In addition to the above-mentioned audits, process-based and/or routine facility inspections were also conducted during the course of this study. Inspection findings, if any, specific to this study were reported by Quality Assurance to the Study Director and Management and listed as a Phase Audit on this Quality Assurance Statement.

The Final Report has been reviewed to assure that it accurately describes the materials and methods, and that the reported results accurately reflect the raw data.

COMPLIANCE STATEMENT

The study was performed in accordance with the OECD Principles of Good Laboratory Practice and as accepted by Regulatory Authorities throughout the European Union, United States of America (FDA), Japan (MHLW), and other countries that are signatories to the OECD Mutual Acceptance of Data Agreement.

Any portion of this study conducted in the USA was performed in accordance with the U.S. Department of Health and Human Services, Food and Drug Administration. United States Code of Federal Regulations, Title 21, Part 58: Good Laboratory Practice for Nonclinical Laboratory Studies and as accepted by Regulatory Authorities throughout the European Union (OECD Principles of Good Laboratory Practice), Japan (MHLW), and other countries that are signatories to the OECD Mutual Acceptance of Data Agreement.

Exceptions from the above regulations are listed below.

- Characterization of the Test Item was performed by the Sponsor or Sponsor subcontractor according to established SOPs, controls, and approved test methodologies to ensure integrity and validity of the results generated; these analyses were not conducted in compliance with the GLP or GMP regulations.
- Analysis of cytokines, α2-macroglobulin, α1-acid glycoprotein, anti-therapeutic antibody and PBMCs were conducted using scientifically qualified methods and in accordance with all applicable analytical procedures.
- The purity analysis of the bulk test item was conducted using a scientifically qualified methods and in accordance with applicable analytical procedures.
- Pathology peer review.

This study was conducted in accordance with the procedures described herein. All deviations authorized/acknowledged by the Study Director are documented in the Study Records. The report represents an accurate and complete record of the results obtained.

There were no deviations from the above regulations that affected the overall integrity of the study or the interpretation of the study results and conclusions.

2. SUMMARY

The objectives of this study were to determine the potential toxicity of mRNA 1647, when given by intramuscular injection for 6 weeks (4 doses) to rats and to evaluate the potential reversibility of any findings following a 2-week recovery period.

The study design was as follows:

Text Table 1
Experimental Design

Group No.	Test Material	Dose Level[a] (µg/dose)	Dose Volume (µL/dose)	Dose Concentration[a] (mg/mL)	No. of Animals			
					Main Study		Recovery Study	
					Males	Females	Males	Females

2	mRNA-1647	10/8.9	200	0.05/0.045	10	10	-	-
3	mRNA-1647	30/27	200	0.15/0.14	10	10	-	-
4	mRNA-1647	100/89	200	0.5/0.45	10	10	5	5

- : Not applicable
[a] Values based on Summary of Analysis (SoA) issued on 16 Mar 2017 / Values based on SoA issued on 31 May 2017 (Refer to memorandum in Appendix 2).

The following parameters and endpoints were evaluated in this study: clinical observations consisting of twice daily examinations for mortality/moribundity and weekly detailed examinations; local irritation assessment at least 24- and 72-hour postdose on dosing days and weekly when there were no dosing and during the recovery period; weekly body weights and food consumption measurements; ophthalmic examinations once prior to dosing initiation and during Day 40 (males) or Day 39 (females) of the dosing period; body temperature on Days 1 and 43 at predose and 6 and 24 hours postdose (end of each group); clinical pathology assessment (hematology, coagulation, clinical chemistry, α1-acid glycoprotein and α2-macroglobulin) at termination; cytokine analysis (IL-1ß, IL-6, TNF-α, IP-10, MIP-1-α and MCP-1) on Days 1, 15, 29 and 43 at 6 hours postdose and on Day 57; Anti-Therapeutic Antibody (ATA) analysis prior to dosing initiation, on Day 29 (predose), on Day 43 (postdose) and on Day 57; PBMC analysis on Day 44; gross necropsy findings, organ weights, and histopathologic examinations.

There were no mRNA-1647-related changes in food consumption and ophthalmology.

There were no mRNA-1647-related mortalities during the course of the study. One male given the Reference Item (PBS) was found dead on Day 43. The pathological evaluation revealed gross abnormal findings in the adrenal gland , kidneys , thymus; and lungs. Histopathology findings for this control male were incidental and did not explain the cause of death.

mRNA-1647-treated main study and recovery animals had significant detectable antibody responses against CMV gB protein and CMV gH pentamer complex.

mRNA-1647 elicited both CD4 and CD8 T cell responses to both CMV Pentamer and gB. T cell response (PBMC analysis) were significantly variable within each test group with data trending towards higher T cells responses at higher doses of mRNA-1647.

The primary mRNA-1647-related findings were observed at the site of injection. At all doses, increase in incidence and/or severity with dose of very slight to severe edema was noted at the injection site, following dosing of males and females (peaking 24 hours postdose, generally decreasing by 72 hours postdose). Although sporadic in occurrences, slight to moderately severe erythema was noted as well, but was only considered mRNA-1647-related at 89 µg/dose. Swelling (soft or firm), noted on the injection site following the third and/or fourth doses, together with localized skin redness at the injection site noted throughout the dosing period, were consistent with the edema and erythema findings. Macroscopically, dose-dependent firm abnormal consistency, dark foci and/or swelling at the injection site correlated with microscopic changes observed at all doses that included minimal to moderate mixed cell inflammation involving the subcutaneous tissues, skeletal muscle, and to a lesser extent the dermis, as well as minimal to moderate subcutaneous edema. Increased incidence and/or severity of minimal to marked mixed cell inflammation was seen in the popliteal and/or inguinal lymph nodes (draining) of all animals at ≥ 8.9 µg/dose which correlated macroscopically with enlargement; minimal to marked mixed cell inflammation was frequently observed in the perineurial tissue surrounding the sciatic nerve of animals given ≥ 8.9 µg/dose. Sciatic nerve and lymph node inflammatory changes were regarded as secondary to the injection site inflammation. mRNA-1647-related microscopic findings were still noted at the injection site and sciatic nerve of recovery animals; minimal to mild mononuclear cell infiltration and minimal mixed cell inflammation were seen respectively in the injection site and on the sciatic nerves of males and/or females given 89 µg/dose. The absence of mixed cell inflammation and edema, with a shift to minimal to mild mononuclear cell infiltration, at the intramuscular injections sites and a reduced incidence and/or severity of perineurial mixed cell inflammation associated with the sciatic nerves were however all indicative of a partial recovery. Clinical signs (i.e. edema, swelling, erythema and reddening of the skin) observed at the injection site and gross pathology findings as well as microscopic findings observed at the inguinal and popliteal lymph nodes were no longer observed in recovery animals, indicating a complete recovery for these changes.

mRNA-1647-related systemic changes associated with inflammation were also observed in animals given ≥ 27 µg/dose and included minimally increased hematopoiesis of the myeloid lineage in the bone marrow. This change was likely a reactive response to the pronounced inflammation observed at the injection site. Other systemic findings included increases in absolute and/or relative spleen weights without correlating histopathology, and minimal to mild decreased cellularity of the splenic periarteriolar lymphoid sheath. Clinical pathology changes suggestive of inflammation were also observed in males and/or females given mRNA-1647 at all doses (unless noted otherwise) and included: minimal to moderate increases in neutrophil, eosinophil and large unstained cell counts with concomitant increases in white blood cell counts, minimal decreases in lymphocyte counts and platelet counts (females at 89 µg/dose), minimal increases in activated partial thromboplastin time and mild increases in fibrinogen, minimal increases in globulin, minimal decreases in albumin, with concomitant decreases in A/G ratio. Increase in body temperature postdose (89 µg/dose), along with increases in acute phase protein Alpha-1-Glycoprotein and Alpha-2-Macroglobulin and elevations of cytokine levels IP-10

(89 µg/dose) and MCP-1, were all suggestive of inflammation. At the end of the 2-week recovery period, Alpha-2-Macroglobulin levels were still higher than controls, but to a lesser extent, the incidence and severity of increased absolute and/or relative spleen weights was reduced, as well as the decrease in cellularity of the periarteriolar lymphoid sheath in the spleen, suggesting only a partial recovery for these aforementioned findings. All other mRNA-1647-related systemic changes returned close to control values and, as such, were considered fully recovered.

When compared to controls, following each dose, a tendency towards lower mean body weight gains was noted in males given ≥ 8.9 µg/dose and in females given 89 µg/dose; these changes sometimes reached statistical significance. The changes were only cumulative in males. There were no clear association of the body weight changes with food consumption or clinical observations. The body weight changes were generally comparable or rebounded during the 2-week recovery period.

In conclusion, administration of mRNA-1647 by intramuscular injection for 6 weeks (4 doses) was clinically well tolerated (no mortality, major decreases in body weight and no changes in food consumption or deleterious changes in hematology, coagulation or clinical chemistry parameters) in rats up to 89 µg/dose. Starting at 8.9 µg/dose, generally dose-dependent changes in clinical signs at the injection site, clinical pathology parameters, cytokines and acute protein levels were consistent with an inflammatory response at the injection site. Dose-related target organ effects were limited to the injection site, the bone marrow, the inguinal and popliteal lymph nodes, the connective tissue surrounding the sciatic nerve and the spleen of animals given mRNA-1647. At the end of the 2-week recovery period, all changes were partially or fully recovered.

3. INTRODUCTION

The objectives of this study were to determine the potential toxicity of mRNA 1647, when given by intramuscular injection for 6 weeks (4 doses) to rats and to evaluate the potential reversibility of any findings following a 2-week recovery period.

The design of this study is based on the study objectives, the overall product development strategy for the Test Item, and the following study design guidelines:

- OECD Guideline 407. *Repeated Dose 28-day Oral Toxicity Study in Rodents*.
- Committee for Medicinal Products for Human Use (CHMP). *Note for Guidance on Repeated Dose Toxicity*. CPMP/SWP/1042/99corr.
- ICH Harmonised Tripartite Guideline M3 (R2). *Nonclinical Safety Studies for the Conduct of Human Clinical Trials and Marketing Authorization for Pharmaceuticals*.
- Japanese Guidelines for Nonclinical Studies of Drugs Manual (1995). *Guidelines for Toxicity Studies of Drugs (Chapter 3, Repeated Dose Toxicity Studies)*.
- Appendix to Director General Notification, No. 12-Nousan-8147, 24 Nov 2000, Agricultural Production Bureau, Ministry of Agriculture, Forestry and Fisheries of Japan (JMAFF).

The Study Director signed the study plan on 08 Mar 2017, and dosing was initiated on 22 Mar 2017 (males) and on 23 Mar 2017 (females). The in-life phase of the study was completed on 05 May 2017 (main study animals) and on 18 May 2017 (recovery study animals), the date of the last necropsy. The experimental start date was 08 Mar 2017, and the experimental completion date is 20 Sep 2017 (signature of the pathology report). The study plan, study plan amendments, and deviations are presented in Appendix 1.

4. MATERIALS AND METHODS

4.1. Test Item

Identification:	mRNA-1647
Batch (Lot) No.:	MTDP17015
Retest Date:	An end-of-use analysis of the bulk Test Item was performed to demonstrate the stability of the Test Item during the dosing period.
Physical Description:	White to off-white lipid nanoparticle dispersion
Concentration:	2.7 / 2.4*mg/mL
Storage Conditions:	Kept in a freezer set to maintain -20°C
Supplier:	Moderna Therapeutics, Inc

* Concentration based on SoA released on 16 Mar 2017 /Concentration based on SoA released on 31 May 2017

4.2. Reference Item

Identification:	Phosphate-buffered Saline (PBS) pH 7.2
Batch (Lot) No.:	1809319 1854892 1759866 1830677
Expiration Date:	Jul 2018 Dec 2018 Feb 2018 Sep 2018
Physical Description:	Liquid
Storage Conditions:	Kept in a controlled temperature area set to maintain 21°C

4.3. Test and Reference Item Characterization

The Sponsor provided to the Test Facility documentation of the identity, strength, purity, composition, and stability for the Test Item. A Summary of Analysis was provided to the Test Facility and is presented in Appendix 2.

4.4. Analysis of Test Item

A sample (2 vials) of the Test Item were taken on the completion of the dosing period. Analysis of bulk Test Item for concentration, particle size and purity were performed.

The first vial was transferred (on dry ice) to the analytical laboratory at the Test Facility for concentration and particle size analysis.

The second vial was transferred (on dry ice) to the analytical laboratory at the Test Facility for purity analysis.

Concentration, Purity and Particle size analysis were performed by IEX- HPLC, Differential Light Scattering (DLS) and rHPLC using validated or qualified analytical procedures.

4.5. Reserve Samples

For each batch (lot) of Test and Reference Items, a reserve sample (1 mL or 1 vial) was collected and maintained under the appropriate storage conditions by the Test Facility (refer to Appendix 1 for one exception).

4.6. Test and Reference Item Inventory and Disposition

Records of the receipt, distribution, and storage and disposition of Test and Reference Items were maintained. With the exception of reserve samples, all unused Test and Reference Items were returned to the Sponsor after completion of dosing.

4.7. Dose Formulation and Analysis

(Appendix 3)

4.7.1. Preparation of Reference Item

Dose formulation preparations were performed under a laminar flow hood using clean procedures.

The Reference Item, Phosphate-buffered Saline (PBS) pH 7.2, was dispensed on days of dosing (i.e. Days 1, 15, 29 and 43) for administration to Group 1 control animals and was used as required to dilute the bulk Test Item for administration to Groups 2 to 4 animals. The aliquots were stored in a refrigerator set to maintain 4°C until use. They were removed from the refrigerator and allowed to warm to room temperature for at least 30 minutes before dosing.

Details of the preparation and dispensing of the Reference Item have been retained in the Study Records.

4.7.2. Preparation of Test Item

Dose formulation preparations were performed under a laminar flow hood using clean procedures.

Test Item formulations were diluted with PBS pH 7.2, as necessary for administration. The dosing formulations were prepared on each days of dosing (i.e. Days 1, 15, 29 and 43) and were stored in a refrigerator set to maintain 4°C. The dose formulations were allowed to warm to room temperature for at least 30 minutes prior to dosing. Stock vials were used only once.

Empty vials were discarded. Any residual volumes of formulated Test Item and stock Test Item were stored in a refrigerator set at 4°C and were discarded prior to report finalization.

4.7.3. Sample Collection and Analysis

Dose formulation samples were collected for analysis as indicated in Text Table 2.

Text Table 2
Dose Formulation Sample Collection Schedule

Interval[b]	Homogeneity	Concentration	Sampling From
Day 1	All groups[a]	All groups	Dosing container
Day 43	N/A	All groups	Dosing container

N/A = Not applicable.
[a] The homogeneity results obtained from the top, middle and bottom preparations were averaged and utilized as the concentration results.
[b] Samples were collected on the first preparation of the study and on the last preparation of the study.

Samples to be analyzed were transferred on ice pack to the analytical laboratory.

4.7.3.1. Analytical Method

Analyses described below were performed by IEX-HPLC using a validated analytical procedure (CR-MTL Study No.1802050).

4.7.3.2. Concentration and Homogeneity Analysis

On Days 1 and 43 of the study, duplicate sets of samples (0.5 mL) were sent to the analytical laboratory; triplicate set of samples (0.5 mL) were retained at the Test Facility as backup samples. Samples were collected in an appropriate sized glass container from the top, middle and bottom strata of the dosing container for each concentration except for Group 1 dosing formulation and on day 43 where only concentration analysis were required; the formulation was then only sampled from the middle stratum.

Concentration results were considered acceptable if mean sample concentration results were within or equal to ± 15% of theoretical concentration. Each individual sample concentration result was considered acceptable if it was within or equal to ± 20%. After acceptance of the analytical results, backup samples were discarded.

Homogeneity results were considered acceptable if the relative standard deviation (RSD) of the mean value at each sampling location was ≤ 5%.

After acceptance of the analytical results, backup samples were discarded.

4.7.3.3. Stability Analysis

There was no stability analysis performed for concentration used on this study however, end of use stability analysis of the bulk test item was performed at the end of the dosing period.

4.8. Test System

4.8.1. Receipt

On 08 March 2017, one hundred and twenty Crl:CD(SD) Sprague-Dawley rat (60 males and 60 females) were received from Charles River Canada Inc., St. Constant, QC, Canada. The animals were 08 weeks old and males weighed between 235 and 297 grams and females weighed between 195 and 248 grams at initiation of dosing.

4.8.2. Justification for Test System and Number of Animals

The Sprague Dawley rat was chosen as the animal model for this study as it is an accepted rodent species for preclinical toxicity testing by regulatory agencies.

The total number of animals to be used in this study was considered to be the minimum required to properly characterize the effects of the Test Item. This study has been designed such that it does not require an unnecessary number of animals to accomplish its objectives.

At this time, studies in laboratory animals provide the best available basis for extrapolation to humans and are required to support regulatory submissions. Acceptable models which do not use live animals currently do not exist.

4.8.3. Animal Identification

Each animal was identified using a subcutaneously implanted electronic identification chip.

4.8.4. Environmental Acclimation

A minimum acclimation period of 14 days was allowed between animal receipt and the start of dosing in order to accustom the animals to the laboratory environment (refer to Appendix 1).

4.8.5. Selection, Assignment, Replacement, and Disposition of Animals

Animals were assigned to groups by a stratified randomization scheme designed to achieve similar group mean body weights. Males and females were randomized separately. Animals in poor health or at extremes of body weight range were not assigned to groups.

Before the initiation of dosing, assigned animals with compromising background ophthalmic findings, that were considered unsuitable for use in the study, were replaced by alternate animals obtained from the same shipment and maintained under the same environmental conditions.

The alternate animals were used as replacements on the study within approximately 4 days.

4.8.6. Husbandry

4.8.6.1. Housing

Animals were group housed (up to 3 animals of the same sex and same dosing group together) in polycarbonate cages containing appropriate bedding equipped with an automatic watering valve. These housing conditions were maintained all along the study. The rooms in which the animals were kept was documented in the study records.

Animals were separated during designated procedures/activities. Each cage was clearly labeled with a color-coded cage card indicating study, group, animal number(s), and sex. Cages were arranged on the racks in group order. Control group animals were housed on a separate rack from the Test Item-dosed animals.

4.8.6.2. Environmental Conditions

Target temperatures of 19°C to 25°C with a relative target humidity of 30% to 70% were maintained. A 12-hour light/12-hour dark cycle was maintained, except when interrupted for designated procedures.

4.8.6.3. Food

PMI Nutrition International Certified Rodent Chow No. 5CR4 (14% protein) was provided ad libitum throughout the study, except during designated procedures. The same diet in meal form was provided to one female animal from Group 4 as warranted by clinical signs (broken/damaged incisors). On few occasions, wet pellets were also provided to Group 4 animals as warranted by clinical signs.

The feed was analyzed by the supplier for nutritional components and environmental contaminants. Results of the analysis are provided by the supplier and are on file at the Test Facility.

It is considered that there are no known contaminants in the feed that would interfere with the objectives of the study.

4.8.6.4. Water

Municipal tap water after treatment by reverse osmosis and ultraviolet irradiation was freely available to each animal via an automatic watering system (except during designated procedures).

Periodic analysis of the water is performed, and results of these analyses are on file at the Test Facility.

It is considered that there are no known contaminants in the water that could interfere with the outcome of the study.

4.8.6.5. Animal Enrichment

Animals were socially housed for psychological/environmental enrichment and were provided with items such as a hiding device and a chewing object, except when interrupted by study procedures/activities.

4.8.6.6. Veterinary Care

Veterinary care was available throughout the course of the study, and animals were examined by the veterinary staff as warranted by clinical signs or other changes. All veterinary examinations were documented in the study records. No veterinary treatments were necessary during the course of the study.

Reaction (Skin scab) to non-toxic pen used for marking the injection area was observed for control Animals Nos. 1510 and 1514 on Day 21 and 38, respectively. Consequently, no marking of the injection site was performed for these animals after that day.

4.9. Experimental Design

Text Table 3
Experimental Design

Group No.	Test Material	Dose Level[a] (µg/dose)	Dose Volume (µL/dose)	Dose Concentration[a] (mg/mL)	Animals No.			
					Main Study		Recovery Study	
					Males	Females	Males	Females
1	Reference Item	0	200	0	1001-1010	1501-1510	1011-1015	1511, 1612, 1513-1515
2	mRNA-1647	10/8.9	200	0.05/0.045	2001, 2102, 2003-2010	2501-2510	-	-
3	mRNA-1647	30/27	200	0.15/0.14	3001, 3002, 3103, 3004-3010	3501-3503, 3604, 3505-3510	-	-
4	mRNA-1647	100/89	200	0.5/0.45	4001-4010	4501-4510	4011-4015	4511-4515

- : Not applicable
[a] Values based on SoA issued on 16 Mar 2017 / Values based on SoA issued on 31 May 2017.

Prior to the start of dosing, animals were rejected from the study due to compromising background ophthalmic findings and were replaced with spare animals. The final allocation of animals is listed under Text Table 3. All animals remaining unassigned to groups after Day 4 (males) or 3 (females) were released from the study and their disposition, documented.

4.9.1. Administration of Test Materials

The Test and Reference Items were administered to the appropriate animals via intramuscular injection into the lateral compartment of the thigh on Days 1, 15, 29 and 43, the injection site was alternated on each dosing occasion (site 1= left; site 2= right). The volume for each dose was administered using a syringe/needle within the demarcated area. The first day of dosing was designated as Day 1.

The injection area was marked as frequently as required to allow appropriate visualization of administration sites (refer to Section 4.8.6.6 for exceptions). Hair may have been clipped or shaved, if required, to improve visualization of the injection sites. The injection site was documented in the raw data for each dose administered.

4.9.2. Justification of Route and Dose Levels

The intramuscular route of exposure was selected because this is the intended route of human exposure.

The dose levels for this toxicology study were chosen to approximate a substantial multiple of the anticipated clinical starting dose and top clinical dose. The highest dose to be tested was expected to represent the intended maximum human clinical dose and volume and was administered by the clinical route (intramuscular). At this dose level, minimal systemic toxicity was expected, but it was possible mild to moderate injection site reaction (redness, swelling) and potentially elevation of systemic cytokine/acute phase markers may have been observed. The mid- and low-dose were selected to evaluate the dose-dependent effect of this compound.

4.10. In-life Procedures, Observations, and Measurements

4.10.1. Mortality/Moribundity Checks

Throughout the study, animals were observed for general health/mortality and moribundity twice daily, once in the morning and once in the afternoon. Animals were not removed from cage during observation, unless necessary for identification or confirmation of possible findings.

4.10.2. Clinical Observations

4.10.2.1. Detailed Clinical Observations

The animals were removed from the cage, and a detailed clinical observation was performed weekly during the dosing and recovery periods, beginning during Week -1.

4.10.3. Local Irritation Assessment

On days of dosing and at least 24 and 72 hours postdose (end of each group), all animals had the dose injection site examined for signs of erythema/edema. Examinations were also performed weekly when there was no dosing and during the recovery period. Following Day 43 dosing, no assessment was performed on Main Study animals at 72 hours postdose as these animals were sent to necropsy on Day 44.

Observations were scored according to the Local Irritation Assessment scoring table as follows:

Erythema (Redness)	**Score**
No erythema	0
Very slight erythema (barely perceptible)	1
Mild erythema	2
Moderate to severe erythema	3
Severe erythema (beet redness to slight eschar formation, injury in depth)	4
Notable dermal lesion (maximized)	M
Edema (Swelling)	
No edema	0
Very slight edema (barely perceptible)	1
Slight edema	2
Moderate edema	3
Severe edema	4

4.10.4. Body Weights

Animals were weighed individually weekly, starting during Day -1. A fasted weight was recorded on the day of necropsy. Terminal body weight was not collected from animals found dead.

4.10.5. Food Consumption

Food consumption was quantitatively measured starting on Day -9 and weekly throughout the dosing and recovery periods (refer to Appendix 1 for additional details).

4.10.6. Ophthalmic Examinations

Animals had funduscopic (indirect ophthalmoscopy) and biomicroscopic (slit lamp) examinations once prior to dosing (all animals) and on Day 40 for males and Day 39 for females. As there were no Test Item-related ophthalmoscopic findings at the end of the dosing period, examinations were not performed during the recovery phase. The mydriatic used was atropine 0.126%.

4.10.7. Body Temperature

Rectal body temperature was recorded on un-sedated animals on Days 1 and 43 at predose and 6 and 24 hours postdose (end of each group). After first dose administration, body temperature of Group 4 female animals was monitored until 48 post dose, after which body temperature normal range (36.0°C to 38.0°C) was recovered.

4.11. Laboratory Evaluations

4.11.1. Clinical Pathology

4.11.1.1. Sample Collection

Blood was collected from the abdominal aorta following isoflurane anesthesia. After collection, samples were transferred to the appropriate laboratory for processing.

Animals were fasted overnight before blood sampling (for clinical chemistry). Samples were collected according to Text Table 4.

Text Table 4
Samples for Clinical Pathology Evaluation

Group Nos.	Time Point	Hematology	Coagulation	Clinical Chemistry	α1-acid glycoprotein/ α2-macroglobulin
1 to 4[a]	Day 44	X	X	X	X
1 and 4	Day 57	X	X	X	X

X = Sample collected
[a] Samples were only collected from those animals scheduled for euthanasia on Day 44.

4.11.1.2. Hematology

Blood samples (target volume of 0.5 mL collected in a tube containing EDTA as anticoagulant) were analyzed for the parameters specified in Text Table 5.

Text Table 5
Hematology Parameters

Red blood cell count Hemoglobin concentration Hematocrit Mean corpuscular volume Red Blood Cell Distribution Width Mean corpuscular hemoglobin concentration Mean corpuscular hemoglobin Reticulocyte count (absolute) Platelet count	White blood cell count Neutrophil count (absolute) Lymphocyte count (absolute) Monocyte count (absolute) Eosinophil count (absolute) Basophil count (absolute) Large unstained cells (absolute)

A blood smear was prepared from each hematology sample. Blood smears were labeled, stained, and stored. Blood smears were read to investigate results for some animals.

4.11.1.3. Coagulation

Blood samples (target volume of 1.2 mL collected in a 1.3 mL tube containing citrate as anticoagulant) were processed for plasma, and plasma was analyzed for the parameters listed in Text Table 6.

Text Table 6
Coagulation Parameters

Activated partial thromboplastin time Fibrinogen	Prothrombin time Sample Quality

4.11.1.4. Clinical Chemistry

Blood samples (target volume of 0.7 mL collected in serum separator tubes) were processed for serum, and the serum was analyzed for the parameters specified in Text Table 7.

Text Table 7
Clinical Chemistry Parameters

Alanine aminotransferase	Total protein
Aspartate aminotransferase	Albumin
Alkaline phosphatase	Globulin
Gamma-glutamyltransferase	Albumin/globulin ratio
Creatine Kinase	Glucose
Total bilirubin	Cholesterol
Urea nitrogen	Triglycerides
Creatinine	Sodium
Calcium	Potassium
Phosphorus	Chloride
	Sample Quality

4.11.1.5. α1-acid Glycoprotein and α2-macroglobulin Analysis

Blood (target volume of 0.7 mL collected in a serum separator tube) was obtained via abdominal aorta following isoflurane anesthesia before scheduled necropsy for all animals.

Blood samples were allowed to clot at ambient room temperature, until centrifugation which was carried out as soon as practical. The samples were centrifuged for (b) (4) in a refrigerated centrifuge (set to maintain (b) (4)) at (b) (4) Samples were processed to serum by the Immunology Department. Serum were aliquoted into 1 x 75 µL aliquot for α2-macroglobulin and 2 x 75 µL aliquot and a leftover (when available) for α1-acid glycoprotein. All samples were stored in a freezer set to maintain -20°C, pending analysis.

Analysis for α1-acid glycoprotein and α2-macroglobulin was conducted using a qualified ELISA method by the Immunology Department. The procedure to be followed along with the assay acceptance criteria was detailed in the appropriate analytical procedure.

Samples were analyzed in duplicate. Any residual/retained samples were discarded prior to report finalization.

4.11.2. Laboratory Investigation (Cytokines Analysis)

Blood was collected from the jugular vein of recovery animals. After collection, blood samples for serum were allowed to clot at ambient room temperature and blood samples for plasma were transferred on wet ice to the appropriate laboratory for processing.

Text Table 8
Sample Collection Schedule

Target Blood Volume (mL)			0.5	0.5
Anticoagulant			**None (SST)** (refer to Appendix 1 for one exception)	**EDTA**
Centrifugation setting			(b) (4)	
Timepoints			**Sample Type**	
Day	**Hrs**	**Males/ Females No.**	IFN-α*	IL-1ß, IL-6, TNF-α, IP-10, MIP-1-α, MCP-1
1	6	1011-1015, 4011-4015	X	X
15	6		X	X
29	6		X	X
43	6	1511, 1612, 1513-1515, 4511-4515	X	X
57	N / A		X	X
Matrix			Serum	Plasma
Volume per aliquot (µL)			all volume	all volume
Number of aliquot(s)			1	1
Storage condition (set to maintain)			-80°C	-80°C
Responsible Lab			CR-SHB	CR-SHB

X = Sample collected; N/A = not applicable

* The assay validation of IFN-α did not work appropriately and serum samples analysis was not conducted.

The samples were analyzed by the Immunology department. Analysis for IL-1ß, IL-6, TNF-α, IP-10, MIP-1-α and MCP-1 were conducted using a multiplex Luminex method. The procedures to be followed during the course of this study along with the assays acceptance criteria were detailed in the appropriate analytical procedure. Samples were analyzed in duplicate.

An Immunology Report for cytokine analysis is included as an appendix to the Final Report.

4.11.3. Anti-Therapeutic Antibody (ATA) Analysis

Before the initiation of dosing, on Day 29 (before dose administration, all animals), on Day 43 (post dose administration, main animals only) and on Day 57 (recovery animals), target blood volume of 0.5 mL was collected in a serum separator tube by jugular venipuncture from the appropriate animals.

Samples were mixed gently and allowed to clot at ambient room temperature until centrifugation, which was carried out as soon as practical. The samples were centrifuged for (b) (4) in a refrigerated centrifuge (set to maintain (b) (4)) at (b) (4) The resultant serum was separated, transferred to uniquely labeled clear polypropylene tubes, frozen immediately over dry ice and transferred to a freezer set to maintain -80°C until shipment on dry ice to Integrated BioTherapeutics, Inc., Rockville, MA, USA for analysis.

The samples were analyzed for rat anti-CMV antibodies using a qualified ELISA method.

An Anti-therapeutic Antibody Report is included as an appendix to the Final Report.

4.12. PBMC Analysis

On Day 44, blood (target volume of 0.5 mL collected in a tube containing Sodium Heparin as anticoagulant) was obtained by jugular venipuncture from main animals only. Samples were shipped at controlled temperature set to maintain 21°C via overnight courier to Southern research, Birmingham, AL, for whole blood stimulation and cytokine analysis.

The PBMC samples were analyzed using a qualified method.

An Immunology Report for PBMC analysis is included as an appendix to the Final Report.

4.13. Terminal Procedures

Terminal procedures are summarized in Text Table 9.

Text Table 9
Terminal Procedures

Group No.	No. of Animals		Scheduled Euthanasia Day	Necropsy Procedures			Histology	Histopathology
	M	F		Necropsy	Tissue Collection	Organ Weights		
1	10	10	44	X	X	X	Full Tissue[a]	Full Tissue[a]
2	10	10					Full Tissue[a]	Gross Lesions Target Tissues
3	10	10					Full Tissue[a]	Gross Lesions Target Tissues
4	10	10					Full Tissue[a]	Full Tissue[a]
1	5	5	57	X	X	X	Full Tissue[a]	Full Tissue[a]
4	5	5					Full Tissue[a]	Full Tissue[a]
Unscheduled Deaths				X	X	-	Full Tissue[a]	Full Tissue[a]

X = Procedure conducted; - = Not applicable.
[a] See Tissue Collection and Preservation table for listing of tissues.

4.13.1. Unscheduled Deaths

A complete necropsy was conducted for one control animal assigned to recovery study that died during dosing, and specified tissues were saved. Animal was refrigerated before necropsy to minimize autolysis.

4.13.2. Scheduled Euthanasia

Main study and recovery animals surviving until scheduled euthanasia had a terminal body weight recorded, samples for laboratory evaluation were collected (as appropriate), and were euthanized by exsanguination by incision from the abdominal aorta following isoflurane anesthesia. The animals were euthanized rotating across dose groups such that similar numbers of animals from each group, including controls, were necropsied throughout the day. Animals were fasted overnight before their scheduled necropsy.

4.13.3. Necropsy

Main study and recovery animals were subjected to a complete necropsy examination, which included evaluation of the carcass and musculoskeletal system; all external surfaces and orifices;

cranial cavity and external surfaces of the brain; and thoracic, abdominal, and pelvic cavities with their associated organs and tissues.

Necropsy procedures were performed by qualified personnel with appropriate training and experience in animal anatomy and gross pathology. A veterinary pathologist, or other suitably qualified person, was available.

4.13.4. Organ Weights

The organs identified in Text Table 10 were weighed at necropsy for all scheduled euthanasia animals. Organ weights were not recorded for animal found dead. Paired organs were weighed together. In the event of gross abnormalities, in addition to the combined weight, the weight of each organ of a pair may be taken and entered as a tissue comment. Organ to body weight ratio (using the terminal body weight) and organ to brain weight ratios were calculated.

Text Table 10
Organs Weighed at Necropsy

Brain	Liver
Epididymis[a]	Lung
Gland, adrenal[a]	Ovary[a]
Gland, pituitary	Spleen
Gland, prostate	Testis[a]
Gland, thyroid[a]	Thymus
Heart	Uterus
Kidney[a]	

[a] Paired organ weight.

4.13.5. Tissue Collection and Preservation

Representative samples of the tissues identified in Text Table 11 were collected from all animals and preserved in 10% neutral buffered formalin, unless otherwise indicated.

Text Table 11
Tissue Collection and Preservation

Injection site[c]	Large intestine, rectum
Animal identification	Larynx
Artery, aorta	Liver
Body cavity, nasal	Lung
Bone marrow smear	Lymph node, mandibular
Bone marrow	Lymph node, mesenteric

Large intestine, colon	

[a] Preserved in Davidson's fixative.
[b] Preserved in Modified Davidson's fixative.
[c] Thigh site used for the last injection.
[d] Seven brain levels examined included olfactory bulb (Examine in Body cavity, nasal section level 4).
[e] Lymph node draining the last administration site used (unilateral examination).

4.13.6. Histology

Tissues identified in Text Table 11 (except animal identification, bone marrow smears and larynx) were embedded in paraffin, sectioned, mounted on glass slides, and stained with hematoxylin and eosin.

4.13.7. Histopathology

Histopathological evaluation was performed by a board-certified veterinary pathologist.

4.13.8. Peer Review

(Appendix 20)

A pathology peer review was conducted by a Sponsor-designated pathologist; (b) (6), (b) (6) from Experimental Pathology Laboratories, Inc., Research Triangle Park, NC 27709, USA.

The peer review statement was included as an appendix to the Final Report.

4.13.9. Bone Marrow Smear Analysis

Two bone marrow smears were prepared from each euthanized animal, air dried, stained with Wright's Giemsa stain, and not coverslipped. Bone marrow smears were not evaluated.

5. CONSTRUCTED VARIABLES

Body Weight Gains	calculated between each scheduled interval as well as between the beginning and end of each phase
Organ Weight relative to Body Weight	calculated against the Terminal body weight for scheduled intervals
Organ Weight relative to Brain Weight	calculated against the brain weight for scheduled intervals

All results presented in the tables of the report are calculated using non-rounded values as per the raw data rounding procedure and may not be exactly reproduced from the individual data presented.

6. STATISTICAL ANALYSIS

Numerical data collected on scheduled occasions for the listed variables were analyzed as indicated according to sex and occasion. Descriptive statistics number, mean and standard deviation (or %CV or SE when deemed appropriate) were reported whenever possible. Values may also be expressed as a percentage of predose or control values when deemed appropriate. Inferential statistics were performed according to the matrix below when possible, but excluded semi-quantitative data, and any group with less than 3 observations.

Text Table 12
Statistical Matrix

Variables for Inferential Analysis	Statistical Method
	Parametric/ Non-Parametric
Body Weight	X
Hematology Variables	X
Coagulation Variables	X
Clinical Chemistry Variables	X
Cytokines	X
Body Temperature	X
α2-macroglobulin	X
α1-acid glycoprotein	X
Organ Weights	X
Body Weight Gains	X
Organ Weight relative to Body Weight	X
Organ Weight relative to Brain Weight	X

The following pairwise comparisons were made:

Group 2 vs. Group 1

Group 3 vs. Group 1

Group 4 vs. Group 1

6.1. Parametric/Non-parametric

Levene's test was used to assess the homogeneity of group variances parametric assumption at the 5% significance level. Datasets with at least 3 groups were compared using an overall one-way ANOVA *F*-test if Levene's test was not significant or the Kruskal-Wallis test if it was. If the overall *F*-test or Kruskal-Wallis test was found to be significant, then the above pairwise comparisons were conducted using Dunnett's or Dunn's test, respectively.

Datasets with 2 groups (the designated control group and 1 other group) were compared using a *t*-test if Levene's test was not significant or Wilcoxon Rank-Sum test if it was.

All significant pairwise comparisons were reported at the 0.1, 1, and 5% significance levels.

7. COMPUTERIZED SYSTEMS

Critical computerized systems used in the study are listed below or presented in the appropriate Phase Report. All computerized systems used in the conduct of this study have been validated; when a particular system has not satisfied all requirements, appropriate administrative and procedural controls were implemented to assure the quality and integrity of data.

Text Table 13
Critical Computerized Systems

System Name	Version	Description of Data Collected and/or Analyzed
Provantis	8	In-life; clinical pathology; postmortem
Dispense	8	Test Material receipt, accountability and/or formulation activities
In-house reporting software Nevis (using SAS)	Nevis 2 (SAS 9.2)	Statistical analyses of numerical in-life, clinical pathology and postmortem data
Mesa Laboratories AmegaView CMS	v3.0 Build 1208.8	Continuous Monitoring System. Monitoring of standalone fridges, freezers, incubators, and selected laboratories to measure temperature, relative humidity, and CO_2, as appropriate
Johnson Controls Metasys	MVE 7.0 and 4.0	Building Automation System. Control of HVAC and other building systems, as well as temperature/humidity control and trending in selected laboratories and animal rooms
Empower 3 (Waters Corporation)	Build 3471 SR1	Data acquisition for dose formulation analysis, including regression analysis and measurement of concentration and recovery of dose formulations using HPLC
Bio Plex Manager (Bio-Rad)	6.1	Cytokine data collection
Softmax Pro GxP	5.4.6	Cytokine data collection
Watson LIMS	7.4.2 SP1	Sample tracking/analysis/regression - biomarkers
Dynamics (Wyatt)	7.1.9.3	Data acquisition for particle size analysis for the test item using DLS

8. RETENTION OF RECORDS, SAMPLES, AND SPECIMENS

All study-specific raw data, documentation, study plan, samples, specimens, and final reports from this study were archived at CRL-MTL by no later than the date of final report issue unless otherwise specified in the study plan. At least one year after issue of the draft report, the Sponsor will be contacted to determine disposition of materials associated with the study.

Electronic data generated by the Test Facility were archived as noted above, except that the data collected using Provantis 8 and reporting files stored on SDMS, which were archived at the Charles River Laboratories facility location in Wilmington, MA.

All records, retained samples and specimens, and reports generated from phases or segments performed by Test Facility-designated subcontractors were returned to the Test Facility for archiving Archival location and duration are detailed in the applicable PI report(s) or details regarding the retention of the materials were provided to the Study Director for inclusion in the Final Report.

All records, retained samples and specimens, and reports generated from phases or segments performed by Sponsor-designated subcontractors were returned to the Test Facility for archiving Archival location and duration are detailed in the applicable PI report(s) or details regarding the retention of the materials were provided to the Study Director for inclusion in the Final Report.

9. RESULTS

9.1. Dose Formulation Analyses

(Appendix 3)

Dose formulation concentration results were within specification. Homogeneity testing showed that the formulation technique used produced homogeneous preparations.

9.2. End of Use Bulk Test Item Analysis

(Appendix 3)

The bulk Test Item analysis demonstrated that the Test Item was suitable for use during the study period; the concentration, purity and particle size results obtained were consistent with the revised Summary of Analysis.

9.3. Mortality

(Appendix 4)

There were no mRNA-1647-related mortalities during the course of the study.

One male (No. 1014) given the Reference Item was found dead on Day 43. The pathological evaluation revealed a small, dark discoloration, and soft abnormal consistency of the right adrenal gland without histopathology correlates; a dark discoloration of the corticomedullary junction of the kidneys without histopathology correlates; a dark focus and dark discoloration of the thymus (incidental thymic hemorrhage); and a failure of the lungs to collapse (lung congestion). Histopathology findings for this control male were incidental and did not explain the cause of death for this animal.

9.4. Clinical Observations

(Table 1 and Appendix 5)

On the day following the last dosing occasion, a dose-related (in severity) soft swelling was noted on the last injection site (i.e. the right hindlimb). Firm swelling (severe) was also noted at the injection site of individual males and females given 89 µg/dose. The firm swelling was noted two days following the third dose and, for one male only, 1 day following the last dose. In addition, skin redness at the injection site, was noted at a higher incidence throughout the dosing period for animals given 89 µg/dose.

Given the absence of swelling or redness at the injection site 3 days following the last dose and throughout the recovery period, these clinical observations were considered fully reversed.

9.5. Local Irritation Assessment

(Appendix 5)

Slight to severe edema was noted at the injection site following dosing of males and females given ≥ 8.9 µg/dose. The incidence and severity of these findings were dose-dependent. The apex of severity was noted 24 hours postdose and generally decreased 72 hours postdose.

Sporadic, slight to (rare) moderately severe erythema, noted at the injection site, was considered mRNA-1647-related only at 89 µg/dose and occurred generally following the third and fourth (last) doses.

Edema and erythema were no longer observed one week into the recovery period, and as such, they were considered completely reversed.

9.6. Body Weights and Body Weight Gains

(Figure 1, Figure 2, Table 2, Table 3, Appendix 6 and Appendix 7)

When compared to controls, following each dose, a tendency towards lower mean body weight gains was noted in males given ≥ 8.9 µg/dose and in females given 89 µg/dose; these changes sometimes reached statistical significance. The changes were only cumulative in males and were down to 0.86X controls from Day -1 to 42. The body weight changes were generally comparable or rebounded during the 2-week recovery period.

9.7. Food Consumption

(Table 4 and Appendix 8)

Given the variability in weekly food consumption results, the occasional weekly changes, with no clear dose-relationship, were considered not mRNA-1647-related.

9.8. Opthalmology

(Appendix 15)

There were no mRNA-1647-related ocular changes observed during the course of the study. The findings noted were age-related or incidental in origin and to be expected in this population of animals.

9.9. Body Temperature

(Table 5 and Appendix 9)

In general body temperatures were within normal ranges of 36-38°C . When compared to control animals and pre-dose body temperature measurements, the mean body temperature appeared minimally increased in males and females given 89 µg/dose, 6 and/or 24 hours post Day 1 and Day 43 doses. These statistically-significant changes were considered mRNA-1647-related.

9.10. Hematology

(Table 6 and Appendix 10)

mRNA-1647-related hematology changes were noted for males and females starting at 8.9 µg/dose and included increases in neutrophil (NEUT), eosinophil (EOS) and/or large unstained cell (LUC) counts (with concomitant increases in white blood cell [WBC] counts) and decreases in lymphocyte (LYMPH) and platelet (PLT) counts. These changes are illustrated in Text Table 14.

Text Table 14
Hematology Changes

Dose (µg/dose)	8.9		27		89	
Parameter	**Males**	**Females**	**Males**	**Females**	**Males**	**Females**
WBC						
Day 44	**-**	1.2	1.3	**1.4**	**1.8**	**1.8**
Day 57					1.1	1.1
NEUT						
Day 44	1.8	4.6	**4.4**	**6.2**	**7.2**	**8.9**
Day 57					0.63	0.95
LYMPH						
Day 44	0.84	0.73	0.74	0.73	0.77	0.83
Day 57					1.2	1.2
EOS						
Day 44	**2.6**	**4.0**	**2.8**	**3.9**	**3.8**	**6.5**
Day 57					1.0	1.2
LUC						
Day 44	**2.2**	1.9	**2.2**	2.1	1.8	2.0
Day 57					1.1	0.81
PLT						
Day 44	-	-	-	**-**	**-**	**0.82**
Day 57					-	1.1

Changes are expressed as X Fold from mean Group 1 (control) value.
–: indicates results were considered not to be meaningfully different from mean control value.
Bolded values were statistically significant.
Shaded boxes indicate no collection at this timepoint for corresponding groups.

Mild to moderate increases in WBC counts (up to 1..8X controls for both genders) were noted in males given ≥ 27 µg/dose and females given ≥ 8.9 µg/dose, mainly due to minimal to moderate increases in NEUT, LUC (up to 7.2X and 2.2X controls for males and 8.9X and 2.1X controls for females) and/or EOS (up to 3.8X controls for males and up to 6.5X controls for females). Minimal decreases in LYMPH counts were noted for males and females at ≥ 8.9 µg/dose (down to 0.74X and 0.73X controls, respectively).

Minimal decreases in PLT were noted in females given 89 µg/dose (0.82X controls).

Of the above changes noted following the dosing period, a full recovery of the findings were noted following the 2-week recovery period.

Any other differences in hematology parameters, including those attaining statistical significance, were judged to be due to individual or biological variation or lacked true dose relationship and therefore were considered not mRNA-1647-related.

9.11. Coagulation

(Table 7 and Appendix 11)

mRNA-1647-related increases in activated partial thromboplastin time (APTT) and in fibrinogen (FIB) were noted in males and females given ≥ 8.9 µg/dose. The changes are illustrated in Text Table 15.

Text Table 15
Coagulation Changes

Dose (µg/dose)	8.9		27		89	
Parameter	**Males**	**Females**	**Males**	**Females**	**Males**	**Females**
APTT						
Day 44	1.1	**1.2**	**1.1**	**1.2**	**1.2**	**1.2**
Day 57					0.99	0.96
FIB						
Day 44	**1.7**	**1.7**	**1.9**	**1.9**	**2.1**	**2.1**
Day 57					0.95	1.1

Changes are expressed as X Fold from mean (Group 1) control value.
Bolded values were statistically significant.
Shaded boxes indicate no collection at this timepoint for corresponding groups.

Minimal increases in APTT were noted for males and females given ≥ 8.9 µg/dose (up to 1.2X controls for both genders). Mild increases in FIB were noted for males and females given ≥ 8.9 µg/dose (up to 2.1X controls for both genders). At the end of the 2-week recovery period, changes were fully recovered.

Any other differences in the coagulation parameters were judged to be due to individual or biological variability or lacked true dose relationship and therefore were considered not mRNA-1647-related.

9.12. Clinical Chemistry

(Table 8 and Appendix 12)

mRNA-1647-related decreases in albumin (ALB) and increases in globulin (GLOB) were noted for males and females; these changes were reflected by overall decrease in A/G ratio. The changes are illustrated in Text Table 16.

Text Table 16
Clinical Chemistry Changes

Dose (µg/dose)	8.9		27		89	
Parameter	**Males**	**Females**	**Males**	**Females**	**Males**	**Females**
ALB						
Day 44	**0.9**	**0.9**	**0.9**	**0.9**	**0.9**	**0.9**
Day 57					1.0	**0.9**
GLOB						
Day 44	**1.2**	**1.2**	**1.2**	**1.2**	**1.3**	**1.2**
Day 57					**0.9**	1.0
A/G						
Day 44	**0.8**	**0.8**	**0.8**	**0.8**	**0.7**	**0.7**
Day 57					**1.1**	0.9

Changes are expressed as X Fold from mean Group 1 (control) value.
Bolded values were statistically significant.
Shaded boxes indicate no collection at this timepoint for corresponding groups.

Minimal decreases in ALB and minimal increases in GLOB were noted for males and females given ≥ 8.9 µg/dose (0.9X controls and up to 1.3X controls respectively) and affected the A/G ratio (down to 0.7X controls, for both genders). At the end of the 2-week recovery period, changes were fully recovered.

Any other differences in the clinical chemistry parameters, including those attaining statistical significance, were judged to be due to individual or biological variability or lacked true dose relationship and therefore were considered not mRNA-1647-related.

9.13. Alpha-1-Acid Glycoprotein

(Table 9, Appendix 13 and Appendix 18)

When compared to controls, statistically-significant dose-related increases in Alpha-1-Glycoprotein were noted in males and females, following the dosing period.

Following the 2-week recovery period, the concentrations of Alpha-1-Glycoprotein were comparable in both the controls and the males and females that were previously given 89 µg/dose, suggesting a full recovery.

9.14. Alpha-2-Macroglobulin

(Table 9, Appendix 13 and Appendix 18)

When compared to controls, dose-related increases in Alpha-2-Macroglobulin was noted in males and females, following the dosing period.

Following the 2-week recovery period, the concentrations of Alpha-2-Macroglobulin were still slightly higher than controls, suggesting only a partial recovery.

9.15. Cytokines

(Table 10, Appendix 14 and Appendix 18)

When compared to controls, statistically-significant higher concentrations of IP-10 were observed in both genders given 89 µg/dose at all timepoints, except on Day 57 (end of recovery) where the IP-10 concentrations were comparable to control levels. The highest IP-10 concentrations were generally observed 6 hours post Day 1 dose.

Higher concentrations of MCP-1 were noted in Test Item-given females on Days 1, 15 and 29, 6 hours postdose; the increases were statistically significant. MCP-1 concentrations were comparable to control levels on Day 57.

No mRNA-1647-related changes were observed in IL-1β, IL-6, MIP-1α and TNF-α levels.

9.16. Anti-Therapeutic Antibody (ATA)

(Appendix 16)

The Day 43 samples from mRNA-1647-treated Main Study animals had detectable antibody responses against CMV gB protein and CMV gH pentamer complex. The Day 57 samples from Recovery Study animals previously given 89 µg/dose had similar antibody titers compared to Day 43 titers.

9.17. PBMC

(Appendix 17)

T-cell responses were evaluated by assessment of Interferon gamma (INFγ) producing T cells. The results are detailed in the following tables.

Summary of Pentamer Specific INF γ Response

	Group	Test material	N	Dose level (µg)	Pentamer specific CD4+ T Cells Range (%)*;	Mean (%);	SD	Pentamer specific CD8+ T Cells Range (%)*;	Mean (%);	SD

	4	mRNA-1647	10	89	0.00-3.00;	0.00;	1.62	0.00-4.76;	0.79;	1.96

* For purpose of Range and Mean calculation, value <0.00 following unstimulated Control subtration were set to 0.00 for reporting

Maximal antigen-specific response was observed at 89 µg/dose for both Pentamer and Glycoprotein B peptide libraries. The Pentamer library produced the stronger response of the two antigen libraries with an individual maximal response in males of up to 6.99 and 8.96% in CD4+ and CD8+ T cells, respectively. The largest response to Glycoprotein B stimulation was at 89 µg/dose in males for CD4+ T cells at 3.17%, and in females at 4.76% for CD8+ T cells.

9.18. Gross Pathology

(Appendix 19)

9.18.1. Terminal Necropsy (Day 44)

mRNA-1647-related gross pathology findings are summarized in Text Table 17.

Text Table 17
Summary of Gross Pathology Findings – Terminal Necropsy (Day 44)

	Males				Females			
Group	**1**	**2**	**3**	**4**	**1**	**2**	**3**	**4**
Dose (µg/dose)	**0**	**8.9**	**27**	**89**	**0**	**8.9**	**27**	**89**
No. Animals Examined	**10**	**10**	**10**	**10**	**10**	**10**	**10**	**10**
Site, Injection (No. Examined)	10	10	10	10	10	10	10	10
Abnormal consistency, firm	0	1	5	9	0	3	5	7
Swelling	0	5	6	9	0	5	5	7
Focus, dark	0	0	0	0	0	1	1	3
Lymph Node, Inguinal (No. Examined)	10	10	10	10	10	10	10	10
Enlargement	1	1	0	5	0	0	0	1
Lymph Node, Popliteal (No. Examined)	10	10	10	10	10	10	10	10
Enlargement	0	3	7	7	0	8	6	7

At the intramuscular injection sites, dose-dependent mRNA-1647-related gross pathology observations of abnormal firm consistency, dark focus, and/or swelling were noted in animals given ≥ 8.9 µg/dose. These gross observations correlated microscopically with mixed cell inflammation of the subcutaneous and/or muscular tissue and/or subcutaneous edema at the injection site.

In the draining inguinal and/or popliteal lymph nodes, mRNA-1647-related gross enlargement was noted in animals given ≥ 8.9 µg/dose, and correlated microscopically to mixed cell inflammation. Gross enlargement and microscopic mixed cell inflammation most commonly involved the popliteal lymph nodes. Gross enlargement of the inguinal lymph node was noted in one male given the Reference Item, without any correlating microscopic finding.

Other gross pathology findings observed were considered incidental, of the nature commonly observed in this strain and age of rats, and/or were of similar incidence in Reference and Test Item-treated animals and, therefore, were considered not mRNA-1647-related.

9.18.2. Recovery Necropsy (Day 57)

(Appendix 19)

There were no mRNA-1647-related gross pathology findings observed at the end of the 2-week recovery period.

All gross pathology findings observed were considered incidental, of the nature commonly observed in this strain and age of rats, and/or were of similar incidence in Reference and Test Item-treated animals and, therefore, were considered not mRNA-1647-related.

9.19. Organ Weights

(Appendix 19)

9.19.1. Terminal Necropsy (Day 44)

(Appendix 19)

mRNA-1647-related organ weight changes are summarized in Text Table 18.

Text Table 18
Summary of Organ Weight Data – Terminal Necropsy (Day 44)

	Males			Females		
Group	**2**	**3**	**4**	**2**	**3**	**4**
Dose (µg/dose)	**8.9**	**27**	**89**	**8.9**	**27**	**89**

% of body weight	**0.21190** [a]	**0.21678** [a]	**0.23429** [c]	0.22732	**0.24041** [b]	**0.25394** [c]
% of brain weight	48.79592	49.81185	**55.10209** [b]	34.70430	**36.98272** [a]	**38.80259** [b]

[a] Significantly different from Group 1value p≤0.05 (Dunnett).
[b] Significantly different from Group 1 value p≤0.01 (Dunnett).
[c] Significantly different from Group 1 value p≤0.001 (Dunnett).
Based upon statistical analysis of group means, values highlighted in bold are significantly different from control group – P ≤ 0.05; refer to data tables for actual significance levels and tests used.

In the spleen, slight dose-dependent increases in absolute and/or relative organ weights were noted in males and females given ≥ 8.9 µg/dose. These changes were consistently statistically significant for increases in absolute and/or relative (to body and/or to brain) weights in males given 89 µg/dose and females given ≥ 27 µg/dose. These splenic weight changes were not correlated with any specific histopathology finding.

No other mRNA-1647-related organ weight changes were noted. There were other isolated organ weight values that were statistically different from their respective controls. There were, however, no patterns, trends, or correlating data to suggest these values were toxicologically relevant. Thus, other organ weight differences observed were considered incidental and/or related to difference of sexual maturity and not mRNA-1647-related.

9.19.2. Recovery Necropsy (Day 57)

(Appendix 19)

mRNA-1647-related increased spleen weights noted at the terminal necropsy were also observed at the end of the 2-week recovery period and are summarized in Text Table 19.

Text Table 19
Summary of Organ Weight Data – Recovery Necropsy (Day 57)

	Males			Females		
Group	**2**	**3**	**4**	**2**	**3**	**4**

% of brain weight	-	-	48.35552	-	-	31.90101
% Difference	-	-	+19.86	-	-	+11.58

[a] Significantly different from Group 1 value p≤0.05 (T-Test).
Based upon statistical analysis of group means, values highlighted in bold are significantly different from Group 1– P ≤ 0.05; refer to data tables for actual significance levels and tests used.

In the spleen, a slight increase in absolute and/or relative organ weights were noted in males and females given 89 µg/dose. These changes were not statistically significant, with the exception of mean spleen weight relative to final body weight in the males; and thus, were considered to have limited toxicological importance. These splenic weight changes were not correlated with any specific histopathology finding.

No other mRNA-1647-related organ weight changes were noted. There were other isolated organ weight values that were statistically different from their respective controls. There were, however, no patterns, trends, or correlating data to suggest these values were toxicologically relevant. Thus, other organ weight differences observed were considered incidental and/or related to difference of sexual maturity and not mRNA-1647-related.

9.20. Histopathology

(Appendix 19)

9.20.1. Terminal Necropsy (Day 44)

(Appendix 19)

mRNA-1647-related microscopic pathology findings were noted at the injection sites, the draining lymph nodes (popliteal and/or inguinal), sciatic nerve, bone marrow, and spleen and these findings are summarized in Text Table 20

Text Table 20

Mild	-	4	4	7	-	2	4	9

Localized tissue reactions involved the intramuscular injection sites, the draining popliteal and/or inguinal lymph nodes, and the sciatic nerves. Systemic tissue reactions involved the bone marrow and spleen.

At the intramuscular injection sites, there was a dose-related inflammatory reaction characterized by minimal to moderate mixed cell inflammation involving the subcutaneous tissues, skeletal muscle, and to a lesser extent the dermis, as well as associated minimal to moderate subcutaneous edema and minimal to mild myofiber degeneration in animals given ≥ 8.9 µg/dose. The inflammatory reaction, which increased in severity with increasing dose, often extended along and expanded endomysial and perimysial tissue layers, encircling individual muscle fibers

and/or bundles. This reaction was characterized by varying numbers of intact and degenerating neutrophils, mononuclear cells, and macrophages (mixed cell inflammation); accumulations of protein-rich fluid (edema); and varying degrees of myofiber degeneration.

In the draining popliteal and/or inguinal lymph nodes, an increased incidence and/or severity of minimal to marked mixed cell inflammation were noted in animals given ≥ 8.9 µg/dose. The inflammation often involved the adventitia surrounding the lymph nodes, and most commonly involved the popliteal lymph nodes.

Minimal to marked mixed cell inflammation was frequently observed in the perineurial tissue surrounding the sciatic nerve of animals given ≥ 8.9 µg/dose. This finding was considered to be an extension of the inflammatory reaction at the intramuscular injection sites to this region.

In the bone marrow, minimal increased myeloid hematopoiesis was noted in animals given ≥ 27 µg/dose. This finding was characterized by increased numbers of myeloid precursors in the marrow, and was secondary or compensatory inflammatory reaction noted at the intramuscular injection sites.

In the spleen, a dose-dependent minimal to mild decreased cellularity of the periarteriolar lymphoid sheath was noted in animals given ≥ 8.9 µg/dose.

Other microscopic findings observed were considered incidental, of the nature commonly observed in this strain and age of rats, and/or were of similar incidence and severity in Reference and Test Item-treated animals and, therefore, were considered not mRNA-1647-related.

9.20.2. Recovery Necropsy (Day 57)

(Appendix 19)

Following the 2-week recovery period, microscopic pathology findings seen at the terminal necropsy were no longer present in the draining lymph nodes (popliteal and/or inguinal), consistent with a complete recovery of these findings.

Microscopic findings noted at the terminal necropsy were also observed at the recovery necropsy at the injection sites (however, a shift to mononuclear cell infiltration rather than mixed cell inflammation was observed), sciatic nerve, bone marrow, and spleen and these findings are summarized in Text Table 21.

Text Table 21
Summary of Microscopic Findings – Recovery Necropsy (Day 57)

	Males		Females	
Group	1	4	1	4
Dose (µg/dose)	0	89	0	89
No. Animals Examined	4	5	4	5
Site, Injection (No. Examined)	4	5	5	5
Infiltration, mononuclear cell; myofiber	0	2	0	5
Minimal	-	1	-	4
Mild	-	1	-	1
Nerve, Sciatic	4	5	5	5
Inflammation, mixed cell; perineurial	0	0	0	2
Minimal	-	-	-	2
Bone Marrow (No. Examined)	4	5	5	5
Increased hematopoiesis; myeloid	0	2	0	1
Minimal	-	2	-	1
Spleen (No. Examined)	4	5	5	5
Decreased cellularity; periarteriolar lymphoid sheath	0	2	0	0
Minimal	-	2	-	-

At the intramuscular injection sites, there was a residual inflammatory reaction characterized by minimal to mild mononuclear cell infiltration involving the subcutaneous tissues and skeletal muscle at 89 µg/dose. Minimal to mild myofiber degeneration did not differ in incidence or severity from the Reference Item-treated group.

Mixed cell inflammation involving the draining lymph nodes (popliteal and/or inguinal) and sciatic nerves, as noted as the terminal euthanasia, was not noted at the recovery necropsy, consistent with complete recovery.

Minimal mixed cell inflammation was observed in the perineurial tissue surrounding the sciatic nerve of females given 89 µg/dose. The incidence and severity of this finding was reduced compared to the terminal necropsy.

In the bone marrow, minimal increased myeloid hematopoiesis was noted in animals given 89 µg/dose. The incidence of this finding was reduced compared to the terminal necropsy.

In the spleen, a minimal decreased cellularity of the periarteriolar lymphoid sheath was noted in males given 89 µg/dose. The incidence and severity of this finding was reduced compared to the terminal necropsy.

Other microscopic findings observed were considered incidental, of the nature commonly observed in this strain and age of rats, and/or were of similar incidence and severity in Reference and Test Item-treated animals and, therefore, were considered not mRNA-1647-related.

10. CONCLUSION

In conclusion, administration of mRNA-1647 by intramuscular injection for 6 weeks (4 doses) was clinically well tolerated (no mortality, major decreases in body weight and no changes in food consumption or deleterious changes in hematology, coagulation or clinical chemistry parameters) in rats up to 89 µg/dose. Starting at 8.9 µg/dose, generally dose-dependent changes in clinical signs at the injection site, clinical pathology parameters, cytokines and acute protein levels were consistent with an inflammatory response at the injection site. Dose-related target organ effects were limited to the injection site, the bone marrow, the inguinal and popliteal lymph nodes, the connective tissue surrounding the sciatic nerve and the spleen of animals given mRNA-1647. At the end of the 2-week recovery period, all changes were partially or fully recovered.

Appendix 1

TABLE OF CONTENTS

Appendix 1

1. OBJECTIVE(S)

The objectives of this study are to determine the potential toxicity of mRNA 1647, when given by intramuscular injection for 6 weeks (4 doses) to rats and to evaluate the potential reversibility of any findings following a 2-week recovery period.

1.1. Study Classification

Study Category:	TOX
Study Type:	Repeat Dose Toxicity
Study Design:	Parallel
Primary Treatment CAS Registry Number:	Not Available
Primary Treatment Unique Ingredient ID:	Not Available
Class of Compound:	mRNA

2. PROPOSED STUDY SCHEDULE

Proposed study dates are listed below. Actual applicable dates will be included in the Final Report.

Experimental Start Date:	08 Mar 2017
Experimental Completion Date:	To be included by amendment (Last date data are collected from the study)
Animal Arrival:	08 Mar 2017
Initiation of Dosing:	20 Mar 2017 (Male) 21 Mar 2017 (Female)
Completion of In-life:	03 May 2017 (Main) 16 May 2017 (Recovery) (Last date of necropsy)
Unaudited Draft Report:	To be included by amendment
Audited Draft Report:	To be included by amendment
Final Report:	To be included by amendment (Expected date of Study Director signature)

3. GUIDELINES FOR STUDY DESIGN

The design of this study was based on the study objective(s), the overall product development strategy for the Test Item, and the following study design guidelines:

- OECD Guideline 407. *Repeated Dose 28-day Oral Toxicity Study in Rodents*.

Appendix 1

- Committee for Medicinal Products for Human Use (CHMP). *Note for Guidance on Repeated Dose Toxicity*. CPMP/SWP/1042/99corr.
- ICH Harmonised Tripartite Guideline M3 (R2). *Nonclinical Safety Studies for the Conduct of Human Clinical Trials and Marketing Authorization for Pharmaceuticals*.
- Japanese Guidelines for Nonclinical Studies of Drugs Manual (1995). *Guidelines for Toxicity Studies of Drugs (Chapter 3, Repeated Dose Toxicity Studies)*.
- Appendix to Director General Notification, No. 12-Nousan-8147, 24 November 2000, Agricultural Production Bureau, Ministry of Agriculture, Forestry and Fisheries of Japan (JMAFF).

4. REGULATORY COMPLIANCE

The study will be performed in accordance with the OECD Principles of Good Laboratory Practice and as accepted by Regulatory Authorities throughout the European Union, United States of America (FDA), Japan (MHLW), and other countries that are signatories to the OECD Mutual Acceptance of Data Agreement.

Any portion of this study conducted in the USA will be performed in accordance with the U.S. Department of Health and Human Services, Food and Drug Administration. United States Code of Federal Regulations, Title 21, Part 58: Good Laboratory Practice for Nonclinical Laboratory Studies and as accepted by Regulatory Authorities throughout the European Union (OECD Principles of Good Laboratory Practice), Japan (MHLW), and other countries that are signatories to the OECD Mutual Acceptance of Data Agreement.

Exceptions to GLPs include the following study elements:

- Characterization of the Test Item will be performed by the Sponsor or Sponsor subcontractor according to established SOPs, controls, and approved test methodologies to ensure integrity and validity of the results generated; these analyses will not be conducted in compliance with the GLP or GMP regulations.
- Analysis of cytokines, α2-macroglobulin, α1-acid glycoprotein, anti-therapeutic antibody and PBMCs will be conducted using scientifically qualified methods and in accordance with all applicable analytical procedures.
- Pathology peer review

5. QUALITY ASSURANCE

5.1. Test Facility

The Test Facility Quality Assurance Program (QAP) will monitor the study to assure the facilities, equipment, personnel, methods, practices, records, and controls are in conformance with Good Laboratory Practice regulations. The QAP will review the study plan, conduct inspections at intervals adequate to assure the integrity of the study, and audit the Final Report to

Appendix 1

assure that it accurately describes the methods and standard operating procedures and that the reported results accurately reflect the raw data of the study.

The Test Facility QAP contact for this study is indicated below:

Each IS is required to report any deviations or other circumstances that could affect the quality or integrity of the study to the Study Director in a timely manner. Each IS will provide a report addressing their assigned phase of the study, which will be included as an appendix to the Final Report. The phase report will include the following:

- A listing of critical computerized systems used in the conduct and/or interpretation of the assigned study phase

PIs at Sponsor or Sponsor-designated Test Site(s)

Appendix 1

Each PI is required to report any deviations or other circumstances that could affect the quality or integrity of the study to the Study Director in a timely manner. Each PI will provide a report addressing their assigned phase of the study, which will be included as an appendix to the Final Report. The phase report will include the following:

- The archive site for all records, samples, specimens and reports generated from the phase or segment (alternatively, details regarding the retention of the materials may be provided to the Study Director for inclusion in the Final Report)
- A listing of critical computerized systems used in the conduct and/or interpretation of the assigned study phase

8. TEST AND REFERENCE ITEMS

8.1. Test Item

Identification:	mRNA-1647
Supplier:	Moderna Therapeutics, Inc.
Batch (Lot) Number:	MTDP16015
Concentration:	2 mg/mL
Retest Date:	An end-of-use analysis of the bulk Test Item will be performed to demonstrate the stability of the Test Item during the dosing period.
Physical Description:	White to off-white lipid nanopacticle dispersion
Storage Conditions:	Kept in a freezer set to maintain -20°C

8.2. Reference Item

Identification:	Phosphate-buffered Saline (PBS) pH 7.2
Supplier:	Will be included in the Final Report
Batch (Lot) Number:	Will be included in the Final Report
Expiration Date:	Will be included in the Final Report
Physical Description:	Liquid
Storage Conditions:	Kept in a controlled temperature area set to maintain 21°C

8.3. Test Item Characterization

The Sponsor will provide to the Test Facility documentation of the identity, strength, purity and composition for the Test Item. A Certificate of Analysis or equivalent documentation will be provided for inclusion in the Final Report. The Sponsor will also provide information concerning the regulatory standard that was followed for these evaluations.

Appendix 1

The Sponsor has appropriate documentation on file concerning the method of synthesis, fabrication or derivation of the Test Item, and this information is available to the appropriate regulatory agencies should it be requested.

8.4. Analysis of Test Item

A sample (2 vials) of the Test Item will be taken on the completion of the dosing period. Analysis of bulk Test Item for concentration, particle size and purity will be performed.

The first vial will be transferred (on ice pack) to the analytical laboratory at the Test Facility for concentration and particle size analysis.

The second vial will be transferred (on ice pack) to the molecular biology laboratory at the Test Facility for purity analysis.

Purity and Particle size analysis will be performed by IEX- HPLC, Differential Light Scattering (DLS) and capillary electrophoresis (CE) using validated analytical procedures.

Any residual/retained analytical samples (and Test Item used in analysis) will be discarded before issue of the Final Report.

8.5. Reserve Samples

For each batch (lot) of Test and Reference Items, a reserve sample (1 mL or 1 vial) will be collected and maintained under the appropriate storage conditions by the Test Facility.

8.6. Test and Reference Item Inventory and Disposition

Records of the receipt, distribution, storage, and disposition of Test and Reference Items will be maintained. With the exception of reserve samples, all unused Sponsor-supplied bulk Test Item will be returned on dry ice to the Sponsor (after completion of dosing).

Shipping Contact
(b) (6)

800 Technology Sq, 8th Floor
Cambridge MA 02476
Cell: (b) (6)
E-mail: (b) (6)

9. SAFETY

The safety precautions for the Test Item and dose formulations will be documented in a Test Material Safety Data Sheet (TMSDS) based on the information provided by the Sponsor either by an MSDS or similar document.

Appendix 1

10. DOSE FORMULATION AND ANALYSIS

10.1. Preparation of Reference Item

Dose formulation preparations will be performed under a laminar flow hood using clean procedures.

The Reference Item, Phosphate-buffered Saline (PBS) pH 7.2, will be dispensed on days of dosing (i.e. Days 1, 15, 29 and 43) for administration to Group 1 control animals and will be used as required to dilute the bulk Test Item for administration to Groups 2 to 4 animals. The aliquots will be stored in a refrigerator set to maintain 4°C until use. They will be removed from the refrigerator and allowed to warm to room temperature for at least 30 minutes before dosing.

Any residual volumes will be discarded unless otherwise requested by the Study Director.

10.2. Preparation of Test Item

Dose formulation preparations will be performed under a laminar flow hood using clean procedures.

Test Item formulations will be diluted with PBS pH 7.2, as necessary for administration. The dosing formulations will be prepared on each days of dosing (i.e. Days 1, 15, 29 and 43) and will be stored in a refrigerator set to maintain 4°C. The dose formulations will be allowed to warm to room temperature for at least 30 minutes prior to dosing. Alternatively, the aliquots can be transferred directly to room temperature. When possible, stock vials will be used only once.

Any residual volumes of formulated Test Item will be stored in a refrigerator set at 4°C and discarded prior to report finalization.

10.3. Sample Collection and Analysis

Dose formulation samples will be collected for analysis as indicated in the following table. Additional samples may be collected and analyzed at the discretion of the Study Director.

Dose Formulation Sample Collection Schedule

Interval[b]	Homogeneity	Concentration	Sampling From
Day 1	All groups[a]	All groups	Dosing container
Day 43	N/A	All groups	Dosing container

N/A = Not applicable.

[a] The homogeneity results obtained from the top, middle and bottom preparations will be averaged and utilized as the concentration results.

[b] Samples will be collected on the first preparation of the study and on the last preparation of the study.

Samples to be analyzed will be submitted as soon as possible following collection.

All samples to be analyzed will be transferred (on ice pack) to the analytical laboratory.

Any residual/retained analytical samples (and Test Item used in analysis) will be discarded before issue of the Final Report.

Appendix 1

10.3.1. Analytical Method

Analyses described below will be performed by IEX-HPLC using a validated analytical procedure (CR-MTL Study No. To be included by amendment).

10.3.1.1. Concentration and Homogeneity Analysis

Samples for Analysis:	Duplicate top, middle, and bottom samples (duplicate middle only from Group 1); sent for analysis as noted in Section 10.3. On days where only concentration analysis is required, the formulation will only be sampled from the middle.
Backup Samples:	Triplicate top, middle, and bottom samples (Triplicate middle only from Group 1); maintained at the Test Facility. Backup samples may be analyzed at the discretion of the Study Director. On days where only concentration analysis is required, the formulation will only be sampled from the middle.
Sampling Containers:	Appropriate sized glass containers.
Sample Volume:	0.5 mL for analysis and backup samples.
Storage Conditions:	Kept in a refrigerator set to maintain 4°C.
Acceptance Criteria:	For concentration, the criteria for acceptability will be mean sample concentration results within or equal to ± 15% of theoretical concentration. Each individual sample concentration result within or equal to ± 20%. For homogeneity, the criteria for acceptability will be a relative standard deviation (RSD) of concentrations of ≤ 5% for each group.

10.3.1.2. Stability Analysis

There will be no stability analysis performed for concentration used on this study however, end of use stability analysis of the stock solution will be performed at the end of the dosing period.

11. TEST SYSTEM

Species:	Rat
Strain:	Crl:CD(SD) Sprague-Dawley rat
Source:	Charles River Canada Inc., St. Constant, QC, Canada
Number of Males Ordered:	60
Number of Females Ordered:	60
Target Age at Arrival:	4 to 8 weeks

Appendix 1

Target Weight at Arrival:	126 to 150 g (males) 101 to 125 g (females)

The actual age, weight, and number of animals received will be listed in the Final Report.

11.1. Justification of Test System and Number of Animals

The Sprague Dawley rat was chosen as the animal model for this study as it is an accepted rodent species for preclinical toxicity testing by regulatory agencies.

The total number of animals to be used in this study is considered to be the minimum required to properly characterize the effects of the Test Item. This study has been designed such that it does not require an unnecessary number of animals to accomplish its objectives.

At this time, studies in laboratory animals provide the best available basis for extrapolation to humans and are required to support regulatory submissions. Acceptable models which do not use live animals currently do not exist.

11.2. Animal Identification

Each animal will be identified using a subcutaneously implanted electronic identification chip.

11.3. Environmental Acclimation

A minimum acclimation period of 14 days will be allowed between animal receipt and the start of dosing in order to accustom the animals to the laboratory environment.

11.4. Selection, Assignment, Replacement, and Disposition of Animals

Animals will be assigned to groups by a stratified randomization scheme designed to achieve similar group mean body weights. Males and females will be randomized separately. Animals in poor health or at extremes of body weight range will not be assigned to groups.

Before the initiation of dosing, any assigned animals considered unsuitable for use in the study will be replaced by alternate animals obtained from the same shipment and maintained under the same environmental conditions.

After initiation of dosing, study animals may be replaced during the replacement period with alternate animals in the event of accidental injury, non-Test Item-related health issues, or similar circumstances.

The alternate animals may be used as replacements on the study within 3 days.

The disposition of all animals will be documented in the study records.

Appendix 1

12. HUSBANDRY

12.1. Housing

Animals will be group housed (up to 3 animals of the same sex and same dosing group together) in polycarbonate cages containing appropriate bedding equipped with an automatic watering valve. These housing conditions will be maintained unless deemed inappropriate by the Study Director and/or Clinical Veterinarian. The room(s) in which the animals will be kept will be documented in the study records.

Animals will be separated during designated procedures/activities. Each cage will be clearly labeled with a color-coded cage card indicating study, group, animal number(s), and sex. Cages will be arranged on the racks in group order. Where possible, control group animals will be housed on a separate rack from the Test Item treated animals.

12.2. Environmental Conditions

The targeted conditions for animal room environment will be as follows:

Temperature:	19°C to 25°C
Humidity:	30% to 70%
Light Cycle:	12 hours light and 12 hours dark (except during designated procedures)

12.3. Food

PMI Nutrition International Certified Rodent Chow No. 5CR4 will be provided ad libitum throughout the study, except during designated procedures. The same diet in meal form may be provided to individual animals as warranted by clinical signs (e.g., broken/damaged incisors or other health changes).

The feed is analyzed by the supplier for nutritional components and environmental contaminants. Results of the analysis are provided by the supplier and are on file at the Test Facility.

It is considered that there are no known contaminants in the feed that would interfere with the objectives of the study.

12.4. Water

Municipal tap water after treatment by reverse osmosis and ultraviolet irradiation will be freely available to each animal via an automatic watering system (except during designated procedures). Water bottles can be provided, if required.

Periodic analysis of the water is performed, and results of these analyses are on file at the Test Facility.

It is considered that there are no known contaminants in the water that could interfere with the outcome of the study.

Appendix 1

12.5. Animal Enrichment

Animals will be socially housed for psychological/environmental enrichment and will be provided with items such as a hiding tube and a chewing object, except during study procedures/activities.

12.6. Veterinary Care

Veterinary care will be available throughout the course of the study and animals will be examined by the veterinary staff as warranted by clinical signs or other changes. All veterinary examinations and recommended therapeutic treatments, if any, will be documented in the study records.

In the event that animals show signs of illness or distress, the responsible veterinarian may make initial recommendations about treatment of the animal(s) and/or alteration of study procedures, which must be approved by the Study Director or Scientific designate. All such actions will be properly documented in the study records and, when appropriate, by study plan amendment. Treatment of the animal(s) for minor injuries or ailments may be approved without prior consultation with the Sponsor representative when such treatment does not impact fulfillment of the study objectives. If the condition of the animal(s) warrants significant therapeutic intervention or alterations in study procedures, the Sponsor representative will be contacted, when possible, to discuss appropriate action. If the condition of the animal(s) is such that emergency measures must be taken, the Study Director and/or clinical veterinarian will attempt to consult with the Sponsor representative prior to responding to the medical crisis, but the Study Director and/or veterinarian has authority to act immediately at his/her discretion to alleviate suffering. The Sponsor representative will be fully informed of any such events.

Appendix 1

13. EXPERIMENTAL DESIGN

Experimental Design

Group No.	Test Material	Dose Level (µg/dose)	Dose Volume (µL/dose)	Dose Concentration (mg/mL)	No. of Animals			
					Main Study		Recovery Study	
					Males	Females	Males	Females
1	Reference Item	0	200	0	10	10	5	5
2	mRNA-1647	10	200	0.05	10	10	-	-
3	mRNA-1647	30	200	0.15	10	10	-	-
4	mRNA-1647	100	200	0.5	10	10	5	5

- : Not applicable

13.1. Administration of Test and Reference Items

The Test and Reference Items will be administered to the appropriate animals via intramuscular injection into the lateral compartment of the thigh on Days 1, 15, 29 and 43, the injection site will be alternated on each dosing occasion (site 1= left; site 2= right). The volume for each dose will be administered using a syringe/needle within the demarcated area. The first day of dosing will be designated as Day 1 (exception: alternate animals used for replacement after Day 1 will assume the day of the animal being replaced).

The injection area will be marked as frequently as required to allow appropriate visualization of administration sites. Hair may be clipped or shaved if required to improve visualization of the injection sites. The injection site will be documented in the raw data for each dose administered.

13.2. Justification of Route and Dose Levels

The intramuscular route of exposure was selected because this is the intended route of human exposure.

The dose levels for this toxicology study were chosen to approximate a substantial multiple of the anticipated clinical starting dose and top clinical dose. The highest dose to be tested is expected to represent the intended maximum human clinical dose and volume and will be administered by the clinical route (intramuscular). At this dose level, minimal systemic toxicity is expected, but it is possible mild to moderate injection site reaction (redness, swelling) and potentially elevation of systemic cytokine/acute phase markers may be observed. The mid- and low-dose were selected to evaluate the dose-dependent effect of this compound.

14. IN-LIFE PROCEDURES, OBSERVATIONS, AND MEASUREMENTS

The in-life procedures, observations, and measurements listed below including Laboratory Investigations listed in section below will be performed for all main study and recovery animals, unless otherwise indicated in the respective section. During the study, additional evaluations to those described below and/or scheduled, and considered necessary by the Study Director and/or Veterinarian to assess health status will be conducted and duly documented. More frequent observations may be undertaken if considered appropriate.

Appendix 1

14.1. Mortality/Moribundity Checks

Frequency: Twice daily, once in the morning and once in the afternoon, throughout the study.

Procedure: Animals will be observed for general health/mortality and moribundity. Animals will not be removed from cage during observation, unless necessary for identification or confirmation of possible findings.

14.2. Clinical Observations

14.2.1. Detailed Clinical Observations

Frequency: Weekly during the dosing and recovery periods, and at least every two weeks during the predosing period.

Procedure: Animals removed from the cage for examination.

14.3. Local Irritation Assessment

Frequency: On days of dosing; at least 24 and 72 hours post-dose (end of each group). Weekly when there is no dosing and during the recovery period. Following Day 43 dosing, no assessment will be performed on main animals at 72 hours postdose as animals will be sent to necropsy on Day 44.

Procedure: All animals will have the dose injection site examined for signs of erythema/edema. Observations will be scored according to the Local Irritation Assessment scoring table as follows:

Erythema (Redness)	Score
No erythema	0
Very slight erythema (barely perceptible)	1
Mild erythema	2
Moderate to severe erythema	3
Severe erythema (beet redness to slight eschar formation, injury in depth)	4
Notable dermal lesion (maximized)	M
Edema (Swelling)	
No edema	0
Very slight edema (barely perceptible)	1
Slight edema	2
Moderate edema	3
Severe edema	4

Appendix 1

Any other abnormalities will be recorded as they are observed.

14.4. Body Weights

Frequency:	Weekly during the dosing and recovery periods, and at least every two weeks during the predosing period.
Procedure:	Animals will be individually weighed. A fasted weight will be recorded on the day of necropsy. Terminal body weights will not be collected from animals found dead or euthanized moribund.

14.5. Food Consumption

Frequency:	Weekly, starting Day -7, throughout the dosing and recovery periods.
Procedure:	Food consumption will be quantitatively measured except for on the day of scheduled euthanasia.

14.6. Ophthalmic Examinations

Frequency:	Once prestudy and again toward the end of Week 6 of the dosing period. During Week 2 of the recovery period if Test Item-related findings are observed during the dosing period.
Procedure:	All animals will be subjected to funduscopic (indirect ophthalmoscopy) and biomicroscopic (slit lamp) examinations. The mydriatic used will be Atropine 0.126%.
Evaluation:	A report will be included as an appendix to the Final Report.

14.7. Body Temperature

Frequency:	On Day 1 and Day 43 at predose, and 6 and 24 hours post dose (end of each group). If body temperature is significantly above normal range (36.0°C to 38.0°C) the temperature will be monitored daily till return to normal. If clinical observations indicate a possible body temperature changes measurements may be taken at the discretion of the Study Director.
Procedure:	Rectal body temperature will be recorded on un-sedated animals.

Appendix 1

15. LABORATORY EVALUATIONS

15.1. Clinical Pathology

15.1.1. Sample Collection

Blood will be collected from the abdominal aorta following isoflurane anesthesia. After collection, samples will be transferred to the appropriate laboratory for processing.

Animals will be fasted overnight before blood sampling (for clinical chemistry). Samples will be collected according to the following table.

Samples for Clinical Pathology Evaluation

Group Nos.	Time Point	Hematology	Coagulation	Clinical Chemistry	α1-acid glycoprotein/ α2-macroglubulin
1 to 4[a]	Day 44	X	X	X	X
1 and 4	Day 57	X	X	X	X
Unscheduled euthanasia (when possible)	Before euthanasia	X	X	X	X

X = Sample to be collected

[a] Samples will only be collected from those animals scheduled for euthanasia on Day 44.

Any residual/retained clinical pathology samples will be discarded before issue of the Final Report.

15.1.2. Hematology

Target Volume: 0.5 mL

Anticoagulant: EDTA

Hematology Parameters

Red blood cell count Hemoglobin concentration Hematocrit Mean corpuscular volume Red Blood Cell Distribution Width Mean corpuscular hemoglobin concentration Mean corpuscular hemoglobin Reticulocyte count (absolute) Platelet count	White blood cell count Neutrophil count (absolute) Lymphocyte count (absolute) Monocyte count (absolute) Eosinophil count (absolute) Basophil count (absolute) Large unstained cells (absolute)

A blood smear will be prepared from each hematology sample. Blood smears will be labeled, stained, and stored. Blood smears may be read to investigate results. If additional examination of blood smears is deemed necessary, the smears may be subsequently evaluated and this evaluation will be described in a study plan amendment.

Appendix 1

15.1.3. Coagulation

Target Volume: 1.2 mL (in a 1.3 mL tube)

Anticoagulant: Citrate

Processing: To plasma

Coagulation Parameters

Activated partial thromboplastin time Fibrinogen	Prothrombin time Sample Quality

15.1.4. Clinical Chemistry

Target Volume: 0.7 mL

Anticoagulant: None, collected in serum separator tube

Processing: To serum

Clinical Chemistry Parameters

Alanine aminotransferase Aspartate aminotransferase Alkaline phosphatase Gamma-glutamyltransferase Creatine Kinase Total bilirubin[a] Urea nitrogen Creatinine Calcium Phosphorus	Total protein Albumin Globulin Albumin/globulin ratio Glucose Cholesterol Triglycerides Sodium Potassium Chloride Sample Quality

[a] When total bilirubin is > 0.5 mg/dL, indirect and direct bilirubin will also be measured.

15.1.5. Bone Marrow Smear Evaluation (Optional)

Bone marrow smears will be collected and prepared as described in the Tissue Collection and Preservation table (Section 16.5). Evaluation of stained smears may be added by amendment at the discretion of the Study Director in consultation with the pathologist and the Sponsor.

15.1.6. α1-acid Glycoprotein and α2-macroglobulin Analysis

Blood will be collected via the abdominal aorta following isoflurane anesthesia before scheduled and unscheduled euthanasia for all animals.

Target Volume: 0.7 mL

Anticoagulant: None, collected in serum separator tubes

Processing: Blood samples to clot at ambient room temperature. Centrifugation for (b) (4) set at (b) (4) in a refrigerated centrifuge (set to maintain (b) (4) Samples will be processed to

Appendix 1

serum by the Immunology Department. Serum will be aliquoted into 1 x 75 µL aliquot for α2-macroglobulin and 2 x 75 µL aliquot and a leftover (if available) for α1-acid glycoprotein.

Storage conditions: Stored in a freezer set to maintain -20°C, pending analysis.

Analysis for α1-acid glycoprotein and α2-macroglobulin will be conducted using a qualified ELISA method by the Immunology Department. The procedure to be followed along with the assay acceptance criteria will be detailed in the appropriate analytical procedure.

Samples will be analyzed in duplicate. Any residual/retained samples will be discarded prior to report finalization.

15.2. Laboratory Investigations (Cytokine Analysis)

Blood will be collected from the jugular vein of all recovery animals and preterminally euthanized animals (recovery animals only). After collection, blood samples for serum will be transferred at ambient room temperature and blood samples for plasma will be transferred on wet ice to the appropriate laboratory for processing.

Sample Collection Schedule

Target Blood Volume (mL)			0.5	0.5
Anticoagulant			**None (SST)**	**EDTA**
Centrifugation setting			(b) (4)	
Timepoints			**Sample Type**	
Day	**Hrs**	**No. of Males/ Females**	IFN-α	IL-1ß, IL-6, TNF-α, IP-10, MIP-1-α, MCP-1
1	6	5/5	X	X
15	6	5/5	X	X
29	6	5/5	X	X
43	6	5/5	X	X
57	NA	5/5	X	X
Matrix			Serum	Plasma
Volume per aliquot (µL)			all volume	all volume
Number of aliquot(s)			1	1
Storage condition (set to maintain)			-80°C	-80°C
Responsible Lab			CR-SHB	CR-SHB

X = Sample to be collected; N/A = not applicable

The number of aliquots and volumes are targets that may be adjusted based on sample volume availability.

The samples will be analyzed by the Immunology department. Analysis for IL-1ß, IL-6, TNF-α, IP-10, MIP-1-α and MCP-1 will be conducted using a multiplex Luminex method. An ELISA

Appendix 1

method will be used for the analysis of IFN-α. The procedures to be followed during the course of this study along with the assays acceptance criteria will be detailed in the appropriate analytical procedure. Samples will be analyzed in duplicate.

Following Study Director approval, any residual/retained samples will be discarded prior to report finalization.

An Immunology Report for cytokine analysis will be included as an appendix to the Final Report.

15.3. Anti Therapeutic Antibody (ATA) Analysis

Blood will be collected by jugular venipuncture from the appropriate animals.

Time Points:	Before initiation of dosing, Day 43 (main animals only) and Day 57 (recovery animals).
Target Volume:	0.5 mL
Anticoagulant:	None, collected in serum separator tubes
Processing:	To serum

Samples will be mixed gently and kept under ambient conditions until centrifugation, which will be carried out as soon as practical. The samples will be centrifuged for (b) (4) in a refrigerated centrifuge (set to maintain (b) (4) at (b) (4) The resultant serum will be separated, transferred to uniquely labeled clear polypropylene tubes, frozen immediately over dry ice and transferred to a freezer set to maintain -80°C.
Samples will be shipped on dry ice to:

Shipping Contact
(b) (6)
Integrated BioTherapeutics, Inc.
21 Firstfield Road
Suite 100
Gaithersburg, MD 20878, USA
Tel: (b) (6)
Fax: (b) (6)
E-mail: (b) (6)

The Test Site will be notified before shipment of the samples. Upon receipt at the immunology laboratory, the samples will be stored at -80°C.

The samples will be analyzed for rat anti-CMV antibodies using a qualified ELISA method.

Any residual/retained samples will be maintained for a minimum of 6 months following issuance of the Audited Draft Report after which samples will be discarded. Alternatively, residual/retained samples will be discarded prior to the 6 month period should the issuance of the Final Report occur prior to the end of the 6 month retention period. An earlier discard of these residual/retained samples may also be requested and authorized by the Study Director.

Appendix 1

An Anti-therapeutic Antibody Report will be included as an appendix to the Final Report.

15.4. PBMC Analysis

Blood will be collected by abdominal aorta following isoflurane anesthesia from the appropriate animals.

Time Points:	On Day 44 (main animals only).
Target Volume:	0.5 mL
Anticoagulant:	Sodium Heparin
Storage Conditions:	Kept in a controlled temperature area set to maintain 21°C

Samples will be shipped at controlled temperature set to maintain 21°C via overnight courier to the Immunology laboratory, for whole blood stimulation and cytokine analysis, to:

Shipping Contact
(b) (6)
Cell Biology and Immunology
Southern Research
2000 Ninth Ave S
Birmingham Alabama 35205
Tel: (b) (6)
E-mail: (b) (6)

The Test Site will be notified before shipment of the samples. Upon receipt at the immunology laboratory, the samples will be stored at room temperature.

The PBMC samples will be analyzed using a qualified method.

Any residual/retained samples will be maintained for a minimum of 6 months following issuance of the Audited Draft Report after which samples will be discarded. Alternatively, residual/retained samples will be discarded prior to the 6 month period should the issuance of the Final Report occur prior to the end of the 6 month retention period. An earlier discard of these residual/retained samples may also be requested and authorized by the Study Director.

An Immunology Report for PBMC analysis will be included as an appendix to the Final Report.

Appendix 1

16. TERMINAL PROCEDURES

Terminal procedures are summarized in the following table:

Terminal Procedures for Main Study and Recovery Animals

Group No.	No. of Animals		Scheduled Euthanasia Day	Necropsy Procedures			Histology	Histopathology
	M	F		Necropsy	Tissue Collection	Organ Weights		
1	10	10	44	X	X	X	Full Tissue[a]	Full Tissue[a]
2	10	10					Full Tissue[a]	Gross Lesions Target Tissues
3	10	10					Full Tissue[a]	Gross Lesions Target Tissues
4	10	10					Full Tissue[a]	Full Tissue[a]
1	5	5	57	X	X	X	Full Tissue[a]	Full Tissue[a]
4	5	5					Full Tissue[a]	Full Tissue[a]
Unscheduled Deaths				X	X	-	Full Tissue[a]	Full Tissue[a]
Replaced animals (prestudy)[b]				X	Standard Diagnostic List	-	-	-
Replaced animals (after dosing start)				X	X	-	-	-

X = Procedure to be conducted; - = Not applicable.
[a] See Tissue Collection and Preservation table for listing of tissues.
[b] Animals found dead or euthanized before the initiation of dosing.

16.1. Unscheduled Deaths

If a main study or recovery animal dies on study, a complete necropsy examination will be conducted and specified tissues will be saved. If necessary, the animal will be refrigerated to minimize autolysis.

Main or recovery animals may be euthanized for humane reasons as per Test Facility SOPs. The samples for evaluation of laboratory evaluation will be obtained if possible as specified in Section 15. These animals will undergo exsanguination by incision from the abdominal aorta following isoflurane anesthesia unless deemed inappropriate by the Study Director and/or the clinical veterinarian and will undergo complete necropsy examination, and specified tissues will be retained. If necessary, the animal will be refrigerated (set to maintain 4°C) to minimize autolysis.

Animals found dead or euthanized before the initiation of dosing will be subject to complete necropsy examination and limited tissue retention (standard diagnostic tissue list). Any animal replaced after the start of dosing will be subject to complete necropsy examination and tissues will be retained (as per Tissue Collection and Preservation section), and any data generated will not be included in the report unless deemed appropriate by the Study Director.

Appendix 1

16.2. Scheduled Euthanasia

Main study and recovery animals surviving until scheduled euthanasia will have a terminal body weight recorded, samples for laboratory evaluation will be collected (as appropriate), and will be euthanized by exsanguination by incision from the abdominal aorta following isoflurane anesthesia. When possible, the animals will be euthanized rotating across dose groups such that similar numbers of animals from each group, including controls, will be necropsied throughout the day. Animals will be fasted overnight before their scheduled necropsy.

16.3. Necropsy

Main and recovery animals will be subjected to a complete necropsy examination, which will include evaluation of the carcass and musculoskeletal system; all external surfaces and orifices; cranial cavity and external surfaces of the brain; and thoracic, abdominal, and pelvic cavities with their associated organs and tissues.

Necropsy procedures will be performed by qualified personnel with appropriate training and experience in animal anatomy and gross pathology. A veterinary pathologist, or other suitably qualified person, will be available.

At the discretion of the necropsy supervising pathologist, images may be generated for illustration of or consultation on gross observations. Generation of such images will be documented and communicated to the Study Director. Images and associated documentation will be retained and archived.

16.4. Organ Weights

The organs identified for weighing in the Tissues Collection and Preservation table will be weighed at necropsy for all scheduled euthanasia animals. Organ weights will not be recorded for animals found dead or euthanized in poor condition or in extremis. Paired organs will be weighed together. In the event of gross abnormalities, in addition to the combined weight, the weight of each organ of a pair may be taken and entered as a tissue comment. Organ weight as a percent of body weight (using the terminal body weight) and organ weight as a percent of brain weight will be calculated.

16.5. Tissue Collection and Preservation

Representative samples of the tissues identified in the Tissue Collection and Preservation table in ATTACHMENT A will be collected from all animals and preserved in 10% neutral buffered formalin, unless otherwise indicated. Additional tissue samples may be collected to elucidate abnormal findings.

Appendix 1

17. HISTOLOGY AND HISTOPATHOLOGY

17.1. Histology

Tissues in the Tissue Collection and Preservation table from animals identified in the Terminal Procedures table will be embedded in paraffin, sectioned, mounted on glass slides, and stained with hematoxylin and eosin.

17.2. Histopathology

Histopathological evaluation will be performed by a board-certified veterinary pathologist. Target tissues identified by the study pathologist during microscopic evaluation will be communicated to the study Director; tissues will be evaluated and reported. Any additional stains or evaluations, if deemed necessary by the pathologist, will be added by study plan amendment following discussion with the Study Director and in consultation the Sponsor.

At the discretion of the study pathologist and after acknowledgement by the Study Director, images may be captured for consultation purposes.

17.3. Pathology Peer Review

A on-site pathology peer review will be conducted by:

(b) (6)
Moderna Therapeutics
200 Technology Square, 3rd Floor
Cambridge, MA 02116
Tel: (b) (6)
E-mail: (b) (6)

The peer review statement or equivalent documentation will be included as an appendix to the Final Report.

18. CONSTRUCTED VARIABLES

Body Weight Gains	Calculated between at least each interval as well as between the beginning and end of each phase
Organ Weight relative to Body Weight	Calculated against the Terminal body weight for scheduled intervals
Organ Weight relative to Brain Weight	Calculated against the brain weight for scheduled intervals

19. STATISTICAL ANALYSIS

All statistical tests will be conducted at the 5% significance level. All pairwise comparisons will be conducted using two sided tests and will be reported at the 0.1%, 1%, and 5% levels.

Appendix 1

Numerical data collected on scheduled occasions for the listed variables will be analyzed as indicated according to sex and occasion. Descriptive statistics number, mean and standard deviation (or %CV or SE when deemed appropriate) will be reported whenever possible. Values may also be expressed as a percentage of predose or control values when deemed appropriate. Inferential statistics will be performed according to the matrix below when possible, but will exclude semi-quantitative data, and any group with less than 3 observations.

Statistical Matrix

Variables for Inferential Analysis	Statistical Method
	Parametric/ Non-Parametric
Body Weight	X
Hematology Variables	X
Coagulation Variables	X
Clinical Chemistry Variables	X
Cytokines	X
Body Temperature	X
α2-macroglobulin	X
α1-acid glycoprotein	X
Organ Weights	X
Body Weight Gains	X
Organ Weight relative to Body Weight	X
Organ Weight relative to Brain Weight	X

The following pairwise comparisons will be made:

Group 2 vs. Group 1

Group 3 vs. Group 1

Group 4 vs. Group 1

19.1. Parametric/Non-Parametric

Levene's test will be used to assess the homogeneity of group variances.

Datasets with at least 3 groups will be compared using an overall one-way ANOVA *F*-test if Levene's test is not significant or the Kruskal-Wallis test if it is. If the overall *F*-test or Kruskal-Wallis test is found to be significant, then the above pairwise comparisons will be conducted using Dunnett's or Dunn's test, respectively.

Datasets with 2 groups (the designated control group and 1 other group) will be compared using a *t*-test if Levene's test is not significant or Wilcoxon Rank-Sum test if it is.

20. COMPUTERIZED SYSTEMS

The following critical computerized systems may be used in the study. The actual critical computerized systems used will be specified in the Final Report.

Appendix 1

Data for parameters not required by study plan, which are automatically generated by analytical devices used will be retained on file but not reported. Statistical analysis results that are generated by the program but are not required by study plan and/or are not scientifically relevant will be retained on file but will not be included in the tabulations.

Critical Computerized Systems

System Name	Description of Data Collected and/or Analyzed
Provantis	In-life; clinical pathology; postmortem
Dispense	Test Material receipt, accountability and/or formulation activities
SRS (CR-MTL in-house application built with SAS) and SAS system for Windows and/or In-house reporting software Nevis 2012 (using SAS)	Statistical analyses of numerical in-life, clinical pathology and postmortem data
Mesa Laboratories AmegaView CMS	Continuous Monitoring System. Monitoring of standalone fridges, freezers, incubators, and selected laboratories to measure temperature, relative humidity, and CO2, as appropriate
Johnson Controls Metasys	Building Automation System. Control of HVAC and other building systems, as well as temperature/humidity control and trending in selected laboratories and animal rooms
Empower 3 (Waters Corporation)	Data acquisition for dose formulation analysis, including regression analysis and measurement of concentration and recovery of dose formulations using HPLC
BioPlex Manager	Cytokine data collection
Softmax Pro GxP	Elisa data collection
Watson LIMS	Biomarker data analysis
Dynamics (Wyatt)	Data acquisition for particle size analysis of the test item using DLS

21. AMENDMENTS AND DEVIATIONS

Changes to the approved study plan shall be made in the form of an amendment, which will be signed and dated by the Study Director. Every reasonable effort will be made to discuss any necessary study plan changes in advance with the Sponsor.

All study plan and SOP deviations will be documented in the study records. Deviations from the study plan and/or SOP related to the phase(s) of the study conducted at a Test Site shall be documented, acknowledged by the PI/IS, and reported to the Study Director for authorization/acknowledgement. The Study Director will notify the Sponsor of deviations that may result in a significant impact on the study as soon as possible.

22. RETENTION OF RECORDS, SAMPLES, AND SPECIMENS

All study-specific raw data, electronic data, documentation, study plan, retained samples and specimens, and interim (if applicable) and final reports will be archived by no later than the date of final report issue. All materials generated by Charles River from this study will be transferred

Appendix 1

to CR MTL archive. One year after issue of the draft report, the Sponsor will be contacted to determine the disposition of materials associated with the study.

Records to be maintained will include, but will not be limited to, documentation and data for the following:

- Study Plan, study plan amendments, and deviations
- Study schedule
- Study-related correspondence
- Test system receipt, health, and husbandry
- Test and Reference Item receipt, identification, preparation, and analysis
- In-life measurements and observations
- Clinical pathology sample collection and evaluation
- Gross and microscopic observations and related data
- Organ weight measurements
- Statistical analysis results

23. REPORTING

A comprehensive Draft Report will be prepared following completion of the study and will be finalized following consultation with the Sponsor. The report will include all information necessary to provide a complete and accurate description of the experimental methods and results and any circumstances that may have affected the quality or integrity of the study.

The Sponsor will receive an electronic version of the Draft and Final Report provided in Adobe Acrobat PDF format (hyperlinked and searchable at final) along with a Microsoft Word version of the text. The PDF document will be created from native electronic files to the extent possible, including text and tables generated by the Test Facility. Report components not available in native electronic files and/or original signature pages will be scanned and converted to PDF image files for incorporation. An original copy of the report with the Test Facility's handwritten signatures will be retained.

Reports should be finalized within 6 months of issue of the Draft Report. If the Sponsor has not provided comments to the report within 6 months of draft issue, the report will be finalized by the Test Facility unless other arrangements are made by the Sponsor.

Appendix 1

24. ANIMAL WELFARE

24.1. Institutional Animal Care and Use Committee Approval

The study plan and any amendment(s) or procedures involving the care and use of animals in this study will be reviewed and approved by CR SHB Institutional Animal Care and Use Committee (IACUC). During the study, the care and use of animals will be conducted with guidance from the USA National Research Council and the Canadian Council on Animal Care (CCAC).

Appendix 1

TEST FACILITY APPROVAL

The signature below acknowledges Test Facility Management's responsibility to the study as defined by the relevant GLP regulations.

Appendix 1

SUMMARY OF CHANGES AND JUSTIFICATIONS

Study Plan effective date: 8 Mar 2017

Note: When applicable, additions are indicated in bold underlined text and deletions are indicated in bold strikethrough text in the affected sections of the document.

Item or Section(s)	Justification
Amendment 1	**Date: 15-Mar-2017**
2. PROPOSED STUDY SCHEDULE	To update the schedule due to delay in the test item documentation.
7. RESPONSIBLE PERSONNEL	To update the contact information of the ATA PI.
10.3.1. Analytical Method	To include validation number.
10.3.1.2. Stability Analysis	To clarify that stability analysis will be performed on the bulk Test Item.
15.2. Laboratory Investigations (Cytokine Analysis)	To correct a typographical error and to include clarification for sample processing.
15.3. Anti Therapeutic Antibody (ATA) Analysis	To clarify the processing of samples and update the shipping contact information.
15.4. PBMC Analysis	To change the blood collection procedure.

Appendix 1

TABLE OF CONTENTS

Appendix 1

1. OBJECTIVE(S)

The objectives of this study are to determine the potential toxicity of mRNA 1647, when given by intramuscular injection for 6 weeks (4 doses) to rats and to evaluate the potential reversibility of any findings following a 2-week recovery period.

1.1. Study Classification

Study Category:	TOX
Study Type:	Repeat Dose Toxicity
Study Design:	Parallel
Primary Treatment CAS Registry Number:	Not Available
Primary Treatment Unique Ingredient ID:	Not Available
Class of Compound:	mRNA

2. PROPOSED STUDY SCHEDULE

Proposed study dates are listed below. Actual applicable dates will be included in the Final Report.

Experimental Start Date:	08 Mar 2017
Experimental Completion Date:	**29 Aug 2017** ~~**To be included by amendment**~~ (Last date data are collected from the study)
Animal Arrival:	08 Mar 2017
Initiation of Dosing:	~~**20**~~ **22** Mar 2017 (Male) ~~**21**~~ **23** Mar 2017 (Female)
Completion of In-life:	~~**03**~~ **05** May 2017 (Main) ~~**16**~~ **18** May 2017 (Recovery) (Last date of necropsy)
Unaudited Draft Report:	**17 Jul 2017** ~~**To be included by amendment**~~
Audited Draft Report:	**22 Aug 2017** ~~**To be included by amendment**~~
Final Report:	**29 Aug 2017** ~~**To be included by amendment**~~ (Expected date of Study Director signature)

3. GUIDELINES FOR STUDY DESIGN

The design of this study was based on the study objective(s), the overall product development strategy for the Test Item, and the following study design guidelines:

- OECD Guideline 407. *Repeated Dose 28-day Oral Toxicity Study in Rodents*.

Appendix 1

- Committee for Medicinal Products for Human Use (CHMP). *Note for Guidance on Repeated Dose Toxicity*. CPMP/SWP/1042/99corr.
- ICH Harmonised Tripartite Guideline M3 (R2). *Nonclinical Safety Studies for the Conduct of Human Clinical Trials and Marketing Authorization for Pharmaceuticals*.
- Japanese Guidelines for Nonclinical Studies of Drugs Manual (1995). *Guidelines for Toxicity Studies of Drugs (Chapter 3, Repeated Dose Toxicity Studies)*.
- Appendix to Director General Notification, No. 12-Nousan-8147, 24 November 2000, Agricultural Production Bureau, Ministry of Agriculture, Forestry and Fisheries of Japan (JMAFF).

4. REGULATORY COMPLIANCE

The study will be performed in accordance with the OECD Principles of Good Laboratory Practice and as accepted by Regulatory Authorities throughout the European Union, United States of America (FDA), Japan (MHLW), and other countries that are signatories to the OECD Mutual Acceptance of Data Agreement.

Any portion of this study conducted in the USA will be performed in accordance with the U.S. Department of Health and Human Services, Food and Drug Administration. United States Code of Federal Regulations, Title 21, Part 58: Good Laboratory Practice for Nonclinical Laboratory Studies and as accepted by Regulatory Authorities throughout the European Union (OECD Principles of Good Laboratory Practice), Japan (MHLW), and other countries that are signatories to the OECD Mutual Acceptance of Data Agreement.

Exceptions to GLPs include the following study elements:

- Characterization of the Test Item will be performed by the Sponsor or Sponsor subcontractor according to established SOPs, controls, and approved test methodologies to ensure integrity and validity of the results generated; these analyses will not be conducted in compliance with the GLP or GMP regulations.
- Analysis of cytokines, α2-macroglobulin, α1-acid glycoprotein, anti-therapeutic antibody and PBMCs will be conducted using scientifically qualified methods and in accordance with all applicable analytical procedures.
- Pathology peer review

5. QUALITY ASSURANCE

5.1. Test Facility

The Test Facility Quality Assurance Program (QAP) will monitor the study to assure the facilities, equipment, personnel, methods, practices, records, and controls are in conformance with Good Laboratory Practice regulations. The QAP will review the study plan, conduct inspections at intervals adequate to assure the integrity of the study, and audit the Final Report to

Appendix 1

assure that it accurately describes the methods and standard operating procedures and that the reported results accurately reflect the raw data of the study.

The Test Facility QAP contact for this study is indicated below:

Each PI is required to report any deviations or other circumstances that could affect the quality or integrity of the study to the Study Director in a timely manner. Each PI will provide a report addressing their assigned phase of the study, which will be included as an appendix to the Final Report. The phase report will include the following:

- The archive site for all records, samples, specimens and reports generated from the phase or segment (alternatively, details regarding the retention of the materials may be provided to the Study Director for inclusion in the Final Report)
- A listing of critical computerized systems used in the conduct and/or interpretation of the assigned study phase

8. TEST AND REFERENCE ITEMS

8.1. Test Item

Identification:	mRNA-1647
Supplier:	Moderna Therapeutics, Inc.
Batch (Lot) Number:	MTDP16015
Concentration:	2 mg/mL
Retest Date:	An end-of-use analysis of the bulk Test Item will be performed to demonstrate the stability of the Test Item during the dosing period.
Physical Description:	White to off-white lipid nanopacticle dispersion
Storage Conditions:	Kept in a freezer set to maintain -20°C

8.2. Reference Item

Identification:	Phosphate-buffered Saline (PBS) pH 7.2
Supplier:	Will be included in the Final Report
Batch (Lot) Number:	Will be included in the Final Report
Expiration Date:	Will be included in the Final Report
Physical Description:	Liquid
Storage Conditions:	Kept in a controlled temperature area set to maintain 21°C

8.3. Test Item Characterization

The Sponsor will provide to the Test Facility documentation of the identity, strength, purity and composition for the Test Item. A Certificate of Analysis or equivalent documentation will be provided for inclusion in the Final Report. The Sponsor will also provide information concerning the regulatory standard that was followed for these evaluations.

Appendix 1

The Sponsor has appropriate documentation on file concerning the method of synthesis, fabrication or derivation of the Test Item, and this information is available to the appropriate regulatory agencies should it be requested.

8.4. Analysis of Test Item

A sample (2 vials) of the Test Item will be taken on the completion of the dosing period. Analysis of bulk Test Item for concentration, particle size and purity will be performed.

The first vial will be transferred (on ice pack) to the analytical laboratory at the Test Facility for concentration and particle size analysis.

The second vial will be transferred (on ice pack) to the molecular biology laboratory at the Test Facility for purity analysis.

Purity and Particle size analysis will be performed by IEX- HPLC, Differential Light Scattering (DLS) and capillary electrophoresis (CE) using validated analytical procedures.

Any residual/retained analytical samples (and Test Item used in analysis) will be discarded before issue of the Final Report.

8.5. Reserve Samples

For each batch (lot) of Test and Reference Items, a reserve sample (1 mL or 1 vial) will be collected and maintained under the appropriate storage conditions by the Test Facility.

8.6. Test and Reference Item Inventory and Disposition

Records of the receipt, distribution, storage, and disposition of Test and Reference Items will be maintained. With the exception of reserve samples, all unused Sponsor-supplied bulk Test Item will be returned on dry ice to the Sponsor (after completion of dosing).

Shipping Contact
(b) (6)
Moderna Therapeutics
800 Technology Sq, 8th Floor
Cambridge MA 02476
Cell: (b) (6)
E-mail: (b) (6)

9. SAFETY

The safety precautions for the Test Item and dose formulations will be documented in a Test Material Safety Data Sheet (TMSDS) based on the information provided by the Sponsor either by an MSDS or similar document.

Appendix 1

10. DOSE FORMULATION AND ANALYSIS

10.1. Preparation of Reference Item

Dose formulation preparations will be performed under a laminar flow hood using clean procedures.

The Reference Item, Phosphate-buffered Saline (PBS) pH 7.2, will be dispensed on days of dosing (i.e. Days 1, 15, 29 and 43) for administration to Group 1 control animals and will be used as required to dilute the bulk Test Item for administration to Groups 2 to 4 animals. The aliquots will be stored in a refrigerator set to maintain 4°C until use. They will be removed from the refrigerator and allowed to warm to room temperature for at least 30 minutes before dosing.

Any residual volumes will be discarded unless otherwise requested by the Study Director.

10.2. Preparation of Test Item

Dose formulation preparations will be performed under a laminar flow hood using clean procedures.

Test Item formulations will be diluted with PBS pH 7.2, as necessary for administration. The dosing formulations will be prepared on each days of dosing (i.e. Days 1, 15, 29 and 43) and will be stored in a refrigerator set to maintain 4°C. The dose formulations will be allowed to warm to room temperature for at least 30 minutes prior to dosing. Alternatively, the aliquots can be transferred directly to room temperature. When possible, stock vials will be used only once.

Any residual volumes of formulated Test Item will be stored in a refrigerator set at 4°C and discarded prior to report finalization.

10.3. Sample Collection and Analysis

Dose formulation samples will be collected for analysis as indicated in the following table. Additional samples may be collected and analyzed at the discretion of the Study Director.

Dose Formulation Sample Collection Schedule

Interval[b]	Homogeneity	Concentration	Sampling From
Day 1	All groups[a]	All groups	Dosing container
Day 43	N/A	All groups	Dosing container

N/A = Not applicable.

[a] The homogeneity results obtained from the top, middle and bottom preparations will be averaged and utilized as the concentration results.

[b] Samples will be collected on the first preparation of the study and on the last preparation of the study.

Samples to be analyzed will be submitted as soon as possible following collection.

All samples to be analyzed will be transferred (on ice pack) to the analytical laboratory.

Any residual/retained analytical samples (and Test Item used in analysis) will be discarded before issue of the Final Report.

Appendix 1

10.3.1. Analytical Method

Analyses described below will be performed by IEX-HPLC using a validated analytical procedure (CR-MTL Study No.**1802050** ~~**To be included by amendment**~~).

10.3.1.1. Concentration and Homogeneity Analysis

Samples for Analysis:	Duplicate top, middle, and bottom samples (duplicate middle only from Group 1); sent for analysis as noted in Section 10.3. On days where only concentration analysis is required, the formulation will only be sampled from the middle.
Backup Samples:	Triplicate top, middle, and bottom samples (Triplicate middle only from Group 1); maintained at the Test Facility. Backup samples may be analyzed at the discretion of the Study Director. On days where only concentration analysis is required, the formulation will only be sampled from the middle.
Sampling Containers:	Appropriate sized glass containers.
Sample Volume:	0.5 mL for analysis and backup samples.
Storage Conditions:	Kept in a refrigerator set to maintain 4°C.
Acceptance Criteria:	For concentration, the criteria for acceptability will be mean sample concentration results within or equal to ± 15% of theoretical concentration. Each individual sample concentration result within or equal to ± 20%. For homogeneity, the criteria for acceptability will be a relative standard deviation (RSD) of concentrations of ≤ 5% for each group.

10.3.1.2. Stability Analysis

There will be no stability analysis performed for concentration used on this study however, end of use stability analysis of the ~~**stock solution**~~ **bulk test item** will be performed at the end of the dosing period.

11. TEST SYSTEM

Species:	Rat
Strain:	Crl:CD(SD) Sprague-Dawley rat
Source:	Charles River Canada Inc., St. Constant, QC, Canada
Number of Males Ordered:	60
Number of Females Ordered:	60
Target Age at Arrival:	4 to 8 weeks

Appendix 1

Target Weight at Arrival: 126 to 150 g (males)
101 to 125 g (females)

The actual age, weight, and number of animals received will be listed in the Final Report.

11.1. Justification of Test System and Number of Animals

The Sprague Dawley rat was chosen as the animal model for this study as it is an accepted rodent species for preclinical toxicity testing by regulatory agencies.

The total number of animals to be used in this study is considered to be the minimum required to properly characterize the effects of the Test Item. This study has been designed such that it does not require an unnecessary number of animals to accomplish its objectives.

At this time, studies in laboratory animals provide the best available basis for extrapolation to humans and are required to support regulatory submissions. Acceptable models which do not use live animals currently do not exist.

11.2. Animal Identification

Each animal will be identified using a subcutaneously implanted electronic identification chip.

11.3. Environmental Acclimation

A minimum acclimation period of 14 days will be allowed between animal receipt and the start of dosing in order to accustom the animals to the laboratory environment.

11.4. Selection, Assignment, Replacement, and Disposition of Animals

Animals will be assigned to groups by a stratified randomization scheme designed to achieve similar group mean body weights. Males and females will be randomized separately. Animals in poor health or at extremes of body weight range will not be assigned to groups.

Before the initiation of dosing, any assigned animals considered unsuitable for use in the study will be replaced by alternate animals obtained from the same shipment and maintained under the same environmental conditions.

After initiation of dosing, study animals may be replaced during the replacement period with alternate animals in the event of accidental injury, non-Test Item-related health issues, or similar circumstances.

The alternate animals may be used as replacements on the study within 3 days.

The disposition of all animals will be documented in the study records.

Appendix 1

12. HUSBANDRY

12.1. Housing

Animals will be group housed (up to 3 animals of the same sex and same dosing group together) in polycarbonate cages containing appropriate bedding equipped with an automatic watering valve. These housing conditions will be maintained unless deemed inappropriate by the Study Director and/or Clinical Veterinarian. The room(s) in which the animals will be kept will be documented in the study records.

Animals will be separated during designated procedures/activities. Each cage will be clearly labeled with a color-coded cage card indicating study, group, animal number(s), and sex. Cages will be arranged on the racks in group order. Where possible, control group animals will be housed on a separate rack from the Test Item treated animals.

12.2. Environmental Conditions

The targeted conditions for animal room environment will be as follows:

Temperature:	19°C to 25°C
Humidity:	30% to 70%
Light Cycle:	12 hours light and 12 hours dark (except during designated procedures)

12.3. Food

PMI Nutrition International Certified Rodent Chow No. 5CR4 will be provided ad libitum throughout the study, except during designated procedures. The same diet in meal form may be provided to individual animals as warranted by clinical signs (e.g., broken/damaged incisors or other health changes).

The feed is analyzed by the supplier for nutritional components and environmental contaminants. Results of the analysis are provided by the supplier and are on file at the Test Facility.

It is considered that there are no known contaminants in the feed that would interfere with the objectives of the study.

12.4. Water

Municipal tap water after treatment by reverse osmosis and ultraviolet irradiation will be freely available to each animal via an automatic watering system (except during designated procedures). Water bottles can be provided, if required.

Periodic analysis of the water is performed, and results of these analyses are on file at the Test Facility.

It is considered that there are no known contaminants in the water that could interfere with the outcome of the study.

Appendix 1

12.5. Animal Enrichment

Animals will be socially housed for psychological/environmental enrichment and will be provided with items such as a hiding tube and a chewing object, except during study procedures/activities.

12.6. Veterinary Care

Veterinary care will be available throughout the course of the study and animals will be examined by the veterinary staff as warranted by clinical signs or other changes. All veterinary examinations and recommended therapeutic treatments, if any, will be documented in the study records.

In the event that animals show signs of illness or distress, the responsible veterinarian may make initial recommendations about treatment of the animal(s) and/or alteration of study procedures, which must be approved by the Study Director or Scientific designate. All such actions will be properly documented in the study records and, when appropriate, by study plan amendment. Treatment of the animal(s) for minor injuries or ailments may be approved without prior consultation with the Sponsor representative when such treatment does not impact fulfillment of the study objectives. If the condition of the animal(s) warrants significant therapeutic intervention or alterations in study procedures, the Sponsor representative will be contacted, when possible, to discuss appropriate action. If the condition of the animal(s) is such that emergency measures must be taken, the Study Director and/or clinical veterinarian will attempt to consult with the Sponsor representative prior to responding to the medical crisis, but the Study Director and/or veterinarian has authority to act immediately at his/her discretion to alleviate suffering. The Sponsor representative will be fully informed of any such events.

Appendix 1

13. EXPERIMENTAL DESIGN

Experimental Design

Group No.	Test Material	Dose Level (µg/dose)	Dose Volume (µL/dose)	Dose Concentration (mg/mL)	No. of Animals			
					Main Study		Recovery Study	
					Males	Females	Males	Females
1	Reference Item	0	200	0	10	10	5	5
2	mRNA-1647	10	200	0.05	10	10	-	-
3	mRNA-1647	30	200	0.15	10	10	-	-
4	mRNA-1647	100	200	0.5	10	10	5	5

- : Not applicable

13.1. Administration of Test and Reference Items

The Test and Reference Items will be administered to the appropriate animals via intramuscular injection into the lateral compartment of the thigh on Days 1, 15, 29 and 43, the injection site will be alternated on each dosing occasion (site 1= left; site 2= right). The volume for each dose will be administered using a syringe/needle within the demarcated area. The first day of dosing will be designated as Day 1 (exception: alternate animals used for replacement after Day 1 will assume the day of the animal being replaced).

The injection area will be marked as frequently as required to allow appropriate visualization of administration sites. Hair may be clipped or shaved if required to improve visualization of the injection sites. The injection site will be documented in the raw data for each dose administered.

13.2. Justification of Route and Dose Levels

The intramuscular route of exposure was selected because this is the intended route of human exposure.

The dose levels for this toxicology study were chosen to approximate a substantial multiple of the anticipated clinical starting dose and top clinical dose. The highest dose to be tested is expected to represent the intended maximum human clinical dose and volume and will be administered by the clinical route (intramuscular). At this dose level, minimal systemic toxicity is expected, but it is possible mild to moderate injection site reaction (redness, swelling) and potentially elevation of systemic cytokine/acute phase markers may be observed. The mid- and low-dose were selected to evaluate the dose-dependent effect of this compound.

14. IN-LIFE PROCEDURES, OBSERVATIONS, AND MEASUREMENTS

The in-life procedures, observations, and measurements listed below including Laboratory Investigations listed in section below will be performed for all main study and recovery animals, unless otherwise indicated in the respective section. During the study, additional evaluations to those described below and/or scheduled, and considered necessary by the Study Director and/or Veterinarian to assess health status will be conducted and duly documented. More frequent observations may be undertaken if considered appropriate.

Appendix 1

14.1. Mortality/Moribundity Checks

Frequency: Twice daily, once in the morning and once in the afternoon, throughout the study.

Procedure: Animals will be observed for general health/mortality and moribundity. Animals will not be removed from cage during observation, unless necessary for identification or confirmation of possible findings.

14.2. Clinical Observations

14.2.1. Detailed Clinical Observations

Frequency: Weekly during the dosing and recovery periods, and at least every two weeks during the predosing period.

Procedure: Animals removed from the cage for examination.

14.3. Local Irritation Assessment

Frequency: On days of dosing; at least 24 and 72 hours post-dose (end of each group). Weekly when there is no dosing and during the recovery period. Following Day 43 dosing, no assessment will be performed on main animals at 72 hours postdose as animals will be sent to necropsy on Day 44.

Procedure: All animals will have the dose injection site examined for signs of erythema/edema. Observations will be scored according to the Local Irritation Assessment scoring table as follows:

Erythema (Redness)	Score
No erythema	0
Very slight erythema (barely perceptible)	1
Mild erythema	2
Moderate to severe erythema	3
Severe erythema (beet redness to slight eschar formation, injury in depth)	4
Notable dermal lesion (maximized)	M
Edema (Swelling)	
No edema	0
Very slight edema (barely perceptible)	1
Slight edema	2
Moderate edema	3
Severe edema	4

Appendix 1

Any other abnormalities will be recorded as they are observed.

14.4. Body Weights

Frequency:	Weekly during the dosing and recovery periods, and at least every two weeks during the predosing period.
Procedure:	Animals will be individually weighed. A fasted weight will be recorded on the day of necropsy. Terminal body weights will not be collected from animals found dead or euthanized moribund.

14.5. Food Consumption

Frequency:	Weekly, starting Day -7, throughout the dosing and recovery periods.
Procedure:	Food consumption will be quantitatively measured except for on the day of scheduled euthanasia.

14.6. Ophthalmic Examinations

Frequency:	Once prestudy and again toward the end of Week 6 of the dosing period. During Week 2 of the recovery period if Test Item-related findings are observed during the dosing period.
Procedure:	All animals will be subjected to funduscopic (indirect ophthalmoscopy) and biomicroscopic (slit lamp) examinations. The mydriatic used will be Atropine 0.126%.
Evaluation:	A report will be included as an appendix to the Final Report.

14.7. Body Temperature

Frequency:	On Day 1 and Day 43 at predose, and 6 and 24 hours post dose (end of each group). If body temperature is significantly above normal range (36.0°C to 38.0°C) the temperature will be monitored daily till return to normal. If clinical observations indicate a possible body temperature changes measurements may be taken at the discretion of the Study Director.
Procedure:	Rectal body temperature will be recorded on un-sedated animals.

Appendix 1

15. LABORATORY EVALUATIONS

15.1. Clinical Pathology

15.1.1. Sample Collection

Blood will be collected from the abdominal aorta following isoflurane anesthesia. After collection, samples will be transferred to the appropriate laboratory for processing.

Animals will be fasted overnight before blood sampling (for clinical chemistry). Samples will be collected according to the following table.

Samples for Clinical Pathology Evaluation

Group Nos.	Time Point	Hematology	Coagulation	Clinical Chemistry	α1-acid glycoprotein/ α2-macroglubulin
1 to 4[a]	Day 44	X	X	X	X
1 and 4	Day 57	X	X	X	X
Unscheduled euthanasia (when possible)	Before euthanasia	X	X	X	X

X = Sample to be collected

[a] Samples will only be collected from those animals scheduled for euthanasia on Day 44.

Any residual/retained clinical pathology samples will be discarded before issue of the Final Report.

15.1.2. Hematology

Target Volume: 0.5 mL

Anticoagulant: EDTA

Hematology Parameters

Red blood cell count Hemoglobin concentration Hematocrit Mean corpuscular volume Red Blood Cell Distribution Width Mean corpuscular hemoglobin concentration Mean corpuscular hemoglobin Reticulocyte count (absolute) Platelet count	White blood cell count Neutrophil count (absolute) Lymphocyte count (absolute) Monocyte count (absolute) Eosinophil count (absolute) Basophil count (absolute) Large unstained cells (absolute)

A blood smear will be prepared from each hematology sample. Blood smears will be labeled, stained, and stored. Blood smears may be read to investigate results. If additional examination of blood smears is deemed necessary, the smears may be subsequently evaluated and this evaluation will be described in a study plan amendment.

Appendix 1

15.1.3. Coagulation

Target Volume: 1.2 mL (in a 1.3 mL tube)

Anticoagulant: Citrate

Processing: To plasma

Coagulation Parameters

Activated partial thromboplastin time Fibrinogen	Prothrombin time Sample Quality

15.1.4. Clinical Chemistry

Target Volume: 0.7 mL

Anticoagulant: None, collected in serum separator tube

Processing: To serum

Clinical Chemistry Parameters

Alanine aminotransferase Aspartate aminotransferase Alkaline phosphatase Gamma-glutamyltransferase Creatine Kinase Total bilirubin[a] Urea nitrogen Creatinine Calcium Phosphorus	Total protein Albumin Globulin Albumin/globulin ratio Glucose Cholesterol Triglycerides Sodium Potassium Chloride Sample Quality

[a] When total bilirubin is > 0.5 mg/dL, indirect and direct bilirubin will also be measured.

15.1.5. Bone Marrow Smear Evaluation (Optional)

Bone marrow smears will be collected and prepared as described in the Tissue Collection and Preservation table (Section 16.5). Evaluation of stained smears may be added by amendment at the discretion of the Study Director in consultation with the pathologist and the Sponsor.

15.1.6. α1-acid Glycoprotein and α2-macroglobulin Analysis

Blood will be collected via the abdominal aorta following isoflurane anesthesia before scheduled and unscheduled euthanasia for all animals.

Target Volume: 0.7 mL

Anticoagulant: None, collected in serum separator tubes

Processing: Blood samples to clot at ambient room temperature. Centrifugation for (b) (4) set at (b) (4) in a refrigerated centrifuge (set to maintain (b) (4) Samples will be processed to

Appendix 1

serum by the Immunology Department. Serum will be aliquoted into 1 x 75 µL aliquot for α2-macroglobulin and 2 x 75 µL aliquot and a leftover (if available) for α1-acid glycoprotein.

Storage conditions: Stored in a freezer set to maintain -20°C, pending analysis.

Analysis for α1-acid glycoprotein and α2-macroglobulin will be conducted using a qualified ELISA method by the Immunology Department. The procedure to be followed along with the assay acceptance criteria will be detailed in the appropriate analytical procedure.

Samples will be analyzed in duplicate. Any residual/retained samples will be discarded prior to report finalization.

15.2. Laboratory Investigations (Cytokine Analysis)

Blood will be collected from the jugular vein of all recovery animals and preterminally euthanized animals (recovery animals only). After collection, blood samples for serum will be **allowed to clot** ~~**transferred**~~ at ambient room temperature and blood samples for plasma will be transferred on wet ice to the appropriate laboratory for processing.

Sample Collection Schedule

Target Blood Volume (mL)			0.5	0.5
Anticoagulant			**None (SST)**	**EDTA**
Centrifugation setting			(b) (4)	
Timepoints			**Sample Type**	
Day	**Hrs**	**No. of Males/ Females**	IFN-α	IL-1ß, IL-6, TNF-α, IP-10, MIP-1-α, MCP-1
1	6	5/5	X	X
15	6	5/5	X	X
29	6	5/5	X	X
43	6	5/5	X	X
57	N/A	5/5	X	X
Matrix			Serum	Plasma
Volume per aliquot (µL)			all volume	all volume
Number of aliquot(s)			1	1
Storage condition (set to maintain)			-80°C	-80°C
Responsible Lab			CR-SHB	CR-SHB

X = Sample to be collected; N/A = not applicable

The number of aliquots and volumes are targets that may be adjusted based on sample volume availability.

The samples will be analyzed by the Immunology department. Analysis for IL-1ß, IL-6, TNF-α, IP-10, MIP-1-α and MCP-1 will be conducted using a multiplex Luminex method. An ELISA

Appendix 1

method will be used for the analysis of IFN-α. The procedures to be followed during the course of this study along with the assays acceptance criteria will be detailed in the appropriate analytical procedure. Samples will be analyzed in duplicate.

Following Study Director approval, any residual/retained samples will be discarded prior to report finalization.

An Immunology Report for cytokine analysis will be included as an appendix to the Final Report.

15.3. Anti Therapeutic Antibody (ATA) Analysis

Blood will be collected by jugular venipuncture from the appropriate animals.

Time Points:	Before initiation of dosing, Day 43 (main animals only) and Day 57 (recovery animals).
Target Volume:	0.5 mL
Anticoagulant:	None, collected in serum separator tubes
Processing:	To serum

Samples will be mixed gently and **allow to clot at ambient room temperature** ~~**kept under ambient conditions**~~ until centrifugation, which will be carried out as soon as practical. The samples will be centrifuged for (b) (4) in a refrigerated centrifuge (set to maintain (b) (4) at (b) (4) The resultant serum will be separated, transferred to uniquely labeled clear polypropylene tubes, frozen immediately over dry ice and transferred to a freezer set to maintain -80°C.
Samples will be shipped on dry ice to:

Shipping Contact
(b) (6)
Integrated BioTherapeutics, Inc.
21 Firstfield Road
Suite 100
Gaithersburg, MD 20878, USA
Tel: (b) (6)
Fax: (b) (6)
E-mail: (b) (6)

The Test Site will be notified before shipment of the samples. Upon receipt at the immunology laboratory, the samples will be stored at -80°C.

The samples will be analyzed for rat anti-CMV antibodies using a qualified ELISA method.

Any residual/retained samples will be maintained for a minimum of 6 months following issuance of the Audited Draft Report after which samples will be discarded. Alternatively, residual/retained samples will be discarded prior to the 6 month period should the issuance of the

Appendix 1

Final Report occur prior to the end of the 6 month retention period. An earlier discard of these residual/retained samples may also be requested and authorized by the Study Director.

An Anti-therapeutic Antibody Report will be included as an appendix to the Final Report.

15.4. PBMC Analysis

Blood will be collected by **jugular venipuncture** ~~**abdominal aorta following isoflurane anesthesia**~~ from the appropriate animals.

Time Points:	On Day 44 (main animals only).
Target Volume:	0.5 mL
Anticoagulant:	Sodium Heparin
Storage Conditions:	Kept in a controlled temperature area set to maintain 21°C

Samples will be shipped at controlled temperature set to maintain 21°C via overnight courier to the Immunology laboratory, for whole blood stimulation and cytokine analysis, to:

Shipping Contact
(b) (6)
Cell Biology and Immunology
Southern Research
2000 Ninth Ave S
Birmingham Alabama 35205
Tel: (b) (6)
E-mail: (b) (6)

The Test Site will be notified before shipment of the samples. Upon receipt at the immunology laboratory, the samples will be stored at room temperature.

The PBMC samples will be analyzed using a qualified method.

Any residual/retained samples will be maintained for a minimum of 6 months following issuance of the Audited Draft Report after which samples will be discarded. Alternatively, residual/retained samples will be discarded prior to the 6 month period should the issuance of the Final Report occur prior to the end of the 6 month retention period. An earlier discard of these residual/retained samples may also be requested and authorized by the Study Director.

An Immunology Report for PBMC analysis will be included as an appendix to the Final Report.

Appendix 1

16. TERMINAL PROCEDURES

Terminal procedures are summarized in the following table:

Terminal Procedures for Main Study and Recovery Animals

Group No.	No. of Animals		Scheduled Euthanasia Day	Necropsy Procedures			Histology	Histopathology
	M	F		Necropsy	Tissue Collection	Organ Weights		
1	10	10	44	X	X	X	Full Tissue[a]	Full Tissue[a]
2	10	10					Full Tissue[a]	Gross Lesions Target Tissues
3	10	10					Full Tissue[a]	Gross Lesions Target Tissues
4	10	10					Full Tissue[a]	Full Tissue[a]
1	5	5	57	X	X	X	Full Tissue[a]	Full Tissue[a]
4	5	5					Full Tissue[a]	Full Tissue[a]
Unscheduled Deaths				X	X	-	Full Tissue[a]	Full Tissue[a]
Replaced animals (prestudy)[b]				X	Standard Diagnostic List	-	-	-
Replaced animals (after dosing start)				X	X	-	-	-

X = Procedure to be conducted; - = Not applicable.
[a] See Tissue Collection and Preservation table for listing of tissues.
[b] Animals found dead or euthanized before the initiation of dosing.

16.1. Unscheduled Deaths

If a main study or recovery animal dies on study, a complete necropsy examination will be conducted and specified tissues will be saved. If necessary, the animal will be refrigerated to minimize autolysis.

Main or recovery animals may be euthanized for humane reasons as per Test Facility SOPs. The samples for evaluation of laboratory evaluation will be obtained if possible as specified in Section 15. These animals will undergo exsanguination by incision from the abdominal aorta following isoflurane anesthesia unless deemed inappropriate by the Study Director and/or the clinical veterinarian and will undergo complete necropsy examination, and specified tissues will be retained. If necessary, the animal will be refrigerated (set to maintain 4°C) to minimize autolysis.

Animals found dead or euthanized before the initiation of dosing will be subject to complete necropsy examination and limited tissue retention (standard diagnostic tissue list). Any animal replaced after the start of dosing will be subject to complete necropsy examination and tissues will be retained (as per Tissue Collection and Preservation section), and any data generated will not be included in the report unless deemed appropriate by the Study Director.

Appendix 1

16.2. Scheduled Euthanasia

Main study and recovery animals surviving until scheduled euthanasia will have a terminal body weight recorded, samples for laboratory evaluation will be collected (as appropriate), and will be euthanized by exsanguination by incision from the abdominal aorta following isoflurane anesthesia. When possible, the animals will be euthanized rotating across dose groups such that similar numbers of animals from each group, including controls, will be necropsied throughout the day. Animals will be fasted overnight before their scheduled necropsy.

16.3. Necropsy

Main and recovery animals will be subjected to a complete necropsy examination, which will include evaluation of the carcass and musculoskeletal system; all external surfaces and orifices; cranial cavity and external surfaces of the brain; and thoracic, abdominal, and pelvic cavities with their associated organs and tissues.

Necropsy procedures will be performed by qualified personnel with appropriate training and experience in animal anatomy and gross pathology. A veterinary pathologist, or other suitably qualified person, will be available.

At the discretion of the necropsy supervising pathologist, images may be generated for illustration of or consultation on gross observations. Generation of such images will be documented and communicated to the Study Director. Images and associated documentation will be retained and archived.

16.4. Organ Weights

The organs identified for weighing in the Tissues Collection and Preservation table will be weighed at necropsy for all scheduled euthanasia animals. Organ weights will not be recorded for animals found dead or euthanized in poor condition or in extremis. Paired organs will be weighed together. In the event of gross abnormalities, in addition to the combined weight, the weight of each organ of a pair may be taken and entered as a tissue comment. Organ weight as a percent of body weight (using the terminal body weight) and organ weight as a percent of brain weight will be calculated.

16.5. Tissue Collection and Preservation

Representative samples of the tissues identified in the Tissue Collection and Preservation table in ATTACHMENT A will be collected from all animals and preserved in 10% neutral buffered formalin, unless otherwise indicated. Additional tissue samples may be collected to elucidate abnormal findings.

Appendix 1

17. HISTOLOGY AND HISTOPATHOLOGY

17.1. Histology

Tissues in the Tissue Collection and Preservation table from animals identified in the Terminal Procedures table will be embedded in paraffin, sectioned, mounted on glass slides, and stained with hematoxylin and eosin.

17.2. Histopathology

Histopathological evaluation will be performed by a board-certified veterinary pathologist. Target tissues identified by the study pathologist during microscopic evaluation will be communicated to the study Director; tissues will be evaluated and reported. Any additional stains or evaluations, if deemed necessary by the pathologist, will be added by study plan amendment following discussion with the Study Director and in consultation the Sponsor.

At the discretion of the study pathologist and after acknowledgement by the Study Director, images may be captured for consultation purposes.

17.3. Pathology Peer Review

A on-site pathology peer review will be conducted by:

(b) (6)
Moderna Therapeutics
200 Technology Square, 3rd Floor
Cambridge, MA 02116
Tel: (b) (6)
E-mail: (b) (6)

The peer review statement or equivalent documentation will be included as an appendix to the Final Report.

18. CONSTRUCTED VARIABLES

Body Weight Gains	Calculated between at least each interval as well as between the beginning and end of each phase
Organ Weight relative to Body Weight	Calculated against the Terminal body weight for scheduled intervals
Organ Weight relative to Brain Weight	Calculated against the brain weight for scheduled intervals

19. STATISTICAL ANALYSIS

All statistical tests will be conducted at the 5% significance level. All pairwise comparisons will be conducted using two sided tests and will be reported at the 0.1%, 1%, and 5% levels.

Appendix 1

Numerical data collected on scheduled occasions for the listed variables will be analyzed as indicated according to sex and occasion. Descriptive statistics number, mean and standard deviation (or %CV or SE when deemed appropriate) will be reported whenever possible. Values may also be expressed as a percentage of predose or control values when deemed appropriate. Inferential statistics will be performed according to the matrix below when possible, but will exclude semi-quantitative data, and any group with less than 3 observations.

Statistical Matrix

Variables for Inferential Analysis	Statistical Method
	Parametric/ Non-Parametric
Body Weight	X
Hematology Variables	X
Coagulation Variables	X
Clinical Chemistry Variables	X
Cytokines	X
Body Temperature	X
α2-macroglobulin	X
α1-acid glycoprotein	X
Organ Weights	X
Body Weight Gains	X
Organ Weight relative to Body Weight	X
Organ Weight relative to Brain Weight	X

The following pairwise comparisons will be made:

Group 2 vs. Group 1

Group 3 vs. Group 1

Group 4 vs. Group 1

19.1. Parametric/Non-Parametric

Levene's test will be used to assess the homogeneity of group variances.

Datasets with at least 3 groups will be compared using an overall one-way ANOVA *F*-test if Levene's test is not significant or the Kruskal-Wallis test if it is. If the overall *F*-test or Kruskal-Wallis test is found to be significant, then the above pairwise comparisons will be conducted using Dunnett's or Dunn's test, respectively.

Datasets with 2 groups (the designated control group and 1 other group) will be compared using a *t*-test if Levene's test is not significant or Wilcoxon Rank-Sum test if it is.

20. COMPUTERIZED SYSTEMS

The following critical computerized systems may be used in the study. The actual critical computerized systems used will be specified in the Final Report.

Appendix 1

Data for parameters not required by study plan, which are automatically generated by analytical devices used will be retained on file but not reported. Statistical analysis results that are generated by the program but are not required by study plan and/or are not scientifically relevant will be retained on file but will not be included in the tabulations.

Critical Computerized Systems

System Name	Description of Data Collected and/or Analyzed
Provantis	In-life; clinical pathology; postmortem
Dispense	Test Material receipt, accountability and/or formulation activities
SRS (CR-MTL in-house application built with SAS) and SAS system for Windows and/or In-house reporting software Nevis 2012 (using SAS)	Statistical analyses of numerical in-life, clinical pathology and postmortem data
Mesa Laboratories AmegaView CMS	Continuous Monitoring System. Monitoring of standalone fridges, freezers, incubators, and selected laboratories to measure temperature, relative humidity, and CO2, as appropriate
Johnson Controls Metasys	Building Automation System. Control of HVAC and other building systems, as well as temperature/humidity control and trending in selected laboratories and animal rooms
Empower 3 (Waters Corporation)	Data acquisition for dose formulation analysis, including regression analysis and measurement of concentration and recovery of dose formulations using HPLC
BioPlex Manager	Cytokine data collection
Softmax Pro GxP	Elisa data collection
Watson LIMS	Biomarker data analysis
Dynamics (Wyatt)	Data acquisition for particle size analysis of the test item using DLS

21. AMENDMENTS AND DEVIATIONS

Changes to the approved study plan shall be made in the form of an amendment, which will be signed and dated by the Study Director. Every reasonable effort will be made to discuss any necessary study plan changes in advance with the Sponsor.

All study plan and SOP deviations will be documented in the study records. Deviations from the study plan and/or SOP related to the phase(s) of the study conducted at a Test Site shall be documented, acknowledged by the PI/IS, and reported to the Study Director for authorization/acknowledgement. The Study Director will notify the Sponsor of deviations that may result in a significant impact on the study as soon as possible.

22. RETENTION OF RECORDS, SAMPLES, AND SPECIMENS

All study-specific raw data, electronic data, documentation, study plan, retained samples and specimens, and interim (if applicable) and final reports will be archived by no later than the date of final report issue. All materials generated by Charles River from this study will be transferred

Appendix 1

to CR MTL archive. One year after issue of the draft report, the Sponsor will be contacted to determine the disposition of materials associated with the study.

Records to be maintained will include, but will not be limited to, documentation and data for the following:

- Study Plan, study plan amendments, and deviations
- Study schedule
- Study-related correspondence
- Test system receipt, health, and husbandry
- Test and Reference Item receipt, identification, preparation, and analysis
- In-life measurements and observations
- Clinical pathology sample collection and evaluation
- Gross and microscopic observations and related data
- Organ weight measurements
- Statistical analysis results

23. REPORTING

A comprehensive Draft Report will be prepared following completion of the study and will be finalized following consultation with the Sponsor. The report will include all information necessary to provide a complete and accurate description of the experimental methods and results and any circumstances that may have affected the quality or integrity of the study.

The Sponsor will receive an electronic version of the Draft and Final Report provided in Adobe Acrobat PDF format (hyperlinked and searchable at final) along with a Microsoft Word version of the text. The PDF document will be created from native electronic files to the extent possible, including text and tables generated by the Test Facility. Report components not available in native electronic files and/or original signature pages will be scanned and converted to PDF image files for incorporation. An original copy of the report with the Test Facility's handwritten signatures will be retained.

Reports should be finalized within 6 months of issue of the Draft Report. If the Sponsor has not provided comments to the report within 6 months of draft issue, the report will be finalized by the Test Facility unless other arrangements are made by the Sponsor.

Appendix 1

24. ANIMAL WELFARE

24.1. Institutional Animal Care and Use Committee Approval

The study plan and any amendment(s) or procedures involving the care and use of animals in this study will be reviewed and approved by CR SHB Institutional Animal Care and Use Committee (IACUC). During the study, the care and use of animals will be conducted with guidance from the USA National Research Council and the Canadian Council on Animal Care (CCAC).

Appendix 1

SUMMARY OF CHANGES AND JUSTIFICATIONS

Study Plan effective date: 8 Mar 2017

Note: When applicable, additions are indicated in bold underlined text and deletions are indicated in bold strikethrough text in the affected sections of the document.

Item or Section(s)	Justification
Amendment 1	**Date: 15-Mar-2017**
2. PROPOSED STUDY SCHEDULE	To update the schedule due to delay in the test item documentation.
7. RESPONSIBLE PERSONNEL	To update the contact information of the ATA PI.
10.3.1. Analytical Method	To include validation number.
10.3.1.2. Stability Analysis	To clarify that stability analysis will be performed on the bulk Test Item.
15.2. Laboratory Investigations (Cytokine Analysis)	To correct a typographical error and to include clarification for sample processing.
15.3. Anti Therapeutic Antibody (ATA) Analysis	To clarify the processing of samples and update the shipping contact information.
15.4. PBMC Analysis	To change the blood collection procedure.
Amendment 2	**Date: 22-Mar-2017**
8.1. Test Item	To update information based on Summary of Analysis and to correct a typographical error.
10.2. Preparation of Test Item	To include missing information from study plan about the residual test item following formulation.
15.3. Anti Therapeutic Antibody (ATA) Analysis	To update the shipping contact information.

Appendix 1

TABLE OF CONTENTS

Appendix 1

1. OBJECTIVE(S)

The objectives of this study are to determine the potential toxicity of mRNA 1647, when given by intramuscular injection for 6 weeks (4 doses) to rats and to evaluate the potential reversibility of any findings following a 2-week recovery period.

1.1. Study Classification

Study Category:	TOX
Study Type:	Repeat Dose Toxicity
Study Design:	Parallel
Primary Treatment CAS Registry Number:	Not Available
Primary Treatment Unique Ingredient ID:	Not Available
Class of Compound:	mRNA

2. PROPOSED STUDY SCHEDULE

Proposed study dates are listed below. Actual applicable dates will be included in the Final Report.

Experimental Start Date:	08 Mar 2017
Experimental Completion Date:	29 Aug 2017 (Last date data are collected from the study)
Animal Arrival:	08 Mar 2017
Initiation of Dosing:	22 Mar 2017 (Male) 23 Mar 2017 (Female)
Completion of In-life:	05 May 2017 (Main) 18 May 2017 (Recovery) (Last date of necropsy)
Unaudited Draft Report:	17 Jul 2017
Audited Draft Report:	22 Aug 2017
Final Report:	29 Aug 2017 (Expected date of Study Director signature)

3. GUIDELINES FOR STUDY DESIGN

The design of this study was based on the study objective(s), the overall product development strategy for the Test Item, and the following study design guidelines:

- OECD Guideline 407. *Repeated Dose 28-day Oral Toxicity Study in Rodents*.

Appendix 1

- Committee for Medicinal Products for Human Use (CHMP). *Note for Guidance on Repeated Dose Toxicity*. CPMP/SWP/1042/99corr.
- ICH Harmonised Tripartite Guideline M3 (R2). *Nonclinical Safety Studies for the Conduct of Human Clinical Trials and Marketing Authorization for Pharmaceuticals*.
- Japanese Guidelines for Nonclinical Studies of Drugs Manual (1995). *Guidelines for Toxicity Studies of Drugs (Chapter 3, Repeated Dose Toxicity Studies)*.
- Appendix to Director General Notification, No. 12-Nousan-8147, 24 November 2000, Agricultural Production Bureau, Ministry of Agriculture, Forestry and Fisheries of Japan (JMAFF).

4. REGULATORY COMPLIANCE

The study will be performed in accordance with the OECD Principles of Good Laboratory Practice and as accepted by Regulatory Authorities throughout the European Union, United States of America (FDA), Japan (MHLW), and other countries that are signatories to the OECD Mutual Acceptance of Data Agreement.

Any portion of this study conducted in the USA will be performed in accordance with the U.S. Department of Health and Human Services, Food and Drug Administration. United States Code of Federal Regulations, Title 21, Part 58: Good Laboratory Practice for Nonclinical Laboratory Studies and as accepted by Regulatory Authorities throughout the European Union (OECD Principles of Good Laboratory Practice), Japan (MHLW), and other countries that are signatories to the OECD Mutual Acceptance of Data Agreement.

Exceptions to GLPs include the following study elements:

- Characterization of the Test Item will be performed by the Sponsor or Sponsor subcontractor according to established SOPs, controls, and approved test methodologies to ensure integrity and validity of the results generated; these analyses will not be conducted in compliance with the GLP or GMP regulations.
- Analysis of cytokines, α2-macroglobulin, α1-acid glycoprotein, anti-therapeutic antibody and PBMCs will be conducted using scientifically qualified methods and in accordance with all applicable analytical procedures.
- Pathology peer review

5. QUALITY ASSURANCE

5.1. Test Facility

The Test Facility Quality Assurance Program (QAP) will monitor the study to assure the facilities, equipment, personnel, methods, practices, records, and controls are in conformance with Good Laboratory Practice regulations. The QAP will review the study plan, conduct inspections at intervals adequate to assure the integrity of the study, and audit the Final Report to

Appendix 1

assure that it accurately describes the methods and standard operating procedures and that the reported results accurately reflect the raw data of the study.

The Test Facility QAP contact for this study is indicated below:

Appendix 1

Each PI is required to report any deviations or other circumstances that could affect the quality or integrity of the study to the Study Director in a timely manner. Each PI will provide a report addressing their assigned phase of the study, which will be included as an appendix to the Final Report. The phase report will include the following:

- The archive site for all records, samples, specimens and reports generated from the phase or segment (alternatively, details regarding the retention of the materials may be provided to the Study Director for inclusion in the Final Report)
- A listing of critical computerized systems used in the conduct and/or interpretation of the assigned study phase

8. TEST AND REFERENCE ITEMS

8.1. Test Item

Identification:	mRNA-1647
Supplier:	Moderna Therapeutics, Inc.
Batch (Lot) Number:	~~**MTDP16015**~~ **MTDP17015**
Concentration:	2**.7** mg/mL
Retest Date:	An end-of-use analysis of the bulk Test Item will be performed to demonstrate the stability of the Test Item during the dosing period.
Physical Description:	White to off-white lipid nanopa~~e~~**r**ticle dispersion
Storage Conditions:	Kept in a freezer set to maintain -20°C

8.2. Reference Item

Identification:	Phosphate-buffered Saline (PBS) pH 7.2
Supplier:	Will be included in the Final Report
Batch (Lot) Number:	Will be included in the Final Report
Expiration Date:	Will be included in the Final Report
Physical Description:	Liquid
Storage Conditions:	Kept in a controlled temperature area set to maintain 21°C

8.3. Test Item Characterization

The Sponsor will provide to the Test Facility documentation of the identity, strength, purity and composition for the Test Item. A Certificate of Analysis or equivalent documentation will be provided for inclusion in the Final Report. The Sponsor will also provide information concerning the regulatory standard that was followed for these evaluations.

Appendix 1

The Sponsor has appropriate documentation on file concerning the method of synthesis, fabrication or derivation of the Test Item, and this information is available to the appropriate regulatory agencies should it be requested.

8.4. Analysis of Test Item

A sample (2 vials) of the Test Item will be taken on the completion of the dosing period. Analysis of bulk Test Item for concentration, particle size and purity will be performed.

The first vial will be transferred (on ice pack) to the analytical laboratory at the Test Facility for concentration and particle size analysis.

The second vial will be transferred (on ice pack) to the molecular biology laboratory at the Test Facility for purity analysis.

Purity and Particle size analysis will be performed by IEX- HPLC, Differential Light Scattering (DLS) and capillary electrophoresis (CE) using validated analytical procedures.

Any residual/retained analytical samples (and Test Item used in analysis) will be discarded before issue of the Final Report.

8.5. Reserve Samples

For each batch (lot) of Test and Reference Items, a reserve sample (1 mL or 1 vial) will be collected and maintained under the appropriate storage conditions by the Test Facility.

8.6. Test and Reference Item Inventory and Disposition

Records of the receipt, distribution, storage, and disposition of Test and Reference Items will be maintained. With the exception of reserve samples, all unused Sponsor-supplied bulk Test Item will be returned on dry ice to the Sponsor (after completion of dosing).

Shipping Contact
(b) (6)
Moderna Therapeutics
800 Technology Sq, 8th Floor
Cambridge MA 02476
Cell: (b) (6)
E-mail: (b) (6)

9. SAFETY

The safety precautions for the Test Item and dose formulations will be documented in a Test Material Safety Data Sheet (TMSDS) based on the information provided by the Sponsor either by an MSDS or similar document.

Appendix 1

10. DOSE FORMULATION AND ANALYSIS

10.1. Preparation of Reference Item

Dose formulation preparations will be performed under a laminar flow hood using clean procedures.

The Reference Item, Phosphate-buffered Saline (PBS) pH 7.2, will be dispensed on days of dosing (i.e. Days 1, 15, 29 and 43) for administration to Group 1 control animals and will be used as required to dilute the bulk Test Item for administration to Groups 2 to 4 animals. The aliquots will be stored in a refrigerator set to maintain 4°C until use. They will be removed from the refrigerator and allowed to warm to room temperature for at least 30 minutes before dosing.

Any residual volumes will be discarded unless otherwise requested by the Study Director.

10.2. Preparation of Test Item

Dose formulation preparations will be performed under a laminar flow hood using clean procedures.

Test Item formulations will be diluted with PBS pH 7.2, as necessary for administration. The dosing formulations will be prepared on each days of dosing (i.e. Days 1, 15, 29 and 43) and will be stored in a refrigerator set to maintain 4°C. The dose formulations will be allowed to warm to room temperature for at least 30 minutes prior to dosing. Alternatively, the aliquots can be transferred directly to room temperature. When possible, stock vials will be used only once.

Any residual volumes of formulated Test Item **and stock test item** will be stored in a refrigerator set at 4°C and discarded prior to report finalization.

10.3. Sample Collection and Analysis

Dose formulation samples will be collected for analysis as indicated in the following table. Additional samples may be collected and analyzed at the discretion of the Study Director.

Dose Formulation Sample Collection Schedule

Interval[b]	Homogeneity	Concentration	Sampling From
Day 1	All groups[a]	All groups	Dosing container
Day 43	N/A	All groups	Dosing container

N/A = Not applicable.

[a] The homogeneity results obtained from the top, middle and bottom preparations will be averaged and utilized as the concentration results.

[b] Samples will be collected on the first preparation of the study and on the last preparation of the study.

Samples to be analyzed will be submitted as soon as possible following collection.

All samples to be analyzed will be transferred (on ice pack) to the analytical laboratory.

Any residual/retained analytical samples (and Test Item used in analysis) will be discarded before issue of the Final Report.

Appendix 1

10.3.1. Analytical Method

Analyses described below will be performed by IEX-HPLC using a validated analytical procedure (CR-MTL Study No.1802050).

10.3.1.1. Concentration and Homogeneity Analysis

Samples for Analysis:	Duplicate top, middle, and bottom samples (duplicate middle only from Group 1); sent for analysis as noted in Section 10.3. On days where only concentration analysis is required, the formulation will only be sampled from the middle.
Backup Samples:	Triplicate top, middle, and bottom samples (Triplicate middle only from Group 1); maintained at the Test Facility. Backup samples may be analyzed at the discretion of the Study Director. On days where only concentration analysis is required, the formulation will only be sampled from the middle.
Sampling Containers:	Appropriate sized glass containers.
Sample Volume:	0.5 mL for analysis and backup samples.
Storage Conditions:	Kept in a refrigerator set to maintain 4°C.
Acceptance Criteria:	For concentration, the criteria for acceptability will be mean sample concentration results within or equal to ± 15% of theoretical concentration. Each individual sample concentration result within or equal to ± 20%. For homogeneity, the criteria for acceptability will be a relative standard deviation (RSD) of concentrations of ≤ 5% for each group.

10.3.1.2. Stability Analysis

There will be no stability analysis performed for concentration used on this study however, end of use stability analysis of the bulk test item will be performed at the end of the dosing period.

11. TEST SYSTEM

Species:	Rat
Strain:	Crl:CD(SD) Sprague-Dawley rat
Source:	Charles River Canada Inc., St. Constant, QC, Canada
Number of Males Ordered:	60
Number of Females Ordered:	60
Target Age at Arrival:	4 to 8 weeks

Appendix 1

Target Weight at Arrival:	126 to 150 g (males) 101 to 125 g (females)

The actual age, weight, and number of animals received will be listed in the Final Report.

11.1. Justification of Test System and Number of Animals

The Sprague Dawley rat was chosen as the animal model for this study as it is an accepted rodent species for preclinical toxicity testing by regulatory agencies.

The total number of animals to be used in this study is considered to be the minimum required to properly characterize the effects of the Test Item. This study has been designed such that it does not require an unnecessary number of animals to accomplish its objectives.

At this time, studies in laboratory animals provide the best available basis for extrapolation to humans and are required to support regulatory submissions. Acceptable models which do not use live animals currently do not exist.

11.2. Animal Identification

Each animal will be identified using a subcutaneously implanted electronic identification chip.

11.3. Environmental Acclimation

A minimum acclimation period of 14 days will be allowed between animal receipt and the start of dosing in order to accustom the animals to the laboratory environment.

11.4. Selection, Assignment, Replacement, and Disposition of Animals

Animals will be assigned to groups by a stratified randomization scheme designed to achieve similar group mean body weights. Males and females will be randomized separately. Animals in poor health or at extremes of body weight range will not be assigned to groups.

Before the initiation of dosing, any assigned animals considered unsuitable for use in the study will be replaced by alternate animals obtained from the same shipment and maintained under the same environmental conditions.

After initiation of dosing, study animals may be replaced during the replacement period with alternate animals in the event of accidental injury, non-Test Item-related health issues, or similar circumstances.

The alternate animals may be used as replacements on the study within 3 days.

The disposition of all animals will be documented in the study records.

Appendix 1

12. HUSBANDRY

12.1. Housing

Animals will be group housed (up to 3 animals of the same sex and same dosing group together) in polycarbonate cages containing appropriate bedding equipped with an automatic watering valve. These housing conditions will be maintained unless deemed inappropriate by the Study Director and/or Clinical Veterinarian. The room(s) in which the animals will be kept will be documented in the study records.

Animals will be separated during designated procedures/activities. Each cage will be clearly labeled with a color-coded cage card indicating study, group, animal number(s), and sex. Cages will be arranged on the racks in group order. Where possible, control group animals will be housed on a separate rack from the Test Item treated animals.

12.2. Environmental Conditions

The targeted conditions for animal room environment will be as follows:

Temperature:	19°C to 25°C
Humidity:	30% to 70%
Light Cycle:	12 hours light and 12 hours dark (except during designated procedures)

12.3. Food

PMI Nutrition International Certified Rodent Chow No. 5CR4 will be provided ad libitum throughout the study, except during designated procedures. The same diet in meal form may be provided to individual animals as warranted by clinical signs (e.g., broken/damaged incisors or other health changes).

The feed is analyzed by the supplier for nutritional components and environmental contaminants. Results of the analysis are provided by the supplier and are on file at the Test Facility.

It is considered that there are no known contaminants in the feed that would interfere with the objectives of the study.

12.4. Water

Municipal tap water after treatment by reverse osmosis and ultraviolet irradiation will be freely available to each animal via an automatic watering system (except during designated procedures). Water bottles can be provided, if required.

Periodic analysis of the water is performed, and results of these analyses are on file at the Test Facility.

It is considered that there are no known contaminants in the water that could interfere with the outcome of the study.

Appendix 1

12.5. Animal Enrichment

Animals will be socially housed for psychological/environmental enrichment and will be provided with items such as a hiding tube and a chewing object, except during study procedures/activities.

12.6. Veterinary Care

Veterinary care will be available throughout the course of the study and animals will be examined by the veterinary staff as warranted by clinical signs or other changes. All veterinary examinations and recommended therapeutic treatments, if any, will be documented in the study records.

In the event that animals show signs of illness or distress, the responsible veterinarian may make initial recommendations about treatment of the animal(s) and/or alteration of study procedures, which must be approved by the Study Director or Scientific designate. All such actions will be properly documented in the study records and, when appropriate, by study plan amendment. Treatment of the animal(s) for minor injuries or ailments may be approved without prior consultation with the Sponsor representative when such treatment does not impact fulfillment of the study objectives. If the condition of the animal(s) warrants significant therapeutic intervention or alterations in study procedures, the Sponsor representative will be contacted, when possible, to discuss appropriate action. If the condition of the animal(s) is such that emergency measures must be taken, the Study Director and/or clinical veterinarian will attempt to consult with the Sponsor representative prior to responding to the medical crisis, but the Study Director and/or veterinarian has authority to act immediately at his/her discretion to alleviate suffering. The Sponsor representative will be fully informed of any such events.

Appendix 1

13. EXPERIMENTAL DESIGN

Experimental Design

Group No.	Test Material	Dose Level (µg/dose)	Dose Volume (µL/dose)	Dose Concentration (mg/mL)	No. of Animals			
					Main Study		Recovery Study	
					Males	Females	Males	Females
1	Reference Item	0	200	0	10	10	5	5
2	mRNA-1647	10	200	0.05	10	10	-	-
3	mRNA-1647	30	200	0.15	10	10	-	-
4	mRNA-1647	100	200	0.5	10	10	5	5

- : Not applicable

13.1. Administration of Test and Reference Items

The Test and Reference Items will be administered to the appropriate animals via intramuscular injection into the lateral compartment of the thigh on Days 1, 15, 29 and 43, the injection site will be alternated on each dosing occasion (site 1= left; site 2= right). The volume for each dose will be administered using a syringe/needle within the demarcated area. The first day of dosing will be designated as Day 1 (exception: alternate animals used for replacement after Day 1 will assume the day of the animal being replaced).

The injection area will be marked as frequently as required to allow appropriate visualization of administration sites. Hair may be clipped or shaved if required to improve visualization of the injection sites. The injection site will be documented in the raw data for each dose administered.

13.2. Justification of Route and Dose Levels

The intramuscular route of exposure was selected because this is the intended route of human exposure.

The dose levels for this toxicology study were chosen to approximate a substantial multiple of the anticipated clinical starting dose and top clinical dose. The highest dose to be tested is expected to represent the intended maximum human clinical dose and volume and will be administered by the clinical route (intramuscular). At this dose level, minimal systemic toxicity is expected, but it is possible mild to moderate injection site reaction (redness, swelling) and potentially elevation of systemic cytokine/acute phase markers may be observed. The mid- and low-dose were selected to evaluate the dose-dependent effect of this compound.

14. IN-LIFE PROCEDURES, OBSERVATIONS, AND MEASUREMENTS

The in-life procedures, observations, and measurements listed below including Laboratory Investigations listed in section below will be performed for all main study and recovery animals, unless otherwise indicated in the respective section. During the study, additional evaluations to those described below and/or scheduled, and considered necessary by the Study Director and/or Veterinarian to assess health status will be conducted and duly documented. More frequent observations may be undertaken if considered appropriate.

Appendix 1

14.1. Mortality/Moribundity Checks

Frequency: Twice daily, once in the morning and once in the afternoon, throughout the study.

Procedure: Animals will be observed for general health/mortality and moribundity. Animals will not be removed from cage during observation, unless necessary for identification or confirmation of possible findings.

14.2. Clinical Observations

14.2.1. Detailed Clinical Observations

Frequency: Weekly during the dosing and recovery periods, and at least every two weeks during the predosing period.

Procedure: Animals removed from the cage for examination.

14.3. Local Irritation Assessment

Frequency: On days of dosing; at least 24 and 72 hours post-dose (end of each group). Weekly when there is no dosing and during the recovery period. Following Day 43 dosing, no assessment will be performed on main animals at 72 hours postdose as animals will be sent to necropsy on Day 44.

Procedure: All animals will have the dose injection site examined for signs of erythema/edema. Observations will be scored according to the Local Irritation Assessment scoring table as follows:

Erythema (Redness)	Score
No erythema	0
Very slight erythema (barely perceptible)	1
Mild erythema	2
Moderate to severe erythema	3
Severe erythema (beet redness to slight eschar formation, injury in depth)	4
Notable dermal lesion (maximized)	M
Edema (Swelling)	
No edema	0
Very slight edema (barely perceptible)	1
Slight edema	2
Moderate edema	3
Severe edema	4

Appendix 1

Any other abnormalities will be recorded as they are observed.

14.4. Body Weights

Frequency:	Weekly during the dosing and recovery periods, and at least every two weeks during the predosing period.
Procedure:	Animals will be individually weighed. A fasted weight will be recorded on the day of necropsy. Terminal body weights will not be collected from animals found dead or euthanized moribund.

14.5. Food Consumption

Frequency:	Weekly, starting Day -7, throughout the dosing and recovery periods.
Procedure:	Food consumption will be quantitatively measured except for on the day of scheduled euthanasia.

14.6. Ophthalmic Examinations

Frequency:	Once prestudy and again toward the end of Week 6 of the dosing period. During Week 2 of the recovery period if Test Item-related findings are observed during the dosing period.
Procedure:	All animals will be subjected to funduscopic (indirect ophthalmoscopy) and biomicroscopic (slit lamp) examinations. The mydriatic used will be Atropine 0.126%.
Evaluation:	A report will be included as an appendix to the Final Report.

14.7. Body Temperature

Frequency:	On Day 1 and Day 43 at predose, and 6 and 24 hours post dose (end of each group). If body temperature is significantly above normal range (36.0°C to 38.0°C) the temperature will be monitored daily till return to normal. If clinical observations indicate a possible body temperature changes measurements may be taken at the discretion of the Study Director.
Procedure:	Rectal body temperature will be recorded on un-sedated animals.

Appendix 1

15. LABORATORY EVALUATIONS

15.1. Clinical Pathology

15.1.1. Sample Collection

Blood will be collected from the abdominal aorta following isoflurane anesthesia. After collection, samples will be transferred to the appropriate laboratory for processing.

Animals will be fasted overnight before blood sampling (for clinical chemistry). Samples will be collected according to the following table.

Samples for Clinical Pathology Evaluation

Group Nos.	Time Point	Hematology	Coagulation	Clinical Chemistry	α1-acid glycoprotein/ α2-macroglubulin
1 to 4[a]	Day 44	X	X	X	X
1 and 4	Day 57	X	X	X	X
Unscheduled euthanasia (when possible)	Before euthanasia	X	X	X	X

X = Sample to be collected

[a] Samples will only be collected from those animals scheduled for euthanasia on Day 44.

Any residual/retained clinical pathology samples will be discarded before issue of the Final Report.

15.1.2. Hematology

Target Volume: 0.5 mL

Anticoagulant: EDTA

Hematology Parameters

Red blood cell count Hemoglobin concentration Hematocrit Mean corpuscular volume Red Blood Cell Distribution Width Mean corpuscular hemoglobin concentration Mean corpuscular hemoglobin Reticulocyte count (absolute) Platelet count	White blood cell count Neutrophil count (absolute) Lymphocyte count (absolute) Monocyte count (absolute) Eosinophil count (absolute) Basophil count (absolute) Large unstained cells (absolute)

A blood smear will be prepared from each hematology sample. Blood smears will be labeled, stained, and stored. Blood smears may be read to investigate results. If additional examination of blood smears is deemed necessary, the smears may be subsequently evaluated and this evaluation will be described in a study plan amendment.

Appendix 1

15.1.3. Coagulation

Target Volume: 1.2 mL (in a 1.3 mL tube)

Anticoagulant: Citrate

Processing: To plasma

Coagulation Parameters

Activated partial thromboplastin time Fibrinogen	Prothrombin time Sample Quality

15.1.4. Clinical Chemistry

Target Volume: 0.7 mL

Anticoagulant: None, collected in serum separator tube

Processing: To serum

Clinical Chemistry Parameters

Alanine aminotransferase Aspartate aminotransferase Alkaline phosphatase Gamma-glutamyltransferase Creatine Kinase Total bilirubin[a] Urea nitrogen Creatinine Calcium Phosphorus	Total protein Albumin Globulin Albumin/globulin ratio Glucose Cholesterol Triglycerides Sodium Potassium Chloride Sample Quality

[a] When total bilirubin is > 0.5 mg/dL, indirect and direct bilirubin will also be measured.

15.1.5. Bone Marrow Smear Evaluation (Optional)

Bone marrow smears will be collected and prepared as described in the Tissue Collection and Preservation table (Section 16.5). Evaluation of stained smears may be added by amendment at the discretion of the Study Director in consultation with the pathologist and the Sponsor.

15.1.6. α1-acid Glycoprotein and α2-macroglobulin Analysis

Blood will be collected via the abdominal aorta following isoflurane anesthesia before scheduled and unscheduled euthanasia for all animals.

Target Volume: 0.7 mL

Anticoagulant: None, collected in serum separator tubes

Processing: Blood samples to clot at ambient room temperature. Centrifugation for (b) (4) set at (b) (4) in a refrigerated centrifuge (set to maintain (b) (4)). Samples will be processed to

Appendix 1

serum by the Immunology Department. Serum will be aliquoted into 1 x 75 µL aliquot for α2-macroglobulin and 2 x 75 µL aliquot and a leftover (if available) for α1-acid glycoprotein.

Storage conditions: Stored in a freezer set to maintain -20°C, pending analysis.

Analysis for α1-acid glycoprotein and α2-macroglobulin will be conducted using a qualified ELISA method by the Immunology Department. The procedure to be followed along with the assay acceptance criteria will be detailed in the appropriate analytical procedure.

Samples will be analyzed in duplicate. Any residual/retained samples will be discarded prior to report finalization.

15.2. Laboratory Investigations (Cytokine Analysis)

Blood will be collected from the jugular vein of all recovery animals and preterminally euthanized animals (recovery animals only). After collection, blood samples for serum will be allowed to clot at ambient room temperature and blood samples for plasma will be transferred on wet ice to the appropriate laboratory for processing.

Sample Collection Schedule

Target Blood Volume (mL)			0.5	0.5
Anticoagulant			**None (SST)**	**EDTA**
Centrifugation setting			(b) (4)	
Timepoints			**Sample Type**	
Day	**Hrs**	**No. of Males/ Females**	IFN-α	IL-1ß, IL-6, TNF-α, IP-10, MIP-1-α, MCP-1
1	6	5/5	X	X
15	6	5/5	X	X
29	6	5/5	X	X
43	6	5/5	X	X
57	N/A	5/5	X	X
Matrix			Serum	Plasma
Volume per aliquot (µL)			all volume	all volume
Number of aliquot(s)			1	1
Storage condition (set to maintain)			-80°C	-80°C
Responsible Lab			CR-SHB	CR-SHB

X = Sample to be collected; N/A = not applicable

The number of aliquots and volumes are targets that may be adjusted based on sample volume availability.

The samples will be analyzed by the Immunology department. Analysis for IL-1ß, IL-6, TNF-α, IP-10, MIP-1-α and MCP-1 will be conducted using a multiplex Luminex method. An ELISA

Appendix 1

method will be used for the analysis of IFN-α. The procedures to be followed during the course of this study along with the assays acceptance criteria will be detailed in the appropriate analytical procedure. Samples will be analyzed in duplicate.

Following Study Director approval, any residual/retained samples will be discarded prior to report finalization.

An Immunology Report for cytokine analysis will be included as an appendix to the Final Report.

15.3. Anti Therapeutic Antibody (ATA) Analysis

Blood will be collected by jugular venipuncture from the appropriate animals.

Time Points:	Before initiation of dosing, Day 43 (main animals only) and Day 57 (recovery animals).
Target Volume:	0.5 mL
Anticoagulant:	None, collected in serum separator tubes
Processing:	To serum

Samples will be mixed gently and allow to clot at ambient room temperature until centrifugation, which will be carried out as soon as practical. The samples will be centrifuged for (b) (4) in a refrigerated centrifuge (set to maintain (b) (4) at (b) (4) The resultant serum will be separated, transferred to uniquely labeled clear polypropylene tubes, frozen immediately over dry ice and transferred to a freezer set to maintain -80°C.
Samples will be shipped on dry ice to:

Shipping Contact
(b) (6)

4 Research Court
Suite 300
Rockville, MD 20850, USA
Tel: (b) (6)
Fax: (b) (6)
E-mail: (b) (6)

The Test Site will be notified before shipment of the samples. Upon receipt at the immunology laboratory, the samples will be stored at -80°C.

The samples will be analyzed for rat anti-CMV antibodies using a qualified ELISA method.

Any residual/retained samples will be maintained for a minimum of 6 months following issuance of the Audited Draft Report after which samples will be discarded. Alternatively,

Appendix 1

residual/retained samples will be discarded prior to the 6 month period should the issuance of the Final Report occur prior to the end of the 6 month retention period. An earlier discard of these residual/retained samples may also be requested and authorized by the Study Director.

An Anti-therapeutic Antibody Report will be included as an appendix to the Final Report.

15.4. PBMC Analysis

Blood will be collected by jugular venipuncture from the appropriate animals.

Time Points:	On Day 44 (main animals only).
Target Volume:	0.5 mL
Anticoagulant:	Sodium Heparin
Storage Conditions:	Kept in a controlled temperature area set to maintain 21°C

Samples will be shipped at controlled temperature set to maintain 21°C via overnight courier to the Immunology laboratory, for whole blood stimulation and cytokine analysis, to:

Shipping Contact
(b) (6)
Cell Biology and Immunology
Southern Research

Birmingham Alabama 35205
Tel: (b) (6)
E-mail: (b) (6)

The Test Site will be notified before shipment of the samples. Upon receipt at the immunology laboratory, the samples will be stored at room temperature.

The PBMC samples will be analyzed using a qualified method.

Any residual/retained samples will be maintained for a minimum of 6 months following issuance of the Audited Draft Report after which samples will be discarded. Alternatively, residual/retained samples will be discarded prior to the 6 month period should the issuance of the Final Report occur prior to the end of the 6 month retention period. An earlier discard of these residual/retained samples may also be requested and authorized by the Study Director.

An Immunology Report for PBMC analysis will be included as an appendix to the Final Report.

Appendix 1

16. TERMINAL PROCEDURES

Terminal procedures are summarized in the following table:

Terminal Procedures for Main Study and Recovery Animals

Group No.	No. of Animals		Scheduled Euthanasia Day	Necropsy Procedures			Histology	Histopathology
	M	F		Necropsy	Tissue Collection	Organ Weights		
1	10	10	44	X	X	X	Full Tissue[a]	Full Tissue[a]
2	10	10					Full Tissue[a]	Gross Lesions Target Tissues
3	10	10					Full Tissue[a]	Gross Lesions Target Tissues
4	10	10					Full Tissue[a]	Full Tissue[a]
1	5	5	57	X	X	X	Full Tissue[a]	Full Tissue[a]
4	5	5					Full Tissue[a]	Full Tissue[a]
Unscheduled Deaths				X	X	-	Full Tissue[a]	Full Tissue[a]
Replaced animals (prestudy)[b]				X	Standard Diagnostic List	-	-	-
Replaced animals (after dosing start)				X	X	-	-	-

X = Procedure to be conducted; - = Not applicable.
[a] See Tissue Collection and Preservation table for listing of tissues.
[b] Animals found dead or euthanized before the initiation of dosing.

16.1. Unscheduled Deaths

If a main study or recovery animal dies on study, a complete necropsy examination will be conducted and specified tissues will be saved. If necessary, the animal will be refrigerated to minimize autolysis.

Main or recovery animals may be euthanized for humane reasons as per Test Facility SOPs. The samples for evaluation of laboratory evaluation will be obtained if possible as specified in Section 15. These animals will undergo exsanguination by incision from the abdominal aorta following isoflurane anesthesia unless deemed inappropriate by the Study Director and/or the clinical veterinarian and will undergo complete necropsy examination, and specified tissues will be retained. If necessary, the animal will be refrigerated (set to maintain 4°C) to minimize autolysis.

Animals found dead or euthanized before the initiation of dosing will be subject to complete necropsy examination and limited tissue retention (standard diagnostic tissue list). Any animal replaced after the start of dosing will be subject to complete necropsy examination and tissues will be retained (as per Tissue Collection and Preservation section), and any data generated will not be included in the report unless deemed appropriate by the Study Director.

Appendix 1

16.2. Scheduled Euthanasia

Main study and recovery animals surviving until scheduled euthanasia will have a terminal body weight recorded, samples for laboratory evaluation will be collected (as appropriate), and will be euthanized by exsanguination by incision from the abdominal aorta following isoflurane anesthesia. When possible, the animals will be euthanized rotating across dose groups such that similar numbers of animals from each group, including controls, will be necropsied throughout the day. Animals will be fasted overnight before their scheduled necropsy.

16.3. Necropsy

Main and recovery animals will be subjected to a complete necropsy examination, which will include evaluation of the carcass and musculoskeletal system; all external surfaces and orifices; cranial cavity and external surfaces of the brain; and thoracic, abdominal, and pelvic cavities with their associated organs and tissues.

Necropsy procedures will be performed by qualified personnel with appropriate training and experience in animal anatomy and gross pathology. A veterinary pathologist, or other suitably qualified person, will be available.

At the discretion of the necropsy supervising pathologist, images may be generated for illustration of or consultation on gross observations. Generation of such images will be documented and communicated to the Study Director. Images and associated documentation will be retained and archived.

16.4. Organ Weights

The organs identified for weighing in the Tissues Collection and Preservation table will be weighed at necropsy for all scheduled euthanasia animals. Organ weights will not be recorded for animals found dead or euthanized in poor condition or in extremis. Paired organs will be weighed together. In the event of gross abnormalities, in addition to the combined weight, the weight of each organ of a pair may be taken and entered as a tissue comment. Organ weight as a percent of body weight (using the terminal body weight) and organ weight as a percent of brain weight will be calculated.

16.5. Tissue Collection and Preservation

Representative samples of the tissues identified in the Tissue Collection and Preservation table in ATTACHMENT A will be collected from all animals and preserved in 10% neutral buffered formalin, unless otherwise indicated. Additional tissue samples may be collected to elucidate abnormal findings.

Appendix 1

17. HISTOLOGY AND HISTOPATHOLOGY

17.1. Histology

Tissues in the Tissue Collection and Preservation table from animals identified in the Terminal Procedures table will be embedded in paraffin, sectioned, mounted on glass slides, and stained with hematoxylin and eosin.

17.2. Histopathology

Histopathological evaluation will be performed by a board-certified veterinary pathologist. Target tissues identified by the study pathologist during microscopic evaluation will be communicated to the study Director; tissues will be evaluated and reported. Any additional stains or evaluations, if deemed necessary by the pathologist, will be added by study plan amendment following discussion with the Study Director and in consultation the Sponsor.

At the discretion of the study pathologist and after acknowledgement by the Study Director, images may be captured for consultation purposes.

17.3. Pathology Peer Review

A on-site pathology peer review will be conducted by:

(b) (6)
Moderna Therapeutics
200 Technology Square, 3rd Floor
Cambridge, MA 02116
Tel: (b) (6)
E-mail: (b) (6)

The peer review statement or equivalent documentation will be included as an appendix to the Final Report.

18. CONSTRUCTED VARIABLES

Body Weight Gains	Calculated between at least each interval as well as between the beginning and end of each phase
Organ Weight relative to Body Weight	Calculated against the Terminal body weight for scheduled intervals
Organ Weight relative to Brain Weight	Calculated against the brain weight for scheduled intervals

19. STATISTICAL ANALYSIS

All statistical tests will be conducted at the 5% significance level. All pairwise comparisons will be conducted using two sided tests and will be reported at the 0.1%, 1%, and 5% levels.

Appendix 1

Numerical data collected on scheduled occasions for the listed variables will be analyzed as indicated according to sex and occasion. Descriptive statistics number, mean and standard deviation (or %CV or SE when deemed appropriate) will be reported whenever possible. Values may also be expressed as a percentage of predose or control values when deemed appropriate. Inferential statistics will be performed according to the matrix below when possible, but will exclude semi-quantitative data, and any group with less than 3 observations.

Statistical Matrix

Variables for Inferential Analysis	Statistical Method
	Parametric/ Non-Parametric
Body Weight	X
Hematology Variables	X
Coagulation Variables	X
Clinical Chemistry Variables	X
Cytokines	X
Body Temperature	X
α2-macroglobulin	X
α1-acid glycoprotein	X
Organ Weights	X
Body Weight Gains	X
Organ Weight relative to Body Weight	X
Organ Weight relative to Brain Weight	X

The following pairwise comparisons will be made:

Group 2 vs. Group 1

Group 3 vs. Group 1

Group 4 vs. Group 1

19.1. Parametric/Non-Parametric

Levene's test will be used to assess the homogeneity of group variances.

Datasets with at least 3 groups will be compared using an overall one-way ANOVA *F*-test if Levene's test is not significant or the Kruskal-Wallis test if it is. If the overall *F*-test or Kruskal-Wallis test is found to be significant, then the above pairwise comparisons will be conducted using Dunnett's or Dunn's test, respectively.

Datasets with 2 groups (the designated control group and 1 other group) will be compared using a *t*-test if Levene's test is not significant or Wilcoxon Rank-Sum test if it is.

20. COMPUTERIZED SYSTEMS

The following critical computerized systems may be used in the study. The actual critical computerized systems used will be specified in the Final Report.

Appendix 1

Data for parameters not required by study plan, which are automatically generated by analytical devices used will be retained on file but not reported. Statistical analysis results that are generated by the program but are not required by study plan and/or are not scientifically relevant will be retained on file but will not be included in the tabulations.

Critical Computerized Systems

System Name	Description of Data Collected and/or Analyzed
Provantis	In-life; clinical pathology; postmortem
Dispense	Test Material receipt, accountability and/or formulation activities
SRS (CR-MTL in-house application built with SAS) and SAS system for Windows and/or In-house reporting software Nevis 2012 (using SAS)	Statistical analyses of numerical in-life, clinical pathology and postmortem data
Mesa Laboratories AmegaView CMS	Continuous Monitoring System. Monitoring of standalone fridges, freezers, incubators, and selected laboratories to measure temperature, relative humidity, and CO2, as appropriate
Johnson Controls Metasys	Building Automation System. Control of HVAC and other building systems, as well as temperature/humidity control and trending in selected laboratories and animal rooms
Empower 3 (Waters Corporation)	Data acquisition for dose formulation analysis, including regression analysis and measurement of concentration and recovery of dose formulations using HPLC
BioPlex Manager	Cytokine data collection
Softmax Pro GxP	Elisa data collection
Watson LIMS	Biomarker data analysis
Dynamics (Wyatt)	Data acquisition for particle size analysis of the test item using DLS

21. AMENDMENTS AND DEVIATIONS

Changes to the approved study plan shall be made in the form of an amendment, which will be signed and dated by the Study Director. Every reasonable effort will be made to discuss any necessary study plan changes in advance with the Sponsor.

All study plan and SOP deviations will be documented in the study records. Deviations from the study plan and/or SOP related to the phase(s) of the study conducted at a Test Site shall be documented, acknowledged by the PI/IS, and reported to the Study Director for authorization/acknowledgement. The Study Director will notify the Sponsor of deviations that may result in a significant impact on the study as soon as possible.

22. RETENTION OF RECORDS, SAMPLES, AND SPECIMENS

All study-specific raw data, electronic data, documentation, study plan, retained samples and specimens, and interim (if applicable) and final reports will be archived by no later than the date of final report issue. All materials generated by Charles River from this study will be transferred

Appendix 1

to CR MTL archive. One year after issue of the draft report, the Sponsor will be contacted to determine the disposition of materials associated with the study.

Records to be maintained will include, but will not be limited to, documentation and data for the following:

- Study Plan, study plan amendments, and deviations
- Study schedule
- Study-related correspondence
- Test system receipt, health, and husbandry
- Test and Reference Item receipt, identification, preparation, and analysis
- In-life measurements and observations
- Clinical pathology sample collection and evaluation
- Gross and microscopic observations and related data
- Organ weight measurements
- Statistical analysis results

23. REPORTING

A comprehensive Draft Report will be prepared following completion of the study and will be finalized following consultation with the Sponsor. The report will include all information necessary to provide a complete and accurate description of the experimental methods and results and any circumstances that may have affected the quality or integrity of the study.

The Sponsor will receive an electronic version of the Draft and Final Report provided in Adobe Acrobat PDF format (hyperlinked and searchable at final) along with a Microsoft Word version of the text. The PDF document will be created from native electronic files to the extent possible, including text and tables generated by the Test Facility. Report components not available in native electronic files and/or original signature pages will be scanned and converted to PDF image files for incorporation. An original copy of the report with the Test Facility's handwritten signatures will be retained.

Reports should be finalized within 6 months of issue of the Draft Report. If the Sponsor has not provided comments to the report within 6 months of draft issue, the report will be finalized by the Test Facility unless other arrangements are made by the Sponsor.

Appendix 1

24. ANIMAL WELFARE

24.1. Institutional Animal Care and Use Committee Approval

The study plan and any amendment(s) or procedures involving the care and use of animals in this study will be reviewed and approved by CR SHB Institutional Animal Care and Use Committee (IACUC). During the study, the care and use of animals will be conducted with guidance from the USA National Research Council and the Canadian Council on Animal Care (CCAC).

Appendix 1

AMENDMENT APPROVAL

(b) (6)
(b) (6) (b) (6)

Date: 22 Mar 2017

As authorized by the Sponsor on 22 Mar 2017

SUMMARY OF CHANGES AND JUSTIFICATIONS

Study Plan effective date: 8 Mar 2017

Note: When applicable, additions are indicated in bold underlined text and deletions are indicated in bold strikethrough text in the affected sections of the document.

Item or Section(s)	Justification
Amendment 1	**Date: 15-Mar-2017**
2. PROPOSED STUDY SCHEDULE	To update the schedule due to delay in the test item documentation.
7. RESPONSIBLE PERSONNEL	To update the contact information of the ATA PI.
10.3.1. Analytical Method	To include validation number.
10.3.1.2. Stability Analysis	To clarify that stability analysis will be performed on the bulk Test Item.
15.2. Laboratory Investigations (Cytokine Analysis)	To correct a typographical error and to include clarification for sample processing.
15.3. Anti Therapeutic Antibody (ATA) Analysis	To clarify the processing of samples and update the shipping contact information.
15.4. PBMC Analysis	To change the blood collection procedure.
Amendment 2	**Date: 22-Mar-2017**
8.1. Test Item	To update information based on Summary of Analysis and to correct a typographical error.
10.2. Preparation of Test Item	To include missing information from study plan about the residual test item following formulation.
15.3. Anti Therapeutic Antibody (ATA) Analysis	To update the shipping contact information.
Amendment 3	**Date: 13-Apr-2017**
7. RESPONSIBLE PERSONNEL	To add the email address of the management contact.
8.4. Analysis of Test Item	To correct the storage conditions for samples transfer.
15.3. Anti Therapeutic Antibody (ATA) Analysis	To add a blood collection occasion on Day 29.

Appendix 1

TABLE OF CONTENTS

Appendix 1

1. OBJECTIVE(S)

The objectives of this study are to determine the potential toxicity of mRNA 1647, when given by intramuscular injection for 6 weeks (4 doses) to rats and to evaluate the potential reversibility of any findings following a 2-week recovery period.

1.1. Study Classification

Study Category:	TOX
Study Type:	Repeat Dose Toxicity
Study Design:	Parallel
Primary Treatment CAS Registry Number:	Not Available
Primary Treatment Unique Ingredient ID:	Not Available
Class of Compound:	mRNA

2. PROPOSED STUDY SCHEDULE

Proposed study dates are listed below. Actual applicable dates will be included in the Final Report.

Experimental Start Date:	08 Mar 2017
Experimental Completion Date:	29 Aug 2017 (Last date data are collected from the study)
Animal Arrival:	08 Mar 2017
Initiation of Dosing:	22 Mar 2017 (Male) 23 Mar 2017 (Female)
Completion of In-life:	05 May 2017 (Main) 18 May 2017 (Recovery) (Last date of necropsy)
Unaudited Draft Report:	17 Jul 2017
Audited Draft Report:	22 Aug 2017
Final Report:	29 Aug 2017 (Expected date of Study Director signature)

3. GUIDELINES FOR STUDY DESIGN

The design of this study was based on the study objective(s), the overall product development strategy for the Test Item, and the following study design guidelines:

- OECD Guideline 407. *Repeated Dose 28-day Oral Toxicity Study in Rodents*.

Appendix 1

- Committee for Medicinal Products for Human Use (CHMP). *Note for Guidance on Repeated Dose Toxicity*. CPMP/SWP/1042/99corr.
- ICH Harmonised Tripartite Guideline M3 (R2). *Nonclinical Safety Studies for the Conduct of Human Clinical Trials and Marketing Authorization for Pharmaceuticals*.
- Japanese Guidelines for Nonclinical Studies of Drugs Manual (1995). *Guidelines for Toxicity Studies of Drugs (Chapter 3, Repeated Dose Toxicity Studies)*.
- Appendix to Director General Notification, No. 12-Nousan-8147, 24 November 2000, Agricultural Production Bureau, Ministry of Agriculture, Forestry and Fisheries of Japan (JMAFF).

4. REGULATORY COMPLIANCE

The study will be performed in accordance with the OECD Principles of Good Laboratory Practice and as accepted by Regulatory Authorities throughout the European Union, United States of America (FDA), Japan (MHLW), and other countries that are signatories to the OECD Mutual Acceptance of Data Agreement.

Any portion of this study conducted in the USA will be performed in accordance with the U.S. Department of Health and Human Services, Food and Drug Administration. United States Code of Federal Regulations, Title 21, Part 58: Good Laboratory Practice for Nonclinical Laboratory Studies and as accepted by Regulatory Authorities throughout the European Union (OECD Principles of Good Laboratory Practice), Japan (MHLW), and other countries that are signatories to the OECD Mutual Acceptance of Data Agreement.

Exceptions to GLPs include the following study elements:

- Characterization of the Test Item will be performed by the Sponsor or Sponsor subcontractor according to established SOPs, controls, and approved test methodologies to ensure integrity and validity of the results generated; these analyses will not be conducted in compliance with the GLP or GMP regulations.
- Analysis of cytokines, α2-macroglobulin, α1-acid glycoprotein, anti-therapeutic antibody and PBMCs will be conducted using scientifically qualified methods and in accordance with all applicable analytical procedures.
- Pathology peer review

5. QUALITY ASSURANCE

5.1. Test Facility

The Test Facility Quality Assurance Program (QAP) will monitor the study to assure the facilities, equipment, personnel, methods, practices, records, and controls are in conformance with Good Laboratory Practice regulations. The QAP will review the study plan, conduct inspections at intervals adequate to assure the integrity of the study, and audit the Final Report to

Appendix 1

assure that it accurately describes the methods and standard operating procedures and that the reported results accurately reflect the raw data of the study.

The Test Facility QAP contact for this study is indicated below:

Appendix 1

Each PI is required to report any deviations or other circumstances that could affect the quality or integrity of the study to the Study Director in a timely manner. Each PI will provide a report addressing their assigned phase of the study, which will be included as an appendix to the Final Report. The phase report will include the following:

- The archive site for all records, samples, specimens and reports generated from the phase or segment (alternatively, details regarding the retention of the materials may be provided to the Study Director for inclusion in the Final Report)
- A listing of critical computerized systems used in the conduct and/or interpretation of the assigned study phase

8. TEST AND REFERENCE ITEMS

8.1. Test Item

Identification:	mRNA-1647
Supplier:	Moderna Therapeutics, Inc.
Batch (Lot) Number:	MTDP17015
Concentration:	2.7 mg/mL
Retest Date:	An end-of-use analysis of the bulk Test Item will be performed to demonstrate the stability of the Test Item during the dosing period.
Physical Description:	White to off-white lipid nanopa~~e~~r**r**ticle dispersion
Storage Conditions:	Kept in a freezer set to maintain -20°C

8.2. Reference Item

Identification:	Phosphate-buffered Saline (PBS) pH 7.2
Supplier:	Will be included in the Final Report
Batch (Lot) Number:	Will be included in the Final Report
Expiration Date:	Will be included in the Final Report
Physical Description:	Liquid
Storage Conditions:	Kept in a controlled temperature area set to maintain 21°C

8.3. Test Item Characterization

The Sponsor will provide to the Test Facility documentation of the identity, strength, purity and composition for the Test Item. A Certificate of Analysis or equivalent documentation will be provided for inclusion in the Final Report. The Sponsor will also provide information concerning the regulatory standard that was followed for these evaluations.

Appendix 1

The Sponsor has appropriate documentation on file concerning the method of synthesis, fabrication or derivation of the Test Item, and this information is available to the appropriate regulatory agencies should it be requested.

8.4. Analysis of Test Item

A sample (2 vials) of the Test Item will be taken on the completion of the dosing period. Analysis of bulk Test Item for concentration, particle size and purity will be performed.

The first vial will be transferred (on **dry** ice ~~**pack**~~) to the analytical laboratory at the Test Facility for concentration and particle size analysis.

The second vial will be transferred (on **dry** ice ~~**pack**~~) to the molecular biology laboratory at the Test Facility for purity analysis.

Purity and Particle size analysis will be performed by IEX- HPLC, Differential Light Scattering (DLS) and capillary electrophoresis (CE) using validated analytical procedures.

Any residual/retained analytical samples (and Test Item used in analysis) will be discarded before issue of the Final Report.

8.5. Reserve Samples

For each batch (lot) of Test and Reference Items, a reserve sample (1 mL or 1 vial) will be collected and maintained under the appropriate storage conditions by the Test Facility.

8.6. Test and Reference Item Inventory and Disposition

Records of the receipt, distribution, storage, and disposition of Test and Reference Items will be maintained. With the exception of reserve samples, all unused Sponsor-supplied bulk Test Item will be returned on dry ice to the Sponsor (after completion of dosing).

Shipping Contact
(b) (6)
Moderna Therapeutics
800 Technology Sq, 8th Floor
Cambridge MA 02476
Cell: (b) (6)
E-mail: (b) (6)

9. SAFETY

The safety precautions for the Test Item and dose formulations will be documented in a Test Material Safety Data Sheet (TMSDS) based on the information provided by the Sponsor either by an MSDS or similar document.

Appendix 1

10. DOSE FORMULATION AND ANALYSIS

10.1. Preparation of Reference Item

Dose formulation preparations will be performed under a laminar flow hood using clean procedures.

The Reference Item, Phosphate-buffered Saline (PBS) pH 7.2, will be dispensed on days of dosing (i.e. Days 1, 15, 29 and 43) for administration to Group 1 control animals and will be used as required to dilute the bulk Test Item for administration to Groups 2 to 4 animals. The aliquots will be stored in a refrigerator set to maintain 4°C until use. They will be removed from the refrigerator and allowed to warm to room temperature for at least 30 minutes before dosing.

Any residual volumes will be discarded unless otherwise requested by the Study Director.

10.2. Preparation of Test Item

Dose formulation preparations will be performed under a laminar flow hood using clean procedures.

Test Item formulations will be diluted with PBS pH 7.2, as necessary for administration. The dosing formulations will be prepared on each days of dosing (i.e. Days 1, 15, 29 and 43) and will be stored in a refrigerator set to maintain 4°C. The dose formulations will be allowed to warm to room temperature for at least 30 minutes prior to dosing. Alternatively, the aliquots can be transferred directly to room temperature. When possible, stock vials will be used only once.

Any residual volumes of formulated Test Item and stock test item will be stored in a refrigerator set at 4°C and discarded prior to report finalization.

10.3. Sample Collection and Analysis

Dose formulation samples will be collected for analysis as indicated in the following table. Additional samples may be collected and analyzed at the discretion of the Study Director.

Dose Formulation Sample Collection Schedule

Interval[b]	Homogeneity	Concentration	Sampling From
Day 1	All groups[a]	All groups	Dosing container
Day 43	N/A	All groups	Dosing container

N/A = Not applicable.

[a] The homogeneity results obtained from the top, middle and bottom preparations will be averaged and utilized as the concentration results.

[b] Samples will be collected on the first preparation of the study and on the last preparation of the study.

Samples to be analyzed will be submitted as soon as possible following collection.

All samples to be analyzed will be transferred (on ice pack) to the analytical laboratory.

Any residual/retained analytical samples (and Test Item used in analysis) will be discarded before issue of the Final Report.

Appendix 1

10.3.1. Analytical Method

Analyses described below will be performed by IEX-HPLC using a validated analytical procedure (CR-MTL Study No.1802050).

10.3.1.1. Concentration and Homogeneity Analysis

Samples for Analysis:	Duplicate top, middle, and bottom samples (duplicate middle only from Group 1); sent for analysis as noted in Section 10.3. On days where only concentration analysis is required, the formulation will only be sampled from the middle.
Backup Samples:	Triplicate top, middle, and bottom samples (Triplicate middle only from Group 1); maintained at the Test Facility. Backup samples may be analyzed at the discretion of the Study Director. On days where only concentration analysis is required, the formulation will only be sampled from the middle.
Sampling Containers:	Appropriate sized glass containers.
Sample Volume:	0.5 mL for analysis and backup samples.
Storage Conditions:	Kept in a refrigerator set to maintain 4°C.
Acceptance Criteria:	For concentration, the criteria for acceptability will be mean sample concentration results within or equal to ± 15% of theoretical concentration. Each individual sample concentration result within or equal to ± 20%. For homogeneity, the criteria for acceptability will be a relative standard deviation (RSD) of concentrations of ≤ 5% for each group.

10.3.1.2. Stability Analysis

There will be no stability analysis performed for concentration used on this study however, end of use stability analysis of the bulk test item will be performed at the end of the dosing period.

11. TEST SYSTEM

Species:	Rat
Strain:	Crl:CD(SD) Sprague-Dawley rat
Source:	Charles River Canada Inc., St. Constant, QC, Canada
Number of Males Ordered:	60
Number of Females Ordered:	60
Target Age at Arrival:	4 to 8 weeks

Appendix 1

Target Weight at Arrival:	126 to 150 g (males) 101 to 125 g (females)

The actual age, weight, and number of animals received will be listed in the Final Report.

11.1. Justification of Test System and Number of Animals

The Sprague Dawley rat was chosen as the animal model for this study as it is an accepted rodent species for preclinical toxicity testing by regulatory agencies.

The total number of animals to be used in this study is considered to be the minimum required to properly characterize the effects of the Test Item. This study has been designed such that it does not require an unnecessary number of animals to accomplish its objectives.

At this time, studies in laboratory animals provide the best available basis for extrapolation to humans and are required to support regulatory submissions. Acceptable models which do not use live animals currently do not exist.

11.2. Animal Identification

Each animal will be identified using a subcutaneously implanted electronic identification chip.

11.3. Environmental Acclimation

A minimum acclimation period of 14 days will be allowed between animal receipt and the start of dosing in order to accustom the animals to the laboratory environment.

11.4. Selection, Assignment, Replacement, and Disposition of Animals

Animals will be assigned to groups by a stratified randomization scheme designed to achieve similar group mean body weights. Males and females will be randomized separately. Animals in poor health or at extremes of body weight range will not be assigned to groups.

Before the initiation of dosing, any assigned animals considered unsuitable for use in the study will be replaced by alternate animals obtained from the same shipment and maintained under the same environmental conditions.

After initiation of dosing, study animals may be replaced during the replacement period with alternate animals in the event of accidental injury, non-Test Item-related health issues, or similar circumstances.

The alternate animals may be used as replacements on the study within 3 days.

The disposition of all animals will be documented in the study records.

Appendix 1

12. HUSBANDRY

12.1. Housing

Animals will be group housed (up to 3 animals of the same sex and same dosing group together) in polycarbonate cages containing appropriate bedding equipped with an automatic watering valve. These housing conditions will be maintained unless deemed inappropriate by the Study Director and/or Clinical Veterinarian. The room(s) in which the animals will be kept will be documented in the study records.

Animals will be separated during designated procedures/activities. Each cage will be clearly labeled with a color-coded cage card indicating study, group, animal number(s), and sex. Cages will be arranged on the racks in group order. Where possible, control group animals will be housed on a separate rack from the Test Item treated animals.

12.2. Environmental Conditions

The targeted conditions for animal room environment will be as follows:

Temperature:	19°C to 25°C
Humidity:	30% to 70%
Light Cycle:	12 hours light and 12 hours dark (except during designated procedures)

12.3. Food

PMI Nutrition International Certified Rodent Chow No. 5CR4 will be provided ad libitum throughout the study, except during designated procedures. The same diet in meal form may be provided to individual animals as warranted by clinical signs (e.g., broken/damaged incisors or other health changes).

The feed is analyzed by the supplier for nutritional components and environmental contaminants. Results of the analysis are provided by the supplier and are on file at the Test Facility.

It is considered that there are no known contaminants in the feed that would interfere with the objectives of the study.

12.4. Water

Municipal tap water after treatment by reverse osmosis and ultraviolet irradiation will be freely available to each animal via an automatic watering system (except during designated procedures). Water bottles can be provided, if required.

Periodic analysis of the water is performed, and results of these analyses are on file at the Test Facility.

It is considered that there are no known contaminants in the water that could interfere with the outcome of the study.

Appendix 1

12.5. Animal Enrichment

Animals will be socially housed for psychological/environmental enrichment and will be provided with items such as a hiding tube and a chewing object, except during study procedures/activities.

12.6. Veterinary Care

Veterinary care will be available throughout the course of the study and animals will be examined by the veterinary staff as warranted by clinical signs or other changes. All veterinary examinations and recommended therapeutic treatments, if any, will be documented in the study records.

In the event that animals show signs of illness or distress, the responsible veterinarian may make initial recommendations about treatment of the animal(s) and/or alteration of study procedures, which must be approved by the Study Director or Scientific designate. All such actions will be properly documented in the study records and, when appropriate, by study plan amendment. Treatment of the animal(s) for minor injuries or ailments may be approved without prior consultation with the Sponsor representative when such treatment does not impact fulfillment of the study objectives. If the condition of the animal(s) warrants significant therapeutic intervention or alterations in study procedures, the Sponsor representative will be contacted, when possible, to discuss appropriate action. If the condition of the animal(s) is such that emergency measures must be taken, the Study Director and/or clinical veterinarian will attempt to consult with the Sponsor representative prior to responding to the medical crisis, but the Study Director and/or veterinarian has authority to act immediately at his/her discretion to alleviate suffering. The Sponsor representative will be fully informed of any such events.

Appendix 1

13. EXPERIMENTAL DESIGN

Experimental Design

Group No.	Test Material	Dose Level (µg/dose)	Dose Volume (µL/dose)	Dose Concentration (mg/mL)	No. of Animals			
					Main Study		Recovery Study	
					Males	Females	Males	Females
1	Reference Item	0	200	0	10	10	5	5
2	mRNA-1647	10	200	0.05	10	10	-	-
3	mRNA-1647	30	200	0.15	10	10	-	-
4	mRNA-1647	100	200	0.5	10	10	5	5

- : Not applicable

13.1. Administration of Test and Reference Items

The Test and Reference Items will be administered to the appropriate animals via intramuscular injection into the lateral compartment of the thigh on Days 1, 15, 29 and 43, the injection site will be alternated on each dosing occasion (site 1= left; site 2= right). The volume for each dose will be administered using a syringe/needle within the demarcated area. The first day of dosing will be designated as Day 1 (exception: alternate animals used for replacement after Day 1 will assume the day of the animal being replaced).

The injection area will be marked as frequently as required to allow appropriate visualization of administration sites. Hair may be clipped or shaved if required to improve visualization of the injection sites. The injection site will be documented in the raw data for each dose administered.

13.2. Justification of Route and Dose Levels

The intramuscular route of exposure was selected because this is the intended route of human exposure.

The dose levels for this toxicology study were chosen to approximate a substantial multiple of the anticipated clinical starting dose and top clinical dose. The highest dose to be tested is expected to represent the intended maximum human clinical dose and volume and will be administered by the clinical route (intramuscular). At this dose level, minimal systemic toxicity is expected, but it is possible mild to moderate injection site reaction (redness, swelling) and potentially elevation of systemic cytokine/acute phase markers may be observed. The mid- and low-dose were selected to evaluate the dose-dependent effect of this compound.

14. IN-LIFE PROCEDURES, OBSERVATIONS, AND MEASUREMENTS

The in-life procedures, observations, and measurements listed below including Laboratory Investigations listed in section below will be performed for all main study and recovery animals, unless otherwise indicated in the respective section. During the study, additional evaluations to those described below and/or scheduled, and considered necessary by the Study Director and/or Veterinarian to assess health status will be conducted and duly documented. More frequent observations may be undertaken if considered appropriate.

Appendix 1

14.1. Mortality/Moribundity Checks

Frequency: Twice daily, once in the morning and once in the afternoon, throughout the study.

Procedure: Animals will be observed for general health/mortality and moribundity. Animals will not be removed from cage during observation, unless necessary for identification or confirmation of possible findings.

14.2. Clinical Observations

14.2.1. Detailed Clinical Observations

Frequency: Weekly during the dosing and recovery periods, and at least every two weeks during the predosing period.

Procedure: Animals removed from the cage for examination.

14.3. Local Irritation Assessment

Frequency: On days of dosing; at least 24 and 72 hours post-dose (end of each group). Weekly when there is no dosing and during the recovery period. Following Day 43 dosing, no assessment will be performed on main animals at 72 hours postdose as animals will be sent to necropsy on Day 44.

Procedure: All animals will have the dose injection site examined for signs of erythema/edema. Observations will be scored according to the Local Irritation Assessment scoring table as follows:

Erythema (Redness)	Score
No erythema	0
Very slight erythema (barely perceptible)	1
Mild erythema	2
Moderate to severe erythema	3
Severe erythema (beet redness to slight eschar formation, injury in depth)	4
Notable dermal lesion (maximized)	M
Edema (Swelling)	
No edema	0
Very slight edema (barely perceptible)	1
Slight edema	2
Moderate edema	3
Severe edema	4

Appendix 1

Any other abnormalities will be recorded as they are observed.

14.4. Body Weights

Frequency:	Weekly during the dosing and recovery periods, and at least every two weeks during the predosing period.
Procedure:	Animals will be individually weighed. A fasted weight will be recorded on the day of necropsy. Terminal body weights will not be collected from animals found dead or euthanized moribund.

14.5. Food Consumption

Frequency:	Weekly, starting Day -7, throughout the dosing and recovery periods.
Procedure:	Food consumption will be quantitatively measured except for on the day of scheduled euthanasia.

14.6. Ophthalmic Examinations

Frequency:	Once prestudy and again toward the end of Week 6 of the dosing period. During Week 2 of the recovery period if Test Item-related findings are observed during the dosing period.
Procedure:	All animals will be subjected to funduscopic (indirect ophthalmoscopy) and biomicroscopic (slit lamp) examinations. The mydriatic used will be Atropine 0.126%.
Evaluation:	A report will be included as an appendix to the Final Report.

14.7. Body Temperature

Frequency:	On Day 1 and Day 43 at predose, and 6 and 24 hours post dose (end of each group). If body temperature is significantly above normal range (36.0°C to 38.0°C) the temperature will be monitored daily till return to normal. If clinical observations indicate a possible body temperature changes measurements may be taken at the discretion of the Study Director.
Procedure:	Rectal body temperature will be recorded on un-sedated animals.

Appendix 1

15. LABORATORY EVALUATIONS

15.1. Clinical Pathology

15.1.1. Sample Collection

Blood will be collected from the abdominal aorta following isoflurane anesthesia. After collection, samples will be transferred to the appropriate laboratory for processing.

Animals will be fasted overnight before blood sampling (for clinical chemistry). Samples will be collected according to the following table.

Samples for Clinical Pathology Evaluation

Group Nos.	Time Point	Hematology	Coagulation	Clinical Chemistry	α1-acid glycoprotein/ α2-macroglubulin
1 to 4[a]	Day 44	X	X	X	X
1 and 4	Day 57	X	X	X	X
Unscheduled euthanasia (when possible)	Before euthanasia	X	X	X	X

X = Sample to be collected

[a] Samples will only be collected from those animals scheduled for euthanasia on Day 44.

Any residual/retained clinical pathology samples will be discarded before issue of the Final Report.

15.1.2. Hematology

Target Volume: 0.5 mL

Anticoagulant: EDTA

Hematology Parameters

Red blood cell count Hemoglobin concentration Hematocrit Mean corpuscular volume Red Blood Cell Distribution Width Mean corpuscular hemoglobin concentration Mean corpuscular hemoglobin Reticulocyte count (absolute) Platelet count	White blood cell count Neutrophil count (absolute) Lymphocyte count (absolute) Monocyte count (absolute) Eosinophil count (absolute) Basophil count (absolute) Large unstained cells (absolute)

A blood smear will be prepared from each hematology sample. Blood smears will be labeled, stained, and stored. Blood smears may be read to investigate results. If additional examination of blood smears is deemed necessary, the smears may be subsequently evaluated and this evaluation will be described in a study plan amendment.

Appendix 1

15.1.3. Coagulation

Target Volume: 1.2 mL (in a 1.3 mL tube)

Anticoagulant: Citrate

Processing: To plasma

Coagulation Parameters

Activated partial thromboplastin time Fibrinogen	Prothrombin time Sample Quality

15.1.4. Clinical Chemistry

Target Volume: 0.7 mL

Anticoagulant: None, collected in serum separator tube

Processing: To serum

Clinical Chemistry Parameters

Alanine aminotransferase Aspartate aminotransferase Alkaline phosphatase Gamma-glutamyltransferase Creatine Kinase Total bilirubin[a] Urea nitrogen Creatinine Calcium Phosphorus	Total protein Albumin Globulin Albumin/globulin ratio Glucose Cholesterol Triglycerides Sodium Potassium Chloride Sample Quality

[a] When total bilirubin is > 0.5 mg/dL, indirect and direct bilirubin will also be measured.

15.1.5. Bone Marrow Smear Evaluation (Optional)

Bone marrow smears will be collected and prepared as described in the Tissue Collection and Preservation table (Section 16.5). Evaluation of stained smears may be added by amendment at the discretion of the Study Director in consultation with the pathologist and the Sponsor.

15.1.6. α1-acid Glycoprotein and α2-macroglobulin Analysis

Blood will be collected via the abdominal aorta following isoflurane anesthesia before scheduled and unscheduled euthanasia for all animals.

Target Volume: 0.7 mL

Anticoagulant: None, collected in serum separator tubes

Processing: Blood samples to clot at ambient room temperature. Centrifugation for (b) (4) set at (b) (4) in a refrigerated centrifuge (set to maintain (b) (4)). Samples will be processed to

Appendix 1

serum by the Immunology Department. Serum will be aliquoted into 1 x 75 µL aliquot for α2-macroglobulin and 2 x 75 µL aliquot and a leftover (if available) for α1-acid glycoprotein.

Storage conditions: Stored in a freezer set to maintain -20°C, pending analysis.

Analysis for α1-acid glycoprotein and α2-macroglobulin will be conducted using a qualified ELISA method by the Immunology Department. The procedure to be followed along with the assay acceptance criteria will be detailed in the appropriate analytical procedure.

Samples will be analyzed in duplicate. Any residual/retained samples will be discarded prior to report finalization.

15.2. Laboratory Investigations (Cytokine Analysis)

Blood will be collected from the jugular vein of all recovery animals and preterminally euthanized animals (recovery animals only). After collection, blood samples for serum will be allowed to clot at ambient room temperature and blood samples for plasma will be transferred on wet ice to the appropriate laboratory for processing.

Sample Collection Schedule

Target Blood Volume (mL)			0.5	0.5
Anticoagulant			**None (SST)**	**EDTA**
Centrifugation setting			(b) (4)	
Timepoints			**Sample Type**	
Day	**Hrs**	**No. of Males/ Females**	IFN-α	IL-1ß, IL-6, TNF-α, IP-10, MIP-1-α, MCP-1
1	6	5/5	X	X
15	6	5/5	X	X
29	6	5/5	X	X
43	6	5/5	X	X
57	N / A	5/5	X	X
Matrix			Serum	Plasma
Volume per aliquot (µL)			all volume	all volume
Number of aliquot(s)			1	1
Storage condition (set to maintain)			-80°C	-80°C
Responsible Lab			CR-SHB	CR-SHB

X = Sample to be collected; N/A = not applicable

The number of aliquots and volumes are targets that may be adjusted based on sample volume availability.

The samples will be analyzed by the Immunology department. Analysis for IL-1ß, IL-6, TNF-α, IP-10, MIP-1-α and MCP-1 will be conducted using a multiplex Luminex method. An ELISA

Appendix 1

method will be used for the analysis of IFN-α. The procedures to be followed during the course of this study along with the assays acceptance criteria will be detailed in the appropriate analytical procedure. Samples will be analyzed in duplicate.

Following Study Director approval, any residual/retained samples will be discarded prior to report finalization.

An Immunology Report for cytokine analysis will be included as an appendix to the Final Report.

15.3. Anti Therapeutic Antibody (ATA) Analysis

Blood will be collected by jugular venipuncture from the appropriate animals.

Time Points:	Before initiation of dosing, **Day 29 (before dosing),** Day 43 (main animals only) and Day 57 (recovery animals).
Target Volume:	0.5 mL
Anticoagulant:	None, collected in serum separator tubes
Processing:	To serum

Samples will be mixed gently and allow to clot at ambient room temperature until centrifugation, which will be carried out as soon as practical. The samples will be centrifuged for (b) (4) in a refrigerated centrifuge (set to maintain (b) (4)) at (b) (4). The resultant serum will be separated, transferred to uniquely labeled clear polypropylene tubes, frozen immediately over dry ice and transferred to a freezer set to maintain -80°C.
Samples will be shipped on dry ice to:

Shipping Contact
(b) (6)
Integrated BioTherapeutics, Inc.
4 Research Court
Suite 300
Rockville, MD 20850, USA
Tel: (b) (6)
Fax: (b) (6)
E-mail: (b) (6)

The Test Site will be notified before shipment of the samples. Upon receipt at the immunology laboratory, the samples will be stored at -80°C.

The samples will be analyzed for rat anti-CMV antibodies using a qualified ELISA method.

Any residual/retained samples will be maintained for a minimum of 6 months following issuance of the Audited Draft Report after which samples will be discarded. Alternatively, residual/retained samples will be discarded prior to the 6 month period should the issuance of the Final Report occur prior to the end of the 6 month retention period. An earlier discard of these residual/retained samples may also be requested and authorized by the Study Director.

Appendix 1

An Anti-therapeutic Antibody Report will be included as an appendix to the Final Report.

15.4. PBMC Analysis

Blood will be collected by jugular venipuncture from the appropriate animals.

Time Points:	On Day 44 (main animals only).
Target Volume:	0.5 mL
Anticoagulant:	Sodium Heparin
Storage Conditions:	Kept in a controlled temperature area set to maintain 21°C

Samples will be shipped at controlled temperature set to maintain 21°C via overnight courier to the Immunology laboratory, for whole blood stimulation and cytokine analysis, to:

Shipping Contact
(b) (6)
Cell Biology and Immunology
Southern Research
2000 Ninth Ave S
Birmingham Alabama 35205
Tel: (b) (6)
E-mail: (b) (6)

The Test Site will be notified before shipment of the samples. Upon receipt at the immunology laboratory, the samples will be stored at room temperature.

The PBMC samples will be analyzed using a qualified method.

Any residual/retained samples will be maintained for a minimum of 6 months following issuance of the Audited Draft Report after which samples will be discarded. Alternatively, residual/retained samples will be discarded prior to the 6 month period should the issuance of the Final Report occur prior to the end of the 6 month retention period. An earlier discard of these residual/retained samples may also be requested and authorized by the Study Director.

An Immunology Report for PBMC analysis will be included as an appendix to the Final Report.

Appendix 1

16. TERMINAL PROCEDURES

Terminal procedures are summarized in the following table:

Terminal Procedures for Main Study and Recovery Animals

Group No.	No. of Animals		Scheduled Euthanasia Day	Necropsy Procedures			Histology	Histopathology
	M	F		Necropsy	Tissue Collection	Organ Weights		
1	10	10	44	X	X	X	Full Tissue[a]	Full Tissue[a]
2	10	10					Full Tissue[a]	Gross Lesions Target Tissues
3	10	10					Full Tissue[a]	Gross Lesions Target Tissues
4	10	10					Full Tissue[a]	Full Tissue[a]
1	5	5	57	X	X	X	Full Tissue[a]	Full Tissue[a]
4	5	5					Full Tissue[a]	Full Tissue[a]
Unscheduled Deaths				X	X	-	Full Tissue[a]	Full Tissue[a]
Replaced animals (prestudy)[b]				X	Standard Diagnostic List	-	-	-
Replaced animals (after dosing start)				X	X	-	-	-

X = Procedure to be conducted; - = Not applicable.
[a] See Tissue Collection and Preservation table for listing of tissues.
[b] Animals found dead or euthanized before the initiation of dosing.

16.1. Unscheduled Deaths

If a main study or recovery animal dies on study, a complete necropsy examination will be conducted and specified tissues will be saved. If necessary, the animal will be refrigerated to minimize autolysis.

Main or recovery animals may be euthanized for humane reasons as per Test Facility SOPs. The samples for evaluation of laboratory evaluation will be obtained if possible as specified in Section 15. These animals will undergo exsanguination by incision from the abdominal aorta following isoflurane anesthesia unless deemed inappropriate by the Study Director and/or the clinical veterinarian and will undergo complete necropsy examination, and specified tissues will be retained. If necessary, the animal will be refrigerated (set to maintain 4°C) to minimize autolysis.

Animals found dead or euthanized before the initiation of dosing will be subject to complete necropsy examination and limited tissue retention (standard diagnostic tissue list). Any animal replaced after the start of dosing will be subject to complete necropsy examination and tissues will be retained (as per Tissue Collection and Preservation section), and any data generated will not be included in the report unless deemed appropriate by the Study Director.

Appendix 1

16.2. Scheduled Euthanasia

Main study and recovery animals surviving until scheduled euthanasia will have a terminal body weight recorded, samples for laboratory evaluation will be collected (as appropriate), and will be euthanized by exsanguination by incision from the abdominal aorta following isoflurane anesthesia. When possible, the animals will be euthanized rotating across dose groups such that similar numbers of animals from each group, including controls, will be necropsied throughout the day. Animals will be fasted overnight before their scheduled necropsy.

16.3. Necropsy

Main and recovery animals will be subjected to a complete necropsy examination, which will include evaluation of the carcass and musculoskeletal system; all external surfaces and orifices; cranial cavity and external surfaces of the brain; and thoracic, abdominal, and pelvic cavities with their associated organs and tissues.

Necropsy procedures will be performed by qualified personnel with appropriate training and experience in animal anatomy and gross pathology. A veterinary pathologist, or other suitably qualified person, will be available.

At the discretion of the necropsy supervising pathologist, images may be generated for illustration of or consultation on gross observations. Generation of such images will be documented and communicated to the Study Director. Images and associated documentation will be retained and archived.

16.4. Organ Weights

The organs identified for weighing in the Tissues Collection and Preservation table will be weighed at necropsy for all scheduled euthanasia animals. Organ weights will not be recorded for animals found dead or euthanized in poor condition or in extremis. Paired organs will be weighed together. In the event of gross abnormalities, in addition to the combined weight, the weight of each organ of a pair may be taken and entered as a tissue comment. Organ weight as a percent of body weight (using the terminal body weight) and organ weight as a percent of brain weight will be calculated.

16.5. Tissue Collection and Preservation

Representative samples of the tissues identified in the Tissue Collection and Preservation table in ATTACHMENT A will be collected from all animals and preserved in 10% neutral buffered formalin, unless otherwise indicated. Additional tissue samples may be collected to elucidate abnormal findings.

Appendix 1

17. HISTOLOGY AND HISTOPATHOLOGY

17.1. Histology

Tissues in the Tissue Collection and Preservation table from animals identified in the Terminal Procedures table will be embedded in paraffin, sectioned, mounted on glass slides, and stained with hematoxylin and eosin.

17.2. Histopathology

Histopathological evaluation will be performed by a board-certified veterinary pathologist. Target tissues identified by the study pathologist during microscopic evaluation will be communicated to the study Director; tissues will be evaluated and reported. Any additional stains or evaluations, if deemed necessary by the pathologist, will be added by study plan amendment following discussion with the Study Director and in consultation the Sponsor.

At the discretion of the study pathologist and after acknowledgement by the Study Director, images may be captured for consultation purposes.

17.3. Pathology Peer Review

A on-site pathology peer review will be conducted by:

(b) (6)
Moderna Therapeutics
200 Technology Square, 3rd Floor
Cambridge, MA 02116
Tel: (b) (6)
E-mail: (b) (6)

The peer review statement or equivalent documentation will be included as an appendix to the Final Report.

18. CONSTRUCTED VARIABLES

Body Weight Gains	Calculated between at least each interval as well as between the beginning and end of each phase
Organ Weight relative to Body Weight	Calculated against the Terminal body weight for scheduled intervals
Organ Weight relative to Brain Weight	Calculated against the brain weight for scheduled intervals

19. STATISTICAL ANALYSIS

All statistical tests will be conducted at the 5% significance level. All pairwise comparisons will be conducted using two sided tests and will be reported at the 0.1%, 1%, and 5% levels.

Appendix 1

Numerical data collected on scheduled occasions for the listed variables will be analyzed as indicated according to sex and occasion. Descriptive statistics number, mean and standard deviation (or %CV or SE when deemed appropriate) will be reported whenever possible. Values may also be expressed as a percentage of predose or control values when deemed appropriate. Inferential statistics will be performed according to the matrix below when possible, but will exclude semi-quantitative data, and any group with less than 3 observations.

Statistical Matrix

Variables for Inferential Analysis	Statistical Method
	Parametric/ Non-Parametric
Body Weight	X
Hematology Variables	X
Coagulation Variables	X
Clinical Chemistry Variables	X
Cytokines	X
Body Temperature	X
α2-macroglobulin	X
α1-acid glycoprotein	X
Organ Weights	X
Body Weight Gains	X
Organ Weight relative to Body Weight	X
Organ Weight relative to Brain Weight	X

The following pairwise comparisons will be made:

Group 2 vs. Group 1

Group 3 vs. Group 1

Group 4 vs. Group 1

19.1. Parametric/Non-Parametric

Levene's test will be used to assess the homogeneity of group variances.

Datasets with at least 3 groups will be compared using an overall one-way ANOVA *F*-test if Levene's test is not significant or the Kruskal-Wallis test if it is. If the overall *F*-test or Kruskal-Wallis test is found to be significant, then the above pairwise comparisons will be conducted using Dunnett's or Dunn's test, respectively.

Datasets with 2 groups (the designated control group and 1 other group) will be compared using a *t*-test if Levene's test is not significant or Wilcoxon Rank-Sum test if it is.

20. COMPUTERIZED SYSTEMS

The following critical computerized systems may be used in the study. The actual critical computerized systems used will be specified in the Final Report.

Appendix 1

Data for parameters not required by study plan, which are automatically generated by analytical devices used will be retained on file but not reported. Statistical analysis results that are generated by the program but are not required by study plan and/or are not scientifically relevant will be retained on file but will not be included in the tabulations.

Critical Computerized Systems

System Name	Description of Data Collected and/or Analyzed
Provantis	In-life; clinical pathology; postmortem
Dispense	Test Material receipt, accountability and/or formulation activities
SRS (CR-MTL in-house application built with SAS) and SAS system for Windows and/or In-house reporting software Nevis 2012 (using SAS)	Statistical analyses of numerical in-life, clinical pathology and postmortem data
Mesa Laboratories AmegaView CMS	Continuous Monitoring System. Monitoring of standalone fridges, freezers, incubators, and selected laboratories to measure temperature, relative humidity, and CO2, as appropriate
Johnson Controls Metasys	Building Automation System. Control of HVAC and other building systems, as well as temperature/humidity control and trending in selected laboratories and animal rooms
Empower 3 (Waters Corporation)	Data acquisition for dose formulation analysis, including regression analysis and measurement of concentration and recovery of dose formulations using HPLC
BioPlex Manager	Cytokine data collection
Softmax Pro GxP	Elisa data collection
Watson LIMS	Biomarker data analysis
Dynamics (Wyatt)	Data acquisition for particle size analysis of the test item using DLS

21. AMENDMENTS AND DEVIATIONS

Changes to the approved study plan shall be made in the form of an amendment, which will be signed and dated by the Study Director. Every reasonable effort will be made to discuss any necessary study plan changes in advance with the Sponsor.

All study plan and SOP deviations will be documented in the study records. Deviations from the study plan and/or SOP related to the phase(s) of the study conducted at a Test Site shall be documented, acknowledged by the PI/IS, and reported to the Study Director for authorization/acknowledgement. The Study Director will notify the Sponsor of deviations that may result in a significant impact on the study as soon as possible.

22. RETENTION OF RECORDS, SAMPLES, AND SPECIMENS

All study-specific raw data, electronic data, documentation, study plan, retained samples and specimens, and interim (if applicable) and final reports will be archived by no later than the date of final report issue. All materials generated by Charles River from this study will be transferred

Appendix 1

to CR MTL archive. One year after issue of the draft report, the Sponsor will be contacted to determine the disposition of materials associated with the study.

Records to be maintained will include, but will not be limited to, documentation and data for the following:

- Study Plan, study plan amendments, and deviations
- Study schedule
- Study-related correspondence
- Test system receipt, health, and husbandry
- Test and Reference Item receipt, identification, preparation, and analysis
- In-life measurements and observations
- Clinical pathology sample collection and evaluation
- Gross and microscopic observations and related data
- Organ weight measurements
- Statistical analysis results

23. REPORTING

A comprehensive Draft Report will be prepared following completion of the study and will be finalized following consultation with the Sponsor. The report will include all information necessary to provide a complete and accurate description of the experimental methods and results and any circumstances that may have affected the quality or integrity of the study.

The Sponsor will receive an electronic version of the Draft and Final Report provided in Adobe Acrobat PDF format (hyperlinked and searchable at final) along with a Microsoft Word version of the text. The PDF document will be created from native electronic files to the extent possible, including text and tables generated by the Test Facility. Report components not available in native electronic files and/or original signature pages will be scanned and converted to PDF image files for incorporation. An original copy of the report with the Test Facility's handwritten signatures will be retained.

Reports should be finalized within 6 months of issue of the Draft Report. If the Sponsor has not provided comments to the report within 6 months of draft issue, the report will be finalized by the Test Facility unless other arrangements are made by the Sponsor.

Appendix 1

24. ANIMAL WELFARE

24.1. Institutional Animal Care and Use Committee Approval

The study plan and any amendment(s) or procedures involving the care and use of animals in this study will be reviewed and approved by CR SHB Institutional Animal Care and Use Committee (IACUC). During the study, the care and use of animals will be conducted with guidance from the USA National Research Council and the Canadian Council on Animal Care (CCAC).

Appendix 1

AMENDMENT APPROVAL

(b) (6)
(b) (6) (b) (6)

Date: 13 Apr 2017

As authorized by the Sponsor on 13 Apr 2017

SUMMARY OF CHANGES AND JUSTIFICATIONS

Study Plan effective date: 8 Mar 2017

Note: When applicable, additions are indicated in bold underlined text and deletions are indicated in bold strikethrough text in the affected sections of the document.

Item or Section(s)	Justification
Amendment 1	**Date: 15-Mar-2017**
2. PROPOSED STUDY SCHEDULE	To update the schedule due to delay in the test item documentation.
7. RESPONSIBLE PERSONNEL	To update the contact information of the ATA PI.
10.3.1. Analytical Method	To include validation number.
10.3.1.2. Stability Analysis	To clarify that stability analysis will be performed on the bulk Test Item.
15.2. Laboratory Investigations (Cytokine Analysis)	To correct a typographical error and to include clarification for sample processing.
15.3. Anti Therapeutic Antibody (ATA) Analysis	To clarify the processing of samples and update the shipping contact information.
15.4. PBMC Analysis	To change the blood collection procedure.
Amendment 2	**Date: 22-Mar-2017**
8.1. Test Item	To update information based on Summary of Analysis and to correct a typographical error.
10.2. Preparation of Test Item	To include missing information from study plan about the residual test item following formulation.
15.3. Anti Therapeutic Antibody (ATA) Analysis	To update the shipping contact information.
Amendment 3	**Date: 13-Apr-2017**
7. RESPONSIBLE PERSONNEL	To add the email address of the management contact.
8.4. Analysis of Test Item	To correct the storage conditions for samples transfer.
15.3. Anti Therapeutic Antibody (ATA) Analysis	To add a blood collection occasion on Day 29.
Amendment 4	**Date: 02-May-2017**
5.2. Test Facility-designated Subcontractor(s)	To include histopathology phase.
7. RESPONSIBLE PERSONNEL	To include the pathologist assigned to the study and to clarify the test item purity analysis.
8.4. Analysis of Test Item	To correct the wording for purity analysis as it will be performed by the analytical laboratory.
17.2. Histopathology	To include that slides will be shipped to the pathologist Test Site.
17.3. Pathology Peer Review	To update as the pathology peer review will not be performed at the Test Facility.

Appendix 1

TABLE OF CONTENTS

Appendix 1

1. OBJECTIVE(S)

The objectives of this study are to determine the potential toxicity of mRNA 1647, when given by intramuscular injection for 6 weeks (4 doses) to rats and to evaluate the potential reversibility of any findings following a 2-week recovery period.

1.1. Study Classification

Study Category:	TOX
Study Type:	Repeat Dose Toxicity
Study Design:	Parallel
Primary Treatment CAS Registry Number:	Not Available
Primary Treatment Unique Ingredient ID:	Not Available
Class of Compound:	mRNA

2. PROPOSED STUDY SCHEDULE

Proposed study dates are listed below. Actual applicable dates will be included in the Final Report.

Experimental Start Date:	08 Mar 2017
Experimental Completion Date:	29 Aug 2017 (Last date data are collected from the study)
Animal Arrival:	08 Mar 2017
Initiation of Dosing:	22 Mar 2017 (Male) 23 Mar 2017 (Female)
Completion of In-life:	05 May 2017 (Main) 18 May 2017 (Recovery) (Last date of necropsy)
Unaudited Draft Report:	17 Jul 2017
Audited Draft Report:	22 Aug 2017
Final Report:	29 Aug 2017 (Expected date of Study Director signature)

3. GUIDELINES FOR STUDY DESIGN

The design of this study was based on the study objective(s), the overall product development strategy for the Test Item, and the following study design guidelines:

- OECD Guideline 407. *Repeated Dose 28-day Oral Toxicity Study in Rodents*.

Appendix 1

- Committee for Medicinal Products for Human Use (CHMP). *Note for Guidance on Repeated Dose Toxicity*. CPMP/SWP/1042/99corr.
- ICH Harmonised Tripartite Guideline M3 (R2). *Nonclinical Safety Studies for the Conduct of Human Clinical Trials and Marketing Authorization for Pharmaceuticals*.
- Japanese Guidelines for Nonclinical Studies of Drugs Manual (1995). *Guidelines for Toxicity Studies of Drugs (Chapter 3, Repeated Dose Toxicity Studies)*.
- Appendix to Director General Notification, No. 12-Nousan-8147, 24 November 2000, Agricultural Production Bureau, Ministry of Agriculture, Forestry and Fisheries of Japan (JMAFF).

4. REGULATORY COMPLIANCE

The study will be performed in accordance with the OECD Principles of Good Laboratory Practice and as accepted by Regulatory Authorities throughout the European Union, United States of America (FDA), Japan (MHLW), and other countries that are signatories to the OECD Mutual Acceptance of Data Agreement.

Any portion of this study conducted in the USA will be performed in accordance with the U.S. Department of Health and Human Services, Food and Drug Administration. United States Code of Federal Regulations, Title 21, Part 58: Good Laboratory Practice for Nonclinical Laboratory Studies and as accepted by Regulatory Authorities throughout the European Union (OECD Principles of Good Laboratory Practice), Japan (MHLW), and other countries that are signatories to the OECD Mutual Acceptance of Data Agreement.

Exceptions to GLPs include the following study elements:

- Characterization of the Test Item will be performed by the Sponsor or Sponsor subcontractor according to established SOPs, controls, and approved test methodologies to ensure integrity and validity of the results generated; these analyses will not be conducted in compliance with the GLP or GMP regulations.
- Analysis of cytokines, α2-macroglobulin, α1-acid glycoprotein, anti-therapeutic antibody and PBMCs will be conducted using scientifically qualified methods and in accordance with all applicable analytical procedures.
- Pathology peer review

5. QUALITY ASSURANCE

5.1. Test Facility

The Test Facility Quality Assurance Program (QAP) will monitor the study to assure the facilities, equipment, personnel, methods, practices, records, and controls are in conformance with Good Laboratory Practice regulations. The QAP will review the study plan, conduct inspections at intervals adequate to assure the integrity of the study, and audit the Final Report to

Appendix 1

assure that it accurately describes the methods and standard operating procedures and that the reported results accurately reflect the raw data of the study.

The Test Facility QAP contact for this study is indicated below:

(b) (6)
Charles River Laboratories Montreal ULC

5.2. Test Facility-designated Subcontractor(s)

The following study phases performed by Test Facility-designated subcontractors will be audited by the Test Facility QAP:

- Ophthalmology

The following study phases performed by Test Facility-designated subcontractors will be audited by the respective subcontractor QAP(s):

- **Histopathology**

For all study phase(s) inspected by subcontractor QAP(s), copies of each periodic inspection report will be made available to the Study Director, Test Facility Management, and the Test Facility QAP.

Each PI will provide a report addressing their assigned phase of the study, which will be included as an appendix to the Final Report. The phase report will include the following:

- The archive site for all records, samples, specimens and reports generated from the phase or segment (alternatively, details regarding the retention of the materials may be provided to the Study Director for inclusion in the Final Report)
- A listing of critical computerized systems used in the conduct and/or interpretation of the assigned study phase

8. TEST AND REFERENCE ITEMS

8.1. Test Item

Identification:	mRNA-1647
Supplier:	Moderna Therapeutics, Inc.
Batch (Lot) Number:	MTDP17015
Concentration:	2.7 mg/mL
Retest Date:	An end-of-use analysis of the bulk Test Item will be performed to demonstrate the stability of the Test Item during the dosing period.
Physical Description:	White to off-white lipid nanoparticle dispersion

Appendix 1

Storage Conditions: Kept in a freezer set to maintain -20°C

8.2. Reference Item

Identification: Phosphate-buffered Saline (PBS) pH 7.2

Supplier: Will be included in the Final Report

Batch (Lot) Number: Will be included in the Final Report

Expiration Date: Will be included in the Final Report

Physical Description: Liquid

Storage Conditions: Kept in a controlled temperature area set to maintain 21°C

8.3. Test Item Characterization

The Sponsor will provide to the Test Facility documentation of the identity, strength, purity and composition for the Test Item. A Certificate of Analysis or equivalent documentation will be provided for inclusion in the Final Report. The Sponsor will also provide information concerning the regulatory standard that was followed for these evaluations.

The Sponsor has appropriate documentation on file concerning the method of synthesis, fabrication or derivation of the Test Item, and this information is available to the appropriate regulatory agencies should it be requested.

8.4. Analysis of Test Item

A sample (2 vials) of the Test Item will be taken on the completion of the dosing period. Analysis of bulk Test Item for concentration, particle size and purity will be performed.

The first vial will be transferred (on dry ice) to the analytical laboratory at the Test Facility for concentration and particle size analysis.

The second vial will be transferred (on dry ice) to the **analytical laboratory** ~~**molecular biology**~~ laboratory at the Test Facility for purity analysis.

Concentration, Purity and Particle size analysis will be performed by IEX- HPLC, Differential Light Scattering (DLS) and **rHPLC** ~~**capillary electrophoresis (CE)**~~ using validated **or qualified** analytical procedures.

Any residual/retained analytical samples (and Test Item used in analysis) will be discarded before issue of the Final Report.

8.5. Reserve Samples

For each batch (lot) of Test and Reference Items, a reserve sample (1 mL or 1 vial) will be collected and maintained under the appropriate storage conditions by the Test Facility.

Appendix 1

8.6. Test and Reference Item Inventory and Disposition

Records of the receipt, distribution, storage, and disposition of Test and Reference Items will be maintained. With the exception of reserve samples, all unused Sponsor-supplied bulk Test Item will be returned on dry ice to the Sponsor (after completion of dosing).

Shipping Contact
(b) (6)
Moderna Therapeutics
800 Technology Sq, 8th Floor
Cambridge MA 02476
Cell: (b) (6)
E-mail: (b) (6)

9. SAFETY

The safety precautions for the Test Item and dose formulations will be documented in a Test Material Safety Data Sheet (TMSDS) based on the information provided by the Sponsor either by an MSDS or similar document.

10. DOSE FORMULATION AND ANALYSIS

10.1. Preparation of Reference Item

Dose formulation preparations will be performed under a laminar flow hood using clean procedures.

The Reference Item, Phosphate-buffered Saline (PBS) pH 7.2, will be dispensed on days of dosing (i.e. Days 1, 15, 29 and 43) for administration to Group 1 control animals and will be used as required to dilute the bulk Test Item for administration to Groups 2 to 4 animals. The aliquots will be stored in a refrigerator set to maintain 4°C until use. They will be removed from the refrigerator and allowed to warm to room temperature for at least 30 minutes before dosing.

Any residual volumes will be discarded unless otherwise requested by the Study Director.

10.2. Preparation of Test Item

Dose formulation preparations will be performed under a laminar flow hood using clean procedures.

Test Item formulations will be diluted with PBS pH 7.2, as necessary for administration. The dosing formulations will be prepared on each days of dosing (i.e. Days 1, 15, 29 and 43) and will be stored in a refrigerator set to maintain 4°C. The dose formulations will be allowed to warm to room temperature for at least 30 minutes prior to dosing. Alternatively, the aliquots can be transferred directly to room temperature. When possible, stock vials will be used only once.

Any residual volumes of formulated Test Item and stock test item will be stored in a refrigerator set at 4°C and discarded prior to report finalization.

Appendix 1

10.3. Sample Collection and Analysis

Dose formulation samples will be collected for analysis as indicated in the following table. Additional samples may be collected and analyzed at the discretion of the Study Director.

Dose Formulation Sample Collection Schedule

Interval[b]	Homogeneity	Concentration	Sampling From
Day 1	All groups[a]	All groups	Dosing container
Day 43	N/A	All groups	Dosing container

N/A = Not applicable.

[a] The homogeneity results obtained from the top, middle and bottom preparations will be averaged and utilized as the concentration results.

[b] Samples will be collected on the first preparation of the study and on the last preparation of the study.

Samples to be analyzed will be submitted as soon as possible following collection.

All samples to be analyzed will be transferred (on ice pack) to the analytical laboratory.

Any residual/retained analytical samples (and Test Item used in analysis) will be discarded before issue of the Final Report.

10.3.1. Analytical Method

Analyses described below will be performed by IEX-HPLC using a validated analytical procedure (CR-MTL Study No.1802050).

10.3.1.1. Concentration and Homogeneity Analysis

Samples for Analysis:	Duplicate top, middle, and bottom samples (duplicate middle only from Group 1); sent for analysis as noted in Section 10.3. On days where only concentration analysis is required, the formulation will only be sampled from the middle.
Backup Samples:	Triplicate top, middle, and bottom samples (Triplicate middle only from Group 1); maintained at the Test Facility. Backup samples may be analyzed at the discretion of the Study Director. On days where only concentration analysis is required, the formulation will only be sampled from the middle.
Sampling Containers:	Appropriate sized glass containers.
Sample Volume:	0.5 mL for analysis and backup samples.
Storage Conditions:	Kept in a refrigerator set to maintain 4°C.
Acceptance Criteria:	For concentration, the criteria for acceptability will be mean sample concentration results within or equal to ± 15% of theoretical concentration. Each individual sample concentration result within or equal to ± 20%. For homogeneity, the criteria for

Appendix 1

acceptability will be a relative standard deviation (RSD) of concentrations of ≤ 5% for each group.

10.3.1.2. Stability Analysis

There will be no stability analysis performed for concentration used on this study however, end of use stability analysis of the bulk test item will be performed at the end of the dosing period.

11. TEST SYSTEM

Species:	Rat
Strain:	Crl:CD(SD) Sprague-Dawley rat
Source:	Charles River Canada Inc., St. Constant, QC, Canada
Number of Males Ordered:	60
Number of Females Ordered:	60
Target Age at Arrival:	4 to 8 weeks
Target Weight at Arrival:	126 to 150 g (males) 101 to 125 g (females)

The actual age, weight, and number of animals received will be listed in the Final Report.

11.1. Justification of Test System and Number of Animals

The Sprague Dawley rat was chosen as the animal model for this study as it is an accepted rodent species for preclinical toxicity testing by regulatory agencies.

The total number of animals to be used in this study is considered to be the minimum required to properly characterize the effects of the Test Item. This study has been designed such that it does not require an unnecessary number of animals to accomplish its objectives.

At this time, studies in laboratory animals provide the best available basis for extrapolation to humans and are required to support regulatory submissions. Acceptable models which do not use live animals currently do not exist.

11.2. Animal Identification

Each animal will be identified using a subcutaneously implanted electronic identification chip.

11.3. Environmental Acclimation

A minimum acclimation period of 14 days will be allowed between animal receipt and the start of dosing in order to accustom the animals to the laboratory environment.

Appendix 1

11.4. Selection, Assignment, Replacement, and Disposition of Animals

Animals will be assigned to groups by a stratified randomization scheme designed to achieve similar group mean body weights. Males and females will be randomized separately. Animals in poor health or at extremes of body weight range will not be assigned to groups.

Before the initiation of dosing, any assigned animals considered unsuitable for use in the study will be replaced by alternate animals obtained from the same shipment and maintained under the same environmental conditions.

After initiation of dosing, study animals may be replaced during the replacement period with alternate animals in the event of accidental injury, non-Test Item-related health issues, or similar circumstances.

The alternate animals may be used as replacements on the study within 3 days.

The disposition of all animals will be documented in the study records.

12. HUSBANDRY

12.1. Housing

Animals will be group housed (up to 3 animals of the same sex and same dosing group together) in polycarbonate cages containing appropriate bedding equipped with an automatic watering valve. These housing conditions will be maintained unless deemed inappropriate by the Study Director and/or Clinical Veterinarian. The room(s) in which the animals will be kept will be documented in the study records.

Animals will be separated during designated procedures/activities. Each cage will be clearly labeled with a color-coded cage card indicating study, group, animal number(s), and sex. Cages will be arranged on the racks in group order. Where possible, control group animals will be housed on a separate rack from the Test Item treated animals.

12.2. Environmental Conditions

The targeted conditions for animal room environment will be as follows:

Temperature:	19°C to 25°C
Humidity:	30% to 70%
Light Cycle:	12 hours light and 12 hours dark (except during designated procedures)

12.3. Food

PMI Nutrition International Certified Rodent Chow No. 5CR4 will be provided ad libitum throughout the study, except during designated procedures. The same diet in meal form may be provided to individual animals as warranted by clinical signs (e.g., broken/damaged incisors or other health changes).

Appendix 1

The feed is analyzed by the supplier for nutritional components and environmental contaminants. Results of the analysis are provided by the supplier and are on file at the Test Facility.

It is considered that there are no known contaminants in the feed that would interfere with the objectives of the study.

12.4. Water

Municipal tap water after treatment by reverse osmosis and ultraviolet irradiation will be freely available to each animal via an automatic watering system (except during designated procedures). Water bottles can be provided, if required.

Periodic analysis of the water is performed, and results of these analyses are on file at the Test Facility.

It is considered that there are no known contaminants in the water that could interfere with the outcome of the study.

12.5. Animal Enrichment

Animals will be socially housed for psychological/environmental enrichment and will be provided with items such as a hiding tube and a chewing object, except during study procedures/activities.

12.6. Veterinary Care

Veterinary care will be available throughout the course of the study and animals will be examined by the veterinary staff as warranted by clinical signs or other changes. All veterinary examinations and recommended therapeutic treatments, if any, will be documented in the study records.

In the event that animals show signs of illness or distress, the responsible veterinarian may make initial recommendations about treatment of the animal(s) and/or alteration of study procedures, which must be approved by the Study Director or Scientific designate. All such actions will be properly documented in the study records and, when appropriate, by study plan amendment. Treatment of the animal(s) for minor injuries or ailments may be approved without prior consultation with the Sponsor representative when such treatment does not impact fulfillment of the study objectives. If the condition of the animal(s) warrants significant therapeutic intervention or alterations in study procedures, the Sponsor representative will be contacted, when possible, to discuss appropriate action. If the condition of the animal(s) is such that emergency measures must be taken, the Study Director and/or clinical veterinarian will attempt to consult with the Sponsor representative prior to responding to the medical crisis, but the Study Director and/or veterinarian has authority to act immediately at his/her discretion to alleviate suffering. The Sponsor representative will be fully informed of any such events.

Appendix 1

13. EXPERIMENTAL DESIGN

Experimental Design

Group No.	Test Material	Dose Level (µg/dose)	Dose Volume (µL/dose)	Dose Concentration (mg/mL)	No. of Animals			
					Main Study		Recovery Study	
					Males	Females	Males	Females
1	Reference Item	0	200	0	10	10	5	5
2	mRNA-1647	10	200	0.05	10	10	-	-
3	mRNA-1647	30	200	0.15	10	10	-	-
4	mRNA-1647	100	200	0.5	10	10	5	5

- : Not applicable

13.1. Administration of Test and Reference Items

The Test and Reference Items will be administered to the appropriate animals via intramuscular injection into the lateral compartment of the thigh on Days 1, 15, 29 and 43, the injection site will be alternated on each dosing occasion (site 1= left; site 2= right). The volume for each dose will be administered using a syringe/needle within the demarcated area. The first day of dosing will be designated as Day 1 (exception: alternate animals used for replacement after Day 1 will assume the day of the animal being replaced).

The injection area will be marked as frequently as required to allow appropriate visualization of administration sites. Hair may be clipped or shaved if required to improve visualization of the injection sites. The injection site will be documented in the raw data for each dose administered.

13.2. Justification of Route and Dose Levels

The intramuscular route of exposure was selected because this is the intended route of human exposure.

The dose levels for this toxicology study were chosen to approximate a substantial multiple of the anticipated clinical starting dose and top clinical dose. The highest dose to be tested is expected to represent the intended maximum human clinical dose and volume and will be administered by the clinical route (intramuscular). At this dose level, minimal systemic toxicity is expected, but it is possible mild to moderate injection site reaction (redness, swelling) and potentially elevation of systemic cytokine/acute phase markers may be observed. The mid- and low-dose were selected to evaluate the dose-dependent effect of this compound.

14. IN-LIFE PROCEDURES, OBSERVATIONS, AND MEASUREMENTS

The in-life procedures, observations, and measurements listed below including Laboratory Investigations listed in section below will be performed for all main study and recovery animals, unless otherwise indicated in the respective section. During the study, additional evaluations to those described below and/or scheduled, and considered necessary by the Study Director and/or Veterinarian to assess health status will be conducted and duly documented. More frequent observations may be undertaken if considered appropriate.

Appendix 1

14.1. Mortality/Moribundity Checks

Frequency: Twice daily, once in the morning and once in the afternoon, throughout the study.

Procedure: Animals will be observed for general health/mortality and moribundity. Animals will not be removed from cage during observation, unless necessary for identification or confirmation of possible findings.

14.2. Clinical Observations

14.2.1. Detailed Clinical Observations

Frequency: Weekly during the dosing and recovery periods, and at least every two weeks during the predosing period.

Procedure: Animals removed from the cage for examination.

14.3. Local Irritation Assessment

Frequency: On days of dosing; at least 24 and 72 hours post-dose (end of each group). Weekly when there is no dosing and during the recovery period. Following Day 43 dosing, no assessment will be performed on main animals at 72 hours postdose as animals will be sent to necropsy on Day 44.

Procedure: All animals will have the dose injection site examined for signs of erythema/edema. Observations will be scored according to the Local Irritation Assessment scoring table as follows:

Erythema (Redness)	Score
No erythema	0
Very slight erythema (barely perceptible)	1
Mild erythema	2
Moderate to severe erythema	3
Severe erythema (beet redness to slight eschar formation, injury in depth)	4
Notable dermal lesion (maximized)	M
Edema (Swelling)	
No edema	0
Very slight edema (barely perceptible)	1
Slight edema	2
Moderate edema	3
Severe edema	4

Appendix 1

Any other abnormalities will be recorded as they are observed.

14.4. Body Weights

Frequency:	Weekly during the dosing and recovery periods, and at least every two weeks during the predosing period.
Procedure:	Animals will be individually weighed. A fasted weight will be recorded on the day of necropsy. Terminal body weights will not be collected from animals found dead or euthanized moribund.

14.5. Food Consumption

Frequency:	Weekly, starting Day -7, throughout the dosing and recovery periods.
Procedure:	Food consumption will be quantitatively measured except for on the day of scheduled euthanasia.

14.6. Ophthalmic Examinations

Frequency:	Once prestudy and again toward the end of Week 6 of the dosing period. During Week 2 of the recovery period if Test Item-related findings are observed during the dosing period.
Procedure:	All animals will be subjected to funduscopic (indirect ophthalmoscopy) and biomicroscopic (slit lamp) examinations. The mydriatic used will be Atropine 0.126%.
Evaluation:	A report will be included as an appendix to the Final Report.

14.7. Body Temperature

Frequency:	On Day 1 and Day 43 at predose, and 6 and 24 hours post dose (end of each group). If body temperature is significantly above normal range (36.0°C to 38.0°C) the temperature will be monitored daily till return to normal. If clinical observations indicate a possible body temperature changes measurements may be taken at the discretion of the Study Director.
Procedure:	Rectal body temperature will be recorded on un-sedated animals.

Appendix 1

15. LABORATORY EVALUATIONS

15.1. Clinical Pathology

15.1.1. Sample Collection

Blood will be collected from the abdominal aorta following isoflurane anesthesia. After collection, samples will be transferred to the appropriate laboratory for processing.

Animals will be fasted overnight before blood sampling (for clinical chemistry). Samples will be collected according to the following table.

Samples for Clinical Pathology Evaluation

Group Nos.	Time Point	Hematology	Coagulation	Clinical Chemistry	α1-acid glycoprotein/ α2-macroglubulin
1 to 4[a]	Day 44	X	X	X	X
1 and 4	Day 57	X	X	X	X
Unscheduled euthanasia (when possible)	Before euthanasia	X	X	X	X

X = Sample to be collected

[a] Samples will only be collected from those animals scheduled for euthanasia on Day 44.

Any residual/retained clinical pathology samples will be discarded before issue of the Final Report.

15.1.2. Hematology

Target Volume: 0.5 mL

Anticoagulant: EDTA

Hematology Parameters

Red blood cell count Hemoglobin concentration Hematocrit Mean corpuscular volume Red Blood Cell Distribution Width Mean corpuscular hemoglobin concentration Mean corpuscular hemoglobin Reticulocyte count (absolute) Platelet count	White blood cell count Neutrophil count (absolute) Lymphocyte count (absolute) Monocyte count (absolute) Eosinophil count (absolute) Basophil count (absolute) Large unstained cells (absolute)

A blood smear will be prepared from each hematology sample. Blood smears will be labeled, stained, and stored. Blood smears may be read to investigate results. If additional examination of blood smears is deemed necessary, the smears may be subsequently evaluated and this evaluation will be described in a study plan amendment.

Appendix 1

15.1.3. Coagulation

Target Volume: 1.2 mL (in a 1.3 mL tube)

Anticoagulant: Citrate

Processing: To plasma

Coagulation Parameters

Activated partial thromboplastin time Fibrinogen	Prothrombin time Sample Quality

15.1.4. Clinical Chemistry

Target Volume: 0.7 mL

Anticoagulant: None, collected in serum separator tube

Processing: To serum

Clinical Chemistry Parameters

Alanine aminotransferase Aspartate aminotransferase Alkaline phosphatase Gamma-glutamyltransferase Creatine Kinase Total bilirubin[a] Urea nitrogen Creatinine Calcium Phosphorus	Total protein Albumin Globulin Albumin/globulin ratio Glucose Cholesterol Triglycerides Sodium Potassium Chloride Sample Quality

[a] When total bilirubin is > 0.5 mg/dL, indirect and direct bilirubin will also be measured.

15.1.5. Bone Marrow Smear Evaluation (Optional)

Bone marrow smears will be collected and prepared as described in the Tissue Collection and Preservation table (Section 16.5). Evaluation of stained smears may be added by amendment at the discretion of the Study Director in consultation with the pathologist and the Sponsor.

15.1.6. α1-acid Glycoprotein and α2-macroglobulin Analysis

Blood will be collected via the abdominal aorta following isoflurane anesthesia before scheduled and unscheduled euthanasia for all animals.

Target Volume: 0.7 mL

Anticoagulant: None, collected in serum separator tubes

Processing: Blood samples to clot at ambient room temperature. Centrifugation for (b) (4) set at (b) (4) in a refrigerated centrifuge (set to maintain (b) (4) Samples will be processed to

Appendix 1

serum by the Immunology Department. Serum will be aliquoted into 1 x 75 µL aliquot for α2-macroglobulin and 2 x 75 µL aliquot and a leftover (if available) for α1-acid glycoprotein.

Storage conditions: Stored in a freezer set to maintain -20°C, pending analysis.

Analysis for α1-acid glycoprotein and α2-macroglobulin will be conducted using a qualified ELISA method by the Immunology Department. The procedure to be followed along with the assay acceptance criteria will be detailed in the appropriate analytical procedure.

Samples will be analyzed in duplicate. Any residual/retained samples will be discarded prior to report finalization.

15.2. Laboratory Investigations (Cytokine Analysis)

Blood will be collected from the jugular vein of all recovery animals and preterminally euthanized animals (recovery animals only). After collection, blood samples for serum will be allowed to clot at ambient room temperature and blood samples for plasma will be transferred on wet ice to the appropriate laboratory for processing.

Sample Collection Schedule

Target Blood Volume (mL)			0.5	0.5
Anticoagulant			**None (SST)**	**EDTA**
Centrifugation setting			(b) (4)	
Timepoints			**Sample Type**	
Day	**Hrs**	**No. of Males/ Females**	IFN-α	IL-1ß, IL-6, TNF-α, IP-10, MIP-1-α, MCP-1
1	6	5/5	X	X
15	6	5/5	X	X
29	6	5/5	X	X
43	6	5/5	X	X
57	N / A	5/5	X	X
Matrix			Serum	Plasma
Volume per aliquot (µL)			all volume	all volume
Number of aliquot(s)			1	1
Storage condition (set to maintain)			-80°C	-80°C
Responsible Lab			CR-SHB	CR-SHB

X = Sample to be collected; N/A = not applicable

The number of aliquots and volumes are targets that may be adjusted based on sample volume availability.

The samples will be analyzed by the Immunology department. Analysis for IL-1ß, IL-6, TNF-α, IP-10, MIP-1-α and MCP-1 will be conducted using a multiplex Luminex method. An ELISA

Appendix 1

method will be used for the analysis of IFN-α. The procedures to be followed during the course of this study along with the assays acceptance criteria will be detailed in the appropriate analytical procedure. Samples will be analyzed in duplicate.

Following Study Director approval, any residual/retained samples will be discarded prior to report finalization.

An Immunology Report for cytokine analysis will be included as an appendix to the Final Report.

15.3. Anti Therapeutic Antibody (ATA) Analysis

Blood will be collected by jugular venipuncture from the appropriate animals.

Time Points:	Before initiation of dosing, Day 29 (before dosing), Day 43 (main animals only) and Day 57 (recovery animals).
Target Volume:	0.5 mL
Anticoagulant:	None, collected in serum separator tubes
Processing:	To serum

Samples will be mixed gently and allow to clot at ambient room temperature until centrifugation, which will be carried out as soon as practical. The samples will be centrifuged for (b) (4) in a refrigerated centrifuge (set to maintain (b) (4)) at (b) (4) The resultant serum will be separated, transferred to uniquely labeled clear polypropylene tubes, frozen immediately over dry ice and transferred to a freezer set to maintain -80°C.
Samples will be shipped on dry ice to:

Shipping Contact
(b) (6)
Integrated BioTherapeutics, Inc.
4 Research Court
Suite 300
Rockville, MD 20850, USA
Tel: (b) (6)
Fax: (b) (6)
E-mail: (b) (6)

The Test Site will be notified before shipment of the samples. Upon receipt at the immunology laboratory, the samples will be stored at -80°C.

The samples will be analyzed for rat anti-CMV antibodies using a qualified ELISA method.

Any residual/retained samples will be maintained for a minimum of 6 months following issuance of the Audited Draft Report after which samples will be discarded. Alternatively, residual/retained samples will be discarded prior to the 6 month period should the issuance of the Final Report occur prior to the end of the 6 month retention period. An earlier discard of these residual/retained samples may also be requested and authorized by the Study Director.

Appendix 1

An Anti-therapeutic Antibody Report will be included as an appendix to the Final Report.

15.4. PBMC Analysis

Blood will be collected by jugular venipuncture from the appropriate animals.

Time Points:	On Day 44 (main animals only).
Target Volume:	0.5 mL
Anticoagulant:	Sodium Heparin
Storage Conditions:	Kept in a controlled temperature area set to maintain 21°C

Samples will be shipped at controlled temperature set to maintain 21°C via overnight courier to the Immunology laboratory, for whole blood stimulation and cytokine analysis, to:

Shipping Contact
(b) (6)
Cell Biology and Immunology
Southern Research
2000 Ninth Ave S
Birmingham Alabama 35205
Tel: (b) (6)
E-mail: (b) (6)

The Test Site will be notified before shipment of the samples. Upon receipt at the immunology laboratory, the samples will be stored at room temperature.

The PBMC samples will be analyzed using a qualified method.

Any residual/retained samples will be maintained for a minimum of 6 months following issuance of the Audited Draft Report after which samples will be discarded. Alternatively, residual/retained samples will be discarded prior to the 6 month period should the issuance of the Final Report occur prior to the end of the 6 month retention period. An earlier discard of these residual/retained samples may also be requested and authorized by the Study Director.

An Immunology Report for PBMC analysis will be included as an appendix to the Final Report.

Appendix 1

16. TERMINAL PROCEDURES

Terminal procedures are summarized in the following table:

Terminal Procedures for Main Study and Recovery Animals

Group No.	No. of Animals		Scheduled Euthanasia Day	Necropsy Procedures			Histology	Histopathology
	M	F		Necropsy	Tissue Collection	Organ Weights		
1	10	10	44	X	X	X	Full Tissue[a]	Full Tissue[a]
2	10	10					Full Tissue[a]	Gross Lesions Target Tissues
3	10	10					Full Tissue[a]	Gross Lesions Target Tissues
4	10	10					Full Tissue[a]	Full Tissue[a]
1	5	5	57	X	X	X	Full Tissue[a]	Full Tissue[a]
4	5	5					Full Tissue[a]	Full Tissue[a]
Unscheduled Deaths				X	X	-	Full Tissue[a]	Full Tissue[a]
Replaced animals (prestudy)[b]				X	Standard Diagnostic List	-	-	-
Replaced animals (after dosing start)				X	X	-	-	-

X = Procedure to be conducted; - = Not applicable.
[a] See Tissue Collection and Preservation table for listing of tissues.
[b] Animals found dead or euthanized before the initiation of dosing.

16.1. Unscheduled Deaths

If a main study or recovery animal dies on study, a complete necropsy examination will be conducted and specified tissues will be saved. If necessary, the animal will be refrigerated to minimize autolysis.

Main or recovery animals may be euthanized for humane reasons as per Test Facility SOPs. The samples for evaluation of laboratory evaluation will be obtained if possible as specified in Section 15. These animals will undergo exsanguination by incision from the abdominal aorta following isoflurane anesthesia unless deemed inappropriate by the Study Director and/or the clinical veterinarian and will undergo complete necropsy examination, and specified tissues will be retained. If necessary, the animal will be refrigerated (set to maintain 4°C) to minimize autolysis.

Animals found dead or euthanized before the initiation of dosing will be subject to complete necropsy examination and limited tissue retention (standard diagnostic tissue list). Any animal replaced after the start of dosing will be subject to complete necropsy examination and tissues will be retained (as per Tissue Collection and Preservation section), and any data generated will not be included in the report unless deemed appropriate by the Study Director.

Appendix 1

16.2. Scheduled Euthanasia

Main study and recovery animals surviving until scheduled euthanasia will have a terminal body weight recorded, samples for laboratory evaluation will be collected (as appropriate), and will be euthanized by exsanguination by incision from the abdominal aorta following isoflurane anesthesia. When possible, the animals will be euthanized rotating across dose groups such that similar numbers of animals from each group, including controls, will be necropsied throughout the day. Animals will be fasted overnight before their scheduled necropsy.

16.3. Necropsy

Main and recovery animals will be subjected to a complete necropsy examination, which will include evaluation of the carcass and musculoskeletal system; all external surfaces and orifices; cranial cavity and external surfaces of the brain; and thoracic, abdominal, and pelvic cavities with their associated organs and tissues.

Necropsy procedures will be performed by qualified personnel with appropriate training and experience in animal anatomy and gross pathology. A veterinary pathologist, or other suitably qualified person, will be available.

At the discretion of the necropsy supervising pathologist, images may be generated for illustration of or consultation on gross observations. Generation of such images will be documented and communicated to the Study Director. Images and associated documentation will be retained and archived.

16.4. Organ Weights

The organs identified for weighing in the Tissues Collection and Preservation table will be weighed at necropsy for all scheduled euthanasia animals. Organ weights will not be recorded for animals found dead or euthanized in poor condition or in extremis. Paired organs will be weighed together. In the event of gross abnormalities, in addition to the combined weight, the weight of each organ of a pair may be taken and entered as a tissue comment. Organ weight as a percent of body weight (using the terminal body weight) and organ weight as a percent of brain weight will be calculated.

16.5. Tissue Collection and Preservation

Representative samples of the tissues identified in the Tissue Collection and Preservation table in ATTACHMENT A will be collected from all animals and preserved in 10% neutral buffered formalin, unless otherwise indicated. Additional tissue samples may be collected to elucidate abnormal findings.

Appendix 1

17. HISTOLOGY AND HISTOPATHOLOGY

17.1. Histology

Tissues in the Tissue Collection and Preservation table from animals identified in the Terminal Procedures table will be embedded in paraffin, sectioned, mounted on glass slides, and stained with hematoxylin and eosin.

17.2. Histopathology

Histopathological evaluation will be performed by a board-certified veterinary pathologist. Target tissues identified by the study pathologist during microscopic evaluation will be communicated to the study Director; tissues will be evaluated and reported. Any additional stains or evaluations, if deemed necessary by the pathologist, will be added by study plan amendment following discussion with the Study Director and in consultation the Sponsor.

At the discretion of the study pathologist and after acknowledgement by the Study Director, images may be captured for consultation purposes.

The appropriate Charles River Laboratories, Pathology Associates Test Site will be contacted for the slide shipping address.

17.3. Pathology Peer Review

A ~~**on-site**~~ pathology peer review will be conducted by:

(b) (6)
Moderna Therapeutics
200 Technology Square, 3rd Floor
Cambridge, MA 02116
Tel: (b) (6)
E-mail: (b) (6)

The peer review statement or equivalent documentation will be included as an appendix to the Final Report.

18. CONSTRUCTED VARIABLES

Body Weight Gains	Calculated between at least each interval as well as between the beginning and end of each phase
Organ Weight relative to Body Weight	Calculated against the Terminal body weight for scheduled intervals
Organ Weight relative to Brain Weight	Calculated against the brain weight for scheduled intervals

Appendix 1

19. STATISTICAL ANALYSIS

All statistical tests will be conducted at the 5% significance level. All pairwise comparisons will be conducted using two sided tests and will be reported at the 0.1%, 1%, and 5% levels.

Numerical data collected on scheduled occasions for the listed variables will be analyzed as indicated according to sex and occasion. Descriptive statistics number, mean and standard deviation (or %CV or SE when deemed appropriate) will be reported whenever possible. Values may also be expressed as a percentage of predose or control values when deemed appropriate. Inferential statistics will be performed according to the matrix below when possible, but will exclude semi-quantitative data, and any group with less than 3 observations.

Statistical Matrix

Variables for Inferential Analysis	Statistical Method
	Parametric/ Non-Parametric
Body Weight	X
Hematology Variables	X
Coagulation Variables	X
Clinical Chemistry Variables	X
Cytokines	X
Body Temperature	X
α2-macroglobulin	X
α1-acid glycoprotein	X
Organ Weights	X
Body Weight Gains	X
Organ Weight relative to Body Weight	X
Organ Weight relative to Brain Weight	X

The following pairwise comparisons will be made:

Group 2 vs. Group 1

Group 3 vs. Group 1

Group 4 vs. Group 1

19.1. Parametric/Non-Parametric

Levene's test will be used to assess the homogeneity of group variances.

Datasets with at least 3 groups will be compared using an overall one-way ANOVA *F*-test if Levene's test is not significant or the Kruskal-Wallis test if it is. If the overall *F*-test or Kruskal-Wallis test is found to be significant, then the above pairwise comparisons will be conducted using Dunnett's or Dunn's test, respectively.

Datasets with 2 groups (the designated control group and 1 other group) will be compared using a *t*-test if Levene's test is not significant or Wilcoxon Rank-Sum test if it is.

Appendix 1

20. COMPUTERIZED SYSTEMS

The following critical computerized systems may be used in the study. The actual critical computerized systems used will be specified in the Final Report.

Data for parameters not required by study plan, which are automatically generated by analytical devices used will be retained on file but not reported. Statistical analysis results that are generated by the program but are not required by study plan and/or are not scientifically relevant will be retained on file but will not be included in the tabulations.

Critical Computerized Systems

System Name	Description of Data Collected and/or Analyzed
Provantis	In-life; clinical pathology; postmortem
Dispense	Test Material receipt, accountability and/or formulation activities
SRS (CR-MTL in-house application built with SAS) and SAS system for Windows and/or In-house reporting software Nevis 2012 (using SAS)	Statistical analyses of numerical in-life, clinical pathology and postmortem data
Mesa Laboratories AmegaView CMS	Continuous Monitoring System. Monitoring of standalone fridges, freezers, incubators, and selected laboratories to measure temperature, relative humidity, and CO2, as appropriate
Johnson Controls Metasys	Building Automation System. Control of HVAC and other building systems, as well as temperature/humidity control and trending in selected laboratories and animal rooms
Empower 3 (Waters Corporation)	Data acquisition for dose formulation analysis, including regression analysis and measurement of concentration and recovery of dose formulations using HPLC
BioPlex Manager	Cytokine data collection
Softmax Pro GxP	Elisa data collection
Watson LIMS	Biomarker data analysis
Dynamics (Wyatt)	Data acquisition for particle size analysis of the test item using DLS

21. AMENDMENTS AND DEVIATIONS

Changes to the approved study plan shall be made in the form of an amendment, which will be signed and dated by the Study Director. Every reasonable effort will be made to discuss any necessary study plan changes in advance with the Sponsor.

All study plan and SOP deviations will be documented in the study records. Deviations from the study plan and/or SOP related to the phase(s) of the study conducted at a Test Site shall be documented, acknowledged by the PI/IS, and reported to the Study Director for authorization/acknowledgement. The Study Director will notify the Sponsor of deviations that may result in a significant impact on the study as soon as possible.

Appendix 1

22. RETENTION OF RECORDS, SAMPLES, AND SPECIMENS

All study-specific raw data, electronic data, documentation, study plan, retained samples and specimens, and interim (if applicable) and final reports will be archived by no later than the date of final report issue. All materials generated by Charles River from this study will be transferred to CR MTL archive. One year after issue of the draft report, the Sponsor will be contacted to determine the disposition of materials associated with the study.

Records to be maintained will include, but will not be limited to, documentation and data for the following:

- Study Plan, study plan amendments, and deviations
- Study schedule
- Study-related correspondence
- Test system receipt, health, and husbandry
- Test and Reference Item receipt, identification, preparation, and analysis
- In-life measurements and observations
- Clinical pathology sample collection and evaluation
- Gross and microscopic observations and related data
- Organ weight measurements
- Statistical analysis results

23. REPORTING

A comprehensive Draft Report will be prepared following completion of the study and will be finalized following consultation with the Sponsor. The report will include all information necessary to provide a complete and accurate description of the experimental methods and results and any circumstances that may have affected the quality or integrity of the study.

The Sponsor will receive an electronic version of the Draft and Final Report provided in Adobe Acrobat PDF format (hyperlinked and searchable at final) along with a Microsoft Word version of the text. The PDF document will be created from native electronic files to the extent possible, including text and tables generated by the Test Facility. Report components not available in native electronic files and/or original signature pages will be scanned and converted to PDF image files for incorporation. An original copy of the report with the Test Facility's handwritten signatures will be retained.

Reports should be finalized within 6 months of issue of the Draft Report. If the Sponsor has not provided comments to the report within 6 months of draft issue, the report will be finalized by the Test Facility unless other arrangements are made by the Sponsor.

Appendix 1

24. ANIMAL WELFARE

24.1. Institutional Animal Care and Use Committee Approval

The study plan and any amendment(s) or procedures involving the care and use of animals in this study will be reviewed and approved by CR SHB Institutional Animal Care and Use Committee (IACUC). During the study, the care and use of animals will be conducted with guidance from the USA National Research Council and the Canadian Council on Animal Care (CCAC).

Appendix 1

AMENDMENT APPROVAL

(b) (6) Date: 02 May 2017

(b) (6) (b) (6)

As authorized by the Sponsor on 02 May 2017

SUMMARY OF CHANGES AND JUSTIFICATIONS

Study Plan effective date: 8 Mar 2017

Note: When applicable, additions are indicated in bold underlined text and deletions are indicated in bold strikethrough text in the affected sections of the document.

Item or Section(s)	Justification
Amendment 1	**Date: 15-Mar-2017**
2. PROPOSED STUDY SCHEDULE	To update the schedule due to delay in the test item documentation.
7. RESPONSIBLE PERSONNEL	To update the contact information of the ATA PI.
10.3.1. Analytical Method	To include validation number.
10.3.1.2. Stability Analysis	To clarify that stability analysis will be performed on the bulk Test Item.
15.2. Laboratory Investigations (Cytokine Analysis)	To correct a typographical error and to include clarification for sample processing.
15.3. Anti Therapeutic Antibody (ATA) Analysis	To clarify the processing of samples and update the shipping contact information.
15.4. PBMC Analysis	To change the blood collection procedure.
Amendment 2	**Date: 22-Mar-2017**
8.1. Test Item	To update information based on Summary of Analysis and to correct a typographical error.
10.2. Preparation of Test Item	To include missing information from study plan about the residual test item following formulation.
15.3. Anti Therapeutic Antibody (ATA) Analysis	To update the shipping contact information.
Amendment 3	**Date: 13-Apr-2017**
7. RESPONSIBLE PERSONNEL	To add the email address of the management contact.
8.4. Analysis of Test Item	To correct the storage conditions for samples transfer.
15.3. Anti Therapeutic Antibody (ATA) Analysis	To add a blood collection occasion on Day 29.
Amendment 4	**Date: 02-May-2017**
5.2. Test Facility-designated Subcontractor(s)	To include histopathology phase.
7. RESPONSIBLE PERSONNEL	To include the pathologist assigned to the study and to clarify the test item purity analysis.
8.4. Analysis of Test Item	To correct the wording for purity analysis as it will be performed by the analytical laboratory.
17.2. Histopathology	To include that slides will be shipped to the pathologist Test Site.
17.3. Pathology Peer Review	To update as the pathology peer review will not be performed at the Test Facility.
Amendment 5	
8.1. Test Item	To include clarification for TI concentration based on new summary of analysis (SoA) issued.
13. EXPERIMENTAL DESIGN	To include clarification to dose levels and dose concentrations based on new SoA issued.
17.3. Pathology Peer Review	To update as the pathology peer review will be done by EPL.

Appendix 1

TABLE OF CONTENTS

Appendix 1

1. OBJECTIVE(S)

The objectives of this study are to determine the potential toxicity of mRNA 1647, when given by intramuscular injection for 6 weeks (4 doses) to rats and to evaluate the potential reversibility of any findings following a 2-week recovery period.

1.1. Study Classification

Study Category:	TOX
Study Type:	Repeat Dose Toxicity
Study Design:	Parallel
Primary Treatment CAS Registry Number:	Not Available
Primary Treatment Unique Ingredient ID:	Not Available
Class of Compound:	mRNA

2. PROPOSED STUDY SCHEDULE

Proposed study dates are listed below. Actual applicable dates will be included in the Final Report.

Experimental Start Date:	08 Mar 2017
Experimental Completion Date:	29 Aug 2017 (Last date data are collected from the study)
Animal Arrival:	08 Mar 2017
Initiation of Dosing:	22 Mar 2017 (Male) 23 Mar 2017 (Female)
Completion of In-life:	05 May 2017 (Main) 18 May 2017 (Recovery) (Last date of necropsy)
Unaudited Draft Report:	17 Jul 2017
Audited Draft Report:	22 Aug 2017
Final Report:	29 Aug 2017 (Expected date of Study Director signature)

3. GUIDELINES FOR STUDY DESIGN

The design of this study was based on the study objective(s), the overall product development strategy for the Test Item, and the following study design guidelines:

- OECD Guideline 407. *Repeated Dose 28-day Oral Toxicity Study in Rodents*.

Appendix 1

- Committee for Medicinal Products for Human Use (CHMP). *Note for Guidance on Repeated Dose Toxicity*. CPMP/SWP/1042/99corr.
- ICH Harmonised Tripartite Guideline M3 (R2). *Nonclinical Safety Studies for the Conduct of Human Clinical Trials and Marketing Authorization for Pharmaceuticals*.
- Japanese Guidelines for Nonclinical Studies of Drugs Manual (1995). *Guidelines for Toxicity Studies of Drugs (Chapter 3, Repeated Dose Toxicity Studies)*.
- Appendix to Director General Notification, No. 12-Nousan-8147, 24 November 2000, Agricultural Production Bureau, Ministry of Agriculture, Forestry and Fisheries of Japan (JMAFF).

4. REGULATORY COMPLIANCE

The study will be performed in accordance with the OECD Principles of Good Laboratory Practice and as accepted by Regulatory Authorities throughout the European Union, United States of America (FDA), Japan (MHLW), and other countries that are signatories to the OECD Mutual Acceptance of Data Agreement.

Any portion of this study conducted in the USA will be performed in accordance with the U.S. Department of Health and Human Services, Food and Drug Administration. United States Code of Federal Regulations, Title 21, Part 58: Good Laboratory Practice for Nonclinical Laboratory Studies and as accepted by Regulatory Authorities throughout the European Union (OECD Principles of Good Laboratory Practice), Japan (MHLW), and other countries that are signatories to the OECD Mutual Acceptance of Data Agreement.

Exceptions to GLPs include the following study elements:

- Characterization of the Test Item will be performed by the Sponsor or Sponsor subcontractor according to established SOPs, controls, and approved test methodologies to ensure integrity and validity of the results generated; these analyses will not be conducted in compliance with the GLP or GMP regulations.
- Analysis of cytokines, α2-macroglobulin, α1-acid glycoprotein, anti-therapeutic antibody and PBMCs will be conducted using scientifically qualified methods and in accordance with all applicable analytical procedures.
- Pathology peer review

5. QUALITY ASSURANCE

5.1. Test Facility

The Test Facility Quality Assurance Program (QAP) will monitor the study to assure the facilities, equipment, personnel, methods, practices, records, and controls are in conformance with Good Laboratory Practice regulations. The QAP will review the study plan, conduct inspections at intervals adequate to assure the integrity of the study, and audit the Final Report to

Appendix 1

assure that it accurately describes the methods and standard operating procedures and that the reported results accurately reflect the raw data of the study.

The Test Facility QAP contact for this study is indicated below:

(b) (6)
Charles River Laboratories Montreal ULC
Senneville Site (CR-MTL)
22022 Transcanadienne

E-mail: (b) (6)

5.2. Test Facility-designated Subcontractor(s)

The following study phases performed by Test Facility-designated subcontractors will be audited by the Test Facility QAP:

- Ophthalmology

The following study phases performed by Test Facility-designated subcontractors will be audited by the respective subcontractor QAP(s):

- Histopathology

For all study phase(s) inspected by subcontractor QAP(s), copies of each periodic inspection report will be made available to the Study Director, Test Facility Management, and the Test Facility QAP.

8. TEST AND REFERENCE ITEMS

8.1. Test Item

Identification:	mRNA-1647
Supplier:	Moderna Therapeutics, Inc.
Batch (Lot) Number:	MTDP17015
Concentration:	2.7 / 2.4*mg/mL
Retest Date:	An end-of-use analysis of the bulk Test Item will be performed to demonstrate the stability of the Test Item during the dosing period.
Physical Description:	White to off-white lipid nanoparticle dispersion

Appendix 1

Storage Conditions: Kept in a freezer set to maintain -20°C

* Concentration based on SoA released on 16 March 2017 /Concentration based on SoA released on 31 May 2017

8.2. Reference Item

Identification: Phosphate-buffered Saline (PBS) pH 7.2

Supplier: Will be included in the Final Report

Batch (Lot) Number: Will be included in the Final Report

Expiration Date: Will be included in the Final Report

Physical Description: Liquid

Storage Conditions: Kept in a controlled temperature area set to maintain 21°C

8.3. Test Item Characterization

The Sponsor will provide to the Test Facility documentation of the identity, strength, purity and composition for the Test Item. A Certificate of Analysis or equivalent documentation will be provided for inclusion in the Final Report. The Sponsor will also provide information concerning the regulatory standard that was followed for these evaluations.

The Sponsor has appropriate documentation on file concerning the method of synthesis, fabrication or derivation of the Test Item, and this information is available to the appropriate regulatory agencies should it be requested.

8.4. Analysis of Test Item

A sample (2 vials) of the Test Item will be taken on the completion of the dosing period. Analysis of bulk Test Item for concentration, particle size and purity will be performed.

The first vial will be transferred (on dry ice) to the analytical laboratory at the Test Facility for concentration and particle size analysis.

The second vial will be transferred (on dry ice) to the analytical laboratory laboratory at the Test Facility for purity analysis.

Concentration, Purity and Particle size analysis will be performed by IEX- HPLC, Differential Light Scattering (DLS) and rHPLC using validated or qualified analytical procedures.

Any residual/retained analytical samples (and Test Item used in analysis) will be discarded before issue of the Final Report.

8.5. Reserve Samples

For each batch (lot) of Test and Reference Items, a reserve sample (1 mL or 1 vial) will be collected and maintained under the appropriate storage conditions by the Test Facility.

Appendix 1

8.6. Test and Reference Item Inventory and Disposition

Records of the receipt, distribution, storage, and disposition of Test and Reference Items will be maintained. With the exception of reserve samples, all unused Sponsor-supplied bulk Test Item will be returned on dry ice to the Sponsor (after completion of dosing).

Shipping Contact
(b) (6)
Moderna Therapeutics
800 Technology Sq, 8th Floor
Cambridge MA 02476
Cell: (b) (6)
E-mail: (b) (6)

9. SAFETY

The safety precautions for the Test Item and dose formulations will be documented in a Test Material Safety Data Sheet (TMSDS) based on the information provided by the Sponsor either by an MSDS or similar document.

10. DOSE FORMULATION AND ANALYSIS

10.1. Preparation of Reference Item

Dose formulation preparations will be performed under a laminar flow hood using clean procedures.

The Reference Item, Phosphate-buffered Saline (PBS) pH 7.2, will be dispensed on days of dosing (i.e. Days 1, 15, 29 and 43) for administration to Group 1 control animals and will be used as required to dilute the bulk Test Item for administration to Groups 2 to 4 animals. The aliquots will be stored in a refrigerator set to maintain 4°C until use. They will be removed from the refrigerator and allowed to warm to room temperature for at least 30 minutes before dosing.

Any residual volumes will be discarded unless otherwise requested by the Study Director.

10.2. Preparation of Test Item

Dose formulation preparations will be performed under a laminar flow hood using clean procedures.

Test Item formulations will be diluted with PBS pH 7.2, as necessary for administration. The dosing formulations will be prepared on each days of dosing (i.e. Days 1, 15, 29 and 43) and will be stored in a refrigerator set to maintain 4°C. The dose formulations will be allowed to warm to room temperature for at least 30 minutes prior to dosing. Alternatively, the aliquots can be transferred directly to room temperature. When possible, stock vials will be used only once.

Any residual volumes of formulated Test Item and stock test item will be stored in a refrigerator set at 4°C and discarded prior to report finalization.

Appendix 1

10.3. Sample Collection and Analysis

Dose formulation samples will be collected for analysis as indicated in the following table. Additional samples may be collected and analyzed at the discretion of the Study Director.

Dose Formulation Sample Collection Schedule

Interval[b]	Homogeneity	Concentration	Sampling From
Day 1	All groups[a]	All groups	Dosing container
Day 43	N/A	All groups	Dosing container

N/A = Not applicable.

[a] The homogeneity results obtained from the top, middle and bottom preparations will be averaged and utilized as the concentration results.

[b] Samples will be collected on the first preparation of the study and on the last preparation of the study.

Samples to be analyzed will be submitted as soon as possible following collection.

All samples to be analyzed will be transferred (on ice pack) to the analytical laboratory.

Any residual/retained analytical samples (and Test Item used in analysis) will be discarded before issue of the Final Report.

10.3.1. Analytical Method

Analyses described below will be performed by IEX-HPLC using a validated analytical procedure (CR-MTL Study No.1802050).

10.3.1.1. Concentration and Homogeneity Analysis

Samples for Analysis:	Duplicate top, middle, and bottom samples (duplicate middle only from Group 1); sent for analysis as noted in Section 10.3. On days where only concentration analysis is required, the formulation will only be sampled from the middle.
Backup Samples:	Triplicate top, middle, and bottom samples (Triplicate middle only from Group 1); maintained at the Test Facility. Backup samples may be analyzed at the discretion of the Study Director. On days where only concentration analysis is required, the formulation will only be sampled from the middle.
Sampling Containers:	Appropriate sized glass containers.
Sample Volume:	0.5 mL for analysis and backup samples.
Storage Conditions:	Kept in a refrigerator set to maintain 4°C.
Acceptance Criteria:	For concentration, the criteria for acceptability will be mean sample concentration results within or equal to ± 15% of theoretical concentration. Each individual sample concentration result within or equal to ± 20%. For homogeneity, the criteria for

Appendix 1

acceptability will be a relative standard deviation (RSD) of concentrations of ≤ 5% for each group.

10.3.1.2. Stability Analysis

There will be no stability analysis performed for concentration used on this study however, end of use stability analysis of the bulk test item will be performed at the end of the dosing period.

11. TEST SYSTEM

Species:	Rat
Strain:	Crl:CD(SD) Sprague-Dawley rat
Source:	Charles River Canada Inc., St. Constant, QC, Canada
Number of Males Ordered:	60
Number of Females Ordered:	60
Target Age at Arrival:	4 to 8 weeks
Target Weight at Arrival:	126 to 150 g (males) 101 to 125 g (females)

The actual age, weight, and number of animals received will be listed in the Final Report.

11.1. Justification of Test System and Number of Animals

The Sprague Dawley rat was chosen as the animal model for this study as it is an accepted rodent species for preclinical toxicity testing by regulatory agencies.

The total number of animals to be used in this study is considered to be the minimum required to properly characterize the effects of the Test Item. This study has been designed such that it does not require an unnecessary number of animals to accomplish its objectives.

At this time, studies in laboratory animals provide the best available basis for extrapolation to humans and are required to support regulatory submissions. Acceptable models which do not use live animals currently do not exist.

11.2. Animal Identification

Each animal will be identified using a subcutaneously implanted electronic identification chip.

11.3. Environmental Acclimation

A minimum acclimation period of 14 days will be allowed between animal receipt and the start of dosing in order to accustom the animals to the laboratory environment.

Appendix 1

11.4. Selection, Assignment, Replacement, and Disposition of Animals

Animals will be assigned to groups by a stratified randomization scheme designed to achieve similar group mean body weights. Males and females will be randomized separately. Animals in poor health or at extremes of body weight range will not be assigned to groups.

Before the initiation of dosing, any assigned animals considered unsuitable for use in the study will be replaced by alternate animals obtained from the same shipment and maintained under the same environmental conditions.

After initiation of dosing, study animals may be replaced during the replacement period with alternate animals in the event of accidental injury, non-Test Item-related health issues, or similar circumstances.

The alternate animals may be used as replacements on the study within 3 days.

The disposition of all animals will be documented in the study records.

12. HUSBANDRY

12.1. Housing

Animals will be group housed (up to 3 animals of the same sex and same dosing group together) in polycarbonate cages containing appropriate bedding equipped with an automatic watering valve. These housing conditions will be maintained unless deemed inappropriate by the Study Director and/or Clinical Veterinarian. The room(s) in which the animals will be kept will be documented in the study records.

Animals will be separated during designated procedures/activities. Each cage will be clearly labeled with a color-coded cage card indicating study, group, animal number(s), and sex. Cages will be arranged on the racks in group order. Where possible, control group animals will be housed on a separate rack from the Test Item treated animals.

12.2. Environmental Conditions

The targeted conditions for animal room environment will be as follows:

Temperature:	19°C to 25°C
Humidity:	30% to 70%
Light Cycle:	12 hours light and 12 hours dark (except during designated procedures)

12.3. Food

PMI Nutrition International Certified Rodent Chow No. 5CR4 will be provided ad libitum throughout the study, except during designated procedures. The same diet in meal form may be provided to individual animals as warranted by clinical signs (e.g., broken/damaged incisors or other health changes).

Appendix 1

The feed is analyzed by the supplier for nutritional components and environmental contaminants. Results of the analysis are provided by the supplier and are on file at the Test Facility.

It is considered that there are no known contaminants in the feed that would interfere with the objectives of the study.

12.4. Water

Municipal tap water after treatment by reverse osmosis and ultraviolet irradiation will be freely available to each animal via an automatic watering system (except during designated procedures). Water bottles can be provided, if required.

Periodic analysis of the water is performed, and results of these analyses are on file at the Test Facility.

It is considered that there are no known contaminants in the water that could interfere with the outcome of the study.

12.5. Animal Enrichment

Animals will be socially housed for psychological/environmental enrichment and will be provided with items such as a hiding tube and a chewing object, except during study procedures/activities.

12.6. Veterinary Care

Veterinary care will be available throughout the course of the study and animals will be examined by the veterinary staff as warranted by clinical signs or other changes. All veterinary examinations and recommended therapeutic treatments, if any, will be documented in the study records.

In the event that animals show signs of illness or distress, the responsible veterinarian may make initial recommendations about treatment of the animal(s) and/or alteration of study procedures, which must be approved by the Study Director or Scientific designate. All such actions will be properly documented in the study records and, when appropriate, by study plan amendment. Treatment of the animal(s) for minor injuries or ailments may be approved without prior consultation with the Sponsor representative when such treatment does not impact fulfillment of the study objectives. If the condition of the animal(s) warrants significant therapeutic intervention or alterations in study procedures, the Sponsor representative will be contacted, when possible, to discuss appropriate action. If the condition of the animal(s) is such that emergency measures must be taken, the Study Director and/or clinical veterinarian will attempt to consult with the Sponsor representative prior to responding to the medical crisis, but the Study Director and/or veterinarian has authority to act immediately at his/her discretion to alleviate suffering. The Sponsor representative will be fully informed of any such events.

Appendix 1

13. EXPERIMENTAL DESIGN

Experimental Design

Group No.	Test Material	Dose Level[a] (µg/dose)	Dose Volume (µL/dose)	Dose Concentration[a] (mg/mL)	No. of Animals			
					Main Study		Recovery Study	
					Males	Females	Males	Females
1	Reference Item	0	200	0	10	10	5	5
2	mRNA-1647	10/**8.9**	200	0.05/**0.045**	10	10	-	-
3	mRNA-1647	30/**27**	200	0.15/**0.14**	10	10	-	-
4	mRNA-1647	100/**89**	200	0.5/**0.45**	10	10	5	5

- : Not applicable

[a] **Values based on SoA issued on 16 March 2017 / Values based on SoA issued on 31 May 2017.**

13.1. Administration of Test and Reference Items

The Test and Reference Items will be administered to the appropriate animals via intramuscular injection into the lateral compartment of the thigh on Days 1, 15, 29 and 43, the injection site will be alternated on each dosing occasion (site 1= left; site 2= right). The volume for each dose will be administered using a syringe/needle within the demarcated area. The first day of dosing will be designated as Day 1 (exception: alternate animals used for replacement after Day 1 will assume the day of the animal being replaced).

The injection area will be marked as frequently as required to allow appropriate visualization of administration sites. Hair may be clipped or shaved if required to improve visualization of the injection sites. The injection site will be documented in the raw data for each dose administered.

13.2. Justification of Route and Dose Levels

The intramuscular route of exposure was selected because this is the intended route of human exposure.

The dose levels for this toxicology study were chosen to approximate a substantial multiple of the anticipated clinical starting dose and top clinical dose. The highest dose to be tested is expected to represent the intended maximum human clinical dose and volume and will be administered by the clinical route (intramuscular). At this dose level, minimal systemic toxicity is expected, but it is possible mild to moderate injection site reaction (redness, swelling) and potentially elevation of systemic cytokine/acute phase markers may be observed. The mid- and low-dose were selected to evaluate the dose-dependent effect of this compound.

14. IN-LIFE PROCEDURES, OBSERVATIONS, AND MEASUREMENTS

The in-life procedures, observations, and measurements listed below including Laboratory Investigations listed in section below will be performed for all main study and recovery animals, unless otherwise indicated in the respective section. During the study, additional evaluations to those described below and/or scheduled, and considered necessary by the Study Director and/or

Appendix 1

Veterinarian to assess health status will be conducted and duly documented. More frequent observations may be undertaken if considered appropriate.

14.1. Mortality/Moribundity Checks

Frequency: Twice daily, once in the morning and once in the afternoon, throughout the study.

Procedure: Animals will be observed for general health/mortality and moribundity. Animals will not be removed from cage during observation, unless necessary for identification or confirmation of possible findings.

14.2. Clinical Observations

14.2.1. Detailed Clinical Observations

Frequency: Weekly during the dosing and recovery periods, and at least every two weeks during the predosing period.

Procedure: Animals removed from the cage for examination.

14.3. Local Irritation Assessment

Frequency: On days of dosing; at least 24 and 72 hours post-dose (end of each group). Weekly when there is no dosing and during the recovery period. Following Day 43 dosing, no assessment will be performed on main animals at 72 hours postdose as animals will be sent to necropsy on Day 44.

Procedure: All animals will have the dose injection site examined for signs of erythema/edema. Observations will be scored according to the Local Irritation Assessment scoring table as follows:

Erythema (Redness)	Score
No erythema	0
Very slight erythema (barely perceptible)	1
Mild erythema	2
Moderate to severe erythema	3
Severe erythema (beet redness to slight eschar formation, injury in depth)	4
Notable dermal lesion (maximized)	M
Edema (Swelling)	
No edema	0
Very slight edema (barely perceptible)	1
Slight edema	2
Moderate edema	3

Appendix 1

Severe edema	4

Any other abnormalities will be recorded as they are observed.

14.4. Body Weights

Frequency: Weekly during the dosing and recovery periods, and at least every two weeks during the predosing period.

Procedure: Animals will be individually weighed. A fasted weight will be recorded on the day of necropsy. Terminal body weights will not be collected from animals found dead or euthanized moribund.

14.5. Food Consumption

Frequency: Weekly, starting Day -7, throughout the dosing and recovery periods.

Procedure: Food consumption will be quantitatively measured except for on the day of scheduled euthanasia.

14.6. Ophthalmic Examinations

Frequency: Once prestudy and again toward the end of Week 6 of the dosing period. During Week 2 of the recovery period if Test Item-related findings are observed during the dosing period.

Procedure: All animals will be subjected to funduscopic (indirect ophthalmoscopy) and biomicroscopic (slit lamp) examinations. The mydriatic used will be Atropine 0.126%.

Evaluation: A report will be included as an appendix to the Final Report.

14.7. Body Temperature

Frequency: On Day 1 and Day 43 at predose, and 6 and 24 hours post dose (end of each group). If body temperature is significantly above normal range (36.0°C to 38.0°C) the temperature will be monitored daily till return to normal. If clinical observations indicate a possible body temperature changes measurements may be taken at the discretion of the Study Director.

Procedure: Rectal body temperature will be recorded on un-sedated animals.

Appendix 1

15. LABORATORY EVALUATIONS

15.1. Clinical Pathology

15.1.1. Sample Collection

Blood will be collected from the abdominal aorta following isoflurane anesthesia. After collection, samples will be transferred to the appropriate laboratory for processing.

Animals will be fasted overnight before blood sampling (for clinical chemistry). Samples will be collected according to the following table.

Samples for Clinical Pathology Evaluation

Group Nos.	Time Point	Hematology	Coagulation	Clinical Chemistry	α1-acid glycoprotein/ α2-macroglubulin
1 to 4[a]	Day 44	X	X	X	X
1 and 4	Day 57	X	X	X	X
Unscheduled euthanasia (when possible)	Before euthanasia	X	X	X	X

X = Sample to be collected

[a] Samples will only be collected from those animals scheduled for euthanasia on Day 44.

Any residual/retained clinical pathology samples will be discarded before issue of the Final Report.

15.1.2. Hematology

Target Volume: 0.5 mL

Anticoagulant: EDTA

Hematology Parameters

Red blood cell count Hemoglobin concentration Hematocrit Mean corpuscular volume Red Blood Cell Distribution Width Mean corpuscular hemoglobin concentration Mean corpuscular hemoglobin Reticulocyte count (absolute) Platelet count	White blood cell count Neutrophil count (absolute) Lymphocyte count (absolute) Monocyte count (absolute) Eosinophil count (absolute) Basophil count (absolute) Large unstained cells (absolute)

A blood smear will be prepared from each hematology sample. Blood smears will be labeled, stained, and stored. Blood smears may be read to investigate results. If additional examination of blood smears is deemed necessary, the smears may be subsequently evaluated and this evaluation will be described in a study plan amendment.

Appendix 1

15.1.3. Coagulation

Target Volume: 1.2 mL (in a 1.3 mL tube)

Anticoagulant: Citrate

Processing: To plasma

Coagulation Parameters

Activated partial thromboplastin time Fibrinogen	Prothrombin time Sample Quality

15.1.4. Clinical Chemistry

Target Volume: 0.7 mL

Anticoagulant: None, collected in serum separator tube

Processing: To serum

Clinical Chemistry Parameters

Alanine aminotransferase Aspartate aminotransferase Alkaline phosphatase Gamma-glutamyltransferase Creatine Kinase Total bilirubin[a] Urea nitrogen Creatinine Calcium Phosphorus	Total protein Albumin Globulin Albumin/globulin ratio Glucose Cholesterol Triglycerides Sodium Potassium Chloride Sample Quality

[a] When total bilirubin is > 0.5 mg/dL, indirect and direct bilirubin will also be measured.

15.1.5. Bone Marrow Smear Evaluation (Optional)

Bone marrow smears will be collected and prepared as described in the Tissue Collection and Preservation table (Section 16.5). Evaluation of stained smears may be added by amendment at the discretion of the Study Director in consultation with the pathologist and the Sponsor.

15.1.6. α1-acid Glycoprotein and α2-macroglobulin Analysis

Blood will be collected via the abdominal aorta following isoflurane anesthesia before scheduled and unscheduled euthanasia for all animals.

Target Volume: 0.7 mL

Anticoagulant: None, collected in serum separator tubes

Processing: Blood samples to clot at ambient room temperature. Centrifugation for (b) (4) set at (b) (4) in a refrigerated centrifuge (set to maintain (b) (4)). Samples will be processed to

Appendix 1

serum by the Immunology Department. Serum will be aliquoted into 1 x 75 µL aliquot for α2-macroglobulin and 2 x 75 µL aliquot and a leftover (if available) for α1-acid glycoprotein.

Storage conditions: Stored in a freezer set to maintain -20°C, pending analysis.

Analysis for α1-acid glycoprotein and α2-macroglobulin will be conducted using a qualified ELISA method by the Immunology Department. The procedure to be followed along with the assay acceptance criteria will be detailed in the appropriate analytical procedure.

Samples will be analyzed in duplicate. Any residual/retained samples will be discarded prior to report finalization.

15.2. Laboratory Investigations (Cytokine Analysis)

Blood will be collected from the jugular vein of all recovery animals and preterminally euthanized animals (recovery animals only). After collection, blood samples for serum will be allowed to clot at ambient room temperature and blood samples for plasma will be transferred on wet ice to the appropriate laboratory for processing.

Sample Collection Schedule

Target Blood Volume (mL)			0.5	0.5
Anticoagulant			**None (SST)**	**EDTA**
Centrifugation setting			(b) (4)	
Timepoints			**Sample Type**	
Day	**Hrs**	**No. of Males/ Females**	IFN-α	IL-1ß, IL-6, TNF-α, IP-10, MIP-1-α, MCP-1
1	6	5/5	X	X
15	6	5/5	X	X
29	6	5/5	X	X
43	6	5/5	X	X
57	N / A	5/5	X	X
Matrix			Serum	Plasma
Volume per aliquot (µL)			all volume	all volume
Number of aliquot(s)			1	1
Storage condition (set to maintain)			-80°C	-80°C
Responsible Lab			CR-SHB	CR-SHB

X = Sample to be collected; N/A = not applicable

The number of aliquots and volumes are targets that may be adjusted based on sample volume availability.

The samples will be analyzed by the Immunology department. Analysis for IL-1ß, IL-6, TNF-α, IP-10, MIP-1-α and MCP-1 will be conducted using a multiplex Luminex method. An ELISA

Appendix 1

method will be used for the analysis of IFN-α. The procedures to be followed during the course of this study along with the assays acceptance criteria will be detailed in the appropriate analytical procedure. Samples will be analyzed in duplicate.

Following Study Director approval, any residual/retained samples will be discarded prior to report finalization.

An Immunology Report for cytokine analysis will be included as an appendix to the Final Report.

15.3. Anti Therapeutic Antibody (ATA) Analysis

Blood will be collected by jugular venipuncture from the appropriate animals.

Time Points:	Before initiation of dosing, Day 29 (before dosing), Day 43 (main animals only) and Day 57 (recovery animals).
Target Volume:	0.5 mL
Anticoagulant:	None, collected in serum separator tubes
Processing:	To serum

Samples will be mixed gently and allow to clot at ambient room temperature until centrifugation, which will be carried out as soon as practical. The samples will be centrifuged for (b) (4) in a refrigerated centrifuge (set to maintain (b) (4) at (b) (4) The resultant serum will be separated, transferred to uniquely labeled clear polypropylene tubes, frozen immediately over dry ice and transferred to a freezer set to maintain -80°C.
Samples will be shipped on dry ice to:

Shipping Contact
(b) (6)
Integrated BioTherapeutics, Inc.
4 Research Court
Suite 300
Rockville, MD 20850, USA
Tel: (b) (6)
Fax: (b) (6)
E-mail: (b) (6)

The Test Site will be notified before shipment of the samples. Upon receipt at the immunology laboratory, the samples will be stored at -80°C.

The samples will be analyzed for rat anti-CMV antibodies using a qualified ELISA method.

Any residual/retained samples will be maintained for a minimum of 6 months following issuance of the Audited Draft Report after which samples will be discarded. Alternatively, residual/retained samples will be discarded prior to the 6 month period should the issuance of the Final Report occur prior to the end of the 6 month retention period. An earlier discard of these residual/retained samples may also be requested and authorized by the Study Director.

Appendix 1

An Anti-therapeutic Antibody Report will be included as an appendix to the Final Report.

15.4. PBMC Analysis

Blood will be collected by jugular venipuncture from the appropriate animals.

Time Points:	On Day 44 (main animals only).
Target Volume:	0.5 mL
Anticoagulant:	Sodium Heparin
Storage Conditions:	Kept in a controlled temperature area set to maintain 21°C

Samples will be shipped at controlled temperature set to maintain 21°C via overnight courier to the Immunology laboratory, for whole blood stimulation and cytokine analysis, to:

Shipping Contact
(b) (6)
Cell Biology and Immunology
Southern Research
2000 Ninth Ave S
Birmingham Alabama 35205
Tel: (b) (6)
E-mail: (b) (6)

The Test Site will be notified before shipment of the samples. Upon receipt at the immunology laboratory, the samples will be stored at room temperature.

The PBMC samples will be analyzed using a qualified method.

Any residual/retained samples will be maintained for a minimum of 6 months following issuance of the Audited Draft Report after which samples will be discarded. Alternatively, residual/retained samples will be discarded prior to the 6 month period should the issuance of the Final Report occur prior to the end of the 6 month retention period. An earlier discard of these residual/retained samples may also be requested and authorized by the Study Director.

An Immunology Report for PBMC analysis will be included as an appendix to the Final Report.

Appendix 1

16. TERMINAL PROCEDURES

Terminal procedures are summarized in the following table:

Terminal Procedures for Main Study and Recovery Animals

Group No.	No. of Animals		Scheduled Euthanasia Day	Necropsy Procedures			Histology	Histopathology
	M	F		Necropsy	Tissue Collection	Organ Weights		
1	10	10	44	X	X	X	Full Tissue[a]	Full Tissue[a]
2	10	10					Full Tissue[a]	Gross Lesions Target Tissues
3	10	10					Full Tissue[a]	Gross Lesions Target Tissues
4	10	10					Full Tissue[a]	Full Tissue[a]
1	5	5	57	X	X	X	Full Tissue[a]	Full Tissue[a]
4	5	5					Full Tissue[a]	Full Tissue[a]
Unscheduled Deaths				X	X	-	Full Tissue[a]	Full Tissue[a]
Replaced animals (prestudy)[b]				X	Standard Diagnostic List	-	-	-
Replaced animals (after dosing start)				X	X	-	-	-

X = Procedure to be conducted; - = Not applicable.
[a] See Tissue Collection and Preservation table for listing of tissues.
[b] Animals found dead or euthanized before the initiation of dosing.

16.1. Unscheduled Deaths

If a main study or recovery animal dies on study, a complete necropsy examination will be conducted and specified tissues will be saved. If necessary, the animal will be refrigerated to minimize autolysis.

Main or recovery animals may be euthanized for humane reasons as per Test Facility SOPs. The samples for evaluation of laboratory evaluation will be obtained if possible as specified in Section 15. These animals will undergo exsanguination by incision from the abdominal aorta following isoflurane anesthesia unless deemed inappropriate by the Study Director and/or the clinical veterinarian and will undergo complete necropsy examination, and specified tissues will be retained. If necessary, the animal will be refrigerated (set to maintain 4°C) to minimize autolysis.

Animals found dead or euthanized before the initiation of dosing will be subject to complete necropsy examination and limited tissue retention (standard diagnostic tissue list). Any animal replaced after the start of dosing will be subject to complete necropsy examination and tissues will be retained (as per Tissue Collection and Preservation section), and any data generated will not be included in the report unless deemed appropriate by the Study Director.

Appendix 1

16.2. Scheduled Euthanasia

Main study and recovery animals surviving until scheduled euthanasia will have a terminal body weight recorded, samples for laboratory evaluation will be collected (as appropriate), and will be euthanized by exsanguination by incision from the abdominal aorta following isoflurane anesthesia. When possible, the animals will be euthanized rotating across dose groups such that similar numbers of animals from each group, including controls, will be necropsied throughout the day. Animals will be fasted overnight before their scheduled necropsy.

16.3. Necropsy

Main and recovery animals will be subjected to a complete necropsy examination, which will include evaluation of the carcass and musculoskeletal system; all external surfaces and orifices; cranial cavity and external surfaces of the brain; and thoracic, abdominal, and pelvic cavities with their associated organs and tissues.

Necropsy procedures will be performed by qualified personnel with appropriate training and experience in animal anatomy and gross pathology. A veterinary pathologist, or other suitably qualified person, will be available.

At the discretion of the necropsy supervising pathologist, images may be generated for illustration of or consultation on gross observations. Generation of such images will be documented and communicated to the Study Director. Images and associated documentation will be retained and archived.

16.4. Organ Weights

The organs identified for weighing in the Tissues Collection and Preservation table will be weighed at necropsy for all scheduled euthanasia animals. Organ weights will not be recorded for animals found dead or euthanized in poor condition or in extremis. Paired organs will be weighed together. In the event of gross abnormalities, in addition to the combined weight, the weight of each organ of a pair may be taken and entered as a tissue comment. Organ weight as a percent of body weight (using the terminal body weight) and organ weight as a percent of brain weight will be calculated.

16.5. Tissue Collection and Preservation

Representative samples of the tissues identified in the Tissue Collection and Preservation table in ATTACHMENT A will be collected from all animals and preserved in 10% neutral buffered formalin, unless otherwise indicated. Additional tissue samples may be collected to elucidate abnormal findings.

Appendix 1

17. HISTOLOGY AND HISTOPATHOLOGY

17.1. Histology

Tissues in the Tissue Collection and Preservation table from animals identified in the Terminal Procedures table will be embedded in paraffin, sectioned, mounted on glass slides, and stained with hematoxylin and eosin.

17.2. Histopathology

Histopathological evaluation will be performed by a board-certified veterinary pathologist. Target tissues identified by the study pathologist during microscopic evaluation will be communicated to the study Director; tissues will be evaluated and reported. Any additional stains or evaluations, if deemed necessary by the pathologist, will be added by study plan amendment following discussion with the Study Director and in consultation the Sponsor.

At the discretion of the study pathologist and after acknowledgement by the Study Director, images may be captured for consultation purposes.

The appropriate Charles River Laboratories, Pathology Associates Test Site will be contacted for the slide shipping address.

17.3. Pathology Peer Review

A pathology peer review will be conducted by **a Sponsor-designated pathologist**:

~~**Cambridge, MA 02116**~~
~~**Tel:**~~ (b) (6)
~~**E-mail:**~~ (b) (6)

(b) (6)
Experimental Pathology Laboratories, Inc.
PO Box 12766
Research Triangle Park, NC 27709
Tel.: (b) (6)
Fax: (b) (6)
Email: (b) (6)

Appendix 1

The peer review statement or equivalent documentation will be included as an appendix to the Final Report.

18. CONSTRUCTED VARIABLES

Body Weight Gains	Calculated between at least each interval as well as between the beginning and end of each phase
Organ Weight relative to Body Weight	Calculated against the Terminal body weight for scheduled intervals
Organ Weight relative to Brain Weight	Calculated against the brain weight for scheduled intervals

19. STATISTICAL ANALYSIS

All statistical tests will be conducted at the 5% significance level. All pairwise comparisons will be conducted using two sided tests and will be reported at the 0.1%, 1%, and 5% levels.

Numerical data collected on scheduled occasions for the listed variables will be analyzed as indicated according to sex and occasion. Descriptive statistics number, mean and standard deviation (or %CV or SE when deemed appropriate) will be reported whenever possible. Values may also be expressed as a percentage of predose or control values when deemed appropriate. Inferential statistics will be performed according to the matrix below when possible, but will exclude semi-quantitative data, and any group with less than 3 observations.

Statistical Matrix

Variables for Inferential Analysis	Statistical Method
	Parametric/ Non-Parametric
Body Weight	X
Hematology Variables	X
Coagulation Variables	X
Clinical Chemistry Variables	X
Cytokines	X
Body Temperature	X
α2-macroglobulin	X
α1-acid glycoprotein	X
Organ Weights	X
Body Weight Gains	X
Organ Weight relative to Body Weight	X
Organ Weight relative to Brain Weight	X

The following pairwise comparisons will be made:

Group 2 vs. Group 1

Group 3 vs. Group 1

Group 4 vs. Group 1

Appendix 1

19.1. Parametric/Non-Parametric

Levene's test will be used to assess the homogeneity of group variances.

Datasets with at least 3 groups will be compared using an overall one-way ANOVA *F*-test if Levene's test is not significant or the Kruskal-Wallis test if it is. If the overall *F*-test or Kruskal-Wallis test is found to be significant, then the above pairwise comparisons will be conducted using Dunnett's or Dunn's test, respectively.

Datasets with 2 groups (the designated control group and 1 other group) will be compared using a *t*-test if Levene's test is not significant or Wilcoxon Rank-Sum test if it is.

20. COMPUTERIZED SYSTEMS

The following critical computerized systems may be used in the study. The actual critical computerized systems used will be specified in the Final Report.

Data for parameters not required by study plan, which are automatically generated by analytical devices used will be retained on file but not reported. Statistical analysis results that are generated by the program but are not required by study plan and/or are not scientifically relevant will be retained on file but will not be included in the tabulations.

Critical Computerized Systems

System Name	Description of Data Collected and/or Analyzed
Provantis	In-life; clinical pathology; postmortem
Dispense	Test Material receipt, accountability and/or formulation activities
SRS (CR-MTL in-house application built with SAS) and SAS system for Windows and/or In-house reporting software Nevis 2012 (using SAS)	Statistical analyses of numerical in-life, clinical pathology and postmortem data
Mesa Laboratories AmegaView CMS	Continuous Monitoring System. Monitoring of standalone fridges, freezers, incubators, and selected laboratories to measure temperature, relative humidity, and CO2, as appropriate
Johnson Controls Metasys	Building Automation System. Control of HVAC and other building systems, as well as temperature/humidity control and trending in selected laboratories and animal rooms
Empower 3 (Waters Corporation)	Data acquisition for dose formulation analysis, including regression analysis and measurement of concentration and recovery of dose formulations using HPLC
BioPlex Manager	Cytokine data collection
Softmax Pro GxP	Elisa data collection
Watson LIMS	Biomarker data analysis
Dynamics (Wyatt)	Data acquisition for particle size analysis of the test item using DLS

Appendix 1

21. AMENDMENTS AND DEVIATIONS

Changes to the approved study plan shall be made in the form of an amendment, which will be signed and dated by the Study Director. Every reasonable effort will be made to discuss any necessary study plan changes in advance with the Sponsor.

All study plan and SOP deviations will be documented in the study records. Deviations from the study plan and/or SOP related to the phase(s) of the study conducted at a Test Site shall be documented, acknowledged by the PI/IS, and reported to the Study Director for authorization/acknowledgement. The Study Director will notify the Sponsor of deviations that may result in a significant impact on the study as soon as possible.

22. RETENTION OF RECORDS, SAMPLES, AND SPECIMENS

All study-specific raw data, electronic data, documentation, study plan, retained samples and specimens, and interim (if applicable) and final reports will be archived by no later than the date of final report issue. All materials generated by Charles River from this study will be transferred to CR MTL archive. One year after issue of the draft report, the Sponsor will be contacted to determine the disposition of materials associated with the study.

Records to be maintained will include, but will not be limited to, documentation and data for the following:

- Study Plan, study plan amendments, and deviations
- Study schedule
- Study-related correspondence
- Test system receipt, health, and husbandry
- Test and Reference Item receipt, identification, preparation, and analysis
- In-life measurements and observations
- Clinical pathology sample collection and evaluation
- Gross and microscopic observations and related data
- Organ weight measurements
- Statistical analysis results

23. REPORTING

A comprehensive Draft Report will be prepared following completion of the study and will be finalized following consultation with the Sponsor. The report will include all information necessary to provide a complete and accurate description of the experimental methods and results and any circumstances that may have affected the quality or integrity of the study.

Appendix 1

The Sponsor will receive an electronic version of the Draft and Final Report provided in Adobe Acrobat PDF format (hyperlinked and searchable at final) along with a Microsoft Word version of the text. The PDF document will be created from native electronic files to the extent possible, including text and tables generated by the Test Facility. Report components not available in native electronic files and/or original signature pages will be scanned and converted to PDF image files for incorporation. An original copy of the report with the Test Facility's handwritten signatures will be retained.

Reports should be finalized within 6 months of issue of the Draft Report. If the Sponsor has not provided comments to the report within 6 months of draft issue, the report will be finalized by the Test Facility unless other arrangements are made by the Sponsor.

Appendix 1

24. ANIMAL WELFARE

24.1. Institutional Animal Care and Use Committee Approval

The study plan and any amendment(s) or procedures involving the care and use of animals in this study will be reviewed and approved by CR SHB Institutional Animal Care and Use Committee (IACUC). During the study, the care and use of animals will be conducted with guidance from the USA National Research Council and the Canadian Council on Animal Care (CCAC).

Appendix 1

AMENDMENT APPROVAL

(b) (6) _____ Date: 27 Jun 2017

As authorized by the Sponsor on 26 Jun 2017

SUMMARY OF CHANGES AND JUSTIFICATIONS

Study Plan effective date: 8 Mar 2017

Note: When applicable, additions are indicated in bold underlined text and deletions are indicated in bold strikethrough text in the affected sections of the document.

Item or Section(s)	Justification
Amendment 1	**Date: 15-Mar-2017**
2. PROPOSED STUDY SCHEDULE	To update the schedule due to delay in the test item documentation.
7. RESPONSIBLE PERSONNEL	To update the contact information of the ATA PI.
10.3.1. Analytical Method	To include validation number.
10.3.1.2. Stability Analysis	To clarify that stability analysis will be performed on the bulk Test Item.
15.2. Laboratory Investigations (Cytokine Analysis)	To correct a typographical error and to include clarification for sample processing.
15.3. Anti Therapeutic Antibody (ATA) Analysis	To clarify the processing of samples and update the shipping contact information.
15.4. PBMC Analysis	To change the blood collection procedure.
Amendment 2	**Date: 22-Mar-2017**
8.1. Test Item	To update information based on Summary of Analysis and to correct a typographical error.
10.2. Preparation of Test Item	To include missing information from study plan about the residual test item following formulation.
15.3. Anti Therapeutic Antibody (ATA) Analysis	To update the shipping contact information.
Amendment 3	**Date: 13-Apr-2017**
7. RESPONSIBLE PERSONNEL	To add the email address of the management contact.
8.4. Analysis of Test Item	To correct the storage conditions for samples transfer.
15.3. Anti Therapeutic Antibody (ATA) Analysis	To add a blood collection occasion on Day 29.
Amendment 4	**Date: 02-May-2017**
5.2. Test Facility-designated Subcontractor(s)	To include histopathology phase.
7. RESPONSIBLE PERSONNEL	To include the pathologist assigned to the study and to clarify the test item purity analysis.
8.4. Analysis of Test Item	To correct the wording for purity analysis as it will be performed by the analytical laboratory.
17.2. Histopathology	To include that slides will be shipped to the pathologist Test Site.
17.3. Pathology Peer Review	To update as the pathology peer review will not be performed at the Test Facility.
Amendment 5	**Date: 27-Jun-2017**
8.1. Test Item	To include clarification for TI concentration based on new summary of analysis (SoA) issued.
13. EXPERIMENTAL DESIGN	To include clarification to dose levels and dose concentrations based on new SoA issued.
17.3. Pathology Peer Review	To update as the pathology peer review will be done by EPL.
Amendment 6	

Appendix 1

Item or Section(s)	Justification
15.2 Laboratory Investigations (Cytokine Analysis)	To remove IFN-α from the list of cytokine to be analyzed as we were not able to appropriately validate an assay for the analysis.

Appendix 1

TABLE OF CONTENTS

Appendix 1

1. OBJECTIVE(S)

The objectives of this study are to determine the potential toxicity of mRNA 1647, when given by intramuscular injection for 6 weeks (4 doses) to rats and to evaluate the potential reversibility of any findings following a 2-week recovery period.

1.1. Study Classification

Study Category:	TOX
Study Type:	Repeat Dose Toxicity
Study Design:	Parallel
Primary Treatment CAS Registry Number:	Not Available
Primary Treatment Unique Ingredient ID:	Not Available
Class of Compound:	mRNA

2. PROPOSED STUDY SCHEDULE

Proposed study dates are listed below. Actual applicable dates will be included in the Final Report.

Experimental Start Date:	08 Mar 2017
Experimental Completion Date:	29 Aug 2017 (Last date data are collected from the study)
Animal Arrival:	08 Mar 2017
Initiation of Dosing:	22 Mar 2017 (Male) 23 Mar 2017 (Female)
Completion of In-life:	05 May 2017 (Main) 18 May 2017 (Recovery) (Last date of necropsy)
Unaudited Draft Report:	17 Jul 2017
Audited Draft Report:	22 Aug 2017
Final Report:	29 Aug 2017 (Expected date of Study Director signature)

3. GUIDELINES FOR STUDY DESIGN

The design of this study was based on the study objective(s), the overall product development strategy for the Test Item, and the following study design guidelines:

- OECD Guideline 407. *Repeated Dose 28-day Oral Toxicity Study in Rodents*.

Appendix 1

- Committee for Medicinal Products for Human Use (CHMP). *Note for Guidance on Repeated Dose Toxicity*. CPMP/SWP/1042/99corr.
- ICH Harmonised Tripartite Guideline M3 (R2). *Nonclinical Safety Studies for the Conduct of Human Clinical Trials and Marketing Authorization for Pharmaceuticals*.
- Japanese Guidelines for Nonclinical Studies of Drugs Manual (1995). *Guidelines for Toxicity Studies of Drugs (Chapter 3, Repeated Dose Toxicity Studies)*.
- Appendix to Director General Notification, No. 12-Nousan-8147, 24 November 2000, Agricultural Production Bureau, Ministry of Agriculture, Forestry and Fisheries of Japan (JMAFF).

4. REGULATORY COMPLIANCE

The study will be performed in accordance with the OECD Principles of Good Laboratory Practice and as accepted by Regulatory Authorities throughout the European Union, United States of America (FDA), Japan (MHLW), and other countries that are signatories to the OECD Mutual Acceptance of Data Agreement.

Any portion of this study conducted in the USA will be performed in accordance with the U.S. Department of Health and Human Services, Food and Drug Administration. United States Code of Federal Regulations, Title 21, Part 58: Good Laboratory Practice for Nonclinical Laboratory Studies and as accepted by Regulatory Authorities throughout the European Union (OECD Principles of Good Laboratory Practice), Japan (MHLW), and other countries that are signatories to the OECD Mutual Acceptance of Data Agreement.

Exceptions to GLPs include the following study elements:

- Characterization of the Test Item will be performed by the Sponsor or Sponsor subcontractor according to established SOPs, controls, and approved test methodologies to ensure integrity and validity of the results generated; these analyses will not be conducted in compliance with the GLP or GMP regulations.
- Analysis of cytokines, α2-macroglobulin, α1-acid glycoprotein, anti-therapeutic antibody and PBMCs will be conducted using scientifically qualified methods and in accordance with all applicable analytical procedures.
- Pathology peer review

5. QUALITY ASSURANCE

5.1. Test Facility

The Test Facility Quality Assurance Program (QAP) will monitor the study to assure the facilities, equipment, personnel, methods, practices, records, and controls are in conformance with Good Laboratory Practice regulations. The QAP will review the study plan, conduct inspections at intervals adequate to assure the integrity of the study, and audit the Final Report to

Appendix 1

assure that it accurately describes the methods and standard operating procedures and that the reported results accurately reflect the raw data of the study.

The Test Facility QAP contact for this study is indicated below:

(b) (6)
Charles River Laboratories Montreal ULC
Senneville Site (CR-MTL)
22022 Transcanadienne
Senneville, QC H9X 3R3

5.2. Test Facility-designated Subcontractor(s)

The following study phases performed by Test Facility-designated subcontractors will be audited by the Test Facility QAP:

- Ophthalmology

The following study phases performed by Test Facility-designated subcontractors will be audited by the respective subcontractor QAP(s):

- Histopathology

For all study phase(s) inspected by subcontractor QAP(s), copies of each periodic inspection report will be made available to the Study Director, Test Facility Management, and the Test Facility QAP.

8. TEST AND REFERENCE ITEMS

8.1. Test Item

Identification:	mRNA-1647
Supplier:	Moderna Therapeutics, Inc.
Batch (Lot) Number:	MTDP17015
Concentration:	2.7 / 2.4*mg/mL
Retest Date:	An end-of-use analysis of the bulk Test Item will be performed to demonstrate the stability of the Test Item during the dosing period.
Physical Description:	White to off-white lipid nanoparticle dispersion

Appendix 1

Storage Conditions: Kept in a freezer set to maintain -20°C

* Concentration based on SoA released on 16 March 2017 /Concentration based on SoA released on 31 May 2017

8.2. Reference Item

Identification: Phosphate-buffered Saline (PBS) pH 7.2

Supplier: Will be included in the Final Report

Batch (Lot) Number: Will be included in the Final Report

Expiration Date: Will be included in the Final Report

Physical Description: Liquid

Storage Conditions: Kept in a controlled temperature area set to maintain 21°C

8.3. Test Item Characterization

The Sponsor will provide to the Test Facility documentation of the identity, strength, purity and composition for the Test Item. A Certificate of Analysis or equivalent documentation will be provided for inclusion in the Final Report. The Sponsor will also provide information concerning the regulatory standard that was followed for these evaluations.

The Sponsor has appropriate documentation on file concerning the method of synthesis, fabrication or derivation of the Test Item, and this information is available to the appropriate regulatory agencies should it be requested.

8.4. Analysis of Test Item

A sample (2 vials) of the Test Item will be taken on the completion of the dosing period. Analysis of bulk Test Item for concentration, particle size and purity will be performed.

The first vial will be transferred (on dry ice) to the analytical laboratory at the Test Facility for concentration and particle size analysis.

The second vial will be transferred (on dry ice) to the analytical laboratory laboratory at the Test Facility for purity analysis.

Concentration, Purity and Particle size analysis will be performed by IEX- HPLC, Differential Light Scattering (DLS) and rHPLC using validated or qualified analytical procedures.

Any residual/retained analytical samples (and Test Item used in analysis) will be discarded before issue of the Final Report.

8.5. Reserve Samples

For each batch (lot) of Test and Reference Items, a reserve sample (1 mL or 1 vial) will be collected and maintained under the appropriate storage conditions by the Test Facility.

Appendix 1

8.6. Test and Reference Item Inventory and Disposition

Records of the receipt, distribution, storage, and disposition of Test and Reference Items will be maintained. With the exception of reserve samples, all unused Sponsor-supplied bulk Test Item will be returned on dry ice to the Sponsor (after completion of dosing).

Shipping Contact

Moderna Therapeutics
800 Technology Sq, 8th Floor
Cambridge MA 02476
Cell: (b) (6)
E-mail: (b) (6)

9. SAFETY

The safety precautions for the Test Item and dose formulations will be documented in a Test Material Safety Data Sheet (TMSDS) based on the information provided by the Sponsor either by an MSDS or similar document.

10. DOSE FORMULATION AND ANALYSIS

10.1. Preparation of Reference Item

Dose formulation preparations will be performed under a laminar flow hood using clean procedures.

The Reference Item, Phosphate-buffered Saline (PBS) pH 7.2, will be dispensed on days of dosing (i.e. Days 1, 15, 29 and 43) for administration to Group 1 control animals and will be used as required to dilute the bulk Test Item for administration to Groups 2 to 4 animals. The aliquots will be stored in a refrigerator set to maintain 4°C until use. They will be removed from the refrigerator and allowed to warm to room temperature for at least 30 minutes before dosing.

Any residual volumes will be discarded unless otherwise requested by the Study Director.

10.2. Preparation of Test Item

Dose formulation preparations will be performed under a laminar flow hood using clean procedures.

Test Item formulations will be diluted with PBS pH 7.2, as necessary for administration. The dosing formulations will be prepared on each days of dosing (i.e. Days 1, 15, 29 and 43) and will be stored in a refrigerator set to maintain 4°C. The dose formulations will be allowed to warm to room temperature for at least 30 minutes prior to dosing. Alternatively, the aliquots can be transferred directly to room temperature. When possible, stock vials will be used only once.

Any residual volumes of formulated Test Item and stock test item will be stored in a refrigerator set at 4°C and discarded prior to report finalization.

Appendix 1

10.3. Sample Collection and Analysis

Dose formulation samples will be collected for analysis as indicated in the following table. Additional samples may be collected and analyzed at the discretion of the Study Director.

Dose Formulation Sample Collection Schedule

Interval[b]	Homogeneity	Concentration	Sampling From
Day 1	All groups[a]	All groups	Dosing container
Day 43	N/A	All groups	Dosing container

N/A = Not applicable.

[a] The homogeneity results obtained from the top, middle and bottom preparations will be averaged and utilized as the concentration results.

[b] Samples will be collected on the first preparation of the study and on the last preparation of the study.

Samples to be analyzed will be submitted as soon as possible following collection.

All samples to be analyzed will be transferred (on ice pack) to the analytical laboratory.

Any residual/retained analytical samples (and Test Item used in analysis) will be discarded before issue of the Final Report.

10.3.1. Analytical Method

Analyses described below will be performed by IEX-HPLC using a validated analytical procedure (CR-MTL Study No.1802050).

10.3.1.1. Concentration and Homogeneity Analysis

Samples for Analysis:	Duplicate top, middle, and bottom samples (duplicate middle only from Group 1); sent for analysis as noted in Section 10.3. On days where only concentration analysis is required, the formulation will only be sampled from the middle.
Backup Samples:	Triplicate top, middle, and bottom samples (Triplicate middle only from Group 1); maintained at the Test Facility. Backup samples may be analyzed at the discretion of the Study Director. On days where only concentration analysis is required, the formulation will only be sampled from the middle.
Sampling Containers:	Appropriate sized glass containers.
Sample Volume:	0.5 mL for analysis and backup samples.
Storage Conditions:	Kept in a refrigerator set to maintain 4°C.
Acceptance Criteria:	For concentration, the criteria for acceptability will be mean sample concentration results within or equal to ± 15% of theoretical concentration. Each individual sample concentration result within or equal to ± 20%. For homogeneity, the criteria for

Appendix 1

acceptability will be a relative standard deviation (RSD) of concentrations of ≤ 5% for each group.

10.3.1.2. Stability Analysis

There will be no stability analysis performed for concentration used on this study however, end of use stability analysis of the bulk test item will be performed at the end of the dosing period.

11. TEST SYSTEM

Species:	Rat
Strain:	Crl:CD(SD) Sprague-Dawley rat
Source:	Charles River Canada Inc., St. Constant, QC, Canada
Number of Males Ordered:	60
Number of Females Ordered:	60
Target Age at Arrival:	4 to 8 weeks
Target Weight at Arrival:	126 to 150 g (males) 101 to 125 g (females)

The actual age, weight, and number of animals received will be listed in the Final Report.

11.1. Justification of Test System and Number of Animals

The Sprague Dawley rat was chosen as the animal model for this study as it is an accepted rodent species for preclinical toxicity testing by regulatory agencies.

The total number of animals to be used in this study is considered to be the minimum required to properly characterize the effects of the Test Item. This study has been designed such that it does not require an unnecessary number of animals to accomplish its objectives.

At this time, studies in laboratory animals provide the best available basis for extrapolation to humans and are required to support regulatory submissions. Acceptable models which do not use live animals currently do not exist.

11.2. Animal Identification

Each animal will be identified using a subcutaneously implanted electronic identification chip.

11.3. Environmental Acclimation

A minimum acclimation period of 14 days will be allowed between animal receipt and the start of dosing in order to accustom the animals to the laboratory environment.

Appendix 1

11.4. Selection, Assignment, Replacement, and Disposition of Animals

Animals will be assigned to groups by a stratified randomization scheme designed to achieve similar group mean body weights. Males and females will be randomized separately. Animals in poor health or at extremes of body weight range will not be assigned to groups.

Before the initiation of dosing, any assigned animals considered unsuitable for use in the study will be replaced by alternate animals obtained from the same shipment and maintained under the same environmental conditions.

After initiation of dosing, study animals may be replaced during the replacement period with alternate animals in the event of accidental injury, non-Test Item-related health issues, or similar circumstances.

The alternate animals may be used as replacements on the study within 3 days.

The disposition of all animals will be documented in the study records.

12. HUSBANDRY

12.1. Housing

Animals will be group housed (up to 3 animals of the same sex and same dosing group together) in polycarbonate cages containing appropriate bedding equipped with an automatic watering valve. These housing conditions will be maintained unless deemed inappropriate by the Study Director and/or Clinical Veterinarian. The room(s) in which the animals will be kept will be documented in the study records.

Animals will be separated during designated procedures/activities. Each cage will be clearly labeled with a color-coded cage card indicating study, group, animal number(s), and sex. Cages will be arranged on the racks in group order. Where possible, control group animals will be housed on a separate rack from the Test Item treated animals.

12.2. Environmental Conditions

The targeted conditions for animal room environment will be as follows:

Temperature:	19°C to 25°C
Humidity:	30% to 70%
Light Cycle:	12 hours light and 12 hours dark (except during designated procedures)

12.3. Food

PMI Nutrition International Certified Rodent Chow No. 5CR4 will be provided ad libitum throughout the study, except during designated procedures. The same diet in meal form may be provided to individual animals as warranted by clinical signs (e.g., broken/damaged incisors or other health changes).

Appendix 1

The feed is analyzed by the supplier for nutritional components and environmental contaminants. Results of the analysis are provided by the supplier and are on file at the Test Facility.

It is considered that there are no known contaminants in the feed that would interfere with the objectives of the study.

12.4. Water

Municipal tap water after treatment by reverse osmosis and ultraviolet irradiation will be freely available to each animal via an automatic watering system (except during designated procedures). Water bottles can be provided, if required.

Periodic analysis of the water is performed, and results of these analyses are on file at the Test Facility.

It is considered that there are no known contaminants in the water that could interfere with the outcome of the study.

12.5. Animal Enrichment

Animals will be socially housed for psychological/environmental enrichment and will be provided with items such as a hiding tube and a chewing object, except during study procedures/activities.

12.6. Veterinary Care

Veterinary care will be available throughout the course of the study and animals will be examined by the veterinary staff as warranted by clinical signs or other changes. All veterinary examinations and recommended therapeutic treatments, if any, will be documented in the study records.

In the event that animals show signs of illness or distress, the responsible veterinarian may make initial recommendations about treatment of the animal(s) and/or alteration of study procedures, which must be approved by the Study Director or Scientific designate. All such actions will be properly documented in the study records and, when appropriate, by study plan amendment. Treatment of the animal(s) for minor injuries or ailments may be approved without prior consultation with the Sponsor representative when such treatment does not impact fulfillment of the study objectives. If the condition of the animal(s) warrants significant therapeutic intervention or alterations in study procedures, the Sponsor representative will be contacted, when possible, to discuss appropriate action. If the condition of the animal(s) is such that emergency measures must be taken, the Study Director and/or clinical veterinarian will attempt to consult with the Sponsor representative prior to responding to the medical crisis, but the Study Director and/or veterinarian has authority to act immediately at his/her discretion to alleviate suffering. The Sponsor representative will be fully informed of any such events.

Appendix 1

13. EXPERIMENTAL DESIGN

Experimental Design

Group No.	Test Material	Dose Level[a] (µg/dose)	Dose Volume (µL/dose)	Dose Concentration[a] (mg/mL)	No. of Animals			
					Main Study		Recovery Study	
					Males	Females	Males	Females
1	Reference Item	0	200	0	10	10	5	5
2	mRNA-1647	10/8.9	200	0.05/0.045	10	10	-	-
3	mRNA-1647	30/27	200	0.15/0.14	10	10	-	-
4	mRNA-1647	100/89	200	0.5/0.45	10	10	5	5

- : Not applicable
[a] Values based on SoA issued on 16 March 2017 / Values based on SoA issued on 31 May 2017.

13.1. Administration of Test and Reference Items

The Test and Reference Items will be administered to the appropriate animals via intramuscular injection into the lateral compartment of the thigh on Days 1, 15, 29 and 43, the injection site will be alternated on each dosing occasion (site 1= left; site 2= right). The volume for each dose will be administered using a syringe/needle within the demarcated area. The first day of dosing will be designated as Day 1 (exception: alternate animals used for replacement after Day 1 will assume the day of the animal being replaced).

The injection area will be marked as frequently as required to allow appropriate visualization of administration sites. Hair may be clipped or shaved if required to improve visualization of the injection sites. The injection site will be documented in the raw data for each dose administered.

13.2. Justification of Route and Dose Levels

The intramuscular route of exposure was selected because this is the intended route of human exposure.

The dose levels for this toxicology study were chosen to approximate a substantial multiple of the anticipated clinical starting dose and top clinical dose. The highest dose to be tested is expected to represent the intended maximum human clinical dose and volume and will be administered by the clinical route (intramuscular). At this dose level, minimal systemic toxicity is expected, but it is possible mild to moderate injection site reaction (redness, swelling) and potentially elevation of systemic cytokine/acute phase markers may be observed. The mid- and low-dose were selected to evaluate the dose-dependent effect of this compound.

14. IN-LIFE PROCEDURES, OBSERVATIONS, AND MEASUREMENTS

The in-life procedures, observations, and measurements listed below including Laboratory Investigations listed in section below will be performed for all main study and recovery animals, unless otherwise indicated in the respective section. During the study, additional evaluations to those described below and/or scheduled, and considered necessary by the Study Director and/or

Appendix 1

Veterinarian to assess health status will be conducted and duly documented. More frequent observations may be undertaken if considered appropriate.

14.1. Mortality/Moribundity Checks

Frequency: Twice daily, once in the morning and once in the afternoon, throughout the study.

Procedure: Animals will be observed for general health/mortality and moribundity. Animals will not be removed from cage during observation, unless necessary for identification or confirmation of possible findings.

14.2. Clinical Observations

14.2.1. Detailed Clinical Observations

Frequency: Weekly during the dosing and recovery periods, and at least every two weeks during the predosing period.

Procedure: Animals removed from the cage for examination.

14.3. Local Irritation Assessment

Frequency: On days of dosing; at least 24 and 72 hours post-dose (end of each group). Weekly when there is no dosing and during the recovery period. Following Day 43 dosing, no assessment will be performed on main animals at 72 hours postdose as animals will be sent to necropsy on Day 44.

Procedure: All animals will have the dose injection site examined for signs of erythema/edema. Observations will be scored according to the Local Irritation Assessment scoring table as follows:

Erythema (Redness)	Score
No erythema	0
Very slight erythema (barely perceptible)	1
Mild erythema	2
Moderate to severe erythema	3
Severe erythema (beet redness to slight eschar formation, injury in depth)	4
Notable dermal lesion (maximized)	M
Edema (Swelling)	
No edema	0
Very slight edema (barely perceptible)	1
Slight edema	2
Moderate edema	3

Appendix 1

Severe edema	4

Any other abnormalities will be recorded as they are observed.

14.4. Body Weights

Frequency: Weekly during the dosing and recovery periods, and at least every two weeks during the predosing period.

Procedure: Animals will be individually weighed. A fasted weight will be recorded on the day of necropsy. Terminal body weights will not be collected from animals found dead or euthanized moribund.

14.5. Food Consumption

Frequency: Weekly, starting Day -7, throughout the dosing and recovery periods.

Procedure: Food consumption will be quantitatively measured except for on the day of scheduled euthanasia.

14.6. Ophthalmic Examinations

Frequency: Once prestudy and again toward the end of Week 6 of the dosing period. During Week 2 of the recovery period if Test Item-related findings are observed during the dosing period.

Procedure: All animals will be subjected to funduscopic (indirect ophthalmoscopy) and biomicroscopic (slit lamp) examinations. The mydriatic used will be Atropine 0.126%.

Evaluation: A report will be included as an appendix to the Final Report.

14.7. Body Temperature

Frequency: On Day 1 and Day 43 at predose, and 6 and 24 hours post dose (end of each group). If body temperature is significantly above normal range (36.0°C to 38.0°C) the temperature will be monitored daily till return to normal. If clinical observations indicate a possible body temperature changes measurements may be taken at the discretion of the Study Director.

Procedure: Rectal body temperature will be recorded on un-sedated animals.

Appendix 1

15. LABORATORY EVALUATIONS

15.1. Clinical Pathology

15.1.1. Sample Collection

Blood will be collected from the abdominal aorta following isoflurane anesthesia. After collection, samples will be transferred to the appropriate laboratory for processing.

Animals will be fasted overnight before blood sampling (for clinical chemistry). Samples will be collected according to the following table.

Samples for Clinical Pathology Evaluation

Group Nos.	Time Point	Hematology	Coagulation	Clinical Chemistry	α1-acid glycoprotein/ α2-macroglubulin
1 to 4[a]	Day 44	X	X	X	X
1 and 4	Day 57	X	X	X	X
Unscheduled euthanasia (when possible)	Before euthanasia	X	X	X	X

X = Sample to be collected

[a] Samples will only be collected from those animals scheduled for euthanasia on Day 44.

Any residual/retained clinical pathology samples will be discarded before issue of the Final Report.

15.1.2. Hematology

Target Volume: 0.5 mL

Anticoagulant: EDTA

Hematology Parameters

Red blood cell count Hemoglobin concentration Hematocrit Mean corpuscular volume Red Blood Cell Distribution Width Mean corpuscular hemoglobin concentration Mean corpuscular hemoglobin Reticulocyte count (absolute) Platelet count	White blood cell count Neutrophil count (absolute) Lymphocyte count (absolute) Monocyte count (absolute) Eosinophil count (absolute) Basophil count (absolute) Large unstained cells (absolute)

A blood smear will be prepared from each hematology sample. Blood smears will be labeled, stained, and stored. Blood smears may be read to investigate results. If additional examination of blood smears is deemed necessary, the smears may be subsequently evaluated and this evaluation will be described in a study plan amendment.

Appendix 1

15.1.3. Coagulation

Target Volume: 1.2 mL (in a 1.3 mL tube)

Anticoagulant: Citrate

Processing: To plasma

Coagulation Parameters

Activated partial thromboplastin time Fibrinogen	Prothrombin time Sample Quality

15.1.4. Clinical Chemistry

Target Volume: 0.7 mL

Anticoagulant: None, collected in serum separator tube

Processing: To serum

Clinical Chemistry Parameters

Alanine aminotransferase Aspartate aminotransferase Alkaline phosphatase Gamma-glutamyltransferase Creatine Kinase Total bilirubin[a] Urea nitrogen Creatinine Calcium Phosphorus	Total protein Albumin Globulin Albumin/globulin ratio Glucose Cholesterol Triglycerides Sodium Potassium Chloride Sample Quality

[a] When total bilirubin is > 0.5 mg/dL, indirect and direct bilirubin will also be measured.

15.1.5. Bone Marrow Smear Evaluation (Optional)

Bone marrow smears will be collected and prepared as described in the Tissue Collection and Preservation table (Section 16.5). Evaluation of stained smears may be added by amendment at the discretion of the Study Director in consultation with the pathologist and the Sponsor.

15.1.6. α1-acid Glycoprotein and α2-macroglobulin Analysis

Blood will be collected via the abdominal aorta following isoflurane anesthesia before scheduled and unscheduled euthanasia for all animals.

Target Volume: 0.7 mL

Anticoagulant: None, collected in serum separator tubes

Processing: Blood samples to clot at ambient room temperature. Centrifugation for (b) (4) set at (b) (4) in a refrigerated centrifuge (set to maintain (b) (4)). Samples will be processed to

Appendix 1

serum by the Immunology Department. Serum will be aliquoted into 1 x 75 µL aliquot for α2-macroglobulin and 2 x 75 µL aliquot and a leftover (if available) for α1-acid glycoprotein.

Storage conditions: Stored in a freezer set to maintain -20°C, pending analysis.

Analysis for α1-acid glycoprotein and α2-macroglobulin will be conducted using a qualified ELISA method by the Immunology Department. The procedure to be followed along with the assay acceptance criteria will be detailed in the appropriate analytical procedure.

Samples will be analyzed in duplicate. Any residual/retained samples will be discarded prior to report finalization.

15.2. Laboratory Investigations (Cytokine Analysis)

Blood will be collected from the jugular vein of all recovery animals and preterminally euthanized animals (recovery animals only). After collection, blood samples for serum will be allowed to clot at ambient room temperature and blood samples for plasma will be transferred on wet ice to the appropriate laboratory for processing.

Sample Collection Schedule

Target Blood Volume (mL)			0.5	0.5
Anticoagulant			**None (SST)**	**EDTA**
Centrifugation setting			(b) (4)	
Timepoints			**Sample Type**	
Day	**Hrs**	**No. of Males/ Females**	IFN-α*	IL-1ß, IL-6, TNF-α, IP-10, MIP-1-α, MCP-1
1	6	5/5	X	X
15	6	5/5	X	X
29	6	5/5	X	X
43	6	5/5	X	X
57	N / A	5/5	X	X
Matrix			Serum	Plasma
Volume per aliquot (µL)			all volume	all volume
Number of aliquot(s)			1	1
Storage condition (set to maintain)			-80°C	-80°C
Responsible Lab			CR-SHB	CR-SHB

X = Sample to be collected; N/A = not applicable

*** The assay validation of IFN-α did not work appropriately and serum samples analysis will not be conducted.**

The number of aliquots and volumes are targets that may be adjusted based on sample volume availability.

Appendix 1

The samples will be analyzed by the Immunology department. Analysis for IL-1ß, IL-6, TNF-α, IP-10, MIP-1-α and MCP-1 will be conducted using a multiplex Luminex method. ~~**An ELISA method will be used for the analysis of IFN-α.**~~ The procedures to be followed during the course of this study along with the assays acceptance criteria will be detailed in the appropriate analytical procedure. Samples will be analyzed in duplicate.

Following Study Director approval, any residual/retained samples will be discarded prior to report finalization.

An Immunology Report for cytokine analysis will be included as an appendix to the Final Report.

15.3. Anti Therapeutic Antibody (ATA) Analysis

Blood will be collected by jugular venipuncture from the appropriate animals.

Time Points:	Before initiation of dosing, Day 29 (before dosing), Day 43 (main animals only) and Day 57 (recovery animals).
Target Volume:	0.5 mL
Anticoagulant:	None, collected in serum separator tubes
Processing:	To serum

Samples will be mixed gently and allow to clot at ambient room temperature until centrifugation, which will be carried out as soon as practical. The samples will be centrifuged for (b) (4) in a refrigerated centrifuge (set to maintain (b) (4) at (b) (4) The resultant serum will be separated, transferred to uniquely labeled clear polypropylene tubes, frozen immediately over dry ice and transferred to a freezer set to maintain -80°C.
Samples will be shipped on dry ice to:

Shipping Contact
(b) (6)
Integrated BioTherapeutics, Inc.
4 Research Court
Suite 300
Rockville, MD 20850, USA
Tel: (b) (6)
Fax: (b) (6)
E-mail: (b) (6)

The Test Site will be notified before shipment of the samples. Upon receipt at the immunology laboratory, the samples will be stored at -80°C.

The samples will be analyzed for rat anti-CMV antibodies using a qualified ELISA method.

Any residual/retained samples will be maintained for a minimum of 6 months following issuance of the Audited Draft Report after which samples will be discarded. Alternatively, residual/retained samples will be discarded prior to the 6 month period should the issuance of the

Appendix 1

Final Report occur prior to the end of the 6 month retention period. An earlier discard of these residual/retained samples may also be requested and authorized by the Study Director.

An Anti-therapeutic Antibody Report will be included as an appendix to the Final Report.

15.4. PBMC Analysis

Blood will be collected by jugular venipuncture from the appropriate animals.

Time Points:	On Day 44 (main animals only).
Target Volume:	0.5 mL
Anticoagulant:	Sodium Heparin
Storage Conditions:	Kept in a controlled temperature area set to maintain 21°C

Samples will be shipped at controlled temperature set to maintain 21°C via overnight courier to the Immunology laboratory, for whole blood stimulation and cytokine analysis, to:

Shipping Contact
(b) (6)
Cell Biology and Immunology
Southern Research
2000 Ninth Ave S
Birmingham Alabama 35205
Tel: (b) (6)
E-mail: (b) (6)

The Test Site will be notified before shipment of the samples. Upon receipt at the immunology laboratory, the samples will be stored at room temperature.

The PBMC samples will be analyzed using a qualified method.

Any residual/retained samples will be maintained for a minimum of 6 months following issuance of the Audited Draft Report after which samples will be discarded. Alternatively, residual/retained samples will be discarded prior to the 6 month period should the issuance of the Final Report occur prior to the end of the 6 month retention period. An earlier discard of these residual/retained samples may also be requested and authorized by the Study Director.

An Immunology Report for PBMC analysis will be included as an appendix to the Final Report.

Appendix 1

16. TERMINAL PROCEDURES

Terminal procedures are summarized in the following table:

Terminal Procedures for Main Study and Recovery Animals

Group No.	No. of Animals		Scheduled Euthanasia Day	Necropsy Procedures			Histology	Histopathology
	M	F		Necropsy	Tissue Collection	Organ Weights		
1	10	10	44	X	X	X	Full Tissue[a]	Full Tissue[a]
2	10	10					Full Tissue[a]	Gross Lesions Target Tissues
3	10	10					Full Tissue[a]	Gross Lesions Target Tissues
4	10	10					Full Tissue[a]	Full Tissue[a]
1	5	5	57	X	X	X	Full Tissue[a]	Full Tissue[a]
4	5	5					Full Tissue[a]	Full Tissue[a]
Unscheduled Deaths				X	X	-	Full Tissue[a]	Full Tissue[a]
Replaced animals (prestudy)[b]				X	Standard Diagnostic List	-	-	-
Replaced animals (after dosing start)				X	X	-	-	-

X = Procedure to be conducted; - = Not applicable.
[a] See Tissue Collection and Preservation table for listing of tissues.
[b] Animals found dead or euthanized before the initiation of dosing.

16.1. Unscheduled Deaths

If a main study or recovery animal dies on study, a complete necropsy examination will be conducted and specified tissues will be saved. If necessary, the animal will be refrigerated to minimize autolysis.

Main or recovery animals may be euthanized for humane reasons as per Test Facility SOPs. The samples for evaluation of laboratory evaluation will be obtained if possible as specified in Section 15. These animals will undergo exsanguination by incision from the abdominal aorta following isoflurane anesthesia unless deemed inappropriate by the Study Director and/or the clinical veterinarian and will undergo complete necropsy examination, and specified tissues will be retained. If necessary, the animal will be refrigerated (set to maintain 4°C) to minimize autolysis.

Animals found dead or euthanized before the initiation of dosing will be subject to complete necropsy examination and limited tissue retention (standard diagnostic tissue list). Any animal replaced after the start of dosing will be subject to complete necropsy examination and tissues will be retained (as per Tissue Collection and Preservation section), and any data generated will not be included in the report unless deemed appropriate by the Study Director.

Appendix 1

16.2. Scheduled Euthanasia

Main study and recovery animals surviving until scheduled euthanasia will have a terminal body weight recorded, samples for laboratory evaluation will be collected (as appropriate), and will be euthanized by exsanguination by incision from the abdominal aorta following isoflurane anesthesia. When possible, the animals will be euthanized rotating across dose groups such that similar numbers of animals from each group, including controls, will be necropsied throughout the day. Animals will be fasted overnight before their scheduled necropsy.

16.3. Necropsy

Main and recovery animals will be subjected to a complete necropsy examination, which will include evaluation of the carcass and musculoskeletal system; all external surfaces and orifices; cranial cavity and external surfaces of the brain; and thoracic, abdominal, and pelvic cavities with their associated organs and tissues.

Necropsy procedures will be performed by qualified personnel with appropriate training and experience in animal anatomy and gross pathology. A veterinary pathologist, or other suitably qualified person, will be available.

At the discretion of the necropsy supervising pathologist, images may be generated for illustration of or consultation on gross observations. Generation of such images will be documented and communicated to the Study Director. Images and associated documentation will be retained and archived.

16.4. Organ Weights

The organs identified for weighing in the Tissues Collection and Preservation table will be weighed at necropsy for all scheduled euthanasia animals. Organ weights will not be recorded for animals found dead or euthanized in poor condition or in extremis. Paired organs will be weighed together. In the event of gross abnormalities, in addition to the combined weight, the weight of each organ of a pair may be taken and entered as a tissue comment. Organ weight as a percent of body weight (using the terminal body weight) and organ weight as a percent of brain weight will be calculated.

16.5. Tissue Collection and Preservation

Representative samples of the tissues identified in the Tissue Collection and Preservation table in ATTACHMENT A will be collected from all animals and preserved in 10% neutral buffered formalin, unless otherwise indicated. Additional tissue samples may be collected to elucidate abnormal findings.

Appendix 1

17. HISTOLOGY AND HISTOPATHOLOGY

17.1. Histology

Tissues in the Tissue Collection and Preservation table from animals identified in the Terminal Procedures table will be embedded in paraffin, sectioned, mounted on glass slides, and stained with hematoxylin and eosin.

17.2. Histopathology

Histopathological evaluation will be performed by a board-certified veterinary pathologist. Target tissues identified by the study pathologist during microscopic evaluation will be communicated to the study Director; tissues will be evaluated and reported. Any additional stains or evaluations, if deemed necessary by the pathologist, will be added by study plan amendment following discussion with the Study Director and in consultation the Sponsor.

At the discretion of the study pathologist and after acknowledgement by the Study Director, images may be captured for consultation purposes.

The appropriate Charles River Laboratories, Pathology Associates Test Site will be contacted for the slide shipping address.

17.3. Pathology Peer Review

A pathology peer review will be conducted by a Sponsor-designated pathologist:

(b) (6)
Experimental Pathology Laboratories, Inc.
PO Box 12766
Research Triangle Park, NC 27709
Tel.: (b) (6)
Fax: (b) (6)
Email: (b) (6)

The peer review statement or equivalent documentation will be included as an appendix to the Final Report.

18. CONSTRUCTED VARIABLES

Body Weight Gains	Calculated between at least each interval as well as between the beginning and end of each phase
Organ Weight relative to Body Weight	Calculated against the Terminal body weight for scheduled intervals
Organ Weight relative to Brain Weight	Calculated against the brain weight for scheduled intervals

Appendix 1

19. STATISTICAL ANALYSIS

All statistical tests will be conducted at the 5% significance level. All pairwise comparisons will be conducted using two sided tests and will be reported at the 0.1%, 1%, and 5% levels.

Numerical data collected on scheduled occasions for the listed variables will be analyzed as indicated according to sex and occasion. Descriptive statistics number, mean and standard deviation (or %CV or SE when deemed appropriate) will be reported whenever possible. Values may also be expressed as a percentage of predose or control values when deemed appropriate. Inferential statistics will be performed according to the matrix below when possible, but will exclude semi-quantitative data, and any group with less than 3 observations.

Statistical Matrix

Variables for Inferential Analysis	Statistical Method
	Parametric/ Non-Parametric
Body Weight	X
Hematology Variables	X
Coagulation Variables	X
Clinical Chemistry Variables	X
Cytokines	X
Body Temperature	X
α2-macroglobulin	X
α1-acid glycoprotein	X
Organ Weights	X
Body Weight Gains	X
Organ Weight relative to Body Weight	X
Organ Weight relative to Brain Weight	X

The following pairwise comparisons will be made:

Group 2 vs. Group 1

Group 3 vs. Group 1

Group 4 vs. Group 1

19.1. Parametric/Non-Parametric

Levene's test will be used to assess the homogeneity of group variances.

Datasets with at least 3 groups will be compared using an overall one-way ANOVA *F*-test if Levene's test is not significant or the Kruskal-Wallis test if it is. If the overall *F*-test or Kruskal-Wallis test is found to be significant, then the above pairwise comparisons will be conducted using Dunnett's or Dunn's test, respectively.

Datasets with 2 groups (the designated control group and 1 other group) will be compared using a *t*-test if Levene's test is not significant or Wilcoxon Rank-Sum test if it is.

Appendix 1

20. COMPUTERIZED SYSTEMS

The following critical computerized systems may be used in the study. The actual critical computerized systems used will be specified in the Final Report.

Data for parameters not required by study plan, which are automatically generated by analytical devices used will be retained on file but not reported. Statistical analysis results that are generated by the program but are not required by study plan and/or are not scientifically relevant will be retained on file but will not be included in the tabulations.

Critical Computerized Systems

System Name	Description of Data Collected and/or Analyzed
Provantis	In-life; clinical pathology; postmortem
Dispense	Test Material receipt, accountability and/or formulation activities
SRS (CR-MTL in-house application built with SAS) and SAS system for Windows and/or In-house reporting software Nevis 2012 (using SAS)	Statistical analyses of numerical in-life, clinical pathology and postmortem data
Mesa Laboratories AmegaView CMS	Continuous Monitoring System. Monitoring of standalone fridges, freezers, incubators, and selected laboratories to measure temperature, relative humidity, and CO2, as appropriate
Johnson Controls Metasys	Building Automation System. Control of HVAC and other building systems, as well as temperature/humidity control and trending in selected laboratories and animal rooms
Empower 3 (Waters Corporation)	Data acquisition for dose formulation analysis, including regression analysis and measurement of concentration and recovery of dose formulations using HPLC
BioPlex Manager	Cytokine data collection
Softmax Pro GxP	Elisa data collection
Watson LIMS	Biomarker data analysis
Dynamics (Wyatt)	Data acquisition for particle size analysis of the test item using DLS

21. AMENDMENTS AND DEVIATIONS

Changes to the approved study plan shall be made in the form of an amendment, which will be signed and dated by the Study Director. Every reasonable effort will be made to discuss any necessary study plan changes in advance with the Sponsor.

All study plan and SOP deviations will be documented in the study records. Deviations from the study plan and/or SOP related to the phase(s) of the study conducted at a Test Site shall be documented, acknowledged by the PI/IS, and reported to the Study Director for authorization/acknowledgement. The Study Director will notify the Sponsor of deviations that may result in a significant impact on the study as soon as possible.

Appendix 1

22. RETENTION OF RECORDS, SAMPLES, AND SPECIMENS

All study-specific raw data, electronic data, documentation, study plan, retained samples and specimens, and interim (if applicable) and final reports will be archived by no later than the date of final report issue. All materials generated by Charles River from this study will be transferred to CR MTL archive. One year after issue of the draft report, the Sponsor will be contacted to determine the disposition of materials associated with the study.

Records to be maintained will include, but will not be limited to, documentation and data for the following:

- Study Plan, study plan amendments, and deviations
- Study schedule
- Study-related correspondence
- Test system receipt, health, and husbandry
- Test and Reference Item receipt, identification, preparation, and analysis
- In-life measurements and observations
- Clinical pathology sample collection and evaluation
- Gross and microscopic observations and related data
- Organ weight measurements
- Statistical analysis results

23. REPORTING

A comprehensive Draft Report will be prepared following completion of the study and will be finalized following consultation with the Sponsor. The report will include all information necessary to provide a complete and accurate description of the experimental methods and results and any circumstances that may have affected the quality or integrity of the study.

The Sponsor will receive an electronic version of the Draft and Final Report provided in Adobe Acrobat PDF format (hyperlinked and searchable at final) along with a Microsoft Word version of the text. The PDF document will be created from native electronic files to the extent possible, including text and tables generated by the Test Facility. Report components not available in native electronic files and/or original signature pages will be scanned and converted to PDF image files for incorporation. An original copy of the report with the Test Facility's handwritten signatures will be retained.

Reports should be finalized within 6 months of issue of the Draft Report. If the Sponsor has not provided comments to the report within 6 months of draft issue, the report will be finalized by the Test Facility unless other arrangements are made by the Sponsor.

Appendix 1

24. ANIMAL WELFARE

24.1. Institutional Animal Care and Use Committee Approval

The study plan and any amendment(s) or procedures involving the care and use of animals in this study will be reviewed and approved by CR SHB Institutional Animal Care and Use Committee (IACUC). During the study, the care and use of animals will be conducted with guidance from the USA National Research Council and the Canadian Council on Animal Care (CCAC).

Appendix 1

AMENDMENT APPROVAL

(b) (6) Date: 08 Sep 2017

As authorized by the Sponsor on 08 Sep 2017

[a] At the discretion of the Study Pathologist, findings for extraneous tissues (nonspecified tissues in the Study Plan that may be present on a slide as a result of collection of Study Plan tissues) will be recorded when observed.

Appendix 1

DEVIATIONS

All deviations that occurred during the study have been authorized/acknowledged by the Study Director, assessed for impact, and documented in the study records. All study plan deviations and those SOP deviations that could have impacted the quality or integrity of the study are listed below.

None of the deviations were considered to have impacted the overall integrity of the study or the interpretation of the study results and conclusions.

In-life Observations, Measurements, and Evaluations

- Given that the study dosing initiation was changed, the food consumption assessment was initiated on Day -9 and was also performed on Day 1, although specified otherwise in the study plan. These deviations were considered to have no impact on the study outcome.

Other

- A reserve sample (1 mL) of the Reference Item, Phosphate-buffered Saline (PBS) pH 7.2 (Lot No. 1830677) was not collected as there were none remaining after dispensing for dosing the control animals. As this Reference Item is commercially available and well characterized, this deviation was considered to have no impact on the study outcome.

Appendix 2

Memorandum
moderna

To: (b) (6), Charles River Laboratory, Montréal ULC

From: (b) (6)

Date: 13Jun17

Subject: Revised mRNA concentration determination for mRNA-1647 reference standard lot MTDS16027, and subsequent revised final concentration of mRNA-1647 drug product lot MTDP17015

The revised mRNA concentration reported in the revised SoA dated 30May17 and described in memo (reference[1]) directly impacts the effective doses for the GLP toxicology study referenced 5002034. Both the original and revised Summary of Analysis documents reporting the concentration of MTDP17015 will be reported in the toxicology report such that all doses are presented as a pre- and post-method change. The change in the reported RNA content for the mRNA-1647 is -11%, and this percentage difference in reported RNA content was used to revise the calculated doses.

The original doses calculated for dose groups 2, 3 and 4 in study 5002034 were revised based on the updated concentration reported for the mRNA-1647 lot MTDP17015 (Table 2). All calculations and projected margins derived from the GLP toxicology studies should utilize the new effective doses described herein.

Table 2. Revised mRNA-1647 Dose Levels based on Ref Standard MTDS16027(reference[2]) **and drug product lot MTDP17015** (reference[3])

TABLE OF CONTENTS

Appendix 3

LIST OF TABLES

LIST OF APPENDICES

Appendix 3

1. SUMMARY

Dose formulation samples have been analyzed by Ion Exchange High Performance Liquid Chromatography (IEX-HPLC) for the determination of mRNA-1647.

In addition, at the end of the study dosing phase, the bulk test item was analyzed by Ion Exchange High Performance Liquid Chromatography (IEX-HPLC) for concentration analysis, by Reversed Phase High Performance Liquid Chromatography (RP-HPLC) for purity analysis and by Dynamic Light Scattering (DLS) for particle size analysis.

The dose formulations were within specification. Homogeneity testing showed that the formulation technique used produced homogeneous preparations.

The end of use bulk Test Item analysis demonstrated that the test item was suitable for use during the study period.

2. INTRODUCTION

This report describes the analytical evaluation of mRNA-1647 in dose formulations (phosphate-buffered saline (PBS) pH 7.2) and in the bulk test item from Study 5002034.

For the work detailed in this report, the analytical phase experimental start date was 24 Mar 2017, and the analytical phase experimental completion date was 17 Jun 2017.

3. EXPERIMENTAL DESIGN

3.1. Dose Formulation Analysis

Analysis of dose formulations was carried out with regard to concentration and homogeneity.

On Day 1 of the study, duplicate samples were collected from the top, middle and bottom strata of the test item Groups for concentration and homogeneity verification while duplicate samples were collected from the middle strata of the control group. Duplicate samples were also collected from the middle strata of all Groups for concentration verification on Day 43 of the study. The samples were shipped on ice packs, stored refrigerated upon receipt and analyzed within the established stability.

3.2. Bulk Test Item Analysis

Analysis of the bulk test item was carried out with regard to concentration, purity and particle size analysis.

At the end of the study dosing phase, unopened vials of test item were transferred for concentration, purity and particle size analysis.

Appendix 3

4. MATERIALS AND METHODS

4.1. Materials

4.1.1. Reference Standard

Identification:	CX-0005128 mRNA
Physical Description:	Clear, colorless solution
Batch/Lot No.:	MTDS16027
Concentration:	2.22 mg/mL / 1.95 mg/mL (used for calculations) *
Retest Date:	Oct 2017
Storage Conditions:	Kept in a freezer set to maintain -20°C
Supplier:	Moderna Therapeutics, Inc.

* Corrected concentration as per SoA issued on 12 Apr 2017.

4.1.2. Reference Material (Bulk Test Item)

Identification:	mRNA-1647
Physical Description:	0.5 mL per vial, white to off-white lipid nanoparticle dispersion
Batch/Lot No.:	MTDP17015
Concentration:	2.7 mg/mL / 2.4 mg/mL (used for calculations) **
Purity (RP-HPLC):	96.9%
Particle Size:	63 nm
Date of Manufacture:	24 Feb 2017
Retest Date:	24 Feb 2018
Storage Conditions:	Kept in a freezer set to maintain -20°C
Supplier:	Moderna Therapeutics, Inc.

** Re-calculated concentration as per SoA issued on 31 May 2017.

4.1.3. Characterization of Reference Standard and Reference Material

The Sponsor provided the documentation for the identity, strength, purity, composition, and stability for the reference standard and reference material. Copies of the supplied Summary of Analysis (SoA) or equivalent documentation are presented in Appendix 2.

Appendix 3

4.1.4. Inventory and Disposition of Reference Standard and Reference Material

Records of the receipt, distribution, and storage of the reference standard and reference material were maintained. All unused Sponsor-supplied reference standard and reference material were retained for use on subsequent studies for the Sponsor.

4.2. Methods

4.2.1. Analytical Procedures

The method for concentration analysis is documented in Analytical Procedure AP.5002034.SP.02 (Appendix 1) and was previously validated under Study Nos. 1802050. Concentration stability data were generated by the department of Analytical Chemistry, Charles River, CR MTL for 1 day, 6 days, and 8 days, for formulation samples stored at ambient temperature, in a refrigerator set to maintain 4°C and in a freezer set to maintain a temperature of -20°C, respectively, over the concentration range of 0.00888 – 2.40 mg/mL, under Study No. 1802050.

The methods for purity analysis and particle size analysis are documented in Analytical Procedures AP.5002034.PU.03 and AP.5002034.DLS.02 (Appendix 1), respectively.

4.3. Computerized Systems

Critical computerized systems used in this study phase are listed below (see Text Table 1).

Text Table 1
Computerized Systems

System Name	Version No.	Description of Data Collected and/or Analyzed
Empower 3 (Waters Corporation)	Build 3471 SR1	Data acquisition for dose formulation analysis, including regression analysis and measurement of concentration and recovery of dose formulations using HPLC
Dynamics (Wyatt)	7.1.9.3	Data acquisition for particle size analysis for the test item using DLS
Mesa Laboratories AmegaView CMS	v3.0 Build 1208.8	Continuous Monitoring System. Monitoring of standalone fridges, freezers, incubators, and selected laboratories to measure temperature, relative humidity, and CO_2, as appropriate
Johnson Controls Metasys	MVE 7.0	Building Automation System. Control of HVAC and other building systems, as well as temperature/humidity control and trending in selected laboratories and animal rooms

5. RESULTS AND DISCUSSIONS

All results presented in the tables of the report are calculated using non-rounded values as per the raw data rounding procedure and may not be exactly reproduced from the individual data presented.

Appendix 3

5.1. Dose Formulation Analysis

All study samples analyzed had mean concentrations within or equal to the acceptance criteria of ± 15% (individual values within or equal to ± 20%) of their theoretical concentrations. Results are presented in Table 1.

For homogeneity, the RSD of concentrations for all samples in each group tested was within the acceptance criteria of ≤ 5%. Results are presented in Table 1.

5.2. Bulk Test Item Analysis

The concentration, purity and particle size was measured. Concentration, purity and particle size results were consistent with the initial Certificate of Analysis provided by the Sponsor. Results are presented in Table 2, Table 3 and Table 4.

6. CONCLUSION

The dose formulations were within specification. Homogeneity testing showed that the formulation technique used produced homogeneous preparations.

The bulk Test Item analysis demonstrated that the test item was suitable for use during the study period.

Analytical Procedure (AP.5002034.SP.02)

Determination of mRNA-1647 in Dose Formulations by Ion Exchange High Performance Chromatography Using Ultraviolet/Visible Detection

Reference Standard, Reference Material and Vehicle

Reference Standard	CX-0005128 mRNA (API)
Lot number	MTDS16027
Concentration (actual)	1.95 mg/mL
Reference Material	mRNA-1647
Description	White dispersion in lipid nanoparticles
Lot number	MTDP17015
Concentration (nominal)	2.4 mg/mL (to be used for calculations)
Vehicle	Phosphate-buffered Saline (PBS) pH 7.2

For storage conditions for reference standard and reference material supplied by the Sponsor, refer to the corresponding log sheets.

NOTES:

- ❑ Modifications may be made to the chromatographic conditions in order to optimize the chromatography.
- ❑ Solution volumes throughout this AP (including reagent solutions, blanks, standard stocks, standards and spiked samples) may be scaled up or down as long as the final concentration remains the same as specified in the procedure.
- ❑ Any changes made are to be documented in the raw data of the run.
- ❑ Unless otherwise indicated, information relating to the time of mixing/stirring, temperature or mixing method used in the preparation of solutions, diluents, mobile phases and vehicle will be considered non-critical. If a step is deemed critical, it will be noted within the procedure, and a positive entry will be made in the raw data
- ❑ **The compound is a mRNA, benchwork and handling should be performed under clean conditions to limit RNase contamination. When possible use RNase free tubes, pipette and repeater tips for reference standard/test item dilutions. DO NOT VORTEX, mix manually by inversion.**
- ❑ The method was previously validated under study 1802050.

Analytical Procedure (AP.5002034.SP.02)

AP Version Control

First update:
- Updated actual concentration of the reference standard and reference material as per latest summary of analysis (SoA); updated concentrations throughout the AP accordingly.
- Updated sample concentrations in Table 3 and 4 as per Study Plan amendment 05.
- Included all missing expiry periods.
- Updated wording of "test item" for "reference material" in the spike preparation.

AP Version Control

First update:
- Updated the gradient to optimize the chromatography.
- Updated the preparation of Mobile phase B (removal of sodium phosphate).
- Updated the expiry period of the diluent.

Second update:
- Updated concentration of the bulk test item throughout the AP.
- Updated concentration for CX-005128.
- Included the "blank" in the injection sequence.
- Corrected some reference standard names on Page 1.
- Updated the RSD criteria for system suitability with CX-005128 for consistency with sample variability criteria.

Individual Animal Mortality Explanation Page

Abbreviation	Description	Abbreviation	Description
AD or ACCD	Accidental death	REC	Recovery euthanasia
FD	Found dead	REL	Released
INTM	Interim	TE or TERM	Terminal euthanasia
NR	Not recorded	UE or UNSC	Unscheduled euthanasia
		Unsc	Unscheduled examination

Note: This is a comprehensive list of abbreviations. All of the abbreviations listed may not be applicable to this report.

Note: Removal Time represents the time the removal was entered into the Provantis system and may not be representative of the time of death.

Dosing Information

Dosing information is abbreviated on various data outputs; the following represents the dosing information for this study.

Group No.	Test Material	Dose Level[a] (µg/dose)
1	Reference Item	0
2	mRNA-1647	10/8.9
3	mRNA-1647	30/27
4	mRNA-1647	100/89

[a] Values based on SoA issued on 16 March 2017 / Values based on SoA issued on 31 May 2017.

Appendix 5

Individual Clinical Observations Explanation Page

Abbreviation	Description	Abbreviation	Description
AM SIRT	Signs of ill health or reaction to treatment check in the morning	PM SIRT	Signs of ill health or reaction to treatment check in the afternoon
CSO	Cage side observation	PostRx #	Observation post dosing
DE	Detailed examination	PreRx #	Observation predosing
During Rx/R #	Observation during dosing	Unsc #	Unscheduled examination
Vet Aid	Anything observed by Vet Aid	#	Number to avoid using the same timeslot/animal/day

Note: This is a comprehensive list of abbreviations. All of the abbreviations listed may not be applicable to this report.

Note: Only animals with findings are presented in this appendix.

Dosing Information

Dosing information is abbreviated on various data outputs; the following represents the dosing information for this study.

Group No.	Test Material	Dose Level[a] (µg/dose)
1	Reference Item	0
2	mRNA-1647	10/8.9
3	mRNA-1647	30/27
4	mRNA-1647	100/89

[a] Values based on SoA issued on 16 March 2017 / Values based on SoA issued on 31 May 2017.

Appendix 5

Individual Local Irritation Assessment Explanation Page

Score	Erythema (Redness) Description
0	No erythema
1	Very slight erythema (barely perceptible)
2	Mild erythema
3	Moderate to severe erythema
4	Severe erythema (beet redness to slight eschar formation, injuries in depth)
M	Notable dermal lesions (maximized)

Score	Edema (Swelling) Description
0	No edema
1	Very slight edema (barely perceptible)
2	Slight edema
3	Moderate edema
4	Severe edema

Other Abbreviations

Abbreviation	Description	Abbreviation	Description
AVS	Suspected aberrant value	Post Rx	Observation Post dosing
NR	Not recorded	PreRx	Observation predosing
OA	Omitted activity	DE	Detailed examination
		Unsc	Unscheduled examination

Note: This is a comprehensive list of abbreviations. All of the abbreviations listed may not be applicable to this report.

Dosing Information

Dosing information is abbreviated on various data outputs; the following represents the dosing information for this study.

Group No.	Test Material	Dose Level[a] (µg/dose)
1	Reference Item	0
2	mRNA-1647	10/8.9
3	mRNA-1647	30/27
4	mRNA-1647	100/89

[a] Values based on SoA issued on 16 March 2017 / Values based on SoA issued on 31 May 2017.

Appendix 6

Individual Body Weights Explanation Page

Abbreviation	Description	Abbreviation	Description
--	Not scheduled to be performed / dead	TERR	Technical error
AVS	Suspected aberrant value	UPTD	Unable to perform due to technical difficulty
OA	Omitted activity	X	Excluded from mean

Note: This is a comprehensive list of abbreviations. All of the abbreviations listed may not be applicable to this report.

Dosing Information

Dosing information is abbreviated on various data outputs; the following represents the dosing information for this study.

Group No.	Test Material	Dose Level[a] (µg/dose)
1	Reference Item	0
2	mRNA-1647	10/8.9
3	mRNA-1647	30/27
4	mRNA-1647	100/89

[a] Values based on SoA issued on 16 March 2017 / Values based on SoA issued on 31 May 2017.

Individual Body Weight Gains Explanation Page

Abbreviation	Description	Abbreviation	Description
--	Not scheduled to be performed / dead	TERR	Technical error
AVS	Suspected aberrant value	UPTD	Unable to perform due to technical difficulty
NC	Not calculable	X	Excluded from mean
OA	Omitted activity		

Note: This is a comprehensive list of abbreviations. All of the abbreviations listed may not be applicable to this report.

Dosing Information

Dosing information is abbreviated on various data outputs; the following represents the dosing information for this study.

Group No.	Test Material	Dose Level[a] (µg/dose)
1	Reference Item	0
2	mRNA-1647	10/8.9
3	mRNA-1647	30/27
4	mRNA-1647	100/89

[a] Values based on SoA issued on 16 March 2017 / Values based on SoA issued on 31 May 2017.

Individual Food Consumption Explanation Page

Abbreviation	Description	Abbreviation	Description
--	Not scheduled to be performed / dead	OA	Omitted activity
AFE	Animal found with no food during measurement interval-Exclude	ONEG	Original value negative, animal did not eat
AFNF	Animal found with no food during measurement interval	POWF	Powdered food
ANH	Animal found with no hopper during measurement interval	REHO	Animal rehoused during measurement interval
ANIC	Animal not in cage or in incorrect cage during measurement	REPL	Animal replaced during measurement interval
ANW	Animal found with no water access during measurement intervals	SPIL	Spilled food (by animal)
ANWB	Animal found with no water bottle during measurement interval	TERR	Technical error
AVS	Suspected aberrant value	UPTD	Unable to perform due to technical difficulty
AWE	Animal found with no water in bottle during measurement interval-Exclude	WAFE	Water added to food during measurement interval
FSG	Food supplementation given during interval, included in feed weight	WAFI	Water added to food during measurement interval, included
FSNC	Food supplementation given during interval, value not calculable	WETF	Wet or contaminated food (in container)
NC	Not calculable	X	Excluded from mean

Note: This is a comprehensive list of abbreviations. All of the abbreviations listed may not be applicable to this report.

Dosing Information

Dosing information is abbreviated on various data outputs; the following represents the dosing information for this study.

Group No.	Test Material	Dose Level[a] (µg/dose)
1	Reference Item	0
2	mRNA-1647	10/8.9
3	mRNA-1647	30/27
4	mRNA-1647	100/89

[a] Values based on SoA issued on 16 March 2017 / Values based on SoA issued on 31 May 2017.

Individual Body Temperature Values Explanation Page

Abbreviation	Description	Abbreviation	Description
--	Not scheduled to be performed / dead	TERR	Technical error
AVS	Suspected aberrant value	X	Excluded from mean
NR	Not recorded	p	6 hours post dose
pr	Predose		

Note: This is a comprehensive list of abbreviations. All of the abbreviations listed may not be applicable to this report.

Dosing Information

Dosing information is abbreviated on various data outputs; the following represents the dosing information for this study.

Group No.	Test Material	Dose Level[a] (µg/dose)
1	Reference Item	0
2	mRNA-1647	10/8.9
3	mRNA-1647	30/27
4	mRNA-1647	100/89

[a] Values based on SoA issued on 16 March 2017 / Values based on SoA issued on 31 May 2017.

Midas III Slide Stainer

Analyzed Parameter Descriptions

Parameter	Abbreviation	Units	Methodology
White Blood Cell Differential Stain		None	Wright-Giemsa stain
Bone Marrow Stain		None	Wright-Giemsa stain
Bone Marrow Slide Fixation		None	Fixative

Other Abbreviations

Abbreviation	Description	Abbreviation	Description
--	Not required for veterinary monitoring / No findings / Not scheduled to be performed/Dead	QNS	Quantity not sufficient
ADQ	Adequate	RSV	Refer to source data
AVS	Suspected aberrant value	SAMU	Large number of smudge cells
CLOT	Sample clotted	SND	Stability not documented
COMM	Comment added	SNR	Sample not received
DEC	Decreased	UDPC	Results not confirmed by smear review
INC	Increased	Unsc	Unscheduled bleed
MDIFF	Manual differential	UPTD	Unable to perform due to technical difficulty
NAF	No abnormal findings	UTD	Unable to determine
NRBC	WBC corrected for presence of nucleated RBC	UTDM	Unable to determine, not confirmed by microscopy
NSCH	Not scheduled to be performed	UTDR	Unable to determine, results not reproducible

Appendix 10

OA	Omitted activity	Vet	Bleed for veterinary monitoring
OOS	Sample analysed outside of established stability, results for information only	VNC	Value not calculable
		X	Excluded from mean

Note: This is a comprehensive list of parameters and abbreviations. All of the parameters and abbreviations listed may not be applicable to this report.

Note: Additional morphology for flagged samples has been reported for the following animals: 1013, 1015, 4008, 4010.

Dosing Information

Dosing information is abbreviated on various data outputs; the following represents the dosing information for this study.

Group No.	Test Material	Dose Level[a] (µg/dose)
1	Reference Item	0
2	mRNA-1647	10/8.9
3	mRNA-1647	30/27
4	mRNA-1647	100/89

[a] Values based on SoA issued on 16 March 2017 / Values based on SoA issued on 31 May 2017.

START 4 Compact Stago Analyzer

Analyzed Parameter Descriptions

Parameter	Abbreviation	Units	Methodology
Activated Partial Thromboplastin Time	APTT	sec	Viscosity
Fibrinogen	FIB	mg/dL	Viscosity
Prothrombin Time	PT	sec	Viscosity

STA Compact Stago Analyser

Analyzed Parameter Descriptions

Parameter	Abbreviation	Units	Methodology
Prothrombin Time	PT	sec	Viscosity
Activated Partial Thromboplastin Time	APTT	sec	Viscosity
Fibrinogen	FIB	mg/dL	Viscosity

Plasma Appearance (Reported as SAMQ PLASMA)

Analyzed Parameter Descriptions

Parameter	Abbreviation	Degree is graded as	Methodology
Normal sample	N	Normal	Manual and visual
Hemolyzed sample	H	+ = slight (pale/light red) ++ = moderate (red) +++ = severe (dark red)	Manual and visual
Lipemic sample	L	+ = slight (cloudy) ++ = moderate (turbid) +++ = severe (lactescent)	Manual and visual
Icterus sample	I	+ = slight (dark yellow) ++ = moderate (very dark yellow) +++ = severe (dark yellow-green)	Manual and visual

Appendix 11

Other Abbreviations

Abbreviation	Description	Abbreviation	Description
--	Not required for veterinary monitoring / Not scheduled to be performed / Dead	RSV	Refer to source data
AVS	Suspected aberrant value	SND	Stability not documented
CLOT	Sample clotted	SNR	Sample not received
COMM	Comment added	Unsc	Unscheduled bleed
NCD	No clot detected	UPTD	Unable to perform due to technical difficulty
NSCH	Not scheduled to be performed	UTD	Unable to determine
OA	Omitted activity	UTDR	Unable to determine, results not reproducible
OOS	Sample analysed outside of established stability, results for information only	Vet	Bleed for veterinary monitoring
QNS	Quantity not sufficient	VNC	Value not calculable
		X	Excluded from mean

Note: This is a comprehensive list of parameters and abbreviations. All of the parameters and abbreviations listed may not be applicable to this report.

Dosing Information

Dosing information is abbreviated on various data outputs; the following represents the dosing information for this study.

Group No.	Test Material	Dose Level[a] (µg/dose)
1	Reference Item	0
2	mRNA-1647	10/8.9
3	mRNA-1647	30/27
4	mRNA-1647	100/89

[a] Values based on SoA issued on 16 March 2017 / Values based on SoA issued on 31 May 2017.

Individual Clinical Chemistry Values Explanation Page

Modular Analytics

Analyzed Parameter Descriptions

Parameter	Abbreviation	Units	Methodology
Alanine Aminotransferase	ALT	U/L	ALT IFCC UV
Albumin	ALB	g/dL	Bromcresol green colorimetric
Alkaline Phosphatase	ALP	U/L	ALP IFCC liquid colorimetric
Aspartate Aminotransferase	AST	U/L	AST IFCC UV
Calcium	CA	mg/dL	O-cresolphthalein complexone colorimetric
Cholesterol	CHOL	mg/dL	CHOD-PAP enzymatic colorimetric
Creatinine	CREAT	mg/dL	Jaffe kinetic colorimetric. Rate-blanked and compensated
Creatine Kinase	CK	U/L	NAC activated UV
Direct Bilirubin	DBIL	mg/dL	Jendrassik colorimetric
GAMMA-Glutamyl Transferase	GGT	U/L	Nitro-Anilide, Glycylglycine; enzymatic colorimetric
Glucose	GLUC	mg/dL	Hexokinase UV
Iron	FE	µg/dL	Colorimetric
Lactate	LACT	mg/dL	Enzymatic colorimetric
Magnesium	MG	mg/dL	Colorimetric
Phosphorus	PHOS	mg/dL	Molybdate UV
Sodium, Potassium, Chloride (SI)	NA,K,CL	mmol/L	Indirect measurement (Ion selective electrode)
Total Bilirubin	TBIL	mg/dL	DPD colorimetric
Total Protein	TPROT	g/dL	Biuret colorimetric
Triglycerides	TRIG	mg/dL	GPO-PAP enzymatic colorimetric
Urea Nitrogen	UREAN	mg/dL	Urease kinetic UV

Calculations

Analyzed Parameter Descriptions

Parameter	Abbreviation	Units	Calculation
Albumin/Globulin ratio	A/G	None	Albumin / Globulin
Globulin	GLOB	g/dL	Total Protein - Albumin
Indirect Bilirubin	IBIL	mg/dL	Total Bilirubin - Direct Bilirubin

Appendix 12

Serum Appearance
(Reported as SAMQ SERUM)

Analyzed Parameter Descriptions

Parameter	Abbreviation	Key to Results (Code)	Methodology
Normal sample	N	Normal	Manual and visual
Hemolyzed sample	H	+ = slight (pale/light red) ++ = moderate (red) +++ = severe (dark red)	Manual and visual
Lipemic sample	L	+ = slight (cloudy) ++ = moderate (turbid) +++ = severe (lactescent)	Manual and visual
Icterus sample	I	+ = slight (dark yellow) ++ = moderate (very dark yellow) +++ = severe (dark yellow-green)	Manual and visual

Other Abbreviations

Abbreviation	Description	Abbreviation	Description
--	Not evaluated/Not required for veterinary monitoring	SNR	Sample not received
AVS	Suspected aberrant value	TNR	Test not reported
COMM	Comment added	Unsc	Unscheduled bleed
CLOT	Sample clotted	UPTD	Unable to perform due to technical difficulty
LLD	Less than lower limit of detection	UTD	Unable to determine
LLOQ/LLQ	Less than lower limit of quantitation	UTDH	Unable to determine due to marked hemolysis
NSCH	Not scheduled to be performed	UTDL	Unable to determine due to marked lipemia
OA	Omitted activity	UTDR	Unable to determine, results not reproducible
OOS	Sample analysed outside of established stability, results for information only	VARR	Assigned value above reportable range
QNS	Quantity not sufficient	VBRR	Assigned value below reportable range
RSV	Refer to source data	Vet	Bleed for veterinary monitoring
SND	Stability not documented	VNC	Value not calculable
		X	Excluded from mean

Note: This is a comprehensive list of parameters and abbreviations. All of the parameters and abbreviations listed may not be applicable to this report.

Appendix 12

Dosing Information

Dosing information is abbreviated on various data outputs; the following represents the dosing information for this study.

Group No.	Test Material	Dose Level[a] (µg/dose)
1	Reference Item	0
2	mRNA-1647	10/8.9
3	mRNA-1647	30/27
4	mRNA-1647	100/89

[a] Values based on SoA issued on 16 March 2017 / Values based on SoA issued on 31 May 2017.

Individual α1-acid Glycoprotein and α2-macroglobulin Values Explanation Page

Abbreviation	Description	Abbreviation	Description
--	No findings / Dead	QNS	Quantity not sufficient
CLOT	Sample clotted	SNR	Sample not received
NA	Not applicable	TNR	Test not reported
NC	Not calculable	X	Excluded from mean
NR	Not reported		

Note: This is a comprehensive list of abbreviations. All of the abbreviations listed may not be applicable to this report.

Dosing Information

Dosing information is abbreviated on various data outputs; the following represents the dosing information for this study.

Group No.	Test Material	Dose Level (µg/dose)
1	Reference Item	0
2	mRNA-1647	8.9
3	mRNA-1647	27
4	mRNA-1647	89

Appendix 14

Individual Cytokine Values Explanation Page

Abbreviation	Description	Abbreviation	Description
--	No findings / Dead	QNS	Quantity not sufficient
CLOT	Sample clotted	SNR	Sample not received
NA	Not applicable	TNR	Test not reported
NC	Not calculable	X	Excluded from mean
NR	Not reported	a	Less than 30 beads acquired in 2 different analysis. A mean of both analysis was reported
SNC	Sample not collected		

Note: This is a comprehensive list of abbreviations. All of the abbreviations listed may not be applicable to this report.

Note:

For IL-1β and MIP-1-α

Lower Limit of Quantification (LLOQ) = 11.70 pg/mL, <11.70 was assigned as 11.70/2 (5.85 pg/mL) for statistical analysis purposes

For IL-6

Lower Limit of Quantification (LLOQ) = 352.00 pg/mL, <352.00 was assigned as 352.00/2 (176.00 pg/mL) for statistical analysis purposes

For MCP-1

Lower Limit of Quantification (LLOQ) = 141.00 pg/mL, <141.00 was assigned as 141.00/2 (70.50 pg/mL) for statistical analysis purposes

For TNF-α

Lower Limit of Quantification (LLOQ) = 2.93 pg/mL, <2.93 was assigned as 2.93/2 (1.47 pg/mL) for statistical analysis purposes

Dosing Information

Dosing information is abbreviated on various data outputs; the following represents the dosing information for this study.

Group No.	Test Material	Dose Level (µg/dose)
1	Reference Item	0
2	mRNA-1647	8.9
3	mRNA-1647	27
4	mRNA-1647	89

TABLE OF CONTENTS

Appendix 15

LIST OF APPENDICES

Appendix 15

1. INTRODUCTION

This report presents the ophthalmology evaluations for the study entitled *A 6-Week (4 doses) Intramuscular Injection Toxicity Study of mRNA-1647 in Sprague-Dawley Rats followed by a 2-Week Recovery Period* (Study No. 5002034).

For the work detailed in this report, the ophthalmology phase start date was 13 Mar 2017, and the ophthalmology phase completion date was 30 Apr 2017.

2. MATERIALS AND METHODS

Experimental procedures applicable to ophthalmology evaluations are summarized in Text Table 1.

Text Table 1
Experimental Design

Group No.	Test Material	Dose Level[a] (µg/dose)	Dose Volume (µL/dose)	Dose Concentration[a] (mg/mL)	No. of Animals			
					Main Study		Recovery Study	
					Males	Females	Males	Females
1	Reference Item	0	200	0	10	10	5	5
2	mRNA-1647	10/8.9	200	0.05/0.045	10	10	-	-
3	mRNA-1647	30/27	200	0.15/0.14	10	10	-	-
4	mRNA-1647	100/89	200	0.5/0.45	10	10	5	5

- : Not applicable
[a] Values based on Summary of Analysis (SoA) issued on 16 Mar 2017 / Values based on SoA issued on 31 May 2017 (Refer to memorandum in Appendix 2).

2.1. Ophthalmic Examinations

Frequency: Examinations were performed once prestudy and again toward the end of Week 6 of the dosing period.

Procedure: All animals were subjected to funduscopic (indirect ophthalmoscopy) and biomicroscopic (slit lamp) examinations. The mydriatic used was 0.126% Atropine.

2.2. Computerized Systems

The following critical computerized system was used by the Test Facility in the generation of this report (Text Table 2).

Text Table 2
Computerized Systems

System Name	Version No.	Description of Data Collected and/or Analyzed
Provantis	8	Ophthalmic evaluations

Appendix 15

3. RESULTS AND DISCUSSION

(Appendix 1)

3.1. Pretreatment Evaluation

Background findings were recorded and recommendations for rejection from study groups were made when appropriate.

3.2. End of Week 6 Evaluation

There were no test item-related ocular changes observed during the course of the study. The findings noted were age-related or incidental in origin and to be expected in this population of animals.

4. CONCLUSIONS

Administration of mRNA-1647 by Intramuscular Injection to Sprague Dawley Rats for a 6 Weeks (4 doses) at doses of 8.9, 27, and 89 µg/dose did not result in any test item-related ophthalmic changes.

2. INTRODUCTION

This report describes the detection of anti-CMV gH pentamer complex antibodies in vaccinated Sprague-Dawley rat sera from Charles River Study No. 5002034, entitled "A 6-Week Study (4 doses) of mRNA-1647 by Intramuscular Injection in Sprague-Dawley Rats with a 2-Week Recovery Period." The objectives of this study are to determine the potential toxicity of mRNA-1647, when given by intramuscular injection for 6 weeks (4 doses) to rats and to evaluate the potential reversibility of any findings following a 2-week recovery period.

The study was sponsored by Moderna Therapeutics Inc., Cambridge, Massachusetts. (b) (6), ALM served as Sponsor Representative for Moderna Therapeutics Inc.

A total of 219 serum samples (98 samples from Day 1, 80 samples from Day 43, and 19 samples from Day 57; 22 pre-bleed samples noted as "SP") were received at Integrated BioTherapeutics, Inc. (IBT) from Charles River Laboratories on May 10, 2017 and May 31, 2017.

This study phase was not within the scope of regulations governing the conduct of nonclinical laboratory studies and was not intended to comply with such regulations. However, this non GLP study phase was conducted in accordance with the Standard Operating Procedures of Integrated Biotherapeutics, Inc.

4.1. CMV gH pentamer complex

Identification:	gH pentamer complex from hCMV strain VR1814
Supplier:	The Native Antigen Company
Batch/Lot No.:	422872/16082513
Concentration:	1 mg/mL
Used concentration:	3 µg/mL
Expiry:	Not available
Retest Date:	N/A
Storage conditions:	Kept in a freezer set to maintain -80°C

4.2. Standard

Identification:	Anti-CMV gH pentamer complex pooled rat serum Sprague Dawley rats vaccinated with mRNA-1647 Charles River Study 5002034, Group 4 (Day 43)
Supplier:	IBT Bioservices
Batch/Lot No.:	N/A
Concentration:	Not applicable
Expected Titer:	4,417 AU/mL
Expiry:	Not available
Retest Date:	N/A
Storage conditions:	Kept in a freezer set to maintain -80°C

4.3. Unknown test samples

Identification:	Sprague-Dawley rat sera (Charles River Study Number 5002034)
Supplier:	Charles River Laboratories
Storage conditions:	Kept in a freezer set to maintain -80°C
Duration:	Test samples will be discarded 30 days from completion of the project unless otherwise instructed

4.4. Detection Antibody

Appendix 16

Identification:	Goat anti-rat IgG (H+L)-HRP, mouse serum-adsorbed
Supplier:	KPL
Batch/Lot No.:	Catalog # 474-1612, lot 150317
Storage conditions:	Kept in a refrigerator set to maintain +4°C
Expiry:	Not available
Retest Date:	06Jul2018
Storage conditions:	Kept in a freezer set to maintain -80°C

5. RESULTS AND DISCUSSIONS

5.1. Standard

The standard is a well-characterized anti-CMV gH pentamer complex rat serum whose titer (Antibody Units/mL) has been assigned 4,417 AU/mL based on the average EC50 value of multiple runs during Assay Development. A cumulative graph of the standard curves tested is shown below in **Figure 1.** Variations in standard curves were not due to the pooled serum standards as study BS-3152 used the identical pool and resulted in consistent curves. Instead, these variations were likely due to the gH pentamer complex, which visibly precipitated when thawed at room temperature for 10 minutes

5.2. Study Samples

Antibody titers of Unknown Test Samples tested at 1:100 and 1:10,000 dilutions were calculated from the standard curve tested on each plate.

Main study: Day 43 rat sera from animals vaccinated with mRNA-1647 at 8.9 µg/dose, 27 µg/dose, 89 µg/dose on days 1, 15, 29, and 43 intramuscularly showed detectable antibody responses against CMV gH pentamer complex.

Recovery study: Day 57 rat sera from animals vaccinated with mRNA-1647 on days 1, 15, 29, and 43 showed similar antibody titers compared to Day 43 rats.

Individual Antibody Titers are shown in **Table 6 and Table 7**. Graphs are shown in **Figure 2**.

6. CONCLUSION

A total of 219 rat serum samples were successfully tested to detect anti-CMV gH pentamer complex antibodies against CMV gH pentamer complex.

2. INTRODUCTION

This report describes the detection of anti-CMV gB protein antibodies in vaccinated Sprague-Dawley rat sera from Charles River Study No. 5002034, entitled "A 6-Week Study (4 doses) of mRNA-1647 by Intramuscular Injection in Sprague-Dawley Rats with a 2-Week Recovery Period." The objectives of this study are to determine the potential toxicity of mRNA-1647, when given by intramuscular injection for 6 weeks (4 doses) to rats and to evaluate the potential reversibility of any findings following a 2-week recovery period.

The study was sponsored by Moderna Therapeutics Inc., Cambridge, Massachusetts. (b) (6), ALM served as Sponsor Representative for Moderna Therapeutics Inc.

A total of 219 serum samples (98 samples from Day 1, 80 samples from Day 43, and 19 samples from Day 57; 22 pre-bleed samples noted as "SP") were received at Integrated BioTherapeutics, Inc. (IBT) from Charles River Laboratories on May 10, 2017 and May 31, 2017.

This study phase was not within the scope of regulations governing the conduct of nonclinical laboratory studies and was not intended to comply with such regulations. However, this non GLP study phase was conducted in accordance with the Standard Operating Procedures of Integrated Biotherapeutics, Inc.

6. CONCLUSION

A total of 219 rat serum samples were successfully tested to detect anti-CMV gB protein antibodies against CMV gB protein.

TABLE OF CONTENTS

Appendix 17

INTRODUCTION

The objective of the present study was to evaluate the T cell responses of rats vaccinated with mRNA-1647. Rat blood cells were stimulated with overlapping peptide library for Pentamer (Penta) and Glycoprotein B (gB). Interferon gamma (INFγ) producing T cells were then assessed by intracellular cytokine staining (ICS) and flow cytometric analysis.

MATERIALS AND METHODS

Blood Samples

Blood samples for evaluation were generated as part of a study conducted at Charles River Laboratories Montreal, CRLM (Test Facility Study No. 5002034). In total, 80 blood samples were received from CRLM over the course of two days, 05-May-2017 (male rat samples) and 06-May-2017 (female rat samples). Each shipment consisted of 40 whole blood samples in sodium heparin blood collection tubes with 10 samples from each of 4 study groups. Upon receipt, samples were verified against the shipping manifest and immediately processed and analyzed.

Appendix 17

Statistical Analysis

Means and standard deviations for each analyzed parameter were determined for each sex of each treatment group.

Study Design

The detailed Study Design is included in the Appendix (p. 5-6).

Appendix 17

RESULTS and **CONCLUSIONS**

A detailed table of individual animal responses is presented in the Appendix (p.8-15). Summary tables of INFγ production responses are presented in the tables below and the chart found in the Appendix (p. 7).

*For purpose of Range and Mean calculation, values < 0.00 following Unstimulated Control subtraction were set to 0.00 for reporting.

Conclusions

The mRNA-1647 elicited CD4 and CD8 T cell responses to both CMV Pentamer and gB. The animals that received 89 µg mRNA-1647 showed maximal but varying T cell responses for both Pentamer and gB. In male rats immunized with 89 µg of mRNA-1647, the range of Pentamer-specific CD4 and CD8 T cells secreting IFNγ were 0-6.99 % and 0-8.96%, respectively. In female rats that received 89 µg of mRNA-1647, the range of pentamer-specific CD4 and CD8 T cells were 0-3.16% and 0-4.35%, respectively.

The range of gB-specific T cell responses male rats dosed with 89 µg mRNA-1647 were 0-3.17% and 0-4.52% for CD4 and CD8 T cells, respectively. For female rats that received the same dose, the range of gB specific CD4 and CD8 T cell responses were 0-3.00% and 0-4.76%, respectively.

FINAL REPORT

Study Phase: Immunology - Alpha-1-acid Glycoprotein, Alpha-2-macroglobulin and Cytokines

Test Facility Study No. 5002034

TEST FACILITY:
Charles River Laboratories Montreal ULC
Sherbrooke Site (CR SHB)

Page 1 of 57

Appendix 18

TABLE OF CONTENTS

Appendix 18

LIST OF APPENDICES

Appendix 18

1. INTRODUCTION

This report describes the evaluation of alpha-1-acid glycoprotein, alpha-2-macroglobulin and cytokines in rat plasma (EDTA) or serum samples from Study No. 5002034 titled "A 6-Week (4 doses) Intramuscular Injection Toxicity Study of mRNA-1647 in Sprague-Dawley Rats followed by a 2-Week Recovery Period".

For the work detailed in this report, the phase experimental start date was 25 May 2017, and the phase experimental completion date was 08 Jun 2017.

1.1. Materials and Methods

The methodology and materials used for the analyses were detailed in their respective analytical procedures (only the latest version is appended) and listed in the table below:

Analyte	Analytical procedure(s) no.
Alpha-1-acid glycoprotein (AGP)	AP.5002034.AGP.01
Alpha-2-macroglobulin (A2M)	AP.5002034.A2M.01
IL-1β, IL-6, IP-10, MCP-1, MIP-1α and TNF-α	AP.5002034.Cyt.01

The methods were not validated.

1.2. Computerized Systems

Critical computerized systems used in this study phase are listed below (see Text Table 1)

Text Table 1
Computerized Systems

System name	Version no.	Description of data collected and/or analyzed
Softmax Pro GxP	5.4.6	Data collection
Bio Plex Manager (Bio-Rad)	Version 6.1	Data collection
Watson LIMS	7.4.2 SP1	Sample tracking/ analysis/regression
Microsoft Excel	2007	Descriptive statistics
Microsoft Word	2007	Data reporting
Mesa Laboratories AmegaView CMS	v3.0 Build 1208.8	Continuous Monitoring System. Monitoring of standalone fridges, freezers, incubators, and selected laboratories to measure temperature, relative humidity, and CO_2, as appropriate
Johnson Controls Metasys	MVE 4.0.4	Building Automation System. Control of HVAC and other building systems, as well as temperature/humidity control and trending in selected laboratories and animal rooms

Appendix 18

2. RESULTS AND DISCUSSIONS

2.1. Standards and Quality Control samples for alpha-1-acid glycoprotein

Standards, Quality Control (QC) preparation and acceptance criteria are described in the latest version of the analytical procedure (Appendix 2). Standard curve and QC specifications are presented in (Text Table 2).

Text Table 2
Alpha-1-acid glycoprotein standard curve and Quality Controls specifications

Range of the Curve (ng/mL)	LLOQ (ng/mL)	ULOQ (ng/mL)	HQC (ng/mL)	MQC (ng/mL)	LQC (ng/mL)
3.13 to 800*	12.5	400	320	160	20.0

* Standard 3.13, 6.25 and 800 ng/mL are accessory standards used to define the lower and upper portion of the curve.

A total of 5 AGP assays were performed and all assays met the method's acceptance criteria.

2.2. Standards and Quality Control samples for alpha-2-macroglobulin

Standards, Quality Control (QC) preparation and acceptance criteria are described in the latest version of the analytical procedure (Appendix 3). Standard curve and QC specifications are presented in (Text Table 3).

Text Table 3
Alpha-2-Macroglobulin standard curve and Quality Controls specifications

Range of the Curve (ng/mL)	LLOQ (ng/mL)	ULOQ (ng/mL)	HQC (ng/mL)	MQC (ng/mL)	LQC (ng/mL)
3.13 to 400*	6.25	400	240	80.0	8.00

* Standard 3.13 ng/mL is an accessory standard used to define the lower portion of the curve.

A total of 7 A2M assays were performed and three assays were out of the method's acceptance criteria. A technical oversight during the preparation of the QCs is suspected since all assays performed the same day with the same preparation were out of acceptance criteria. All results were reported from the assays that met the acceptance criteria.

2.3. Standards and Quality Control samples for cytokine panel

Standard, Quality control (QC) preparation and acceptance criteria are described in the latest version of the analytical procedure (Appendix 4). Standard curve and quality control specifications are presented in (Text Table 4).

Appendix 18

Text Table 4
Cytokine standard curves and Quality Controls specifications

Cytokine panel	Range of the curve (pg/mL)	LLOQ (pg/mL)	ULOQ (pg/mL)	HQC (pg/mL)	MQC (pg/mL)	LQC (pg/mL)
IL-1β	11.7 to 1500	11.7	1500	1200	150	15.6
IL-6	352 to 45000	352	45000	36000	4500	469
IP-10	11.7 to 1500	11.7	1500	1200	150	15.6
MCP-1	141 to 18000	141	18000	14400	1800	188
MIP-1α	11.7 to 1500	11.7	1500	1200	150	15.6
TNF-α	2.93 to 375	2.93	375	300	37.5	7.81

A total of 9 cytokine assays were performed and 4 individual cytokines were out of the method's acceptance criteria (IL-1β and MCP-1 in the first assay, IL-1β in the second assay and TNF-α in the fourth assay). A technical oversight during the loading of QCs is suspected since the same cytokine analyses performed in other assays on the same day with the same preparations were within acceptance criteria. All results were reported from the assays that met the acceptance criteria.

2.4. Study Samples

For blood markers (AGP and A2M) analysis, approximately 0.7 mL of blood was collected from all animals (unscheduled and scheduled euthanasia) from the abdominal aorta on days 44 and 57. Blood samples were processed to serum and were stored in a freezer set to maintain -20°C until analysis.

Blood was collected from the jugular vein of all recovery animals on Days 1, 15, 29, 43 and 57 at 6 hours post dose for cytokine analysis (IL-1β, IL-6, TNF-α, IP-10, MIP-1α and MCP-1). Blood samples were processed to plasma, and to serum for IFN-α. Samples were stored in a freezer set to maintain -80°C until analysis. However due to method development issues, IFN-α analysis was withdrawn from the cytokine list and therefore IFN-α serum samples were not analyzed.

2.5. Cytokines

The study samples were analyzed in duplicate and results are presented in Table 10 and Appendice 14.

IL-1β

The quantifiable IL-1β concentration range in the reference item group was 26.37 pg/mL to 599.01 pg/mL. All IL-1β concentrations observed amongst the dosed group were lower or within the control group range. These changes were not statistically significant.

IL-6

For all animals, males and females, at all time points, the IL-6 concentrations observed were below the LLOQ. These changes were not statistically significant.

Appendix 18

TNF-α

Incidental TNF-α concentrations similar to the concentrations observed in the control group were detected in both genders. These changes were not statistically significant.

IP-10

Higher concentrations of IP-10, when compared to the reference item group, were observed in the high dosed group of mRNA-1647 with the highest concentrations being generally observed on Days 1, 15 and 29, 6 hours post dose in both genders. On Day 1, a 10.2-fold increase in males and 14.6-fold increase in females were observed when compared to the mean IP-10 concentration detected in the control group. On Day 15, a 10.8 and 15.9-fold increase were observed in males and females respectively. On Day 29, a 9.2 and 18.1-fold increase and on Day 43 a 5.8 to 9.0- fold increase were observed in both genders.

The changes were statistically significant on days 1, 15, 29 and 43 6 hours post dose in both genders.

On day 57, the concentration of IP-10 for the animal assigned to the dosed groups was very similar to the control group concentration for most animals, suggesting that animals had fully recovered.

MIP-1α

The MIP-1α concentrations observed across all males, at all time points were below the LLOQ, except for one dosed male where MIP-1α concentration close to the LLOQ was detected. In females, MIP-1α concentrations were detected in 3 out of 5 dosed animals on Days 1, 15 and 29 whereas all control group animals were < LLOQ. In one dosed animal, MIP-1α concentration was also detected on Day 43. These changes were not statistically significant.

MCP-1

In males, the quantifiable MCP-1 concentration range in the reference item group was 290.05 to 516.54 pg/mL. MCP-1 concentrations observed amongst the dosed group were higher than the control group range in 3 out of 5 animals. Concentrations of 533.42 to 1191.17 pg/mL were observed leading to a 1.4 to 1.6-fold increase on days 1, 15, 29 and 43.

In females, MCP-1 concentrations from the control group were lower than in control males. A 4.1-fold increase was observed on Day 1, a 6.5-fold increase on Day 15, a 5.9-fold increase on day 29 and a 2.3-fold increase on Day 43 6 hours post dose when compared to the mean MCP-1 concentration detected in the control group.

The changes were statistically significant on day 1, 15 and 29 6 hours post dose for females.

On day 57, the concentration of MCP-1 for the animal assigned to the dosed groups was similar to the control group concentration for most animals, suggesting that animals had fully recovered.

Appendix 18

3. CONCLUSION

Statistically significant increases of IP-10 concentrations were observed in both genders dosed with mRNA-1647 at 89 μg/dose at all timepoints, except Day 57 where the IP-10 concentration was back to control level. The highest IP-10 concentrations were generally observed on Day 1 6 hours post dose.

In dosed females, MCP-1 concentrations were increased on Days 1, 15 and 29 6 hours post dose when compared to the control group, and the increases were statistically significant. MCP-1 concentrations were back to control level on Day 57.

No changes were observed in the IL-1β, IL-6, MIP-1α and TNF-α levels following dosing.

All samples collected for the AGP, A2M and cytokines analyses were analyzed using qualified immunoassay methods. Based on the acceptable performance of the standards and QCs during sample analysis, it is concluded that the concentration values reported for the study samples are valid.

Deviations

Appendix 18

DEVIATIONS

All deviations that occurred during this study phase have been acknowledged by the Study Director, assessed for impact, and documented in the study records. None of the deviations were considered to have impacted the overall integrity of this study phase or the interpretation of the study phase results and conclusions.

ANALYTICAL PROCEDURE

charles river | every step of the way.

Title: ELISA METHOD FOR THE QUANTITATIVE DETECTION OF ALPHA 1 ACID GLYCOPROTEIN IN RAT SERUM	AP Number: AP.5002034.AGP.01	Effective Date: Signature of AP
	Page 1 of 6 pages	Supersedes: N/A
Prepared and approved by: (b) (6) (b) (6)	(b) (6)	Date: 25 May 2017
Authorized by: (b) (6) (b) (6)	(b) (6)	Date: 25/May/2017

1. **PURPOSE**

The purpose of this assay is to describe an ELISA method for the quantitation of alpha 1 acid glycoprotein in rat serum.

2. **SCOPE**

This analytical procedure applies to all personnel performing activities related to this method.

3. **RESPONSIBILITY**

All staff performing this assay are responsible for compliance with this analytical procedure.

4. **DEFINITIONS/ABBREVIATIONS**

ELISA:	enzyme-linked immunosorbent assay
% Diff:	% difference
LLOQ:	lower limit of quantitation
LQC:	low concentration quality control sample
MQC:	mid concentration quality control sample
HQC:	high concentration quality control sample
ULOQ:	upper limit of quantitation
N/A:	not applicable
QC:	quality control sample
RT:	ambient room temperature in a non-controlled environment in a normally acceptable room temperature
RF:	refrigerated in a refrigerator set at 4°C
F:	frozen in a freezer set at -20°C
STD:	standard
TBD:	to be determined
UPW:	Ultra Pure Water

5. **REQUIRED FORM**

Appendix #1: Assay Information Sheet.
Appendix #2: AGP standards and QC's Preparation Sheet.

ANALYTICAL PROCEDURE

charles river | every step of the way.

Title: ELISA METHOD FOR THE QUANTITATIVE DETECTION OF ALPHA 2-MACROGLOBULIN IN RAT SERUM	AP Number: AP.5002034.A2M.01	Effective Date: Signature of AP
	Page 1 of 5 pages	Supersedes: N/A
Approved by: (b) (6) (b) (6)	(b) (6)	Date: 19 May 2017
Authorized by: (b) (6) (b) (6)	(b) (6)	Date: 19/May 2017

1. **PURPOSE**
The purpose of this assay is to describe an ELISA method for the quantitation of alpha 2-macroglobulin in rat serum.

2. **SCOPE**
This analytical procedure applies to all personnel performing activities related to this method.

3. **RESPONSIBILITY**
All staff performing this assay are responsible for compliance with this analytical procedure.

4. **REQUIRED FORM**

QUALITY ASSURANCE STATEMENT

Study No.: 5002034

This phase has been audited by Quality Assurance in accordance with the applicable Good Laboratory Practice regulations. Reports were submitted in accordance with standard operating procedures as follows:

QA INSPECTION DATES

		Dates Findings Submitted to:			
Date(s) of Audit	Phase(s) Audited	Principal Investigator	Principal Investigator Management	Study Director	Study Director Management
22-Aug-2017	Draft Phase Report – Pathology	22-Aug-2017	22-Aug-2017	22-Aug-2017	22-Aug-2017
14-Sep-2017	Final Phase Report – Pathology	14-Sep-2017	14-Sep-2017	14-Sep-2017	14-Sep-2017

Process-based inspections relevant to this study were conducted according to a predetermined schedule. The outcome of each inspection was reported to Management and, where relevant for processes seen as part of a study, the Study Director.

Facilities relevant to this study are included in Charles River's annual facility inspection programme. The outcome of each inspection is reported to Management.

The Final Report has been reviewed to assure that it accurately describes the materials and methods and the reported results accurately reflect the raw data.

COMPLIANCE STATEMENT AND REPORT APPROVAL

The pathology phase of this study conducted in the USA was performed in accordance with the U.S. Department of Health and Human Services, Food and Drug Administration. United States Code of Federal Regulations, Title 21, Part 58: Good Laboratory Practice for Nonclinical Laboratory Studies and as accepted by Regulatory Authorities throughout the European Union (OECD Principles of Good Laboratory Practice), Japan (MHLW), and other countries that are signatories to the OECD Mutual Acceptance of Data Agreement.

This phase of the study was conducted in accordance with the procedures described herein. All deviations (if any) authorized/acknowledged by the Study Director are documented in the Study Records. The report represents an accurate and complete record of the results obtained for this study phase.

There were no deviations from the above regulations that affected the overall integrity of this study phase or the interpretation of the phase results and conclusions.

(b) (6) Date: 20Sep2017

Appendix 19

1. SUMMARY

This report presents the pathology findings in rats assigned to Study No. 5002034. The objective of this study was to determine the potential toxicity of mRNA-1647, when given by intramuscular injection for 6 weeks (4 doses) to rats and to evaluate the potential reversibility of any findings following a 2-week recovery period.

A complete gross pathological examination was performed on all animals, organ weights were recorded, and a detailed microscopic evaluation was performed on all protocol-specified tissues from all animals in Groups 1 and 4 and early death animals and all gross lesions from all animals. Additionally, bone marrow, sciatic nerve, liver, spleen, injection site, popliteal lymph node, and inguinal lymph node were evaluated in all Group 2 and 3 terminal euthanasia animals and all recovery euthanasia animals.

The administration of four doses of mRNA-1647 over 6 weeks at doses of 8.9, 27, or 89 µg/dose by intramuscular (IM) injection to rats was well tolerated with no mRNA-1647-related effects on survival. Both localized and systemic tissue reactions were noted; however, systemic effects were limited in severity.

mRNA-1647-related localized tissue reactions involved the intramuscular injection sites, the draining popliteal and/or inguinal lymph nodes, and the sciatic nerves in animals administered ≥ 18.9 µg/dose of mRNA-1647. At the intramuscular injection sites, gross observations of abnormal firm consistency, dark focus, and/or swelling generally correlated microscopically with minimal to moderate mixed cell inflammation involving the subcutaneous tissues, skeletal muscle, and to a lesser extent the dermis, as well as associated minimal to moderate subcutaneous edema and minimal to mild myofiber degeneration. In the draining inguinal and/or popliteal lymph nodes, gross enlargement generally correlated microscopically with minimal to marked mixed cell inflammation. In addition, minimal to marked mixed cell inflammation was noted in the perineurial tissue surrounding the sciatic nerve.

mRNA-1647-related systemic tissue reactions involved the bone marrow and spleen in animals administered ≥ 8.9 µg/dose of mRNA-1647. These systemic findings included minimal increased myeloid hematopoiesis in the bone marrow, increases in absolute and/or relative spleen weights without correlating histopathology, and minimal to mild decreased cellularity of the splenic periarteriolar lymphoid sheath.

Following a two-week recovery period, mRNA-1647-related macroscopic findings in any tissue and microscopic findings in the draining lymph nodes (popliteal and/or inguinal) or sciatic nerves were not present. A reduced incidence and severity of increased absolute and/or relative spleen weights (no histopathology correlate); the absence of mixed cell inflammation and edema, with a shift to minimal to mild mononuclear cell infiltration, at the intramuscular injections sites; and a reduced incidence and/or severity of perineurial mixed cell inflammation associated with the sciatic nerves, increased myeloid hematopoiesis in the bone marrow, and decreased cellularity of the periarteriolar lymphoid sheath in the spleen were consistent with partial recovery.

3. INTRODUCTION

This report presents the pathology findings in rats assigned to Study No. 5002034. The objective of this study was to determine the potential toxicity of mRNA-1647, when given by intramuscular injection for 6 weeks (4 doses) to rats and to evaluate the potential reversibility of any findings following a 2-week recovery period.

The study was sponsored by Moderna Therapeutics, Inc., Cambridge, MA. (b) (6), served as the Study Director.

4. MATERIALS AND METHODS

Experimental procedures applicable to pathology investigations are summarized in Text Table 1. Deviations to the pathology procedures performed by the Test Site are listed in Appendix 1.

a- Values based on SoA issued on 16 March 2017 / Values based on SoA issued on 31 May 2017.

All surviving animals were submitted for necropsy on Day 44 (Terminal Euthanasia) or Day 57 (Recovery Euthanasia). Necropsies were performed and organ weights were collected by Testing Facility personnel. Statistical analysis of organ weight data was performed by the Testing Facility. Tissues required for microscopic evaluation were trimmed, processed routinely, embedded in paraffin, and stained with hematoxylin and eosin by Charles River Laboratories Inc, Montreal, Canada. Microscopic evaluation was conducted by the Principal Investigator, a board-certified veterinary pathologist, on all protocol-specified tissues from all animals in Groups 1 and 4 and early death animal and all gross lesions from all animals. Additionally, bone marrow, sciatic nerve, liver, spleen, injection site, popliteal lymph node, and inguinal lymph node were evaluated in all Group 2 and 3 terminal euthanasia animals and all recovery euthanasia animals. Tissues were evaluated by light microscopy.

4.2. Disposition of Study Materials

All study-specific raw data, pathology materials, documentation and Final Report generated from this study phase are to be transferred to CR MTL archive. Study materials will be retained for a period of 1 year following issue of the audited Draft Report. Electronic Provantis data generated by the Test Site will be archived, and the software and hardware required to produce it in a readable form will be maintained and available. The electronic data will be archived in Charles River Laboratories, Inc., Wilmington, MA.

5. RESULTS AND DISCUSSIONS

5.1. Mortality

One control group male (Animal No. 1014) was found dead on study day 43. Gross observations for this animal included small, dark discoloration, and soft abnormal consistency of the right adrenal gland (no histopathology correlates); dark discoloration of the corticomedullary junction of the kidneys (no histopathology correlate); dark focus and dark discoloration of the thymus (incidental thymic hemorrhage); and failure of the lungs to collapse (lung congestion). Histopathology findings were incidental and did not explain the cause of death for this animal.

5.2. Gross Pathology

5.2.1. Terminal Euthanasia Animals (Day 44)

(Table 1 and Appendix 8)

mRNA-1647-related gross pathology findings are summarized in Text Table 3.

Appendix 19

Text Table 3
Summary of Gross Pathology Findings – Terminal Euthanasia (Day 44)

	Males				Females			
Group	**1**	**2**	**3**	**4**	**1**	**2**	**3**	**4**
Dose (µg/dose)	**0**	**8.9**	**27**	**89**	**0**	**8.9**	**27**	**89**
No. Animals Examined	**10**	**10**	**10**	**10**	**10**	**10**	**10**	**10**
Site, Injection (No. Examined)	10	10	10	10	10	10	10	10
Abnormal consistency, firm	0	1	5	9	0	3	5	7
Swelling	0	5	6	9	0	5	5	7
Focus, dark	0	0	0	0	0	1	1	3
Lymph Node, Inguinal (No. Examined)	10	10	10	10	10	10	10	10
Enlargement	1	1	0	5	0	0	0	1
Lymph Node, Popliteal (No. Examined)	10	10	10	10	10	10	10	10
Enlargement	0	3	7	7	0	8	6	7

At the intramuscular injection sites, dose-dependent mRNA-1647-related gross observations of abnormal firm consistency, dark focus, and/or swelling were noted in animals administered ≥ 8.9 µg/dose of mRNA-1647. These gross observations correlated microscopically with mixed cell inflammation of the subcutaneous and/or muscular tissue and/or subcutaneous edema at the injection site.

In the draining inguinal and/or popliteal lymph nodes, mRNA-1647-related gross enlargement was noted in animals administered ≥ 8.9 µg/dose of mRNA-1647, and correlated microscopically to mixed cell inflammation. Gross enlargement and microscopic mixed cell inflammation most commonly involved the popliteal lymph nodes. Gross enlargement of the inguinal lymph node was noted in one control group male without any correlating microscopic finding.

Other gross findings observed were considered incidental, of the nature commonly observed in this strain and age of rats, and/or were of similar incidence in control and treated animals and, therefore, were considered unrelated to administration of mRNA-1647.

5.2.2. Recovery Euthanasia Animals (Day 57)

(Table 2 and Appendix 8)

mRNA-1647-related gross pathology findings noted at the terminal euthanasia were no longer observed at the end of the recovery period (Day 57) and are summarized in Text Table 4.

Appendix 19

Text Table 4
Summary of Gross Pathology Findings – Recovery Euthanasia (Day 57)

	Males		Females	
Group	**1**	**4**	**1**	**4**
Dose (µg/dose)	**0**	**89**	**0**	**89**
No. Animals Examined	**4**	**5**	**5**	**5**
Lymph Node, Inguinal (No. Examined)	4	5	5	5
Enlargement	0	1	0	0

Gross enlargement of the inguinal lymph node was noted in one 89 µg/dose mRNA-1647 group animal without any correlating microscopic finding. This finding could not be distinguished from the one affected control group animal at the terminal euthanasia and, thus, was not considered to be mRNA-1647-related.

All gross findings observed were considered incidental, of the nature commonly observed in this strain and age of rats, and/or were of similar incidence in control and treated animals and, therefore, were considered unrelated to administration of mRNA-1647.

5.3. Organ Weights

5.3.1. Terminal Euthanasia Animals (Day 44)

(Table 3, Table 4, Table 5, Appendix 2, Appendix 3, and Appendix 4)

mRNA-1647-related organ weight changes are summarized in Text Table 5.

Text Table 5
Summary of Organ Weight Data – Terminal Euthanasia (Day 44)

	Males			Females		
Group	**2**	**3**	**4**	**2**	**3**	**4**

[a] Significantly different from control group 1value p≤0.05 (Dunnett).
[b] Significantly different from control group 1 value p≤0.01 (Dunnett).
[c] Significantly different from control group 1 value p≤0.001 (Dunnett).
Based upon statistical analysis of group means, values highlighted in bold are significantly different from control group – P ≤ 0.05; refer to data tables for actual significance levels and tests used.

In the spleen, slight dose-dependent increases in absolute and/or relative organ weights were noted in males and females administered ≥ 8.9 µg/dose of mRNA-1647. These changes were consistently statistically significant for increases in absolute and/or relative (to body and/or to brain) weights in males administered 89 µg/dose of mRNA-1647 and females administered ≥

Appendix 19

27 µg/dose of mRNA-1647. These splenic weight changes were not correlated with any specific histopathology finding.

No other mRNA-1647-related organ weight changes were noted. There were other isolated organ weight values that were statistically different from their respective controls. There were, however, no patterns, trends, or correlating data to suggest these values were toxicologically relevant. Thus, other organ weight differences observed were considered incidental and/or related to difference of sexual maturity and unrelated to administration of mRNA-1647.

5.3.2. Recovery Euthanasia Animals (Day 57)

(Table 6, Table 7, Table 8, Appendix 5, Appendix 6, and Appendix 7)

mRNA-1647-related organ weight changes noted at the terminal euthanasia were still observed at the end of the recovery period (Day 57) and are summarized in Text Table 6.

Text Table 6
Summary of Organ Weight Data – Recovery Euthanasia (Day 57)

	Males			Females		
Group	**2**	**3**	**4**	**2**	**3**	**4**

% Difference	-	-	+19.86	-	-	+11.58

[a] Significantly different from control group 1 value p≤0.05 (T-Test).
Based upon statistical analysis of group means, values highlighted in bold are significantly different from control group – P ≤ 0.05; refer to data tables for actual significance levels and tests used.

In the spleen, a slight increase in absolute and/or relative organ weights were noted in males and females administered 89 µg/dose of mRNA-1647. These changes were not statistically significant, with the exception of mean spleen weight relative to final body weight in the males; and thus, were considered to have limited toxicological importance. These splenic weight changes were not correlated with any specific histopathology finding.

No other mRNA-1647-related organ weight changes were noted. There were other isolated organ weight values that were statistically different from their respective controls. There were, however, no patterns, trends, or correlating data to suggest these values were toxicologically relevant. Thus, other organ weight differences observed were considered incidental and/or related to difference of sexual maturity and unrelated to administration of mRNA-1647.

Appendix 19

5.4. Histopathology

5.4.1. Terminal Euthanasia (Day 44)

(Table 9 and Appendix 8)

mRNA-1647-related microscopic findings were noted at injection sites, draining lymph nodes (popliteal and/or inguinal), sciatic nerve, bone marrow, and spleen and these findings are summarized in Text Table 7.

[a] Numbers in parentheses represent the number of animals with the finding.

Localized tissue reactions involved the intramuscular injection sites, the draining popliteal and/or inguinal lymph nodes, and the sciatic nerves. Systemic tissue reactions involved the bone marrow and spleen.

At the intramuscular injection sites, there was a dose-related inflammatory reaction characterized by minimal to moderate mixed cell inflammation involving the subcutaneous tissues, skeletal muscle, and to a lesser extent the dermis, as well as associated minimal to moderate subcutaneous edema and minimal to mild myofiber degeneration in animals administered ≥ 8.9 µg/dose of mRNA-1647. The inflammatory reaction, which increased in severity with increasing dose) often extended along and expanded endomysial and perimysial tissue layers, encircling individual muscle fibers and/or bundles. This reaction was characterized by varying numbers of intact and degenerating neutrophils, mononuclear cells, and macrophages (mixed cell inflammation); accumulations of protein-rich fluid (edema); and varying degrees of myofiber degeneration.

In the draining popliteal and/or inguinal lymph nodes, an increased incidence and/or severity of minimal to marked mixed cell inflammation were noted in male and female animals administered ≥ 8.9 µg/dose of mRNA-1647. The inflammation often involved the adventitia surrounding the lymph nodes, and most commonly involved the popliteal lymph nodes.

Minimal to marked mixed cell inflammation was frequently observed in the perineurial tissue surrounding the sciatic nerve of animals administered ≥ 8.9 µg/dose of mRNA-1647. This finding was considered to be an extension of the inflammatory reaction at the intramuscular injection sites to this region.

In the bone marrow, minimal increased myeloid hematopoiesis was noted in males and females administered ≥ 27 µg/dose of mRNA-1647. This finding was characterized by increased numbers of myeloid precursors in the marrow, and was secondary or compensatory inflammatory reaction noted at the intramuscular injection sites.

In the spleen, a dose-dependent minimal to mild decreased cellularity of the periarteriolar lymphoid sheath was noted in male and female animals administered ≥ 8.9 µg/dose of mRNA-1647.

Appendix 19

Other microscopic findings observed were considered incidental, of the nature commonly observed in this strain and age of rats, and/or were of similar incidence and severity in control and treated animals and, therefore, were considered unrelated to administration of mRNA-1647.

5.4.2. Recovery Euthanasia (Day 57)

(Table 10 and Appendix 8)

Following the recovery period, microscopic findings seen at the end of the terminal phase were no longer present in the draining lymph nodes (popliteal and/or inguinal), consistent with complete recovery.

Microscopic findings noted at the terminal euthanasia were observed at the end of the recovery period (Day 57) at injection sites (however, a shift to mononuclear cell infiltration rather than mixed cell inflammation was observed), sciatic nerve, bone marrow, and spleen and these findings are summarized in Text Table 8.

Text Table 8
Summary of Microscopic Findings – Recovery Euthanasia (Day 57)

	Males		Females	
Group	1	4	1	4
Dose (µg/dose)	0	89	0	89
No. Animals Examined	4	5	4	5
Site, Injection (No. Examined)	4	5	5	5
Infiltration, mononuclear cell; myofiber	0	2	0	5
Minimal	-	1	-	4
Mild	-	1	-	1
Nerve, Sciatic	4	5	5	5
Inflammation, mixed cell; perineurial	0	0	0	2
Minimal	-	-	-	2
Bone Marrow (No. Examined)	4	5	5	5
Increased hematopoiesis; myeloid	0	2	0	1
Minimal	-	2	-	1
Spleen (No. Examined)	4	5	5	5
Decreased cellularity; periarteriolar lymphoid sheath	0	2	0	0
Minimal	-	2	-	-

At the intramuscular injection sites, there was a residual inflammatory reaction characterized by minimal to mild mononuclear cell infiltration involving the subcutaneous tissues and skeletal muscle in the 89 µg/dose of mRNA-1647. Minimal to mild myofiber degeneration did not differ in incidence or severity from the reference group.

Mixed cell inflammation involving the draining lymph nodes (popliteal and/or inguinal) and sciatic nerves, as noted as the terminal euthanasia, was not noted at the recovery euthanasia, consistent with complete recovery.

Appendix 19

Minimal mixed cell inflammation was observed in the perineurial tissue surrounding the sciatic nerve of females administered 89 µg/dose of mRNA-1647. The incidence and severity of this finding was reduced compared to the terminal euthanasia.

In the bone marrow, minimal increased myeloid hematopoiesis was noted in males and females administered 89 µg/dose of mRNA-1647. The incidence of this finding was reduced compared to the terminal euthanasia.

In the spleen, a minimal decreased cellularity of the periarteriolar lymphoid sheath was noted in males administered 89 µg/dose of mRNA-1647. The incidence and severity of this finding was reduced compared to the terminal euthanasia.

Other microscopic findings observed were considered incidental, of the nature commonly observed in this strain and age of rats, and/or were of similar incidence and severity in control and treated animals and, therefore, were considered unrelated to administration of mRNA-1647.

6. CONCLUSIONS

The administration of four doses of mRNA-1647 over 6 weeks at doses of 8.9, 27 or 89 µg/dose by intramuscular (IM) injection to rats was well tolerated with no mRNA-1647-related effects on survival. Both localized and systemic tissue reactions were noted; however, systemic effects were limited in severity.

mRNA-1647-related localized tissue reactions involved the intramuscular injection sites, the draining popliteal and/or inguinal lymph nodes, and the sciatic nerves in animals administered ≥ 8.9 µg/dose of mRNA-1647. At the intramuscular injection sites, gross observations of abnormal firm consistency, dark focus, and/or swelling generally correlated microscopically with minimal to moderate mixed cell inflammation involving the subcutaneous tissues, skeletal muscle, and to a lesser extent the dermis, as well as associated minimal to moderate subcutaneous edema and minimal to mild myofiber degeneration. In the draining inguinal and/or popliteal lymph nodes, gross enlargement generally correlated microscopically with minimal to marked mixed cell inflammation. In addition, minimal to marked mixed cell inflammation was noted in the perineurial tissue surrounding the sciatic nerve.

mRNA-1647-related systemic tissue reactions involved the bone marrow and spleen in animals administered ≥ 8.9 µg/dose of mRNA-1647. These systemic findings included minimal increased myeloid hematopoiesis in the bone marrow, increases in absolute and/or relative spleen weights without correlating histopathology, and minimal to mild decreased cellularity of the splenic periarteriolar lymphoid sheath.

Following a two-week recovery period, mRNA-1647-related macroscopic findings in any tissue and microscopic findings in the draining lymph nodes (popliteal and/or inguinal) were not present. A reduced incidence and severity of increased absolute and/or relative spleen weights (no histopathology correlate); the absence of mixed cell inflammation and edema, with a shift to minimal to mild mononuclear cell infiltration, at the intramuscular injections sites; and a reduced

Appendix 19

incidence and/or severity of perineurial mixed cell inflammation associated with the sciatic nerves, increased myeloid hematopoiesis in the bone marrow, and decreased cellularity of the periarteriolar lymphoid sheath in the spleen were consistent with partial recovery.

Deviations

Appendix 19

DEVIATIONS

All deviations (if any) that occurred during this study phase have been acknowledged by the Study Director, assessed for impact, and documented in the study records. All protocol deviations and those SOP deviations regarded as significant are listed below. None of the deviations were considered to have impacted the overall integrity of the study or the interpretation of the study results and conclusions.

- None

Appendix 19

Appendix 8
Individual Animal Data Gross and Histopathology Findings

Appendix 19

5002034 - Individual Animal Data Gross and Histopathology Findings

Animal:	1001	Group:	1	Sex:	Male
Species:	Rat	Strain:	Sprague-Dawley		
		Dose:	0ug/dose		
		Removal Reason:	Terminal Euthanasia		
		Day (Week) of Death:	44 (7)		

Gross Pathology Animal Details:

Comments: Tissues submitted Into 10% neutral buffered formalin except eyes and optic nerves submitted in Davidson`s and testes in modified Davidson`s Fixative.

Animal Notes: EUTHANASIA VIA ANESTHESIA AND EXSANGUINATION

Gross Pathology Observations:

THYMUS : Focus; dark : >10 (TGL)

Any remaining protocol required tissues, which have been examined, have no visible lesions

Gross Pathology - The following Tissues were Not Examined:

None

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

GLAND, PARATHYROID : One Of A Pair Available For Evaluation.
GLAND, PARATHYROID : Examined
GLAND, THYROID : Cyst
KIDNEY : Chronic progressive nephropathy; minimal
LIVER : Infiltration, mononuclear cell; minimal
THYMUS : Hemorrhage; moderate [THYMUS : Focus; dark : >10 (G)]

Histo Pathology - The following Tissues were Within Normal Limits:

ARTERY, AORTA; BONE MARROW; BONE, FEMUR; BONE, STERNUM; BRAIN; EPIDIDYMIS; ESOPHAGUS; EYE; GALT; GLAND, ADRENAL; GLAND, HARDERIAN; GLAND, PARATHYROID; GLAND, PITUITARY; GLAND, PROSTATE; GLAND, SALIVARY, MANDIBULAR; GLAND, SEMINAL VESICLE; HEART; LARGE INTESTINE, CECUM; LARGE INTESTINE, COLON; LARGE INTESTINE, RECTUM; LUNG; LYMPH NODE, INGUINAL; LYMPH NODE, MANDIBULAR; LYMPH NODE, MESENTERIC; LYMPH NODE, POPLITEAL; MUSCLE, SKELETAL; NERVE, OPTIC; NERVE, SCIATIC; PANCREAS; SITE, INJECTION; SKIN; SMALL INTESTINE, DUODENUM; SMALL INTESTINE, ILEUM; SMALL INTESTINE, JEJUNUM; SPINAL CORD, CERVICAL; SPINAL CORD, LUMBAR; SPINAL CORD, THORACIC; SPLEEN; STOMACH; TESTIS; TONGUE; TRACHEA; URINARY BLADDER

Histo Pathology - The following Tissues were Not Examined:

GLAND, MAMMARY - Not Present In Section.

Appendix 19

5002034 - Individual Animal Data Gross and Histopathology Findings

Animal:	1002	Group:	1	Sex: Male
Species:	Rat	Strain:	Sprague-Dawley	
		Dose:	0ug/dose	
		Removal Reason:	Terminal Euthanasia	
		Day (Week) of Death:	44 (7)	

Gross Pathology Animal Details:

Comments: Tissues submitted Into 10% neutral buffered formalin except eyes and optic nerves submitted in Davidson`s and testes in modified Davidson`s Fixative.

Animal Notes: EUTHANASIA VIA ANESTHESIA AND EXSANGUINATION

Gross Pathology Observations:

LIVER : Focus; pale : 1, fissure, right medial. (TGL)
LUNG : Focus; dark : 1 to 2, right middle, right caudal, right accessory. (TGL)
THYMUS : Discoloration; dark : Caudal half. (TGL)
THYMUS : Focus; dark : >10. (TGL)

Any remaining protocol required tissues, which have been examined, have no visible lesions

Gross Pathology - The following Tissues were Not Examined:

None

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

GLAND, ADRENAL : Cortex And One Medulla Available For Evaluation.
GLAND, ADRENAL : Examined
GLAND, PITUITARY : Pars Intermedia Available For Evaluation.
GLAND, PITUITARY : Examined
GLAND, PROSTATE : Infiltration, mononuclear cell; minimal
HEART : Infiltration, mononuclear cell; minimal
KIDNEY : Renal Pelvis
KIDNEY : Chronic progressive nephropathy; minimal
KIDNEY : Dilatation; unilateral, mild
LIVER : Infiltration, mononuclear cell; minimal
LIVER : Tension lipidosis; mild [LIVER : Focus; pale : 1, fissure, right medial. (G)]
LUNG : Congestion; mild [LUNG : Focus; dark : 1 to 2, right middle, right caudal, right accessory. (G)]
MUSCLE, SKELETAL : Infiltration, mononuclear cell; minimal
SITE, INJECTION : muscle
SITE, INJECTION : Degeneration; minimal, myofiber
TESTIS : Degeneration; minimal
THYMUS : Hemorrhage; moderate [THYMUS : Discoloration; dark : Caudal half. (G) | THYMUS : Focus; dark : >10. (G)]

Histo Pathology - The following Tissues were Within Normal Limits:

Appendix 19

5002034 - Individual Animal Data Gross and Histopathology Findings

ARTERY, AORTA; BONE MARROW; BONE, FEMUR; BONE, STERNUM; BRAIN; EPIDIDYMIS; ESOPHAGUS; EYE; GALT; GLAND, ADRENAL; GLAND, HARDERIAN; GLAND, PARATHYROID; GLAND, PITUITARY; GLAND, SALIVARY, MANDIBULAR; GLAND, SEMINAL VESICLE; GLAND, THYROID; LARGE INTESTINE, CECUM; LARGE INTESTINE, COLON; LARGE INTESTINE, RECTUM; LYMPH NODE, INGUINAL; LYMPH NODE, MANDIBULAR; LYMPH NODE, MESENTERIC; LYMPH NODE, POPLITEAL; NERVE, OPTIC; NERVE, SCIATIC; PANCREAS; SKIN; SMALL INTESTINE, DUODENUM; SMALL INTESTINE, ILEUM; SMALL INTESTINE, JEJUNUM; SPINAL CORD, CERVICAL; SPINAL CORD, LUMBAR; SPINAL CORD, THORACIC; SPLEEN; STOMACH; TONGUE; TRACHEA; URINARY BLADDER

Histo Pathology - The following Tissues were Not Examined:

GLAND, MAMMARY - Not Present In Section.

Appendix 19

5002034 - Individual Animal Data Gross and Histopathology Findings

Animal:	1003	Group:	1	Sex: Male
Species:	Rat	Strain:	Sprague-Dawley	
		Dose:	0ug/dose	
		Removal Reason:	Terminal Euthanasia	
		Day (Week) of Death:	44 (7)	

Gross Pathology Animal Details:

Comments: Tissues submitted Into 10% neutral buffered formalin except eyes and optic nerves submitted in Davidson`s and testes in modified Davidson`s Fixative.

Animal Notes: EUTHANASIA VIA ANESTHESIA AND EXSANGUINATION

Gross Pathology Observations:

THYMUS : Focus; dark : >10 (TGL)

Any remaining protocol required tissues, which have been examined, have no visible lesions

Gross Pathology - The following Tissues were Not Examined:

None

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

HEART : Infiltration, mononuclear cell; minimal
KIDNEY : Chronic progressive nephropathy; minimal
KIDNEY : Dilatation; tubular, multifocal, mild
KIDNEY : Inflammation, mononuclear cell; minimal
LIVER : Infiltration, mononuclear cell; minimal
THYMUS : Hemorrhage; minimal [THYMUS : Focus; dark : >10 (G)]

Histo Pathology - The following Tissues were Within Normal Limits:

ARTERY, AORTA; BONE MARROW; BONE, FEMUR; BONE, STERNUM; BRAIN; EPIDIDYMIS; ESOPHAGUS; EYE; GALT; GLAND, ADRENAL; GLAND, HARDERIAN; GLAND, PARATHYROID; GLAND, PITUITARY; GLAND, PROSTATE; GLAND, SALIVARY, MANDIBULAR; GLAND, SEMINAL VESICLE; GLAND, THYROID; LARGE INTESTINE, CECUM; LARGE INTESTINE, COLON; LARGE INTESTINE, RECTUM; LUNG; LYMPH NODE, INGUINAL; LYMPH NODE, MANDIBULAR; LYMPH NODE, MESENTERIC; LYMPH NODE, POPLITEAL; MUSCLE, SKELETAL; NERVE, OPTIC; NERVE, SCIATIC; PANCREAS; SITE, INJECTION; SKIN; SMALL INTESTINE, DUODENUM; SMALL INTESTINE, ILEUM; SMALL INTESTINE, JEJUNUM; SPINAL CORD, CERVICAL; SPINAL CORD, LUMBAR; SPINAL CORD, THORACIC; SPLEEN; STOMACH; TESTIS; TONGUE; TRACHEA; URINARY BLADDER

Histo Pathology - The following Tissues were Not Examined:

GLAND, MAMMARY - Not Present In Section.

Appendix 19

5002034 - Individual Animal Data Gross and Histopathology Findings

Appendix 19

5002034 - Individual Animal Data Gross and Histopathology Findings

ARTERY, AORTA; BONE MARROW; BONE, FEMUR; BONE, STERNUM; BRAIN; EPIDIDYMIS; ESOPHAGUS; EYE; GALT; GLAND, ADRENAL; GLAND, HARDERIAN; GLAND, MAMMARY; GLAND, PARATHYROID; GLAND, PITUITARY; GLAND, SALIVARY, MANDIBULAR; GLAND, SEMINAL VESICLE; GLAND, THYROID; LARGE INTESTINE, CECUM; LARGE INTESTINE, COLON; LARGE INTESTINE, RECTUM; LYMPH NODE, MANDIBULAR; LYMPH NODE, MESENTERIC; LYMPH NODE, POPLITEAL; MUSCLE, SKELETAL; NERVE, OPTIC; NERVE, SCIATIC; PANCREAS; SKIN; SMALL INTESTINE, DUODENUM; SMALL INTESTINE, ILEUM; SMALL INTESTINE, JEJUNUM; SPINAL CORD, CERVICAL; SPINAL CORD, LUMBAR; SPINAL CORD, THORACIC; SPLEEN; STOMACH; TESTIS; TONGUE; TRACHEA; URINARY BLADDER

Histo Pathology - The following Tissues were Not Examined:

None

Appendix 19

5002034 - Individual Animal Data Gross and Histopathology Findings

Animal:	1011	Group:	1	Sex: Male
Species:	Rat	Strain:	Sprague-Dawley	
		Dose:	0ug/dose	
		Removal Reason:	Recovery Euthanasia	
		Day (Week) of Death:	57 (9)	

Gross Pathology Animal Details:

Comments: Tissues submitted Into 10% neutral buffered formalin except eyes and optic nerves submitted in Davidson`s and testes in modified Davidson`s Fixative.

Animal Notes: EUTHANASIA VIA ANESTHESIA AND EXSANGUINATION

Gross Pathology Observations:

No observations found

Any remaining protocol required tissues, which have been examined, have no visible lesions

Gross Pathology - The following Tissues were Not Examined:

None

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

GLAND, PROSTATE : Infiltration, mononuclear cell; mild
GLAND, THYROID : Cyst
HEART : Infiltration, mononuclear cell; minimal
KIDNEY : Cyst
LIVER : Infiltration, mononuclear cell; minimal
LUNG : Metaplasia; osseous, minimal

Histo Pathology - The following Tissues were Within Normal Limits:

ARTERY, AORTA; BONE MARROW; BONE, FEMUR; BONE, STERNUM; BRAIN; EPIDIDYMIS; ESOPHAGUS; EYE; GALT; GLAND, ADRENAL; GLAND, HARDERIAN; GLAND, MAMMARY; GLAND, PARATHYROID; GLAND, PITUITARY; GLAND, SALIVARY, MANDIBULAR; GLAND, SEMINAL VESICLE; LARGE INTESTINE, CECUM; LARGE INTESTINE, COLON; LARGE INTESTINE, RECTUM; LYMPH NODE, INGUINAL; LYMPH NODE, MANDIBULAR; LYMPH NODE, MESENTERIC; LYMPH NODE, POPLITEAL; MUSCLE, SKELETAL; NERVE, OPTIC; NERVE, SCIATIC; PANCREAS; SITE, INJECTION; SKIN; SMALL INTESTINE, DUODENUM; SMALL INTESTINE, ILEUM; SMALL INTESTINE, JEJUNUM; SPINAL CORD, CERVICAL; SPINAL CORD, LUMBAR; SPINAL CORD, THORACIC; SPLEEN; STOMACH; TESTIS; THYMUS; TONGUE; TRACHEA; URINARY BLADDER

Histo Pathology - The following Tissues were Not Examined:

None

Appendix 19

5002034 - Individual Animal Data Gross and Histopathology Findings

Animal:	1012	Group:	1	Sex: Male
Species:	Rat	Strain:	Sprague-Dawley	
		Dose:	0ug/dose	
		Removal Reason:	Recovery Euthanasia	
		Day (Week) of Death:	57 (9)	

Gross Pathology Animal Details:

Comments: Tissues submitted Into 10% neutral buffered formalin except eyes and optic nerves submitted in Davidson`s and testes in modified Davidson`s Fixative.

Animal Notes: EUTHANASIA VIA ANESTHESIA AND EXSANGUINATION

Gross Pathology Observations:

KIDNEY : Focus; raised : 1, pale, firm, cortex, medulla, right. (TGL)
LUNG : Focus; dark : 3 to 5, right cranial, right middle, right accessory, left lobe. (TGL)
THYMUS : Focus; dark : >10. (TGL)

Any remaining protocol required tissues, which have been examined, have no visible lesions

Gross Pathology - The following Tissues were Not Examined:

None

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

EPIDIDYMIS : Sperm granuloma; focal, mild
EYE : Dysplasia; unilateral, minimal, retina
GLAND, PARATHYROID : One Of A Pair Available For Evaluation.
GLAND, PARATHYROID : Examined
GLAND, THYROID : Cyst
HEART : Infiltration, mononuclear cell; minimal
KIDNEY : Nephroblastoma, malignant; incidental [KIDNEY : Focus; raised : 1, pale, firm, cortex, medulla, right. (G)]

KIDNEY : Chronic progressive nephropathy; minimal
LIVER : Infiltration, mononuclear cell; minimal
LUNG : Hemorrhage; minimal [LUNG : Focus; dark : 3 to 5, right cranial, right middle, right accessory, left lobe. (G)]

LYMPH NODE, MESENTERIC : Erythrocytosis; minimal, sinus
NERVE, OPTIC : One Of A Pair Available For Evaluation.
NERVE, OPTIC : Examined
PANCREAS : Fibrosis; focal, minimal, islet of langerhans
SITE, INJECTION : Degeneration; minimal, myofiber
THYMUS : Hemorrhage; minimal [THYMUS : Focus; dark : >10. (G)]

Histo Pathology - The following Tissues were Within Normal Limits:

Appendix 19

5002034 - Individual Animal Data Gross and Histopathology Findings

ARTERY, AORTA; BONE MARROW; BONE, FEMUR; BONE, STERNUM; BRAIN; ESOPHAGUS; GALT; GLAND, ADRENAL; GLAND, HARDERIAN; GLAND, MAMMARY; GLAND, PARATHYROID; GLAND, PITUITARY; GLAND, PROSTATE; GLAND, SALIVARY, MANDIBULAR; GLAND, SEMINAL VESICLE; LARGE INTESTINE, CECUM; LARGE INTESTINE, COLON; LARGE INTESTINE, RECTUM; LYMPH NODE, INGUINAL; LYMPH NODE, MANDIBULAR; LYMPH NODE, POPLITEAL; MUSCLE, SKELETAL; NERVE, OPTIC; NERVE, SCIATIC; SKIN; SMALL INTESTINE, DUODENUM; SMALL INTESTINE, ILEUM; SMALL INTESTINE, JEJUNUM; SPINAL CORD; SPINAL CORD, CERVICAL; SPINAL CORD, LUMBAR; SPINAL CORD, THORACIC; SPLEEN; STOMACH; TESTIS; TONGUE; TRACHEA; URINARY BLADDER

Histo Pathology - The following Tissues were Not Examined:

None

Appendix 19

5002034 - Individual Animal Data Gross and Histopathology Findings

Animal:	1013	Group:	1	Sex: Male
Species:	Rat	Strain:	Sprague-Dawley	
		Dose:	0ug/dose	
		Removal Reason:	Recovery Euthanasia	
		Day (Week) of Death:	57 (9)	

Gross Pathology Animal Details:

Comments: Tissues submitted Into 10% neutral buffered formalin except eyes and optic nerves submitted in Davidson`s and testes in modified Davidson`s Fixative.

Animal Notes: EUTHANASIA VIA ANESTHESIA AND EXSANGUINATION

Gross Pathology Observations:

LIVER : Focus; pale : 1, fissure, right medial. (TGL)

Any remaining protocol required tissues, which have been examined, have no visible lesions

Gross Pathology - The following Tissues were Not Examined:

None

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

GLAND, PARATHYROID : One Of A Pair Available For Evaluation.
GLAND, PARATHYROID : Examined
GLAND, PITUITARY : Pars Intermedia Available For Evaluation.
GLAND, PITUITARY : Examined
GLAND, THYROID : Cyst
LIVER : Infiltration, mononuclear cell; minimal
LIVER : Tension lipidosis; focal, minimal [LIVER : Focus; pale : 1, fissure, right medial. (G)]
LUNG : Hemorrhage; minimal

Histo Pathology - The following Tissues were Within Normal Limits:

ARTERY, AORTA; BONE MARROW; BONE, FEMUR; BONE, STERNUM; BRAIN; EPIDIDYMIS; ESOPHAGUS; EYE; GALT; GLAND, ADRENAL; GLAND, HARDERIAN; GLAND, MAMMARY; GLAND, PARATHYROID; GLAND, PITUITARY; GLAND, PROSTATE; GLAND, SALIVARY, MANDIBULAR; GLAND, SEMINAL VESICLE; HEART; KIDNEY; LARGE INTESTINE, CECUM; LARGE INTESTINE, COLON; LARGE INTESTINE, RECTUM; LYMPH NODE, INGUINAL; LYMPH NODE, MANDIBULAR; LYMPH NODE, MESENTERIC; LYMPH NODE, POPLITEAL; MUSCLE, SKELETAL; NERVE, OPTIC; NERVE, SCIATIC; PANCREAS; SITE, INJECTION; SKIN; SMALL INTESTINE, DUODENUM; SMALL INTESTINE, ILEUM; SMALL INTESTINE, JEJUNUM; SPINAL CORD, CERVICAL; SPINAL CORD, LUMBAR; SPINAL CORD, THORACIC; SPLEEN; STOMACH; TESTIS; THYMUS; TONGUE; TRACHEA; URINARY BLADDER

Histo Pathology - The following Tissues were Not Examined:

None

Appendix 19

5002034 - Individual Animal Data Gross and Histopathology Findings

Animal:	1014	Group:	1	Sex: Male
Species:	Rat	Strain:	Sprague-Dawley	
		Dose:	0ug/dose	
		Removal Reason:	Found Dead	
		Day (Week) of Death:	43 (7)	

Gross Pathology Animal Details:

Comments: Tissues submitted Into 10% neutral buffered formalin except eyes and optic nerves submitted in Davidson`s and testes in modified Davidson`s Fixative.

Animal Notes: ANIMAL DELIVERED DEAD

Gross Pathology Observations:

GLAND, ADRENAL : Small : right. (TGL)
GLAND, ADRENAL : Abnormal consistency; soft : right. (TGL)
GLAND, ADRENAL : Discoloration; dark : right. (TGL)
KIDNEY : Discoloration; dark : corticomedullary junction, bilateral. (TGL)
LUNG : Failure to collapse (TGL)
THYMUS : Discoloration; dark (TGL)
THYMUS : Focus; dark : >10. (TGL)

Any remaining protocol required tissues, which have been examined, have no visible lesions

Gross Pathology - The following Tissues were Not Examined:

BONE MARROW SMEAR - Not Required By Protocol/Study Plan

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

GLAND, ADRENAL : Cortex And One Medulla Available For Evaluation.
GLAND, ADRENAL : Examined
GLAND, PITUITARY : Pars Intermedia Available For Evaluation.
GLAND, PITUITARY : Examined
GLAND, PROSTATE : Infiltration, mononuclear cell; minimal
GLAND, THYROID : Cyst
LIVER : Congestion; moderate
LIVER : Infiltration, mononuclear cell; minimal
LUNG : Congestion; moderate [LUNG : Failure to collapse (G)]
THYMUS : Hemorrhage; mild [THYMUS : Discoloration; dark (G) | THYMUS : Focus; dark : >10. (G)]
NO CORRELATE : No correlating lesion [GLAND, ADRENAL : Small : right. (G) | GLAND, ADRENAL : Abnormal consistency; soft : right. (G) | GLAND, ADRENAL : Discoloration; dark : right. (G) | KIDNEY : Discoloration; dark : corticomedullary junction, bilateral. (G)]

Histo Pathology - The following Tissues were Within Normal Limits:

Appendix 19

5002034 - Individual Animal Data Gross and Histopathology Findings

ARTERY, AORTA; BONE MARROW; BONE, FEMUR; BONE, STERNUM; BRAIN; EPIDIDYMIS; ESOPHAGUS; EYE; GALT; GLAND, ADRENAL; GLAND, HARDERIAN; GLAND, MAMMARY; GLAND, PARATHYROID; GLAND, PITUITARY; GLAND, SALIVARY, MANDIBULAR; GLAND, SEMINAL VESICLE; HEART; KIDNEY; LARGE INTESTINE, CECUM; LARGE INTESTINE, COLON; LARGE INTESTINE, RECTUM; LYMPH NODE, INGUINAL; LYMPH NODE, MANDIBULAR; LYMPH NODE, MESENTERIC; LYMPH NODE, POPLITEAL; MUSCLE, SKELETAL; NERVE, OPTIC; NERVE, SCIATIC; PANCREAS; SITE, INJECTION; SKIN; SMALL INTESTINE, DUODENUM; SMALL INTESTINE, ILEUM; SMALL INTESTINE, JEJUNUM; SPINAL CORD, CERVICAL; SPINAL CORD, LUMBAR; SPINAL CORD, THORACIC; SPLEEN; STOMACH; TESTIS; TONGUE; TRACHEA; URINARY BLADDER

Histo Pathology - The following Tissues were Not Examined:

None

Appendix 19

5002034 - Individual Animal Data Gross and Histopathology Findings

Animal:	1015	Group:	1	Sex: Male
Species:	Rat	Strain:	Sprague-Dawley	
		Dose:	0ug/dose	
		Removal Reason:	Recovery Euthanasia	
		Day (Week) of Death:	57 (9)	

Gross Pathology Animal Details:

Comments: Tissues submitted Into 10% neutral buffered formalin except eyes and optic nerves submitted in Davidson`s and testes in modified Davidson`s Fixative.

Animal Notes: EUTHANASIA VIA ANESTHESIA AND EXSANGUINATION

Gross Pathology Observations:

LIVER : Focus; pale : 1, fissure, right medial. (TGL)
MUSCLE, SKELETAL : Material accumulation; clot : ventral cervical extending into thymus. (TGL)
THYMUS : Focus; dark : 3. (TGL)

Any remaining protocol required tissues, which have been examined, have no visible lesions

Gross Pathology - The following Tissues were Not Examined:

None

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

GLAND, PARATHYROID : One Of A Pair Available For Evaluation.
GLAND, PARATHYROID : Examined
GLAND, PROSTATE : Infiltration, mononuclear cell; minimal
KIDNEY : Chronic progressive nephropathy; minimal
LIVER : Vacuolation; centrilobular, microvesicular, minimal
LIVER : Infiltration, mononuclear cell; minimal
MUSCLE, SKELETAL : Hemorrhage; moderate [MUSCLE, SKELETAL : Material accumulation; clot : ventral cervical extending into thymus. (G)]
MUSCLE, SKELETAL : Inflammation, neutrophilic; mild
SITE, INJECTION : Degeneration; minimal, myofiber
TRACHEA : adventitial
TRACHEA : Inflammation, mixed cell; mild
NO CORRELATE : No correlating lesion [LIVER : Focus; pale : 1, fissure, right medial. (G) | THYMUS : Focus; dark : 3. (G)]

Histo Pathology - The following Tissues were Within Normal Limits:

Appendix 19

5002034 - Individual Animal Data Gross and Histopathology Findings

ARTERY, AORTA; BONE MARROW; BONE, FEMUR; BONE, STERNUM; BRAIN; EPIDIDYMIS; ESOPHAGUS; EYE; GALT; GLAND, ADRENAL; GLAND, HARDERIAN; GLAND, MAMMARY; GLAND, PARATHYROID; GLAND, PITUITARY; GLAND, SALIVARY, MANDIBULAR; GLAND, SEMINAL VESICLE; GLAND, THYROID; HEART; LARGE INTESTINE, CECUM; LARGE INTESTINE, COLON; LARGE INTESTINE, RECTUM; LUNG; LYMPH NODE, INGUINAL; LYMPH NODE, MANDIBULAR; LYMPH NODE, MESENTERIC; LYMPH NODE, POPLITEAL; NERVE, OPTIC; NERVE, SCIATIC; PANCREAS; SKIN; SMALL INTESTINE, DUODENUM; SMALL INTESTINE, ILEUM; SMALL INTESTINE, JEJUNUM; SPINAL CORD, CERVICAL; SPINAL CORD, LUMBAR; SPINAL CORD, THORACIC; SPLEEN; STOMACH; TESTIS; THYMUS; TONGUE; URINARY BLADDER

Histo Pathology - The following Tissues were Not Examined:

None

Appendix 19

5002034 - Individual Animal Data Gross and Histopathology Findings

Animal:	1501	Group:	1	Sex: Female
Species:	Rat	Strain:	Sprague-Dawley	
		Dose:	0ug/dose	
		Removal Reason:	Terminal Euthanasia	
		Day (Week) of Death:	44 (7)	

Gross Pathology Animal Details:

Comments: Tissues submitted in 10% neutral buffered formalin except eyes and optic nerves submitted in Davidson`s fixative

Animal Notes: EUTHANASIA VIA ANESTHESIA AND EXSANGUINATION

Gross Pathology Observations:

LIVER : Focus; pale : 1, near hilus, right lateral (TGL)
THYMUS : Focus; dark : >10, right (TGL)

Any remaining protocol required tissues, which have been examined, have no visible lesions

Gross Pathology - The following Tissues were Not Examined:

None

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

GLAND, PARATHYROID : One Of A Pair Available For Evaluation.
GLAND, PARATHYROID : Examined
HEART : Infiltration, mononuclear cell; minimal
KIDNEY : Chronic progressive nephropathy; minimal
KIDNEY : Inflammation, mononuclear cell; minimal
LIVER : Infiltration, mononuclear cell; minimal
LIVER : Tension lipidosis; focal, minimal [LIVER : Focus; pale : 1, near hilus, right lateral (G)]
LUNG : Inflammation, mixed cell; minimal
VAGINA : Diestrus
NO CORRELATE : No correlating lesion [THYMUS : Focus; dark : >10, right (G)]

Histo Pathology - The following Tissues were Within Normal Limits:

ARTERY, AORTA; BONE MARROW; BONE, FEMUR; BONE, STERNUM; BRAIN; CERVIX; ESOPHAGUS; EYE; GALT; GLAND, ADRENAL; GLAND, HARDERIAN; GLAND, MAMMARY; GLAND, PARATHYROID; GLAND, PITUITARY; GLAND, SALIVARY, MANDIBULAR; GLAND, THYROID; LARGE INTESTINE, CECUM; LARGE INTESTINE, COLON; LARGE INTESTINE, RECTUM; LYMPH NODE, INGUINAL; LYMPH NODE, MANDIBULAR; LYMPH NODE, MESENTERIC; LYMPH NODE, POPLITEAL; MUSCLE, SKELETAL; NERVE, OPTIC; NERVE, SCIATIC; OVARY; PANCREAS; SITE, INJECTION; SKIN; SMALL INTESTINE, DUODENUM; SMALL INTESTINE, ILEUM; SMALL INTESTINE, JEJUNUM; SPINAL CORD, CERVICAL; SPINAL CORD, LUMBAR; SPINAL CORD, THORACIC; SPLEEN; STOMACH; THYMUS; TONGUE; TRACHEA; URINARY BLADDER; UTERUS

Histo Pathology - The following Tissues were Not Examined:

Appendix 19

5002034 - Individual Animal Data Gross and Histopathology Findings

None

ARTERY, AORTA; BONE MARROW; BONE, FEMUR; BONE, STERNUM; BRAIN; CERVIX; ESOPHAGUS; EYE; GALT; GLAND, ADRENAL; GLAND, HARDERIAN; GLAND, MAMMARY; GLAND, PARATHYROID; GLAND, PITUITARY; GLAND, SALIVARY, MANDIBULAR; HEART; KIDNEY; LARGE INTESTINE, CECUM; LARGE INTESTINE, COLON; LARGE INTESTINE, RECTUM; LUNG; LYMPH NODE, INGUINAL; LYMPH NODE, MANDIBULAR; LYMPH NODE, MESENTERIC; LYMPH NODE, POPLITEAL; MUSCLE, SKELETAL; NERVE, OPTIC; NERVE, SCIATIC; OVARY; PANCREAS; SMALL INTESTINE, DUODENUM; SMALL INTESTINE, ILEUM; SMALL INTESTINE, JEJUNUM; SPINAL CORD, CERVICAL; SPINAL CORD, LUMBAR; SPINAL CORD, THORACIC; SPLEEN; STOMACH; THYMUS; TONGUE; TRACHEA; URINARY BLADDER; UTERUS

Histo Pathology - The following Tissues were Not Examined:

None

Appendix 19

5002034 - Individual Animal Data Gross and Histopathology Findings

Animal:	1507	Group:	1	Sex: Female
Species:	Rat	Strain:	Sprague-Dawley	
		Dose:	0ug/dose	
		Removal Reason:	Terminal Euthanasia	
		Day (Week) of Death:	44 (7)	

Gross Pathology Animal Details:

Comments: Tissues submitted in 10% neutral buffered formalin except eyes and optic nerves submitted in Davidson`s fixative

Animal Notes: EUTHANASIA VIA ANESTHESIA AND EXSANGUINATION

Gross Pathology Observations:

LIVER : Focus; pale : 1, fissure, right medial (TGL)
LYMPH NODE, MANDIBULAR : Focus; dark : 1 to >10, bilateral (TGL)

Any remaining protocol required tissues, which have been examined, have no visible lesions

Gross Pathology - The following Tissues were Not Examined:

None

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

GLAND, THYROID : thymus
GLAND, THYROID : Ectopia
LIVER : Infiltration, mononuclear cell; minimal
THYMUS : Hemorrhage; minimal
VAGINA : Diestrus
NO CORRELATE : No correlating lesion [LIVER : Focus; pale : 1, fissure, right medial (G) | LYMPH NODE, MANDIBULAR : Focus; dark : 1 to >10, bilateral (G)]

Histo Pathology - The following Tissues were Within Normal Limits:

ARTERY, AORTA; BONE MARROW; BONE, FEMUR; BONE, STERNUM; BRAIN; CERVIX; ESOPHAGUS; EYE; GALT; GLAND, ADRENAL; GLAND, HARDERIAN; GLAND, MAMMARY; GLAND, PARATHYROID; GLAND, PITUITARY; GLAND, SALIVARY, MANDIBULAR; HEART; KIDNEY; LARGE INTESTINE, CECUM; LARGE INTESTINE, COLON; LARGE INTESTINE, RECTUM; LUNG; LYMPH NODE, INGUINAL; LYMPH NODE, MANDIBULAR; LYMPH NODE, MESENTERIC; LYMPH NODE, POPLITEAL; MUSCLE, SKELETAL; NERVE, OPTIC; NERVE, SCIATIC; OVARY; PANCREAS; SITE, INJECTION; SKIN; SMALL INTESTINE, DUODENUM; SMALL INTESTINE, ILEUM; SMALL INTESTINE, JEJUNUM; SPINAL CORD, CERVICAL; SPINAL CORD, LUMBAR; SPINAL CORD, THORACIC; SPLEEN; STOMACH; TONGUE; TRACHEA; URINARY BLADDER; UTERUS

Histo Pathology - The following Tissues were Not Examined:

None

Appendix 19

5002034 - Individual Animal Data Gross and Histopathology Findings

Animal:	1508	Group:	1	Sex: Female
Species:	Rat	Strain:	Sprague-Dawley	
		Dose:	0ug/dose	
		Removal Reason:	Terminal Euthanasia	
		Day (Week) of Death:	44 (7)	

Gross Pathology Animal Details:

Comments: Tissues submitted in 10% neutral buffered formalin except eyes and optic nerves submitted in Davidson`s fixative.

Animal Notes: EUTHANASIA VIA ANESTHESIA AND EXSANGUINATION

Gross Pathology Observations:

LIVER : Focus; pale : 1, fissure, medial lobe. (TGL)
THYMUS : Focus; dark : >10. (TGL)

Any remaining protocol required tissues, which have been examined, have no visible lesions

Gross Pathology - The following Tissues were Not Examined:

None

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

GLAND, PITUITARY : Pars Distalis Available For Evaluation.
GLAND, PITUITARY : Examined
LIVER : Infiltration, mononuclear cell; minimal
LIVER : Tension lipidosis; focal, mild [LIVER : Focus; pale : 1, fissure, medial lobe. (G)]
LUNG : Macrophage aggregation; alveolar, focal, minimal
MUSCLE, SKELETAL : Degeneration; minimal, myofiber
SITE, INJECTION : Degeneration; minimal, myofiber
THYMUS : Hemorrhage; moderate [THYMUS : Focus; dark : >10. (G)]
VAGINA : Estrus

Histo Pathology - The following Tissues were Within Normal Limits:

ARTERY, AORTA; BONE MARROW; BONE, FEMUR; BONE, STERNUM; BRAIN; CERVIX; ESOPHAGUS; EYE; GALT; GLAND, ADRENAL; GLAND, HARDERIAN; GLAND, MAMMARY; GLAND, PARATHYROID; GLAND, PITUITARY; GLAND, SALIVARY, MANDIBULAR; GLAND, THYROID; HEART; KIDNEY; LARGE INTESTINE, CECUM; LARGE INTESTINE, COLON; LARGE INTESTINE, RECTUM; LYMPH NODE, INGUINAL; LYMPH NODE, MANDIBULAR; LYMPH NODE, MESENTERIC; LYMPH NODE, POPLITEAL; NERVE, OPTIC; NERVE, SCIATIC; OVARY; PANCREAS; SKIN; SMALL INTESTINE, DUODENUM; SMALL INTESTINE, ILEUM; SMALL INTESTINE, JEJUNUM; SPINAL CORD, CERVICAL; SPINAL CORD, LUMBAR; SPINAL CORD, THORACIC; SPLEEN; STOMACH; TONGUE; TRACHEA; URINARY BLADDER; UTERUS

Histo Pathology - The following Tissues were Not Examined:

None

Appendix 19

5002034 - Individual Animal Data Gross and Histopathology Findings

Animal:	1509	Group:	1	Sex: Female
Species:	Rat	Strain:	Sprague-Dawley	
		Dose:	0ug/dose	
		Removal Reason:	Terminal Euthanasia	
		Day (Week) of Death:	44 (7)	

Gross Pathology Animal Details:

Comments: Tissues submitted in 10% neutral buffered formalin except eyes and optic nerves submitted in Davidson`s fixative

Animal Notes: EUTHANASIA VIA ANESTHESIA AND EXSANGUINATION

Gross Pathology Observations:

LYMPH NODE, MANDIBULAR : Discoloration; dark : Bilateral (TGL)
THYMUS : Focus; dark : >10 (TGL)

Any remaining protocol required tissues, which have been examined, have no visible lesions

Gross Pathology - The following Tissues were Not Examined:

None

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

EYE : one lens available for evaluation
GLAND, ADRENAL : Cortex And One Medulla Available For Evaluation.
GLAND, ADRENAL : Examined
GLAND, PARATHYROID : One Of A Pair Available For Evaluation.
GLAND, PARATHYROID : Examined
GLAND, PITUITARY : Pars Intermedia Available For Evaluation.
GLAND, PITUITARY : Examined
LIVER : Infiltration, mononuclear cell; minimal
LYMPH NODE, MANDIBULAR : Erythrocytosis; minimal, sinus [LYMPH NODE, MANDIBULAR : Discoloration; dark : Bilateral (G)]
MUSCLE, SKELETAL : Degeneration; minimal, myofiber
SITE, INJECTION : Degeneration; mild, myofiber
THYMUS : Hemorrhage; moderate [THYMUS : Focus; dark : >10 (G)]
VAGINA : Proestrus

Histo Pathology - The following Tissues were Within Normal Limits:

Appendix 19

5002034 - Individual Animal Data Gross and Histopathology Findings

No animal details found

Histo Pathology Observations [Correlation]:

KIDNEY : Chronic progressive nephropathy; minimal
LIVER : Infiltration, mononuclear cell; minimal
NERVE, SCIATIC : Inflammation, mixed cell; perineurial, mild
SITE, INJECTION : Degeneration; minimal, myofiber
SITE, INJECTION : Inflammation, mixed cell; mild, myofiber
SITE, INJECTION : Inflammation, mixed cell; mild, subcutaneous tissue [SITE, INJECTION : Swelling : Right. (G)]

SPLEEN : Decreased cellularity; mild, periarteriolar lymphoid sheath
THYMUS : Hemorrhage; mild [THYMUS : Focus; dark : >10. (G)]
NO CORRELATE : No correlating lesion [SPLEEN : Focus; pale : >10, linear. (G) | KIDNEY : Focus; pale : >10, bilateral. (G)]

Histo Pathology - The following Tissues were Within Normal Limits:

BONE MARROW; LYMPH NODE, INGUINAL; LYMPH NODE, POPLITEAL

Histo Pathology - The following Tissues were Not Examined:

None

Appendix 19

5002034 - Individual Animal Data Gross and Histopathology Findings

Animal:	2005	Group: 2	Sex: Male
Species:	Rat	Strain: Sprague-Dawley	
		Dose: 10ug/dose	
		Removal Reason: Terminal Euthanasia	
		Day (Week) of Death: 44 (7)	

Gross Pathology Animal Details:

Comments: Tissues submitted Into 10% neutral buffered formalin except eyes and optic nerves submitted in Davidson`s and testes in modified Davidson`s Fixative.

Animal Notes: EUTHANASIA VIA ANESTHESIA AND EXSANGUINATION

Gross Pathology Observations:

LIVER : Focus; pale : 1, fissure, right medial (TGL)
LYMPH NODE, INGUINAL : Enlargement : Right (TGL)
LYMPH NODE, MANDIBULAR : Focus; dark : 1, right (TGL)
LYMPH NODE, POPLITEAL : Enlargement : Right (TGL)
SITE, INJECTION : Abnormal consistency; firm : Right (TGL)
THYMUS : Focus; dark : 2, right (TGL)

Any remaining protocol required tissues, which have been examined, have no visible lesions

Gross Pathology - The following Tissues were Not Examined:

None

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

LIVER : Infiltration, mononuclear cell; minimal
NERVE, SCIATIC : Inflammation, mixed cell; perineurial, marked
SITE, INJECTION : Edema; mild, subcutaneous tissue
SITE, INJECTION : Degeneration; minimal, myofiber
SITE, INJECTION : Inflammation, mixed cell; moderate, myofiber [SITE, INJECTION : Abnormal consistency; firm : Right (G)]
SITE, INJECTION : Inflammation, mixed cell; moderate, subcutaneous tissue [SITE, INJECTION : Abnormal consistency; firm : Right (G)]
NO CORRELATE : No correlating lesion [LYMPH NODE, POPLITEAL : Enlargement : Right (G) | LYMPH NODE, INGUINAL : Enlargement : Right (G) | LYMPH NODE, MANDIBULAR : Focus; dark : 1, right (G) | LIVER : Focus; pale : 1, fissure, right medial (G) | THYMUS : Focus; dark : 2, right (G)]

Histo Pathology - The following Tissues were Within Normal Limits:

BONE MARROW; LYMPH NODE, INGUINAL; LYMPH NODE, MANDIBULAR; LYMPH NODE, POPLITEAL; SPLEEN; THYMUS

Histo Pathology - The following Tissues were Not Examined:

None

Appendix 19

5002034 - Individual Animal Data Gross and Histopathology Findings

Animal:	2006	Group: 2	Sex: Male
Species:	Rat	Strain: Sprague-Dawley	
		Dose: 10ug/dose	
		Removal Reason: Terminal Euthanasia	
		Day (Week) of Death: 44 (7)	

Gross Pathology Animal Details:

Comments: Tissues submitted Into 10% neutral buffered formalin except eyes and optic nerves submitted in Davidson`s and testes in modified Davidson`s Fixative.

Animal Notes: EUTHANASIA VIA ANESTHESIA AND EXSANGUINATION

Gross Pathology Observations:

LIVER : Focus; pale : 1, papillary process of caudate. (TGL)
LUNG : Focus; dark : 1, edge, right caudal. (TGL)
LYMPH NODE, INGUINAL : Focus; dark : 2, right. (TGL)
LYMPH NODE, POPLITEAL : Enlargement : Right. (TGL)
SITE, INJECTION : Swelling : Right. (TGL)
THYMUS : Focus; dark : 6, left lobe. (TGL)

Any remaining protocol required tissues, which have been examined, have no visible lesions

Gross Pathology - The following Tissues were Not Examined:

None

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

LIVER : Infiltration, mononuclear cell; minimal
LYMPH NODE, POPLITEAL : Inflammation, mixed cell; mild [LYMPH NODE, POPLITEAL : Enlargement : Right. (G)]
NERVE, SCIATIC : Inflammation, mixed cell; perineurial, marked
SITE, INJECTION : Edema; minimal, subcutaneous tissue [SITE, INJECTION : Swelling : Right. (G)]
SITE, INJECTION : Inflammation, mixed cell; mild, myofiber
SITE, INJECTION : Inflammation, mixed cell; moderate, subcutaneous tissue
THYMUS : Hemorrhage; minimal [THYMUS : Focus; dark : 6, left lobe. (G)]
NO CORRELATE : No correlating lesion [LYMPH NODE, INGUINAL : Focus; dark : 2, right. (G) | LIVER : Focus; pale : 1, papillary process of caudate. (G) | LUNG : Focus; dark : 1, edge, right caudal. (G)]

Histo Pathology - The following Tissues were Within Normal Limits:

BONE MARROW; LUNG; LYMPH NODE, INGUINAL; SPLEEN

Histo Pathology - The following Tissues were Not Examined:

None

Appendix 19

5002034 - Individual Animal Data Gross and Histopathology Findings

Animal:	2007	Group: 2	Sex: Male
Species:	Rat	Strain: Sprague-Dawley	
		Dose: 10ug/dose	
		Removal Reason: Terminal Euthanasia	
		Day (Week) of Death: 44 (7)	

Gross Pathology Animal Details:

Comments: Tissues submitted Into 10% neutral buffered formalin except eyes and optic nerves submitted in Davidson`s and testes in modified Davidson`s Fixative.

Animal Notes: EUTHANASIA VIA ANESTHESIA AND EXSANGUINATION

Gross Pathology Observations:

EPIDIDYMIS : Focus; pale : 4, right (TGL)
TESTIS : Small : Right (TGL)
TESTIS : Abnormal consistency; soft : Right (TGL)
THYMUS : Focus; dark : >10 (TGL)

Any remaining protocol required tissues, which have been examined, have no visible lesions

Gross Pathology - The following Tissues were Not Examined:

None

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

EPIDIDYMIS : Cellular debris; mild
EPIDIDYMIS : Sperm granuloma; multifocal, moderate [EPIDIDYMIS : Focus; pale : 4, right (G)]
LIVER : Necrosis; focal, minimal
LIVER : Infiltration, mononuclear cell; minimal
NERVE, SCIATIC : Inflammation, mixed cell; perineurial, marked
SITE, INJECTION : Inflammation, mixed cell; mild, myofiber
SITE, INJECTION : Inflammation, mixed cell; mild, subcutaneous tissue
SPLEEN : Decreased cellularity; mild, periarteriolar lymphoid sheath
TESTIS : Degeneration; diffuse, severe [TESTIS : Small : Right (G) | TESTIS : Abnormal consistency; soft : Right (G)]
THYMUS : Hemorrhage; mild [THYMUS : Focus; dark : >10 (G)]

Histo Pathology - The following Tissues were Within Normal Limits:

BONE MARROW; LYMPH NODE, INGUINAL; LYMPH NODE, POPLITEAL

Histo Pathology - The following Tissues were Not Examined:

None

SITE, INJECTION : Abnormal consistency; firm : Right (TGL)
THYMUS : Focus; dark : 5 (TGL)

Any remaining protocol required tissues, which have been examined, have no visible lesions

Gross Pathology - The following Tissues were Not Examined:

None

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

LIVER : Infiltration, mononuclear cell; minimal
LIVER : Tension lipidosis; focal, minimal [LIVER : Focus; pale : 1, near hilus, right lateral (G)]
LYMPH NODE, POPLITEAL : Inflammation, mixed cell; mild [LYMPH NODE, POPLITEAL : Enlargement : Right (G)]
NERVE, SCIATIC : Inflammation, mixed cell; perineurial, moderate
SITE, INJECTION : Edema; minimal, subcutaneous tissue
SITE, INJECTION : Inflammation, mixed cell; mild, myofiber [SITE, INJECTION : Abnormal consistency; firm : Right (G)]
SITE, INJECTION : Inflammation, mixed cell; mild, subcutaneous tissue [SITE, INJECTION : Abnormal consistency; firm : Right (G)]
SPLEEN : Decreased cellularity; mild, periarteriolar lymphoid sheath
THYMUS : Hemorrhage; moderate [THYMUS : Focus; dark : 5 (G)]

Histo Pathology - The following Tissues were Within Normal Limits:

BONE MARROW; LYMPH NODE, INGUINAL

Histo Pathology - The following Tissues were Not Examined:

None

Appendix 19

5002034 - Individual Animal Data Gross and Histopathology Findings

Animal: 2510	Group: 2		Sex: Female
Species: Rat	Strain: Sprague-Dawley		
	Dose: 10ug/dose		
	Removal Reason: Terminal Euthanasia		
	Day (Week) of Death: 44 (7)		

Gross Pathology Animal Details:

Comments: Tissues submitted in 10% neutral buffered formalin except eyes and optic nerves submitted in Davidson`s fixative.

Animal Notes: EUTHANASIA VIA ANESTHESIA AND EXSANGUINATION

Gross Pathology Observations:

LIVER : Focus; pale : 2, fissure, left medial. (TGL)
LYMPH NODE, POPLITEAL : Enlargement : Right. (TGL)
SITE, INJECTION : Swelling : Right. (TGL)
THYMUS : Focus; dark : >10. (TGL)

Any remaining protocol required tissues, which have been examined, have no visible lesions

Gross Pathology - The following Tissues were Not Examined:

None

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

LIVER : Vacuolation; focal, minimal
LIVER : Necrosis; focal, minimal [LIVER : Focus; pale : 2, fissure, left medial. (G)]
LIVER : Infiltration, mononuclear cell; minimal
LYMPH NODE, POPLITEAL : Inflammation, mixed cell; minimal [LYMPH NODE, POPLITEAL : Enlargement : Right. (G)]
NERVE, SCIATIC : Inflammation, mixed cell; perineurial, mild
SITE, INJECTION : Edema; minimal, subcutaneous tissue [SITE, INJECTION : Swelling : Right. (G)]
SITE, INJECTION : Degeneration; minimal, myofiber
SITE, INJECTION : Inflammation, mixed cell; moderate, myofiber
SITE, INJECTION : Inflammation, mixed cell; mild, subcutaneous tissue
SPLEEN : Decreased cellularity; minimal, periarteriolar lymphoid sheath
THYMUS : Hemorrhage; mild [THYMUS : Focus; dark : >10. (G)]

Histo Pathology - The following Tissues were Within Normal Limits:

BONE MARROW; LYMPH NODE, INGUINAL

Histo Pathology - The following Tissues were Not Examined:

None

Appendix 19

5002034 - Individual Animal Data Gross and Histopathology Findings

Animal:	3001	Group:	3	Sex: Male
Species:	Rat	Strain:	Sprague-Dawley	
		Dose:	30ug/dose	
		Removal Reason:	Terminal Euthanasia	
		Day (Week) of Death:	44 (7)	

Gross Pathology Animal Details:

Comments: Tissues submitted Into 10% neutral buffered formalin except eyes and optic nerves submitted in Davidson`s and testes in modified Davidson`s Fixative.

Animal Notes: EUTHANASIA VIA ANESTHESIA AND EXSANGUINATION

Gross Pathology Observations:

LYMPH NODE, POPLITEAL : Enlargement : Right (TGL)
SITE, INJECTION : Abnormal consistency; firm : Right (TGL)
THYMUS : Focus; dark : >10 (TGL)
THYMUS : Focus; raised : 2, dark, firm, left, surrounded by a pale rim (TGL)

Any remaining protocol required tissues, which have been examined, have no visible lesions

Gross Pathology - The following Tissues were Not Examined:

None

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

LIVER : Infiltration, mononuclear cell; minimal
LYMPH NODE, POPLITEAL : Inflammation, mixed cell; mild [LYMPH NODE, POPLITEAL : Enlargement : Right (G)]
NERVE, SCIATIC : Inflammation, mixed cell; perineurial, moderate
SITE, INJECTION : Edema; mild, subcutaneous tissue
SITE, INJECTION : Inflammation, mixed cell; mild, myofiber [SITE, INJECTION : Abnormal consistency; firm : Right (G)]
SITE, INJECTION : Inflammation, mixed cell; mild, subcutaneous tissue [SITE, INJECTION : Abnormal consistency; firm : Right (G)]
THYMUS : Hemorrhage; moderate [THYMUS : Focus; dark : >10 (G)]
NO CORRELATE : No correlating lesion [THYMUS : Focus; raised : 2, dark, firm, left, surrounded by a pale rim (G)]

Histo Pathology - The following Tissues were Within Normal Limits:

BONE MARROW; LYMPH NODE, INGUINAL; SPLEEN

Histo Pathology - The following Tissues were Not Examined:

None

Appendix 19

5002034 - Individual Animal Data Gross and Histopathology Findings

Animal:	3002	Group:	3	Sex: Male
Species:	Rat	Strain:	Sprague-Dawley	
		Dose:	30ug/dose	
		Removal Reason:	Terminal Euthanasia	
		Day (Week) of Death:	44 (7)	

Gross Pathology Animal Details:

Comments: Tissues submitted Into 10% neutral buffered formalin except eyes and optic nerves submitted in Davidson`s and testes in modified Davidson`s Fixative.

Animal Notes: EUTHANASIA VIA ANESTHESIA AND EXSANGUINATION

Gross Pathology Observations:

LARGE INTESTINE, RECTUM : Parasite : 4.
LUNG : Focus; dark : 4, right accessory. (TGL)
LYMPH NODE, POPLITEAL : Enlargement : Right. (TGL)
SITE, INJECTION : Swelling : Right. (TGL)
SPLEEN : Focus; pale : 6. (TGL)
THYMUS : Focus; dark : >10. (TGL)

Any remaining protocol required tissues, which have been examined, have no visible lesions

Gross Pathology - The following Tissues were Not Examined:

None

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

BONE MARROW : Increased hematopoiesis; myeloid, minimal
LIVER : Infiltration, mononuclear cell; minimal
LUNG : with hemorrhage
LUNG : Inflammation, mixed cell; focal, minimal [LUNG : Focus; dark : 4, right accessory. (G)]
LYMPH NODE, POPLITEAL : Inflammation, mixed cell; moderate [LYMPH NODE, POPLITEAL : Enlargement : Right. (G)]
NERVE, SCIATIC : Inflammation, mixed cell; perineurial, mild
SITE, INJECTION : Edema; moderate, subcutaneous tissue [SITE, INJECTION : Swelling : Right. (G)]
SITE, INJECTION : Degeneration; minimal, myofiber
SITE, INJECTION : Inflammation, mixed cell; mild, myofiber
SITE, INJECTION : Inflammation, mixed cell; moderate, subcutaneous tissue
SPLEEN : Decreased cellularity; mild, periarteriolar lymphoid sheath
THYMUS : Hemorrhage; minimal [THYMUS : Focus; dark : >10. (G)]
NO CORRELATE : No correlating lesion [SPLEEN : Focus; pale : 6. (G)]

Gross Pathology Observations:

LIVER : Focus; pale : 1, fissure, right medial (TGL)
SITE, INJECTION : Abnormal consistency; firm : Right (TGL)

Any remaining protocol required tissues, which have been examined, have no visible lesions

Gross Pathology - The following Tissues were Not Examined:

None

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

LIVER : Infiltration, mononuclear cell; minimal
LYMPH NODE, POPLITEAL : Inflammation, mixed cell; minimal
NERVE, SCIATIC : Inflammation, mixed cell; perineurial, moderate
SITE, INJECTION : Edema; moderate, subcutaneous tissue
SITE, INJECTION : Inflammation, mixed cell; mild, myofiber [SITE, INJECTION : Abnormal consistency; firm : Right (G)]
SITE, INJECTION : Inflammation, mixed cell; mild, subcutaneous tissue [SITE, INJECTION : Abnormal consistency; firm : Right (G)]
SPLEEN : Decreased cellularity; mild, periarteriolar lymphoid sheath
NO CORRELATE : No correlating lesion [LIVER : Focus; pale : 1, fissure, right medial (G)]

Histo Pathology - The following Tissues were Within Normal Limits:

BONE MARROW; LYMPH NODE, INGUINAL; LYMPH NODE, INGUINAL, RIGHT

Histo Pathology - The following Tissues were Not Examined:

None

Appendix 19

5002034 - Individual Animal Data Gross and Histopathology Findings

Animal:	3604	Group:	3	Sex: Female
Species:	Rat	Strain:	Sprague-Dawley	
		Dose:	30ug/dose	
		Removal Reason:	Terminal Euthanasia	
		Day (Week) of Death:	44 (7)	

Gross Pathology Animal Details:

Comments: Tissues submitted in 10% neutral buffered formalin except eyes and optic nerves submitted in Davidson`s fixative.

Animal Notes: EUTHANASIA VIA ANESTHESIA AND EXSANGUINATION

Gross Pathology Observations:

LYMPH NODE, POPLITEAL : Enlargement : Right. (TGL)
SITE, INJECTION : Swelling : Right. (TGL)
THYMUS : Focus; dark : >10. (TGL)

Any remaining protocol required tissues, which have been examined, have no visible lesions

Gross Pathology - The following Tissues were Not Examined:

None

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

LIVER : Infiltration, mononuclear cell; minimal
LYMPH NODE, POPLITEAL : Inflammation, mixed cell; minimal [LYMPH NODE, POPLITEAL : Enlargement : Right. (G)]
NERVE, SCIATIC : Inflammation, mixed cell; perineurial, minimal
SITE, INJECTION : Edema; moderate, subcutaneous tissue [SITE, INJECTION : Swelling : Right. (G)]
SITE, INJECTION : Degeneration; minimal, myofiber
SITE, INJECTION : Inflammation, mixed cell; mild, myofiber
SITE, INJECTION : Inflammation, mixed cell; moderate, subcutaneous tissue
SPLEEN : Decreased cellularity; minimal, periarteriolar lymphoid sheath
THYMUS : Hemorrhage; mild [THYMUS : Focus; dark : >10. (G)]

Histo Pathology - The following Tissues were Within Normal Limits:

BONE MARROW; LYMPH NODE, INGUINAL; LYMPH NODE, INGUINAL, RIGHT

Histo Pathology - The following Tissues were Not Examined:

None

Appendix 19

5002034 - Individual Animal Data Gross and Histopathology Findings

Animal:	3505	Group:	3	Sex: Female
Species:	Rat	Strain:	Sprague-Dawley	
		Dose:	30ug/dose	
		Removal Reason:	Terminal Euthanasia	
		Day (Week) of Death:	44 (7)	

Gross Pathology Animal Details:

Comments: Tissues submitted in 10% neutral buffered formalin except eyes and optic nerves submitted in Davidson`s fixative

Animal Notes: EUTHANASIA VIA ANESTHESIA AND EXSANGUINATION

Gross Pathology Observations:

LYMPH NODE, MANDIBULAR : Enlargement : Bilateral (TGL)
LYMPH NODE, POPLITEAL : Enlargement : Right (TGL)
SITE, INJECTION : Abnormal consistency; firm : Right (TGL)
THYMUS : Focus; dark : >10 (TGL)

Any remaining protocol required tissues, which have been examined, have no visible lesions

Gross Pathology - The following Tissues were Not Examined:

None

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

LIVER : Infiltration, mononuclear cell; minimal
LYMPH NODE, POPLITEAL : Inflammation, mixed cell; mild [LYMPH NODE, POPLITEAL : Enlargement : Right (G)]
NERVE, SCIATIC : Inflammation, mixed cell; perineurial, mild
SITE, INJECTION : Degeneration; minimal, myofiber
SITE, INJECTION : Inflammation, mixed cell; moderate, myofiber [SITE, INJECTION : Abnormal consistency; firm : Right (G)]
SITE, INJECTION : Inflammation, mixed cell; mild, subcutaneous tissue [SITE, INJECTION : Abnormal consistency; firm : Right (G)]
SPLEEN : Decreased cellularity; minimal, periarteriolar lymphoid sheath
THYMUS : Hemorrhage; minimal [THYMUS : Focus; dark : >10 (G)]
NO CORRELATE : No correlating lesion [LYMPH NODE, MANDIBULAR : Enlargement : Bilateral (G)]

Histo Pathology - The following Tissues were Within Normal Limits:

BONE MARROW; LYMPH NODE, INGUINAL; LYMPH NODE, INGUINAL, RIGHT; LYMPH NODE, MANDIBULAR

Histo Pathology - The following Tissues were Not Examined:

None

Appendix 19

5002034 - Individual Animal Data Gross and Histopathology Findings

Animal:	3506	Group:	3	Sex: Female
Species:	Rat	Strain:	Sprague-Dawley	
		Dose:	30ug/dose	
		Removal Reason:	Terminal Euthanasia	
		Day (Week) of Death:	44 (7)	

Gross Pathology Animal Details:

Comments: Tissues submitted in 10% neutral buffered formalin except eyes and optic nerves submitted in Davidson`s fixative.

Animal Notes: EUTHANASIA VIA ANESTHESIA AND EXSANGUINATION

Gross Pathology Observations:

GLAND, ADRENAL : Focus; dark : 4, left. (TGL)
LIVER : Focus; pale : 1, fissure, right medial. (TGL)
LYMPH NODE, POPLITEAL : Enlargement : Right. (TGL)
SITE, INJECTION : Swelling : Right. (TGL)
THYMUS : Focus; dark : >10. (TGL)

Any remaining protocol required tissues, which have been examined, have no visible lesions

Gross Pathology - The following Tissues were Not Examined:

None

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

LIVER : Infiltration, mononuclear cell; minimal
LIVER : Tension lipidosis; focal, minimal [LIVER : Focus; pale : 1, fissure, right medial. (G)]
LYMPH NODE, POPLITEAL : Inflammation, mixed cell; moderate [LYMPH NODE, POPLITEAL : Enlargement : Right. (G)]
NERVE, SCIATIC : Inflammation, mixed cell; perineurial, moderate
SITE, INJECTION : Edema; minimal, subcutaneous tissue [SITE, INJECTION : Swelling : Right. (G)]
SITE, INJECTION : Degeneration; minimal, myofiber
SITE, INJECTION : Inflammation, mixed cell; moderate, myofiber
SITE, INJECTION : Inflammation, mixed cell; mild, subcutaneous tissue
SPLEEN : Decreased cellularity; mild, periarteriolar lymphoid sheath
THYMUS : Hemorrhage; mild [THYMUS : Focus; dark : >10. (G)]
NO CORRELATE : No correlating lesion [GLAND, ADRENAL : Focus; dark : 4, left. (G)]

Histo Pathology - The following Tissues were Within Normal Limits:

BONE MARROW; GLAND, ADRENAL; LYMPH NODE, INGUINAL; LYMPH NODE, INGUINAL, RIGHT

Histo Pathology - The following Tissues were Not Examined:

None

Appendix 19

5002034 - Individual Animal Data Gross and Histopathology Findings

Animal:	3507	Group:	3	Sex: Female
Species:	Rat	Strain:	Sprague-Dawley	
		Dose:	30ug/dose	
		Removal Reason:	Terminal Euthanasia	
		Day (Week) of Death:	44 (7)	

Gross Pathology Animal Details:

Comments: Tissues submitted in 10% neutral buffered formalin except eyes and optic nerves submitted in Davidson`s fixative

Animal Notes: EUTHANASIA VIA ANESTHESIA AND EXSANGUINATION

Gross Pathology Observations:

MUSCLE, SKELETAL : Material accumulation; clot : Ventral cervical, extending into axillary left, adhesion to esophagus, cranial part of trachea (TGL)

SITE, INJECTION : Abnormal consistency; firm : Right (TGL)

THYMUS : Focus; dark : >10 (TGL)

THYMUS : Material accumulation; clot (TGL)

Any remaining protocol required tissues, which have been examined, have no visible lesions

Gross Pathology - The following Tissues were Not Examined:

None

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

BONE MARROW : Increased hematopoiesis; myeloid, minimal

LIVER : Infiltration, mononuclear cell; minimal

LYMPH NODE, POPLITEAL : Inflammation, mixed cell; mild

MUSCLE, SKELETAL : adventitial, adjacent to trachea and esophagus

MUSCLE, SKELETAL : Hemorrhage; moderate [MUSCLE, SKELETAL : Material accumulation; clot : Ventral cervical, extending into axillary left, adhesion to esophagus, cranial part of trachea (G)]

NERVE, SCIATIC : Inflammation, mixed cell; perineurial, minimal

SITE, INJECTION : Edema; mild, subcutaneous tissue

SITE, INJECTION : Degeneration; mild, myofiber

SITE, INJECTION : Inflammation, mixed cell; mild, myofiber [SITE, INJECTION : Abnormal consistency; firm : Right (G)]

SITE, INJECTION : Inflammation, mixed cell; mild, subcutaneous tissue [SITE, INJECTION : Abnormal consistency; firm : Right (G)]

SPLEEN : Decreased cellularity; minimal, periarteriolar lymphoid sheath

THYMUS : Hemorrhage; moderate [THYMUS : Material accumulation; clot (G) | THYMUS : Focus; dark : >10 (G)]

Histo Pathology - The following Tissues were Within Normal Limits:

LYMPH NODE, INGUINAL; LYMPH NODE, INGUINAL, RIGHT

Appendix 19

5002034 - Individual Animal Data Gross and Histopathology Findings

Histo Pathology - The following Tissues were Not Examined:

None

Appendix 19

5002034 - Individual Animal Data Gross and Histopathology Findings

Animal:	3508	Group:	3	Sex: Female
Species:	Rat	Strain:	Sprague-Dawley	
		Dose:	30ug/dose	
		Removal Reason:	Terminal Euthanasia	
		Day (Week) of Death:	44 (7)	

Gross Pathology Animal Details:

Comments: Tissues submitted in 10% neutral buffered formalin except eyes and optic nerves submitted in Davidson`s fixative.

Animal Notes: EUTHANASIA VIA ANESTHESIA AND EXSANGUINATION

Gross Pathology Observations:

LIVER : Focus; pale : 1, right lateral, hilus, adjacent to right lateral. (TGL)
SITE, INJECTION : Swelling : Right. (TGL)
SITE, INJECTION : Focus; dark : 4, right. (TGL)
THYMUS : Focus; dark : >10. (TGL)

Any remaining protocol required tissues, which have been examined, have no visible lesions

Gross Pathology - The following Tissues were Not Examined:

None

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

LIVER : Infiltration, mononuclear cell; minimal
LYMPH NODE, POPLITEAL : Inflammation, mixed cell; mild
NERVE, SCIATIC : Inflammation, mixed cell; perineurial, mild

	Dose: 100ug/dose		
	Removal Reason: Terminal Euthanasia		
	Day (Week) of Death: 44 (7)		

Gross Pathology Animal Details:

Comments: Tissues submitted Into 10% neutral buffered formalin except eyes and optic nerves submitted in Davidson`s and testes in modified Davidson`s Fixative.

Animal Notes: EUTHANASIA VIA ANESTHESIA AND EXSANGUINATION

Gross Pathology Observations:

LYMPH NODE, POPLITEAL : Enlargement : Right (TGL)
LYMPH NODE, POPLITEAL : Focus; dark : 1, right (TGL)
SITE, INJECTION : Abnormal consistency; firm : Right (TGL)

Any remaining protocol required tissues, which have been examined, have no visible lesions

Gross Pathology - The following Tissues were Not Examined:

None

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

BONE MARROW : Increased hematopoiesis; myeloid, minimal
GLAND, PROSTATE : Infiltration, mononuclear cell; minimal
GLAND, THYROID : Cyst
LIVER : Infiltration, mononuclear cell; minimal
LYMPH NODE, POPLITEAL : Inflammation, mixed cell; moderate [LYMPH NODE, POPLITEAL : Enlargement : Right (G) | LYMPH NODE, POPLITEAL : Focus; dark : 1, right (G)]
NERVE, SCIATIC : Inflammation, mixed cell; perineurial, moderate
SITE, INJECTION : Edema; mild, subcutaneous tissue
SITE, INJECTION : Degeneration; minimal, myofiber
SITE, INJECTION : Inflammation, mixed cell; dermal, minimal
SITE, INJECTION : Inflammation, mixed cell; mild, myofiber [SITE, INJECTION : Abnormal consistency; firm : Right (G)]
SITE, INJECTION : Inflammation, mixed cell; mild, subcutaneous tissue [SITE, INJECTION : Abnormal consistency; firm : Right (G)]
SPLEEN : Decreased cellularity; minimal, periarteriolar lymphoid sheath

Histo Pathology - The following Tissues were Within Normal Limits:

Appendix 19

5002034 - Individual Animal Data Gross and Histopathology Findings

ARTERY, AORTA; BONE, FEMUR; BONE, STERNUM; BRAIN; EPIDIDYMIS; ESOPHAGUS; EYE; GALT; GLAND, ADRENAL; GLAND, HARDERIAN; GLAND, MAMMARY; GLAND, PARATHYROID; GLAND, PITUITARY; GLAND, SALIVARY, MANDIBULAR; GLAND, SEMINAL VESICLE; HEART; KIDNEY; LARGE INTESTINE, CECUM; LARGE INTESTINE, COLON; LARGE INTESTINE, RECTUM; LUNG; LYMPH NODE, INGUINAL; LYMPH NODE, MANDIBULAR; LYMPH NODE, MESENTERIC; MUSCLE, SKELETAL; NERVE, OPTIC; PANCREAS; SKIN; SMALL INTESTINE, DUODENUM; SMALL INTESTINE, ILEUM; SMALL INTESTINE, JEJUNUM; SPINAL CORD, CERVICAL; SPINAL CORD, LUMBAR; SPINAL CORD, THORACIC; STOMACH; TESTIS; THYMUS; TONGUE; TRACHEA; URINARY BLADDER

Histo Pathology - The following Tissues were Not Examined:

None

Appendix 19

5002034 - Individual Animal Data Gross and Histopathology Findings

Animal:	4006	Group: 4	Sex: Male
Species:	Rat	Strain: Sprague-Dawley	
		Dose: 100ug/dose	
		Removal Reason: Terminal Euthanasia	
		Day (Week) of Death: 44 (7)	

Gross Pathology Animal Details:

Comments: Tissues submitted Into 10% neutral buffered formalin except eyes and optic nerves submitted in Davidson`s and testes in modified Davidson`s Fixative.

Animal Notes: EUTHANASIA VIA ANESTHESIA AND EXSANGUINATION

Gross Pathology Observations:

LIVER : Focus; pale : 1, near hilus, papillary process of caudate (TGL)
LUNG : Focus; dark : 1, edge, right caudal. (TGL)
LYMPH NODE, INGUINAL : Enlargement : Right. (TGL)
LYMPH NODE, INGUINAL : Focus; dark : 1, right. (TGL)
LYMPH NODE, POPLITEAL : Enlargement : Right. (TGL)
SITE, INJECTION : Swelling : Right. (TGL)
SITE, INJECTION : Abnormal consistency; firm : Right. (TGL)
THYMUS : Focus; dark : 1, right lobe. (TGL)

Any remaining protocol required tissues, which have been examined, have no visible lesions

Gross Pathology - The following Tissues were Not Examined:

None

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

BONE MARROW : Increased hematopoiesis; myeloid, minimal
GLAND, PITUITARY : Pars Intermedia Available For Evaluation.
GLAND, PITUITARY : Examined
GLAND, PROSTATE : Infiltration, mononuclear cell; minimal
GLAND, THYROID : Cyst
KIDNEY : Chronic progressive nephropathy; minimal
LARGE INTESTINE, COLON : Parasitism; nematode
LUNG : Hemorrhage; minimal [LUNG : Focus; dark : 1, edge, right caudal. (G)]
LYMPH NODE, INGUINAL : Erythrocytosis; mild, sinus [LYMPH NODE, INGUINAL : Focus; dark : 1, right. (G)]
LYMPH NODE, POPLITEAL : Inflammation, mixed cell; moderate [LYMPH NODE, POPLITEAL : Enlargement : Right. (G)]
NERVE, SCIATIC : Degeneration; neuroaxonal, mild
NERVE, SCIATIC : Inflammation, mixed cell; perineurial, moderate
SITE, INJECTION : Inflammation, mixed cell; moderate, myofiber [SITE, INJECTION : Abnormal consistency; firm : Right. (G)]

Appendix 19

5002034 - Individual Animal Data Gross and Histopathology Findings

Histo Pathology Observations [Correlation] (Continued):

SITE, INJECTION : Inflammation, mixed cell; mild, subcutaneous tissue [SITE, INJECTION : Swelling : Right. (G) | SITE, INJECTION : Abnormal consistency; firm : Right. (G)]

SPLEEN : Decreased cellularity; mild, periarteriolar lymphoid sheath

NO CORRELATE : No correlating lesion [LYMPH NODE, INGUINAL : Enlargement : Right. (G) | LIVER : Focus; pale : 1, near hilus, papillary process of caudate (G) | THYMUS : Focus; dark : 1, right lobe. (G)]

Histo Pathology - The following Tissues were Within Normal Limits:

ARTERY, AORTA; BONE, FEMUR; BONE, STERNUM; BRAIN; EPIDIDYMIS; ESOPHAGUS; EYE; GALT; GLAND, ADRENAL; GLAND, HARDERIAN; GLAND, MAMMARY; GLAND, PITUITARY; GLAND, SALIVARY, MANDIBULAR; GLAND, SEMINAL VESICLE; HEART; LARGE INTESTINE, CECUM; LARGE INTESTINE, RECTUM; LIVER; LYMPH NODE, MANDIBULAR; LYMPH NODE, MESENTERIC; MUSCLE, SKELETAL; NERVE, OPTIC; PANCREAS; SKIN; SMALL INTESTINE, DUODENUM; SMALL INTESTINE, ILEUM; SMALL INTESTINE, JEJUNUM; SPINAL CORD, CERVICAL; SPINAL CORD, LUMBAR; SPINAL CORD, THORACIC; STOMACH; TESTIS; THYMUS; TONGUE; TRACHEA; URINARY BLADDER

Histo Pathology - The following Tissues were Not Examined:

GLAND, PARATHYROID - Not Present In Section.

Appendix 19

5002034 - Individual Animal Data Gross and Histopathology Findings

Animal:	4007	Group: 4	Sex: Male
Species:	Rat	Strain: Sprague-Dawley

Appendix 19

5002034 - Individual Animal Data Gross and Histopathology Findings

ARTERY, AORTA; BONE, FEMUR; BONE, STERNUM; BRAIN; EPIDIDYMIS; ESOPHAGUS; EYE; GALT; GLAND, ADRENAL; GLAND, HARDERIAN; GLAND, MAMMARY; GLAND, PARATHYROID; GLAND, PITUITARY; GLAND, SALIVARY, MANDIBULAR; GLAND, SEMINAL VESICLE; LARGE INTESTINE, CECUM; LARGE INTESTINE, COLON; LARGE INTESTINE, RECTUM; LYMPH NODE, INGUINAL; LYMPH NODE, MANDIBULAR; LYMPH NODE, MESENTERIC; LYMPH NODE, POPLITEAL; MUSCLE, SKELETAL; NERVE, OPTIC; NERVE, SCIATIC; PANCREAS; SKIN; SMALL INTESTINE, DUODENUM; SMALL INTESTINE, ILEUM; SMALL INTESTINE, JEJUNUM; SPINAL CORD, CERVICAL; SPINAL CORD, LUMBAR; SPINAL CORD, THORACIC; STOMACH; TESTIS; THYMUS; TONGUE; TRACHEA; URINARY BLADDER

Histo Pathology - The following Tissues were Not Examined:

None

Appendix 19

5002034 - Individual Animal Data Gross and Histopathology Findings

Animal:	4015	Group: 4	Sex: Male
Species:	Rat	Strain: Sprague-Dawley	
		Dose: 100ug/dose	
		Removal Reason: Recovery Euthanasia	
		Day (Week) of Death: 57 (9)	

Gross Pathology Animal Details:

Comments: Tissues submitted Into 10% neutral buffered formalin except eyes and optic nerves submitted in Davidson`s and testes in modified Davidson`s Fixative.

Animal Notes: EUTHANASIA VIA ANESTHESIA AND EXSANGUINATION

Gross Pathology Observations:

No observations found

Any remaining protocol required tissues, which have been examined, have no visible lesions

Gross Pathology - The following Tissues were Not Examined:

None

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

GLAND, PROSTATE : Infiltration, mononuclear cell; mild
LIVER : Infiltration, mononuclear cell; minimal
LUNG : Metaplasia; osseous, focal, minimal
SITE, INJECTION : Infiltration, mononuclear cell; mild, subcutaneous tissue
SPLEEN : Decreased cellularity; minimal, periarteriolar lymphoid sheath

Histo Pathology - The following Tissues were Within Normal Limits:

ARTERY, AORTA; BONE MARROW; BONE, FEMUR; BONE, STERNUM; BRAIN; EPIDIDYMIS; ESOPHAGUS; EYE; GALT; GLAND, ADRENAL; GLAND, HARDERIAN; GLAND, MAMMARY; GLAND, PARATHYROID; GLAND, PITUITARY; GLAND, SALIVARY, MANDIBULAR; GLAND, SEMINAL VESICLE; GLAND, THYROID; HEART; KIDNEY; LARGE INTESTINE, CECUM; LARGE INTESTINE, COLON; LARGE INTESTINE, RECTUM; LYMPH NODE, INGUINAL; LYMPH NODE, MANDIBULAR; LYMPH NODE, MESENTERIC; LYMPH NODE, POPLITEAL; MUSCLE, SKELETAL; NERVE, OPTIC; NERVE, SCIATIC; PANCREAS; SKIN; SMALL INTESTINE, DUODENUM; SMALL INTESTINE, ILEUM; SMALL INTESTINE, JEJUNUM; SPINAL CORD, CERVICAL; SPINAL CORD, LUMBAR; SPINAL CORD, THORACIC; STOMACH; TESTIS; THYMUS; TONGUE; TRACHEA; URINARY BLADDER

Histo Pathology - The following Tissues were Not Examined:

None

Appendix 19

5002034 - Individual Animal Data Gross and Histopathology Findings

Animal:	4501	Group: 4	Sex: Female
Species:	Rat	Strain: Sprague-Dawley	
		Dose: 100ug/dose	
		Removal Reason: Terminal Euthanasia	
		Day (Week) of Death: 44 (7)	

Gross Pathology Animal Details:

Comments: Tissues submitted in 10% neutral buffered formalin except eyes and optic nerves submitted in Davidson`s fixative

Animal Notes: EUTHANASIA VIA ANESTHESIA AND EXSANGUINATION

Gross Pathology Observations:

SITE, INJECTION : Abnormal consistency; firm : Right (TGL)
THYMUS : Focus; dark : >10, left (TGL)

Any remaining protocol required tissues, which have been examined, have no visible lesions

Gross Pathology - The following Tissues were Not Examined:

None

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

BONE MARROW : Increased hematopoiesis; myeloid, minimal
GLAND, PARATHYROID : One Of A Pair Available For Evaluation.
GLAND, PARATHYROID : Examined
LIVER : Infiltration, mononuclear cell; minimal
LYMPH NODE, POPLITEAL : Inflammation, mixed cell; mild
NERVE, SCIATIC : Inflammation, mixed cell; perineurial, mild
SITE, INJECTION : Edema; mild, subcutaneous tissue
SITE, INJECTION : Degeneration; minimal, myofiber
SITE, INJECTION : Inflammation, mixed cell; mild, myofiber [SITE, INJECTION : Abnormal consistency; firm : Right (G)]
SITE, INJECTION : Inflammation, mixed cell; minimal, subcutaneous tissue [SITE, INJECTION : Abnormal consistency; firm : Right (G)]
SPLEEN : Decreased cellularity; mild, periarteriolar lymphoid sheath
THYMUS : Hemorrhage; mild [THYMUS : Focus; dark : >10, left (G)]
VAGINA : Diestrus

Histo Pathology - The following Tissues were Within Normal Limits:

Appendix 19

5002034 - Individual Animal Data Gross and Histopathology Findings

ARTERY, AORTA; BONE, FEMUR; BONE, STERNUM; BRAIN; CERVIX; ESOPHAGUS; EYE; GALT; GLAND, ADRENAL; GLAND, HARDERIAN; GLAND, MAMMARY; GLAND, PARATHYROID; GLAND, PITUITARY; GLAND, SALIVARY, MANDIBULAR; GLAND, THYROID; HEART; KIDNEY; LARGE INTESTINE, CECUM; LARGE INTESTINE, COLON; LARGE INTESTINE, RECTUM; LUNG; LYMPH NODE, INGUINAL; LYMPH NODE, MANDIBULAR; LYMPH NODE, MESENTERIC; MUSCLE, SKELETAL; NERVE, OPTIC; OVARY; PANCREAS; SKIN; SMALL INTESTINE, DUODENUM; SMALL INTESTINE, ILEUM; SMALL INTESTINE, JEJUNUM; SPINAL CORD, CERVICAL; SPINAL CORD, LUMBAR; SPINAL CORD, THORACIC; STOMACH; TONGUE; TRACHEA; URINARY BLADDER; UTERUS

Histo Pathology - The following Tissues were Not Examined:

None

Appendix 19

5002034 - Individual Animal Data Gross and Histopathology Findings

Animal:	4502	Group: 4	Sex: Female
Species:	Rat	Strain: Sprague-Dawley	
		Dose: 100ug/dose	
		Removal Reason: Terminal Euthanasia	
		Day (Week) of Death: 44 (7)	

Gross Pathology Animal Details:

Comments: Tissues submitted in 10% neutral buffered formalin except eyes and optic nerves submitted in Davidson`s fixative.

Animal Notes: EUTHANASIA VIA ANESTHESIA AND EXSANGUINATION

Gross Pathology Observations:

LYMPH NODE, POPLITEAL : Enlargement : right (TGL)
SITE, INJECTION : Swelling : right (TGL)
THYMUS : Focus; dark : >10. (TGL)

Any remaining protocol required tissues, which have been examined, have no visible lesions

Gross Pathology - The following Tissues were Not Examined:

None

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

BONE MARROW : Increased hematopoiesis; myeloid, minimal
GLAND, ADRENAL : Cortex And One Medulla Available For Evaluation.
GLAND, ADRENAL : Examined
GLAND, THYROID : thymus
GLAND, THYROID : Ectopia
LIVER : Necrosis; focal, minimal
LIVER : Infiltration, mononuclear cell; minimal
LYMPH NODE, POPLITEAL : Inflammation, mixed cell; moderate [LYMPH NODE, POPLITEAL : Enlargement : right (G)]
MUSCLE, SKELETAL : Degeneration; minimal, myofiber
NERVE, SCIATIC : Inflammation, mixed cell; perineurial, minimal
SITE, INJECTION : Edema; moderate, subcutaneous tissue [SITE, INJECTION : Swelling : right (G)]
SITE, INJECTION : Degeneration; minimal, myofiber
SITE, INJECTION : Inflammation, mixed cell; dermal, minimal
SITE, INJECTION : Inflammation, mixed cell; mild, myofiber
SITE, INJECTION : Inflammation, mixed cell; moderate, subcutaneous tissue
SPLEEN : Decreased cellularity; mild, periarteriolar lymphoid sheath
THYMUS : Hemorrhage; moderate [THYMUS : Focus; dark : >10. (G)]
VAGINA : Estrus

Histo Pathology - The following Tissues were Within Normal Limits:

Appendix 19

5002034 - Individual Animal Data Gross and Histopathology Findings

ARTERY, AORTA; BONE, FEMUR; BONE, STERNUM; BRAIN; CERVIX; ESOPHAGUS; EYE; GALT; GLAND, ADRENAL; GLAND, HARDERIAN; GLAND, MAMMARY; GLAND, PARATHYROID; GLAND, PITUITARY; GLAND, SALIVARY, MANDIBULAR; HEART; KIDNEY; LARGE INTESTINE, CECUM; LARGE INTESTINE, COLON; LARGE INTESTINE, RECTUM; LUNG; LYMPH NODE, INGUINAL; LYMPH NODE, MANDIBULAR; LYMPH NODE, MESENTERIC; NERVE, OPTIC; OVARY; PANCREAS; SKIN; SMALL INTESTINE, DUODENUM; SMALL INTESTINE, ILEUM; SMALL INTESTINE, JEJUNUM; SPINAL CORD, CERVICAL; SPINAL CORD, LUMBAR; SPINAL CORD, THORACIC; STOMACH; TONGUE; TRACHEA; URINARY BLADDER; UTERUS

Histo Pathology - The following Tissues were Not Examined:

None

Appendix 19

5002034 - Individual Animal Data Gross and Histopathology Findings

Animal:	4503	Group: 4	Sex: Female
Species:	Rat	Strain: Sprague-Dawley	
		Dose: 100ug/dose	
		Removal Reason: Terminal Euthanasia	
		Day (Week) of Death: 44 (7)	

Gross Pathology Animal Details:

Comments: Tissues submitted in 10% neutral buffered formalin except eyes and optic nerves submitted in Davidson`s fixative

Animal Notes: EUTHANASIA VIA ANESTHESIA AND EXSANGUINATION

Gross Pathology Observations:

GLAND, ADRENAL : Small : Right (TGL)
LYMPH NODE, MANDIBULAR : Focus; dark : >10, left (TGL)
LYMPH NODE, MANDIBULAR : Enlargement : Left (TGL)
SITE, INJECTION : Abnormal consistency; firm : Right (TGL)
THYMUS : Focus; dark : >10 (TGL)

Any remaining protocol required tissues, which have been examined, have no visible lesions

Gross Pathology - The following Tissues were Not Examined:

None

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

BONE MARROW : Increased hematopoiesis; myeloid, minimal
KIDNEY : Chronic progressive nephropathy; minimal
LIVER : Infiltration, mononuclear cell; minimal
LYMPH NODE, POPLITEAL : Inflammation, mixed cell; mild
NERVE, SCIATIC : Inflammation, mixed cell; perineurial, marked
SITE, INJECTION : Edema; moderate, subcutaneous tissue
SITE, INJECTION : Inflammation, mixed cell; dermal, minimal
SITE, INJECTION : Inflammation, mixed cell; moderate, myofiber [SITE, INJECTION : Abnormal consistency; firm : Right (G)]
SITE, INJECTION : Inflammation, mixed cell; moderate, subcutaneous tissue [SITE, INJECTION : Abnormal consistency; firm : Right (G)]
SPLEEN : Decreased cellularity; mild, periarteriolar lymphoid sheath
THYMUS : Hemorrhage; minimal [THYMUS : Focus; dark : >10 (G)]
VAGINA : Proestrus
NO CORRELATE : No correlating lesion [GLAND, ADRENAL : Small : Right (G) | LYMPH NODE, MANDIBULAR : Enlargement : Left (G) | LYMPH NODE, MANDIBULAR : Focus; dark : >10, left (G)]

Histo Pathology - The following Tissues were Within Normal Limits:

Appendix 19

5002034 - Individual Animal Data Gross and Histopathology Findings

ARTERY, AORTA; BONE, FEMUR; BONE, STERNUM; BRAIN; CERVIX; ESOPHAGUS; EYE; GALT; GLAND, ADRENAL; GLAND, HARDERIAN; GLAND, MAMMARY; GLAND, PARATHYROID; GLAND, PITUITARY; GLAND, SALIVARY, MANDIBULAR; GLAND, THYROID; HEART; LARGE INTESTINE, CECUM; LARGE INTESTINE, COLON; LARGE INTESTINE, RECTUM; LUNG; LYMPH NODE, INGUINAL; LYMPH NODE, MANDIBULAR; LYMPH NODE, MESENTERIC; MUSCLE, SKELETAL; NERVE, OPTIC; OVARY; PANCREAS; SKIN; SMALL INTESTINE, DUODENUM; SMALL INTESTINE, ILEUM; SMALL INTESTINE, JEJUNUM; SPINAL CORD, CERVICAL; SPINAL CORD, LUMBAR; SPINAL CORD, THORACIC; STOMACH; TONGUE; TRACHEA; URINARY BLADDER; UTERUS

Histo Pathology - The following Tissues were Not Examined:

None

Appendix 19

5002034 - Individual Animal Data Gross and Histopathology Findings

Animal:	4504	Group: 4	Sex: Female
Species:	Rat	Strain: Sprague-Dawley	
		Dose: 100ug/dose	
		Removal Reason: Terminal Euthanasia	
		Day (Week) of Death: 44 (7)	

Gross Pathology Animal Details:

Comments: Tissues submitted in 10% neutral buffered formalin except eyes and optic nerves submitted in Davidson`s fixative.

Animal Notes: EUTHANASIA VIA ANESTHESIA AND EXSANGUINATION

Gross Pathology Observations:

LYMPH NODE, POPLITEAL : Enlargement : Right. (TGL)
SITE, INJECTION : Swelling : Right. (TGL)
SITE, INJECTION : Abnormal consistency; firm : Right. (TGL)
SITE, INJECTION : Focus; dark : >10, right. (TGL)
THYMUS : Focus; dark : >10. (TGL)

Any remaining protocol required tissues, which have been examined, have no visible lesions

Gross Pathology - The following Tissues were Not Examined:

None

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

BONE MARROW : Increased hematopoiesis; myeloid, minimal
GLAND, THYROID : Cyst
LIVER : Infiltration, mononuclear cell; minimal
LYMPH NODE, POPLITEAL : Inflammation, mixed cell; moderate [LYMPH NODE, POPLITEAL : Enlargement : Right. (G)]
NERVE, SCIATIC : Inflammation, mixed cell; perineurial, moderate
SITE, INJECTION : Edema; mild, subcutaneous tissue [SITE, INJECTION : Swelling : Right. (G)]
SITE, INJECTION : Degeneration; minimal, myofiber
SITE, INJECTION : Inflammation, mixed cell; dermal, minimal
SITE, INJECTION : Inflammation, mixed cell; moderate, myofiber [SITE, INJECTION : Abnormal consistency; firm : Right. (G)]
SITE, INJECTION : Inflammation, mixed cell; moderate, subcutaneous tissue [SITE, INJECTION : Abnormal consistency; firm : Right. (G) | SITE, INJECTION : Focus; dark : >10, right. (G)]
SPLEEN : Decreased cellularity; mild, periarteriolar lymphoid sheath
THYMUS : Hemorrhage; mild [THYMUS : Focus; dark : >10. (G)]
VAGINA : Estrus

Histo Pathology - The following Tissues were Within Normal Limits:

SITE, INJECTION : Swelling : Right (TGL)
SITE, INJECTION : Abnormal consistency; firm : Right (TGL)

Any remaining protocol required tissues, which have been examined, have no visible lesions

Gross Pathology - The following Tissues were Not Examined:

None

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

BONE MARROW : Increased hematopoiesis; myeloid, minimal
GLAND, PARATHYROID : One Of A Pair Available For Evaluation.
GLAND, PARATHYROID : Examined
KIDNEY : Dilatation; tubular, focal, mild
LIVER : Necrosis; focal, minimal
LIVER : Infiltration, mononuclear cell; minimal
LYMPH NODE, POPLITEAL : Inflammation, mixed cell; mild
NERVE, SCIATIC : Inflammation, mixed cell; perineurial, moderate
SITE, INJECTION : Edema; moderate, subcutaneous tissue [SITE, INJECTION : Swelling : Right (G)]
SITE, INJECTION : Inflammation, mixed cell; dermal, minimal
SITE, INJECTION : Inflammation, mixed cell; moderate, myofiber [SITE, INJECTION : Abnormal consistency; firm : Right (G)]
SITE, INJECTION : Inflammation, mixed cell; moderate, subcutaneous tissue [SITE, INJECTION : Abnormal consistency; firm : Right (G)]
SPLEEN : Decreased cellularity; minimal, periarteriolar lymphoid sheath
VAGINA : Diestrus
NO CORRELATE : No correlating lesion [LYMPH NODE, MANDIBULAR : Focus; dark : >10 (G)]

Histo Pathology - The following Tissues were Within Normal Limits:

Appendix 19

5002034 - Individual Animal Data Gross and Histopathology Findings

ARTERY, AORTA; BONE, FEMUR; BONE, STERNUM; BRAIN; CERVIX; ESOPHAGUS; EYE; GALT; GLAND, ADRENAL; GLAND, HARDERIAN; GLAND, MAMMARY; GLAND, PARATHYROID; GLAND, PITUITARY; GLAND, SALIVARY, MANDIBULAR; GLAND, THYROID; HEART; LARGE INTESTINE, CECUM; LARGE INTESTINE, COLON; LARGE INTESTINE, RECTUM; LUNG; LYMPH NODE, INGUINAL; LYMPH NODE, MANDIBULAR; LYMPH NODE, MESENTERIC; MUSCLE, SKELETAL; NERVE, OPTIC; OVARY; PANCREAS; SKIN; SMALL INTESTINE, DUODENUM; SMALL INTESTINE, ILEUM; SMALL INTESTINE, JEJUNUM; SPINAL CORD, CERVICAL; SPINAL CORD, LUMBAR; SPINAL CORD, THORACIC; STOMACH; THYMUS; TONGUE; TRACHEA; URINARY BLADDER; UTERUS

Histo Pathology - The following Tissues were Not Examined:

None

Appendix 19

5002034 - Individual Animal Data Gross and Histopathology Findings

Animal: 4510	Group: 4		Sex: Female
Species: Rat	Strain: Sprague-Dawley		
	Dose: 100ug/dose		
	Removal Reason: Terminal Euthanasia		
	Day (Week) of Death: 44 (7)		

Gross Pathology Animal Details:

Comments: Tissues submitted in 10% neutral buffered formalin except eyes and optic nerves submitted in Davidson`s fixative.

Animal Notes: EUTHANASIA VIA ANESTHESIA AND EXSANGUINATION

Gross Pathology Observations:

LIVER : Focus; pale : 1, fissure, right medial. (TGL)
LYMPH NODE, MANDIBULAR : Focus; dark : >10, bilateral. (TGL)
LYMPH NODE, POPLITEAL : Enlargement : Right. (TGL)
SITE, INJECTION : Swelling : Right. (TGL)
SITE, INJECTION : Abnormal consistency; firm : Right. (TGL)
SITE, INJECTION : Focus; dark : >10, right. (TGL)
THYMUS : Discoloration; dark : Caudal half, right lobe. (TGL)
THYMUS : Focus; dark : >10. (TGL)

Any remaining protocol required tissues, which have been examined, have no visible lesions

Gross Pathology - The following Tissues were Not Examined:

None

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

BONE MARROW : Increased hematopoiesis; myeloid, minimal
KIDNEY : Hyperplasia; atypical, tubular, multifocal, mild
LARGE INTESTINE, CECUM : Parasitism; nematode
LIVER : Infiltration, mononuclear cell; minimal
LIVER : Tension lipidosis; focal, minimal [LIVER : Focus; pale : 1, fissure, right medial. (G)]
LYMPH NODE, POPLITEAL : Inflammation, mixed cell; moderate [LYMPH NODE, POPLITEAL : Enlargement : Right. (G)]
NERVE, SCIATIC : Inflammation, mixed cell; perineurial, moderate
SITE, INJECTION : Edema; moderate, subcutaneous tissue [SITE, INJECTION : Swelling : Right. (G)]
SITE, INJECTION : Inflammation, mixed cell; dermal, minimal
SITE, INJECTION : Inflammation, mixed cell; moderate, myofiber [SITE, INJECTION : Abnormal consistency; firm : Right. (G)]
SITE, INJECTION : Inflammation, mixed cell; moderate, subcutaneous tissue [SITE, INJECTION : Abnormal consistency; firm : Right. (G) | SITE, INJECTION : Focus; dark : >10, right. (G)]
SPLEEN : Decreased cellularity; mild, periarteriolar lymphoid sheath

Appendix 19

5002034 - Individual Animal Data Gross and Histopathology Findings

Histo Pathology Observations [Correlation] (Continued):

THYMUS : Hemorrhage; mild [THYMUS : Focus; dark : >10. (G) | THYMUS : Discoloration; dark : Caudal half, right lobe. (G)]

VAGINA : Proestrus

NO CORRELATE : No correlating lesion [LYMPH NODE, MANDIBULAR : Focus; dark : >10, bilateral. (G)]

Histo Pathology - The following Tissues were Within Normal Limits:

ARTERY, AORTA; BONE, FEMUR; BONE, STERNUM; BRAIN; CERVIX; ESOPHAGUS; EYE; GALT; GLAND, ADRENAL; GLAND, HARDERIAN; GLAND, MAMMARY; GLAND, PARATHYROID; GLAND, PITUITARY; GLAND, SALIVARY, MANDIBULAR; GLAND, THYROID; HEART; LARGE INTESTINE, COLON; LARGE INTESTINE, RECTUM; LUNG; LYMPH NODE, INGUINAL; LYMPH NODE, MANDIBULAR; LYMPH NODE, MESENTERIC; MUSCLE, SKELETAL; NERVE, OPTIC; OVARY; PANCREAS; SKIN; SMALL INTESTINE, DUODENUM; SMALL INTESTINE, ILEUM; SMALL INTESTINE, JEJUNUM; SPINAL CORD, CERVICAL; SPINAL CORD, LUMBAR; SPINAL CORD, THORACIC; STOMACH; TONGUE; TRACHEA; URINARY BLADDER; UTERUS

EPL® Experimental Pathology Laboratories, Inc.

MODERNA THERAPEUTICS, INC.
STUDY NUMBER 5002034
EPL PROJECT NUMBER A76-005

A 6-WEEK (4 DOSES) INTRAMUSCULAR INJECTION TOXICITY STUDY OF mRNA-1647 IN SPRAGUE-DAWLEY RATS FOLLOWED BY A 2-WEEK RECOVERY PERIOD

PEER REVIEW STATEMENT

A microscopic peer review was performed as follows for this study:

1. Re-examination of all tissues from 20% of the control group (Group 1) and 60% of the high-dose group (Group 4) animals per sex selected randomly from the Main and Recovery Sacrifices:

   Main Sacrifice
   Group 1 males: 1006, 1007
   Group 4 males: 4001, 4002, 4003, 4004, 4008, 4009
   Group 1 females: 1508, 1509
   Group 4 females: 4501, 4504, 4505, 4508, 4509, 4510

   Recovery Sacrifice
   Group 1 male: 1015
   Group 4 males: 4011, 4013, 4014
   Group 1 female: 1513
   Group 4 females: 4512, 4514, 4515

2. Re-examination of selected tissues from all animals that die on study to verify the probable cause of death: Group 1 male 1014.

3. Re-examination of all hyperplasias and neoplasias diagnosed by the study pathologist in all groups in both sexes.

4. Re-examination of the following potential target tissues from all animals in all groups in the Main and Recovery Sacrifices: injection site, spleen, bone marrow (femur and sternum), liver, lymph nodes (inguinal and popliteal), and sciatic nerve.

Following review of the microscopic findings reported by the study pathologist, the results were discussed and appropriate terminology and diagnoses mutually agreed on. Differences of opinion between the study and reviewing pathologists were resolved with agreement on the final diagnoses. The tables contained in the final report for the study reflect the mutually agreed-on diagnoses.
