Subject: Invitation to give plenary scientific talk at 2020 Annual Biomedical Research Conference for Minority Students (ABRCMS)

April 15, 2020,

Dear Dr. Kizzmekia Corbett:

I hope this email finds you well. My name is Irene Hulede and I serve as project lead for the Annual Biomedical Research Conference for Minority Students (ABRCMS) as well as senior manager for several American Society for Microbiology programs. You were highly recommended by Ms. Earnestine Baker, a good friend and supporter of ABRCMS and Dr. Avery August, chairperson of ABRCMS. In checking our records, I also saw that you attended ABRCMS in 2005 and I hope you enjoyed your experience when you participated.

On behalf of the ABRCMS Steering and Planning Committee, I would like to invite you to give a plenary scientific presentation on either **Thursday, November 12 from 9:15 a.m.-10:00 a.m. or Friday, November 13 from 1:30 p.m. – 2:15 p.m. focusing on your area of research specifically the work you are doing on COVID-19 and your personal story.** Your presentation will be 35 minutes with 10 minutes for question and answer period. The conference activities will be held at the Henry B. Gonzalez Convention Center in San Antonio, TX from November 11-14, 2020.

The conference is sponsored by the National Institute of General Medical Sciences and the American Society for Microbiology. ABRCMS is managed by the American Society for Microbiology. For more information, visit the conference website at www.abrcms.org.

ABRCMS is currently the largest, professional conference for biomedical science, behavioral science and STEM students attracting over 5,250 individuals, including 2,875 undergraduate and postbac students, 520 graduate students/postdocs and 1860 faculty, administrators and graduate program exhibitors. Students come from over 350 U.S. colleges and universities. All are pursuing advanced training in the biomedical sciences and STEM, and many have conducted independent research. Attendees represent a very diverse ethnic background, African American (49%), Hispanic/Latino (25%), Native American (4%), Asian American (4%) Pacific Islander/Alaskan Native (1%), Caucasian (17%).

During the four-day conference, over 2,400 students participate in poster and oral presentations in twelve sub disciplines in STEM. The ABRCMS exhibitors program, comprised of over 900 representatives from graduate programs at US colleges and universities, government agencies, foundations, and professional scientific societies share information about graduate school, summer internship/research opportunities, funding sources, and professional networks.

ABRCMS is the recipient of the 2019 AIMBE Excellence in STEM Education Award presented by the American Institute for Medical and Biological Engineering. ABRCMS was recognized for contributing to the advancement of underrepresented minorities in science, technology, engineering and mathematics, diversifying the biomedical sciences and biomedical engineering workforce, and providing URM students with early exposure to the profession.

ABRCMS will provide you with an honorarium as a small token of our appreciation and cover all of your travel expenses. I can be reached at ihulede@asmusa.org or 202-942-9295 to answer any questions you may have about the conference.

Thank you for your continued support as we invest in the future of our students. I hope your schedule will permit you to join us in San Antonio.

Sincerely,

Irene Hulede

Hello all,

I've attached the updated CoV VHH manuscript, figures and the Response to Reviewers document here. I think that we're nearly ready for resubmission so it would be great if you could review the updated documents and send me any comments you might have over the weekend while I try to prepare the STAR methods and additional files that Cell requires.

Best regards,

Daniel

Barney,

Items from last meeting;

1. (b) (5)
(b) (5) Everything else will have to wait based on CSIRO limiting staff on-site and focusing all their resources on COVID-19 related work.
2. (b) (5)
3. Submitted reference letter for (b) (6). Thank you for sending an example – it really helped me to tailor the letter and address key elements.
4. Brandon and I discussed (b) (5)
(b) (5)
5. Submitted and will present (b) (5) this week at ACUC meeting.
6. Working on (b) (5)
(b) (5)
7. I have outlined all manuscripts – (b) (5). I am working on finalizing the figures for the (b) (5) manuscript and will have that done by end of this

week for you to review. I will start working on manuscript text at the end of this week/next week.

8. Olu, Cynthia and I talked with CDC about [REDACTED] (b) (5)

9. I also talked with Olu afterwards about some of the issues she is having with [REDACTED] (b) (5)

Thank you,
Rebecca

Hi Barney,

I am scheduled to have a meeting with you today at 1pm – which I am happy to keep if you have the time.

If not, would you be willing to send me a reference letter or two to use as templates? (b) (6)
(b) (6) It is due TODAY. I don't have a lot of experience writing letters and want to use the right language, format, etc.

Other items;

1. I talked with (b) (5)
(b) (5)
(b) (5)
2. The results from the (b) (5) We have a call this afternoon to go over what was collected, how it is stored and things to be completed at a later date.
3. I will follow up with (b) (5)
(b) (5)
4. I am working on the 3-year renewal for the (b) (5)
5. I will start on the (b) (5)
(b) (5)

6. Working on manuscripts in the following order;

- a. [REDACTED] (b) (5)
- b. [REDACTED]
- c. [REDACTED]

7. I talked with [REDACTED] (b) (5)

8. Will have a teleconference soon (this week or next) with Olu, Cynthia, Kizzmekia and CDC about

[REDACTED] (b) (5)

9. Lastly, organizing my data files, general upkeep and reading literature.

Thank you and I hope you and family are staying safe,
Rebecca

Hi Kaitlyn

I assume you got really busy after the press release, but just want to strike the iron while it is hot...would you have a chance to comment on Bob's email? Are the (b) (5), (b) (4) he is using the ones that you are using as well?

Best regards and many thanks

Stavros

Subject: RE: SARS-CoV2 expression

Hi Stavros,

I have (b) (5), (b) (4) (came today). I have this from Barney Graham (Judy Stein, John Mascola, Kizzmekia Corbett, Kaitlyn Morabito, Gabriela Alvarado, Karin Bok, and Charla Andrews -NIH/VRC and NIH/NIAID). They are sending their (b) (5), (b) (4), but they sent their (b) (5), (b) (4) as well. I am also getting in (b) (5), (b) (4)

(b) (5), (b) (4) Just let me know exactly what (b) (5), (b) (4) you want and we will get it for you.

Bob

Subject: CME forms for NIAID Grand Rounds

Drs. Lucey, Graham and Beigel,

Attached are the CME forms for the 5/1/2020 NIAID Grand Rounds. We will need all of the forms listed below returned to us by **Tuesday, 4/21/2020**.

For the speaker title/objective form, we only need one form that will be a combined lecture title and objectives. Please coordinate your title and objectives.

1. Current CV (except Dr. Lucey who has provided a copy already)
2. PESGCE agreement form
3. CME Disclosure form
4. Speakers title/objective form (one total for the entire lecture).

If you have any questions, please do not hesitate to reach out to myself or Trang Nguyen.

Thank you.

Subject: COVID SIG

Dear Barney,

I hope you are well during these crazy days...

Mihalis and I are trying to organize the new COVID lecture series of the brand new SIG and Dr Gottesman would like to have a seminar planned for Wed April 22nd at 3PM so he can announce it tomorrow when he introduces Hilary's talk.

He suggested we approached you to see if you would be willing to present perhaps even with Dr Corbett presenting a part of the seminar on the clinical vaccine trial efforts of the VRC.

We would really appreciate it and we apologize for the lateness of the request.

Best,

Irini

Subject: RE: Journal Club / Coronavirus -- DAVID LINDSAY ask

I found a book, by Advances in Virus Research, titled "Coronaviruses" (Edited by John Ziebuhr) 2016 ; there are a couple useful chapters (ch2/ spike protein; ch8 /molecular basis of coronavirus virulence and vacc.dev.) with references to specific papers I think could be worth reading.

Sui et al. 2014 (*J. Virology*, 88) "Effects of human anti-spike protein RBD antibodies on SARS CoV neutralization escape and fitness"

Zhang et al. 2016 (*Cell. Mol Immunol* 13) "ID of an ideal adjuvant for RBD-based subunit vaccines against MERS CoV"

I may just go with these... unless you have any suggestion.

Hi Barney,

Good Monday afternoon.

We are re-starting journal club this month at VCMP, and I am volunteering to lead a discussion on a paper related to Coronavirus. Do you have one or two papers off the top of your head you might recommend? Ideally papers are <5 years for publication date, but not necessary.

In parallel, I am conducting a literature search.

Thank you,

To: Erling Rud
Subject: RE: Pre-Fusion modified sequence

We published the structure of the SARS-CoV-2 spike protein, and most groups reference that structure. We have confidence in our antigen because we know the structure and have mapped neutralizing epitopes on analogous structures from other betacoronaviruses.

Subject: Re: Pre-Fusion modified sequence

Thanks for your explanation! Have you been able to compare your Spike sequence and atomic level structure optimization with those used in other SARS-CoV-2 vaccine candidates? After spending 25 years in Health Canada, Safety concerns come naturally to my queries.

I wish you the best in this pursuit for all of our sakes!

Cheers

Erling

To: Erling Rud
Subject: RE: Pre-Fusion modified sequence

[External Email]

The main strategy we used was to produce a highly characterized antigen based on the atomic level structure, so the antibodies induced would will have the highest possible functional activity.

We also think that since this is a virus with respiratory epithelium tropism that ADE is less likely because that is something that typically happens with viruses that have primary tropism for macrophages.

Subject: Pre-Fusion modified sequence

Dear Barney,

Best wishes from Canada! I am wondering about how you modified the Pre-Fusion Spike protein sequence for the mRNA vaccine candidate in an attempt to avoid ADE? I have been involved in vaccine R&D from a Biotech/Pharmaceutical, Government and Academic sector (UK, Canada and USA) since 1989 and have been concerned about the 1966 RSV issue (as you have). We had the same concerns about epitope specific regions that may enhance infection in the HIV envelope that concerned us when generating soluble trimers.

I recently retired from Health Canada in September, but continue to teach at Carleton University.

Cheers

Erling

Dear Barney,

Many thanks for your Perspective - this is great. I'm afraid that I do need you to add references please, a maximum of 15. I know this means picking references out of many, but I cannot proceed with your submission without them. Did you want to add a figure? You do not have to, but it might be helpful to explain some of the concepts in your piece. If you could send me a referenced version, I will get this to expedited review.

Thanks and best wishes,
Gemma

Dear Dr. Alderton,

I have attached the perspective here and I will also go into the web site and submit later tonight.

This short perspective could have had dozens of references, but I have added none. Let me know if you would like me to add references, but it would be hard to add one without all the rest.

Thank you for the opportunity to publish by perspectives.

Best wishes and take care,

Barney

On Apr 14, 2020, at 5:09 PM, Pierson, Theodore (NIH/NIAID) [E] (b) (6) wrote:

Hi Barney,

Hope this note finds you well during busy times. As mentioned when we spoke last, Mike Diamond and I were asked to comment on the state of SARS-CoV-2 vaccines. Attached is a complete draft of a short "Forum" piece composed for Cell Host and Microbe. We wrote about the unusual challenges of vaccine development during a pandemic and the important role information about prototype pathogens have accelerating progress under these circumstances.

It is due at the end of the week and we will edit and polish a bit more (working on the figure now). Before submission, I wanted to share to give you the opportunity to comment (if time permits). It is certainly not my intention for any of my words or ideas to make your job or Tony's more difficult- it is remarkable how complicated this science has become by other issues.

Three options:

1. If too busy- absolutely no worries!
2. Take a quick peak to identify any red flags for Mike and I to think about.
3. Make some edits- we are happy to include you as an author here.

Cheers,

T

Hi Peter,

The 12-18 month timeline is still our best hope.

I'm not sure I understand the second comment about Feb 25, but maybe Dr. Corbett does.

Take care,

Barney

Sent from my iPhone

On Apr 1, 2020, at 5:06 PM, Loftus, Peter <peter.loftus@wsj.com> wrote:

Thank you both for answers to the follow up questions. I think we are close to wrapping up our story.

I just wanted to triple-check that the best-case scenario -- assuming all the things you cite here go smoothly -- is 12-18 months for the vaccine to become available? Meaning, early next year at best?

And just to triple check on the mouse testing - you said results Feb. 25, and do you remember when that testing started?

On Sat, Mar 28, 2020 at 6:06 PM Graham, Barney (NIH/VRC) [E] (b) (6) wrote:
Hi Peter,

Sorry for not getting back to this. I gave a few answers below.

Can you give me a sense of the main factors that could lead to things taking longer?

RESPONSE: 1) There has never been a licensed human coronavirus vaccine before, 2) there has never been a licensed mRNA vaccine before, 3) most vaccine development efforts are measured in decades, not in months, so this would be unprecedented timeline, 4) The vaccine may not work as well as we want and may take some revision, 5) the animal models to test the vaccine may not work as well as we want and will take time to improve, 6) if too many people become infected who are critical for the research, manufacturing, and clinical trial work there could be delays. This could include delays in shipping because flights are canceled or in any number of services we usually take for granted

Or, a related question: how challenging is it to develop a vaccine against an emerging infectious disease, and why might it take some time despite the urgent and quick response so far?

RESPONSE: Making a vaccine in response to a new emerging disease in time to influence the immediate course of the epidemic has never been done, but our hope is that new technologies and pre-existing knowledge will make this possible.

Barney

Subject: Re: Interview request

Thanks so much to both of you for taking time to speak on a Saturday, and amid all that you are working on.

I have follow-up questions that I am hoping you can answer:

-Dr. Corbett, you mentioned that around Jan. 1, you set up alerts on your phone for news about the virus in Wuhan. Can you elaborate on why - as in, what was it about the situation at that time that caught your interest (or concerned you) and motivated you to set up alerts? And to clarify, did you mean setting up something like a Google news alert, or is there some sort of alert system for NIH or scientists generally?

-Dr. Graham, at the end of our call you mentioned that a 12-18 month time frame is a hope-for outcome and assumes many things would have to go smoothly.

Can you give me a sense of the main factors that could lead to things taking longer? Or, a related question: how challenging is it to develop a vaccine against an emerging infectious disease, and why might it take some time despite the urgent and quick response so far?

Thanks!

Dear Dr. Graham,

My name is Roman Giverts. I'm the founder of VuMedi, a website that is like YouTube for Physicians with over 300,000 registered doctors.

We know there's an incredible amount of change and uncertainty happening at every hospital around the country. At VuMedi, we've had a number of requests from our physician users asking for information on everything from new hospital protocols and best practices to the actual treatment of COVID-19 patients. We're wondering if you would be open to recording a short video over a webconference regarding the understanding of COVID-19 virus and the basic

science for developing a vaccine? It would only take 10-15 minutes.

Kind regards,

Roman Giverts
CEO & Founder

Hi Barney,

[REDACTED] (b) (5)

The FOIA request received by Nissa was for the names of all people who worked on the mRNA SARS CoV 2, and we confirmed with both TTIPO and the FOIA office that the VRC should provide this information. This list is not restricted to inventorship.

I hope this helps.

Thanks

Judy

Dear Dr. Graham,

I hope you and your family are healthy and staying well. My name is Ryan Lasker, and I am a program manager at the National Science & Technology Medals Foundation. We're dedicated to providing inspiring experiences to STEM students in college and high school. I'm reaching out because we thought you'd be a perfect fit for a virtual program we're launching amid the COVID-19 pandemic.

The program will feature STEM experts covering topics both related and unrelated to the COVID-19 pandemic. Taking no more than an hour of your time, we'd love the opportunity to interview you for a pre-recorded video featuring you and the important work you're doing. Then, we'd like to have you participate in a 20-minute live watch party with a group of students, where they'll be able to chat with you and ask questions of you.

If you're interested, it would be great to set up a quick call to give you some more information about the program.

Let me know if you have any questions, and I look forward to hearing from you!

Best,
Ryan

Subject: RE: Nature Medicine query

Hi Alison,

I remember our meeting. Thank you for your inquiry. We have learned a lot since MERS. We have maintained a consortium of academic and industry collaborators and have been actively working on beta-coronaviruses since 2014. Much of the work is still unpublished.

We now have structures for more than a dozen spike proteins; stabilizing mutations that work across all beta-coronaviruses; large panels of mAbs and a map of neutralizing epitopes; and have developed many assays/models/etc. Based on our work delivering the stabilized spike trimer as a soluble protein, displayed on a self-assembling nanoparticle, or as mRNA we have established antigen designs that should be effective immunogens. We have had a long-standing collaboration with Moderna to deliver the stabilized spike trimer as mRNA, and as stated in their press release today, they have started GMP production for a small phase I pilot study based on a sequence we gave them nine days ago.

The response has been organized between NIAID divisions, between U.S. government agencies, and coordinated with WHO. Most of the key coronavirus experts that I know are involved. Each time we have done this for Chikungunya, MERS, Ebola, Zika, and now Wuhan the response has been better coordinated and more effective.

CEPI was established for this purpose and many organizations have been thinking about more specifically about how to respond to pathogen X. I've copied Hilary Marston because she has been involved in coordinating these efforts for NIAID.

Best wishes,

Barney

Subject: Nature Medicine query

Dear Dr. Graham,

I am an editor at the biomedical research journal *Nature Medicine* and we met a few years ago when I visited the VRC. We are writing our February editorial on the new coronavirus outbreak and I was wondering if there is a concerted and collaborative effort among vaccine developers to work on a vaccine against 2019-nCoV? If so, is there thought to be a preferred vaccine platform, based on your experience with MERS-CoV vaccines, and is the VRC working on a 2019-nCoV vaccine? We are interested to discuss in the editorial the scientific effort and collaboration thus far, even though we know it's very early days yet. Specifically I was interested to learn if there are efforts to best optimize use of expertise and resources in terms of vaccine development against the new coronavirus.

Thanks for considering these questions, and I'd be happy to talk directly if that should be more straightforward.

With best wishes,
Alison

Subject: April 22 COVID-19 lecture

Dear Barney,

First, let me thank you for agreeing to give the second COVID-19 lecture next Wednesday, April 22, at 3 PM. Our videocasting team will be in touch about the audiovisual issues; likely you will be on via a WEBEX connection to our videocast system at the NIH. This worked generally well for Hilary Marston, with about 7000 viewers in real time, and close to 3000 so far looking at the archived version. As you may have heard, there were many people who couldn't get the videocast because the demand was so high. We're working on this and hopefully things will run smoothly next week.

Another reason why I am writing is to ask if it would be possible for Kizzmekia Corbett to share the podium with you? She has gotten some nice attention lately for her work, and I wondered if she could have 10-15 minutes of your allotted time to talk about her contributions. This would be a great way to acknowledge her hard work on this project, and to give her more visibility as her career advances. I don't know if she is available, but you would make a fabulous duo.

Thanks, again for doing this. We are all looking forward to your talk.

Michael

Thanks Kizzmekia - My suggestion to the joint group would be that a slide deck would include these kinds of information to keep us all on same page as to prior decisions, latest data, thus allowing us to more readily discuss next steps. It would also be helpful to have written slides of timeline goals from AbCellera and Lilly. – **Thanks. I will keep a running slide deck with all-inclusive decision trees to come.**

For neutralization with anti-RBD and NTD. Do you have an example of data from (b) (4)
(b) (4) This would help me understand and provide some suggestions on most efficient way to do the combination work.

I have attached the graphs for your information. These are pared down to what was to be included into publication. I will need to make a slide show showing (b) (4)
(b) (4)

In this regard:

(b) (4)

Best,
John

Subject: Wuhan inquiry from NIH

Dear Dr. Gao,

I am writing to ask you for information about the Wuhan coronavirus. I am deputy director of the NIAID Vaccine Research Center on the NIH campus in Bethesda. We share many mutual interests and I have followed your work closely over the last few years. I was hoping to see you next week at the bunyavirus workshop but found out that you would not be able to attend. I'm sure this is likely because of your obligations related to the Wuhan outbreak.

Since The MERS CoV outbreak we have learned a lot about CoV spike structure and stabilization and antigenic sites associated with neutralization. I know that your lab is highly capable of characterizing the new virus, but we would be very willing and interested to help with this. Since this virus is likely to not be confined to China alone, we also feel some obligation to initiate our local processes for pandemic preparedness. While this may or may not be necessary, and hopefully the outbreak will not expand, I'm hoping that you would be willing to share sequences with our group at NIAID, especially for spike. We would very much enjoy collaborating with you on this new pathogen.

Best wishes,

Barney

Subject: Re: Interview request

Hello all, Thanks for the time you've taken to answer all my questions.

I was wondering, for planning purposes, what will be the way in which the preliminary results of the first study of the NIAID/Moderna vaccine will be released? Any sense of timing for that, now that some of the first enrollees have gotten their 2nd doses?

Pete

Hi Peter,

The 12-18 month timeline is still our best hope.

I'm not sure I understand the second comment about Feb 25, but maybe Dr. Corbett does.

Take care,

Barney

Sent from my iPhone

On Apr 1, 2020, at 5:06 PM, Loftus, Peter <peter.loftus@wsj.com> wrote:

Thank you both for answers to the follow up questions. I think we are close to wrapping up our story.

I just wanted to triple-check that the best-case scenario -- assuming all the things you cite here go smoothly -- is 12-18 months for the vaccine to become available? Meaning, early next year at best?

And just to triple check on the mouse testing - you said results Feb. 25, and do you remember when that testing started?

On Sat, Mar 28, 2020 at 6:06 PM Graham, Barney (NIH/VRC) [E] (b) (6) > wrote:
Hi Peter,

Sorry for not getting back to this. I gave a few answers below.

Can you give me a sense of the main factors that could lead to things taking longer?

RESPONSE: 1) There has never been a licensed human coronavirus vaccine before, 2) there has never been a licensed mRNA vaccine before, 3) most vaccine development efforts are measured in decades, not in months, so this would be unprecedented timeline, 4) The vaccine may not work as well as we want and may take some revision, 5) the animal models to test the vaccine may not work as well as we want and will take time to improve, 6) if too many people become infected who are critical for the research, manufacturing, and clinical trial work there could be delays. This could include delays in shipping because flights are canceled or in any number of services we usually take for granted

Or, a related question: how challenging is it to develop a vaccine against an emerging infectious disease, and why might it take some time despite the urgent and quick response so far?

RESPONSE: Making a vaccine in response to a new emerging disease in time to influence the immediate course of the epidemic has never been done, but our hope is that new technologies and pre-existing knowledge will make this possible.

Subject: Re: Interview request

Thanks so much to both of you for taking time to speak on a Saturday, and amid all that you are working on.

I have follow-up questions that I am hoping you can answer:

-Dr. Corbett, you mentioned that around Jan. 1, you set up alerts on your phone for news about the virus in Wuhan. Can you elaborate on why - as in, what was it about the situation at that time that caught your interest (or concerned you) and motivated you to set up alerts? And to clarify, did you mean setting up something like a Google news alert, or is there some sort of alert system for NIH or scientists generally?

-Dr. Graham, at the end of our call you mentioned that a 12-18 month time frame is a hope-for outcome and assumes many things would have to go smoothly.

Can you give me a sense of the main factors that could lead to things taking longer? Or, a related question: how challenging is it to develop a vaccine against an emerging infectious disease, and why might it take some time despite the urgent and quick response so far?

Thanks!

Dear Dr. Gao,

I am writing to ask you for information about the Wuhan coronavirus. I am deputy director of the NIAID Vaccine Research Center on the NIH campus in Bethesda. We share many mutual interests and I have followed your work closely over the last few years. I was hoping to see you next week at the bunyavirus workshop but found out that you would not be able to attend. I'm sure this is likely because of your obligations related to the Wuhan outbreak.

Since The MERS CoV outbreak we have learned a lot about CoV spike structure and stabilization and antigenic sites associated with neutralization. I know that your lab is highly capable of characterizing the new virus, but we would be very willing and interested to help with this. Since this virus is likely to not be confined to China alone, we also feel some obligation to initiate our local processes for pandemic preparedness. While this may or may not be necessary, and hopefully the outbreak will not expand, I'm hoping that you would be willing to share sequences with our group at NIAID, especially for spike. We would very much enjoy collaborating with you on this new pathogen.

Best wishes,

Barney

在 2020年1月11日, 00:30, Graham, Barney (NIH/VRC) [E] (b) (6) 写道 :

Dear Dr. Gao,

I am writing to ask you for information about the Wuhan coronavirus. I am deputy director of the NIAID Vaccine Research Center on the NIH campus in Bethesda. We share many mutual interests and I have followed your work closely over the last few years. I was hoping to see you next week at the bunyavirus workshop but found out that you would not be able to attend. I'm sure this is likely because of your obligations related to the Wuhan outbreak.

Since The MERS CoV outbreak we have learned a lot about CoV spike structure and stabilization and antigenic sites associated with neutralization. I know that your lab is highly capable of characterizing the new virus, but we would be very willing and interested to help with this. Since this virus is likely to not be confined to China alone, we also feel some obligation to initiate our local processes for pandemic preparedness. While this may or may not be necessary, and hopefully the outbreak will not expand, I'm hoping that you would be willing to share sequences with our group at NIAID, especially for spike. We would very much enjoy collaborating with you on this new pathogen.

Best wishes,

Barney

Subject: INTERVIEW: Regarding Wuhan coronavirus

Dear Dr. Graham,

My name is Knvul Sheikh and I'm a science reporter at The New York Times. I'm interested in understanding the human backstory of how U.S. scientists got involved in ID'ing the new coronavirus out of Wuhan and/or developing a test to diagnose the virus. I just got off a call with Dr. Anthony Fauci and he recommended I speak with you about the process.

Please let me know if you might have time to speak over the phone later this tomorrow. I'm on a tight deadline, trying to get some context for a story by Monday morning, Jan. 27.

Thanks and best regards,
Knvul

Hi Barney and Karen- Hope all is well with you. I wanted to follow-up with you about (b) (4)
(b) (4)

(b) (4) Looking forward to talking more at the upcoming meeting

On a separate note, I was thinking you and your lab are probably quite busy working with this new coronavirus trying to find cross-reactive mAbs and vaccine constructs. The CEO of AZ and his senior leadership team are keen to support ongoing efforts if we can be of service, especially in light of the past collaboration with the Ebola mAb. I'm sure things are moving very quickly, but thought it might be a good opportunity to at least touch on this topic at the F2F meeting if not before.

Thanks
Nicole

Hi Sung-Han,

I am coming to Korea arriving Sept 4th on a United flight at 14:50 PM. I will then be in Osong for the KNIH meeting.

Sept 5 – 13:00 – “Structure-guided vaccine design for respiratory viruses and pandemic preparedness”

Sept 5 – 16:40 – “Development of universal influenza vaccines”

Sept 6 – 17:30 – meeting ends

I’m returning to Seoul either evening of the 6th or morning of the 7th to give a talk at IVI on the 7th (Structure-based Vaccine Design for Respiratory Viruses) then leaving on the 8th on an Asiana flight at 16:10 PM.

Would be nice to see you.

Hi Barney,

I heard from Sang-gu that everything goes well with you. Yesterday, I received the acceptance letter from CID for the study on the extensive environmental contamination of MERS-CoV. I attached the final version of the manuscript. Thank you for your keen comments on our study. Your opinion made sure the confidence of our study and drove the positive results.

Dear Barney Graham,

I am writing to ask if you could make a statement at the International COVID-19 Conference, which is being held by Zoom on April 8.

We are including the following sessions, you would be welcome to speak at any time from your desk.

EPIDEMIOLOGY AND SURVEILLANCE
MEDICAL DEVICES
THERAPEUTICS
DIAGNOSTICS
PUBLIC HEALTH
MANUFACTURING & DISTRIBUTION

There are further details at www.discoverylab.ca.

Thank you for your consideration and for your leadership, we are gathering hundreds of academic scientists, clinicians, startups, biotechs and pharma to work together with government and funding agencies, your input would make a tremendous difference.

Best wishes,

Michael

Subject: Add'l Follow up Qs: Novel Coronavirus (Week of Mar 1)

Reporter: Eric Boodyman

Organization: STAT

Phone #(s): (b) (6) eric.boodyman@globe.com

Subject: Coronavirus, animal model used in testing Moderna candidate vaccine

Deadline: not specified (I told him very unlikely before Monday)

Hi all,

Eric Boodyman is back with some follow up questions regarding mouse models for studying COVID-19 virus. Could take answers by phone or email. Please let me know if VRC has an SME willing to do this. His questions are:

- 1) My understanding is that wild type mice are not susceptible to Covid-19 virus. What has been modified in the mice that will be used in the next in vivo step to make them susceptible to the virus?
- 2) Do those mice exist already and to what extent do we know how susceptible they are to the virus and what sorts of disease they show?
- 3) When will those optimized challenge models be ready?
- 4) Will there be efficacy results from testing mRNA-1273 in optimized challenge models before clinical testing begins in April, as Dr. Fauci has stated it will?

Eric's piece on animal models from today: <https://www.statnews.com/2020/03/05/coronavirus-labs-scramble-to-find-right-animals-for-covid-19-studies/>

Reply-To: Ab Osterhaus - One Health Platform <ab.osterhaus@onehealthplatform.org>

**Submit your late-breaking abstract to
the 6th World One Health Congress!**

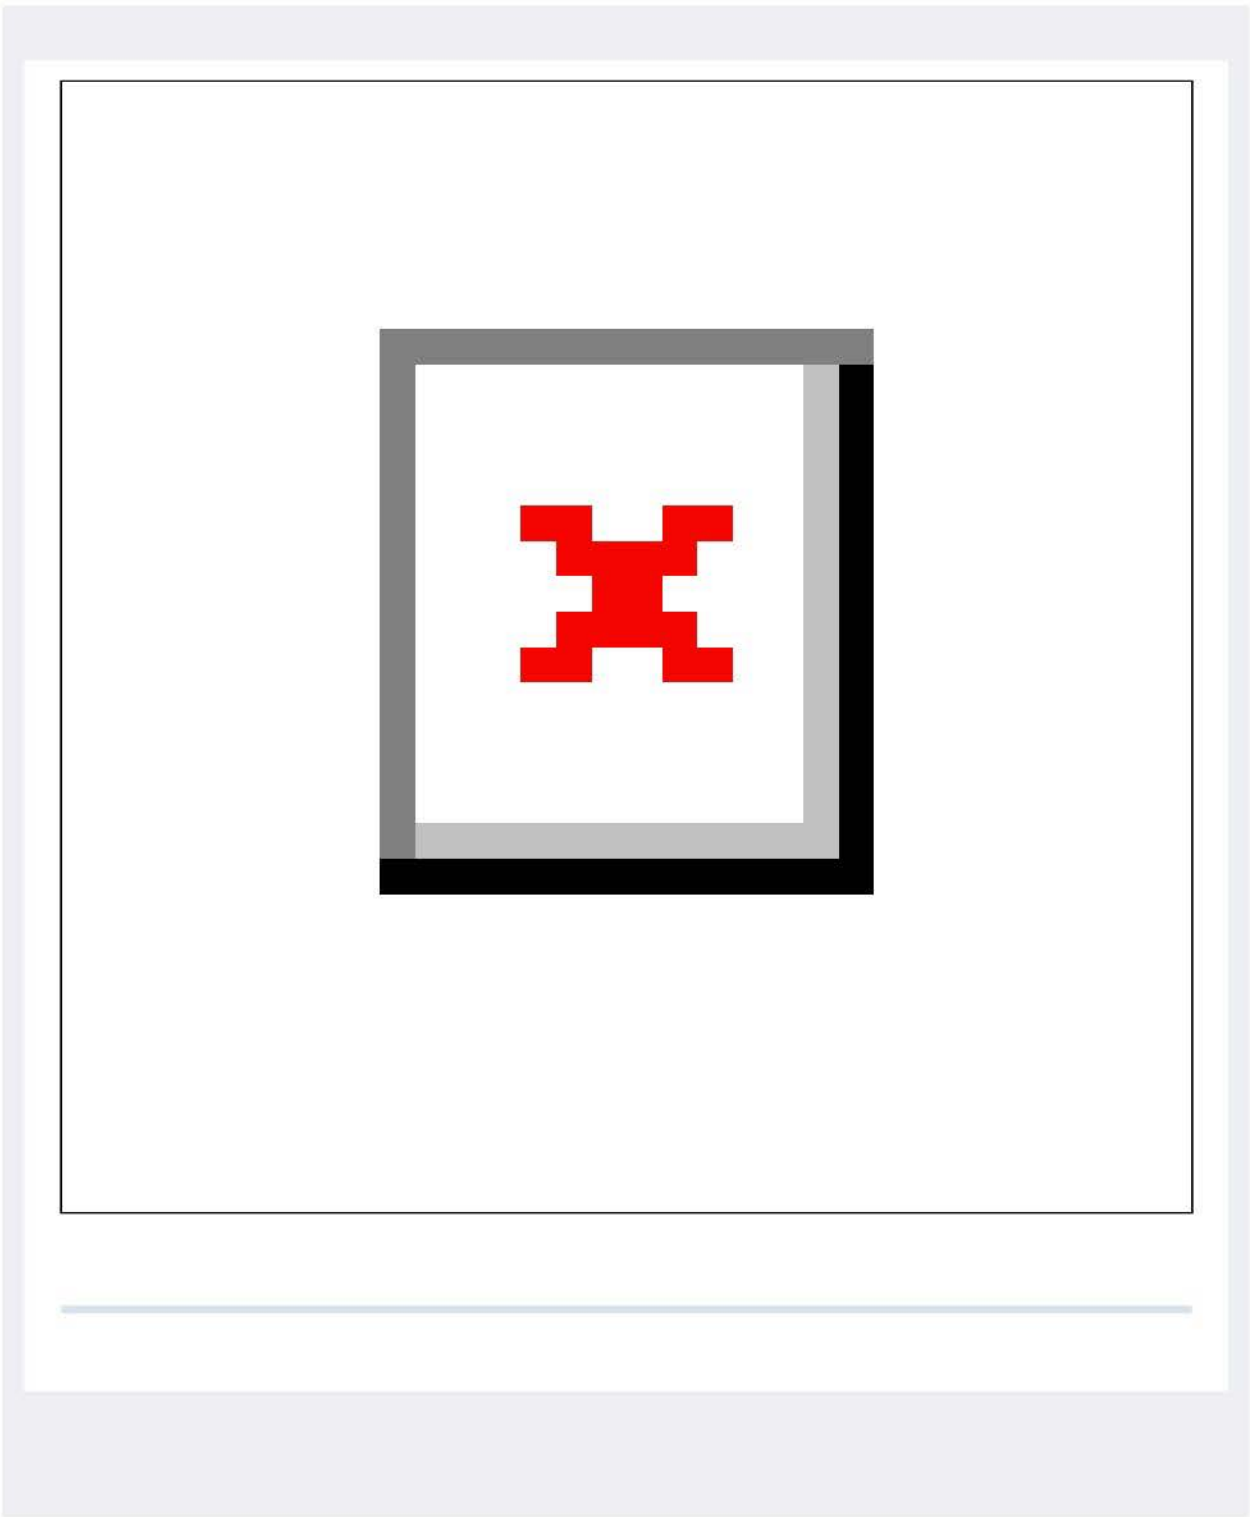

The 6th World One Health Congress is the largest One Health event of the year, where

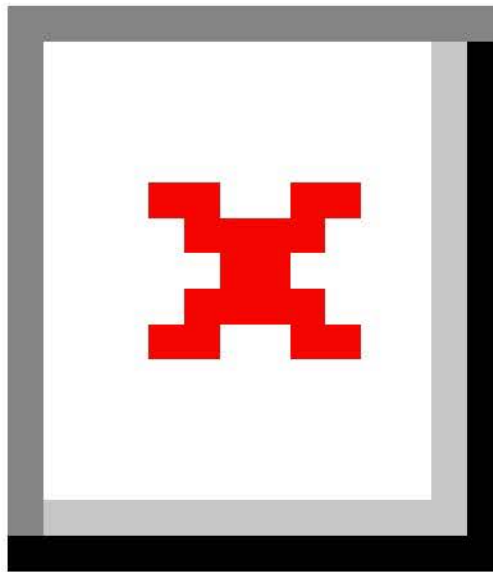

experts and researchers from around the world present their latest scientific research.

The late-breaker category is exclusively devoted to novel and outstanding scientific discoveries, and aims at selecting abstracts with unique, high impact, ground breaking, innovative and newsworthy scientific data.

Thursday June 18, 2020 10:45 - 12:15

[Click to see the list of relevant abstract topics](#)

Submit your abstracts on the 2019 n-CoV outbreak!

As we're confronted daily with news stories about the 2019 n-CoV outbreak,

the seventh coronavirus known to infect humans, the 6th World One Health Congress could not come at a more significant time. With more cases being reported every day the race is on to contain the outbreak and scientists are at the heart of the effort.

The 6th World One Health Congress offers a unique and valuable opportunity to bring together scientific experts of all the relevant disciplines, to share and discuss their findings. The Congress organizers have therefore added a **separate session on the 2019 n-CoV to the programme.**

The WOHC2020 2019 n-CoV special session is specifically calling for abstracts with an emphasis on

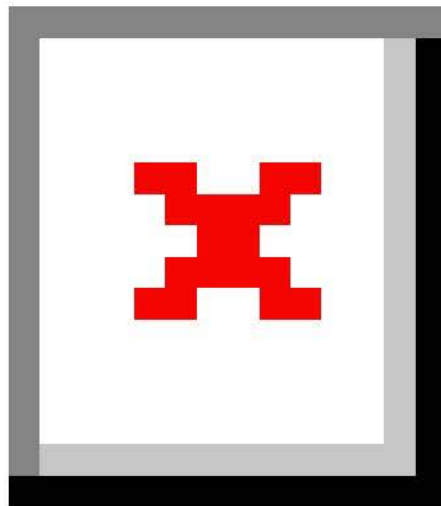

- Pathogenesis and clinical manifestations
- Virology and epidemiology
- Intervention strategies (diagnostics, vaccines, antivirals, antibodies and biological response modifiers)
- Clinical and outbreak management

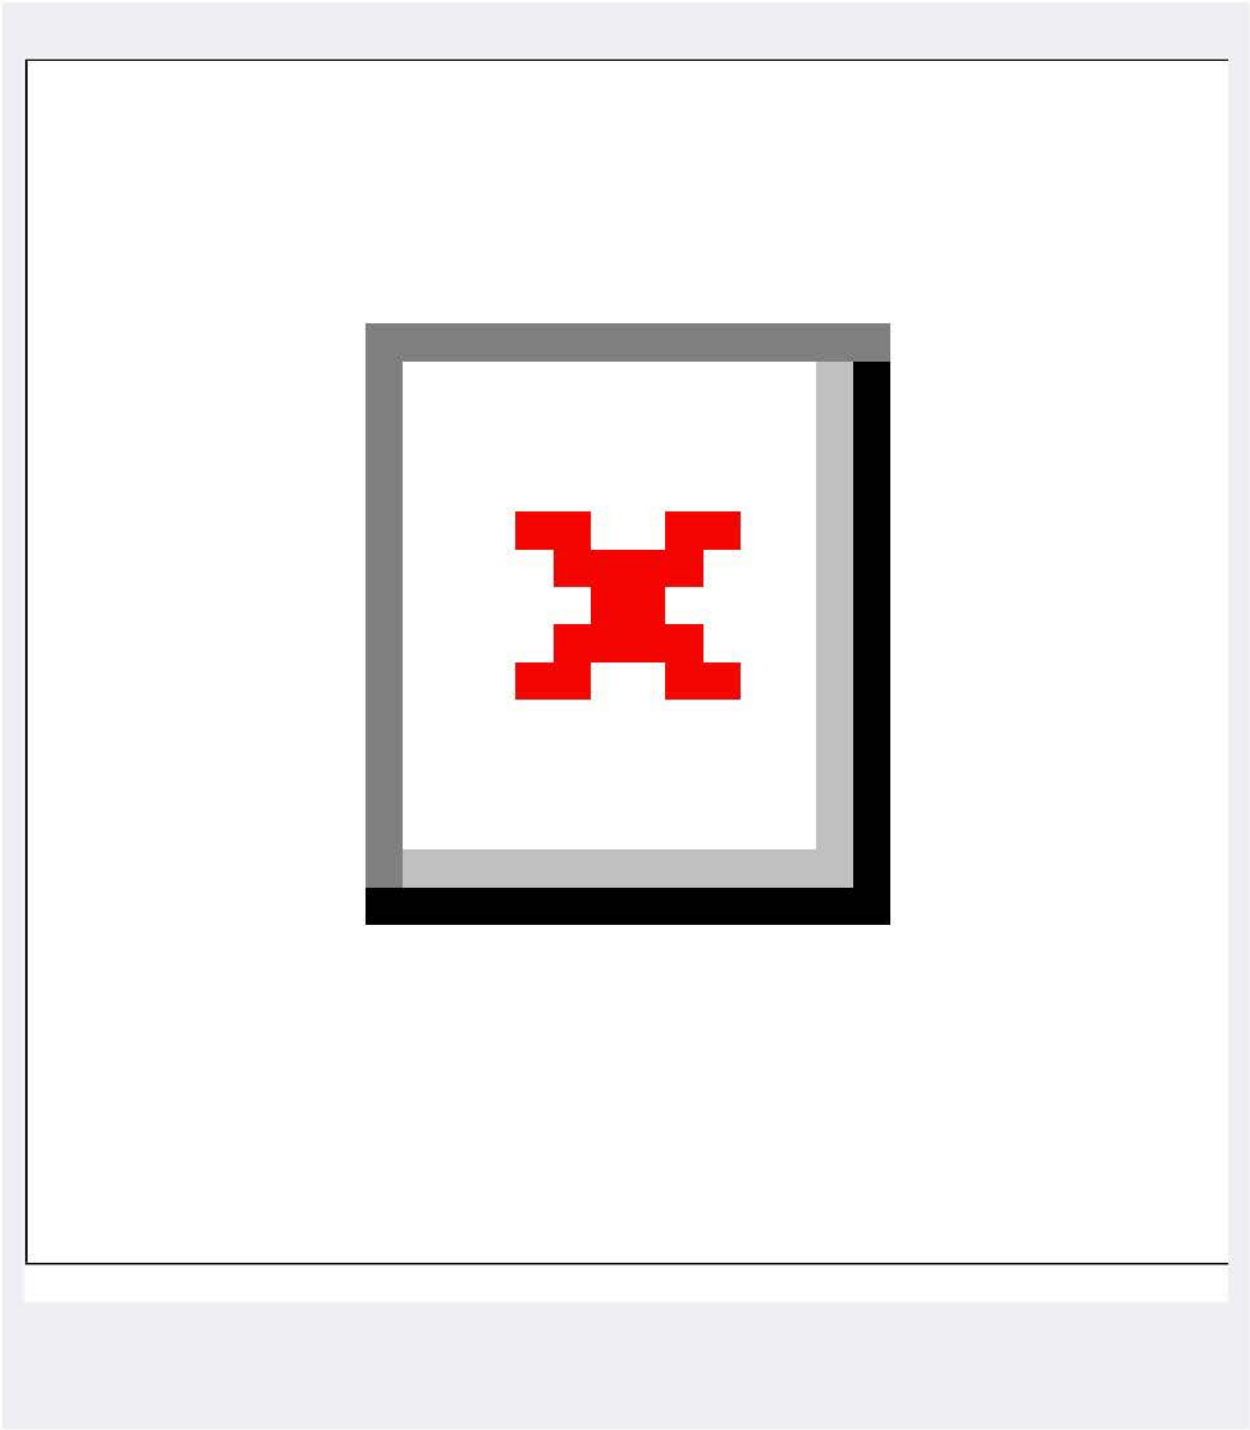

Thursday June 18, 2020 13:00 - 14:30

The One Health EJP is hosting their 2nd Annual Scientific Meeting (ASM) on the 27th-29th May 2020, in Prague, Czech

Republic.

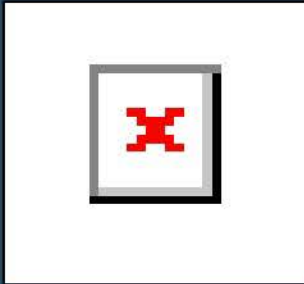

The One Health EJP is a landmark partnership between 36 partner institutes and the Med-Vet-Net Association, focussing on One Health research in the domains of Foodborne Zoonoses, Antimicrobial Resistance and Emerging Threats.

The [registration](#) and [abstract submission](#) are open now! The early bird registration and abstract submission deadline is the 15th February 2020. For more information visit the [ASM website](#).

The Annual Scientific Meeting Satellite Workshop will be held on the 26th May 2020.

For more information visit the [One Health EJP website](#). This year's theme is: Integrated Approaches to Zoonoses: a systems thinking primer.

Barney,

I need to confirm the HPRD number (RD-03-VIII-08) on the request to do a sort for Geoffrey Hutchinson before Tuesday next week (see attached). As you may know, Geoff is requesting a cell sort using B cells (b) (5)

Can you please send me a PDF of the HPRD and/or other supporting documents approved by the NIH IBC. (b) (5)

Thanks

Subject: Re: Scheduling request for B cell sorting

Don't worry about the last few questions about sort training and using sorters. Those are mainly for individuals who are wanting to do there own sorting. If you could try and get an HPRD# for this study (Barney should have one) and then send the form to Steve Perfetto he will take it from there.

Subject: Re: Scheduling request for B cell sorting

Good morning,

I'm sending you this sort registration form which will need to be filled out (as best as you can) and then emailed to Steve Perfetto. It is mainly to get the HPRD# for the project and he will do a risk assessment to determine the precautions we will take while sorting your samples. You should only have to do this once to get things started. If you have any specific questions please ask Steve.

Thanks,

David

Subject: Avigan

External Sender: This email originated from outside of the organization.

Hi Aaron,

This is the confidential information. So I am writing to you because I want to save lives of American people and timing is now and you have to tell me whether you can talk to somebody who can talk closely with President Trum. I am talking to our Prime Minister today and also Fuji Film executive in charge of Avigan. I am now in close consultation with (b) (6) Minister of Health and Welfare.

Avigan is developed by Fuji Film and approved by Ministry of Health and Welfare as contingency medicine for Influenza A.

Therefore we have a reserve of Avigan for (b) (4) People as contingency medicine for Japanese national who are infected with Influenza A (budget of approximately 140 million USD).

Also, government has tight control of usage of Avigan since it was renowned for side effect to produce malformed child with pregnancy lady.

Since the number of patients are growing, Japanese government started to use Avigan for Covid infected patients clinical testing.

Today Infectious disease council was held in Japan and according to NHK broadcast, Professor Doi, Fujita Medical University, Infectious Disease specialist reported the result of Avigan dosage to Covid Patients. There are 300 patients which took Avigan and out of 300, 90 percent of minor and middle symptom improved and 60 % of serious patient which requires recipirotory machine improved after 2 weeks.

China have conducted clinical testing of Avigan for Covid patients and proven to be quite effective. The data on a Chinese clinical study conducted in Jan/Feb, 2020 are as follow:
<https://www.sciencedirect.com/science/article/pii/S2095809920300631?via%3Dihub>

(b) (4)

(b) (4)

(b) (4) Please give me a call.

Koko

P.S. One more paper on a Chinese clinical study is attached.
The following are our materials on this drug.

1. Package Insert_7th Version_English.pdf (latest version)

2. Guidance for COVID-19 treatment_Fabipiravir_Eng V4.pdf
3. AVIGAN(Favipiravir) Overview_11MAR2020.pdf

First Wuhan Coronavirus Patient Identified in the United States

A person in Washington State is infected with a new respiratory virus. The outbreak began at a market in China and now has spread to at least four other countries.

<image001.jpg>

The outbreak, which has infected nearly 300 people in mainland China, began in a seafood and poultry market in Wuhan, central China. Credit...EPA, via Shutterstock

<[image002.png](#)>

By [Roni Caryn Rabin](#)

- • A person in Washington State is infected with the Wuhan coronavirus, the first confirmed case in the United States of a mysterious respiratory infection that has killed at least six people and sickened hundreds more in Asia.

The patient, who was hospitalized with pneumonia last week, recently had traveled to Wuhan, China, where the outbreak appears to have originated, federal officials have found.

Investigators tested samples from the patient for the presence of the virus; positive results were received over the weekend. Officials declined to identify the patient, who was said to be quite ill. News of the first case in the United States comes amid growing evidence that the virus spreads from person to person, although it is not clear how easily.

The outbreak, which began in a seafood and poultry market in Wuhan, a city of 11 million, is spreading: Patients have been identified in Beijing, Shanghai and Shenzhen, as well as Taiwan, Japan, Thailand and South Korea.

On Tuesday, Chinese authorities confirmed that six people have died of the infection in Wuhan. Nearly 300 cases have been reported to date in China. Many of the patients lived in or traveled to Wuhan. The World Health Organization will meet tomorrow to decide whether to declare the outbreak an international public health emergency. But information about the new virus is still thin, and it's not clear whether or how many Americans are at risk.

[\[Like the Science Times page on Facebook.\]](#) | [Sign up for the Science Times newsletter.](#)]

"There are still more questions that we don't know the answers to than things we do know," said Dr. William Schaffner, a professor of preventive medicine and infectious diseases at Vanderbilt University Medical Center in Nashville.

"For example, what is the source? We don't know exactly. The location likely was the live animal market, but we don't know the particular animal."

The more pressing and urgent question, he said: "How frequent is human to human transmission?" In one instance a patient appears to have infected 14 health care workers in a medical facility, but that individual may have been a "super-spreader," he said. "Could people with mild infections transmit this virus from person to person? That all remains still under investigation."

On Monday, Vanderbilt University Medical Center in Nashville changed its electronic prompts so that any patients coming in to its hospital, emergency room or clinics with a fever or respiratory symptoms will be asked whether they have been to China recently or have had contact with anyone who has recently traveled to China.

Hospitals around the country are likely taking similar steps, Dr. Schaffner said, in an effort to quickly identify infected patients and place them in isolation so they can be cared for safely by hospital workers, and so specimens can be collected for testing.

Dr. Schaffner cautioned anyone traveling to China to avoid visiting live animal markets and to keep a distance from all live animals, including domesticated farm animals. Travelers to China should practice [lots of good hand hygiene](#), he added, and do their best to avoid anyone who is coughing or sneezing.
