

**SUMMARY MONTHLY SAFETY REPORT 6
for
ACTIVE SUBSTANCE: PF-07302048 (BNT162b2)**

ATC CODE: J07BX03¹

AUTHORISATION PROCEDURE in the EU: Centralised

INTERNATIONAL BIRTH DATE (IBD):² 19 December 2020

EUROPEAN UNION REFERENCE DATE (EURD):³ 19 December 2020

INTERVAL COVERED BY THIS REPORT:

30⁴ APRIL 2021 through 31 MAY 2021

DATE OF THIS REPORT: 13 JUNE 2021

Report Prepared by: Worldwide Medical & Safety

Pfizer - BioNTech

The information contained in this document is proprietary and confidential. Any disclosure, reproduction, distribution, or other dissemination of this information outside of Pfizer and BioNTech, their Affiliates, their Licensees, or Regulatory Agencies is strictly prohibited. Except as may be otherwise agreed to in writing, by accepting or reviewing these materials, you agree to hold such information in confidence and not to disclose it to others (except where required by applicable law), nor to use it for unauthorized purposes.

¹ Temporary ATC code.

² It corresponds to the earliest conditional approval date.

³ Re-aligned with IBD as per EMA/630645/2012 Rev.101 Procedure Management Department.

⁴ Please consider that for the May month reporting period, start date is 30 April 2021 since 29 April 2021 was used as cut-off date for the April month reporting period due to MedDRA 24.0 up-versioning activities that prevented the use of cut-off date of 30 April 2021 for the April SMSR.

EXECUTIVE SUMMARY

This is the 6th Summary Monthly Safety Report (SMSR) for PF-07302048 [Coronavirus disease 2019 (COVID-19) mRNA Vaccine, hereafter referred to as BNT162b2)], covering the reporting interval 30 April 2021 through 31 May 2021.

BNT162b2 is a white to off-white frozen dispersion (pH: 6.9 - 7.9), provided as concentrate for dispersion for injection (sterile concentrate) as multidose vial to be diluted before use. The multidose vial contains 6 doses of 0.3 mL after dilution; low dead-volume syringes and/or needles should be used in order to extract 6 doses from a single vial. The low dead-volume syringe and needle combination should have a dead volume of no more than 35 microlitres. If standard syringes and needles are used, there may not be sufficient volume to extract a sixth dose from a single vial. Each dose contains 30 micrograms of BNT162b2 embedded in lipid nanoparticles (LNPs). The vaccine also contains (4-hydroxybutyl)azanediylbis(hexane-6,1-diyl)bis(2-hexyldecanoate) (ALC-0315), 2-[(polyethylene glycol)-2000]-N,N-ditetradecylacetamide (ALC-0159), 1,2-Distearoyl-sn-glycero-3-phosphocholine (DSPC), cholesterol, potassium chloride, potassium dihydrogen phosphate, sodium chloride, disodium hydrogen phosphate dihydrate, sucrose and water for injections as excipients.

BNT162b2 is highly purified single-stranded, 5'-capped mRNA produced using a cell-free in vitro transcription from the corresponding DNA templates, encoding the viral spike (S) protein of severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2). The nucleoside-modified mRNA is formulated in LNPs, which enable delivery of the RNA into host cells to allow expression of the SARS-CoV-2 S antigen. The vaccine elicits both neutralizing antibody and cellular immune responses to the spike (S) antigen, which may contribute to protection against COVID-19.

BNT162b2 is indicated for active immunisation to prevent COVID-19 caused by SARS-CoV-2 virus, in individuals 12 years of age and older.⁵ No dosage adjustment is required in elderly individuals ≥ 65 years of age. It is administered intramuscularly in the deltoid muscle after dilution as a series of 2 doses (0.3 mL each) at greater than or equal to 21 days (preferably 3 weeks) apart.

It is estimated that approximately 639,868,710 doses of BNT162b2 were shipped worldwide from the receipt of the first temporary authorisation for emergency supply on 01 December 2020 through 31 May 2021 and that approximately 220,976,340 doses of BNT162b2 were shipped worldwide during the current reporting interval from 30 April 2021 through 31 May 2021. Estimated worldwide shipped doses may serve as a reasonable indicator of subject exposure, considering that approximately 85% of the shipped doses were administered; this estimation is a weight average considering the proportion of doses

⁵ Please note that BNT162b2 was authorized for use in individuals 12 years – 15 years of age in Canada on 05 May 2021, in the US on 10 May 2021 and in Japan on 28 May 2021. On 28 May 2021, EMA CHMP recommended granting the extension of indication for use in children aged 12-15 years and the European Commission adopted a decision accordingly on 31 May 2021.

administered out of those shipped upon review of data currently available for the EU-EEA⁶ countries and the US.⁷

It is estimated that approximately (b) (4) doses of BNT162b2 were shipped in the EU-EEA countries from the receipt of the first conditional marketing approval authorisation on 21 December 2020 through 31 May 2021 and that approximately (b) (4) doses of BNT162b2 were shipped in the EU-EEA countries during the current reporting interval from 30 April 2021 through 31 May 2021. Estimated shipped doses in the EU-EEA countries may serve as a reasonable indicator of subject exposure, considering that approximately (b) (4) %⁶ of the shipped doses were administered in these countries.

BNT162b2 has received temporary authorisation for emergency supply in 35 countries and conditional marketing authorisation approval in 43 countries globally.

There were no authorisation withdrawals for safety reasons during the reporting interval.

During the reporting period, no actions have been taken with respect to BNT162b2 for safety reasons, either by a Health Authority or by the MAH.

The Reference Safety Information (RSI) for this SMSR is the BNT162b2 Core Data Sheet (CDS) Version 4.0, dated 19 May 2021, in effect at the end of the reporting period. The previous CDS Version 3.0, dated 20 April 2021, was also in effect during the reporting period, and was updated on 19 May 2021 with safety-related changes made. Among the safety-related changes made to the CDS, were the addition of Asthenia, Lethargy, Decreased appetite, Hyperhidrosis and Night sweats as ADRs in Section 4.8 Undesirable effects, and the addition of warning text for Vaccine stress-related responses (including Dizziness, Fainting, Palpitations, Increases in heart rate, Alterations in blood pressure, Feeling short of breath, Tingling sensations, Sweating and/or Anxiety) in Section 4.4 Special warnings and precautions for use.

During the reporting period, the following signals were addressed:

1. Appendicitis was evaluated and determined not to be a risk;

⁶ Approximately (b) (4) % of the doses shipped in the EU-EEA countries were administered; this proportion has been calculated considering, out of total number of vaccine doses distributed in the EU-EEA countries, the total number of vaccine doses administered as per report on <https://qap.ecdc.europa.eu/public/extensions/COVID-19/vaccine-tracker.html#distribution-tab>, as of 03 June 2021.

⁷ Approximately (b) (4) % of the doses shipped in the US were administered; this proportion has been calculated considering, out of total number of vaccine doses distributed in the US, the total number of vaccine doses administered as per report on <https://covid.cdc.gov/covid-data-tracker/#vaccinations>, as of 02 June 2021.

2. Dizziness was evaluated and determined not to be a risk;⁸
3. Myocarditis and Pericarditis evaluation is ongoing.

During the reporting period, the following safety topics were addressed and determined not to be validated signals:

1. Abnormal behaviour/Mental disorder;
2. Acquired hemophilia;⁹
3. Acute disseminated encephalomyelitis;
4. Acute pancreatitis;
5. Guillain-Barré syndrome;
6. Menstrual cycle abnormalities;
7. Transverse myelitis.

Based on the new safety and efficacy/effectiveness data from the reporting interval for BNT162b2, the benefit-risk profile of BNT162b2 remains favorable.

⁸ The available information supports dizziness associated with the vaccination process (i.e. stress-related response) but not a causal association with the vaccine itself.

⁹ Determined not to be a validated signal after the data-lock point of this SMSR, on 04 June 2021.

1. INTRODUCTION

This is the 6th SMSR for PF-07302048 (COVID-19 mRNA Vaccine, hereafter referred to as BNT162b2), covering the reporting interval 30 April 2021 through 31 May 2021. The format and content of this SMSR is in accordance with the EMA coreRMP19 Guidance (EMA/544966/2020) and, as applicable, with ICH Guideline E2C (R2) Periodic Benefit-Risk Evaluation Report [Step 5, January 2013] considering the information for the evidence from post-EUA/conditional marketing authorisation approval data sources.

BNT162b2 is a white to off-white frozen dispersion (pH: 6.9 – 7.9), provided as concentrate for dispersion for injection (sterile concentrate) as multidose vial to be diluted before use. The multidose vial contains 6 doses of 0.3 mL after dilution; low dead-volume syringes and/or needles should be used in order to extract 6 doses from a single vial. The low dead-volume syringe and needle combination should have a dead volume of no more than 35 microlitres. If standard syringes and needles are used, there may not be sufficient volume to extract a sixth dose from a single vial. Each dose contains 30 micrograms of BNT162b2 (embedded in LNPs). The vaccine also contains ((4-hydroxybutyl)azanediyl)bis(hexane-6,1-diyl)bis(2-hexyldecanoate) (ALC-0315), 2-[(polyethylene glycol)-2000]-N,N-ditetradecylacetamide (ALC-0159), 1,2-Distearoyl-sn-glycero-3-phosphocholine (DSPC), cholesterol, potassium chloride, potassium dihydrogen phosphate, sodium chloride, disodium hydrogen phosphate dihydrate, sucrose and water for injections as excipients.

BNT162b2 is highly purified single-stranded, 5'-capped mRNA produced using a cell-free in vitro transcription from the corresponding DNA templates, encoding the viral spike (S) protein of SARS-CoV-2. The nucleoside-modified mRNA is formulated in LNPs, which enable delivery of the RNA into host cells to allow expression of the SARS-CoV-2 S antigen. The vaccine elicits both neutralizing antibody and cellular immune responses to the spike (S) antigen, which may contribute to protection against COVID-19.

BNT162b2 is indicated for active immunization to prevent COVID-19 caused by SARS-CoV-2 virus, in individuals 12 years of age and older.⁵ No dosage adjustment is required in elderly individuals ≥ 65 years of age. It is administered intramuscularly in the deltoid muscle after dilution as a series of 2 doses (0.3 mL each) at greater than or equal to 21 days (preferably 3 weeks) apart.

Pfizer is responsible for the preparation of the SMSR on behalf of the MAH BioNTech according to the Pharmacovigilance Agreement in place. Data from BioNTech are included in the report when applicable.

A complete list of the finalized SMSRs is provided in Table 1 below.

Table 1. List of SMSRs

SMSR Number	Reporting Period
1	01 December 2020 through 31 December 2020
2	01 January 2021 through 31 January 2021
3	01 February 2021 through 28 February 2021
4	01 March 2021 through 31 March 2021
5	01 April 2021 through 29 April 2021

CONFIDENTIAL

Page 12

2. WORLDWIDE APPROVAL OR AUTHORISATION STATUS

BNT162b2 received first temporary authorisation for emergency supply under regulation 174 in the UK¹⁰ on 01 December 2020 and is currently authorised for emergency use in 35 countries.

BNT162b2 received first regulatory conditional marketing authorisation approval in Switzerland on 19 December 2020 and is currently conditionally approved in 43 countries (including EEA).

Details of the current authorisation/approval status are presented in [Appendix 4](#).

There were no authorisation withdrawals for safety reasons during the reporting interval.

3. ACTIONS TAKEN IN THE REPORTING INTERVAL FOR SAFETY REASONS

During the reporting period, no actions have been taken with respect to BNT162b2 for safety reasons, either by a HA or by the MAH.

4. CHANGES TO REFERENCE SAFETY INFORMATION

The RSI for this SMSR is the BNT162b2 CDS Version 4.0, dated 19 May 2021, in effect at the end of the reporting period which is located in [Appendix 1](#).

The previous CDS Version 3.0, dated 20 April 2021, was also in effect during the reporting period, and it was updated on 19 May 2021 with safety-related changes made.

Among the safety-related changes made to the CDS, were the addition of Asthenia, Lethargy, Decreased appetite, Hyperhidrosis and Night sweats as ADRs in Section 4.8 Undesirable effects, and the addition of warning text for Vaccine stress-related responses (including Dizziness, Fainting, Palpitations, Increases in heart rate, Alterations in blood pressure, Feeling short of breath, Tingling sensations, Sweating and/or Anxiety) in Section 4.4 Special warnings and precautions for use.

All the safety-related changes made to the CDS are presented in [Appendix 1.1](#).

5. ESTIMATED EXPOSURE AND USE PATTERNS

5.1. Cumulative and Interval Exposure Data Worldwide

It is not possible to determine with certainty the number of individuals who received BNT162b2 during the period of this review. Estimated worldwide shipped doses may serve as a reasonable indicator of subject exposure, considering that approximately 85% of the shipped doses were administered; this estimation is based on a weight average considering

¹⁰ Upon that on 22 April 2021 conditional marketing authorisation approval was also granted in the UK, both the authorisation for emergency supply under regulation 174 and the conditional marketing authorization approval are currently active.

the proportion of doses administered out of those shipped upon review of data currently available for the EU-EEA⁶ countries and the US.⁷

With these caveats in mind, it is estimated that:

- approximately 639,868,710 doses of BNT162b2 were shipped worldwide from the receipt of the first temporary authorisation for emergency supply on 01 December 2020 through 31 May 2021, corresponding to approximately 542,013,978 estimated administered doses;
- approximately 220,976,340 doses of BNT162b2 were shipped worldwide during the current reporting interval from 30 April 2021 through 31 May 2021, corresponding to approximately 188,860,682 estimated administered doses.

The estimated cumulative number of shipped and administered doses of BNT162b2 by region¹¹ based on data provided in the shipment tracker (b) (4)¹² from the receipt of the first temporary authorisation for emergency supply on 01 December 2020 through 31 May 2021, are summarized in Table 2.

Table 2. Cumulative Estimated Shipped/Administered Doses of BNT162b2 by Region Worldwide

Region/Country/Other	% of Doses	Total Number of Shipped Doses	Total Number of Administered Doses
Europe	(b) (4)	(4)	214738754

¹¹ Currently there are no available data that allow to estimate exposure by gender; for age group data available for some EU-EEA countries see below data in Table 5.

¹² The (b) (4) is the most accurate tracker of shipment used as data source for all the Regions and Countries; US shipment data not available in the (b) (4) were taken from the (b) (4) and data for Hong Kong and Macau were provided by BioNTech.

Table 2. Cumulative Estimated Shipped/Administered Doses of BNT162b2 by Region Worldwide

Region/Country/Other	% of Doses	Total Number of Shipped Doses	Total Number of Administered Doses
Africa ^h	(b) (4)		2944715
Total	100.0%	639868710	542013978

- a. In this Region BNT162b2 was conditionally approved;
- b. In the UK, both the authorisation for emergency supply under regulation 174 and the conditional marketing authorisation approval are currently active for BNT162b2;
- c. Includes Albania and Kosovo where BNT162b2 was conditionally approved, Serbia where it received authorization for emergency supply, Bosnia where it was shipped for COVAX, North Macedonia where it was shipped for a non-COVAX agreement and Turkey where it was shipped according to a pharmacovigilance agreement in place by the MAH and the Turkish government;
- d. Includes Azerbaijan, Georgia, Moldova and Ukraine; in these countries BNT162b2 was shipped for COVAX;
- e. In this Region BNT162b2 received authorization for emergency supply;
- f. Includes Chile, Colombia, Costa Rica, Ecuador, El Salvador, Mexico, Panama, Peru and Uruguay where BNT162b2 received authorisation for emergency supply (some doses in Colombia and El Salvador were also shipped for COVAX), Brazil and Peru where BNT162b2 was conditionally approved (some doses in Peru were also shipped for COVAX), and Bolivia where BNT162b2 was shipped for COVAX;
- g. Includes Bahrain, Iraq, Israel, Jordan, Kuwait, Lebanon, Macau, Oman, Palestine, Qatar, Saudi Arabia, Singapore, United Arab Emirates where BNT162b2 received authorization for emergency supply, Hong Kong, Malaysia and South Korea where BNT162b2 was conditionally approved (some doses in South Korea were also shipped for COVAX), and Bangladesh, Bhutan, Laos, Maldives, Mongolia, Pakistan, Philippines and West Bank & Gaza where BNT162b2 was shipped for COVAX;
- h. Includes Angola, Botswana, Cape Verde, Rwanda and Togo where BNT162b2 was shipped for COVAX, Tunisia where BNT162b2 received authorisation for emergency supply (some doses were also shipped for COVAX), and South Africa where BNT162b2 received authorization for emergency supply.

The estimated interval number of shipped and administered doses of BNT162b2 by region¹³ based on data provided in the shipment tracker (b) (4)¹⁴ from 30 April 2021 through 31 May 2021, are summarized in Table 3.

Table 3. Interval Estimated Shipped/Administered Doses of BNT162b2 by Region Worldwide

- a. In this Region BNT162b2 was conditionally approved;
- b. In the UK, both the authorisation for emergency supply under regulation 174 and the conditional marketing authorisation approval are currently active for BNT162b2;
- c. Includes Albania where BNT162b2 was conditionally approved, Serbia where it received authorization for emergency supply, Bosnia and Kosovo where it was shipped for COVAX, North Macedonia where it was shipped for a non-COVAX agreement, and Turkey where it was shipped according to a manufacturing and supply agreement in place by the MAH and the Turkish government;
- d. Includes Azerbaijan, Georgia, Moldova and Ukraine; in these countries BNT162b2 was shipped for COVAX;
- e. In this Region BNT162b2 received authorization for emergency supply;
- f. Includes Chile, Colombia, Costa Rica, Ecuador, El Salvador, Mexico, Panama, and Uruguay where BNT162b2 received authorisation for emergency supply (some doses in Colombia, El Salvador were also shipped for COVAX), Brazil and Peru where BNT162b2 was conditionally approved, and Bolivia where BNT162b2 was shipped for COVAX;
- g. Includes Bahrain, Iraq, Israel, Jordan, Kuwait, Lebanon, Oman, Palestine, Qatar, Saudi Arabia, Singapore, United Arab Emirates where BNT162b2 received authorization for emergency supply, Hong Kong, Malaysia and South Korea where BNT162b2 was conditionally approved (some doses in South Korea were also shipped for COVAX), and Bangladesh, Bhutan, Laos, Mongolia, Pakistan, Philippines where BNT162b2 was shipped for COVAX;
- h. Includes Angola, Botswana, Rwanda and Togo where BNT162b2 was shipped for COVAX, Tunisia where BNT162b2 received authorisation for emergency supply (some doses were also shipped for COVAX), and South Africa where BNT162b2 received authorization for emergency supply.

5.2. Cumulative and Interval Exposure Data in the EU

Estimated shipped doses in the EU-EEA countries may serve as a reasonable indicator of subject exposure in these countries, considering that approximately (b) (4) % of the shipped doses were administered; this estimation is based on the proportion of doses administered out of those shipped upon review of data currently available for the EU⁶ countries.

With these caveats in mind, it is estimated that:

- approximately (b) (4) doses of BNT162b2 were shipped in the EU-EEA countries from the receipt of the first conditional marketing authorisation approval on 21 December 2020 through 31 May 2021, corresponding to 177,677,386 estimated administered doses;
- approximately (b) (4) doses of BNT162b2 were shipped in the EU-EEA countries during the current reporting interval from 30 April 2021 through 31 May 2021, corresponding to 70,422,581 estimated administered doses.

Table 4 provides the estimated interval/cumulative number of shipped doses of BNT162b2 from the receipt of the first conditional marketing authorisation approval through 31 May 2021 for the 27 EU Countries and for the 3 EEA Countries.

Table 4. Interval/Cumulative Estimated Shipped/Administered Doses of BNT162b2 by EU-EEA Countries (30)

6. DATA IN SUMMARY TABULATIONS

6.1. Reference Information

The MedDRA version 24.0 was used to code adverse events/reactions in summary tabulations.

6.2. Cumulative and Interval Summary Tabulations from Post-Marketing Data Sources¹⁵

- [Appendix 2](#) and [Appendix 2.1](#) respectively provide interval and cumulative numbers of case reports (serious and non-serious, medically confirmed and non-medically confirmed) received from post-marketing authorisation data sources,¹⁵ overall, by sex, country, age groups and in special populations, and summary tabulations of events by PT and SOC respectively for the interval and cumulative periods.

The cumulative data include all data up to 31 May 2021 while the interval data are for the period from 30 April 2021 to 31 May 2021.

- [Appendix 2.2](#) provides an interval summary tabulation of case reports with DMEs from post-marketing data sources.¹⁵
- [Appendices 2.3](#) and [2.4](#) provide data stratified by country. In these appendices, spontaneous cases (including regulatory authority and literature cases) are presented separately from non-interventional cases:
 - [Appendix 2.3](#) provides a cumulative and interval summary tabulation of cases by medically confirmed and non-medically confirmed status (fatal, serious and non-serious).
 - [Appendix 2.4](#) provides a cumulative and interval summary tabulation of fatal cases.
- [Appendix 2.5](#) and [Appendix 2.6](#) provide a cumulative and interval summary tabulation of adverse reactions from post-marketing authorisation data sources¹⁵ respectively by PT and by HLT organized according to SOC. Please refer to [Appendix 2.5.1](#)¹⁶ and [Appendix 2.6.1](#)¹⁶ for data per country.

Adverse events totals presented in [Appendix 2](#), [Appendix 2.1](#) and for safety topic evaluations in [Section 9.5](#) may differ from those presented in [Appendix 2.5](#) and [Appendix 2.6](#), due to the

¹⁵ This refers to post-EUA/conditional marketing authorisation approval data sources. Only cases having a complete workflow cycle in the safety database (meaning that they went to Distribution or Closed workflow status at least once) have been included. This approach will prevent the inclusion of cases initially received and not fully processed since cases in early steps of the workflow process may still undergo changes and not accurately reflect final data. Each month, Pfizer applies a Late condition process that retrieves cases received in the reporting period but not included due to lack of completeness; this ensures no cases will be missed for inclusion in monthly reports.

¹⁶ Due to a technical formatting issue, blank pages may be present in this Appendix; the total data are however correctly displayed.

fact that [Appendix 2.5](#) and [Appendix 2.6](#) only display the number of serious and non-serious reactions from spontaneous sources, serious reactions from non-interventional studies and from solicited sources as described above, whereas [Appendix 2](#), [Appendix 2.1](#) and the safety topic evaluations includes all reported events.

[Appendix 2.5.2](#),¹⁶ [Appendix 2.5.3](#)¹⁶ and [Appendix 2.5.4](#)¹⁶ were added to include a cumulative and interval summary tabulation of adverse events from post-authorisation data sources¹⁵ by PT per country, stratified respectively for age, gender and relevant co-morbidities.

Available relevant information with regard to the differences in vaccination prioritization in EU countries,¹⁷ US¹⁸, UK and ROW¹⁹ was taken into account in the evaluation of adverse events trends, clusters or signals.

¹⁷ Overview of the implementation of COVID-19 vaccination strategies and vaccine deployment plans in the EU/EEA. ECDC, February 2021.

¹⁹ WHO Roadmap for Prioritizing Population Groups for Vaccines against COVID-19; ACIP COVID-19 Vaccines Working Group, Phased Allocation of COVID-19 Vaccines (Dec 01, 2020); JCVI updated interim advice on priority groups for COVID-19 vaccination (Sept 25, 2020)

7. MEDICATION ERRORS

Cases potentially indicative of medication errors²⁰ that occurred in the reporting period are summarized below.

- Number of cases: 2394 (5.1% of 47174 cases, the total PM¹⁵ dataset) of which 1487 (62.1%) are medically confirmed, compared to 1258 (4.1%) in the fifth monthly report of which 44.8% were medically confirmed. The increase in medication errors reported during this reporting period in comparison to the previous monthly report is mainly due to an approximate 3.7-fold increase in reported medication errors related to inappropriate administration or scheduling of the second vaccine dose more than 21 days from the first vaccine dose as recommended in the RSI and medication errors related to preparation, temperature excursion and poor quality administration of vaccine. In particular, the increase of medication errors related to preparation, temperature excursion and poor quality administration of vaccine is due to clusters of medication error cases. In the majority of the events reporting inappropriate administration or scheduling of second dose administered, the reasons for administration or scheduling of the dose were not provided.
- Of the 2394 cases, 22 cases were determined to be non-contributory and are not included in the discussion for the following reasons:
 - No indication that the medication error is associated to the vaccine in 7 cases;
 - Reporting information was not consistent for paediatric patients (e.g., height, weight, clinical details, etc. indicative of an adult patient) and did not meet the medication error criteria for product administered to patient of inappropriate age in 1 case;
 - Reporting information was not consistent to meet medication error criteria in 10 cases;
 - Medical inquiries only on dosage regimen of vaccine were reported in 4 cases;

²⁰ MedDRA (version 24.0) Higher Level Terms: Accidental exposures to product; Product administration errors and issues; Product confusion errors and issues; Product dispensing errors and issues; Product label issues; Product monitoring errors and issues; Product preparation errors and issues; Product selection errors and issues; Product storage errors and issues in the product use system; Product transcribing errors and communication issues, OR Preferred Terms: Accidental poisoning; Circumstance or information capable of leading to device use error; Circumstance or information capable of leading to medication error; Contraindicated device used; Deprescribing error; Device use error; Dose calculation error; Drug titration error; Expired device used; Exposure via direct contact; Exposure via eye contact; Exposure via mucosa; Exposure via skin contact; Failure of child resistant product closure; Inadequate aseptic technique in use of product; Incorrect disposal of product; Intercepted medication error; Intercepted product prescribing error; Medication error; Multiple use of single-use product; Product advertising issue; Product distribution issue; Product prescribing error; Product prescribing issue; Product substitution error; Product temperature excursion issue; Product use in unapproved therapeutic environment; Radiation underdose; Underdose; Unintentional medical device removal; Unintentional use for unapproved indication; Vaccination error; Wrong device used; Wrong dosage form; Wrong dosage formulation; Wrong dose; Wrong drug; Wrong patient; Wrong product procured; Wrong product stored; Wrong rate; Wrong route; Wrong schedule; Wrong strength; Wrong technique in device usage process; Wrong technique in product usage process.

- Number of relevant medication error cases: 2372
Number of relevant events: 3090.
- Number of medication errors by country:
 - There were 599 cases describing medication errors that occurred in the EU/EEA countries [France (233), Germany (94), Belgium (79), Italy (44), Romania and Spain (25 each), Portugal (15), Poland (13), Ireland (12), Sweden (11), Netherlands and Norway (9 each), Finland (7), Austria (6), Denmark and Greece (4 each), Czech Republic (3), Hungary (2), Croatia, Latvia, Liechtenstein and Malta (1 each).
 - There were 1773 cases with medication errors from non-EU/EEA countries [US (1083), UK (595), Mexico (25), Japan (15), Israel (12), Canada and Panama (9 each), Switzerland (6), Brazil (4), Chile, Saudi Arabia and Turkey (2 each), Australia, Colombia, Georgia, Jordan, New Zealand, Puerto Rico, Serbia, Singapore, United Arab Emirates (1 each).

In some instances, clusters of medication errors were reported, generally by HCPs, suggesting that rather than a systematic issue worldwide, these errors were repeated mistakes at certain vaccination centres:

- In the EU/EEA region there were 5 clusters, the largest reported cluster was received from France [(93 cases, 44 cases, and 20 cases (3 clusters))].
- In non-EU/EEA countries there were 10 clusters, the largest reported clusters were received from the US [309 cases, 47 cases, and 19 cases (3 clusters)].
- Medication error PTs in the EU/EEA and non-EU/EEA countries:²¹
 - In the EU/EEA countries, a total of 914 PTs indicative of medication errors were reported; those events reported at least thrice included: Poor quality product administered (233), Incorrect route of product administration (166), Product temperature excursion issue (164), Wrong technique in product usage process (87), Inappropriate schedule of product administration (80), Product preparation error (44), Underdose (27), Incorrect dose administered (22), Product preparation issue (19), Product storage error (16), Wrong product administered (13), Product administered at inappropriate site (10), Product administration error (8), Incomplete course of vaccination (6), Accidental exposure to product (4), Accidental overdose (3).²²

²¹ As per EMA assessment received on the first SMSR, the MAH was requested to keep medication errors under close scrutiny especially within the EU and discuss whether the current product information is sufficiently clear or whether there is room for improvement. The Rapporteurs should be notified immediately in case of unexpected findings or trends.

²² The PTs reported less than 3 times included: Exposure via skin contact and Extra dose administered (2 each), Booster dose missed, Circumstance or information capable of leading to medication error,

- In non-EU/EEA countries, a total of 2176 medication errors were reported; those events reported at least thrice included: Inappropriate schedule of product administration (743), Product preparation issue (358), Poor quality product administered (299), Product temperature excursion issue (145), Product storage error (96), Product preparation error (73), Underdose (63), Circumstance or information capable of leading to medication error and Incorrect route of product administration (52), Wrong product administered (45), Incorrect dose administered (38), Wrong technique in product usage process (36), Product dose omission issue (35), Expired product administered (31), Product administered at inappropriate site (28), Product administered to patient of inappropriate age (22), Accidental overdose (14), Product administration error (13), Accidental exposure to product (7), Exposure via skin contact (5), Medication error and Vaccination error (4 each).
- Medication errors by seriousness:
 - Serious (62 events of medication error):
 - Of these serious events of medication error, 26 serious medication errors²³ accompanied by clinical AEs were reported in EU/EEA countries [Romania (16), Ireland, Italy and Norway, (2 each), France, Germany, Hungary and Sweden (1 each)];
 - Seriousness criteria were medically significant events (19 events), Hospitalization (4 events), Disability (1 event), Fatal and Hospitalization²⁴ (1 event), Life-threatening and Disability (1 event each);
 - Of note, more than 1 serious criteria applied to 1 event;
 - All but 5 events were medically confirmed.
 - Non-serious (3028 events of medication error).

Please see the *Medication errors associated with harm* and *Medication errors without Harm* sections below for further details on co-reported AEs in cases involving serious medication error.

Contraindicated product administered, Expired product administered, Product administered to patient of inappropriate age, Product dose omission issue, Product prescribing error, Vaccination error (1 each).

²³ PTs Incorrect route of product administration (17), Incomplete course of vaccination and Incorrect dose administered (2 each), Accidental overdose, Extra dose administered, Product administered at inappropriate site, Product preparation error and Vaccination error (1 each).

²⁴ Upon review the fatal medication error did not lead to harm.

Medication Errors Harm Analysis

Among the medication error cases, the following scenarios, categorized according to the EMA guidance “Good practice guide on recording, coding, reporting and assessment of medication errors” (EMA/762563/2014) were described:

- Medication errors associated with harm [i.e., resulting in adverse reaction(s)] were reported in 23 cases (1 % of relevant medication error cases) compared to 34 cases (2.8%) in the fifth SMSR;
- Medication errors without harm [i.e. not resulting in adverse reaction(s)]²⁵ were reported in 2343 cases (98.8% of relevant medication error cases), of which 990 cases involved co-reported AEs, compared to 1157 cases (94.0%), of which 652 included co-reported AEs, in the fifth SMSR;
- Potential medication errors were reported in 6 cases (0.3% of relevant medication error cases) compared to 46 cases (3.7%) in the fifth SMSR.
- Similar to the fifth SMSR, intercepted medication errors were not reported during the reporting interval.

Of note, some cases involved more than one medication error.

Medication errors associated with harm (25 medication errors in 23 cases)

There were 18 cases from the EU/EEA area [Romania (15)²⁶, Germany, Hungary, and Italy (1 each)] and 5 from non-EU/EEA countries [US and UK (2 each), and Mexico (1)].

Serious medication errors

In 19 cases (involving 19 medication error events), serious medication errors potentially contributed to the occurrence of SAEs.

- Fifteen (15)²⁶ out of these 19 cases reported bradycardia and vasovagal syncope, occurred about 1 minute and 7-10 minutes respectively, after receiving the vaccine in patients of unspecified age and gender. The physician suspected these SAEs occurred due to the penetration into the vascular bed of the needle (PT: Incorrect route of product administration). The patients recovered from vasovagal syncope.
- A male patient of unspecified age received a third dose of vaccine 21 days after the previous one (PT: Incorrect dose administered) since some vials containing only saline were found at the hospital. It was unknown if the patient had previously received only saline. The patient experienced Pyrexia (40 °C) and Atrial fibrillation due to which he

²⁵ AEs may be co-reported in a case, but they are not considered to be a result of the medication error.

²⁶ These cases originated from a single cluster reported by the same HCP in Romania.

was hospitalized for four days. Treatment consisted of furosemide. Clinical outcomes for all events were unknown at the time of the report.

- A female patient of unspecified age experienced yellowish and greenish spots near the injection site after the needle had reached a blood vessel (PT: Incorrect route of product administration). Additionally, she had arm pain and pain in extremity (both considered non-serious). Following a medical examination, the patient was told that the needle may have reached a blood vessel. The events were not resolved.
- Following a vaccine application error (PT: Wrong technique in product usage process), a 67-year-old male patient experienced Injection bleeding, Chills and Nasal obstruction. The subject underwent hydrocortisone and recovered from Nasal obstruction. The outcome of the other events was unknown.
- Medication error, muscle and shoulder pain, bruise and allergic reaction were reported in a 64-year-old male patient with a medical history of penicillin and creosote allergies. The events were assessed as serious (disability). Muscle and shoulder pain were not resolved, and clinical outcomes for the other events were unknown at the time of the report.

Non-serious medication errors

In 4 cases (involving 6²⁷ medication error events), non-serious medication errors potentially contributed to the occurrence of non-serious AEs.

Errors in the route of administration (3 events, 3 cases)

- This error occurred in 2 cases from the EU/EEA area [Germany and Italy (1 each)] and in 1 case from non-EU/EEA country [UK (1)]. The vaccine was administered intravenously, cutaneously (1 each) in the first two cases. Local vaccination site reactions included Vaccination site swelling and Pain, Vaccination site oedema, Skin reaction and Vaccination site erythema (1 each). In addition, the third case reported an administration of vaccine into soft tissue (1), which led to an incomplete dose administered and Vaccination site pain.

Incorrect dilution (2 events, 1 case)

- These errors occurred in 1 case non-EU/EEA country US [(1)]. A pharmacist accidentally administered 6 shots of 0.3 mL undiluted vaccine to a 12-year-old female patient. The patient experienced Pain in extremity, Vomiting, Diarrhoea, Skin discolouration, Pyrexia, Chills, Nausea, Faeces discoloured, Illness. All events were considered non-serious.

²⁷ Upon review medication error PT "Vaccination error" was not considered, as the event "given into soft tissue" was already coded to the more specific PT "Incorrect route of product administration".

Medication errors without harm (3059 medication errors in 2343 cases)

These medication error PTs describe errors occurring during 1 or more steps of the vaccination process: preparation, administration, or scheduling of second dose.

Overall, there were:

- 581 cases from the EU/EEA area: France (233), Germany (93), Belgium (79), Italy (43), Spain (25), Portugal (15), Poland (13), Ireland (12), Sweden (11), Romania (10), Netherlands and Norway (9 each), Finland (7), Austria (6), Denmark and Greece (4 each), Czech Republic (3), Croatia, Hungary, Latvia, Liechtenstein and Malta (1 each).
- 1762 cases from non-EU/EEA countries: US (1075), UK (593), Mexico (24), Japan (15), Israel (12), Canada and Panama (9 each), Switzerland (6), Brazil (4), Chile, Saudi Arabia and Turkey (2 each), and Australia, Colombia, Georgia, Jordan, New Zealand, Puerto Rico, Serbia, Singapore and United Arab Emirates (1 each).

Vaccine preparation errors (1107 events): Events mainly described errors during dilution and temperature excursion issue.

- *Incorrect dilution (455 events):* In the vast majority of cases an improper dilution of vaccine was performed affecting the vaccine preparation. These errors involved more steps of dilution process: dilution with different solvents, use of a larger or smaller volume of diluent or resuspension with normal saline.
- *Temperature excursion (423 events):* These events reported incorrect temperature excursion errors during the preparation of vaccine not compliant with recommendations of RSI.
- *Other preparation errors (229 events):* In majority of the events, there are preparation issues with needle/syringe (91 events), vaccine doses prepared with other dilution technique (87 events), unspecified dosing errors (11 events) and problems of non-inverting vials (7 events). In addition, there were 4 events reported a preparation with expired vaccine, 26 events of other unspecified preparation issues and 3 events of preparation error underdose.

Vaccine administration errors (1795 events): Events mainly described errors in administering the second dose outside the recommended 21 days after the first dose per the RSI, errors in route of administration, errors in administration of vaccine dose not adequately prepared, errors in administration technique, errors in the volume or dosage of the vaccine administered, errors of vaccination at the wrong anatomical site.

- *Incorrect interval between doses (683 events):* Errors included second dose administration more than 21 days after the first dose (226 events), second dose administration less than 21 days after the first dose (52 events), and unspecified errors with the administration date of the second dose (405 events).

- *Errors in the route of administration (198 events)*: The route of administration for the vaccine was unspecified (other than intramuscular) in 82 events, subcutaneous (72 events), intravenous (23 events), intradermal/cutaneous (9 events), parenteral without any further detail and auricular (3 events each), oral (2 events), intra-articular, intra-amniotic, intra-meningeal and intra-ocular (1 event each).
- *Administration after inadequate preparation (467 events)*: These events referred to vaccine administered after inadequate preparation. There were: vaccines administered after temperature excursion (406 events), doses with particles issue (17 events) or colour issue (3 events). Additionally, 41 events reported other unspecified inadequate preparation errors.
- *Errors in administration technique (6 events)*: Errors included other unspecified administration technique errors (3 events), use of an incorrect needle/syringe (2 events), injury to blood vessel (1 event).
- *Errors in the volume administered (123 events)*: Errors included smaller volume administered (118 events), administration of partial doses due to syringe needle malfunction (3 events), higher volume administered (2 events).
- *Errors in vaccine dosage (79 events)*: These errors involved 2 vaccine doses administered on the same day and unspecified improper dilution errors (15 events each), 3 doses administered (12 events), dilution before use not performed (8 events), administration of entire vials (4 events), 3 events of dose larger than usual, administration of second dose date issue (1 event) and unspecified dosage errors (21 events).
- *Vaccination site other than deltoid muscle (41 events)*: The vaccine was administered at a site other than deltoid muscle (24 events), leg (9 events), thigh (4 events), forearm, gluteus muscle, shoulder and wrist (1 event each).
- *Wrong vaccine other than recommended in the RSI administered (62 events)*: Vaccinees received 1 dose of BioNTech-Pfizer vaccine and 1 dose of the Moderna vaccine (27 events), 1 dose of BioNTech-Pfizer vaccine and 1 dose of AstraZeneca vaccine (17 events) and wrong unspecified vaccines (18 events).
- *Use in unauthorized individuals (26 events)*: The vaccine was inadvertently administered to paediatric individuals below 16 years of age²⁸ (24 events), and patients with medical history of allergy (2 events).
- *Accidental exposure to vaccine (19 events)*: These errors involved exposure to the skin (17 events) and eye (2 events).

²⁸ Before the authorisation of vaccine use in individuals 12 years – 15 years or from countries in which the vaccine was not authorized yet below 16 years of age.

- *Dose of vaccine not administered (50 events)*: Errors included second dose of BioNTech-Pfizer vaccine not administered (49), missing administration of dose (1).
- *Other vaccine administration errors (41 events)*: Errors mainly included administration of expired vaccine²⁹ (33 events), the use of concomitant drugs (3 events) or concomitant vaccine (1 event). In addition, there were other unspecified dosage administration error (2 events), underdose due to syringe leakage and administration of third dose of vaccine (1 event each).

Vaccine scheduling errors (144 events): Events mainly described errors involving scheduled second dose vaccinations outside the recommended 21 days after the first dose.

- *Incorrect interval between doses (47 events)*: The second dose was scheduled more than 21 days after the first dose (24 events), and the second dose of the vaccine was scheduled less than 21 days after the first dose (3 events). Second dose was not administered (15 events) and there were errors in scheduling second dose administration date (5 events).
- *Other scheduling errors (97 events)*: The vaccinee cancelled or missed their appointment (3 events), there was Conflicting appointment / procedure with scheduled vaccination date (4 events), no scheduled appointment for the second dose (3 events), the second dose was not available due to a supply issue and second dose appointment cancelled by site (2 events each). Second dose of vaccine was not administered (4 events) and 79 events reported other unspecified scheduling errors.

Other medication errors (13 events): Events described patient resistance for second dose (3 events), patient question on scheduling and patient question on treatment/procedure (2 events each), question on counterfeit product, dosing, unspecified patient question (1 event each). In addition, there were HCP question, medication errors reported and details unknown (PT Medication Error) and patient was unable to get the appointment (1 event each).

Potential medication errors (6 medication errors in 6 cases, all non-serious)

There were 6 cases from non-EU/EEA countries (all from US).

- *Potential interaction error with drugs or patient's condition (4 events)*: Events mainly described potential errors due to possible interaction with patient condition and with product co-administered (2 events each).
- *Other potential errors (2 events)*: Events mainly described patient questions around scheduling.

²⁹ Vaccine was administered after an incorrect handling/storage.

Some medication errors are expected to occur despite written instructions and educational activities for HCPs administering the vaccine. The number and seriousness of the reported medication errors do not indicate a need for additional mitigation activity.

8. GENERAL OVERVIEW

A total of 47,174 case reports (26,272 medically confirmed and 20,902 non-medically confirmed) containing 174,446 events fulfilled criteria for inclusion in this SMSR. Refer to [Appendix 2](#) for the summary tabulations of all cases received during the current reporting period.

PRESENTATION OF CASE CHARACTERISTICS

Table 7. General Overview: Selected Characteristics of All Cases Received During the Reporting Interval

Characteristics		Relevant cases (N=47174)
Gender:	Female	32751
	Male	11506
	No Data	2917
Age range: 1 month -105 years Mean = 51 years Median = 49 years n = 39610	≤ 17	327 ^a
	18-30	5777
	31-50	14682
	51-64	8817
	65-74	4702
	≥ 75	5465
	Unknown	7391 ^b
Case outcome:	Resolved/Resolving	21669
	Resolved with sequelae	546
	Not resolved at the time of report	11840
	Fatal	971
	Unknown	12148
Presence of comorbidities	Yes	8621 ^c
	No	38553

a. Including 13 cases for which a paediatric age was initially reported but that they re-evaluated as not consistent with this age upon review, 1 paediatric case invalidated after DLP as duplicate case of an invalid case (see [Table 14](#), *Use in Paediatric Individuals <12 Years of Age*) and 86 breastfed babies for which paediatric age was reported;

b. Including 42 breastfed babies for whom age was not reported;

c. Cases retrieved applying the criteria in place to identify the reports involving the special populations of Immunocompromised patients, Patients with autoimmune or inflammatory disorders, Frail patients with comorbidities (e.g. COPD, diabetes, chronic neurological disease, cardiovascular disorders, active tuberculosis) described as Missing Information in [Table 14](#).

Case outcome by age group, gender and presence of relevant comorbidities is presented in [Figure 1](#), [Figure 2](#) and [Figure 3](#). Across all age groups, there were more females than males reporting adverse events. Overall, the proportion of cases with fatal outcome is higher when relevant comorbidities are reported ([Figure 1](#)). Among the cases with a fatal outcome, there is a similar pattern for gender both in presence or in absence of relevant comorbidities ([Figure 2-A](#)). Keeping in consideration the age group ([Figure 2-B](#)), when the age was known, there are no differences in the proportion of cases with a fatal outcome, with the

highest number of cases in individuals aged 75 years and older, either in presence or absence of relevant comorbidities (please also see *Death* in [Table 13](#) and *Frail patients with co-morbidities e.g. COPD, diabetes, chronic neurological disease, cardiovascular disorders, active tuberculosis*, described as Missing Information in [Table 14](#)).

ADVERSE EVENT DATA

As shown in Figure 4, the MedDRA SOC containing the greatest number of events ($\geq 2\%$) were General disorders and administration site conditions (52,360), Nervous system disorders (28,466), Musculoskeletal and connective tissue disorders (18,998), Gastrointestinal disorders (13,472), Skin and subcutaneous tissue disorders (11,416), Respiratory, thoracic and mediastinal disorders (9491), Injury, poisoning and procedural complications (6082), Infections and infestations (5772), Vascular disorders (4032), Investigations (4204), Cardiac disorders (3713). Of note, multiple adverse events may be reported in a single case.

Figure 4. General Overview: Total Number of Events by MedDRA SOC and Event Seriousness

The overall safety evaluation includes a review of the most frequently reported events by SOC and by the PT for events reported in ($\geq 2\%$) of all cases during the reporting interval as compared to the cumulative period since the first temporary authorisation for emergency supply on 01 December 2020.

Table 8. Events Reported in $\geq 2\%$ * Cases

	30 April 2021 Through 31 May 2021	Cumulatively Through 31 May 2021

Total number of events	95889	349186

a. Listed or consistent with listed AEs in current RSI;

b. Listed per case processing conventions, except for fatal cases; for discussion of relevant cases of Drug ineffective/COVID-19 see Table 13, *Lack of Efficacy* subsection;

c. Consistent with anaphylactic reactions listed in the current RSI;

* Reporting proportion (% of total cases) in the current reporting period.

Most of the frequently reported events are listed or consistent with listed events as per the current RSI.

During the reporting interval, the distribution of the events reported in more than 2% of the cases by gender is presented in [Figure 5](#). The observed imbalance in the female gender distribution reflects the imbalance in the gender distribution of the cases received in the reporting period.

The distribution of the AEs reported in more than 2% of the cases by age group and by SOC is shown in [Figure 6](#) and [Figure 7](#). Across the SOC, the largest number of events is reported overall in the 31-50 years age group, except for the events included in the SOC Infection and infestations, COVID-19 and Herpes zoster, for which the largest number of occurrences is reported in the 75 years and older group (when the age was known).

9. SIGNAL AND RISK EVALUATION

9.1. Literature Review

Please refer to [Appendix 6](#) for a summary description of the interval literature review that is performed for the purpose of signal detection. There were no literature articles identifying new safety topics or signals for BNT162b2 during the reporting period.

9.2. Overview of Safety Topics and Signals During the Reporting Interval

Safety topics and Signals addressed during the reporting interval are presented below in Table 9.

Table 9. Overview of Safety Topics and Signals

Signal/Safety Topic	Status	Category
Appendicitis	Signal Closed	No Risk
Dizziness	Signal Closed	No Risk ^a
Myocarditis and Pericarditis	Signal Ongoing	Under evaluation
Abnormal behaviour/Mental disorder	Safety Topic Closed	No Validated Signal
Acquired hemophilia	Safety Topic Closed	No Validated Signal
Acute disseminated encephalomyelitis	Safety Topic Closed	No Validated Signal
Acute pancreatitis	Safety Topic Closed	No Validated Signal
Guillain-Barré syndrome	Safety Topic Closed	No Validated Signal
Menstrual cycle abnormalities	Safety Topic Closed	No Validated Signal
Transverse myelitis	Safety Topic Closed	No Validated Signal

a. The available information supports dizziness associated with the vaccination process (i.e. stress-related response) but not a causal association with the vaccine itself.

[Appendix 3](#) provides a summary of the safety topics and signals addressed during the reporting interval and [Appendix 3.1](#) an evaluation of these safety topics and signals.

As per EMA PRAC assessment report (Product No. EMEA/H/C/005735/MEA/002.3) received on the fourth SMSR, the following cumulative overview was performed for:

Appendicitis ([Appendix 3.2](#)).

As per EMA PRAC assessment report (Product No. EMEA/H/C/005735/MEA/002.4) received on the fifth SMSR, the following cumulative overviews were performed for:

ADEM ([Appendix 3.3](#));

Hepatic events ([Appendix 3.4](#));

TTS ([Appendix 3.5](#)).

As per requests received from different HAs, the following cumulative overview were performed for:

Transverse myelitis ([Appendix 3.6](#));

Dizziness ([Appendix 3.7](#));

GBS ([Appendix 3.8](#));

Myocarditis and Pericarditis ([Appendix 3.9](#)).

9.3. Summary of Safety Concerns

Table 10 summarises the comprehensive list of important risks and missing information reflected in risk management and pharmacovigilance plans globally for BNT162b2 at the beginning of the reporting period. The pharmacovigilance and risk management activities implemented for the safety concerns by Pfizer on behalf of BioNTech are global.

Table 10. Safety Concerns

Important Identified Risk	Anaphylaxis ^a
Important Potential Risk	Vaccine-Associated Enhanced Disease (VAED), Including Vaccine-Associated Enhanced Respiratory Disease (VAERD) ^a
Missing Information	Use in Pregnancy and While Breast Feeding ^a
	Use in Immunocompromised Patients ^b
	Use in Frail Patients With Co-Morbidities (e.g. COPD, Diabetes, Chronic Neurological Disease, Cardiovascular disorders, Active tuberculosis) ^{b,d}
	Use in Patients With Autoimmune or Inflammatory Disorders ^b
	Interaction With Other Vaccines ^b
	Long-Term Safety Data ^b
	Use in Paediatric Individuals <12 Years of Age ^c
	Vaccine Effectiveness ^{c,e}

Table 10. Safety Concerns

- a. As per both the EU RMP Version 1.1, approved on 15 April 2021 and the US PVP Version 0.4, dated 08 April 2021;
- b. As per the EU RMP Version 1.1, approved on 15 April 2021;
- c. As per the US PVP Version 0.4, dated 08 April 2021;
- d. As per the South Africa RMP, Version 1.0, dated 24 March 2021, active tuberculosis is included as an additional co-morbidity;
- e. As per the South Africa RMP, Version 1.0, dated 24 March 2021, this safety concern is stated as “Vaccine effectiveness against novel variant(s) in South Africa”. For vaccine effectiveness against novel variant(s) in South Africa, in the Lack of Efficacy Section ([Section 9.5.3](#)) it will be reviewed whether any reports and/or virological analysis of variant type on any breakthrough infection is reported among the relevant cases.

9.4. Summary of Adverse Events of Special Interest (AESIs)

The company’s AESI list takes into consideration the lists of AESIs from the following expert groups and regulatory authorities: Brighton Collaboration (SPEAC), ACCESS protocol, US CDC (preliminary list of AESI for VAERS surveillance), MHRA (unpublished guideline).

The AESI terms are incorporated into a TME list and include events of interest due to their association with severe COVID-19 and events of interest for vaccines in general.

The AESI list includes MedDRA PTs, HLTs, HLGTs or MedDRA SMQs and can be changed as appropriate based on the evolving safety profile of the vaccine.

Please refer to [Appendix 5](#) for the list of the company’s AESIs (TME List) for BNT162b2. Please refer to [Appendix 5.1](#) for the observed versus expected analysis for AESIs.

9.5. Evaluation of Safety Concerns

Evaluation of new information collected from post-marketing data sources¹⁵ for BNT162b2 during the interval reporting period for important identified and important potential risks, AESIs, special situations and missing information is provided below in [Section 9.5.1](#), [Section 9.5.2](#), [Section 9.5.3](#) and [Section 9.5.4](#).

9.5.1. Evaluation of Important Identified and Important Potential Risks

[Table 11](#) below presents the evaluation of new information received during the interval reporting period from post-marketing data sources¹⁵ for the important identified and important potential risks of BNT162b2.

Table 11. Risks Evaluation for BNT162b2

Safety Risk	Post-Marketing ^a Cases Evaluation Total Number of Cases in the Reporting Period (N=47174)
Important Identified Risk	
<p>Anaphylaxis^b</p> <p><i>Search criteria:</i>³⁰ PTs <i>Anaphylactic reaction, Anaphylactic shock, Anaphylactoid reaction, Anaphylactoid shock</i></p>	<p>Number of cases by searching the relevant PTs³⁰ 745 (1.6% compared to 4.7% of the total PM dataset of the previous SMSR) of which 648 were medically confirmed and 97 were non-medically confirmed.</p> <ul style="list-style-type: none"> Number of events: 2942 (of which 760 were PTs of interest); Country of incidence (>2%): Japan (459), UK (48), US (45), Germany and Australia (26 each), Norway (20), France (17) and Italy (16); Subjects' gender: female (624), male (90) and unknown (31); Subjects' age (n = 673): ranged from 1 year (1 subject) to 96 years (mean = 44.2 years, median = 44 years); Medical history (n=450): the most frequently (≥2%) reported medical conditions included Asthma (113), Food allergy (95), Drug hypersensitivity (56), Hypertension (45), Seasonal allergy (41), Hypersensitivity (36) and Anaphylactic reaction (27). Number of vaccine doses administered at the time of the event onset: 1 dose in 484 cases, 2 doses in 166 cases and number of doses was not specified in 95 cases. Time to event onset: <ul style="list-style-type: none"> Same day: 602 cases (305 within 15 minutes). 1 day: 25 cases 2-3-4 days: 10 cases 10-13-21 days: 5 cases 46 days: 1 case Not specified (102 cases) Most frequently reported individual PTs (≥2%): Anaphylactic reaction (672), Dyspnoea (110), Nausea (78), Anaphylactic shock (74), Cough (72), Pruritus (63), Erythema (60), Headache (57), Blood pressure increased (50), Malaise and Oropharyngeal discomfort (49 each), Feeling abnormal and Pyrexia (47 each), Dizziness and Rash (45 each), Tachycardia (44), Vomiting (42), Urticaria (40), Throat tightness (36), Palpitations (34), Heart rate increased (27), Hypoaesthesia (26), Chest discomfort (25), Chills and Oxygen saturation decreased (23), Hypersensitivity (22), Swollen tongue (21), Paraesthesia and Paraesthesia oral (20 each), Lip swelling and Tremor (19 each), Abdominal pain, Asthma, Dysphonia and Fatigue (17 each), Hypotension (16), Blood pressure

³⁰ Updated search criteria starting from the present SMSR (see 5th Monthly Safety Update preliminary PRAC Assessment Report; EMEA/H/C/005735/MEA/002.4). Previously, cases were retrieved by using the Anaphylactic reaction SMQ (Narrow and Broad, with the algorithm applied) selecting relevant cases according to Brighton Collaboration criteria.

Table 11. Risks Evaluation for BNT162b2

Safety Risk	Post-Marketing ^a Cases Evaluation Total Number of Cases in the Reporting Period (N=47174)
	<p>decreased, Flushing, Pallor, Pharyngeal swelling, Swelling face, Throat irritation and Wheezing (15 each).</p> <ul style="list-style-type: none"> • Relevant event seriousness: serious (759), non-serious (1); • Relevant event outcome:³¹ fatal (6), resolved/resolving (579), resolved with sequelae (13), not resolved (32), unknown (132). <p><u>Fatal cases: 5</u></p> <ul style="list-style-type: none"> • <u>Country: Ireland</u> The case involved an 82- year-old female patient suffering from several cardiac and respiratory comorbidities (Aortic valve replacement, Atrial fibrillation, Chronic obstructive pulmonary disease and Rheumatic heart disease). The patient experienced malaise and cardiopulmonary arrest about 7 hours after receiving the 2nd vaccine dose (Lot Number: EW8904). The patient was transferred to the hospital where reported hypoxic brain damage and died. The fatal event Cardio-respiratory arrest was judged a delayed Anaphylactoid reaction to the vaccine by the treating physician. All the events reported a fatal outcome (Anaphylactoid reaction, Cardio-respiratory arrest, Brain injury and Malaise). It was not reported if an autopsy was performed. • <u>Country: UK</u> The case described a 96-year-old male patient who died due to Anaphylactic reaction occurrence, 15 minutes after receiving the 1st vaccine dose (Lot number: EJ0724). The nature of the fatal event is still under evaluation. It was not reported if an autopsy was performed. • <u>Country: Sweden</u> The case involved a 55-year-old female patient who experienced first signs of Anaphylactic reaction 5 minutes after receiving the 1st vaccine dose (Lot number: EX6537) associated with Anaphylactic shock. Despite treatments with epinephrine and iv fluids the patient died. Both the events reported a fatal outcome. • <u>Country: Japan</u> The case described a 91-year-old female patient with a medical history of Cardiac failure chronic, Myocardial infarction (3 years before) and Dementia Alzheimer's type.

³¹ Multiple episodes of the same PT event were reported with a different clinical outcome within some cases hence the sum of the events outcome exceeds the total number of PT events.

Table 11. Risks Evaluation for BNT162b2

Safety Risk	Post-Marketing ^a Cases Evaluation Total Number of Cases in the Reporting Period (N=47174)
	<p>Two (2) hours and 15 minutes after receiving the 1st vaccine dose (Lot number: ET9096), the patient experienced Cardio-respiratory arrest and Apnoea. She was intubated and despite cardiac message and mechanical ventilation she died 4 hours and 25 minutes after receiving the vaccine. The reporting physician considered the baseline condition of the patient relevant to the event's onset but did not exclude that an anaphylactic reaction to the vaccine could have caused the sudden cardio-pulmonary arrest (although skin and mucosal manifestation of anaphylaxis were not confirmed). All the reported events had a fatal outcome (Cardio-respiratory arrest, Apnoea and Anaphylactic reaction). It was unknown if an autopsy was performed.</p> <ul style="list-style-type: none"> Country: US The case described a 60-year-old male patient suffering from an unspecified hypersensitivity who died due to Anaphylactic reaction following vaccine administration (number dose was not specified). No further information was available at the time of the report. <p>Discussion</p> <p>Anaphylaxis is an adverse reaction in Section 4.8 of the EU SmPC, in the CDS and local labels/fact sheets. It is also included as an Important identified risk in the EU RMP and in the US PVP. Based upon review of the available information, no additional change to the RSI is warranted at this time. Based on the assessment report for the post-authorisation measure LEG-022.1 for the 'cumulative review anaphylaxis' (EMA/PRAC/181346/2021), no amendment of the current labeling is warranted.</p> <p>Conclusion: Evaluation of Anaphylaxis cases did not reveal any significant new safety information. Anaphylaxis is appropriately described in the product labeling as are non-anaphylactic hypersensitivity events. Surveillance will continue.</p>
Important Potential Risk	
Vaccine-Associated Enhanced Disease (VAED) Including Vaccine-Associated Enhanced Respiratory Disease (VAERD) ^{b,c}	<p>VAED is a modified and/or severe presentation of an infectious disease affecting individuals exposed to the wild-type pathogen after having received vaccine designed to prevent infection.³²</p> <p>As noted by the Brighton Collaboration, there is currently no uniformly accepted definition of VAED (or VAERD) and the BC</p>

³² Flor M Munoz, et al. Vaccine-associated Enhanced Disease: Case Definition and Guidelines for Data Collection, Analysis, and Presentation of Immunization Safety Data. Brighton Collaboration. September 2020, Vaccine Journal Draft Manuscript.

Table 11. Risks Evaluation for BNT162b2

Safety Risk	Post-Marketing ^a Cases Evaluation Total Number of Cases in the Reporting Period (N=47174)
	<p>working group considers that a definitive case of VAED (Level 1 diagnostic certainty) cannot be ascertained with current knowledge of the mechanisms of pathogenesis of the condition; they have provided guidance on levels of diagnostic certainty of VAED cases based on various laboratory and clinical findings.</p> <p>No post-authorized AE reports have been identified as cases of VAED/VAERD, therefore, there is no observed data at this time. An expected rate of VAED is difficult to establish so a meaningful observed/expected analysis cannot be conducted at this point based on available data. The feasibility of conducting such an analysis will be re-evaluated on an ongoing basis as data on the virus grows and the vaccine safety data continues to accrue.</p> <p>The search criteria utilised to identify potential cases of VAED/VAERD for this SMSR include the PTs Vaccine associated enhanced disease and Vaccine associated enhanced respiratory disease³³ or other PTs indicating a lack of effect of the vaccine and medical disorders chosen because they are PTs potentially indicative of severe or atypical COVID-19.</p> <p>Overview</p> <ul style="list-style-type: none"> • Number of cases based on search strategy: 151³⁴ (0.3% of the total PM dataset, compared to 0.4% in the previous reporting period), all serious (of which 119 are medically confirmed). • Country of incidence: France (38), US (18), Italy (15), Austria (13), Hungary (12), Spain (7), Germany (6), Czech Republic, Norway, UK (4 each), Mexico (3); the remaining 27 cases originated from 18 different countries. • Gender: female (76), male (74), unknown (1). • Age: 17 to 100 years (n = 140), mean = 71.2 years, median = 77.0 years. • Respiratory system PTs: COVID-19 pneumonia (49), Dyspnoea (46), Respiratory failure (14), Acute respiratory distress syndrome, Hypoxia (4 each), and Tachypnoea (3) • Gastrointestinal/Hepatic system PTs: Diarrhoea (31), Vomiting (9), and Abdominal pain (6) • Cardiovascular system PTs: Cardiac failure (6), Arrhythmia (3), Acute myocardial infarction and Cardiogenic shock (1 each) • Vascular system PTs: Pulmonary embolism (6), Deep vein thrombosis (2), and Peripheral ischaemia (1)

³³ New PTs introduced with MedDRA version 24.0.

³⁴ Note: 3 additional cases retrieved with this search strategy were excluded from the discussion for the following reasons: 2 cases, where the PT Drug ineffective was coded, reported that the patients developed SARS-CoV-2 infection during the early days from the first dose (days 1 – 13); the vaccine has not had sufficient time to stimulate the immune system and, consequently, the development of a vaccine preventable disease during this time is not considered a potential lack of effect of the vaccine; in 1 case the PT Therapeutic product effect decreased did not refer to BNT162b2 vaccine.

Table 11. Risks Evaluation for BNT162b2

Safety Risk	Post-Marketing ^a Cases Evaluation Total Number of Cases in the Reporting Period (N=47174)
	<ul style="list-style-type: none"> Haematological system PTs: Thrombocytopenia (8) Renal system PTs: Acute kidney injury (6) and Renal failure (2) Neurological system PTs: Altered state of consciousness (3) Cerebrovascular accident, and Meningitis (1 each) Other systems, relevant PTs: Multiple organ dysfunction syndrome (4) Case outcome: resolved/resolving (54), resolved with sequelae (1), not resolved (33), unknown (20), and fatal (43). <p>COVID-19 positivity and severity of events</p> <ul style="list-style-type: none"> Suspected COVID-19 infection: 11 (no information on confirmatory tests performed or test negative). Confirmed COVID-19 infection: 140 (test positive or implied COVID-19 infection). Seriousness criteria for the total 151 cases: <ul style="list-style-type: none"> Medically significant: 60 (of which 1 serious also for disability) Hospitalisation required (non-fatal/non-life threatening): 40 Life threatening: 8 (of which 1 serious also for disability) Death: 43 <p>Seriousness criteria: medically significant (60)</p> <ul style="list-style-type: none"> In 52 out of 60 cases where the seriousness criterion was “medically significant”, the subjects had a confirmed COVID-19 infection after vaccination, while 8 subjects had unconfirmed suspected COVID-19 infection. These 60 subjects did not require hospitalisation. In the 52 confirmed COVID-19 cases, subjects’ age ranged from 27 to 99 years (n = 44), Mean = 56.5 years, Median = 51.0 years. Among the 52 confirmed COVID-19 cases, latency of COVID occurrence was reported for 40 cases: <ul style="list-style-type: none"> day 14 to 39 days after dose 1 (5). 7 days to 120 days after dose 2 (33). 17 days and 20 days after vaccination [dose number not reported] (2) <p>The commonly (>3 occurrences) reported events (PTs) in these 52 cases were: COVID-19 (46), Drug ineffective (29), Vaccination failure (23), Dyspnoea (20), Diarrhoea (16), Pyrexia (14), Fatigue (12), Cough (10), Headache (8), COVID-19 pneumonia (7), Asthenia, Myalgia (5 each), Ageusia, Anosmia, Chills, and Vomiting (4 each).</p> <p>The outcome of COVID-19 infection related events (54) reported in these 52 cases were: resolved/resolving (28), not resolved (11), and unknown (15).</p> <p>Seriousness criteria: hospitalisation (non-fatal, non-life threatening) (40)</p>

	No new significant safety information was identified based on a review of these cases, or of the Observed versus Expected analysis. Safety surveillance will continue.

9.5.3. Evaluation of Special Situations

Table 13 below presents the evaluation of new information received during the current reporting period from post-marketing data sources for BNT162b2 in relation to special situations (Death, Lack of Efficacy and Vaccine Interactions).

Table 13. Evaluation of Special Situations for BNT162b2

Topic	Post-Marketing Cases Evaluation ^a Total Number of Cases in the Reporting Period (N=47174)
Death	<p>Overview</p> <ul style="list-style-type: none"> Number of fatal cases: 962⁴⁵ (2.0% of the total PM dataset, compared to 3.1% of the total PM cases received in the previous reporting period) of which 752 were medically confirmed and 210 non-medically confirmed; Country of incidence: the majority were from Germany (142), France (112), Japan (78), Hungary (70), Italy (69), Australia, Spain (55 each), Netherlands (53), UK (47), US (38), Sweden (31), Austria (22), and Poland (21); the remaining 169 cases occurred in 34 other countries; Subjects' Gender: females (474), males (470), unknown (18); Subjects' Age: 16 to 101 years (n = 903), mean = 78.1, median = 81; Paediatric⁴⁶ (2), Adults (124), Elderly (782), subjects with unknown age (54); Causes of death most frequently reported (>2% of total fatal cases): Death (198), COVID-19 (76), Cardiac arrest (72), Sudden death (63), Dyspnoea (58), Pulmonary embolism (56), Cardio-respiratory arrest (49), Myocardial infarction (45), Vaccination failure (41), Pyrexia (39), COVID-19 pneumonia (35), Respiratory failure (34), Cerebrovascular accident, Drug ineffective (31 each), Cerebral haemorrhage, Pneumonia (29 each), Cardiac failure (23), and Vomiting (20).

⁴⁵ During the current reporting interval, there were 20 additional cases reporting subjects' death that were excluded from further analysis in this subsection as: death was mentioned as an incidental information only with none of the reported events presenting a fatal outcome (6) and cases which reported foetal death and are reviewed in [Table 14](#) under *Use in Pregnancy and While Breast Feeding* (14). After DLP, one case was found to be a duplicate of an invalid case and is excluded from this analysis.

⁴⁶ These 2 cases reported use in patients >12 years of age (16 and 17 years old). Upon review of these cases, 1 subject committed suicide and another subject had many risk factors for developing fatal pulmonary embolism (and subsequent fatal cardiac arrest) such as medical history of JIA, ongoing immunodeficiency, chronic osteomyelitis, multiple focal non-bacterial osteomyelitis, multiple fractures, and history of recurrent DVTs.

Table 13. Evaluation of Special Situations for BNT162b2

Topic	Post-Marketing Cases Evaluation ^a Total Number of Cases in the Reporting Period (N=47174)
	<ul style="list-style-type: none"> ○ In addition, autopsy results were provided in 33 cases and Acute myocardial infarction, Pulmonary embolism, Pulmonary oedema (4 each), Arteriosclerosis coronary artery, Myocardial infarction, Pneumonia (3 each), Aortic dissection, Arteriosclerosis, Brain oedema, Cardiac hypertrophy, Circulatory collapse, and Deep vein thrombosis (2 each) were reported more than once. • PTs most frequently reported (>2% events): Death (202), COVID-19 (83), Cardiac arrest (74), Sudden death (69), Dyspnoea (60), Pulmonary embolism (57), Vaccination failure (53), Cardio-respiratory arrest (50), Drug ineffective (49), and Myocardial infarction (45). • Concomitant medications were reported in 345 out of 962 cases and the most frequently present (>2% of total fatal cases) are listed below: acetylsalicylic acid (71), furosemide (56), paracetamol (44), omeprazole (35), apixaban (31), bisoprolol fumarate (30), simvastatin (28), levothyroxine sodium (27), amlodipine, colecalciferol (26 each), pantoprazole (25), bisoprolol (24), atorvastatin (23), pantoprazole sodium sesquihydrate (22), metformin, spironolactone (21 each), allopurinol, and atorvastatin calcium (20 each). • Lot/Batch Number (#) information by Country was available in 579 cases with no related quality issues identified during investigations of the impacted lot/batch numbers. The list of Lot/Batch #s most frequently reported (>2% of total fatal cases) is presented hereinafter: <ul style="list-style-type: none"> ○ Lot # EW2246 in 26 cases from France (9), Italy (8), Spain (5), Finland (2), Austria, and Croatia (1 each). ○ Lot # EW2239 in 22 cases from Hungary (6), France (5), Spain, Sweden (3 each), Slovenia (2), Austria, Czech Republic, and Finland (1 each). ○ Lot # EP2166 in 21 cases from Hungary (8), France, Italy (4 each), Netherlands (2), Greece, Romania, and Spain (1 each). • Time to onset of fatal events was reported for 756 subjects and ranged from the day of vaccination to 121 days after vaccination: <ul style="list-style-type: none"> ○ Same day to 3 days after vaccination: 323 cases ○ 4-7 days after vaccination: 124 cases ○ 8-14 days after vaccination: 120 cases ○ 15-30 days after vaccination: 115 cases ○ 30+ days after vaccination: 74 cases • Number of vaccine doses administered at the time of the subjects' death: <ul style="list-style-type: none"> ○ First dose (369) ○ Second dose (357). Of the 357 cases, 94 cases (33.9%) reported a latency of same day to 3 days after vaccination. There were 847 fatal events. Of the 847 fatal events, there was 1 fatal anaphylaxis event⁴⁷ and 110

⁴⁷ Search aligned to the important identified risk of anaphylaxis.

Table 13. Evaluation of Special Situations for BNT162b2

Topic	Post-Marketing Cases Evaluation ^a Total Number of Cases in the Reporting Period (N=47174)
	<p>cardiovascular/stroke/thrombotic events⁴⁸. The most frequently reported (>2%) fatal events were coded to PTs Death (75), Vaccination failure (52), COVID-19 (51), Cardiac arrest (25), Sudden death (23), Dyspnoea (22), COVID-19 pneumonia (21), and Drug ineffective (20).</p> <ul style="list-style-type: none"> ○ Third dose (1). There was 1 case that reported a 57-year-old male subject who had a fatal outcome after receiving a third dose of BNT162b2 in an outpatient setting with “no effect or specific complaint immediately after”. It was not specified why a third dose was administered. One (1) day after he “spoke a little inconsistently” and was not feeling well. He was found deceased in his home 2 days later. Medical history included bipulmonary and hepatic transplant with COPD and non-alcoholic liver cirrhosis and concomitant medications were not reported. It was unknown if an autopsy was completed, however, the physician reported that there was no cardiovascular antecedent, no hypertension, normal coronary angiography and ultrasound, no kidney damage. The subject was hospitalized a few days before for suspected acute rejection and was given a corticosteroid bolus. ○ In the remaining cases (235), it was not specified if the subjects received the first or the second vaccine dose at the time of the fatal events. <ul style="list-style-type: none"> ● Test for COVID-19 was reported for 222 subjects as follows: in 126 cases subjects tested positive (35 after 1st vaccine dose, 81 after 2nd vaccine dose and in 10 cases there was no information available about the dose they received), 92 cases were negative, 1 case reported an inconclusive COVID-19 test, and in 3 cases, test results were unknown. <p>Analysis</p> <p>Most of the cases reporting a fatal outcome (62.7%) were in subjects over 75 years of age. This reflects one of the priority groups targeted for vaccination by many regions and countries, including Europe and the US, that is, elderly (with various lower age cut-offs across countries), because of their higher risk of severe disease and mortality if infected with SARS-CoV-2.^{17,18,19}</p> <p>Among the total of 962 cases with a fatal outcome, when the medical history was provided (in 664 cases), the majority had multiple concomitant comorbidities. The most frequently reported (>2% of total fatal cases) medical conditions included cardiac and vascular disorders (eg Hypertension, Atrial fibrillation, Cardiac failure, Myocardial ischaemia, Cerebrovascular accident, Dyslipidaemia, Coronary artery disease, Hypercholesterolaemia, Myocardial infarction, and Arrhythmia). Other frequently reported significant medical histories included Diabetes mellitus/Type 2 diabetes mellitus, Chronic obstructive pulmonary disease, Dementia, Chronic kidney disease, Obesity, COVID-19, Benign prostatic hyperplasia, Renal failure, Cognitive disorder, Osteoporosis, and Prostate cancer. No specific pattern regarding underlying conditions or cause of death have been identified. Further reports will continue to be closely monitored.</p> <p>Please see Appendix 5.1 for Observed versus Expected analysis of Death.</p> <p>Conclusion: No new risks were identified following review of the signal of death, particularly in the comorbid elderly population.</p>

	<ul style="list-style-type: none"> ○ ≥ 61 days to ≤ 90 days: 11 subjects ○ 120 days: 19 subjects <p>According to the RSI, individuals may not be fully protected until 7 days after their second dose of vaccine, therefore for the above 1024 cases where lack of efficacy was reported after the first dose or the second dose, the reported events may represent signs and symptoms of intercurrent or undiagnosed COVID-19 infection or infection in an individual who was not fully vaccinated, rather than vaccine ineffectiveness.</p> <p><i>Vaccination failure cases (519)</i></p> <ul style="list-style-type: none"> • Vaccination failure seriousness: all serious⁵² • Lack of efficacy term was reported in all cases after the second dose • Latency of lack of efficacy term was known for 506 cases; in the remaining 13 cases, it was implied that lack of efficacy term was reported on or after day 7 post second dose, but specific information of latency was not provided. <ul style="list-style-type: none"> ○ day 7 to ≤ 30 days: 104 subjects ○ ≥ 31 days to ≤ 60 days: 212 subjects ○ ≥ 61 days to ≤ 90 days: 172 subjects ○ ≥ 91 days to ≤ 120 days: 18 subjects • COVID-19 (412), Asymptomatic COVID-19 (77), COVID-19 pneumonia, and SARS-CoV-2 test positive (27 each) were the reported vaccine preventable infections in these cases. <p><i>South African variant (7 cases)</i></p> <ul style="list-style-type: none"> • In 7 of the 1543 cases, COVID-19 infection with South African variant was reported. Country of incidence: France (3), Norway (3, from a single reporter), and Switzerland (1). • Lack of efficacy events: Vaccination failure (6) and Drug ineffective (1) <p>The outcome of COVID-19 infection related events (7) reported in these 7 cases were: fatal (1), resolving (2), not resolved (1), and unknown (3).</p> <p>Conclusion: No new safety signals have emerged based on a review of these cases.</p>
Vaccine Interactions	<ul style="list-style-type: none"> • Number of cases: 40⁵³ (0.08% of the total PM dataset, compared to 0.09% in the previous reporting period) of which, 6 cases were medically confirmed and 34 cases were non-medically confirmed. • Country of incidence: US (16), UK (9), Germany (3), Canada, Finland (2 each), Bulgaria, Czech Republic, France, Italy, Netherlands, Norway, Spain, and Switzerland (1 each). • Subject Gender: Female (22), Male (17), and Unknown (1); • Subjects' Age: 22 to 84 years; (n=33); mean=57.1; median 59;

⁵² Includes 1 case where event seriousness captured as non-serious was upgraded to serious after DLP.

⁵³ 1 case reported interaction with BCG vaccine after a 9-month-old baby was exposed to BNT162b2 during breast feeding. This case was excluded and will be reviewed in [Table 14](#) under Use in Pregnancy and While Breast Feeding.

Table 13. Evaluation of Special Situations for BNT162b2

Topic	Post-Marketing Cases Evaluation ^a Total Number of Cases in the Reporting Period (N=47174)
	<ul style="list-style-type: none"> • Relevant reported interaction PTs: Drug interaction (30), Potentiating drug interaction (6), Alcohol interaction (3), and Inhibitory drug interaction (1); • Relevant event seriousness: Serious (16) and Non-serious (24); • Relevant event outcome: Resolved/Resolving (10), Resolved with sequelae (1), Not resolved (2), and Unknown (27); • Co-reported events coded to the PTs (>1 event): Headache (6), Fatigue, Nausea, Pain in extremity (4 each), Heart rate increased, Loss of consciousness, Pruritus, Pyrexia, Somnolence (3 each), Arthralgia, Asthenia, Balance disorder, Discomfort, Dizziness, Dysphonia, Erythema, Glossodynia, Herpes virus infection, Herpes zoster, Hypertension, Hypoaesthesia, Inappropriate schedule of product administration, Insomnia, Myalgia, Off label use, Tremor, Urticaria, and Visual impairment (2 each). • Reported Interacting Agents (33 cases): Alcohol (3), clopidogrel, hydroxycarbamide, ibuprofen, methotrexate, polyethylene glycol microspheres, pregabalin, ropinirole (2 each), acenocoumarol, aciclovir, amlodipine, amoxicillin/clavulanate, acetylsalicylic acid, atorvastatin, bisoprolol, bupivacaine, carbidopa/levodopa, ciprofloxacin, fexofenadine, guselkumab, infliximab, insulin, lamotrigine, levodopa, macrogol 3350/potassium chloride/sodium bicarbonate/sodium chloride, methylprednisolone, mirtazapine, naproxen, olanzapine, osimertinib, paracetamol, ramipril, rasegiline, temazepam, tetanus vaccine (1 each). <ul style="list-style-type: none"> ○ Of the 33 cases, 1 case reported a potential interaction with tetanus vaccine. A 35-year-old female patient received her first dose of BNT162b2 and a tetanus vaccine 7 days later after sustaining an injury. The patient saw on the CDC website after she received the tetanus vaccine that she had to wait 14 days before or after the Covid-19 vaccination. Of note, previously, the CDC recommended COVID-19 vaccines to be administered alone 14 days before or after administration of other vaccines out of caution. The CDC guidance regarding coadministration with other vaccines was updated to state “COVID-19 vaccines and other vaccines may now be administered without regard to timing.”⁵⁴ • The remaining 7 cases reported potential interactions with unspecified medications such as blood thinner, hormone replacement, hormonal contraception, NSAIDs, immunosuppressant, MRI contrast, and sleep aid containing diphenhydramine (1 each). <p>Conclusion: There is no indication of a safety signal of interference of immune response of vaccines noted based on a review of these cases.</p>

a. Please note that this corresponds to evidence from post-EUA/conditional marketing authorisation approval data sources.

9.5.4. Evaluation of Missing Information

Table 14 below summarises the evaluation of new information received during the current reporting period from post-marketing data sources¹⁵ in relation to the Missing information associated with the use of BNT162b2.

Table 14. Evaluation of Missing Information for BNT162b2

Missing Information	Post-Marketing ¹⁵ Cases Evaluation Total Number of Cases in the Reporting Period (N=47174)
Use in Pregnancy and While Breast Feeding ⁵⁵	<ul style="list-style-type: none"> Number of cases: 473⁵⁶ (1.0% of the total PM dataset, compared to 0.9% of the total PM dataset in the previous reporting period) of which 330 cases involved use in pregnancy. Please refer to Appendix 9 for the interval and cumulative analysis of use in pregnancy cases. During the interval there were 143 cases involving the use of BNT162b2 while breast feeding. <p><u>Breast feeding baby cases: 128, of which</u></p> <ul style="list-style-type: none"> 107 cases reported exposure to vaccine during breastfeeding (PT Exposure via breast milk) without the occurrence of any clinical events; 21 cases, 8 serious and 13 non-serious, reported clinical events that occurred in the infant/child exposed to vaccine via breastfeeding (PT Exposure via breast milk); the events that were reported more than once coded to the PTs Pyrexia (3), Diarrhoea, Poor feeding infant, Poor quality sleep, and Rash (2 each). <p><u>Breast feeding mother cases: 15, of which</u></p> <ul style="list-style-type: none"> 13 were serious and 2 were non-serious. Of the 15 cases that reported events in mothers who were breast feeding, 3 cases reported lactation issues that coded to the PTs Galactostasis (2) and Lactation disorder (1). The other events reported in more than 1 case coded to the PTs Maternal exposure during breast feeding (12), Fatigue, Off label use (4 each), Headache, Pain, Pain in extremity, Product use issue, Vaccination site pain (3 each), Asthenia, Axillary pain, Dizziness, Lymphadenopathy, Mastitis, Muscular weakness, and Urticaria (2 each). <p>Conclusion: There were no safety signals that emerged from the review of these cases of use while breast feeding.</p>
Use in Immunocompromised Patients ⁵⁷	<ul style="list-style-type: none"> Number of cases: 1823 (3.9% of the total PM dataset, compared to 4.4% of the previous reporting period) of which 887 were medically confirmed and 936 non-medically confirmed; Case Seriousness: Serious (1217), Non-Serious (606); Country of incidence: UK (528), US (316), France (295), Czech Republic (142), Italy (116), Germany (48), Spain (43), Japan (35), Sweden (33),

⁵⁵ Missing information as per both the EU-RMP Version 1.1, approved on 15 April 2021 and the US PVP, Version 0.4, dated 08 April 2021.

⁵⁶ Eleven (11) cases were excluded from the analysis because pregnancy was not confirmed, or the case did not involve breast feeding.

⁵⁷ Missing information as per the EU-RMP Version 1.1, approved on 15 April 2021.

Table 14. Evaluation of Missing Information for BNT162b2

Missing Information	Post-Marketing ¹⁵ Cases Evaluation Total Number of Cases in the Reporting Period (N=47174)
	<p>Denmark (28), Netherlands (23), Belgium (22), Norway (20), Canada (19), Austria (18), Hungary (16), Mexico and Switzerland (15 each), Greece (12), Finland (9), Ireland, Poland and Portugal (8 each), Israel (6), Romania (5), Croatia and Luxembourg (4 each), Brazil, Iceland, Panama and Turkey (3 each) and Estonia, Lithuania and Malaysia (2 each); the remaining 9 cases originated from 9 different countries;</p> <ul style="list-style-type: none"> • Gender: females (1267), males (533) and unknown (23); • Age (n = 1707) ranged from 16 to 98 years, mean = 60.4 years, median = 62 years; • Relevant subjects' medical histories most frequently reported (≥20 cases) coded to the PTs: Immunodeficiency (306), Breast cancer (244), Neoplasm malignant (91), Renal transplant (86), Radiotherapy and Hysterectomy (82 each), Prostate cancer (77), Chemotherapy (68), Thyroidectomy (67), Liver transplant (54), Neoplasm (43), Lung neoplasm malignant (42), Chronic lymphocytic leukaemia (38), Thyroid cancer and Lymphoma (33 each), Colon cancer, Breast cancer female, Mastectomy and Immunosuppression (28 each), Splenectomy and Malignant melanoma (25 each), HIV infection and Nephrectomy (24 each), Breast conserving surgery (23) and Non-Hodgkin's lymphoma (21); • Of the 7560 clinical events overall reported, the most frequent (>60 occurrences) coded to the PTs: Headache (322), Fatigue (319), Pyrexia (234), Pain in extremity (202), Nausea (182), Vaccination site pain (163), Chills (153), Arthralgia (140), Myalgia (135), Malaise (131), Pain (121), Dyspnoea (118), Dizziness (115), Asthenia (93), Lymphadenopathy (88), Diarrhoea (84), Vomiting (75), COVID-19 (71), Herpes zoster (70), Pruritus and Rash (65 each) and Pulmonary embolism (64)); • Case outcome: fatal (77, see Table 13, <i>Death</i>), resolved/resolving (871), resolved with sequelae (37), not resolved (630) and unknown (208). <p>Conclusion: The most frequently reported clinical events observed in immunocompromised subjects were consistent with those observed in the overall population, except for pulmonary embolism which is consistent with what would be expected given the disease states of this population (e.g. cancers). The reporting proportion of cases with fatal outcome (4.2%), unresolved cases (34.6%) and cases resolved with sequelae (2.0%) in immunocompromised subjects is higher compared to the reporting proportion observed in the overall population (2.1% for fatal outcome, 25.1% for outcome of not resolved, 1.2% for outcome of resolved with sequelae), but this is expected considering that underlying comorbidities are likely to be contributory to delayed events recovery or to subjects' death.</p> <p>No safety signals have emerged that would be considered specific to this population.</p>
Use in Patients With Autoimmune or Inflammatory Disorders ⁵⁷	<ul style="list-style-type: none"> • Number of cases: 2708 (5.7% of the total PM dataset, compared to 6.5% of the previous reporting period) of which 1089 were medically confirmed and 1619 non-medically confirmed; • Case Seriousness: Serious (1590), Non-Serious (1118); • Country of incidence: UK (807), US (711), France (212), Italy (182), Germany (101), Japan (80), Czech Republic (65), Sweden (54), Spain (49), Canada (47), Finland (34), Greece (30), Austria (28), Belgium, Denmark and Norway (26 each), Ireland (25), Switzerland (24), Netherlands (21), Hungary and Portugal (20 each), Mexico (18), Israel (15), Romania (14), Panama (8), Brazil and Turkey (7 each), Croatia and Luxembourg (5 each), Puerto Rico (4), Bulgaria,

Table 14. Evaluation of Missing Information for BNT162b2

Missing Information	Post-Marketing ¹⁵ Cases Evaluation Total Number of Cases in the Reporting Period (N=47174)
	<p>Chile, Lithuania, Serbia and Slovenia (3 each) and Island and Peru (2 each); the remaining 12 cases originated from 12 different countries;</p> <ul style="list-style-type: none"> • Gender: Females (2205), Males (455) and Unknown (48); • Age (n=2535) ranged from 12 to 99 years, mean=54.2 years, median=54 years; • Relevant subjects' medical histories most frequently reported (≥40 cases) coded to the PTs: Hypothyroidism (549), Rheumatoid arthritis (336), Autoimmune thyroiditis (228), Arthritis (213), Multiple sclerosis (138), Psoriasis (117), Thyroid disorder and Crohn's disease (115 each), Colitis ulcerative (110), Type 1 diabetes mellitus (101), Inflammatory bowel disease (82), Coeliac disease (77), Systemic lupus erythematosus (69), Psoriatic arthropathy (64), Diabetes mellitus (63), Sjogren's syndrome (57), Autoimmune disorder (55), Raynaud's phenomenon (48), Basedow's disease (44), Neuropathy peripheral (41) and Hyperthyroidism (40); • Of the 11338 events overall reported, the most frequent clinical events (>80 occurrences) coded to the PTs: Headache (601), Fatigue (515), Pyrexia (369), Pain in extremity (336), Nausea (283), Arthralgia (276), Myalgia (256), Pain (239), Dizziness (236), Vaccination site pain (230), Chills (225), Malaise (164), Asthenia (145), Pruritus (139), Dyspnoea and Lymphadenopathy (131 each), Herpes zoster (121), Paraesthesia (119), Rash (116), Diarrhoea (101), Hypoaesthesia (90), Vomiting (89), and Feeling abnormal (82); • Case outcome: fatal (31, see Table 13, <i>Death</i>), resolved/resolving (1278), resolved with sequelae (53), not resolved (1034) and unknown (312). <p>Conclusion: The most frequently reported clinical events observed in subjects with autoimmune or inflammatory disorders were consistent with those observed in the overall population. The reporting proportion of unresolved cases (38.2%) and cases resolved with sequelae (2.0%) is slightly higher compared to the reporting proportion observed in the overall population (25.1% for outcome of not resolved and 1.2% for outcome of resolved with sequelae) but this is expected considering that underlying comorbidities are likely to be contributory to delayed events recovery. Of note, the reporting proportion of cases with fatal outcome in subjects with autoimmune or inflammatory conditions (1.1%) is below the reporting proportion of cases with fatal outcome in the overall population (2.1%).</p> <p>No safety signals have emerged that would be considered specific to this population.</p>
Use in Frail Patients With Co-morbidities (e.g. COPD, Diabetes, Chronic Neurological Disease, Cardiovascular Disorders, Active tuberculosis) ⁵⁸	<ul style="list-style-type: none"> • Number of cases: 4090 (8.7% of the total PM dataset, compared to 10.6% of the previous reporting period) of which 2431 were medically confirmed and 1659 non-medically confirmed; • Case Seriousness: Serious (2733), Non-Serious (1357); • Country of incidence: UK (802), US (683), France (561), Japan (357), Italy (257), Spain (190), Czech Republic and Germany (153 each), Sweden (118), Netherlands (76), Denmark (69), Austria (65), Finland (58), Canada (50), Hungary and Portugal (47 each), Belgium, Mexico and Norway (40 each), Ireland (38), Switzerland (36), Panama (31), Greece (28), Poland (18), Romania (15), Israel (14), Croatia (13), Estonia (10), Brazil and Malta (8 each), Luxembourg (7), Costa Rica and Slovenia (5 each), Bulgaria, Latvia and

⁵⁸ Missing information as per the EU-RMP Version 1.1, approved on 15 April 2021; as per the South Africa RMP, Version 1.0, dated 24 March 2021, active tuberculosis is included as an additional co-morbidity.

Table 14. Evaluation of Missing Information for BNT162b2

Missing Information	Post-Marketing ¹⁵ Cases Evaluation Total Number of Cases in the Reporting Period (N=47174)
	<p>Turkey (4 each), Ecuador, Philippines, Puerto Rico and Slovakia (3 each); the remaining 24 cases originated from 16 different countries;</p> <ul style="list-style-type: none"> Gender: Females (2625), Males (1417) and Unknown (48); Age (n=3913) ranged from 3 to 101 years, mean = 63.2 years, median = 67 years; Relevant subjects' medical histories most frequently reported (>□0 cases) coded to the PTs: Asthma (1466), Diabetes mellitus (782), Type 2 diabetes mellitus (594), COPD (344), Chronic kidney disease (225), Cardiac failure (211), Pulmonary embolism (156), Dementia 153), Renal failure (98), Parkinson's disease (95), Dementia Alzheimer's type (89), Cognitive disorder (67) and Cardiac failure congestive (41); Of the 15871 events overall reported, the most frequent clinical events (□135 occurrences) coded to the PTs: Headache (626), Pyrexia (523), Fatigue (518), Dyspnoea (366), Nausea (330), Pain in extremity (312), Chills (302), Dizziness (287), Myalgia (262), Vaccination site pain (258), Pain (243), Arthralgia (241), Malaise (231), Asthenia (228), COVID-19 (193), Pruritus (185), Pulmonary embolism (172), Cough (170), Vomiting (160), Diarrhoea (140), Rash (136); all these events were consistent with the most frequent events observed in the overall population, except for pulmonary embolism which is consistent with what may be expected in this population given the underlying risk factors for pulmonary embolism; Case outcome: fatal (350, see Table 13, Death), resolved/resolving (2044), resolved with sequelae (57), not resolved (1176) and unknown (463). <p>Conclusion: The reporting proportion of not resolved cases (28.8%) and cases resolved with sequelae (1.4%) in frail subjects is similar to the reporting proportion observed in the overall population (25.1% for outcome of not resolved, 1.2% for outcome of resolved with sequelae).</p> <p>The reporting proportion of cases reporting fatal outcome (8.6%) in frail subjects is higher than the reporting proportion of cases reporting fatal outcome in the overall population (2.1%). This is expected, considering that most of the cases reporting a fatal outcome (76%) among the frail subjects involved subjects over 75 years of age who, due to their advanced age and underlying comorbidities, are more likely to die than younger individuals. Underlying comorbidities are likely to be contributory to their deaths.</p> <p>No safety signals have emerged that would be considered specific to this population.</p>
Interaction With Other Vaccines ⁵⁷	There was 1 case reporting a potential interaction with other vaccines during the reporting interval (please refer to Table 13, Vaccine Interactions).
Long-Term Safety Data ⁵⁷	Not applicable
Use in Paediatric Individuals <12 Years of Age ⁵⁹	<ul style="list-style-type: none"> Number of cases: 12⁶⁰ (0.03% of the total PM dataset, compared to 0.07% of the previous reporting period), of which 7 were medically confirmed and

⁵⁹ Missing information as per the US PVP, Version 0.4, dated 08 April 2021.

⁶⁰ Upon review, 13 additional cases were excluded from analysis as the data reported (e.g. clinical details, height, weight, etc.) were not consistent with paediatric subjects and 1 case was invalidated after the DLP as

Table 14. Evaluation of Missing Information for BNT162b2

Missing Information	Post-Marketing ¹⁵ Cases Evaluation Total Number of Cases in the Reporting Period (N=47174)
	<p>5 were non-medically confirmed, and indicative of administration in paediatric subjects <12 years of age;</p> <ul style="list-style-type: none"> • Country of incidence: UK, US (5 each), Italy, Spain (1 each); • Cases Seriousness: Serious (1), Non-Serious (11); • Gender: Females (8), Males (3), Unknown (1); • Age (n=12) ranged from 1 month to 11 years, mean = 5.7, median = 5.5; • Case outcome: resolved/resolving, not resolved (3 each), and unknown (6). • Of the 27 reported events, <ul style="list-style-type: none"> ○ The most frequent (>1 case) were coded to the PTs Product administered to patient of inappropriate age (7, see Section 7 Medication Errors) and Product use issue (5); ○ There were 5 unlisted events reported in 5 cases. These events coded to the PTs Dysgeusia, Influenza like illness, Eye infection, Fibroblast growth factor 23, and Seizure (1 each). <p>No new significant safety information was identified based on a review of these cases.</p>
Vaccine effectiveness ⁶¹	Relevant cases for vaccine effectiveness during the reporting interval are reviewed in Table 13 , <i>Lack of Efficacy</i> .

found to be a duplicate of an invalid case; other paediatric cases, including a case involving a 1-month-old subject, might be reported with a miscoded pediatric age however, since they reported limited details and no follow-up is possible for clarification, they were conservatively discussed in this section.

⁶¹ As per the US PVP Version 0.4, dated 08 April 2021; as per the South Africa RMP, Version 1.0, dated 24 March 2021, this safety concern is stated as “Vaccine effectiveness against novel variant(s) in South Africa”.

10. OVERALL BENEFIT-RISK EVALUATION

10.1. Benefits

BNT162b2 is indicated for active immunisation to prevent COVID-19 caused by SARS-CoV-2 virus, in individuals 12 years of age and older.

Efficacy

Study 2 is a multicenter, placebo-controlled efficacy study in participants 12 years of age and older. Randomization was stratified by age: 12 through 15 years of age, 16 through 55 years of age, or 56 years of age and older, with a minimum of 40% of participants in the ≥ 56 -year stratum. The study excluded participants who were immunocompromised and those who had previous clinical or microbiological diagnosis of COVID-19. Participants with pre-existing stable disease, defined as disease not requiring significant change in therapy or hospitalization for worsening disease during the 6 weeks before enrollment, were included as were participants with known stable infection with HIV, HCV, or HBV.

Efficacy in participants 16 years of age and older

In the Phase 2/3 portion of Study 2, based on data accrued through 14 November 2020, approximately 44,000 participants 12 years of age and older were randomised equally and were to receive 2 doses of COVID-19 mRNA Vaccine or placebo. The efficacy analyses included participants that received their second vaccination within 19 to 42 days after their first vaccination. The majority (93.1%) of vaccine recipients received the second dose 19 days to 23 days after Dose 1. Participants are planned to be followed for up to 24 months, for assessments of safety and efficacy against COVID-19.

The population for the analysis of the primary efficacy endpoint included 36,621 participants 12 years of age and older (18,242 in the COVID-19 mRNA Vaccine group and 18,379 in the placebo group) who did not have evidence of prior infection with SARS-CoV-2 through 7 days after the second dose.

At the time of the primary efficacy analysis, participants had been followed for symptomatic COVID-19 for in total 2,214 person-years for the COVID-19 mRNA Vaccine and in total 2,222 person-years in the placebo group. There were no meaningful clinical differences in overall vaccine efficacy in participants who were at risk of severe COVID-19 including those with 1 or more comorbidities that increase the risk of severe COVID-19 (e.g. asthma, body mass index (BMI) ≥ 30 kg/m², chronic pulmonary disease, diabetes mellitus, hypertension).

Updated efficacy analyses were performed with additional confirmed COVID-19 cases accrued during blinded placebo-controlled follow-up through 13 March 2021, representing up to 6 months of follow-up after Dose 2 for participants in the efficacy population.

Efficacy against severe COVID-19

Secondary efficacy analyses suggested benefit of the COVID-19 mRNA Vaccine in preventing severe COVID-19. As of 14 November 2020, efficacy against severe COVID-19 (as defined by the study protocol) occurring after the first dose was 88.9% (95% CI: 20.1,

99.7) (1 case in COVID-19 mRNA Vaccine group and 9 cases in placebo group), with an estimated vaccine efficacy of 75.0% (95% CI: -152.6, 99.5) (1 case in COVID-19 mRNA Vaccine group and 4 cases in placebo group) against severe COVID-19 occurring at least 7 days after Dose 2. Efficacy against severe COVID-19, defined by the Centers for Disease Control and Prevention as hospitalization, admission to the Intensive Care Unit, intubation or mechanical ventilation, or death occurring after the first dose, was 92.9% (95% CI: 53.2, 99.8) (1 case in COVID-19 mRNA Vaccine group and 14 cases in placebo group). As of 13 March 2021, vaccine efficacy against severe COVID-19 is presented only for participants with or without prior SARS-CoV-2 infection (Table 12) as the COVID-19 case counts in participants without prior SARS-CoV-2 infection were the same as those in participants with or without prior SARS-CoV-2 infection in both the vaccine and placebo groups.

Efficacy and immunogenicity in adolescents 12 to 15 years of age

In Study 2 an analysis of SARS-CoV-2 neutralizing titers in a randomly selected subset of participants was performed to demonstrate non-inferior immune responses (within 1.5-fold) comparing adolescents 12 to 15 years of age to participants 16 to 25 years of age who had no serological or virological evidence of past SARS-CoV-2 infection. The immune response to BNT162b2 in adolescents 12 to 15 years of age (n=190) was non-inferior to the immune response in participants 16 to 25 years of age (n=170), based on results for SARS-CoV-2 neutralizing titers at 1 month after Dose 2. The GMT ratio of the adolescents 12 to 15 years of age group to the participants 16 to 25 years of age group was 1.76, with a 2-sided 95% CI of 1.47 to 2.10, meeting the 1.5-fold non-inferiority criterion (the lower bound of the 2-sided 95% CI for the GMR >0.67) which indicates a statistically greater response in the adolescents 12 to 15 years of age than that of participants 16 to 25 years of age.

10.2. Risks

Based on pharmacovigilance monitoring activities, since first authorisation, anaphylaxis has been recognised as an important identified risk. Hypersensitivity reactions (other than Anaphylaxis), Diarrhoea, Pain in extremity (arm), Vomiting, Asthenia, Lethargy, Decreased appetite, Hyperhidrosis and Night sweats were also assessed as identified risks (not important for the purpose of inclusion in the RMPs and PVP) and added to the RSI as ADRs in Section 4.8 Undesirable effects. Vaccine stress-related responses (including Dizziness, Fainting, Palpitations, Increases in heart rate, Alterations in blood pressure, Feeling short of breath, Tingling sensations, Sweating and/or Anxiety) were evaluated to be identified risks (not important for the purpose of inclusion in the in the RMPs and PVP) and they were added to the RSI in Section 4.4 Special warnings and precautions for use.

Based on all available safety and efficacy data for BNT162b2 the benefit-risk profile of the vaccine remains favourable.

10.3. Overall Benefit-Risk

The identified risks associated with the use of BNT162b2 are mitigated through provision of relevant product information in the RSI to support safe use of the product. Risks have been evaluated in the context of the enumerated benefits of the product. Based on the available safety and efficacy data for BNT162b2, the overall benefit-risk profile of BNT162b2 remains favourable.

11. CONCLUSION AND ACTIONS

Based on all available safety and efficacy data for BNT162b2, the benefit-risk profile of the vaccine remains favourable.

The MAH will continue to review the safety of BNT162b2, including reports of adverse experiences and will revise the product documents if an evaluation of the safety data yields significant new information.

PREPARED BY PFIZER INC

CDS EFFECTIVE DATE: 19-MAY-2021

Date of Superseded CDS: 20-Apr-2021

COVID-19 mRNA Vaccine

CORE DATA SHEET

VERSION 4

PFIZER CONFIDENTIAL

1

1. NAME OF THE MEDICINAL PRODUCT

COVID-19 mRNA Vaccine (nucleoside modified) and COMIRNATY are called TRADENAME.

2. QUALITATIVE AND QUANTITATIVE COMPOSITION^{1,2}

This is a multidose vial and must be diluted before use.

One vial (0.45 mL) contains 6 doses of 0.3 mL after dilution, see Section 6.6.

One dose (0.3 mL) contains 30 micrograms of COVID-19 mRNA Vaccine (embedded in lipid nanoparticles).

TRADENAME is highly purified single-stranded, 5'-capped messenger RNA (mRNA) produced using a cell-free *in vitro* transcription from the corresponding DNA templates, encoding the viral spike (S) protein of severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2).

For the full list of excipients, see Section 6.1.

3. PHARMACEUTICAL FORM^{2,3}

Concentrate for solution for injection.

The vaccine is a white to off-white frozen solution.

4. CLINICAL PARTICULARS

4.1. Therapeutic indications

The following is a representative indication. Locally approved indications may differ.

Active immunization to prevent coronavirus disease 2019 (COVID-19) caused by SARS-CoV-2 virus, in individuals 12 years of age and older.^{4,49}

4.2. Posology and method of administration

Posology

Individuals 12 years of age and older

TRADENAME is administered intramuscularly after dilution as a series of 2 doses (0.3 mL each) at greater than or equal to 21 days (preferably 3 weeks) apart.^{5,49}

There are no data available on the interchangeability of TRADENAME with other COVID-19 vaccines to complete the vaccination series. Individuals who have received 1 dose of TRADENAME should receive a second dose of TRADENAME to complete the vaccination series.

Individuals may not be protected until at least 7 days after their second dose of the vaccine.⁶

For further information on efficacy, see Section 5.1.

Pediatric population

The safety and efficacy of TRADENAME in individuals under 12 years of age have not yet been established.

Geriatric population

Clinical studies of TRADENAME include participants 65 years of age and older and their data contributes to the overall assessment of safety and efficacy.⁷ Of the total number of TRADENAME recipients in Study 2 (N = 22,026), 16.5% (n = 3627) were 65 through 74 years of age and 4.2% (n = 925) were 75 years of age and older (see Section 5.1).⁵⁰

Method of administration

Administer TRADENAME intramuscularly in the deltoid muscle after dilution.

Do not inject the vaccine intravascularly, subcutaneously, or intradermally.

After dilution, vials of TRADENAME contain 6 doses of 0.3 mL of vaccine. Low dead-volume syringes and/or needles can be used to extract 6 doses from a single vial. If standard syringes and needles are used, there may not be sufficient volume to extract a sixth dose from a single vial.

Irrespective of the type of syringe and needle:

- Each dose must contain 0.3 mL of vaccine.
- If the amount of vaccine remaining in the vial cannot provide a full dose of 0.3 mL, discard the vial and any excess volume.
- Do not pool excess vaccine from multiple vials.

For instructions on the handling, dilution, and dose preparation of the vaccine before administration, see Section 6.6.

4.3. Contraindications

Hypersensitivity to the active substance or to any of the excipients listed in Section 6.1.

4.4. Special warnings and precautions for use

Traceability

In order to improve the traceability of biological medicinal products, the name and the batch number of the administered product should be clearly recorded.

General recommendations

As with all injectable vaccines, appropriate medical treatment and supervision must always be readily available in case of a rare anaphylactic event following the administration of the vaccine.⁹

The administration of TRADENAME should be postponed in individuals suffering from acute severe febrile illness.⁹

Individuals receiving anticoagulant therapy or those with a bleeding disorder that would contraindicate intramuscular injection, should not be given the vaccine unless the potential benefit clearly outweighs the risk of administration.⁹

Immunocompromised persons, including individuals receiving immunosuppressant therapy, may have a diminished immune response to the vaccine.

Some individuals may have stress-related responses associated with the process of vaccination itself. Stress-related responses are temporary and resolve on their own. They may include dizziness, fainting, palpitations, increases in heart rate, alterations in blood pressure, feeling short of breath, tingling sensations, sweating and/or anxiety. Individuals should be advised to bring symptoms to the attention of the vaccination provider for evaluation and precautions should be in place to avoid injury from fainting.⁶⁷

As with any vaccine, vaccination with TRADENAME may not protect all vaccine recipients.

4.5. Interaction with other medicinal products and other forms of interaction

No interaction studies have been performed.

Do not mix TRADENAME with other vaccines/products in the same syringe.

4.6. Fertility, pregnancy and lactation

Pregnancy

There are limited amount of data from the use of TRADENAME in pregnant women. Animal studies do not indicate direct or indirect harmful effects with respect to pregnancy, embryo/fetal development, parturition, or post-natal development (see Section 5.3).^{10,11} Administration of TRADENAME in pregnancy should be considered when the potential benefits outweigh any potential risks for the mother and fetus.

Lactation

It is unknown whether TRADENAME is excreted in human milk.

Fertility

It is unknown whether TRADENAME has an impact on fertility. Animal studies do not indicate direct or indirect harmful effects with respect to female fertility or reproductive toxicity (see Section 5.3).^{10,11}

4.7. Effects on ability to drive and use machines

TRADENAME has no or negligible influence on the ability to drive and use machines. However, some of the effects mentioned under Section 4.8 “Undesirable effects” may temporarily affect the ability to drive or use machines.

4.8. Undesirable effects

Summary of safety profile

The safety of TRADENAME was evaluated in participants 12 years of age and older in 2 clinical studies conducted in the United States, Europe, Turkey, South Africa, and South America.^{12,49} Study BNT162-01 (Study 1) enrolled 60 participants, 18 through 55 years of age and 36 participants, 56 through 85 years of age.⁶⁸ Study C4591001 (Study 2) enrolled approximately 46,000 participants,⁴¹ 12 years of age or older.¹²

Participants 16 years of age and older

In Study 2, a total of 22,026 participants 16 years of age or older received at least 1 dose of TRADENAME and a total of 22,021 participants 16 years of age or older received placebo.⁵⁰

The most frequent adverse reactions in participants 16 years of age and older (in order from highest to lowest frequencies) were injection site pain (>80%), fatigue (>60%), headache (>50%), myalgia (>40%), chills (>30%), arthralgia (>20%), pyrexia and injection site swelling (>10%) and were usually mild or moderate in intensity and resolved within a few days after vaccination.⁶⁴ A lower frequency of reactogenicity events was associated with greater age.¹⁵

The safety profile in 545 participants receiving TRADENAME, that were seropositive for SARS-CoV-2 at baseline, was similar to that seen in the general population.^{17,28,31}

Study 2 also included 200 participants with confirmed stable human immunodeficiency virus (HIV) infection. The safety profile of the participants receiving TRADENAME (n = 100) in the individuals with stable HIV infection was similar to that seen in the general population.⁵¹

Adolescents 12 through 15 years of age

In an analysis of Study 2, 2260 adolescents (1131 TRADENAME; 1129 placebo) were 12 through 15 years of age. Of these, 1308 adolescents (660 TRADENAME and 648 placebo) have been followed for at least 2 months after the second dose of TRADENAME.^{41,42} The safety evaluation in Study 2 is ongoing.

The most frequent adverse reactions in adolescents 12 through 15 years of age were injection site pain (>90%), fatigue and headache (>70%), myalgia and chills (>40%), arthralgia and pyrexia (>20%).^{43,44,45}

Table 1. Adverse Drug Reactions^{13,14,16,64}

System Organ Class	Adverse Drug Reactions
Blood and lymphatic system disorders	Lymphadenopathy
Metabolism and nutrition disorders	Decreased appetite
Nervous system disorders	Headache Lethargy
Gastrointestinal disorders	Nausea
Skin and subcutaneous tissue disorders	Hyperhidrosis Night sweats
Musculoskeletal and connective tissue disorders	Arthralgia Myalgia
General disorders and administration site conditions	Pyrexia Chills Asthenia Malaise Fatigue Injection site pain Injection site swelling Injection site redness

Adverse reactions from TRADENAME post-authorization experience

The following events have been identified as adverse reactions during the post-authorization use of TRADENAME.

Table 2. Adverse Drug Reactions³⁸

System Organ Class	Adverse Drug Reactions
Immune system disorders	Anaphylaxis Hypersensitivity reactions (e.g., rash, pruritus, urticaria, angioedema)
Gastrointestinal disorders	Diarrhea Vomiting
Musculoskeletal and connective tissue disorders	Pain in extremity (arm)

4.9. Overdose

Participants who received 58 micrograms of TRADENAME in clinical trials did not report an increase in reactogenicity or adverse events.¹⁸

In the event of overdose, monitoring of vital functions and possible symptomatic treatment is recommended.

5. PHARMACOLOGICAL PROPERTIES

5.1. Pharmacodynamic properties

Pharmacological class, therapeutic class

Vaccines

Refer to the current ATC code index for the appropriate code assignment for the pharmacologic and/or therapeutic class.

Mechanism of action

The nucleoside-modified messenger RNA in TRADENAME is formulated in lipid nanoparticles, which enable delivery of the RNA into host cells to allow expression of the SARS-CoV-2 S antigen. The vaccine elicits both neutralizing antibody and cellular immune responses to the spike (S) antigen, which may contribute to protection against COVID-19.^{19,20}

Efficacy

Study 2 is a multicenter, placebo-controlled efficacy study in participants 12 years of age and older. Randomization was stratified by age: 12 through 15 years of age, 16 through 55 years of age, or 56 years of age and older, with a minimum of 40% of participants in the ≥ 56 -year stratum.¹² The study excluded participants who were immunocompromised and those who had previous clinical or microbiological diagnosis of COVID-19.¹² Participants with pre-existing stable disease, defined as disease not requiring significant change in therapy or hospitalization for worsening disease during the 6 weeks before enrollment,²¹ were included as were participants with known stable infection with human immunodeficiency virus (HIV), hepatitis C virus (HCV), or hepatitis B virus (HBV).¹²

Efficacy in participants 16 years of age and older

In the Phase 2/3 portion of Study 2, based on data accrued through 14 November 2020, approximately 44,000 participants 12 years of age and older were randomized equally and received 2 doses of COVID-19 mRNA Vaccine or placebo. The efficacy analyses included participants that received their second vaccination within 19 to 42 days after their first vaccination. The majority (93.1%) of vaccine recipients received the second dose 19 days to 23 days after Dose 1.⁵² Participants are planned to be followed for up to 24 months, for assessments of safety and efficacy against COVID-19.^{12,27}

The population for the analysis of the primary efficacy endpoint included, 36,621 participants 12 years of age and older (18,242 in the COVID-19 mRNA Vaccine group and 18,379 in the placebo group) who did not have evidence of prior infection with SARS-CoV-2 through 7 days after the second dose.²² Table 3 presents the specific demographic characteristics in the studied population.

Note: Confirmed cases were determined by Reverse Transcription-Polymerase Chain Reaction (RT-PCR) and at least 1 symptom consistent with COVID-19 (symptoms included: fever; new or increased cough; new or increased shortness of breath; chills; new or increased muscle pain; new loss of taste or smell; sore throat; diarrhea; vomiting).

Abbreviations: NAAT = nucleic acid amplification test; SARS-CoV-2 = severe acute respiratory syndrome coronavirus 2; VE = vaccine efficacy.

* Participants who had no evidence of past SARS-CoV-2 infection (i.e., N-binding antibody [serum] negative at Visit 1 and SARS-CoV-2 not detected by NAAT [nasal swab] at Visits 1 and 2), and had negative NAAT (nasal swab) at any unscheduled visit prior to 7 days after Dose 2 were included in the analysis.

- N = number of participants in the specified group.
- n1 = Number of participants meeting the endpoint definition.
- Total surveillance time in 1000 person-years for the given endpoint across all participants within each group at risk for the endpoint. Time period for COVID-19 case accrual is from 7 days after Dose 2 to the end of the surveillance period.
- n2 = Number of participants at risk for the endpoint.
- No confirmed cases were identified in adolescents 12 to 15 years of age.
- Two-sided credible interval for vaccine efficacy (VE) was calculated using a beta-binomial model with a beta (0.700102, 1) prior for $\theta=r(1-VE)/(1+r(1-VE))$, where r is the ratio of surveillance time in the active vaccine group over that in the placebo group.
- Two-sided confidence interval (CI) for VE is derived based on the Clopper and Pearson method adjusted to the surveillance time.

The subgroup analyses of vaccine efficacy including demographic characteristics is presented in Table 5.

Table 8. Vaccine Efficacy– First COVID-19 Occurrence From 7 Days After Dose 2 – Participants With or Without* Evidence of Infection Prior to 7 Days After Dose 2 by Demographic Characteristics – Evaluable Efficacy (7 Days) Population During the Placebo-Controlled Follow-up Period⁵⁴

Subgroup	TRADENAME N^a=22,166 Cases n1^b Surveillance Time^c (n2^d)	Placebo N^a=22,320 Cases n1^b Surveillance Time^c (n2^d)	Vaccine Efficacy % (95% CI)^e
----------	---	---	--

Notes: Confirmed cases were determined by Reverse Transcription-Polymerase Chain Reaction (RT-PCR) and at least 1 symptom consistent with COVID-19 (symptoms included: fever; new or increased cough; new or increased shortness of breath; chills; new or increased muscle pain; new loss of taste or smell; sore throat; diarrhea; vomiting). Included confirmed cases in participants 12 through 15 years of age: 0 in the TRADENAME group; 18 in the placebo group.

* Participants who had no evidence of past SARS-CoV-2 infection (i.e., N-binding antibody [serum] negative at Visit 1 and SARS-CoV-2 not detected by NAAT [nasal swab] at Visits 1 and 2), and had negative NAAT (nasal swab) at any unscheduled visit prior to 7 days after Dose 2 were included in the analysis.

- N = Number of participants in the specified group.
- n1 = Number of participants meeting the endpoint definition.
- Total surveillance time in 1000 person-years for the given endpoint across all participants within each group at risk for the endpoint. Time period for COVID-19 case accrual is from 7 days after Dose 2 to the end of the surveillance period.
- n2 = Number of participants at risk for the endpoint.
- Two-sided confidence interval (CI) for vaccine efficacy is derived based on the Clopper and Pearson method adjusted to the surveillance time.
- All others = American Indian or Alaska Native, Asian, Native Hawaiian or other Pacific Islander, multiracial, and not reported race categories.

The subgroup analyses of vaccine efficacy by risk status in participants is presented in Table 9.

Efficacy against severe COVID-19

Secondary efficacy analyses suggested benefit of the COVID-19 mRNA Vaccine in preventing severe COVID-19.

As of 14 November 2020, efficacy against severe COVID-19 (as defined by the study protocol) occurring after the first dose was 88.9% (95% CI: 20.1, 99.7) (1 case in COVID-19 mRNA Vaccine group and 9 cases in placebo group), with an estimated vaccine efficacy of 75.0% (95% CI: -152.6, 99.5) (1 case in COVID-19 mRNA Vaccine group and 4 cases in placebo group) against severe COVID-19 occurring at least 7 days after Dose 2.³⁶ Efficacy against severe COVID-19, defined by the Centers for Disease Control and Prevention as hospitalization, admission to the Intensive Care Unit, intubation or mechanical ventilation, or death occurring after the first dose, was 92.9% (95% CI: 53.2, 99.8) (1 case in COVID-19 mRNA Vaccine group and 14 cases in placebo group).³⁷

As of 13 March 2021, vaccine efficacy against severe COVID-19 is presented only for participants with or without prior SARS-CoV-2 infection (Table 12) as the COVID-19 case counts in participants without prior SARS-CoV-2 infection were the same as those in participants with or without prior SARS-CoV-2 infection in both the TRADENAME and placebo groups.

Table 12. Vaccine Efficacy – First Severe COVID-19 Occurrence in Participants With or Without* Prior SARS-CoV-2 Infection Based on FDA[†] or Centers for Disease Control and Prevention (CDC)[‡] Definition After Dose 1 or From 7 Days After Dose 2 in the Placebo-Controlled Follow-up

[†] Severe illness from COVID-19 as defined by FDA is confirmed COVID-19 and presence of at least 1 of the following:⁶¹

- Clinical signs at rest indicative of severe systemic illness (respiratory rate ≥ 30 breaths per minute, heart rate ≥ 125 beats per minute, saturation of oxygen $\leq 93\%$ on room air at sea level, or ratio of arterial oxygen partial pressure to fractional inspired oxygen < 300 mm Hg);
- Respiratory failure [defined as needing high-flow oxygen, noninvasive ventilation, mechanical ventilation or extracorporeal membrane oxygenation (ECMO)];
- Evidence of shock (systolic blood pressure < 90 mm Hg, diastolic blood pressure < 60 mm Hg, or requiring vasopressors);
- Significant acute renal, hepatic, or neurologic dysfunction;
- Admission to an Intensive Care Unit;
- Death.

[‡] Severe illness from COVID-19 as defined by CDC is confirmed COVID-19 and presence of at least 1 of the following:⁶¹

- Hospitalization;
- Admission to the Intensive Care Unit;
- Intubation or mechanical ventilation;
- Death.

a. n1 = Number of participants meeting the endpoint definition.

b. n2 = Number of participants at risk for the endpoint.

- c. Two-side confidence interval (CI) for vaccine efficacy is derived based on the Clopper and Pearson method adjusted to the surveillance time.
- d. Efficacy assessed based on the Dose 1 all available efficacy (modified intention-to-treat) population that included all randomized participants who received at least 1 dose of study intervention.⁶²
- e. Total surveillance time in 1000 person-years for the given endpoint across all participants within each group at risk for the endpoint. Time period for COVID-19 case accrual is from Dose 1 to the end of the surveillance period.
- f. Efficacy assessed based on the evaluable efficacy (7 Days) population that included all eligible randomized participants who receive all dose(s) of study intervention as randomized within the predefined window, have no other important protocol deviations as determined by the clinician.⁶²
- g. Total surveillance time in 1000 person-years for the given endpoint across all participants within each group at risk for the endpoint. Time period for COVID-19 case accrual is from 7 days after Dose 2 to the end of the surveillance period.

Efficacy and immunogenicity in adolescents 12 to 15 years of age

An analysis of Study 2 has been performed in adolescents 12 to 15 years of age up to a data cutoff date of 13 March 2021.

The vaccine efficacy information in adolescents 12 to 15 years of age is presented in Table 13.

Table 13. Vaccine Efficacy – First COVID-19 Occurrence From 7 Days After Dose 2, Without Evidence of Infection and With or Without Evidence of Infection Prior to 7 Days After Dose 2 – Blinded Placebo-Controlled Follow-up Period, Adolescents 12 to 15 Years of Age Evaluable Efficacy (7 Days) Population

First COVID-19 occurrence from 7 days after Dose 2 in adolescents 12 to 15 years of age without evidence of prior SARS-CoV-2 infection^{*,46}			
	TRADENAME N^a=1005 Cases n^{1b} Surveillance Time^c (n^{2d})	Placebo N^a=978 Cases n^{1b} Surveillance Time^c (n^{2d})	Vaccine Efficacy % (95% CI^e)

First COVID-19 occurrence from 7 days after Dose 2 in adolescents 12 to 15 years of age with or without* evidence of prior SARS-CoV-2 infection⁴⁷			
	TRADENAME N^a=1119 Cases n^{1b} Surveillance Time^c (n^{2d})	Placebo N^a=1110 Cases n^{1b} Surveillance Time^c (n^{2d})	Vaccine Efficacy % (95% CI^e)
Adolescents 12 to 15 Years of Age	0 0.170 (1109)	18 0.163 (1094)	100.0 (78.1, 100.0)

Note: Confirmed cases were determined by Reverse Transcription-Polymerase Chain Reaction (RT-PCR) and at least 1 symptom consistent with COVID-19 (symptoms included: fever; new or increased cough; new or increased shortness of breath; chills; new or increased muscle pain; new loss of taste or smell; sore throat; diarrhea; vomiting).

-
- * Participants who had no evidence of past SARS-CoV-2 infection (i.e., N-binding antibody [serum] negative at Visit 1 and SARS-CoV-2 not detected by NAAT [nasal swab] at Visits 1 and 2), and had negative NAAT (nasal swab) at any unscheduled visit prior to 7 days after Dose 2 were included in the analysis.
 - a. N = Number of participants in the specified group.
 - b. n1 = Number of participants meeting the endpoint definition.
 - c. Total surveillance time in 1000 person-years for the given endpoint across all participants within each group at risk for the endpoint. Time period for COVID-19 case accrual is from 7 days after Dose 2 to the end of the surveillance period.
 - d. n2 = Number of participants at risk for the endpoint.
 - e. Confidence interval (CI) for vaccine efficacy is derived based on the Clopper and Pearson method adjusted for surveillance time.

In Study 2 an analysis of SARS-CoV-2 neutralizing titers in a randomly selected subset of participants was performed to demonstrate non-inferior immune responses (within 1.5-fold) comparing adolescents 12 to 15 years of age to participants 16 to 25 years of age who had no serological or virological evidence of past SARS-CoV-2 infection. The immune response to TRADENAME in adolescents 12 to 15 years of age (n=190) was non-inferior to the immune response in participants 16 to 25 years of age (n=170), based on results for SARS-CoV-2 neutralizing titers at 1 month after Dose 2. The geometric mean titers (GMT) ratio of the adolescents 12 to 15 years of age group to the participants 16 to 25 years of age group was 1.76, with a 2-sided 95% CI of 1.47 to 2.10, meeting the 1.5-fold non-inferiority criterion (the lower bound of the 2-sided 95% CI for the geometric mean ratio [GMR] >0.67) which indicates a statistically greater response in the adolescents 12 to 15 years of age than that of participants 16 to 25 years of age.⁴⁸

5.2. Pharmacokinetic properties

Not applicable.

5.3. Preclinical safety data

Non-clinical data reveal no special hazard for humans based on conventional studies of repeat dose toxicity and reproduction and developmental toxicity.^{10,11}

Potassium dihydrogen phosphate

Sodium chloride

Disodium hydrogen phosphate dihydrate

Sucrose

Water for injections

6.2. Incompatibilities

This medicinal product must not be mixed with other medicinal products except those mentioned in Sections 6.3 and 6.6.

6.3. Shelf life

Unopened vial

6 months at -90 °C to -60 °C.

Alternatively, unopened vials may be stored and transported at -25 °C to -15 °C for a total of 2 weeks and can be returned to -90 °C to -60 °C.³⁹

Once removed from the freezer, the unopened vial can be stored for up to 1 month at 2 °C to 8 °C. Within the 1-month shelf-life at 2 °C to 8 °C, up to 12 hours may be used for transportation.^{29,63} Prior to use, the unopened vial can be stored for up to 2 hours at temperatures up to 30 °C.

Once thawed, the vaccine should not be re-frozen.

Transfers of frozen vials stored at ultra-low temperature (<-60 °C)

- Closed-lid vial trays containing 195 vials removed from ultra-low temperature frozen storage (<-60 °C) may be at temperatures up to 25 °C for up to 5 minutes.
- Open-lid vial trays, or vial trays containing less than 195 vials, removed from ultra-low temperature frozen storage (<-60 °C) may be at temperatures up to 25 °C for up to 3 minutes.
- After vial trays are returned to frozen storage following temperature exposure up to 25 °C, they must remain in frozen storage for at least 2 hours before they can be removed again.

Transfers of frozen vials stored at -25 °C to -15 °C⁴⁰

- Closed-lid vial trays containing 195 vials removed from frozen storage (-25 °C to -15 °C) may be at temperatures up to 25 °C for up to 3 minutes.
- Open-lid vial trays, or vial trays containing less than 195 vials, removed from frozen storage (-25 °C to -15 °C) may be at temperatures up to 25 °C for up to 1 minute.

Once a vial is removed from the vial tray, it should be thawed for use.

Diluted medicinal product

Chemical and physical in-use stability, including during transportation,³⁰ has been demonstrated for 6 hours at 2 °C to 30 °C after dilution in sodium chloride 9 mg/mL (0.9%) solution for injection. From a microbiological point of view, the product should be used immediately. If not used immediately, in-use storage times and conditions are the responsibility of the user.

6.4. Special precautions for storage^{2,25}

Store in a freezer at -90 °C to -60 °C.

Store in the original package in order to protect from light.

During storage, minimize exposure to room light, and avoid exposure to direct sunlight and ultraviolet light.

Thawed vials can be handled in room light conditions.

For storage conditions after thawing and dilution of the medicinal product, see Section 6.3.

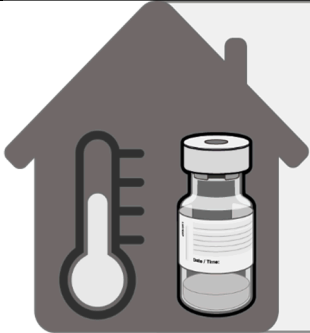

6.5. Nature and contents of container

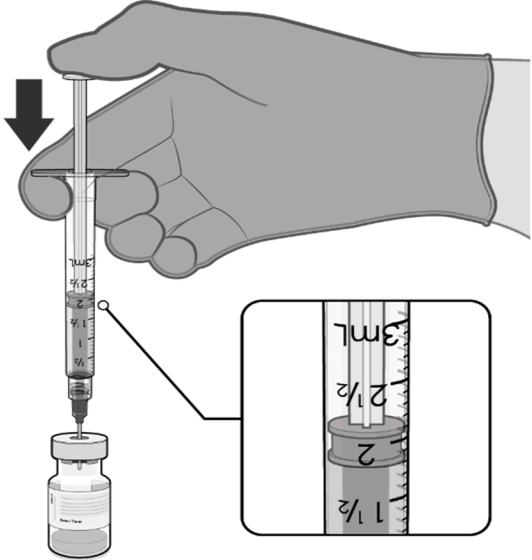

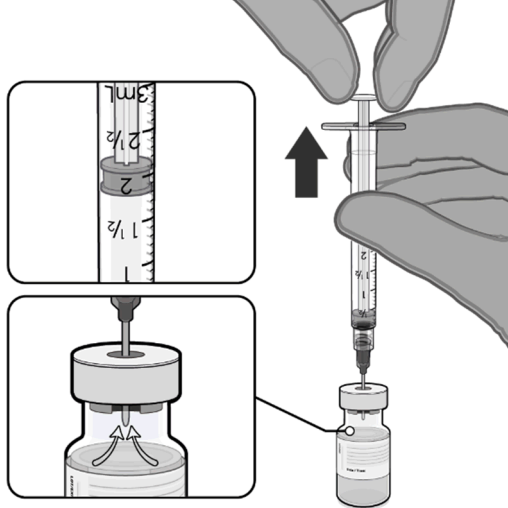

Information to be provided by local subsidiary.

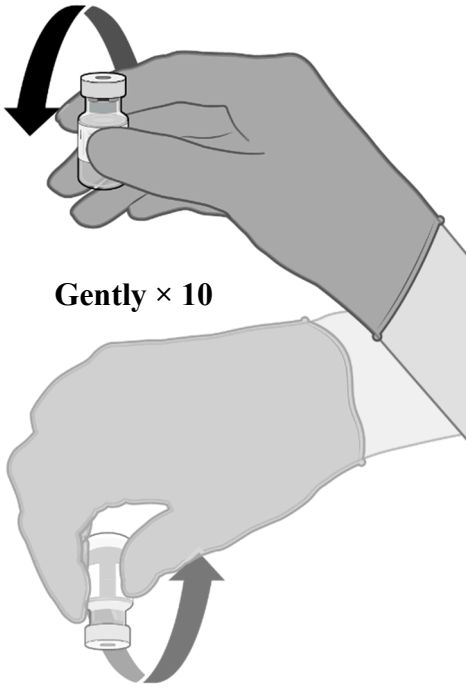

6.6. Special precautions for disposal and other handling^{2,3,26,29,30,35,63}

Handling instructions

TRADENAME should be prepared by a healthcare professional using aseptic technique to ensure the sterility of the prepared dispersion.

THAWING PRIOR TO DILUTION	
 <p>No more than 2 hours at up to 30 °C</p>	<ul style="list-style-type: none"> • The multidose vial is stored frozen and must be thawed prior to dilution. Frozen vials should be transferred to an environment of 2 °C to 8 °C to thaw; a 195 vial pack may take 3 hours to thaw. Alternatively, frozen vials may also be thawed for 30 minutes at temperatures up to 30 °C for immediate use. • The unopened vial can be stored for up to 1 month at 2 °C to 8 °C. Within the 1-month shelf-life at 2 °C to 8 °C, up to 12 hours may be used for transportation. • Allow the thawed vial to come to room temperature and gently invert it 10 times prior to dilution. Do not shake. • Prior to dilution, the thawed dispersion may contain white to off-white opaque amorphous particles.

DILUTION	
 <p>1.8 mL of 0.9% sodium chloride injection</p>	<ul style="list-style-type: none"> The thawed vaccine must be diluted in its original vial with 1.8 mL sodium chloride 9 mg/mL (0.9%) solution for injection, using a 21 gauge or narrower needle and aseptic techniques.
 <p>Pull back plunger to 1.8 mL to remove air from vial.</p>	<ul style="list-style-type: none"> Equalize vial pressure before removing the needle from the vial stopper by withdrawing 1.8 mL air into the empty diluent syringe.

 <p>Gently x 10</p>	<ul style="list-style-type: none"> • Gently invert the diluted dispersion 10 times. Do not shake. • The diluted vaccine should present as an off-white dispersion with no particulates visible. Do not use the diluted vaccine if particulates or discoloration are present.
 <p>Record appropriate date and time. Use within 6 hours after dilution.</p>	<ul style="list-style-type: none"> • The diluted vials should be marked with the appropriate date and time. • After dilution, store at 2 °C to 30 °C and use within 6 hours, including any transportation time. • Do not freeze or shake the diluted dispersion. If refrigerated, allow the diluted dispersion to come to room temperature prior to use.

PREPARATION OF INDIVIDUAL 0.3 mL DOSES OF COMIRNATY

- After dilution, the vial contains 2.25 mL from which 6 doses of 0.3 mL can be extracted.
- Using aseptic technique, cleanse the vial stopper with a single-use antiseptic swab.
- Withdraw 0.3 mL of TRADENAME.

Low dead-volume syringes and/or needles should be used in order to extract 6 doses from a single vial. The low dead-volume syringe and needle combination should have a dead volume of no more than 35 microliters.

If standard syringes and needles are used, there may not be sufficient volume to extract a sixth dose from a single vial.

- Each dose must contain 0.3 mL of vaccine.
- If the amount of vaccine remaining in the vial cannot provide a full dose of 0.3 mL, discard the vial and any excess volume.
- Discard any unused vaccine within 6 hours after dilution.

Disposal

Any unused medicinal product or waste material should be disposed of in accordance with local requirements.

GLOBAL LABELING MANAGEMENT CDS Safety Log

PRODUCT NAME: COVID-19 mRNA Vaccine

Some individuals may have stress-related responses associated with the process of vaccination itself. Stress-related responses are temporary and resolve on their own. They may include dizziness, fainting, palpitations, increases in heart rate, alterations in blood pressure, feeling short of breath, tingling sensations, sweating and/or anxiety. Individuals should be advised to bring symptoms to the attention of the vaccination provider for evaluation and precautions should be in place to avoid injury from fainting.⁶⁷

PRODUCT NAME: COVID-19 mRNA Vaccine

Adolescents 12 through 15 years of age

In an analysis of Study 2, ~~based on data up to the cutoff date of 13 March 2021~~, 2260 adolescents (1131 TRADENAME; 1129 placebo) were 12 ~~to~~through 15 years of age. Of these, 1308 adolescents (660 TRADENAME and 648 placebo) have been followed for at least 2 months after the second dose of TRADENAME.^{41,42} The safety evaluation in Study 2 is ongoing.

The most frequent adverse reactions in adolescents 12 through 15 years of age were injection site pain (>90%), fatigue and headache (>70%), myalgia and chills (>40%), arthralgia and ~~pyrexia~~fever (>20%).^{43,44,45}

Note: Confirmed cases were determined by Reverse Transcription-Polymerase Chain Reaction (RT-PCR) and at least 1 symptom consistent with COVID-19 (symptoms included: fever; new or increased cough; new or increased shortness of breath; chills; new or increased muscle pain; new loss of taste or smell; sore throat; diarrhea; vomiting).

* Participants who had no evidence of past SARS-CoV-2 infection (i.e., N-binding antibody [serum] negative at Visit 1 and SARS-CoV-2 not detected by NAAT [nasal swab] at Visits 1 and 2), and had negative NAAT (nasal swab) at any unscheduled visit prior to 7 days after Dose 2 were included in the analysis.

a. N = Number of participants in the specified group.

b. n1 = Number of participants meeting the endpoint definition.

c. Total surveillance time in 1000 person-years for the given endpoint across all participants within each group at risk for the endpoint. Time period for COVID-19 case accrual is from 7 days after Dose 2 to the end of the surveillance period.

d. n2 = Number of participants at risk for the endpoint.

e. Two-sided confidence interval (CI) for vaccine efficacy is derived based on the Clopper and Pearson method adjusted to the surveillance time.

f. Included confirmed cases in participants 12 through 15 years of age: 0 in the TRADENAME group (both without and with or without evidence of prior SARS-CoV-2 infection); 16 and 18 in the placebo group (without and with or without evidence of prior SARS-CoV-2 infection, respectively).

The updated subgroup analyses of vaccine efficacy by demographic characteristics are presented in Table 7 and Table 8.

Table 7. Vaccine Efficacy– First COVID-19 Occurrence From 7 Days After Dose 2 – Participants Without Evidence of Infection* Prior to 7 Days After Dose 2 by Demographic Characteristics – Evaluable Efficacy (7 Days) Population During the Placebo-Controlled Follow-up Period⁵³

Notes: Confirmed cases were determined by Reverse Transcription-Polymerase Chain Reaction (RT-PCR) and at least 1 symptom consistent with COVID-19 (symptoms included: fever; new or increased cough; new or increased shortness of breath; chills; new or increased muscle pain; new loss of taste or smell; sore throat; diarrhea; vomiting). Included confirmed cases in participants 12 through 15 years of age: 0 in the TRADENAME group; 18 in the placebo group.

* Participants who had no evidence of past SARS-CoV-2 infection (i.e., N-binding antibody [serum] negative at Visit 1 and SARS-CoV-2 not detected by NAAT [nasal swab] at Visits 1 and 2), and had negative NAAT (nasal swab) at any unscheduled visit prior to 7 days after Dose 2 were included in the analysis.

a. N = Number of participants in the specified group.

b. n1 = Number of participants meeting the endpoint definition.

c. Total surveillance time in 1000 person-years for the given endpoint across all participants within each group at risk for the endpoint. Time period for COVID-19 case accrual is from 7 days after Dose 2 to the end of the surveillance period.

d. n2 = Number of participants at risk for the endpoint.

e. Two-sided confidence interval (CI) for vaccine efficacy is derived based on the Clopper and Pearson method adjusted to the surveillance time.

f. All others = American Indian or Alaska Native, Asian, Native Hawaiian or other Pacific Islander, multiracial, and not reported race categories.

The subgroup analyses of vaccine efficacy by risk status in participants is presented in Table 96.

Table 96. Vaccine Efficacy – First COVID-19 Occurrence From 7 Days After Dose 2, by Risk Status – Participants Without Evidence of Infection* Prior to 7 Days After Dose 2 – Evaluable Efficacy (7 Days) Population²³

[...]			
-------	--	--	--

Abbreviations: BMI = body mass index; N-binding = SARS-CoV-2 nucleoprotein-binding; NAAT = nucleic acid amplification test; SARS-CoV-2 = severe acute respiratory syndrome coronavirus 2; VE = vaccine efficacy.

Note: Subjects who had no serological or virological evidence (prior to 7 days after receipt of the last dose) of past SARS-CoV-2 infection (i.e., N-binding antibody [serum] negative at Visit 1 and SARS-CoV-2 not detected by NAAT [nasal swab] at Visits 1 and 2), and had negative NAAT (nasal swab) at any unscheduled visit prior to 7 days after Dose 2 were included in the analysis.

[...]

The updated subgroup analyses of vaccine efficacy by risk status in participants followed up to 6 months after Dose 2 (with a cut-off date of 13 March 2021) are presented in Tables 10 and 11.

† Severe illness from COVID-19 as defined by FDA is confirmed COVID-19 and presence of at least 1 of the following:⁶¹

- Clinical signs at rest indicative of severe systemic illness (respiratory rate ≥ 30 breaths per minute, heart rate ≥ 125 beats per minute, saturation of oxygen $< 93\%$ on room air at sea level, or ratio of arterial oxygen partial pressure to fractional inspired oxygen < 300 mm Hg);
- Respiratory failure [defined as needing high-flow oxygen, noninvasive ventilation, mechanical ventilation or extracorporeal membrane oxygenation (ECMO)];
- Evidence of shock (systolic blood pressure < 90 mm Hg, diastolic blood pressure < 60 mm Hg, or requiring vasopressors);
- Significant acute renal, hepatic, or neurologic dysfunction;
- Admission to an Intensive Care Unit;
- Death.

‡ Severe illness from COVID-19 as defined by CDC is confirmed COVID-19 and presence of at least 1 of the following:⁶¹

- Hospitalization;
- Admission to the Intensive Care Unit;
- Intubation or mechanical ventilation;
- Death.

a. n1 = Number of participants meeting the endpoint definition.

b. n2 = Number of participants at risk for the endpoint.

c. Two-side confidence interval (CI) for vaccine efficacy is derived based on the Clopper and Pearson method

Table B-1. ADRs by SOC and CIOMS Frequency Category Listed in Order of Decreasing Medical Seriousness Within Each Frequency Category and SOC: Individuals 16 Years of Age and Older (13 -March -2021 Data Cut-off Date)

System Organ Class	Very Common ≥1/10 (>10%)	Common ≥1/100 to <1/10 (≥1% to <10%)	Uncommon ≥1/1,000 to <1/100 (≥0.1% to <1%)	Rare ≥1/10,000 to <1/1,000 (≥0.01% to <0.1%)	Very Rare ≤1/10,000 (≤0.01%)	Frequency not known (cannot be estimated from the available data)
Blood and lymphatic system disorders			Lymphadenopathy			
Immune system disorders			Urticaria; ^{a,b} Pruritus; ^{a,b} Rash ^{a,b}	Angioedema ^{a,b}		Anaphylaxis ^a
Metabolism and Nutrition disorders			Decreased appetite			
Nervous system disorders	Headache		Lethargy			
Gastrointestinal disorders	Diarrhea ^a	Vomiting; ^a Nausea				
Skin and subcutaneous Tissue disorders			Hyperhidrosis; Night sweats			
Musculoskeletal and connective tissue disorders	Arthralgia; Myalgia		Pain in extremity (arm) ^a			
General disorders and administration site conditions	Injection site pain; Fatigue; Chills; Pyrexia; Injection site swelling	Injection site redness	Asthenia; Malaise			

a. These adverse reactions were identified in the post-authorization period.

b. The following events are categorized as hypersensitivity reactions: urticaria, pruritus, rash, and angioedema.

Table B-2. ADRs by SOC and CIOMS Frequency Category Listed in order of Decreasing Medical Seriousness Within Each Frequency Category and SOC: Individuals 12 Through 15 Years of Age (13 March 2021 Data Cut-off Date)

<u>Severe</u>	<u>0</u>	<u>0</u>	<u>1 (1.7)</u>	<u>0</u>

Notes: Reactions were collected in the electronic diary (e-diary) from Day 1 to Day 7 after vaccination.

No Grade 4 solicited local reactions were reported in HIV-Positive participants 16 years of age and older.

* Randomized participants in the safety analysis population who received at least 1 dose of the study intervention.

a. N = Number of participants reporting at least 1 yes or no response for the specified reaction after the specified dose. The N for each reaction was the same, therefore, this information was included in the column header.

b. n = Number of participants with the specified reaction.

c. Mild: >2.0 to <5.0 cm; Moderate: >5.0 to <10.0 cm; Severe: >10.0 cm.

d. Mild: does not interfere with activity; Moderate: interferes with activity; Severe: prevents daily activity.

Adverse event following immunisation	Injury, poisoning and procedural complications	5 (0.00%)
Adverse reaction	General disorders and administration site conditions	5 (0.00%)
Agranulocytosis	Blood and lymphatic system disorders	5 (0.00%)
Alcohol interaction	General disorders and administration site conditions	5 (0.00%)
Allergy to chemicals	Immune system disorders	5 (0.00%)
Anal sphincter atony	Gastrointestinal disorders	5 (0.00%)
Anaphylactoid shock	Immune system disorders	5 (0.00%)
Angular cheilitis	Gastrointestinal disorders	5 (0.00%)
Ankle fracture	Injury, poisoning and procedural complications	5 (0.00%)
Anterograde amnesia	Nervous system disorders	5 (0.00%)
Antiphospholipid syndrome	Blood and lymphatic system disorders	5 (0.00%)
Anti-thyroid antibody positive	Investigations	5 (0.00%)
Aortic aneurysm rupture	Vascular disorders	5 (0.00%)
Aortic valve incompetence	Cardiac disorders	5 (0.00%)
Apallic syndrome	Nervous system disorders	5 (0.00%)
Apnoeic attack	Respiratory, thoracic and mediastinal disorders	5 (0.00%)
Application site erythema	General disorders and administration site conditions	5 (0.00%)
Arterial disorder	Vascular disorders	5 (0.00%)
Arterial stenosis	Vascular disorders	5 (0.00%)
Attention deficit hyperactivity disorder	Psychiatric disorders	5 (0.00%)
Basal ganglia haemorrhage	Nervous system disorders	5 (0.00%)
Basal ganglia stroke	Nervous system disorders	5 (0.00%)
Behcet's syndrome	Vascular disorders	5 (0.00%)
Benign prostatic hyperplasia	Reproductive system and breast disorders	5 (0.00%)
Bladder spasm	Renal and urinary disorders	5 (0.00%)
Blood calcium increased	Investigations	5 (0.00%)
Blood chloride decreased	Investigations	5 (0.00%)
Blood cholesterol abnormal	Investigations	5 (0.00%)
Blood creatinine abnormal	Investigations	5 (0.00%)
Blood fibrinogen decreased	Investigations	5 (0.00%)
Blood immunoglobulin G decreased	Investigations	5 (0.00%)
Blood pH increased	Investigations	5 (0.00%)
Blood pressure ambulatory increased	Investigations	5 (0.00%)
Blood pressure inadequately controlled	Vascular disorders	5 (0.00%)
Blood pressure measurement	Investigations	5 (0.00%)
Bone neoplasm	Neoplasms benign, malignant and unspecified (incl cysts and polyps)	5 (0.00%)
Brain herniation	Injury, poisoning and procedural complications	5 (0.00%)
Brain neoplasm	Neoplasms benign, malignant and unspecified (incl cysts and polyps)	5 (0.00%)
Bronchial hyperreactivity	Respiratory, thoracic and mediastinal disorders	5 (0.00%)
Bronchial obstruction	Respiratory, thoracic and mediastinal disorders	5 (0.00%)
Burning mouth syndrome	Gastrointestinal disorders	5 (0.00%)
Burns second degree	Injury, poisoning and procedural complications	5 (0.00%)
Cardiospasm	Gastrointestinal disorders	5 (0.00%)
Carotid artery stenosis	Nervous system disorders	5 (0.00%)

Preferred Term	System Organ Class (SOC)	Number of Cases
Cell death	Metabolism and nutrition disorders	5 (0.00%)
Cerebral palsy	Congenital, familial and genetic disorders	5 (0.00%)
Cerebral small vessel ischaemic disease	Nervous system disorders	5 (0.00%)
Change of bowel habit	Gastrointestinal disorders	5 (0.00%)
Chronic inflammatory demyelinating polyradiculoneuropathy	Nervous system disorders	5 (0.00%)
Clostridium difficile colitis	Infections and infestations	5 (0.00%)
Completed suicide	Psychiatric disorders	5 (0.00%)
Congestive cardiomyopathy	Cardiac disorders	5 (0.00%)
Congestive hepatopathy	Hepatobiliary disorders	5 (0.00%)
Conjunctivitis bacterial	Infections and infestations	5 (0.00%)
Cor pulmonale	Cardiac disorders	5 (0.00%)
Dental caries	Gastrointestinal disorders	5 (0.00%)
Dilatation ventricular	Cardiac disorders	5 (0.00%)
Discoloured vomit	Gastrointestinal disorders	5 (0.00%)
Dissociative disorder	Psychiatric disorders	5 (0.00%)
Distractibility	Psychiatric disorders	5 (0.00%)
Duodenogastric reflux	Gastrointestinal disorders	5 (0.00%)
Dysacusis	Ear and labyrinth disorders	5 (0.00%)
Dyslexia	Nervous system disorders	5 (0.00%)
Dyslipidaemia	Metabolism and nutrition disorders	5 (0.00%)
Dysmetria	Nervous system disorders	5 (0.00%)
Eczema herpeticum	Infections and infestations	5 (0.00%)
Electrocardiogram change	Investigations	5 (0.00%)
Enanthema	General disorders and administration site conditions	5 (0.00%)
Epididymitis	Infections and infestations	5 (0.00%)
Epiglottic oedema	Respiratory, thoracic and mediastinal disorders	5 (0.00%)
Escherichia bacteraemia	Infections and infestations	5 (0.00%)
Escherichia sepsis	Infections and infestations	5 (0.00%)
Essential tremor	Nervous system disorders	5 (0.00%)
Extensor plantar response	Nervous system disorders	5 (0.00%)
Extremity necrosis	Vascular disorders	5 (0.00%)
Focal dyscognitive seizures	Nervous system disorders	5 (0.00%)
Foetal heart rate abnormal	Investigations	5 (0.00%)
Folate deficiency	Metabolism and nutrition disorders	5 (0.00%)
Fungal skin infection	Infections and infestations	5 (0.00%)
Galactorrhoea	Reproductive system and breast disorders	5 (0.00%)
Gastrointestinal oedema	Gastrointestinal disorders	5 (0.00%)
Genital herpes simplex	Infections and infestations	5 (0.00%)
Glare	Eye disorders	5 (0.00%)
Haemorrhoids thrombosed	Gastrointestinal disorders	5 (0.00%)
Hearing disability	Social circumstances	5 (0.00%)
Heat oedema	Injury, poisoning and procedural complications	5 (0.00%)
Hepatic cirrhosis	Hepatobiliary disorders	5 (0.00%)
Hidradenitis	Skin and subcutaneous tissue disorders	5 (0.00%)
Horner's syndrome	Nervous system disorders	5 (0.00%)

Preferred Term	System Organ Class (SOC)	Number of Cases
Humerus fracture	Injury, poisoning and procedural complications	5 (0.00%)
Hypercholesterolaemia	Metabolism and nutrition disorders	5 (0.00%)
Hypercoagulation	Blood and lymphatic system disorders	5 (0.00%)
Hypertensive encephalopathy	Nervous system disorders	5 (0.00%)
Hypertonic bladder	Renal and urinary disorders	5 (0.00%)
Immunoglobulins increased	Investigations	5 (0.00%)
Impetigo	Infections and infestations	5 (0.00%)
Inappropriate affect	Psychiatric disorders	5 (0.00%)
Indifference	Psychiatric disorders	5 (0.00%)
Infusion related reaction	Injury, poisoning and procedural complications	5 (0.00%)
Injection site extravasation	General disorders and administration site conditions	5 (0.00%)
Injection site hypersensitivity	General disorders and administration site conditions	5 (0.00%)
Injection site muscle weakness	General disorders and administration site conditions	5 (0.00%)
Inspiratory capacity decreased	Investigations	5 (0.00%)
Intestinal infarction	Gastrointestinal disorders	5 (0.00%)
Lichenoid keratosis	Skin and subcutaneous tissue disorders	5 (0.00%)
Lichen planus	Skin and subcutaneous tissue disorders	5 (0.00%)
Lip haemorrhage	Gastrointestinal disorders	5 (0.00%)
Lipids increased	Investigations	5 (0.00%)
Lung consolidation	Respiratory, thoracic and mediastinal disorders	5 (0.00%)
Lymphadenopathy mediastinal	Blood and lymphatic system disorders	5 (0.00%)
Lymphatic disorder	Blood and lymphatic system disorders	5 (0.00%)
Madarosis	Skin and subcutaneous tissue disorders	5 (0.00%)
Mean cell haemoglobin concentration increased	Investigations	5 (0.00%)
Meningeal disorder	Nervous system disorders	5 (0.00%)
Menopausal symptoms	Reproductive system and breast disorders	5 (0.00%)
Microembolism	Vascular disorders	5 (0.00%)
Monocyte count decreased	Investigations	5 (0.00%)
Mononeuropathy	Nervous system disorders	5 (0.00%)
Mucosal haemorrhage	General disorders and administration site conditions	5 (0.00%)
Mucosal inflammation	General disorders and administration site conditions	5 (0.00%)
Muscle mass	Musculoskeletal and connective tissue disorders	5 (0.00%)
Muscle oedema	Musculoskeletal and connective tissue disorders	5 (0.00%)
Myelosuppression	Blood and lymphatic system disorders	5 (0.00%)
Myocardial rupture	Cardiac disorders	5 (0.00%)
Myofascial pain syndrome	Musculoskeletal and connective tissue disorders	5 (0.00%)
Necrotising fasciitis	Infections and infestations	5 (0.00%)
Neoplasm skin	Neoplasms benign, malignant and unspecified (incl cysts and polyps)	5 (0.00%)
Neuromuscular pain	Nervous system disorders	5 (0.00%)
Neuromyelitis optica spectrum disorder	Nervous system disorders	5 (0.00%)
Non-Hodgkin's lymphoma	Neoplasms benign, malignant and unspecified (incl cysts and polyps)	5 (0.00%)
Obstruction	General disorders and administration site conditions	5 (0.00%)
Ocular myasthenia	Eye disorders	5 (0.00%)
Oesophageal disorder	Gastrointestinal disorders	5 (0.00%)

Preferred Term	System Organ Class (SOC)	Number of Cases
Optic nerve disorder	Eye disorders	5 (0.00%)
Osteomyelitis	Infections and infestations	5 (0.00%)
Oxygen saturation	Investigations	5 (0.00%)
Palpable purpura	Skin and subcutaneous tissue disorders	5 (0.00%)
Pancreatic disorder	Gastrointestinal disorders	5 (0.00%)
Panniculitis	Skin and subcutaneous tissue disorders	5 (0.00%)
Peripheral arterial occlusive disease	Vascular disorders	5 (0.00%)
Persistent depressive disorder	Psychiatric disorders	5 (0.00%)
Pharyngeal stenosis	Respiratory, thoracic and mediastinal disorders	5 (0.00%)
Platelet count abnormal	Investigations	5 (0.00%)
Polycystic ovaries	Reproductive system and breast disorders	5 (0.00%)
Post-acute COVID-19 syndrome	Infections and infestations	5 (0.00%)
Post procedural complication	Injury, poisoning and procedural complications	5 (0.00%)
Post-traumatic neck syndrome	Injury, poisoning and procedural complications	5 (0.00%)
Premenstrual pain	Reproductive system and breast disorders	5 (0.00%)
Product container issue	Product issues	5 (0.00%)
Product contamination physical	Product issues	5 (0.00%)
Product use in unapproved indication	Injury, poisoning and procedural complications	5 (0.00%)
Prothrombin time shortened	Investigations	5 (0.00%)
Psychotic symptom	Psychiatric disorders	5 (0.00%)
Pupillary reflex impaired	Eye disorders	5 (0.00%)
Reading disorder	Psychiatric disorders	5 (0.00%)
Red blood cells urine positive	Investigations	5 (0.00%)
Red cell distribution width increased	Investigations	5 (0.00%)
Renal haemorrhage	Renal and urinary disorders	5 (0.00%)
Salivary gland disorder	Gastrointestinal disorders	5 (0.00%)
SARS-CoV-2 antibody test	Investigations	5 (0.00%)
SARS-CoV-2 test	Investigations	5 (0.00%)
Sciatic nerve neuropathy	Nervous system disorders	5 (0.00%)
Secondary hypertension	Vascular disorders	5 (0.00%)
Seroconversion test negative	Investigations	5 (0.00%)
Serum ferritin decreased	Investigations	5 (0.00%)
Shock haemorrhagic	Vascular disorders	5 (0.00%)
Sinus rhythm	Investigations	5 (0.00%)
Skin hyperpigmentation	Skin and subcutaneous tissue disorders	5 (0.00%)
Soft tissue infection	Infections and infestations	5 (0.00%)
Spinal stenosis	Musculoskeletal and connective tissue disorders	5 (0.00%)
Subileus	Gastrointestinal disorders	5 (0.00%)
Submaxillary gland enlargement	Gastrointestinal disorders	5 (0.00%)
Superficial vein prominence	Vascular disorders	5 (0.00%)
Superinfection	Infections and infestations	5 (0.00%)
Suspected product quality issue	Product issues	5 (0.00%)
Systemic immune activation	Immune system disorders	5 (0.00%)
Tardive dyskinesia	Nervous system disorders	5 (0.00%)
Thrombosis mesenteric vessel	Gastrointestinal disorders	5 (0.00%)
Thrombotic microangiopathy	Blood and lymphatic system disorders	5 (0.00%)

Preferred Term	System Organ Class (SOC)	Number of Cases
Tongue rough	Gastrointestinal disorders	5 (0.00%)
Tooth extraction	Surgical and medical procedures	5 (0.00%)
Tracheal pain	Respiratory, thoracic and mediastinal disorders	5 (0.00%)
Tracheal stenosis	Respiratory, thoracic and mediastinal disorders	5 (0.00%)
Transient aphasia	Nervous system disorders	5 (0.00%)
Transverse sinus thrombosis	Nervous system disorders	5 (0.00%)
Ulnar nerve injury	Injury, poisoning and procedural complications	5 (0.00%)
Urinary tract disorder	Renal and urinary disorders	5 (0.00%)
Urticaria thermal	Skin and subcutaneous tissue disorders	5 (0.00%)
Vaccination site dysaesthesia	General disorders and administration site conditions	5 (0.00%)
Vaccination site eczema	General disorders and administration site conditions	5 (0.00%)
Vaccination site injury	General disorders and administration site conditions	5 (0.00%)
Vascular occlusion	Vascular disorders	5 (0.00%)
Vein rupture	Vascular disorders	5 (0.00%)
Vitreous disorder	Eye disorders	5 (0.00%)
Vulval haemorrhage	Reproductive system and breast disorders	5 (0.00%)
Abnormal clotting factor	Blood and lymphatic system disorders	4 (0.00%)
Abnormal uterine bleeding	Reproductive system and breast disorders	4 (0.00%)

Nasal crusting	Respiratory, thoracic and mediastinal disorders	2 (0.00%)
Nasal discharge discolouration	Respiratory, thoracic and mediastinal disorders	2 (0.00%)
Neoplasm recurrence	Neoplasms benign, malignant and unspecified (incl cysts and polyps)	2 (0.00%)
Nerve conduction studies abnormal	Investigations	2 (0.00%)
Nerve degeneration	Nervous system disorders	2 (0.00%)
Neurogenic bladder	Renal and urinary disorders	2 (0.00%)
Neuropsychiatric symptoms	Psychiatric disorders	2 (0.00%)
Neurotoxicity	Nervous system disorders	2 (0.00%)
Neutropenic sepsis	Infections and infestations	2 (0.00%)
Nipple disorder	Reproductive system and breast disorders	2 (0.00%)
Nipple exudate bloody	Reproductive system and breast disorders	2 (0.00%)
Nodal rhythm	Cardiac disorders	2 (0.00%)
Nonspecific reaction	General disorders and administration site conditions	2 (0.00%)
Nose deformity	Musculoskeletal and connective tissue disorders	2 (0.00%)
Nucleated red cells	Blood and lymphatic system disorders	2 (0.00%)
Obstructive shock	Vascular disorders	2 (0.00%)
Occult blood positive	Investigations	2 (0.00%)
Oedema genital	Reproductive system and breast disorders	2 (0.00%)
Oesophageal discomfort	Gastrointestinal disorders	2 (0.00%)
Oesophageal oedema	Gastrointestinal disorders	2 (0.00%)
Oesophageal stenosis	Gastrointestinal disorders	2 (0.00%)

Preferred Term	System Organ Class (SOC)	Number of Cases
Oesophageal varices haemorrhage	Gastrointestinal disorders	2 (0.00%)
Oligoarthritis	Musculoskeletal and connective tissue disorders	2 (0.00%)
Opisthotonus	Nervous system disorders	2 (0.00%)
Optic atrophy	Eye disorders	2 (0.00%)
Optic disc haemorrhage	Eye disorders	2 (0.00%)
Oral mucosa haematoma	Gastrointestinal disorders	2 (0.00%)
Oral mucosal discolouration	Gastrointestinal disorders	2 (0.00%)
Oropharyngeal candidiasis	Infections and infestations	2 (0.00%)
Oscillopsia	Eye disorders	2 (0.00%)
Osteochondritis	Musculoskeletal and connective tissue disorders	2 (0.00%)
Osteonecrosis of jaw	Musculoskeletal and connective tissue disorders	2 (0.00%)
Otitis media acute	Infections and infestations	2 (0.00%)
Otolithiasis	Ear and labyrinth disorders	2 (0.00%)
Ovarian cancer	Neoplasms benign, malignant and unspecified (incl cysts and polyps)	2 (0.00%)
Ovarian haemorrhage	Reproductive system and breast disorders	2 (0.00%)
Ovarian vein thrombosis	Reproductive system and breast disorders	2 (0.00%)
Ovulation disorder	Reproductive system and breast disorders	2 (0.00%)
Palatal ulcer	Gastrointestinal disorders	2 (0.00%)
Palate injury	Injury, poisoning and procedural complications	2 (0.00%)
Palmoplantar pustulosis	Skin and subcutaneous tissue disorders	2 (0.00%)
Pancreatic cyst	Gastrointestinal disorders	2 (0.00%)
Pancreatitis chronic	Gastrointestinal disorders	2 (0.00%)
Pancreatitis necrotising	Gastrointestinal disorders	2 (0.00%)
Pancreatitis relapsing	Gastrointestinal disorders	2 (0.00%)
Paramnesia	Psychiatric disorders	2 (0.00%)
Paronychia	Infections and infestations	2 (0.00%)
Parophthalmia	Eye disorders	2 (0.00%)
Paroxysmal arrhythmia	Cardiac disorders	2 (0.00%)
Paroxysmal sympathetic hyperactivity	Nervous system disorders	2 (0.00%)
Parvovirus B19 test positive	Investigations	2 (0.00%)
Patella fracture	Injury, poisoning and procedural complications	2 (0.00%)
Paternal exposure during pregnancy	Injury, poisoning and procedural complications	2 (0.00%)
PCO2 decreased	Investigations	2 (0.00%)
Pelvic inflammatory disease	Infections and infestations	2 (0.00%)
Pelvic mass	General disorders and administration site conditions	2 (0.00%)
Penile erythema	Reproductive system and breast disorders	2 (0.00%)
Perforation	General disorders and administration site conditions	2 (0.00%)
Pericardial disease	Cardiac disorders	2 (0.00%)
Periorbital disorder	Eye disorders	2 (0.00%)
Peripheral nerve injury	Injury, poisoning and procedural complications	2 (0.00%)
Peripheral nerve paresis	Nervous system disorders	2 (0.00%)
Peripheral sensorimotor neuropathy	Nervous system disorders	2 (0.00%)
Peroneal nerve injury	Injury, poisoning and procedural complications	2 (0.00%)
Personality disorder	Psychiatric disorders	2 (0.00%)
Pharyngeal cyst	Respiratory, thoracic and mediastinal disorders	2 (0.00%)

Appendix 2.2 Interval Summary Tabulation of Case Reports with DME Events from Post-Marketing Data Sources

BNT162B2 - ALL

Interval Reporting Period: 30-APR-2021 Through 31-MAY-2021

Total Number of Cases: 47,174 (Interval)

Total Number of Cases with DME 1,252 (Interval)

Total Number of Adverse Events (PT) (DME only) 1,331 (Interval)

MedDRA Version: v.24.0J

SOC and PT	Number of Events	Percentage (%)
Blood and lymphatic system disorders	3	
Agranulocytosis	1	0.0 %
Febrile bone marrow aplasia	1	0.0 %
Hypereosinophilic syndrome	1	0.0 %
Cardiac disorders	1	
Torsade de pointes	1	0.0 %
Eye disorders	1	
Angle closure glaucoma	1	0.0 %
Gastrointestinal disorders	65	
Intestinal angioedema	1	0.0 %
Oedematous pancreatitis	1	0.0 %
Pancreatitis	14	0.0 %
Pancreatitis acute	19	0.0 %
Pancreatitis haemorrhagic	1	0.0 %
Pancreatitis necrotising	1	0.0 %
Tongue oedema	28	0.1 %
General disorders and administration site conditions	72	
Face oedema	72	0.2 %

Multiple adverse event coding to the same Preferred Term (DME) may have been reported in some cases. Counts are provided for the number of unique Preferred Terms Reported.

Hepatobiliary disorders	5	
Acute hepatic failure	2	0.0 %
Hepatic failure	2	0.0 %
Hepatorenal syndrome	1	0.0 %
Immune system disorders	770	
Anaphylactic reaction	672	1.4 %
Anaphylactic shock	74	0.2 %
Anaphylactoid reaction	12	0.0 %
Anaphylactoid shock	2	0.0 %
Type I hypersensitivity	10	0.0 %
Injury, poisoning and procedural complications	5	
Burn oesophageal	2	0.0 %
Contraindicated product administered	2	0.0 %
Contraindicated product prescribed	1	0.0 %
Investigations	2	
Electrocardiogram QT prolonged	2	0.0 %
Metabolism and nutrition disorders	9	
Hyperkalaemia	9	0.0 %
Musculoskeletal and connective tissue disorders	36	
Myopathy	6	0.0 %

APPENDIX 2.5.1: Cumulative and Interval Summary Tabulation of Serious and Non-Serious Adverse Reactions From Post-Marketing Data Sources Organized per MedDRA System Organ Class by Preferred Term per Country

Cumulative Reporting Period: Through 31-MAY-2021

Interval Reporting Period: 30-APR-2021 Through 31-MAY-2021

Total Number of Cases: 47,174 (Interval) / 167,956 (Cumulative)

Total Number of Adverse Events (PT): 174,177 (Interval) / 631,356 (Cumulative)

MedDRA Version: v.24.0J

Country Where Event Occurred

AFGHANISTAN
