COMPLIANCE STATEMENT

The study was performed in accordance with the OECD Principles of Good Laboratory Practice and as accepted by Regulatory Authorities throughout the European Union, United States of America (FDA), Japan (MHLW), and other countries that are signatories to the OECD Mutual Acceptance of Data Agreement.

Any portion of this study conducted in the USA was performed in accordance with the U.S. Department of Health and Human Services, Food and Drug Administration. United States Code of Federal Regulations, Title 21, Part 58: Good Laboratory Practice for Nonclinical Laboratory Studies and as accepted by Regulatory Authorities throughout the European Union (OECD Principles of Good Laboratory Practice), Japan (MHLW), and other countries that are signatories to the OECD Mutual Acceptance of Data Agreement.

Exceptions from the above regulations are listed below:

- Characterization of the Test Item was performed by the Sponsor or Sponsor subcontractor according to established SOPs, controls, and approved test methodologies to ensure integrity and validity of the results generated; these analyses were not conducted in compliance with the GLP or GMP regulations.
- Analysis of cytokines, α2-macroglobulin, α1-acid glycoprotein and PBMCs were conducted using scientifically qualified methods and in accordance with all applicable analytical procedures.
- Pathology peer review

This study was conducted in accordance with the procedures described herein. All deviations authorized/acknowledged by the Study Director are documented in the Study Records. The report represents an accurate and complete record of the results obtained.

There were no deviations from the above regulations that affected the overall integrity of the study or the interpretation of the study results and conclusions.

2. SUMMARY

The objective of this study was to determine the potential toxicity of mRNA-1443, when given by intramuscular injection for 6 weeks (4 doses) to rats and to evaluate the potential reversibility of any findings following a 2-week recovery period.

The study design was as follows:

Text Table 1
Experimental Design

Group No.	Test Material	Dose Level (µg/dose)[a]	Dose Volume (µL/dose)	Dose Concentration (mg/mL)[a]	No. of Animals			
					Main Study		Recovery Study	
					Males	Females	Males	Females
1	Reference Item	0	200	0	10	10	5	5
2	mRNA-1443	10 / 9.6	200	0.05 / 0.048	10	10	-	-
3	mRNA-1443	30 / 29	200	0.15 / 0.145	10	10	-	-
4	mRNA-1443	100 / 96	200	0.5 / 0.48	10	10	5	5

- : Not applicable
[a] Values based on Summary of Analysis (SoA) issued on 16 March 2017 / Values based on SoA issued on 30 May 2017 (Refer to memorandum in Appendix 2).

The following parameters and end points were evaluated in this study: clinical signs, body weights, food consumption, ophthalmology, body temperature, clinical pathology parameters (hematology, coagulation, clinical chemistry, α1-acid glycoprotein and α2-macroglubulin), cytokines analysis (IL-1ß, IL-6, TNF-α, IP-10, MIP-1-α and MCP-1) on Days 1, 15, 29, 43 at 6 hours postdose and on Day 57, PBMC analysis on Day 44, gross necropsy findings, organ weights, and histopathologic examinations.

There were no mRNA-1443-related changes in body weights, food consumption, ophthalmology and no mRNA-1443-related mortalities.

The mRNA-1443 elicited minimal and variable CD4 and CD8 T cell responses to pp65.

The primary mRNA-1443-related findings were observed at the site of injection and included: at all doses, very slight to moderate edemas, increasing in incidence and/or severity with dose, occasional severe edemas observed at ≥ 29 µg/dose, and very slight erythemas noted in males at 96 µg/dose and very slight to mild erythemas noted in females at ≥ 29 µg/dose. Although incidence and severity were dose-dependent for both sexes (peaking generally 24 hours postdose and resolving 72 hours postdose), these findings were generally noted with a higher extent in female rats. Firm abnormal consistency, swelling, and dark or pale foci were seen at the injection site of males and females at all doses and correlated histopathologically with regional mixed cellular inflammation (characterized primarily by neutrophils and to a lesser extent macrophages and lymphocytes) with edema and varying degrees of erythrocytes present. Minimal to marked perineurial mixed-cell inflammation was also noted in the sciatic nerve and was considered an extension of regionally extensive acute inflammation occurring at the injection site. Dose-dependent minimal to moderate lymphoid hyperplasia, and minimal to mild medullary plasmacytosis were seen in the locoregional lymph nodes (i.e. popliteal and inguinal) of both sexes. These lymph node changes reflected a non-specific, secondary reactive immunologic response to local acute inflammation at the injection site. Inguinal and popliteal lymph nodes occasionally had locally extensive, minimal to mild peripheral (i.e. interstitial)

inflammation and edema. The peripheral interstitial edema and inflammation were likely a secondary extension of the local inflammatory response centered at the injection site. The relative proximal location of these lymph nodes likely contributed to the accumulation of inflammation and edema in and around the injection site. mRNA-1443-related microscopic changes observed in the inguinal and popliteal lymph nodes were nearly or fully resolved, and changes in the spleen and the bone marrow were completely resolved. The mixed cellular inflammation observed at injection sites, in the connective tissues surrounding the sciatic nerve and in inguinal and popliteal lymph node was replaced by an infiltrate of mononucluear cells indicative of continued resolution and healing of injection site inflammation. In addition, there was a decrease in incidence and severity of the hepatocellular microvesicular vacuolation noted at the end of the recovery phase, suggesting partial resolution. Clinical signs (i.e. edema and erythema) observed at the injection site and gross findings were no longer observed in recovery animals, indicating a complete recovery.

Systemic changes associated with inflammation were also observed in animals given ≥ 9.6 µg/dose and included: increases in splenic weights that reach statistical significance at ≥ 9.6 µg/dose in males and at 96 µg/dose in females; with no histological correlates, minimal decreased cellularity of the periarteriolar lymphoid sheath noted in both sexes; with females having slightly increased incidence vs. males, and dose-dependent minimal to mild increased myeloid hematopoiesis in the bone marrow of males at ≥ 9.6 µg/dose and females at ≥ 29 µg/dose; this change was likely a reactive response to the pronounced inflammation observed at the injection site. Clinical pathology changes suggestive of inflammation were also observed in all males and/or females given mRNA-1443 and included: minimal to moderate increases in neutrophil, eosinophil and/or large unstained cell (males only ≥ 9.6 µg/dose) counts with concomitant increases in white blood cell counts (males ≥ 29 µg/dose, females ≥ 9.6 µg/dose), minimal decreases in lymphocyte counts (males only ≥ 29 µg/dose), reticulocyte (males only ≥ 9.6 µg/dose) and platelet (females only ≥ 9.6 µg/dose) counts, minimal increases in activated partial thromboplastin time (males ≥ 29 µg/dose, females 96 µg/dose) and mild increases in fibrinogen, minimal decreases in albumin (males 96 µg/dose, females ≥ 29 µg/dose) and increases in globulin with concomitant decreases in A/G ratio (males and females ≥ 29 µg/dose). Slight increases in body temperature were generally noted 6 hours postdose and return to or close to predose value 24 hours postdose. Although all body temperatures were within normal ranges, temperatures tend to increase with dose levels. Elevations of protein and cytokine levels suggestive of inflammation were also observed. Increases in α1-acid glycoprotein, α2-macroglobulin, IP-10 and MCP-1 were noted at ≥ 9.6 µg/dose. At the end of the recovery period, all mRNA-1443-related changes return close to control values or were partially or fully recovered.

Additionally, liver sections displayed a periportal to midzonal microvesicular vacuolar change with minimal to moderate magnitude. While present in all groups including controls, this change demonstrated a slight dose-dependent increase in incidence and magnitude consistent with a Test Item exacerbation of a background lesion. This change was also observed within recovery animals, but with decreased magnitude and incidence which indicate a partial resolution.

In conclusion, administration of mRNA-1443 by intramuscular injection for 6 weeks (4 doses) was clinically well tolerated (no mortality, changes in body weight and food consumption or deleterious changes in hematology, coagulation or clinical chemistry parameters) in rats up to 96 µg/dose. At ≥ 9.6 µg/dose, dose-dependent changes clinical signs (edema/erythema) at the

injection site, clinical pathology parameters, and cytokines/protein levels along with slight increase in body temperature were consistent with a systemic inflammatory response. Dose-dependent target organ effects were limited to the injection site, the tissues surrounding the sciatic nerve, the popliteal and inguinal lymph nodes, the spleen, the bone marrow and the liver of animals given mRNA-1443. At the end of the recovery period, all changes were partially or fully recovered.

3. INTRODUCTION

The objective of this study was to determine the potential toxicity of mRNA-1443, when given by intramuscular injection for 6 weeks (4 doses) to rats and to evaluate the potential reversibility of any findings following a 2-week recovery period.

The design of this study is based on the study objectives, the overall product development strategy for the Test Item, and the following study design guidelines:

- OECD Guideline 407. *Repeated Dose 28-day Oral Toxicity Study in Rodents*.
- Committee for Medicinal Products for Human Use (CHMP). *Note for Guidance on Repeated Dose Toxicity*. CPMP/SWP/1042/99corr.
- ICH Harmonised Tripartite Guideline M3 (R2). *Nonclinical Safety Studies for the Conduct of Human Clinical Trials and Marketing Authorization for Pharmaceuticals*.
- Japanese Guidelines for Nonclinical Studies of Drugs Manual (1995). *Guidelines for Toxicity Studies of Drugs (Chapter 3, Repeated Dose Toxicity Studies)*.
- Appendix to Director General Notification, No. 12-Nousan-8147, 24 November 2000, Agricultural Production Bureau, Ministry of Agriculture, Forestry and Fisheries of Japan (JMAFF).

The Study Director signed the study plan on 08 Mar 2017 and dosing was initiated on 20 Mar 2017 (males) and 21 Mar 2017 (females). The in-life phase of the study was completed on 03 May 2017 (Main Study animals) and on 16 May 2017 (Recovery Study animals). The experimental start date was 08 Mar 2017, and the experimental completion date was 15 Sep 2017. The study plan, study plan amendments, and deviations are presented in Appendix 1.

4. MATERIALS AND METHODS

4.1. Test and Reference Items

4.1.1. Test Item

Identification:	mRNA-1443
Batch (Lot) No.:	MTDP17017
Retest Date:	The end of use bulk Test Item analysis demonstrated that the Test Item was suitable for use during the study period.
Concentration:	2.6 / 2.5* mg/mL
Physical Description:	White to off-white lipid nanoparticle dispersion
Storage Conditions:	Kept in a freezer set to maintain -20°C
Supplier:	Moderna Therapeutics, Inc.

* Concentration based on SoA released on 16 Mar 2017 / Concentration based on SoA released on 30 May 2017 (Refer to memorandum in Appendix 2).

4.2. Reference Item

Identification:	Phosphate-buffered Saline (PBS) pH 7.2
Batch (Lot) No.:	1809319 1759866
Expiration Date:	Jul 2018 Feb 2018
Physical Description:	Liquid
Storage Conditions:	Kept in a controlled temperature area set to maintain 21°C
Supplier:	Gibco

4.3. Test Item Characterization

The Sponsor provided to the Test Facility documentation of the identity, strength, purity and composition for the Test Item. A Summary of Analysis was provided to the Test Facility and is presented in Appendix 2.

4.4. Analysis of the Test Item

A sample (2 vials) of the Test Item was taken on the completion of the dosing period. Analysis of bulk Test Item for concentration, particle size and purity were performed.

The first vial was transferred (on dry ice) to the analytical laboratory at the Test Facility for concentration and particle size analysis.

The second vial was transferred (on dry ice) to the molecular biology laboratory at the Test Facility for purity analysis.

Purity and Particle size analysis were performed by IEX- HPLC, Differential Light Scattering (DLS) and capillary electrophoresis (CE) using validated analytical procedures.

Any residual/retained analytical samples (and Test Item used in analysis) were discarded before issue of the Final Report.

4.5. Reserve Samples

For each batch (lot) of Test and Reference Items, a reserve sample (1mL or 1vial) was collected and maintained under the appropriate storage conditions by the Test Facility.

4.6. Test and Reference Item Inventory and Disposition

Records of the receipt, distribution, and storage of Test and Reference Items were maintained. With the exception of reserve samples, all unused Sponsor-supplied bulk Test Item was returned to the Sponsor on dry ice after completion of dosing.

4.7. Dose Formulation and Analysis

4.7.1. Preparation of Reference Item

Dose formulation preparations were performed under a laminar flow hood using clean procedures.

The Reference Item, Phosphate-buffered Saline (PBS) pH 7.2, was dispensed on days of dosing (i.e. Days 1, 15, 29 and 43) for administration to Group 1 control animals and was used as required to dilute the bulk Test Item for administration to Groups 2 to 4 animals. The aliquots were stored in a refrigerator set to maintain 4°C until use. They were removed from the refrigerator and allowed to warm to room temperature for at least 30 minutes before dosing.

Details of the preparation and dispensing of the Reference Item have been retained in the Study Records.

4.7.2. Preparation of Test Item

Dose formulation preparations were performed under a laminar flow hood using clean procedures.

Test Item formulations were diluted with PBS pH 7.2, as necessary for administration. The dosing formulations were prepared on each days of dosing (i.e. Days 1, 15, 29 and 43) and were stored in a refrigerator set to maintain 4°C. The dose formulations were allowed to warm to room temperature for at least 30 minutes prior to dosing. Stock vials were used only once.

Any residual volumes of formulated Test Item were stored in a refrigerator set at 4°C and were discarded prior to report finalization.

Details of the preparation and dispensing of the Test Item have been retained in the Study Records.

4.7.3. Sample Collection and Analysis

Dose formulation samples were collected for analysis as indicated in Text Table 2.

Text Table 2
Dose Formulation Sample Collection Schedule

Interval[b]	Homogeneity	Concentration	Sampling From
Day 1	All groups[a]	All groups	Dosing container
Day 43	N/A	All groups	Dosing container

N/A = Not applicable.
[a] The homogeneity results obtained from the top, middle and bottom preparations were averaged and utilized as the concentration results.
[b] Samples were collected on the first preparation of the study and on the last preparation of the study.

Samples to be analyzed were transferred on ice pack to the analytical laboratory.

Any residual/retained analytical samples (and Test Item used in analysis) were discarded before issue of the Final Report.

4.7.3.1. Analytical Method

Analyses were performed by IEX-HPLC using a validated analytical procedure (CR MTL Study No. 1801913).

4.7.3.2. Concentration and Homogeneity Analysis

On the first and the last preparation of the study, duplicate sets of samples (0.5 mL) were sent to the analytical laboratory; triplicate set of samples (0.5 mL) were retained at the Test Facility as backup samples. Samples were collected in an appropriate sized glass container from the top,

middle and bottom strata of the dosing container for each concentration. On days where only concentration analysis was required, the formulation was only sampled from the middle stratum.

Concentration results were considered acceptable when mean sample concentration results were within or equal to ± 15% of theoretical concentration. Each individual sample concentration result was considered acceptable when it was within or equal to ± 20%. Homogeneity results were considered acceptable when the relative standard deviation (RSD) of the mean value at each sampling location was ≤ 5%. After acceptance of the analytical results, backup samples were discarded.

4.7.3.3. Stability Analysis

There were no stability analysis performed for concentration used on this study however, end of use stability analysis of the bulk Test Item was performed at the end of the dosing period.

4.8. Test System

4.8.1. Receipt

On 08 Mar 2017, one hundred and twenty Crl:CD(SD) Sprague-Dawley rats (60 males and 60 females) were received from Charles River Canada Inc., St. Constant, QC, Canada. At dosing initiation, the animals were 7 weeks old and males weighed between 223 and 260 grams and females weighed between 188 and 232 grams.

4.8.2. Justification for Test System and Number of Animals

The Sprague Dawley rat was chosen as the animal model for this study as it is an accepted rodent species for preclinical toxicity testing by regulatory agencies.

The total number of animals to be used in this study was considered to be the minimum required to properly characterize the effects of the Test Item. This study has been designed such that it does not require an unnecessary number of animals to accomplish its objectives.

At this time, studies in laboratory animals provide the best available basis for extrapolation to humans and are required to support regulatory submissions. Acceptable models which do not use live animals currently do not exist.

4.8.3. Animal Identification

Each animal was identified using a subcutaneously implanted electronic identification chip.

4.8.4. Environmental Acclimation

A minimum acclimation period of at least 12 days was allowed between animal receipt and the start of dosing in order to accustom the animals to the laboratory environment.

4.8.5. Selection, Assignment, Replacement, and Disposition of Animals

Animals were assigned to groups by a stratified randomization scheme designed to achieve similar group mean body weights. Males and females were randomized separately. Animals at extremes of body weight range or with compromising background findings were not assigned to groups.

No animal were replaced before or after the initiation of dosing. All spare animals were released from the study on Day 4.

The disposition of all animals was documented in the study records.

4.8.6. Husbandry

4.8.6.1. Housing

Animals were group housed (up to 3 animals of the same sex and same dosing group together) in polycarbonate cages containing appropriate bedding equipped with an automatic watering valve. These housing conditions were maintained unless deemed inappropriate by the Study Director and/or Clinical Veterinarian. The room in which the animals were kept was documented in the study records.

Animals were separated during designated procedures/activities. Each cage was clearly labeled with a color-coded cage card indicating study, group, animal number(s), and sex. Cages were arranged on the racks in group order. Control group animals were housed on a separate rack from the Test Item-dosed animals.

4.8.6.2. Environmental Conditions

Target temperatures of 19°C to 25°C with a relative target humidity of 30% to 70% were maintained. A 12-hour light/12-hour dark cycle was maintained.

4.8.6.3. Food

PMI Nutrition International Certified Rodent Chow No. 5CR4 (14% protein) was provided ad libitum throughout the study, except during designated procedures. Wet pellet were provided for few days to one animal as warranted by clinical sign.

The feed was analyzed by the supplier for nutritional components and environmental contaminants. Results of the analysis are provided by the supplier and are on file at the Test Facility.

It is considered that there were no known contaminants in the feed that would interfere with the objectives of the study.

4.8.6.4. Water

Municipal tap water after treatment by reverse osmosis and ultraviolet irradiation was freely available to each animal via an automatic watering system (except during designated procedures). Water bottles were provided to one animal as warranted by clinical sign.

Periodic analysis of the water is performed, and results of these analyses are on file at the Test Facility.

It is considered that there were no known contaminants in the water that could interfere with the outcome of the study.

4.8.6.5. Animal Enrichment

Animals were socially housed for psychological/environmental enrichment and were provided with items such as a hiding device and a chewing object, except when interrupted by study procedures/activities.

4.8.6.6. Veterinary Care

Veterinary care was available throughout the course of the study, and animals were examined by the veterinary staff as warranted by clinical signs or other changes. All veterinary examinations were documented in the study records. No veterinary treatments were necessary during the course of the study.

Reaction to non-toxic pen used for marking the injection area was suspected for control female No. 1508 on Day 25. Consequently, no marking of the injection site was performed for this animal after that day, except on the terminal necropsy day.

4.9. Experimental Design

Text Table 3
Experimental Design

Group No.	Test Material	Dose Level (µg/dose)[a]	Dose Volume (µL/dose)	Dose Concentration (mg/mL)[a]	No. of Animals			
					Main Study		Recovery Study	
					Males	Females	Males	Females
1	Reference Item	0	200	0	10	10	5	5
2	mRNA-1443	10 / 9.6	200	0.05 / 0.048	10	10	-	-
3	mRNA-1443	30 / 29	200	0.15 / 0.145	10	10	-	-
4	mRNA-1443	100 / 96	200	0.5 / 0.48	10	10	5	5

- : Not applicable
[a] Values based on SoA issued on 16 March 2017 / Values based on SoA issued on 30 May 2017 (Refer to memorandum in Appendix 2).

4.9.1. Administration of Test Materials

The Test and Reference Items were administered to the appropriate animals via intramuscular injection into the lateral compartment of the thigh on Days 1, 15, 29 and 43. The injection site was alternated on each dosing occasion (Site 1 left thigh and Site 2 right thigh). The volume for each dose was administered using a syringe/needle within the demarcated area. The first day of dosing was designated as Day 1.

The injection area was marked as frequently as required to allow appropriate visualization of administration sites. Hair may have been clipped or shaved, when required, to improve visualization of the injection sites. The injection site was documented in the raw data for each dose administered.

A low incidence of dosing reflux and/or spillage was observed for individual animals. As these events occurred only once (twice for one animal) per affected animal and were scattered in all dosing groups, including controls, they were considered to have no impact on overall animals exposure and on the study outcome.

4.9.2. Justification of Route and Dose Levels

The intramuscular route of exposure was selected because this is the intended route of human exposure.

The dose levels for this toxicology study were chosen to approximate a substantial multiple of the anticipated clinical starting dose and top clinical dose. The highest dose tested was expected to represent the intended maximum human clinical dose and volume and was administered by the clinical route (intramuscular). At this dose level, minimal systemic toxicity was expected, but it was possible mild to moderate injection site reaction (redness, swelling) and potentially elevation of systemic cytokine/acute phase markers may have been observed. The mid- and low-dose were selected to evaluate the dose-dependent effect of this compound.

4.10. In-life Procedures, Observations, and Measurements

4.10.1. Mortality/Moribundity Checks

Throughout the study, animals were observed for general health/mortality and moribundity twice daily, once in the morning and once in the afternoon. Animals were not removed from cage during observation, unless necessary for identification or confirmation of possible findings.

4.10.2. Clinical Observations

4.10.2.1. Detailed Clinical Observations

The animals were removed from the cage, and a detailed clinical observation was performed weekly starting on Day -1.

4.10.3. Local Irritation Assessment

All animals had the dose injection site examined for signs of erythema/edema at least 24 and 72 hours postdose (end of each group). Examinations were also performed weekly when there was no dosing and during the recovery period. Following Day 43 dosing, no assessment was performed on Main Study animals at 72 hours postdose as these animals were sent to necropsy on Day 44.

Observations were scored according to the Local Irritation Assessment scoring table as follows:

Erythema (Redness)	**Score**
No erythema	0
Very slight erythema (barely perceptible)	1
Mild erythema	2
Moderate to severe erythema	3
Severe erythema (beet redness to slight eschar formation, injury in depth)	4
Notable dermal lesion (maximized)	M
Edema (Swelling)	
No edema	0
Very slight edema (barely perceptible)	1
Slight edema	2
Moderate edema	3
Severe edema	4

4.10.4. Body Weights

Animals were weighed individually weekly, starting on Day -1. A fasted weight was recorded on the day of necropsy.

4.10.5. Food Consumption

Food consumption was quantitatively measured weekly starting on Day -5 (refer to Appendix 1) and continuing weekly throughout the dosing and recovery periods.

4.10.6. Ophthalmic Examinations

Animals had funduscopic (indirect ophthalmoscopy) and biomicroscopic (slit lamp) examinations once prior to randomization (all animals) and on Day 42 for males and Day 41 for females. As there were no Test Item-related ophthalmoscopic findings toward the end of the dosing period, examinations were not performed during the recovery phase. The mydriatic used was atropine 0.126%.

4.10.7. Body Temperature

Rectal body temperature was recorded on un-sedated animals on Days 1 and 43 at predose and 6 and 24 hours postdose (end of each group).

4.11. Laboratory Evaluations

4.11.1. Clinical Pathology

4.11.1.1. Sample Collection

Blood was collected from the abdominal aorta following isoflurane anesthesia. After collection, samples were transferred to the appropriate laboratory for processing.

Animals were fasted overnight before blood sampling (for clinical chemistry). Samples were collected according to Text Table 4.

Text Table 4
Samples for Clinical Pathology Evaluation

Group Nos.	Time Point	Hematology	Coagulation	Clinical Chemistry	α1-acid glycoprotein/ α2-macroglubulin
1 to 4[a]	Day 44	X	X	X	X
1 and 4	Day 57	X	X	X	X

X = Sample collected
[a] Samples were only collected from those animals scheduled for euthanasia on Day 44.

4.11.1.2. Hematology

Blood samples (target volume of 0.5 mL collected in a tube containing K_3EDTA as anticoagulant) were analyzed for the parameters specified in Text Table 5.

Text Table 5
Hematology Parameters

Red blood cell count Hemoglobin concentration Hematocrit Mean corpuscular volume Red Blood Cell Distribution Width Mean corpuscular hemoglobin concentration Mean corpuscular hemoglobin Reticulocyte count (absolute) Platelet count	White blood cell count Neutrophil count (absolute) Lymphocyte count (absolute) Monocyte count (absolute) Eosinophil count (absolute) Basophil count (absolute) Large unstained cells (absolute)

A blood smear was prepared from each hematology sample. Blood smears were labeled, stained, and stored. Blood smears were read to investigate results for some animals.

4.11.1.3. Coagulation

Blood samples (target volume of 1.2 mL collected in a 1.3 mL tube containing citrate as anticoagulant) were processed for plasma, and the plasma was analyzed for the parameters listed in Text Table 6.

Text Table 6
Coagulation Parameters

Activated partial thromboplastin time Fibrinogen	Prothrombin time Sample Quality

4.11.1.4. Clinical Chemistry

Blood samples (target volume of 0.7 mL collected in a serum separator tube) were processed for serum, and the serum was analyzed for the parameters specified in Text Table 7.

Text Table 7
Clinical Chemistry Parameters

Alanine aminotransferase Aspartate aminotransferase Alkaline phosphatase Gamma-glutamyltransferase Creatine Kinase Total bilirubin Urea nitrogen Creatinine Calcium Phosphorus	Total protein Albumin Globulin Albumin/globulin ratio Glucose Cholesterol Triglycerides Sodium Potassium Chloride Sample Quality

4.11.1.5. α1-acid Glycoprotein and α2-macroglobulin Analysis

Blood (target volume of 0.7 mL collected in a serum separator tube) was obtained via abdominal aorta following isoflurane anesthesia before scheduled necropsy for all animals.

Blood samples were allowed to clot at ambient room temperature until centrifugation which was carried out as soon as practical. The samples were centrifuged for (b) (4) in a refrigerated centrifuge (set to maintain (b) (4)) at (b) (4) Samples were processed to serum by the Immunology Department. Serum was aliquoted into 1 x 75 µL aliquot for α2-macroglobulin and

2 x 75 µL aliquot and a leftover (when available) for α1-acid glycoprotein. All samples were stored in a freezer set to maintain -20°C, pending analysis.

Analysis for α1-acid glycoprotein and α2-macroglobulin was conducted using a qualified ELISA method by the Immunology Department. The procedure to be followed along with the assay acceptance criteria was detailed in the appropriate analytical procedure. Samples were analyzed in duplicate.

Any residual/retained samples were discarded prior to report finalization.

4.11.2. Laboratory Investigation (Cytokine Analysis)

Blood was collected from the jugular vein of all recovery animals. Blood samples for serum were allowed to clot at ambient room temperature and blood samples for plasma were transferred on wet ice to the appropriate laboratory for processing.

Text Table 8
Sample Collection Schedule

Target Blood Volume (mL)			0.5	0.5
Anticoagulant			**None (SST)**	**K_3EDTA**
Centrifugation setting			(b) (4)	
Timepoints			**Sample Type**	
Day	**Hrs**	**Animal Nos.**	IFN-α*	IL-1ß, IL-6, TNF-α, IP-10, MIP-1-α, MCP-1
1	6	1011 to1015 4011 to 4015 1511 to 1515 4511 to 4515	X	X
15	6		X	X
29	6		X	X
43	6		X	X
57	N/A		X	X
Matrix			Serum	Plasma
Volume per aliquot (µL)			all volume	all volume
Number of aliquot(s)			1	1
Storage condition (set to maintain)			-80°C	-80°C
Responsible Lab			CR-SHB	CR-SHB

X = Sample collected; N/A = not applicable

* The assay validation of IFN-α did not work appropriately and serum samples analysis was not conducted.

The number of aliquots and volumes were targets that may have been adjusted based on sample volume availability.

The samples were analyzed by the Immunology department. Analysis for IL-1ß, IL-6, TNF-α, IP-10, MIP-1-α and MCP-1 were conducted using a multiplex Luminex method. The procedures followed during the course of this study along with the assays acceptance criteria were detailed in the appropriate analytical procedure. Samples were analyzed in duplicate.

Following Study Director approval, any residual/retained samples were discarded prior to report finalization.

4.11.3. Anti Therapeutic Antibody (ATA) Analysis

Before the initiation of dosing and on Day 29 (before dose administration), a target blood volume of 0.5 mL was collected in a serum separator tube by jugular venipuncture from the appropriate animals.

Samples were mixed gently and allowed to clot at room temperature until centrifugation, which was carried out as soon as practical. The samples were centrifuged for (b) (4) in a refrigerated centrifuge (set to maintain (b) (4)) at (b) (4). The resultant serum was separated, transferred to uniquely labeled clear polypropylene tubes, frozen immediately over dry ice and transferred to a freezer set to maintain -80°C.

ATA samples were ultimately not analyzed and were discarded prior to report finalization, following Study Director approval.

4.11.4. PBMC Analysis

On Day 44, blood (target volume of 0.5 mL collected in a tube containing Sodium Heparin as anticoagulant) was obtained by jugular venipuncture from the appropriate animals. Samples were shipped at controlled temperature set to maintain 21°C via overnight courier to Southern Research, Birmingham, AL, USA, for whole blood stimulation and cytokine analysis.

The PBMC samples were analyzed using a qualified method.

4.12. Terminal Procedures

Terminal procedures are summarized in Text Table 9.

Text Table 9
Terminal Procedures

Group No.	No. of Animals		Scheduled Euthanasia Day	Necropsy Procedures			Histology	Histopathology
	M	F		Necropsy	Tissue Collection	Organ Weights		
1	10	10	44	X	X	X	Full Tissue[a]	Full Tissue[a]
2	10	10					Full Tissue[a]	Gross Lesions Target Tissues
3	10	10					Full Tissue[a]	Gross Lesions Target Tissues
4	10	10					Full Tissue[a]	Full Tissue[a]
1	5	5	57	X	X	X	Full Tissue[a]	Full Tissue[a]
4	5	5					Full Tissue[a]	Full Tissue[a]

X = Procedure conducted
[a] See Tissue Collection and Preservation table for listing of tissues.

4.12.1. Unscheduled Deaths

No animals died during the course of the study.

4.12.2. Scheduled Euthanasia

Main study and recovery animals surviving until scheduled euthanasia had a terminal body weight recorded, samples for laboratory evaluation were collected (as appropriate), and were

euthanized by exsanguination by incision from the abdominal aorta following isoflurane anesthesia. The animals were euthanized rotating across dose groups such that similar numbers of animals from each group, including controls, were necropsied throughout the day. Animals were fasted overnight before their scheduled necropsy.

4.12.3. Necropsy

Main and recovery animals were subjected to a complete necropsy examination, which included evaluation of the carcass and musculoskeletal system; all external surfaces and orifices; cranial cavity and external surfaces of the brain; and thoracic, abdominal, and pelvic cavities with their associated organs and tissues.

Necropsy procedures were performed by qualified personnel with appropriate training and experience in animal anatomy and gross pathology. A veterinary pathologist, or other suitably qualified person, was available.

4.12.4. Organ Weights

The organs identified in Text Table 10 were weighed at necropsy for all scheduled euthanasia animals. Paired organs were weighed together. Organ weight as a percent of body weight (using the terminal body weight) and organ weight as a percent of brain weight were calculated.

Text Table 10
Organs Weighed at Necropsy

Brain	Liver
Epididymis[a]	Lung
Gland, adrenal[a]	Ovary[a]
Gland, pituitary	Spleen
Gland, prostate	Testis[a]
Gland, thyroid[a]	Thymus
Heart	Uterus
Kidney[a]	

[a] Paired organ weight.

4.12.5. Tissue Collection and Preservation

Representative samples of the tissues identified in Text Table 11 were collected from all animals and preserved in 10% neutral buffered formalin, unless otherwise indicated.

Text Table 11
Tissue Collection and Preservation

Injection site[c]	Large intestine, rectum
Animal identification	Larynx
Artery, aorta	Liver
Body cavity, nasal[f]	Lung
Bone marrow smear	Lymph node, mandibular
Bone marrow	Lymph node, mesenteric
Bone, femur	Lymph node, inguinal[d]
Bone, sternum	Lymph node, popliteal[d]
Brain[e]	Small intestine, duodenum
Cervix	Small intestine, ileum
Epididymis	Small intestine, jejunum
Esophagus	Muscle, skeletal (Quatriceps[g])
Eye[a]	Nerve, optic[a]
Gland, adrenal	Nerve, sciatic
Gland, harderian	Ovary
Gland, mammary	Pancreas
Gland, parathyroid	Skin
Gland, pituitary	Spinal cord
Gland, prostate	Spleen
Gland, salivary	Stomach
Gland, seminal vesicle	Testis[b]
Gland, thyroid	Thymus
Gross lesions/masses	Tongue
Gut-associated lymphoid tissue	Trachea
Heart	Urinary bladder
Kidney	Uterus
Large intestine, cecum	Vagina
Large intestine, colon	

[a] Preserved in Davidson's fixative.
[b] Preserved in Modified Davidson's fixative.
[c] Thigh site used for the last injection.
[d] Lymph node draining the last administration site used (unilateral examination).
[e] Seven Brain levels examined to include olfactory bulb (examined in Body cavity, nasal section level 4).
[f] Level 4 processed to slide for evaluation of olfactory bulb. Nasal structures were not examined.
[g] Biceps femoris for all recovery animals (refer to Appendix 1).

4.12.6. Histology

Tissues identified in Text Table 11 (except animal identification, larynx and bone marrow smears) were embedded in paraffin, sectioned, mounted on glass slides, and stained with hematoxylin and eosin.

4.12.7. Histopathology

Histopathological evaluation was performed by a board-certified veterinary pathologist. Injection site, liver, spleen, bone marrow, sciatic nerve and popliteal and inguinal lymph nodes were identified by the study pathologist during microscopic evaluation as potential target tissues. They were evaluated and reported.

4.12.8. Peer Review

A pathology peer review was conducted by (b) (6) from Moderna Therapeutics.

4.12.9. Bone Marrow Smear Analysis

Two bone marrow smears were prepared from each euthanized animal, air dried, stained with Wright's Giemsa stain, and not coverslipped. Bone marrow smears were not evaluated.

5. CONSTRUCTED VARIABLES

Body Weight Gains	calculated between at least each interval as well as between the beginning and end of each phase
Organ Weight relative to Body Weight	calculated against the Terminal body weight for scheduled intervals
Organ Weight relative to Brain Weight	calculated against the brain weight for scheduled intervals

All results presented in the tables of the report were calculated using non-rounded values as per the raw data rounding procedure and may not be exactly reproduced from the individual data presented.

6. STATISTICAL ANALYSIS

All statistical tests were conducted at the 5% significance level. All pairwise comparisons were conducted using two sided tests and were reported at the 0.1%, 1%, and 5% levels.

Numerical data collected on scheduled occasions for the listed variables were analyzed as indicated according to sex and occasion. Descriptive statistics number, mean and standard deviation (or %CV or SE when deemed appropriate) were reported whenever possible. Values may also have been expressed as a percentage of control values when deemed appropriate. Inferential statistics were performed according to the matrix below when possible, but excluded semi-quantitative data, and any group with less than 3 observations.

Text Table 12
Statistical Matrix

Variables for Inferential Analysis	**Statistical Method**
	Parametric/ Non-Parametric
Body Weight	X
Body Temperature	X
Hematology Variables	X
Coagulation Variables	X
Clinical Chemistry Variables	X
Cytokines	X
α2-macroglobulin	X
α1-acid glycoprotein	X
Organ Weights	X
Body Weight Gains	X
Organ Weight relative to Body Weight	X
Organ Weight relative to Brain Weight	X

The following pairwise comparisons were made:

Group 2 vs. Group 1

Group 3 vs. Group 1

Group 4 vs. Group 1

6.1. Parametric/Non-Parametric

Levene's test was used to assess the homogeneity of group variances. Datasets with at least 3 groups were compared using an overall one-way ANOVA *F*-test if Levene's test was not significant or the Kruskal-Wallis test if it was. If the overall *F*-test or Kruskal-Wallis test was found to be significant, then the above pairwise comparisons were conducted using Dunnett's or Dunn's test, respectively.

Datasets with 2 groups (the designated control group and 1 other group) were compared using a *t*-test if Levene's test was not significant or Wilcoxon Rank-Sum test if it was.

7. COMPUTERIZED SYSTEMS

Critical computerized systems used in the study are listed below or presented in the appropriate Phase Report. All computerized systems used in the conduct of this study have been validated; when a particular system has not satisfied all requirements, appropriate administrative and procedural controls were implemented to assure the quality and integrity of data.

Text Table 13
Critical Computerized Systems

System Name	Version	Description of Data Collected and/or Analyzed
Provantis	8	In-life; clinical pathology; postmortem
Dispense	8	Test Material receipt, accountability
In-house reporting software Nevis (using SAS)	Nevis 2 (SAS 9.2)	Statistical analyses of numerical in-life, clinical pathology and postmortem data
Mesa Laboratories AmegaView CMS	v3.0 Build 1208.8	Continuous Monitoring System. Monitoring of standalone fridges, freezers, incubators, and selected laboratories to measure temperature, relative humidity, and CO2, as appropriate
Johnson Controls Metasys	MVE 7.0/4.0	Building Automation System. Control of HVAC and other building systems, as well as temperature/humidity control and trending in selected laboratories and animal rooms

8. RETENTION OF RECORDS, SAMPLES, AND SPECIMENS

All study-specific raw data, documentation, study plan, samples, specimens, and final reports from this study were archived at CR MTL archive by no later than the date of final report issue unless otherwise specified in the study plan. At least one year after issue of the draft report, the Sponsor will be contacted to determine disposition of materials associated with the study.

Electronic data generated by the Test Facility were archived as noted above, except that the data collected using Provantis 8 and reporting files stored on SDMS, which were archived at the Charles River Laboratories facility location in Wilmington, MA.

All records, retained samples and specimens, and reports generated from phases or segments performed by Test Facility-designated subcontractors were returned to the Test Facility for archiving.

All records and reports generated from Sponsor-designated subcontractors were archive at the Southern Research's Archive.

9. RESULTS

9.1. Dose Formulation Analyses

(Appendix 3)

Dose formulation concentration results were within specification except for Day 1, Group 2 (i.e. mean: 126%). Following investigation, the cause of out of specification results could not be determined. However, this was considered to have had no impact on the overall integrity of the study since the concentration results obtained were slightly over the concentration acceptance criteria. In addition, the same procedures of preparation were performed for all occasions and on Day 43, all concentrations were within specifications.

Homogeneity testing showed that the formulation technique used produced homogeneous preparations.

9.2. End of Use Bulk Test Item Analysis

(Appendix 2 and Appendix 19)

The bulk Test Item analysis demonstrated that the Test Item was suitable for use during the study period; the concentration and particle size results obtained were consistent with the Summary of Analysis.

The end of use bulk Test Item analysis demonstrates a purity of (b) (4), which is similar to the original results provided by the Sponsor on the Certificate of Analysis (i.e. (b) (4)

9.3. Mortality

(Appendix 4)

There were no mortalities during the course of the study.

9.4. Clinical Observations

(Table 1, Appendix 5, and Appendix 6)

There were no significant mRNA-1443-related clinical signs observed during the course of this study.

9.5. Local Irritation Assessment

(Appendix 7)

Edema and, less frequently, erythema, were noted at the injection site following dosing of males and females given ≥ 9.6 µg/dose. The edema severity scores ranged from very slight to moderate, with occasional severe edema noted at ≥ 29 µg/dose. Very slight erythemas were noted in males at 96 µg/dose while scores ranged from very slight to mild erythema in females at ≥ 29 µg/dose. The apex of severity was generally noted 24 hours postdose and decreased 72 hours postdose. Although incidence and severity were dose-dependent for both sexes, these findings were generally noted with a higher extent in female rats.

Very slight to slight edema and/or erythema were still observed 72 hours post last dose (i.e. Day 43) but they were no longer observed at the end of the recovery period, and as such, they were considered completely reversed.

9.6. Body Weights and Body Weight Gains

(Figure 1, Figure 2, Table 2, Table 3, Appendix 8, and Appendix 9)

There were no significant mRNA-1443-related changes in body weights during the course of this study.

9.7. Food Consumption

(Table 4 and Appendix 10)

There were no significant mRNA-1443-related changes in food consumption during the course of this study.

9.8. Ophthalmic Examinations

(Appendix 17)

There were no mRNA-1443-related ocular changes observed during the course of the study. The findings noted were age-related or incidental in origin and expected in this population of animals.

9.9. Body Temperature

(Table 5 and Appendix 11)

Slight increases in body temperature were generally noted 6 hours postdose and return to or close to predose value 24 hours postdose. Although all body temperatures were generally within normal ranges (i.e. 36.0°C to 38.0°C), temperatures tend to increase with dose levels. On Day 43, predose body temperatures were higher than postdose temperatures, except for animals dosed at 96 µg where postdose temperatures were higher.

9.10. Hematology

(Table 6 and Appendix 12)

mRNA-1443-related hematology changes were noted for males and females at ≥ 9.6 µg/dose and included increases in neutrophil (NEUT), eosinophil (EOS) and/or large unstained cell (LUC) counts (with concomitant increases in white blood cell (WBC) counts) and decreases in lymphocyte (LYMPH), reticulocyte (RETIC) and platelet (PLT) counts. These changes are illustrated in Text Table 14.

Text Table 14
Hematology Changes in Rats Administered mRNA-1443

Dose (µg/dose)	9.6		29		96	
Parameter	**Males**	**Females**	**Males**	**Females**	**Males**	**Females**
WBC						
Day 44	-	1.3	1.3	1.4	**2.0**	**2.0**
Day 57					1.3	-
NEUT						
Day 44	1.6	1.7	**3.3**	**3.6**	**9.0**	**6.8**
Day 57					-	0.74
LYMPH						
Day 44	-	-	0.91	-	0.87	-
Day 57					1.4	-
EOS						
Day 44	1.8	**2.4**	**2.0**	**3.3**	**2.8**	**4.1**
Day 57					1.4	0.69
LUC						
Day 44	1.8	-	1.6	-	**2.7**	-
Day 57					-	-
RETIC						
Day 44	0.90	-	**0.85**	-	**0.82**	-
Day 57					-	-
PLT						
Day 44	-	**0.84**	-	0.93	-	**0.77**
Day 57					-	0.93

Changes are expressed as X Fold from mean control value.
–: indicates results were considered not to be meaningfully different from mean control value.
Bolded values were statistically significant.
Shaded boxes indicate no collection at these timepoint for corresponding groups.

Minimal increases in WBC counts (up to 2.0X controls) were noted in males and females given ≥ 9.6 µg/dose, mainly due to minimal to moderate increases in NEUT and EOS (up to 9.0X and 2.8X controls for males and 6.8X and 4.1X controls for females, respectively), and/or LUC (up to 2.7X controls for males only). Minimal decreases in LYMPH were noted for males only at ≥ 29 µg/dose (down to 0.87X controls).

Minimal decreases in RETIC were noted in males at ≥ 9.6 µg/dose (down to 0.82X controls) and minimal decreases in PLT were noted in females at ≥ 9.6 µg/dose (down to 0.77X controls).

Of the above changes noted during the dosing period, a partial to full recovery of the findings were noted following the recovery period.

Any other differences in hematology parameters, including those attaining statistical significance, were judged to be due to individual or biological variation or lacked true dose relationship and therefore were considered not mRNA-1443-related.

9.11. Coagulation

(Table 7 and Appendix 13)

mRNA-1443-related increases in activated partial thromboplastin time (APTT) and in fibrinogen (FIB) were noted in males and females given ≥ 9.6 µg/dose. The changes are illustrated in Text Table 15.

Text Table 15
Coagulation Changes in Rats Administered mRNA-1443

Dose (µg/dose)	9.6		29		96	
Parameter	**Males**	**Females**	**Males**	**Females**	**Males**	**Females**
APTT						
Day 44	-	-	**1.1**	-	**1.2**	**1.1**
Day 57					-	-
FIB						
Day 44	**1.6**	1.5	**2.0**	**2.1**	**2.5**	**2.4**
Day 57					-	-

Changes are expressed as X Fold from mean control value.
–: indicates results were considered not to be meaningfully different from mean control value.
Bolded values were statistically significant.
Shaded boxes indicate no collection at these timepoint for corresponding groups.

Minimal increases in APTT were noted for males at ≥ 29 µg/dose (up to 1.2X controls) and females at 96 µg/dose (1.1X controls). Mild increases in FIB were noted for males and females given ≥ 9.6 µg/dose (up to 2.5X and 2.4X controls, respectively). At the end of the recovery period, values were fully recovered.

Any other differences in the coagulation parameters were judged to be due to individual or biological variability or lacked true dose relationship and therefore were considered not mRNA-1443-related.

9.12. Clinical Chemistry

(Table 8 and Appendix 14)

mRNA-1443-related decreases in albumin (ALB) and increases in globulin (GLOB) were noted for males and females and were reflected by decrease in A/G ratio. These changes are illustrated in Text Table 16.

Text Table 16
Clinical Chemistry Changes in Rats Administered mRNA-1443

Dose (µg/dose)	9.6		29		96	
Parameter	**Males**	**Females**	**Males**	**Females**	**Males**	**Females**
ALB						
Day 44	-	-	-	**0.89**	**0.89**	**0.87**
Day 57					-	-
GLOB						
Day 44	-	-	**1.2**	**1.2**	**1.3**	**1.3**
Day 57					-	-
A/G Ratio						
Day 44	-	-	**0.78**	**0.72**	**0.70**	**0.67**
Day 57					-	-

Changes are expressed as X Fold from mean control value.
–: indicates results were considered not to be meaningfully different from mean control value.
Bolded values were statistically significant.
Shaded boxes indicate no collection at these timepoint for corresponding groups.

Minimal decreases in ALB were noted for males given 96 µg/dose (0.89X controls) and females given ≥ 29 µg/dose (down to 0.87X controls). Minimal increases in GLOB were noted for males and females given ≥ 29 µg/dose (up to1.3X controls, for both sexes) and affected the A/G ratio

(down to 0.70X and 0.67X controls for males and females, respectively). At the end of the recovery period, values were fully recovered.

Any other differences in the clinical chemistry parameters, including those attaining statistical significance, were judged to be due to individual or biological variability or lacked true dose relationship and therefore were considered not mRNA-1443-related.

9.12.1. α1-acid Glycoprotein and α2-macroglobulin Analysis

(Table 9 and Appendix 15)

On Day 44, dose-dependent increases in α2-macroglobulin and α1-acid Glycoprotein were noted for males and females. These changes were statistically significant at ≥ 29 µg/dose in both genders. At the end of the recovery period (i.e. Day 57), all values returned close to control group suggesting a full recovery.

9.13. Laboratory Investigations (Cytokine Analysis)

(Table 10, Appendix 16, and Appendix 20)

When compared to the control group, higher concentrations of IP-10 were observed in animals at 96 µg/dose with the highest concentrations being generally observed on Days 29 and 43, 6 hours post dose, in both genders. These changes were statistically significant at 6 hours post dose on Days 29 and 43 for males and on Day 29 only for females. In addition, statistically significant increases in MCP-1 were also observed in females on Days 1, 15, 29 and 43, at 6 hours postdose.

At the end of the recovery period (i.e. Day 57), the concentrations of IP-10 and MCP-1 in the treated groups were generally very similar to the control group concentration suggesting full recovery.

No mRNA-1443-related changes were observed in IL-1β, IL-6, MIP1-α and TNF-α levels.

9.14. PBMC Analysis

(Appendix 18)

The T cell responses were evaluated by assessment of Interferon gamma (INFγ) producing T cells by intracellular cytokine staining and flow cytometric analysis. A summary of INFγ production responses are detailed in the following table.

Summary of Results - pp65 Specific INFγ Response

	Group	Test material	N	Dose level (µg)	pp65 specific CD4+ T cells Range (%)*;	Mean (%);	SD	pp65 specific CD8+ T cells Range (%)*;	Mean (%);	SD

	3	mRNA-1443	10	29	0.00 - 0.48;	0.00;	0.34	0.00 - 0.17;	0.01;	0.10
	4	mRNA-1443	10	96	0.00 - 0.68;	0.09;	0.38	0.00 - 0.55;	0.00;	0.43

*For purpose of Range and Mean calculation, values < 0.00 following Unstimulated Control subtraction were set to 0.00 for reporting.

The mRNA-1443 elicited minimal CD4 and CD8 T cell responses to pp65. Minimal and varying T cell responses for pp65 peptide library were noted at all dose levels. In male rats dosed with 96 µg/dose, the range of pp65-specific CD4 and CD8 T cells secreting IFN-α were 0 to 0.10% and 0 to 0.41%, respectively. In female rats that received 96 µg/dose, the range of pp65-specific CD4 and CD8 T cells were 0 to 0.68% and 0 to 0.55%, respectively.

In males at 29 µg/dose, the range of pp65-specific CD4 and CD8 T cells secreting IFN-α were 0 to 0.22% and 0 to 0.57%, respectively. In females at 29 µg/dose, the range of pp65-specific CD4 and CD8 T cells were 0 to 0.48% and 0 to 0.17%, respectively.

In males at 9.6 µg/dose, the range of pp65-specific CD4 and CD8 T cells secreting IFN-α were 0 to 0.27% and 0 to 1.07%, respectively. In females at 9.6 µg/dose, the range of pp65-specific CD4 and CD8 T cells were 0 to 0.62% and 0 to 0.22%, respectively.

Overall, the analysis revealed that minimal noted antigen-specific response to the pp-65 peptide library was seen during the study.

9.15. Gross Pathology

9.15.1. Terminal Euthanasia Animals (Day 44)

(Appendix 21).

Test Item-related gross pathology findings are summarized in Text Table 17.

Text Table 17
Summary of Gross Pathology Findings – Terminal Euthanasia (Day 44)

	Males				Females			
Group	**1**	**2**	**3**	**4**	**1**	**2**	**3**	**4**

Abnormal consistency; firm	0	2	9	10	0	2	10	10
Swelling	0	1	4	7	0	0	1	2
Focus; dark	0	0	3	1	0	0	1	1
Focus; pale	0	0	0	1	0	0	0	0
Lymph node, inguinal (No. Examined)	10	10	10	10	10	10	10	10
Enlargement	0	2	2	2	0	0	0	1
Lymph node, popliteal (No. Examined)	10	10	10	10	10	10	10	10
Enlargement	0	3	3	5	0	1	2	4

At the injection site, firm abnormal consistency was seen in males and females at ≥ 9.6 µg/dose with a dose-related increase in frequency; this change correlated microscopically with mixed cell inflammation. Swelling was also observed in males at ≥ 9.6 µg/dose and females at ≥ 29 µg/dose. At the injection site, dark foci were also observed in males and females at ≥ 29 µg/dose which correlated histopathologically with mixed cell inflammation with hemorrhage. In addition, one male at 96 µg/dose (No. 4004) was noted with pale foci at the injection site.

Enlargement of the popliteal and inguinal lymph nodes was seen in some treated rats which usually correlated histologically with perinodal mixed cell inflammation.

Other gross findings observed were considered incidental, of the nature commonly observed in this strain and age of rats, and/or were of similar incidence in control and treated animals and, therefore, were considered unrelated to administration of mRNA-1443.

9.15.2. Recovery Euthanasia Animals (Day 57)

(Appendix 21)

At the end of the recovery period, no mRNA-1443-related gross findings were noted. The gross findings observed were considered incidental, of the nature commonly observed in this strain and age of rats and/or were of similar incidence in control and treated animals and, therefore, were considered unrelated to administration of mRNA-1443.

9.16. Organ Weights

9.16.1. Terminal Euthanasia Animals (Day 44)

(Appendix 21)

mRNA-1443-related organ weight changes are summarized in Text Table 18.

Text Table 18
Summary of Organ Weight Data – Terminal Euthanasia (Day 44)

	Males			Females		
Group	**2**	**3**	**4**	**2**	**3**	**4**

[a] All values expressed as percent difference of control group means.
Based upon statistical analysis of group means, values highlighted in bold are significantly different from control group – $P \leq 0.05$; refer to data tables for actual significance levels and tests used.

Statistically significant increased splenic weights were noted in males at ≥ 9.6 µg/dose and females at 96 µg/dose. There were no gross or microscopic changes that correlated to the above weight changes.

No other mRNA-1443-related organ weight changes were noted. There were other isolated organ weight values that were statistically different from their respective controls. However, there were no patterns, trends, or correlating data to suggest these values were toxicologically relevant. Thus, other organ weight differences observed were considered incidental and/or related to difference of sexual maturity and unrelated to administration of mRNA-1443.

9.16.2. Recovery Euthanasia Animals (Day 57)

(Appendix 21)

mRNA-1443-related organ weight changes noted at the terminal euthanasia were not observed at the end of the recovery period (i.e. Day 57). There were isolated organ weight values that were statistically different from their respective controls. However, there were no patterns, trends or correlating data to suggest these values were toxicologically relevant. Thus, the organ weight differences observed were considered incidental and/or related to difference of sexual maturity and unrelated to administration of mRNA-1443.

9.17. Histopathology

9.17.1. Terminal Euthanasia (Day 44)

(Appendix 21)

mRNA-1443-related microscopic findings are summarized in Text Table 19.

[a] Numbers in parentheses represent the number of animals with the finding.

At the injection site, a dose-dependent, minimal to marked mixed cellular inflammation accompanied by edema was noted in males and females at ≥ 9.6 µg/dose. This change was characterized by a stereotypic acute inflammatory milieu comprising increased clear space expanding the interstitium (i.e. edema) accompanied by numerous neutrophils variably admixed with foamy macrophages, lymphocytes, and rare plasma cells and hemosiderophages, as well as variable quantities of extravasated erythrocytes (i.e. hemorrhage).

In the sciatic nerve, a dose-dependent, minimal to marked mixed cellular inflammation of the perineurial tissue was observed and was variably accompanied by edema. Of note, the sciatic nerve contained no changes within the nerve fibers, inflammation did not broach the epidneurium, and inflammation/edema was generally of a lesser severity than the injection site proper.

Similar to the sciatic nerve, minimal to moderate mixed cellular inflammation surrounded the inguinal and/or popliteal lymph node in males and females at ≥ 9.6 µg/dose. These changes were reflected by perinodal interstitial mixed cell inflammation variably accompanied by small amounts of edema. Inflammation did not extend into the lymph node capsule. The inguinal lymph node site generally had less incidence and severity of peripheral inflammation vs. the popliteal site.

Intrinsic lymph node changes included lymphoid hyperplasia and medullary plasmacytosis; these changes were orderly and of a character and magnitude that would be expected of reactive lymph nodes that are a non-specific and appropriate secondary consequence of injection site inflammation. These non-specific reactive changes were observed in relevant locoregional injection site lymph nodes (i.e. inguinal, popliteal) at a higher rate and slightly higher magnitude than controls.

In the spleen of males and females at ≥ 9.6 µg/dose, slightly increased incidence of a minimally decreased cellularity of the periarteriolar lymphoid sheath was noted. Although males did not display any evident dose-dependent trend, increased incidence in females at 96 µg/dose may indicate a dose-dependent effect. Microscopically, this change was characterized by subtle attrition of periarteriolar lymphocytes and variably accompanied by a slight increase in tingible body macrophages.

In the bone marrow of males at ≥ 9.6 µg/dose and females at ≥ 29 µg/dose, increased incidence of minimal to mild increased myeloid hematopoiesis (i.e. myeloid hyperplasia) with a distinctive appearance were noted. Incidence in males and females generally trends upward with increasing dose, suggesting a dose-dependent effect. Microscopically, this change was consistently characterized by multifocal aggregates of precursor cells predominantly composed of early myeloid lineage and typically found adjacent to the cortex and/or trabeculae.

Liver of control and treated males and females display microvescular hepatocelluar vacuolation without nuclear displacement throughout periportal to midzonal regions. However, this change demonstrated a dose-dependent increase in incidence and magnitude at ≥ 9.6 µg/dose in both genders, consistent with a Test Item exacerbation of a background lesion.

Other microscopic findings observed were considered incidental, of the nature commonly observed in this strain and age of rats, and/or were of similar incidence and severity in control and treated animals and, therefore, were considered unrelated to administration of mRNA-1443.

9.17.2. Recovery Euthanasia (Day 57)

(Appendix 21)

Microscopic findings noted at the terminal euthanasia were observed at the end of the recovery period (i.e. Day 57) and are summarized in Text Table 20.

Text Table 20

Mild	0	-	-	0	0	-	-	2

[a] Numbers in parentheses represent the number of animals with the finding.

At the injections site, there was a resolution of edema and acute mixed cellular inflammation in animals at 96 µg/dose at the end of the recovery period (i.e. Day 57) when compared with main animals at 96 µg/dose on Day 44. When present, the interstitial to perivascular inflammatory population was minimal and comprises a mixture of lymphocytes and macrophages with rare plasma cells and is consistent with a healing process.

In the sciatic nerve, minimal to mild infiltration of mononuclear cells was noted in both sexes. This change suggests a partial recovery from the mixed cellular inflammation observed by the end of the Recovery period.

In the inguinal/popliteal lymph nodes, perinodal mixed-cell inflammation was absent in males and females at 96 µg/dose following recovery. As part of the resolving/resolved acute

inflammation, a minimal mononuclear cell infiltration was occasionally present within the interstitium and/or perivascularly, albeit with much decreased frequency and incidence when compared with initial perinodal inflammation on Day 44.

Intrinsic lymph node changes including lymphoid hyperplasia and medullary plasmacytosis had decreased incidence and magnitude following recovery and were consistent with a resolving/resolved inflammatory response.

In the liver of control and treated males and females, microvescular hepatocellular vacuolation were noted throughout the periportal to midzonal regions. This change occurred at decreased incidence and magnitude when compared with Main Study (i.e. Day 44) animals indicating improvement. Amongst recovery animals, this change was observed in two control females (minimal), and one male (mild) and four (1 minimal, 3 mild) females at 96 µg/dose. However, the higher incidence in the 96 µg/dose recovery animals suggests that this Test Item effect has not fully resolved.

Microscopic findings noted in the bone marrow and the spleen at terminal euthanasia were no longer observed at the end of the recovery period and therefore were considered completely recovered.

Other microscopic findings observed were considered incidental, of the nature commonly observed in this strain and age of rats, and/or were of similar incidence and severity in control and treated animals and, therefore, were considered unrelated to administration of mRNA-1443.

10. CONCLUSION

In conclusion, administration of mRNA-1443 by intramuscular injection for 6 weeks (4 doses) was clinically well tolerated (no mortality, changes in body weight and food consumption or deleterious changes in hematology, coagulation or clinical chemistry parameters) in rats up to 96 µg/dose. At ≥ 9.6 µg/dose, dose-dependent changes clinical signs (edema/erythema) at the injection site, clinical pathology parameters, and cytokines/protein levels along with slight increase in body temperature were consistent with a systemic inflammatory response. Dose-dependent target organ effects were limited to the injection site, the tissues surrounding the sciatic nerve, the popliteal and inguinal lymph nodes, the spleen, the bone marrow and the liver of animals given mRNA-1443. At the end of the recovery period, all changes were partially or fully recovered.

Appendix 1

TABLE OF CONTENTS

Appendix 1

1. OBJECTIVE(S)

The objectives of this study are to determine the potential toxicity of mRNA 1443, when given by intramuscular injection for 6 weeks (4 doses) to rats and to evaluate the potential reversibility of any findings following a 2-week recovery period.

1.1. Study Classification

Study Category:	TOX
Study Type:	Repeat Dose Toxicity
Study Design:	Parallel
Primary Treatment CAS Registry Number:	Not Available
Primary Treatment Unique Ingredient ID:	Not Available
Class of Compound:	mRNA

2. PROPOSED STUDY SCHEDULE

Proposed study dates are listed below. Actual applicable dates will be included in the Final Report.

Experimental Start Date:	08 Mar 2017
Experimental Completion Date:	29 Aug 2017 (Last date data are collected from the study)
Animal Arrival:	08 Mar 2017
Initiation of Dosing:	22 Mar 2017 (Male) 23 Mar 2017 (Female)
Completion of In-life:	05 May 2017 (Main) 18 May 2017 (Recovery) (Last date of necropsy)
Unaudited Draft Report:	17 Jul 2017
Audited Draft Report:	22 Aug 2017
Final Report:	29 Aug 2017

3. GUIDELINES FOR STUDY DESIGN

The design of this study was based on the study objective(s), the overall product development strategy for the Test Item, and the following study design guidelines:

- OECD Guideline 407. *Repeated Dose 28-day Oral Toxicity Study in Rodents*.

Appendix 1

- Committee for Medicinal Products for Human Use (CHMP). *Note for Guidance on Repeated Dose Toxicity*. CPMP/SWP/1042/99corr.
- ICH Harmonised Tripartite Guideline M3 (R2). *Nonclinical Safety Studies for the Conduct of Human Clinical Trials and Marketing Authorization for Pharmaceuticals*.
- Japanese Guidelines for Nonclinical Studies of Drugs Manual (1995). *Guidelines for Toxicity Studies of Drugs (Chapter 3, Repeated Dose Toxicity Studies)*.
- Appendix to Director General Notification, No. 12-Nousan-8147, 24 November 2000, Agricultural Production Bureau, Ministry of Agriculture, Forestry and Fisheries of Japan (JMAFF).

4. REGULATORY COMPLIANCE

The study will be performed in accordance with the OECD Principles of Good Laboratory Practice and as accepted by Regulatory Authorities throughout the European Union, United States of America (FDA), Japan (MHLW), and other countries that are signatories to the OECD Mutual Acceptance of Data Agreement.

Any portion of this study conducted in the USA will be performed in accordance with the U.S. Department of Health and Human Services, Food and Drug Administration. United States Code of Federal Regulations, Title 21, Part 58: Good Laboratory Practice for Nonclinical Laboratory Studies and as accepted by Regulatory Authorities throughout the European Union (OECD Principles of Good Laboratory Practice), Japan (MHLW), and other countries that are signatories to the OECD Mutual Acceptance of Data Agreement.

Exceptions to GLPs include the following study elements:

- Characterization of the Test Item will be performed by the Sponsor or Sponsor subcontractor according to established SOPs, controls, and approved test methodologies to ensure integrity and validity of the results generated; these analyses will not be conducted in compliance with the GLP or GMP regulations.
- Analysis of cytokines, α2-macroglobulin, α1-acid glycoprotein, anti-therapeutic antibody and PBMCs will be conducted using scientifically qualified methods and in accordance with all applicable analytical procedures.
- Pathology peer review

5. QUALITY ASSURANCE

5.1. Test Facility

The Test Facility Quality Assurance Program (QAP) will monitor the study to assure the facilities, equipment, personnel, methods, practices, records, and controls are in conformance with Good Laboratory Practice regulations. The QAP will review the study plan, conduct inspections at intervals adequate to assure the integrity of the study, and audit the Final Report to

Appendix 1

assure that it accurately describes the methods and standard operating procedures and that the reported results accurately reflect the raw data of the study.

The Test Facility QAP contact for this study is indicated below:

Appendix 1

Pathology Will be added by amendment

Each IS is required to report any deviations or other circumstances that could affect the quality or integrity of the study to the Study Director in a timely manner. Each IS will provide a report addressing their assigned phase of the study, which will be included as an appendix to the Final Report. The phase report will include the following:

- A listing of critical computerized systems used in the conduct and/or interpretation of the assigned study phase

PIs at Sponsor or Sponsor-designated Test Site(s)

Each PI is required to report any deviations or other circumstances that could affect the quality or integrity of the study to the Study Director in a timely manner. Each PI will provide a report addressing their assigned phase of the study, which will be included as an appendix to the Final Report. The phase report will include the following:

- The archive site for all records, samples, specimens and reports generated from the phase or segment (alternatively, details regarding the retention of the materials may be provided to the Study Director for inclusion in the Final Report)
- A listing of critical computerized systems used in the conduct and/or interpretation of the assigned study phase

8. TEST AND REFERENCE ITEMS

8.1. Test Item

Identification: mRNA-1443

Supplier: Moderna Therapeutics, Inc.

Appendix 1

Batch (Lot) Number:	MTDP17017
Concentration:	Will be added by amendment
Retest Date:	An end-of-use analysis of the bulk Test Item will be performed to demonstrate the stability of the Test Item during the dosing period.
Physical Description:	White to off-white lipid nanopacticle dispersion
Storage Conditions:	Kept in a freezer set to maintain -20°C

8.2. Reference Item

Identification:	Phosphate-buffered Saline (PBS) pH 7.2
Supplier:	Will be included in the Final Report
Batch (Lot) Number:	Will be included in the Final Report
Expiration Date:	Will be included in the Final Report
Physical Description:	Liquid
Storage Conditions:	Kept in a controlled temperature area set to maintain 21°C

8.3. Test Item Characterization

The Sponsor will provide to the Test Facility documentation of the identity, strength, purity and composition for the Test Item. A Certificate of Analysis or equivalent documentation will be provided for inclusion in the Final Report. The Sponsor will also provide information concerning the regulatory standard that was followed for these evaluations.

The Sponsor has appropriate documentation on file concerning the method of synthesis, fabrication or derivation of the Test Item, and this information is available to the appropriate regulatory agencies should it be requested.

8.4. Analysis of Test Item

A sample (2 vials) of the Test Item will be taken on the completion of the dosing period. Analysis of bulk Test Item for concentration, particle size and purity will be performed.

The first vial will be transferred (on ice pack) to the analytical laboratory at the Test Facility for concentration and particle size analysis.

The second vial will be transferred (on ice pack) to the molecular biology laboratory at the Test Facility for purity analysis.

Purity and Particle size analysis will be performed by IEX- HPLC, Differential Light Scattering (DLS) and capillary electrophoresis (CE) using validated analytical procedures.

Any residual/retained analytical samples (and Test Item used in analysis) will be discarded before issue of the Final Report.

Appendix 1

8.5. Reserve Samples

For each batch (lot) of Test and Reference Items, a reserve sample (1 mL or 1 vial) will be collected and maintained under the appropriate storage conditions by the Test Facility.

8.6. Test and Reference Item Inventory and Disposition

Records of the receipt, distribution, storage, and disposition of Test and Reference Items will be maintained. With the exception of reserve samples, all unused Sponsor-supplied bulk Test Item will be returned to the Sponsor on dry ice (after completion of dosing).

Shipping Contact
(b) (6)
Moderna Therapeutics
800 Technology Sq, 8th Floor
Cambridge MA 02476
Cell: (b) (6)
E-mail: (b) (6)

9. SAFETY

The safety precautions for the Test Item and dose formulations will be documented in a Test Material Safety Data Sheet (TMSDS) based on the information provided by the Sponsor either by an MSDS or similar document.

10. DOSE FORMULATION AND ANALYSIS

10.1. Preparation of Reference Item

Dose formulation preparations will be performed under a laminar flow hood using clean procedures.

The Reference Item, Phosphate-buffered Saline (PBS) pH 7.2, will be dispensed on days of dosing (i.e. Days 1, 15, 29 and 43) for administration to Group 1 control animals and will be used as required to dilute the bulk Test Item for administration to Groups 2 to 4 animals. The aliquots will be stored in a refrigerator set to maintain 4°C until use. They will be removed from the refrigerator and allowed to warm to room temperature for at least 30 minutes before dosing.

Any residual volumes will be discarded unless otherwise requested by the Study Director.

10.2. Preparation of Test Item

Dose formulation preparations will be performed under a laminar flow hood using clean procedures.

Test Item formulations will be diluted with PBS pH 7.2, as necessary for administration. The dosing formulations will be prepared on each days of dosing (i.e. Days 1, 15, 29 and 43) and will be stored in a refrigerator set to maintain 4°C. The dose formulations will be allowed to warm to

Appendix 1

room temperature for at least 30 minutes prior to dosing. Alternatively, the aliquots can be transferred directly to room temperature. When possible, stock vials will be used only once.

Any residual volumes of formulated Test Item will be stored in a refrigerator set at 4°C and discarded prior to report finalization.

10.3. Sample Collection and Analysis

Dose formulation samples will be collected for analysis as indicated in the following table. Additional samples may be collected and analyzed at the discretion of the Study Director.

Dose Formulation Sample Collection Schedule

Interval[b]	Homogeneity	Concentration	Sampling From
Day 1	All groups[a]	All groups	Dosing container
Day 43	N/A	All groups	Dosing container

N/A = Not applicable.

[a] The homogeneity results obtained from the top, middle and bottom preparations will be averaged and utilized as the concentration results.

[b] Samples will be collected on the first preparation of the study and on the last preparation of the study.

Samples to be analyzed will be submitted as soon as possible following collection.

All samples to be analyzed will be transferred (on ice pack) to the analytical laboratory.

Any residual/retained analytical samples (and Test Item used in analysis) will be discarded before issue of the Final Report.

10.3.1. Analytical Method

Analyses described below will be performed by IEX-HPLC using a validated analytical procedure (CR-MTL Study No. 1801913).

10.3.1.1. Concentration and Homogeneity Analysis

Samples for Analysis:	Duplicate top, middle, and bottom samples (duplicate middle only from Group 1); sent for analysis as noted in Section 10.3. On days where only concentration analysis is required, the formulation will only be sampled from the middle.
Backup Samples:	Triplicate top, middle, and bottom samples (triplicate middle only from Group 1); maintained at the Test Facility. Backup samples may be analyzed at the discretion of the Study Director. On days where only concentration analysis is required, the formulation will only be sampled from the middle.
Sampling Containers:	Appropriate sized glass containers.
Sample Volume:	0.5 mL for analysis and backup samples.
Storage Conditions:	Kept in a refrigerator set to maintain 4°C.

Appendix 1

Acceptance Criteria:	For concentration, the criteria for acceptability will be mean sample concentration results within or equal to ± 15% of theoretical concentration. Each individual sample concentration result within or equal to ± 20%. For homogeneity, the criteria for acceptability will be a relative standard deviation (RSD) of concentrations of ≤ 5% for each group.

10.3.1.2. Stability Analysis

There will be no stability analysis performed for concentration used on this study however, end of use stability analysis of the stock solution will be performed at the end of the dosing period.

11. TEST SYSTEM

Species:	Rat
Strain:	Crl:CD(SD) Sprague-Dawley rat
Source:	Charles River Canada Inc., St. Constant, QC, Canada
Number of Males Ordered:	60
Number of Females Ordered:	60
Target Age at Arrival:	4 to 8 weeks
Target Weight at Arrival:	126 to 150 g (males) 101 to 125 g (females)

The actual age, weight, and number of animals received will be listed in the Final Report.

11.1. Justification of Test System and Number of Animals

The Sprague Dawley rat was chosen as the animal model for this study as it is an accepted rodent species for preclinical toxicity testing by regulatory agencies.

The total number of animals to be used in this study is considered to be the minimum required to properly characterize the effects of the Test Item. This study has been designed such that it does not require an unnecessary number of animals to accomplish its objectives.

At this time, studies in laboratory animals provide the best available basis for extrapolation to humans and are required to support regulatory submissions. Acceptable models which do not use live animals currently do not exist.

11.2. Animal Identification

Each animal will be identified using a subcutaneously implanted electronic identification chip.

Appendix 1

11.3. Environmental Acclimation

A minimum acclimation period of 14 days will be allowed between animal receipt and the start of dosing in order to accustom the animals to the laboratory environment.

11.4. Selection, Assignment, Replacement, and Disposition of Animals

Animals will be assigned to groups by a stratified randomization scheme designed to achieve similar group mean body weights. Males and females will be randomized separately. Animals in poor health or at extremes of body weight range will not be assigned to groups.

Before the initiation of dosing, any assigned animals considered unsuitable for use in the study will be replaced by alternate animals obtained from the same shipment and maintained under the same environmental conditions.

After initiation of dosing, study animals may be replaced during the replacement period with alternate animals in the event of accidental injury, non-Test Item-related health issues, or similar circumstances.

The alternate animals may be used as replacements on the study within 3 days.

The disposition of all animals will be documented in the study records.

12. HUSBANDRY

12.1. Housing

Animals will be group housed (up to 3 animals of the same sex and same dosing group together) in polycarbonate cages containing appropriate bedding equipped with an automatic watering valve. These housing conditions will be maintained unless deemed inappropriate by the Study Director and/or Clinical Veterinarian. The room(s) in which the animals will be kept will be documented in the study records.

Animals will be separated during designated procedures/activities. Each cage will be clearly labeled with a color-coded cage card indicating study, group, animal number(s), and sex. Cages will be arranged on the racks in group order. Where possible, control group animals will be housed on a separate rack from the Test Item treated animals.

12.2. Environmental Conditions

The targeted conditions for animal room environment will be as follows:

Temperature:	19°C to 25°C
Humidity:	30% to 70%
Light Cycle:	12 hours light and 12 hours dark (except during designated procedures)

Appendix 1

12.3. Food

PMI Nutrition International Certified Rodent Chow No. 5CR4 will be provided ad libitum throughout the study, except during designated procedures. The same diet in meal form may be provided to individual animals as warranted by clinical signs (e.g., broken/damaged incisors or other health changes).

The feed is analyzed by the supplier for nutritional components and environmental contaminants. Results of the analysis are provided by the supplier and are on file at the Test Facility.

It is considered that there are no known contaminants in the feed that would interfere with the objectives of the study.

12.4. Water

Municipal tap water after treatment by reverse osmosis and ultraviolet irradiation will be freely available to each animal via an automatic watering system (except during designated procedures). Water bottles can be provided, if required.

Periodic analysis of the water is performed, and results of these analyses are on file at the Test Facility.

It is considered that there are no known contaminants in the water that could interfere with the outcome of the study.

12.5. Animal Enrichment

Animals will be socially housed for psychological/environmental enrichment and will be provided with items such as a hiding tube and a chewing object, except during study procedures/activities.

12.6. Veterinary Care

Veterinary care will be available throughout the course of the study and animals will be examined by the veterinary staff as warranted by clinical signs or other changes. All veterinary examinations and recommended therapeutic treatments, if any, will be documented in the study records.

In the event that animals show signs of illness or distress, the responsible veterinarian may make initial recommendations about treatment of the animal(s) and/or alteration of study procedures, which must be approved by the Study Director or Scientific designate. All such actions will be properly documented in the study records and, when appropriate, by study plan amendment. Treatment of the animal(s) for minor injuries or ailments may be approved without prior consultation with the Sponsor representative when such treatment does not impact fulfillment of the study objectives. If the condition of the animal(s) warrants significant therapeutic intervention or alterations in study procedures, the Sponsor representative will be contacted, when possible, to discuss appropriate action. If the condition of the animal(s) is such that emergency measures must be taken, the Study Director and/or clinical veterinarian will attempt

Appendix 1

to consult with the Sponsor representative prior to responding to the medical crisis, but the Study Director and/or veterinarian has authority to act immediately at his/her discretion to alleviate suffering. The Sponsor representative will be fully informed of any such events.

13. EXPERIMENTAL DESIGN

Experimental Design

Group No.	Test Material	Dose Level (µg/dose)	Dose Volume (µL/dose)	Dose Concentration (mg/mL)	No. of Animals			
					Main Study		Recovery Study	
					Males	Females	Males	Females
1	Reference Item	0	200	0	10	10	5	5
2	mRNA-1443	10	200	0.05	10	10	-	-
3	mRNA-1443	30	200	0.15	10	10	-	-
4	mRNA-1443	100	200	0.5	10	10	5	5

- : Not applicable

13.1. Administration of Test and Reference Items

The Test and Reference Items will be administered to the appropriate animals via intramuscular injection into the lateral compartment of the thigh on Days 1, 15, 29 and 43, the injection site will be alternated on each dosing occasion (Site 1 left thigh and Site 2 right thigh). The volume for each dose will be administered using a syringe/needle within the demarcated area. The first day of dosing will be designated as Day 1 (exception: alternate animals used for replacement after Day 1 will assume the day of the animal being replaced).

The injection area will be marked as frequently as required to allow appropriate visualization of administration sites. Hair may be clipped or shaved if required to improve visualization of the injection sites. The injection site will be documented in the raw data for each dose administered.

13.2. Justification of Route and Dose Levels

The intramuscular route of exposure was selected because this is the intended route of human exposure.

The dose levels for this toxicology study were chosen to approximate a substantial multiple of the anticipated clinical starting dose and top clinical dose. The highest dose to be tested is expected to represent the intended maximum human clinical dose and volume and will be administered by the clinical route (intramuscular). At this dose level, minimal systemic toxicity is expected, but it is possible mild to moderate injection site reaction (redness, swelling) and potentially elevation of systemic cytokine/acute phase markers may be observed. The mid- and low-dose were selected to evaluate the dose-dependent effect of this compound.

14. IN-LIFE PROCEDURES, OBSERVATIONS, AND MEASUREMENTS

The in-life procedures, observations, and measurements listed below including Laboratory Investigations listed in section below will be performed for all main study and recovery animals, unless otherwise indicated in the respective section. During the study, additional evaluations to

Appendix 1

those described below and/or scheduled, and considered necessary by the Study Director and/or Veterinarian to assess health status will be conducted and duly documented. More frequent observations may be undertaken if considered appropriate.

14.1. Mortality/Moribundity Checks

Frequency: Twice daily, once in the morning and once in the afternoon, throughout the study.

Procedure: Animals will be observed for general health/mortality and moribundity. Animals will not be removed from cage during observation, unless necessary for identification or confirmation of possible findings.

14.2. Clinical Observations

14.2.1. Detailed Clinical Observations

Frequency: Weekly during the dosing and recovery periods, and at least every two weeks during the predosing period.

Procedure: Animals removed from the cage for examination.

14.3. Local Irritation Assessment

Frequency: On days of dosing; at least 24 and 72 hours post-dose (end of each group). Weekly when there is no dosing and during the recovery period. Following Day 43 dosing, no assessment will be performed on main animals at 72 hours postdose as animals will be sent to necropsy on Day 44.

Procedure: All animals will have the dose injection site examined for signs of erythema/edema. Observations will be scored according to the Local Irritation Assessment scoring table as follows:

Erythema (Redness)	**Score**
No erythema	0
Very slight erythema (barely perceptible)	1
Mild erythema	2
Moderate to severe erythema	3
Severe erythema (beet redness to slight eschar formation, injury in depth)	4
Notable dermal lesion (maximized)	M
Edema (Swelling)	
No edema	0
Very slight edema (barely perceptible)	1
Slight edema	2
Moderate edema	3

Appendix 1

Severe edema	4

Any other abnormalities will be recorded as they are observed.

14.4. Body Weights

Frequency: Weekly during the dosing and recovery periods, and at least every two weeks during the predosing period.

Procedure: Animals will be individually weighed. A fasted weight will be recorded on the day of necropsy. Terminal body weights will not be collected from animals found dead or euthanized moribund.

14.5. Food Consumption

Frequency: Weekly, starting Day -7, throughout the dosing and recovery periods.

Procedure: Food consumption will be quantitatively measured except for on the day of scheduled euthanasia.

14.6. Ophthalmic Examinations

Frequency: Once prestudy and again toward the end of Week 6 of the dosing period. During Week 2 of the recovery period if Test Item-related findings are observed during the dosing period.

Procedure: All animals will be subjected to funduscopic (indirect ophthalmoscopy) and biomicroscopic (slit lamp) examinations. The mydriatic used will be Atropine 0.126%.

Evaluation: A report will be included as an appendix to the Final Report.

14.7. Body Temperature

Frequency: On Day 1 and Day 43 at predose, and 6 and 24 hours post dose (end of each group). If body temperature is significantly above normal range (36.0°C to 38.0°C) the temperature will be monitored daily till return to normal. If clinical observations indicate a possible body temperature changes measurements may be taken at the discretion of the Study Director.

Procedure: Rectal body temperature will be recorded on un-sedated animals.

Appendix 1

15. LABORATORY EVALUATIONS

15.1. Clinical Pathology

15.1.1. Sample Collection

Blood will be collected from the abdominal aorta following isoflurane anesthesia. After collection, samples will be transferred to the appropriate laboratory for processing.

Animals will be fasted overnight before blood sampling (for clinical chemistry). Samples will be collected according to the following table.

Samples for Clinical Pathology Evaluation

Group Nos.	Time Point	Hematology	Coagulation	Clinical Chemistry	α1-acid glycoprotein/ α2-macroglubulin
1 to 4[a]	Day 44	X	X	X	X
1 and 4	Day 57	X	X	X	X
Unscheduled euthanasia (when possible)	Before euthanasia	X	X	X	X

X = Sample to be collected

[a] Samples will only be collected from those animals scheduled for euthanasia on Day 44.

Any residual/retained clinical pathology samples will be discarded before issue of the Final Report.

15.1.2. Hematology

Target Volume: 0.5 mL

Anticoagulant: EDTA

Hematology Parameters

Red blood cell count Hemoglobin concentration Hematocrit Mean corpuscular volume Red Blood Cell Distribution Width Mean corpuscular hemoglobin concentration Mean corpuscular hemoglobin Reticulocyte count (absolute) Platelet count	White blood cell count Neutrophil count (absolute) Lymphocyte count (absolute) Monocyte count (absolute) Eosinophil count (absolute) Basophil count (absolute) Large unstained cells (absolute)

A blood smear will be prepared from each hematology sample. Blood smears will be labeled, stained, and stored. Blood smears may be read to investigate results. If additional examination

Appendix 1

of blood smears is deemed necessary, the smears may be subsequently evaluated and this evaluation will be described in a study plan amendment.

15.1.3. Coagulation

Target Volume: 1.2 mL (in a 1.3 mL tube)

Anticoagulant: Citrate

Processing: To plasma

Coagulation Parameters

Activated partial thromboplastin time Fibrinogen	Prothrombin time Sample Quality

15.1.4. Clinical Chemistry

Target Volume: 0.7 mL

Anticoagulant: None, collected in serum separator tube

Processing: To serum

Clinical Chemistry Parameters

Alanine aminotransferase Aspartate aminotransferase Alkaline phosphatase Gamma-glutamyltransferase Creatine Kinase Total bilirubin[a] Urea nitrogen Creatinine Calcium Phosphorus	Total protein Albumin Globulin Albumin/globulin ratio Glucose Cholesterol Triglycerides Sodium Potassium Chloride Sample Quality

[a] When total bilirubin is > 0.5 mg/dL, indirect and direct bilirubin will also be measured.

15.1.5. Bone Marrow Smear Evaluation (Optional)

Bone marrow smears will be collected and prepared as described in the Tissue Collection and Preservation table (Section 16.5). Evaluation of stained smears may be added by amendment at the discretion of the Study Director in consultation with the pathologist and the Sponsor.

15.1.6. α1-acid Glycoprotein and α2-macroglobulin Analysis

Blood will be collected via the abdominal aorta following isoflurane anesthesia before scheduled and unscheduled euthanasia for all animals.

Target Volume: 0.7 mL

Anticoagulant: None, collected in serum separator tubes

Appendix 1

Processing: Blood samples to clot at ambient room temperature. Centrifugation for (b) (4) set at (b) (4) in a refrigerated centrifuge (set to maintain (b) (4) Samples will be processed to serum by the Immunology Department. Serum will be aliquoted into 1 x 75 µL aliquot for α2-macroglobulin and 2 x 75 µL aliquot and a leftover (if available) for α1-acid glycoprotein.

Storage conditions: Stored in a freezer set to maintain -20°C, pending analysis.

Analysis for α1-acid glycoprotein and α2-macroglobulin will be conducted using a qualified ELISA method by the Immunology Department. The procedure to be followed along with the assay acceptance criteria will be detailed in the appropriate analytical procedure.

Samples will be analyzed in duplicate. Any residual/retained samples will be discarded prior to report finalization.

15.2. Laboratory Investigations (Cytokine Analysis)

Blood will be collected from the jugular vein of all recovery animals and preterminally euthanized animals (recovery animals only). After collection, blood samples for serum will be transferred at ambient room temperature and blood samples for plasma will be transferred on wet ice to the appropriate laboratory for processing.

Sample Collection Schedule

Target Blood Volume (mL)			0.5	0.5
Anticoagulant			**None (SST)**	**EDTA**
Centrifugation setting			(b) (4)	
Timepoints			**Sample Type**	
Day	**Hrs**	**No. of Males/ Females**	IFN-α	IL-1ß, IL-6, TNF-α, IP-10, MIP-1-α, MCP-1
1	6	5/5	X	X
15	6	5/5	X	X
29	6	5/5	X	X
43	6	5/5	X	X
57	NA	5/5	X	X
Matrix			Serum	Plasma
Volume per aliquot (µL)			all volume	all volume
Number of aliquot(s)			1	1
Storage condition (set to maintain)			-80°C	-80°C
Responsible Lab			CR-SHB	CR-SHB

X = Sample to be collected; N/A = not applicable

The number of aliquots and volumes are targets that may be adjusted based on sample volume availability.

Appendix 1

The samples will be analyzed by the Immunology department. Analysis for IL-1ß, IL-6, TNF-α, IP-10, MIP-1-α and MCP-1 will be conducted using a multiplex Luminex method. An ELISA method will be used for the analysis of IFN-α. The procedures to be followed during the course of this study along with the assays acceptance criteria will be detailed in the appropriate analytical procedure. Samples will be analyzed in duplicate.

Following Study Director approval, any residual/retained samples will be discarded prior to report finalization.

An Immunology Report for cytokine analysis will be included as an appendix to the Final Report.

15.3. Anti Therapeutic Antibody (ATA) Analysis

Blood will be collected by jugular venipuncture from the appropriate animals.

Time Points:	Before initiation of dosing, Day 43 (main animals only) and Day 57 (recovery animals).
Target Volume:	0.5 mL
Anticoagulant:	None, collected in serum separator tubes
Processing:	To serum

Samples will be mixed gently and kept under ambient conditions until centrifugation, which will be carried out as soon as practical. The samples will be centrifuged for (b) (4) in a refrigerated centrifuge (set to maintain (b) (4)) at (b) (4) The resultant serum will be separated, transferred to uniquely labeled clear polypropylene tubes, frozen immediately over dry ice and transferred to a freezer set to maintain -80°C.
Samples will be shipped on dry ice to:

Shipping Contact
(b) (6)
Integrated BioTherapeutics, Inc.
21 Firstfield Road
Suite 100
Gaithersburg, MD 20878, USA
Tel: (b) (6)
Fax: (b) (6)
E-mail: (b) (6)

The Test Site will be notified before shipment of the samples. Upon receipt at the immunology laboratory, the samples will be stored at -80°C.

The samples will be analyzed for rat anti-CMV antibodies using a qualified ELISA method.

Any residual/retained samples will be maintained for a minimum of 6 months following issuance of the Audited Draft Report after which samples will be discarded. Alternatively, residual/retained samples will be discarded prior to the 6 month period should the issuance of the

Appendix 1

Final Report occur prior to the end of the 6 month retention period. An earlier discard of these residual/retained samples may also be requested and authorized by the Study Director.

An Anti-therapeutic Antibody Report will be included as an appendix to the Final Report.

15.4. PBMC Analysis

Blood will be collected by abdominal aorta following isoflurane anesthesia from the appropriate animals.

Time Points:	On Day 44 (main animals only).
Target Volume:	0.5 mL
Anticoagulant:	Sodium Heparin
Storage Conditions:	Kept in a controlled temperature area set to maintain 21°C

Samples will be shipped at controlled temperature set to maintain 21°C via overnight courier to the Immunology laboratory, for whole blood stimulation and cytokine analysis, to:

Shipping Contact
(b) (6)
Project Leader
Cell Biology and Immunology
Southern Research
2000 Ninth Ave S
Birmingham AL 35205
Tel: (b) (6)
E-mail: (b) (6)

The Test Site will be notified before shipment of the samples. Upon receipt at the Immunology laboratory, the samples will be stored at room temperature.

The PBMC samples will be analyzed using a qualified method.

Any residual/retained samples will be maintained for a minimum of 6 months following issuance of the Audited Draft Report after which samples will be discarded. Alternatively, residual/retained samples will be discarded prior to the 6 month period should the issuance of the Final Report occur prior to the end of the 6 month retention period. An earlier discard of these residual/retained samples may also be requested and authorized by the Study Director.

An Immunology Report for PBMC analysis will be included as an appendix to the Final Report.

Appendix 1

16. TERMINAL PROCEDURES

Terminal procedures are summarized in the following table:

Terminal Procedures for Main Study and Recovery Animals

Group No.	No. of Animals		Scheduled Euthanasia Day	Necropsy Procedures			Histology	Histopathology
	M	F		Necropsy	Tissue Collection	Organ Weights		
1	10	10	44	X	X	X	Full Tissue[a]	Full Tissue[a]
2	10	10					Full Tissue[a]	Gross Lesions Target Tissues
3	10	10					Full Tissue[a]	Gross Lesions Target Tissues
4	10	10					Full Tissue[a]	Full Tissue[a]
1	5	5	57	X	X	X	Full Tissue[a]	Full Tissue[a]
4	5	5					Full Tissue[a]	Full Tissue[a]
Unscheduled Deaths				X	X	-	Full Tissue[a]	Full Tissue[a]
Replaced animals (prestudy)[b]				X	Standard Diagnostic List	-	-	-
Replaced animals (after dosing start)				X	X	-	-	-

X = Procedure to be conducted; - = Not applicable.
[a] See Tissue Collection and Preservation table for listing of tissues.
[b] Animals found dead or euthanized before the initiation of dosing.

16.1. Unscheduled Deaths

If a main study or recovery animal dies on study, a complete necropsy examination will be conducted and specified tissues will be saved. If necessary, the animal will be refrigerated to minimize autolysis.

Main or recovery animals may be euthanized for humane reasons as per Test Facility SOPs. The samples for evaluation of laboratory evaluation will be obtained if possible as specified in Section 15. These animals will undergo exsanguination by incision from the abdominal aorta following isoflurane anesthesia unless deemed inappropriate by the Study Director and/or the clinical veterinarian and will undergo complete necropsy examination, and specified tissues will be retained. If necessary, the animal will be refrigerated (set to maintain 4°C) to minimize autolysis.

Animals found dead or euthanized before the initiation of dosing will be subject to complete necropsy examination and limited tissue retention (standard diagnostic tissue list). Any animal replaced after the start of dosing will be subject to complete necropsy examination and tissues will be retained (as per Tissue Collection and Preservation section), and any data generated will not be included in the report unless deemed appropriate by the Study Director.

Appendix 1

16.2. Scheduled Euthanasia

Main study and recovery animals surviving until scheduled euthanasia will have a terminal body weight recorded, samples for laboratory evaluation will be collected (as appropriate), and will be euthanized by exsanguination by incision from the abdominal aorta following isoflurane anesthesia. When possible, the animals will be euthanized rotating across dose groups such that similar numbers of animals from each group, including controls, will be necropsied throughout the day. Animals will be fasted overnight before their scheduled necropsy.

16.3. Necropsy

Main and recovery animals will be subjected to a complete necropsy examination, which will include evaluation of the carcass and musculoskeletal system; all external surfaces and orifices; cranial cavity and external surfaces of the brain; and thoracic, abdominal, and pelvic cavities with their associated organs and tissues.

Necropsy procedures will be performed by qualified personnel with appropriate training and experience in animal anatomy and gross pathology. A veterinary pathologist, or other suitably qualified person, will be available.

At the discretion of the necropsy supervising pathologist, images may be generated for illustration of or consultation on gross observations. Generation of such images will be documented and communicated to the Study Director. Images and associated documentation will be retained and archived.

16.4. Organ Weights

The organs identified for weighing in the Tissues Collection and Preservation table will be weighed at necropsy for all scheduled euthanasia animals. Organ weights will not be recorded for animals found dead or euthanized in poor condition or in extremis. Paired organs will be weighed together. In the event of gross abnormalities, in addition to the combined weight, the weight of each organ of a pair may be taken and entered as a tissue comment. Organ weight as a percent of body weight (using the terminal body weight) and organ weight as a percent of brain weight will be calculated.

16.5. Tissue Collection and Preservation

Representative samples of the tissues identified in the Tissue Collection and Preservation table in ATTACHMENT A will be collected from all animals and preserved in 10% neutral buffered formalin, unless otherwise indicated. Additional tissue samples may be collected to elucidate abnormal findings.

Appendix 1

17. HISTOLOGY AND HISTOPATHOLOGY

17.1. Histology

Tissues in the Tissue Collection and Preservation table from animals identified in the Terminal Procedures table will be embedded in paraffin, sectioned, mounted on glass slides, and stained with hematoxylin and eosin.

17.2. Histopathology

Histopathological evaluation will be performed by a board-certified veterinary pathologist. Target tissues identified by the study pathologist during microscopic evaluation will be communicated to the study Director; tissues will be evaluated and reported. Any additional stains or evaluations, if deemed necessary by the pathologist, will be added by study plan amendment following discussion with the Study Director and in consultation the Sponsor.

At the discretion of the study pathologist and after acknowledgement by the Study Director, images may be captured for consultation purposes.

17.3. Pathology Peer Review

A on-site pathology peer review will be conducted by:

(b) (6)
Moderna Therapeutics
200 Technology Square, 3rd Floor
Cambridge, MA 02116
Tel: (b) (6)
E-mail: (b) (6)

The peer review statement or equivalent documentation will be included as an appendix to the Final Report.

18. CONSTRUCTED VARIABLES

Body Weight Gains	Calculated between at least each interval as well as between the beginning and end of each phase
Organ Weight relative to Body Weight	Calculated against the Terminal body weight for scheduled intervals
Organ Weight relative to Brain Weight	Calculated against the brain weight for scheduled intervals

19. STATISTICAL ANALYSIS

All statistical tests will be conducted at the 5% significance level. All pairwise comparisons will be conducted using two sided tests and will be reported at the 0.1%, 1%, and 5% levels.

Appendix 1

Numerical data collected on scheduled occasions for the listed variables will be analyzed as indicated according to sex and occasion. Descriptive statistics number, mean and standard deviation (or %CV or SE when deemed appropriate) will be reported whenever possible. Values may also be expressed as a percentage of predose or control values when deemed appropriate. Inferential statistics will be performed according to the matrix below when possible, but will exclude semi-quantitative data, and any group with less than 3 observations.

Statistical Matrix

Variables for Inferential Analysis	Statistical Method
	Parametric/ Non-Parametric
Body Weight	X
Body Temperature	X
Hematology Variables	X
Coagulation Variables	X
Clinical Chemistry Variables	X
Cytokines	X
α2-macroglobulin	X
α1-acid glycoprotein	X
Organ Weights	X
Body Weight Gains	X
Organ Weight relative to Body Weight	X
Organ Weight relative to Brain Weight	X

The following pairwise comparisons will be made:

Group 2 vs. Group 1

Group 3 vs. Group 1

Group 4 vs. Group 1

19.1. Parametric/Non-Parametric

Levene's test will be used to assess the homogeneity of group variances.

Datasets with at least 3 groups will be compared using an overall one-way ANOVA *F*-test if Levene's test is not significant or the Kruskal-Wallis test if it is. If the overall *F*-test or Kruskal-Wallis test is found to be significant, then the above pairwise comparisons will be conducted using Dunnett's or Dunn's test, respectively.

Datasets with 2 groups (the designated control group and 1 other group) will be compared using a *t*-test if Levene's test is not significant or Wilcoxon Rank-Sum test if it is.

20. COMPUTERIZED SYSTEMS

The following critical computerized systems may be used in the study. The actual critical computerized systems used will be specified in the Final Report.

Appendix 1

Data for parameters not required by study plan, which are automatically generated by analytical devices used will be retained on file but not reported. Statistical analysis results that are generated by the program but are not required by study plan and/or are not scientifically relevant will be retained on file but will not be included in the tabulations.

Critical Computerized Systems

System Name	Description of Data Collected and/or Analyzed
Provantis	In-life; clinical pathology; postmortem
Dispense	Test Material receipt, accountability and/or formulation activities
SRS (CR-MTL in-house application built with SAS) and SAS system for Windows and/or In-house reporting software Nevis 2012 (using SAS)	Statistical analyses of numerical in-life, clinical pathology and postmortem data
Mesa Laboratories AmegaView CMS	Continuous Monitoring System. Monitoring of standalone fridges, freezers, incubators, and selected laboratories to measure temperature, relative humidity, and CO2, as appropriate
Johnson Controls Metasys	Building Automation System. Control of HVAC and other building systems, as well as temperature/humidity control and trending in selected laboratories and animal rooms
Empower 3 (Waters Corporation)	Data acquisition for dose formulation analysis, including regression analysis and measurement of concentration and recovery of dose formulations using HPLC
BioPlex Manager	Cytokine data collection
Softmax Pro GxP	IFN-α data collection
Watson LIMS	Biomarker data analysis
Dynamics (Wyatt)	Data acquisition for particle size analysis of the test item using DLS

21. AMENDMENTS AND DEVIATIONS

Changes to the approved study plan shall be made in the form of an amendment, which will be signed and dated by the Study Director. Every reasonable effort will be made to discuss any necessary study plan changes in advance with the Sponsor.

All study plan and SOP deviations will be documented in the study records. Deviations from the study plan and/or SOP related to the phase(s) of the study conducted at a Test Site shall be documented, acknowledged by the PI/IS, and reported to the Study Director for authorization/acknowledgement. The Study Director will notify the Sponsor of deviations that may result in a significant impact on the study as soon as possible.

22. RETENTION OF RECORDS, SAMPLES, AND SPECIMENS

All study-specific raw data, electronic data, documentation, study plan, retained samples and specimens, and interim (if applicable) and final reports will be archived by no later than the date of final report issue. All materials generated by Charles River from this study will be transferred

Appendix 1

to CR MTL archive. One year after issue of the draft report, the Sponsor will be contacted to determine the disposition of materials associated with the study.

Records to be maintained will include, but will not be limited to, documentation and data for the following:

- Study Plan, study plan amendments, and deviations
- Study schedule
- Study-related correspondence
- Test system receipt, health, and husbandry
- Test and Reference Item receipt, identification, preparation, and analysis
- In-life measurements and observations
- Clinical pathology sample collection and evaluation
- Gross and microscopic observations and related data
- Organ weight measurements
- Statistical analysis results

23. REPORTING

A comprehensive Draft Report will be prepared following completion of the study and will be finalized following consultation with the Sponsor. The report will include all information necessary to provide a complete and accurate description of the experimental methods and results and any circumstances that may have affected the quality or integrity of the study.

The Sponsor will receive an electronic version of the Draft and Final Report provided in Adobe Acrobat PDF format (hyperlinked and searchable at final) along with a Microsoft Word version of the text. The PDF document will be created from native electronic files to the extent possible, including text and tables generated by the Test Facility. Report components not available in native electronic files and/or original signature pages will be scanned and converted to PDF image files for incorporation. An original copy of the report with the Test Facility's handwritten signatures will be retained.

Reports should be finalized within 6 months of issue of the Draft Report. If the Sponsor has not provided comments to the report within 6 months of draft issue, the report will be finalized by the Test Facility unless other arrangements are made by the Sponsor.

Appendix 1

24. ANIMAL WELFARE

24.1. Institutional Animal Care and Use Committee Approval

The study plan and any amendment(s) or procedures involving the care and use of animals in this study will be reviewed and approved by CR SHB Institutional Animal Care and Use Committee (IACUC). During the study, the care and use of animals will be conducted with guidance from the USA National Research Council and the Canadian Council on Animal Care (CCAC).

Appendix 1

TEST FACILITY APPROVAL

Appendix 1

SUMMARY OF CHANGES AND JUSTIFICATIONS

Study Plan effective date: 08-Mar-2017

Note: When applicable, additions are indicated in bold underlined text and deletions are indicated in bold strikethrough text in the affected sections of the document.

Item or Section(s)	Justification
Amendment 1	**Date: 15-Mar-2017**
2. PROPOSED STUDY SCHEDULE	To update as per sponsor request.
7. RESPONSIBLE PERSONNEL	To update the contact information of the ATA PI.
10.3.1.2. Stability Analysis	To clarify that stability analysis will be performed on the bulk Test Item.
15.2. Laboratory Investigations (Cytokine Analysis)	To correct a typographical error.
15.3. Anti Therapeutic Antibody (ATA) Analysis	To clarify the processing of samples and update the shipping contact information.
15.4. PBMC Analysis	To change the blood collection procedure.

Appendix 1

TABLE OF CONTENTS

Appendix 1

1. OBJECTIVE(S)

The objectives of this study are to determine the potential toxicity of mRNA 1443, when given by intramuscular injection for 6 weeks (4 doses) to rats and to evaluate the potential reversibility of any findings following a 2-week recovery period.

1.1. Study Classification

Study Category:	TOX
Study Type:	Repeat Dose Toxicity
Study Design:	Parallel
Primary Treatment CAS Registry Number:	Not Available
Primary Treatment Unique Ingredient ID:	Not Available
Class of Compound:	mRNA

2. PROPOSED STUDY SCHEDULE

Proposed study dates are listed below. Actual applicable dates will be included in the Final Report.

Experimental Start Date:	08 Mar 2017
Experimental Completion Date:	**25 Aug 2017~~29 Aug 2017~~** (Last date data are collected from the study)
Animal Arrival:	08 Mar 2017
Initiation of Dosing:	**20 Mar 2017~~22 Mar 2017~~** (Male) **21 Mar 2017~~23 Mar 2017~~** (Female)
Completion of In-life:	**03 May 2017~~05 May 2017~~** (Main) **16 May 2017~~18 May 2017~~** (Recovery) (Last date of necropsy)
Unaudited Draft Report:	**13 Jul 2017~~17 Jul 2017~~**
Audited Draft Report:	**18 Aug 2017~~22 Aug 2017~~**
Final Report:	**25 Aug 2017~~29 Aug 2017~~**

3. GUIDELINES FOR STUDY DESIGN

The design of this study was based on the study objective(s), the overall product development strategy for the Test Item, and the following study design guidelines:

- OECD Guideline 407. *Repeated Dose 28-day Oral Toxicity Study in Rodents*.

Appendix 1

- Committee for Medicinal Products for Human Use (CHMP). *Note for Guidance on Repeated Dose Toxicity*. CPMP/SWP/1042/99corr.
- ICH Harmonised Tripartite Guideline M3 (R2). *Nonclinical Safety Studies for the Conduct of Human Clinical Trials and Marketing Authorization for Pharmaceuticals*.
- Japanese Guidelines for Nonclinical Studies of Drugs Manual (1995). *Guidelines for Toxicity Studies of Drugs (Chapter 3, Repeated Dose Toxicity Studies)*.
- Appendix to Director General Notification, No. 12-Nousan-8147, 24 November 2000, Agricultural Production Bureau, Ministry of Agriculture, Forestry and Fisheries of Japan (JMAFF).

4. REGULATORY COMPLIANCE

The study will be performed in accordance with the OECD Principles of Good Laboratory Practice and as accepted by Regulatory Authorities throughout the European Union, United States of America (FDA), Japan (MHLW), and other countries that are signatories to the OECD Mutual Acceptance of Data Agreement.

Any portion of this study conducted in the USA will be performed in accordance with the U.S. Department of Health and Human Services, Food and Drug Administration. United States Code of Federal Regulations, Title 21, Part 58: Good Laboratory Practice for Nonclinical Laboratory Studies and as accepted by Regulatory Authorities throughout the European Union (OECD Principles of Good Laboratory Practice), Japan (MHLW), and other countries that are signatories to the OECD Mutual Acceptance of Data Agreement.

Exceptions to GLPs include the following study elements:

- Characterization of the Test Item will be performed by the Sponsor or Sponsor subcontractor according to established SOPs, controls, and approved test methodologies to ensure integrity and validity of the results generated; these analyses will not be conducted in compliance with the GLP or GMP regulations.
- Analysis of cytokines, α2-macroglobulin, α1-acid glycoprotein, anti-therapeutic antibody and PBMCs will be conducted using scientifically qualified methods and in accordance with all applicable analytical procedures.
- Pathology peer review

5. QUALITY ASSURANCE

5.1. Test Facility

The Test Facility Quality Assurance Program (QAP) will monitor the study to assure the facilities, equipment, personnel, methods, practices, records, and controls are in conformance with Good Laboratory Practice regulations. The QAP will review the study plan, conduct inspections at intervals adequate to assure the integrity of the study, and audit the Final Report to

Appendix 1

assure that it accurately describes the methods and standard operating procedures and that the reported results accurately reflect the raw data of the study.

The Test Facility QAP contact for this study is indicated below:

Appendix 1

Pathology Will be added by amendment

Each IS is required to report any deviations or other circumstances that could affect the quality or integrity of the study to the Study Director in a timely manner. Each IS will provide a report addressing their assigned phase of the study, which will be included as an appendix to the Final Report. The phase report will include the following:

- A listing of critical computerized systems used in the conduct and/or interpretation of the assigned study phase

PIs at Sponsor or Sponsor-designated Test Site(s)

Each PI is required to report any deviations or other circumstances that could affect the quality or integrity of the study to the Study Director in a timely manner. Each PI will provide a report addressing their assigned phase of the study, which will be included as an appendix to the Final Report. The phase report will include the following:

- The archive site for all records, samples, specimens and reports generated from the phase or segment (alternatively, details regarding the retention of the materials may be provided to the Study Director for inclusion in the Final Report)
- A listing of critical computerized systems used in the conduct and/or interpretation of the assigned study phase

8. TEST AND REFERENCE ITEMS

8.1. Test Item

Identification: mRNA-1443

Supplier: Moderna Therapeutics, Inc.

Appendix 1

Batch (Lot) Number:	MTDP17017
Concentration:	Will be added by amendment
Retest Date:	An end-of-use analysis of the bulk Test Item will be performed to demonstrate the stability of the Test Item during the dosing period.
Physical Description:	White to off-white lipid nanopacticle dispersion
Storage Conditions:	Kept in a freezer set to maintain -20°C

8.2. Reference Item

Identification:	Phosphate-buffered Saline (PBS) pH 7.2
Supplier:	Will be included in the Final Report
Batch (Lot) Number:	Will be included in the Final Report
Expiration Date:	Will be included in the Final Report
Physical Description:	Liquid
Storage Conditions:	Kept in a controlled temperature area set to maintain 21°C

8.3. Test Item Characterization

The Sponsor will provide to the Test Facility documentation of the identity, strength, purity and composition for the Test Item. A Certificate of Analysis or equivalent documentation will be provided for inclusion in the Final Report. The Sponsor will also provide information concerning the regulatory standard that was followed for these evaluations.

The Sponsor has appropriate documentation on file concerning the method of synthesis, fabrication or derivation of the Test Item, and this information is available to the appropriate regulatory agencies should it be requested.

8.4. Analysis of Test Item

A sample (2 vials) of the Test Item will be taken on the completion of the dosing period. Analysis of bulk Test Item for concentration, particle size and purity will be performed.

The first vial will be transferred (on ice pack) to the analytical laboratory at the Test Facility for concentration and particle size analysis.

The second vial will be transferred (on ice pack) to the molecular biology laboratory at the Test Facility for purity analysis.

Purity and Particle size analysis will be performed by IEX- HPLC, Differential Light Scattering (DLS) and capillary electrophoresis (CE) using validated analytical procedures.

Any residual/retained analytical samples (and Test Item used in analysis) will be discarded before issue of the Final Report.

Appendix 1

8.5. Reserve Samples

For each batch (lot) of Test and Reference Items, a reserve sample (1 mL or 1 vial) will be collected and maintained under the appropriate storage conditions by the Test Facility.

8.6. Test and Reference Item Inventory and Disposition

Records of the receipt, distribution, storage, and disposition of Test and Reference Items will be maintained. With the exception of reserve samples, all unused Sponsor-supplied bulk Test Item will be returned to the Sponsor on dry ice (after completion of dosing).

Shipping Contact
(b) (6)
Moderna Therapeutics
800 Technology Sq, 8th Floor
Cambridge MA 02476
Cell: (b) (6)
E-mail: (b) (6)

9. SAFETY

The safety precautions for the Test Item and dose formulations will be documented in a Test Material Safety Data Sheet (TMSDS) based on the information provided by the Sponsor either by an MSDS or similar document.

10. DOSE FORMULATION AND ANALYSIS

10.1. Preparation of Reference Item

Dose formulation preparations will be performed under a laminar flow hood using clean procedures.

The Reference Item, Phosphate-buffered Saline (PBS) pH 7.2, will be dispensed on days of dosing (i.e. Days 1, 15, 29 and 43) for administration to Group 1 control animals and will be used as required to dilute the bulk Test Item for administration to Groups 2 to 4 animals. The aliquots will be stored in a refrigerator set to maintain 4°C until use. They will be removed from the refrigerator and allowed to warm to room temperature for at least 30 minutes before dosing.

Any residual volumes will be discarded unless otherwise requested by the Study Director.

10.2. Preparation of Test Item

Dose formulation preparations will be performed under a laminar flow hood using clean procedures.

Test Item formulations will be diluted with PBS pH 7.2, as necessary for administration. The dosing formulations will be prepared on each days of dosing (i.e. Days 1, 15, 29 and 43) and will be stored in a refrigerator set to maintain 4°C. The dose formulations will be allowed to warm to

Appendix 1

room temperature for at least 30 minutes prior to dosing. Alternatively, the aliquots can be transferred directly to room temperature. When possible, stock vials will be used only once.

Any residual volumes of formulated Test Item will be stored in a refrigerator set at 4°C and discarded prior to report finalization.

10.3. Sample Collection and Analysis

Dose formulation samples will be collected for analysis as indicated in the following table. Additional samples may be collected and analyzed at the discretion of the Study Director.

Dose Formulation Sample Collection Schedule

Interval[b]	Homogeneity	Concentration	Sampling From
Day 1	All groups[a]	All groups	Dosing container
Day 43	N/A	All groups	Dosing container

N/A = Not applicable.

[a] The homogeneity results obtained from the top, middle and bottom preparations will be averaged and utilized as the concentration results.

[b] Samples will be collected on the first preparation of the study and on the last preparation of the study.

Samples to be analyzed will be submitted as soon as possible following collection.

All samples to be analyzed will be transferred (on ice pack) to the analytical laboratory.

Any residual/retained analytical samples (and Test Item used in analysis) will be discarded before issue of the Final Report.

10.3.1. Analytical Method

Analyses described below will be performed by IEX-HPLC using a validated analytical procedure (CR-MTL Study No. 1801913).

10.3.1.1. Concentration and Homogeneity Analysis

Samples for Analysis:	Duplicate top, middle, and bottom samples (duplicate middle only from Group 1); sent for analysis as noted in Section 10.3. On days where only concentration analysis is required, the formulation will only be sampled from the middle.
Backup Samples:	Triplicate top, middle, and bottom samples (triplicate middle only from Group 1); maintained at the Test Facility. Backup samples may be analyzed at the discretion of the Study Director. On days where only concentration analysis is required, the formulation will only be sampled from the middle.
Sampling Containers:	Appropriate sized glass containers.
Sample Volume:	0.5 mL for analysis and backup samples.
Storage Conditions:	Kept in a refrigerator set to maintain 4°C.

Appendix 1

Acceptance Criteria:	For concentration, the criteria for acceptability will be mean sample concentration results within or equal to ± 15% of theoretical concentration. Each individual sample concentration result within or equal to ± 20%. For homogeneity, the criteria for acceptability will be a relative standard deviation (RSD) of concentrations of ≤ 5% for each group.

10.3.1.2. Stability Analysis

There will be no stability analysis performed for concentration used on this study however, end of use stability analysis of the **bulk Test Item**~~**stock solution**~~ will be performed at the end of the dosing period.

11. TEST SYSTEM

Species:	Rat
Strain:	Crl:CD(SD) Sprague-Dawley rat
Source:	Charles River Canada Inc., St. Constant, QC, Canada
Number of Males Ordered:	60
Number of Females Ordered:	60
Target Age at Arrival:	4 to 8 weeks
Target Weight at Arrival:	126 to 150 g (males) 101 to 125 g (females)

The actual age, weight, and number of animals received will be listed in the Final Report.

11.1. Justification of Test System and Number of Animals

The Sprague Dawley rat was chosen as the animal model for this study as it is an accepted rodent species for preclinical toxicity testing by regulatory agencies.

The total number of animals to be used in this study is considered to be the minimum required to properly characterize the effects of the Test Item. This study has been designed such that it does not require an unnecessary number of animals to accomplish its objectives.

At this time, studies in laboratory animals provide the best available basis for extrapolation to humans and are required to support regulatory submissions. Acceptable models which do not use live animals currently do not exist.

11.2. Animal Identification

Each animal will be identified using a subcutaneously implanted electronic identification chip.

Appendix 1

11.3. Environmental Acclimation

A minimum acclimation period of 14 days will be allowed between animal receipt and the start of dosing in order to accustom the animals to the laboratory environment.

11.4. Selection, Assignment, Replacement, and Disposition of Animals

Animals will be assigned to groups by a stratified randomization scheme designed to achieve similar group mean body weights. Males and females will be randomized separately. Animals in poor health or at extremes of body weight range will not be assigned to groups.

Before the initiation of dosing, any assigned animals considered unsuitable for use in the study will be replaced by alternate animals obtained from the same shipment and maintained under the same environmental conditions.

After initiation of dosing, study animals may be replaced during the replacement period with alternate animals in the event of accidental injury, non-Test Item-related health issues, or similar circumstances.

The alternate animals may be used as replacements on the study within 3 days.

The disposition of all animals will be documented in the study records.

12. HUSBANDRY

12.1. Housing

Animals will be group housed (up to 3 animals of the same sex and same dosing group together) in polycarbonate cages containing appropriate bedding equipped with an automatic watering valve. These housing conditions will be maintained unless deemed inappropriate by the Study Director and/or Clinical Veterinarian. The room(s) in which the animals will be kept will be documented in the study records.

Animals will be separated during designated procedures/activities. Each cage will be clearly labeled with a color-coded cage card indicating study, group, animal number(s), and sex. Cages will be arranged on the racks in group order. Where possible, control group animals will be housed on a separate rack from the Test Item treated animals.

12.2. Environmental Conditions

The targeted conditions for animal room environment will be as follows:

Temperature:	19°C to 25°C
Humidity:	30% to 70%
Light Cycle:	12 hours light and 12 hours dark (except during designated procedures)

Appendix 1

12.3. Food

PMI Nutrition International Certified Rodent Chow No. 5CR4 will be provided ad libitum throughout the study, except during designated procedures. The same diet in meal form may be provided to individual animals as warranted by clinical signs (e.g., broken/damaged incisors or other health changes).

The feed is analyzed by the supplier for nutritional components and environmental contaminants. Results of the analysis are provided by the supplier and are on file at the Test Facility.

It is considered that there are no known contaminants in the feed that would interfere with the objectives of the study.

12.4. Water

Municipal tap water after treatment by reverse osmosis and ultraviolet irradiation will be freely available to each animal via an automatic watering system (except during designated procedures). Water bottles can be provided, if required.

Periodic analysis of the water is performed, and results of these analyses are on file at the Test Facility.

It is considered that there are no known contaminants in the water that could interfere with the outcome of the study.

12.5. Animal Enrichment

Animals will be socially housed for psychological/environmental enrichment and will be provided with items such as a hiding tube and a chewing object, except during study procedures/activities.

12.6. Veterinary Care

Veterinary care will be available throughout the course of the study and animals will be examined by the veterinary staff as warranted by clinical signs or other changes. All veterinary examinations and recommended therapeutic treatments, if any, will be documented in the study records.

In the event that animals show signs of illness or distress, the responsible veterinarian may make initial recommendations about treatment of the animal(s) and/or alteration of study procedures, which must be approved by the Study Director or Scientific designate. All such actions will be properly documented in the study records and, when appropriate, by study plan amendment. Treatment of the animal(s) for minor injuries or ailments may be approved without prior consultation with the Sponsor representative when such treatment does not impact fulfillment of the study objectives. If the condition of the animal(s) warrants significant therapeutic intervention or alterations in study procedures, the Sponsor representative will be contacted, when possible, to discuss appropriate action. If the condition of the animal(s) is such that emergency measures must be taken, the Study Director and/or clinical veterinarian will attempt

Appendix 1

to consult with the Sponsor representative prior to responding to the medical crisis, but the Study Director and/or veterinarian has authority to act immediately at his/her discretion to alleviate suffering. The Sponsor representative will be fully informed of any such events.

13. EXPERIMENTAL DESIGN

Experimental Design

Group No.	Test Material	Dose Level (µg/dose)	Dose Volume (µL/dose)	Dose Concentration (mg/mL)	No. of Animals			
					Main Study		Recovery Study	
					Males	Females	Males	Females
1	Reference Item	0	200	0	10	10	5	5
2	mRNA-1443	10	200	0.05	10	10	-	-
3	mRNA-1443	30	200	0.15	10	10	-	-
4	mRNA-1443	100	200	0.5	10	10	5	5

- : Not applicable

13.1. Administration of Test and Reference Items

The Test and Reference Items will be administered to the appropriate animals via intramuscular injection into the lateral compartment of the thigh on Days 1, 15, 29 and 43, the injection site will be alternated on each dosing occasion (Site 1 left thigh and Site 2 right thigh). The volume for each dose will be administered using a syringe/needle within the demarcated area. The first day of dosing will be designated as Day 1 (exception: alternate animals used for replacement after Day 1 will assume the day of the animal being replaced).

The injection area will be marked as frequently as required to allow appropriate visualization of administration sites. Hair may be clipped or shaved if required to improve visualization of the injection sites. The injection site will be documented in the raw data for each dose administered.

13.2. Justification of Route and Dose Levels

The intramuscular route of exposure was selected because this is the intended route of human exposure.

The dose levels for this toxicology study were chosen to approximate a substantial multiple of the anticipated clinical starting dose and top clinical dose. The highest dose to be tested is expected to represent the intended maximum human clinical dose and volume and will be administered by the clinical route (intramuscular). At this dose level, minimal systemic toxicity is expected, but it is possible mild to moderate injection site reaction (redness, swelling) and potentially elevation of systemic cytokine/acute phase markers may be observed. The mid- and low-dose were selected to evaluate the dose-dependent effect of this compound.

14. IN-LIFE PROCEDURES, OBSERVATIONS, AND MEASUREMENTS

The in-life procedures, observations, and measurements listed below including Laboratory Investigations listed in section below will be performed for all main study and recovery animals, unless otherwise indicated in the respective section. During the study, additional evaluations to

Appendix 1

those described below and/or scheduled, and considered necessary by the Study Director and/or Veterinarian to assess health status will be conducted and duly documented. More frequent observations may be undertaken if considered appropriate.

14.1. Mortality/Moribundity Checks

Frequency: Twice daily, once in the morning and once in the afternoon, throughout the study.

Procedure: Animals will be observed for general health/mortality and moribundity. Animals will not be removed from cage during observation, unless necessary for identification or confirmation of possible findings.

14.2. Clinical Observations

14.2.1. Detailed Clinical Observations

Frequency: Weekly during the dosing and recovery periods, and at least every two weeks during the predosing period.

Procedure: Animals removed from the cage for examination.

14.3. Local Irritation Assessment

Frequency: On days of dosing; at least 24 and 72 hours post-dose (end of each group). Weekly when there is no dosing and during the recovery period. Following Day 43 dosing, no assessment will be performed on main animals at 72 hours postdose as animals will be sent to necropsy on Day 44.

Procedure: All animals will have the dose injection site examined for signs of erythema/edema. Observations will be scored according to the Local Irritation Assessment scoring table as follows:

Erythema (Redness)	**Score**
No erythema	0
Very slight erythema (barely perceptible)	1
Mild erythema	2
Moderate to severe erythema	3
Severe erythema (beet redness to slight eschar formation, injury in depth)	4
Notable dermal lesion (maximized)	M
Edema (Swelling)	
No edema	0
Very slight edema (barely perceptible)	1
Slight edema	2
Moderate edema	3

Appendix 1

Severe edema	4

Any other abnormalities will be recorded as they are observed.

14.4. Body Weights

Frequency: Weekly during the dosing and recovery periods, and at least every two weeks during the predosing period.

Procedure: Animals will be individually weighed. A fasted weight will be recorded on the day of necropsy. Terminal body weights will not be collected from animals found dead or euthanized moribund.

14.5. Food Consumption

Frequency: Weekly, starting Day -7, throughout the dosing and recovery periods.

Procedure: Food consumption will be quantitatively measured except for on the day of scheduled euthanasia.

14.6. Ophthalmic Examinations

Frequency: Once prestudy and again toward the end of Week 6 of the dosing period. During Week 2 of the recovery period if Test Item-related findings are observed during the dosing period.

Procedure: All animals will be subjected to funduscopic (indirect ophthalmoscopy) and biomicroscopic (slit lamp) examinations. The mydriatic used will be Atropine 0.126%.

Evaluation: A report will be included as an appendix to the Final Report.

14.7. Body Temperature

Frequency: On Day 1 and Day 43 at predose, and 6 and 24 hours post dose (end of each group). If body temperature is significantly above normal range (36.0°C to 38.0°C) the temperature will be monitored daily till return to normal. If clinical observations indicate a possible body temperature changes measurements may be taken at the discretion of the Study Director.

Procedure: Rectal body temperature will be recorded on un-sedated animals.

Appendix 1

15. LABORATORY EVALUATIONS

15.1. Clinical Pathology

15.1.1. Sample Collection

Blood will be collected from the abdominal aorta following isoflurane anesthesia. After collection, samples will be transferred to the appropriate laboratory for processing.

Animals will be fasted overnight before blood sampling (for clinical chemistry). Samples will be collected according to the following table.

Samples for Clinical Pathology Evaluation

Group Nos.	Time Point	Hematology	Coagulation	Clinical Chemistry	α1-acid glycoprotein/ α2-macroglubulin
1 to 4[a]	Day 44	X	X	X	X
1 and 4	Day 57	X	X	X	X
Unscheduled euthanasia (when possible)	Before euthanasia	X	X	X	X

X = Sample to be collected

[a] Samples will only be collected from those animals scheduled for euthanasia on Day 44.

Any residual/retained clinical pathology samples will be discarded before issue of the Final Report.

15.1.2. Hematology

Target Volume: 0.5 mL

Anticoagulant: EDTA

Hematology Parameters

Red blood cell count Hemoglobin concentration Hematocrit Mean corpuscular volume Red Blood Cell Distribution Width Mean corpuscular hemoglobin concentration Mean corpuscular hemoglobin Reticulocyte count (absolute) Platelet count	White blood cell count Neutrophil count (absolute) Lymphocyte count (absolute) Monocyte count (absolute) Eosinophil count (absolute) Basophil count (absolute) Large unstained cells (absolute)

A blood smear will be prepared from each hematology sample. Blood smears will be labeled, stained, and stored. Blood smears may be read to investigate results. If additional examination

Appendix 1

of blood smears is deemed necessary, the smears may be subsequently evaluated and this evaluation will be described in a study plan amendment.

15.1.3. Coagulation

Target Volume: 1.2 mL (in a 1.3 mL tube)

Anticoagulant: Citrate

Processing: To plasma

Coagulation Parameters

Activated partial thromboplastin time Fibrinogen	Prothrombin time Sample Quality

15.1.4. Clinical Chemistry

Target Volume: 0.7 mL

Anticoagulant: None, collected in serum separator tube

Processing: To serum

Clinical Chemistry Parameters

Alanine aminotransferase Aspartate aminotransferase Alkaline phosphatase Gamma-glutamyltransferase Creatine Kinase Total bilirubin[a] Urea nitrogen Creatinine Calcium Phosphorus	Total protein Albumin Globulin Albumin/globulin ratio Glucose Cholesterol Triglycerides Sodium Potassium Chloride Sample Quality

[a] When total bilirubin is > 0.5 mg/dL, indirect and direct bilirubin will also be measured.

15.1.5. Bone Marrow Smear Evaluation (Optional)

Bone marrow smears will be collected and prepared as described in the Tissue Collection and Preservation table (Section 16.5). Evaluation of stained smears may be added by amendment at the discretion of the Study Director in consultation with the pathologist and the Sponsor.

15.1.6. α1-acid Glycoprotein and α2-macroglobulin Analysis

Blood will be collected via the abdominal aorta following isoflurane anesthesia before scheduled and unscheduled euthanasia for all animals.

Target Volume: 0.7 mL

Anticoagulant: None, collected in serum separator tubes

Appendix 1

Processing: Blood samples to clot at ambient room temperature. Centrifugation for (b) (4) set at (b) (4) in a refrigerated centrifuge (set to maintain (b) (4) Samples will be processed to serum by the Immunology Department. Serum will be aliquoted into 1 x 75 µL aliquot for α2-macroglobulin and 2 x 75 µL aliquot and a leftover (if available) for α1-acid glycoprotein.

Storage conditions: Stored in a freezer set to maintain -20°C, pending analysis.

Analysis for α1-acid glycoprotein and α2-macroglobulin will be conducted using a qualified ELISA method by the Immunology Department. The procedure to be followed along with the assay acceptance criteria will be detailed in the appropriate analytical procedure.

Samples will be analyzed in duplicate. Any residual/retained samples will be discarded prior to report finalization.

15.2. Laboratory Investigations (Cytokine Analysis)

Blood will be collected from the jugular vein of all recovery animals and preterminally euthanized animals (recovery animals only). After collection, blood samples for serum will be transferred at ambient room temperature and blood samples for plasma will be transferred on wet ice to the appropriate laboratory for processing.

Sample Collection Schedule

Target Blood Volume (mL)			0.5	0.5
Anticoagulant			**None (SST)**	**EDTA**
Centrifugation setting			(b) (4)	
Timepoints			**Sample Type**	
Day	**Hrs**	**No. of Males/ Females**	IFN-α	IL-1ß, IL-6, TNF-α, IP-10, MIP-1-α, MCP-1
1	6	5/5	X	X
15	6	5/5	X	X
29	6	5/5	X	X
43	6	5/5	X	X
57	N/A	5/5	X	X
Matrix			Serum	Plasma
Volume per aliquot (µL)			all volume	all volume
Number of aliquot(s)			1	1
Storage condition (set to maintain)			-80°C	-80°C
Responsible Lab			CR-SHB	CR-SHB

X = Sample to be collected; N/A = not applicable

The number of aliquots and volumes are targets that may be adjusted based on sample volume availability.

Appendix 1

The samples will be analyzed by the Immunology department. Analysis for IL-1ß, IL-6, TNF-α, IP-10, MIP-1-α and MCP-1 will be conducted using a multiplex Luminex method. An ELISA method will be used for the analysis of IFN-α. The procedures to be followed during the course of this study along with the assays acceptance criteria will be detailed in the appropriate analytical procedure. Samples will be analyzed in duplicate.

Following Study Director approval, any residual/retained samples will be discarded prior to report finalization.

An Immunology Report for cytokine analysis will be included as an appendix to the Final Report.

15.3. Anti Therapeutic Antibody (ATA) Analysis

Blood will be collected by jugular venipuncture from the appropriate animals.

Time Points:	Before initiation of dosing, Day 43 (main animals only) and Day 57 (recovery animals).
Target Volume:	0.5 mL
Anticoagulant:	None, collected in serum separator tubes
Processing:	To serum

Samples will be mixed gently and **allowed to clot at room temperature**~~**kept under ambient conditions**~~ until centrifugation, which will be carried out as soon as practical. The samples will be centrifuged for (b) (4) in a refrigerated centrifuge (set to maintain (b) (4)) at (b) (4) The resultant serum will be separated, transferred to uniquely labeled clear polypropylene tubes, frozen immediately over dry ice and transferred to a freezer set to maintain -80°C. Samples will be shipped on dry ice to:

Fax: (b) (6)
E-mail: (b) (6)

The Test Site will be notified before shipment of the samples. Upon receipt at the immunology laboratory, the samples will be stored at -80°C.

The samples will be analyzed for rat anti-CMV antibodies using a qualified ELISA method.

Any residual/retained samples will be maintained for a minimum of 6 months following issuance of the Audited Draft Report after which samples will be discarded. Alternatively, residual/retained samples will be discarded prior to the 6 month period should the issuance of the

Appendix 1

Final Report occur prior to the end of the 6 month retention period. An earlier discard of these residual/retained samples may also be requested and authorized by the Study Director.

An Anti-therapeutic Antibody Report will be included as an appendix to the Final Report.

15.4. PBMC Analysis

Blood will be collected by **jugular venipuncture** ~~**abdominal aorta following isoflurane anesthesia**~~ from the appropriate animals.

Time Points:	On Day 44 (main animals only).
Target Volume:	0.5 mL
Anticoagulant:	Sodium Heparin
Storage Conditions:	Kept in a controlled temperature area set to maintain 21°C

Samples will be shipped at controlled temperature set to maintain 21°C via overnight courier to the Immunology laboratory, for whole blood stimulation and cytokine analysis, to:

E-mail: (b) (6)

The Test Site will be notified before shipment of the samples. Upon receipt at the Immunology laboratory, the samples will be stored at room temperature.

The PBMC samples will be analyzed using a qualified method.

Any residual/retained samples will be maintained for a minimum of 6 months following issuance of the Audited Draft Report after which samples will be discarded. Alternatively, residual/retained samples will be discarded prior to the 6 month period should the issuance of the Final Report occur prior to the end of the 6 month retention period. An earlier discard of these residual/retained samples may also be requested and authorized by the Study Director.

An Immunology Report for PBMC analysis will be included as an appendix to the Final Report.

Appendix 1

16. TERMINAL PROCEDURES

Terminal procedures are summarized in the following table:

Terminal Procedures for Main Study and Recovery Animals

Group No.	No. of Animals		Scheduled Euthanasia Day	Necropsy Procedures			Histology	Histopathology
	M	F		Necropsy	Tissue Collection	Organ Weights		
1	10	10	44	X	X	X	Full Tissue[a]	Full Tissue[a]
2	10	10					Full Tissue[a]	Gross Lesions Target Tissues
3	10	10					Full Tissue[a]	Gross Lesions Target Tissues
4	10	10					Full Tissue[a]	Full Tissue[a]
1	5	5	57	X	X	X	Full Tissue[a]	Full Tissue[a]
4	5	5					Full Tissue[a]	Full Tissue[a]
Unscheduled Deaths				X	X	-	Full Tissue[a]	Full Tissue[a]
Replaced animals (prestudy)[b]				X	Standard Diagnostic List	-	-	-
Replaced animals (after dosing start)				X	X	-	-	-

X = Procedure to be conducted; - = Not applicable.
[a] See Tissue Collection and Preservation table for listing of tissues.
[b] Animals found dead or euthanized before the initiation of dosing.

16.1. Unscheduled Deaths

If a main study or recovery animal dies on study, a complete necropsy examination will be conducted and specified tissues will be saved. If necessary, the animal will be refrigerated to minimize autolysis.

Main or recovery animals may be euthanized for humane reasons as per Test Facility SOPs. The samples for evaluation of laboratory evaluation will be obtained if possible as specified in Section 15. These animals will undergo exsanguination by incision from the abdominal aorta following isoflurane anesthesia unless deemed inappropriate by the Study Director and/or the clinical veterinarian and will undergo complete necropsy examination, and specified tissues will be retained. If necessary, the animal will be refrigerated (set to maintain 4°C) to minimize autolysis.

Animals found dead or euthanized before the initiation of dosing will be subject to complete necropsy examination and limited tissue retention (standard diagnostic tissue list). Any animal replaced after the start of dosing will be subject to complete necropsy examination and tissues will be retained (as per Tissue Collection and Preservation section), and any data generated will not be included in the report unless deemed appropriate by the Study Director.

Appendix 1

16.2. Scheduled Euthanasia

Main study and recovery animals surviving until scheduled euthanasia will have a terminal body weight recorded, samples for laboratory evaluation will be collected (as appropriate), and will be euthanized by exsanguination by incision from the abdominal aorta following isoflurane anesthesia. When possible, the animals will be euthanized rotating across dose groups such that similar numbers of animals from each group, including controls, will be necropsied throughout the day. Animals will be fasted overnight before their scheduled necropsy.

16.3. Necropsy

Main and recovery animals will be subjected to a complete necropsy examination, which will include evaluation of the carcass and musculoskeletal system; all external surfaces and orifices; cranial cavity and external surfaces of the brain; and thoracic, abdominal, and pelvic cavities with their associated organs and tissues.

Necropsy procedures will be performed by qualified personnel with appropriate training and experience in animal anatomy and gross pathology. A veterinary pathologist, or other suitably qualified person, will be available.

At the discretion of the necropsy supervising pathologist, images may be generated for illustration of or consultation on gross observations. Generation of such images will be documented and communicated to the Study Director. Images and associated documentation will be retained and archived.

16.4. Organ Weights

The organs identified for weighing in the Tissues Collection and Preservation table will be weighed at necropsy for all scheduled euthanasia animals. Organ weights will not be recorded for animals found dead or euthanized in poor condition or in extremis. Paired organs will be weighed together. In the event of gross abnormalities, in addition to the combined weight, the weight of each organ of a pair may be taken and entered as a tissue comment. Organ weight as a percent of body weight (using the terminal body weight) and organ weight as a percent of brain weight will be calculated.

16.5. Tissue Collection and Preservation

Representative samples of the tissues identified in the Tissue Collection and Preservation table in ATTACHMENT A will be collected from all animals and preserved in 10% neutral buffered formalin, unless otherwise indicated. Additional tissue samples may be collected to elucidate abnormal findings.

Appendix 1

17. HISTOLOGY AND HISTOPATHOLOGY

17.1. Histology

Tissues in the Tissue Collection and Preservation table from animals identified in the Terminal Procedures table will be embedded in paraffin, sectioned, mounted on glass slides, and stained with hematoxylin and eosin.

17.2. Histopathology

Histopathological evaluation will be performed by a board-certified veterinary pathologist. Target tissues identified by the study pathologist during microscopic evaluation will be communicated to the study Director; tissues will be evaluated and reported. Any additional stains or evaluations, if deemed necessary by the pathologist, will be added by study plan amendment following discussion with the Study Director and in consultation the Sponsor.

At the discretion of the study pathologist and after acknowledgement by the Study Director, images may be captured for consultation purposes.

17.3. Pathology Peer Review

A on-site pathology peer review will be conducted by:

(b) (6)
Moderna Therapeutics
200 Technology Square, 3rd Floor
Cambridge, MA 02116
Tel: (b) (6)
E-mail: (b) (6)

The peer review statement or equivalent documentation will be included as an appendix to the Final Report.

18. CONSTRUCTED VARIABLES

Body Weight Gains	Calculated between at least each interval as well as between the beginning and end of each phase
Organ Weight relative to Body Weight	Calculated against the Terminal body weight for scheduled intervals
Organ Weight relative to Brain Weight	Calculated against the brain weight for scheduled intervals

19. STATISTICAL ANALYSIS

All statistical tests will be conducted at the 5% significance level. All pairwise comparisons will be conducted using two sided tests and will be reported at the 0.1%, 1%, and 5% levels.

Appendix 1

Numerical data collected on scheduled occasions for the listed variables will be analyzed as indicated according to sex and occasion. Descriptive statistics number, mean and standard deviation (or %CV or SE when deemed appropriate) will be reported whenever possible. Values may also be expressed as a percentage of predose or control values when deemed appropriate. Inferential statistics will be performed according to the matrix below when possible, but will exclude semi-quantitative data, and any group with less than 3 observations.

Statistical Matrix

Variables for Inferential Analysis	Statistical Method
	Parametric/ Non-Parametric
Body Weight	X
Body Temperature	X
Hematology Variables	X
Coagulation Variables	X
Clinical Chemistry Variables	X
Cytokines	X
α2-macroglobulin	X
α1-acid glycoprotein	X
Organ Weights	X
Body Weight Gains	X
Organ Weight relative to Body Weight	X
Organ Weight relative to Brain Weight	X

The following pairwise comparisons will be made:

Group 2 vs. Group 1

Group 3 vs. Group 1

Group 4 vs. Group 1

19.1. Parametric/Non-Parametric

Levene's test will be used to assess the homogeneity of group variances.

Datasets with at least 3 groups will be compared using an overall one-way ANOVA *F*-test if Levene's test is not significant or the Kruskal-Wallis test if it is. If the overall *F*-test or Kruskal-Wallis test is found to be significant, then the above pairwise comparisons will be conducted using Dunnett's or Dunn's test, respectively.

Datasets with 2 groups (the designated control group and 1 other group) will be compared using a *t*-test if Levene's test is not significant or Wilcoxon Rank-Sum test if it is.

20. COMPUTERIZED SYSTEMS

The following critical computerized systems may be used in the study. The actual critical computerized systems used will be specified in the Final Report.

Appendix 1

Data for parameters not required by study plan, which are automatically generated by analytical devices used will be retained on file but not reported. Statistical analysis results that are generated by the program but are not required by study plan and/or are not scientifically relevant will be retained on file but will not be included in the tabulations.

Critical Computerized Systems

System Name	Description of Data Collected and/or Analyzed
Provantis	In-life; clinical pathology; postmortem
Dispense	Test Material receipt, accountability and/or formulation activities
SRS (CR-MTL in-house application built with SAS) and SAS system for Windows and/or In-house reporting software Nevis 2012 (using SAS)	Statistical analyses of numerical in-life, clinical pathology and postmortem data
Mesa Laboratories AmegaView CMS	Continuous Monitoring System. Monitoring of standalone fridges, freezers, incubators, and selected laboratories to measure temperature, relative humidity, and CO2, as appropriate
Johnson Controls Metasys	Building Automation System. Control of HVAC and other building systems, as well as temperature/humidity control and trending in selected laboratories and animal rooms
Empower 3 (Waters Corporation)	Data acquisition for dose formulation analysis, including regression analysis and measurement of concentration and recovery of dose formulations using HPLC
BioPlex Manager	Cytokine data collection
Softmax Pro GxP	IFN-α data collection
Watson LIMS	Biomarker data analysis
Dynamics (Wyatt)	Data acquisition for particle size analysis of the test item using DLS

21. AMENDMENTS AND DEVIATIONS

Changes to the approved study plan shall be made in the form of an amendment, which will be signed and dated by the Study Director. Every reasonable effort will be made to discuss any necessary study plan changes in advance with the Sponsor.

All study plan and SOP deviations will be documented in the study records. Deviations from the study plan and/or SOP related to the phase(s) of the study conducted at a Test Site shall be documented, acknowledged by the PI/IS, and reported to the Study Director for authorization/acknowledgement. The Study Director will notify the Sponsor of deviations that may result in a significant impact on the study as soon as possible.

22. RETENTION OF RECORDS, SAMPLES, AND SPECIMENS

All study-specific raw data, electronic data, documentation, study plan, retained samples and specimens, and interim (if applicable) and final reports will be archived by no later than the date of final report issue. All materials generated by Charles River from this study will be transferred

Appendix 1

to CR MTL archive. One year after issue of the draft report, the Sponsor will be contacted to determine the disposition of materials associated with the study.

Records to be maintained will include, but will not be limited to, documentation and data for the following:

- Study Plan, study plan amendments, and deviations
- Study schedule
- Study-related correspondence
- Test system receipt, health, and husbandry
- Test and Reference Item receipt, identification, preparation, and analysis
- In-life measurements and observations
- Clinical pathology sample collection and evaluation
- Gross and microscopic observations and related data
- Organ weight measurements
- Statistical analysis results

23. REPORTING

A comprehensive Draft Report will be prepared following completion of the study and will be finalized following consultation with the Sponsor. The report will include all information necessary to provide a complete and accurate description of the experimental methods and results and any circumstances that may have affected the quality or integrity of the study.

The Sponsor will receive an electronic version of the Draft and Final Report provided in Adobe Acrobat PDF format (hyperlinked and searchable at final) along with a Microsoft Word version of the text. The PDF document will be created from native electronic files to the extent possible, including text and tables generated by the Test Facility. Report components not available in native electronic files and/or original signature pages will be scanned and converted to PDF image files for incorporation. An original copy of the report with the Test Facility's handwritten signatures will be retained.

Reports should be finalized within 6 months of issue of the Draft Report. If the Sponsor has not provided comments to the report within 6 months of draft issue, the report will be finalized by the Test Facility unless other arrangements are made by the Sponsor.

Appendix 1

24. ANIMAL WELFARE

24.1. Institutional Animal Care and Use Committee Approval

The study plan and any amendment(s) or procedures involving the care and use of animals in this study will be reviewed and approved by CR SHB Institutional Animal Care and Use Committee (IACUC). During the study, the care and use of animals will be conducted with guidance from the USA National Research Council and the Canadian Council on Animal Care (CCAC).

Appendix 1

Appendix 1

SUMMARY OF CHANGES AND JUSTIFICATIONS

Study Plan effective date: 08-Mar-2017

Note: When applicable, additions are indicated in bold underlined text and deletions are indicated in bold strikethrough text in the affected sections of the document.

Item or Section(s)	Justification
Amendment 1	**Date: 15-Mar-2017**
2. PROPOSED STUDY SCHEDULE	To update as per sponsor request.
7. RESPONSIBLE PERSONNEL	To update the contact information of the ATA PI.
10.3.1.2. Stability Analysis	To clarify that stability analysis will be performed on the bulk Test Item.
15.2. Laboratory Investigations (Cytokine Analysis)	To correct a typographical error.
15.3. Anti Therapeutic Antibody (ATA) Analysis	To clarify the processing of samples and update the shipping contact information.
15.4. PBMC Analysis	To change the blood collection procedure.
Amendment 2	**Date: 17-Mar-2017**
1. OBJECTIVE(S)	To correct a typographical error.
8.1. Test Item	To add the concentration of the bulk Test Item.
11.3. Environmental Acclimation	To correct due to schedule modification.
15.2. Laboratory Ivestigations (Cytokine Analysis)	To include clarification for sample processing.

Appendix 1

TABLE OF CONTENTS

Appendix 1

1. OBJECTIVE(S)

The objectives of this study are to determine the potential toxicity of mRNA-1443, when given by intramuscular injection for 6 weeks (4 doses) to rats and to evaluate the potential reversibility of any findings following a 2-week recovery period.

1.1. Study Classification

Study Category:	TOX
Study Type:	Repeat Dose Toxicity
Study Design:	Parallel
Primary Treatment CAS Registry Number:	Not Available
Primary Treatment Unique Ingredient ID:	Not Available
Class of Compound:	mRNA

2. PROPOSED STUDY SCHEDULE

Proposed study dates are listed below. Actual applicable dates will be included in the Final Report.

Experimental Start Date:	08 Mar 2017
Experimental Completion Date:	25 Aug 2017 (Last date data are collected from the study)
Animal Arrival:	08 Mar 2017
Initiation of Dosing:	20 Mar 2017 (Male) 21 Mar 2017 (Female)
Completion of In-life:	03 May 2017 (Main) 16 May 2017 (Recovery) (Last date of necropsy)
Unaudited Draft Report:	13 Jul 2017
Audited Draft Report:	18 Aug 2017
Final Report:	25 Aug 2017

3. GUIDELINES FOR STUDY DESIGN

The design of this study was based on the study objective(s), the overall product development strategy for the Test Item, and the following study design guidelines:

- OECD Guideline 407. *Repeated Dose 28-day Oral Toxicity Study in Rodents*.

Appendix 1

- Committee for Medicinal Products for Human Use (CHMP). *Note for Guidance on Repeated Dose Toxicity*. CPMP/SWP/1042/99corr.
- ICH Harmonised Tripartite Guideline M3 (R2). *Nonclinical Safety Studies for the Conduct of Human Clinical Trials and Marketing Authorization for Pharmaceuticals*.
- Japanese Guidelines for Nonclinical Studies of Drugs Manual (1995). *Guidelines for Toxicity Studies of Drugs (Chapter 3, Repeated Dose Toxicity Studies)*.
- Appendix to Director General Notification, No. 12-Nousan-8147, 24 November 2000, Agricultural Production Bureau, Ministry of Agriculture, Forestry and Fisheries of Japan (JMAFF).

4. REGULATORY COMPLIANCE

The study will be performed in accordance with the OECD Principles of Good Laboratory Practice and as accepted by Regulatory Authorities throughout the European Union, United States of America (FDA), Japan (MHLW), and other countries that are signatories to the OECD Mutual Acceptance of Data Agreement.

Any portion of this study conducted in the USA will be performed in accordance with the U.S. Department of Health and Human Services, Food and Drug Administration. United States Code of Federal Regulations, Title 21, Part 58: Good Laboratory Practice for Nonclinical Laboratory Studies and as accepted by Regulatory Authorities throughout the European Union (OECD Principles of Good Laboratory Practice), Japan (MHLW), and other countries that are signatories to the OECD Mutual Acceptance of Data Agreement.

Exceptions to GLPs include the following study elements:

- Characterization of the Test Item will be performed by the Sponsor or Sponsor subcontractor according to established SOPs, controls, and approved test methodologies to ensure integrity and validity of the results generated; these analyses will not be conducted in compliance with the GLP or GMP regulations.
- Analysis of cytokines, α2-macroglobulin, α1-acid glycoprotein, anti-therapeutic antibody and PBMCs will be conducted using scientifically qualified methods and in accordance with all applicable analytical procedures.
- Pathology peer review

5. QUALITY ASSURANCE

5.1. Test Facility

The Test Facility Quality Assurance Program (QAP) will monitor the study to assure the facilities, equipment, personnel, methods, practices, records, and controls are in conformance with Good Laboratory Practice regulations. The QAP will review the study plan, conduct inspections at intervals adequate to assure the integrity of the study, and audit the Final Report to

Appendix 1

assure that it accurately describes the methods and standard operating procedures and that the reported results accurately reflect the raw data of the study.

The Test Facility QAP contact for this study is indicated below:

Each PI is required to report any deviations or other circumstances that could affect the quality or integrity of the study to the Study Director in a timely manner. Each PI will provide a report addressing their assigned phase of the study, which will be included as an appendix to the Final Report. The phase report will include the following:

- The archive site for all records, samples, specimens and reports generated from the phase or segment (alternatively, details regarding the retention of the materials may be provided to the Study Director for inclusion in the Final Report)
- A listing of critical computerized systems used in the conduct and/or interpretation of the assigned study phase

8. TEST AND REFERENCE ITEMS

8.1. Test Item

Identification: mRNA-1443

Supplier: Moderna Therapeutics, Inc.

Appendix 1

Batch (Lot) Number:	MTDP17017
Concentration:	**2.6 mg/mL**~~**Will be added by amendment**~~
Retest Date:	An end-of-use analysis of the bulk Test Item will be performed to demonstrate the stability of the Test Item during the dosing period.
Physical Description:	White to off-white lipid nanopacticle dispersion
Storage Conditions:	Kept in a freezer set to maintain -20°C

8.2. Reference Item

Identification:	Phosphate-buffered Saline (PBS) pH 7.2
Supplier:	Will be included in the Final Report
Batch (Lot) Number:	Will be included in the Final Report
Expiration Date:	Will be included in the Final Report
Physical Description:	Liquid
Storage Conditions:	Kept in a controlled temperature area set to maintain 21°C

8.3. Test Item Characterization

The Sponsor will provide to the Test Facility documentation of the identity, strength, purity and composition for the Test Item. A Certificate of Analysis or equivalent documentation will be provided for inclusion in the Final Report. The Sponsor will also provide information concerning the regulatory standard that was followed for these evaluations.

The Sponsor has appropriate documentation on file concerning the method of synthesis, fabrication or derivation of the Test Item, and this information is available to the appropriate regulatory agencies should it be requested.

8.4. Analysis of Test Item

A sample (2 vials) of the Test Item will be taken on the completion of the dosing period. Analysis of bulk Test Item for concentration, particle size and purity will be performed.

The first vial will be transferred (on ice pack) to the analytical laboratory at the Test Facility for concentration and particle size analysis.

The second vial will be transferred (on ice pack) to the molecular biology laboratory at the Test Facility for purity analysis.

Purity and Particle size analysis will be performed by IEX- HPLC, Differential Light Scattering (DLS) and capillary electrophoresis (CE) using validated analytical procedures.

Any residual/retained analytical samples (and Test Item used in analysis) will be discarded before issue of the Final Report.

Appendix 1

8.5. Reserve Samples

For each batch (lot) of Test and Reference Items, a reserve sample (1 mL or 1 vial) will be collected and maintained under the appropriate storage conditions by the Test Facility.

8.6. Test and Reference Item Inventory and Disposition

Records of the receipt, distribution, storage, and disposition of Test and Reference Items will be maintained. With the exception of reserve samples, all unused Sponsor-supplied bulk Test Item will be returned to the Sponsor on dry ice (after completion of dosing).

Shipping Contact
(b) (6)
Moderna Therapeutics
800 Technology Sq, 8th Floor
Cambridge MA 02476
Cell: (b) (6)
E-mail: (b) (6)

9. SAFETY

The safety precautions for the Test Item and dose formulations will be documented in a Test Material Safety Data Sheet (TMSDS) based on the information provided by the Sponsor either by an MSDS or similar document.

10. DOSE FORMULATION AND ANALYSIS

10.1. Preparation of Reference Item

Dose formulation preparations will be performed under a laminar flow hood using clean procedures.

The Reference Item, Phosphate-buffered Saline (PBS) pH 7.2, will be dispensed on days of dosing (i.e. Days 1, 15, 29 and 43) for administration to Group 1 control animals and will be used as required to dilute the bulk Test Item for administration to Groups 2 to 4 animals. The aliquots will be stored in a refrigerator set to maintain 4°C until use. They will be removed from the refrigerator and allowed to warm to room temperature for at least 30 minutes before dosing.

Any residual volumes will be discarded unless otherwise requested by the Study Director.

10.2. Preparation of Test Item

Dose formulation preparations will be performed under a laminar flow hood using clean procedures.

Test Item formulations will be diluted with PBS pH 7.2, as necessary for administration. The dosing formulations will be prepared on each days of dosing (i.e. Days 1, 15, 29 and 43) and will be stored in a refrigerator set to maintain 4°C. The dose formulations will be allowed to warm to

Appendix 1

room temperature for at least 30 minutes prior to dosing. Alternatively, the aliquots can be transferred directly to room temperature. When possible, stock vials will be used only once.

Any residual volumes of formulated Test Item will be stored in a refrigerator set at 4°C and discarded prior to report finalization.

10.3. Sample Collection and Analysis

Dose formulation samples will be collected for analysis as indicated in the following table. Additional samples may be collected and analyzed at the discretion of the Study Director.

Dose Formulation Sample Collection Schedule

Interval[b]	Homogeneity	Concentration	Sampling From
Day 1	All groups[a]	All groups	Dosing container
Day 43	N/A	All groups	Dosing container

N/A = Not applicable.

[a] The homogeneity results obtained from the top, middle and bottom preparations will be averaged and utilized as the concentration results.

[b] Samples will be collected on the first preparation of the study and on the last preparation of the study.

Samples to be analyzed will be submitted as soon as possible following collection.

All samples to be analyzed will be transferred (on ice pack) to the analytical laboratory.

Any residual/retained analytical samples (and Test Item used in analysis) will be discarded before issue of the Final Report.

10.3.1. Analytical Method

Analyses described below will be performed by IEX-HPLC using a validated analytical procedure (CR-MTL Study No. 1801913).

10.3.1.1. Concentration and Homogeneity Analysis

Samples for Analysis:	Duplicate top, middle, and bottom samples (duplicate middle only from Group 1); sent for analysis as noted in Section 10.3. On days where only concentration analysis is required, the formulation will only be sampled from the middle.
Backup Samples:	Triplicate top, middle, and bottom samples (triplicate middle only from Group 1); maintained at the Test Facility. Backup samples may be analyzed at the discretion of the Study Director. On days where only concentration analysis is required, the formulation will only be sampled from the middle.
Sampling Containers:	Appropriate sized glass containers.
Sample Volume:	0.5 mL for analysis and backup samples.
Storage Conditions:	Kept in a refrigerator set to maintain 4°C.

Appendix 1

Acceptance Criteria:	For concentration, the criteria for acceptability will be mean sample concentration results within or equal to ± 15% of theoretical concentration. Each individual sample concentration result within or equal to ± 20%. For homogeneity, the criteria for acceptability will be a relative standard deviation (RSD) of concentrations of ≤ 5% for each group.

10.3.1.2. Stability Analysis

There will be no stability analysis performed for concentration used on this study however, end of use stability analysis of the bulk Test Item will be performed at the end of the dosing period.

11. TEST SYSTEM

Species:	Rat
Strain:	Crl:CD(SD) Sprague-Dawley rat
Source:	Charles River Canada Inc., St. Constant, QC, Canada
Number of Males Ordered:	60
Number of Females Ordered:	60
Target Age at Arrival:	4 to 8 weeks
Target Weight at Arrival:	126 to 150 g (males) 101 to 125 g (females)

The actual age, weight, and number of animals received will be listed in the Final Report.

11.1. Justification of Test System and Number of Animals

The Sprague Dawley rat was chosen as the animal model for this study as it is an accepted rodent species for preclinical toxicity testing by regulatory agencies.

The total number of animals to be used in this study is considered to be the minimum required to properly characterize the effects of the Test Item. This study has been designed such that it does not require an unnecessary number of animals to accomplish its objectives.

At this time, studies in laboratory animals provide the best available basis for extrapolation to humans and are required to support regulatory submissions. Acceptable models which do not use live animals currently do not exist.

11.2. Animal Identification

Each animal will be identified using a subcutaneously implanted electronic identification chip.

Appendix 1

11.3. Environmental Acclimation

A minimum acclimation period of **12**~~14~~ days will be allowed between animal receipt and the start of dosing in order to accustom the animals to the laboratory environment.

11.4. Selection, Assignment, Replacement, and Disposition of Animals

Animals will be assigned to groups by a stratified randomization scheme designed to achieve similar group mean body weights. Males and females will be randomized separately. Animals in poor health or at extremes of body weight range will not be assigned to groups.

Before the initiation of dosing, any assigned animals considered unsuitable for use in the study will be replaced by alternate animals obtained from the same shipment and maintained under the same environmental conditions.

After initiation of dosing, study animals may be replaced during the replacement period with alternate animals in the event of accidental injury, non-Test Item-related health issues, or similar circumstances.

The alternate animals may be used as replacements on the study within 3 days.

The disposition of all animals will be documented in the study records.

12. HUSBANDRY

12.1. Housing

Animals will be group housed (up to 3 animals of the same sex and same dosing group together) in polycarbonate cages containing appropriate bedding equipped with an automatic watering valve. These housing conditions will be maintained unless deemed inappropriate by the Study Director and/or Clinical Veterinarian. The room(s) in which the animals will be kept will be documented in the study records.

Animals will be separated during designated procedures/activities. Each cage will be clearly labeled with a color-coded cage card indicating study, group, animal number(s), and sex. Cages will be arranged on the racks in group order. Where possible, control group animals will be housed on a separate rack from the Test Item treated animals.

12.2. Environmental Conditions

The targeted conditions for animal room environment will be as follows:

Temperature:	19°C to 25°C
Humidity:	30% to 70%
Light Cycle:	12 hours light and 12 hours dark (except during designated procedures)

Appendix 1

12.3. Food

PMI Nutrition International Certified Rodent Chow No. 5CR4 will be provided ad libitum throughout the study, except during designated procedures. The same diet in meal form may be provided to individual animals as warranted by clinical signs (e.g., broken/damaged incisors or other health changes).

The feed is analyzed by the supplier for nutritional components and environmental contaminants. Results of the analysis are provided by the supplier and are on file at the Test Facility.

It is considered that there are no known contaminants in the feed that would interfere with the objectives of the study.

12.4. Water

Municipal tap water after treatment by reverse osmosis and ultraviolet irradiation will be freely available to each animal via an automatic watering system (except during designated procedures). Water bottles can be provided, if required.

Periodic analysis of the water is performed, and results of these analyses are on file at the Test Facility.

It is considered that there are no known contaminants in the water that could interfere with the outcome of the study.

12.5. Animal Enrichment

Animals will be socially housed for psychological/environmental enrichment and will be provided with items such as a hiding tube and a chewing object, except during study procedures/activities.

12.6. Veterinary Care

Veterinary care will be available throughout the course of the study and animals will be examined by the veterinary staff as warranted by clinical signs or other changes. All veterinary examinations and recommended therapeutic treatments, if any, will be documented in the study records.

In the event that animals show signs of illness or distress, the responsible veterinarian may make initial recommendations about treatment of the animal(s) and/or alteration of study procedures, which must be approved by the Study Director or Scientific designate. All such actions will be properly documented in the study records and, when appropriate, by study plan amendment. Treatment of the animal(s) for minor injuries or ailments may be approved without prior consultation with the Sponsor representative when such treatment does not impact fulfillment of the study objectives. If the condition of the animal(s) warrants significant therapeutic intervention or alterations in study procedures, the Sponsor representative will be contacted, when possible, to discuss appropriate action. If the condition of the animal(s) is such that emergency measures must be taken, the Study Director and/or clinical veterinarian will attempt

Appendix 1

to consult with the Sponsor representative prior to responding to the medical crisis, but the Study Director and/or veterinarian has authority to act immediately at his/her discretion to alleviate suffering. The Sponsor representative will be fully informed of any such events.

13. EXPERIMENTAL DESIGN

Experimental Design

Group No.	Test Material	Dose Level (µg/dose)	Dose Volume (µL/dose)	Dose Concentration (mg/mL)	No. of Animals			
					Main Study		Recovery Study	
					Males	Females	Males	Females
1	Reference Item	0	200	0	10	10	5	5
2	mRNA-1443	10	200	0.05	10	10	-	-
3	mRNA-1443	30	200	0.15	10	10	-	-
4	mRNA-1443	100	200	0.5	10	10	5	5

- : Not applicable

13.1. Administration of Test and Reference Items

The Test and Reference Items will be administered to the appropriate animals via intramuscular injection into the lateral compartment of the thigh on Days 1, 15, 29 and 43, the injection site will be alternated on each dosing occasion (Site 1 left thigh and Site 2 right thigh). The volume for each dose will be administered using a syringe/needle within the demarcated area. The first day of dosing will be designated as Day 1 (exception: alternate animals used for replacement after Day 1 will assume the day of the animal being replaced).

The injection area will be marked as frequently as required to allow appropriate visualization of administration sites. Hair may be clipped or shaved if required to improve visualization of the injection sites. The injection site will be documented in the raw data for each dose administered.

13.2. Justification of Route and Dose Levels

The intramuscular route of exposure was selected because this is the intended route of human exposure.

The dose levels for this toxicology study were chosen to approximate a substantial multiple of the anticipated clinical starting dose and top clinical dose. The highest dose to be tested is expected to represent the intended maximum human clinical dose and volume and will be administered by the clinical route (intramuscular). At this dose level, minimal systemic toxicity is expected, but it is possible mild to moderate injection site reaction (redness, swelling) and potentially elevation of systemic cytokine/acute phase markers may be observed. The mid- and low-dose were selected to evaluate the dose-dependent effect of this compound.

14. IN-LIFE PROCEDURES, OBSERVATIONS, AND MEASUREMENTS

The in-life procedures, observations, and measurements listed below including Laboratory Investigations listed in section below will be performed for all main study and recovery animals, unless otherwise indicated in the respective section. During the study, additional evaluations to

Appendix 1

those described below and/or scheduled, and considered necessary by the Study Director and/or Veterinarian to assess health status will be conducted and duly documented. More frequent observations may be undertaken if considered appropriate.

14.1. Mortality/Moribundity Checks

Frequency: Twice daily, once in the morning and once in the afternoon, throughout the study.

Procedure: Animals will be observed for general health/mortality and moribundity. Animals will not be removed from cage during observation, unless necessary for identification or confirmation of possible findings.

14.2. Clinical Observations

14.2.1. Detailed Clinical Observations

Frequency: Weekly during the dosing and recovery periods, and at least every two weeks during the predosing period.

Procedure: Animals removed from the cage for examination.

14.3. Local Irritation Assessment

Frequency: On days of dosing; at least 24 and 72 hours post-dose (end of each group). Weekly when there is no dosing and during the recovery period. Following Day 43 dosing, no assessment will be performed on main animals at 72 hours postdose as animals will be sent to necropsy on Day 44.

Procedure: All animals will have the dose injection site examined for signs of erythema/edema. Observations will be scored according to the Local Irritation Assessment scoring table as follows:

Erythema (Redness)	**Score**
No erythema	0
Very slight erythema (barely perceptible)	1
Mild erythema	2
Moderate to severe erythema	3
Severe erythema (beet redness to slight eschar formation, injury in depth)	4
Notable dermal lesion (maximized)	M
Edema (Swelling)	
No edema	0
Very slight edema (barely perceptible)	1
Slight edema	2
Moderate edema	3

Appendix 1

Severe edema	4

Any other abnormalities will be recorded as they are observed.

14.4. Body Weights

Frequency: Weekly during the dosing and recovery periods, and at least every two weeks during the predosing period.

Procedure: Animals will be individually weighed. A fasted weight will be recorded on the day of necropsy. Terminal body weights will not be collected from animals found dead or euthanized moribund.

14.5. Food Consumption

Frequency: Weekly, starting Day -7, throughout the dosing and recovery periods.

Procedure: Food consumption will be quantitatively measured except for on the day of scheduled euthanasia.

14.6. Ophthalmic Examinations

Frequency: Once prestudy and again toward the end of Week 6 of the dosing period. During Week 2 of the recovery period if Test Item-related findings are observed during the dosing period.

Procedure: All animals will be subjected to funduscopic (indirect ophthalmoscopy) and biomicroscopic (slit lamp) examinations. The mydriatic used will be Atropine 0.126%.

Evaluation: A report will be included as an appendix to the Final Report.

14.7. Body Temperature

Frequency: On Day 1 and Day 43 at predose, and 6 and 24 hours post dose (end of each group). If body temperature is significantly above normal range (36.0°C to 38.0°C) the temperature will be monitored daily till return to normal. If clinical observations indicate a possible body temperature changes measurements may be taken at the discretion of the Study Director.

Procedure: Rectal body temperature will be recorded on un-sedated animals.

Appendix 1

15. LABORATORY EVALUATIONS

15.1. Clinical Pathology

15.1.1. Sample Collection

Blood will be collected from the abdominal aorta following isoflurane anesthesia. After collection, samples will be transferred to the appropriate laboratory for processing.

Animals will be fasted overnight before blood sampling (for clinical chemistry). Samples will be collected according to the following table.

Samples for Clinical Pathology Evaluation

Group Nos.	Time Point	Hematology	Coagulation	Clinical Chemistry	α1-acid glycoprotein/ α2-macroglubulin
1 to 4[a]	Day 44	X	X	X	X
1 and 4	Day 57	X	X	X	X
Unscheduled euthanasia (when possible)	Before euthanasia	X	X	X	X

X = Sample to be collected

[a] Samples will only be collected from those animals scheduled for euthanasia on Day 44.

Any residual/retained clinical pathology samples will be discarded before issue of the Final Report.

15.1.2. Hematology

Target Volume: 0.5 mL

Anticoagulant: EDTA

Hematology Parameters

Red blood cell count Hemoglobin concentration Hematocrit Mean corpuscular volume Red Blood Cell Distribution Width Mean corpuscular hemoglobin concentration Mean corpuscular hemoglobin Reticulocyte count (absolute) Platelet count	White blood cell count Neutrophil count (absolute) Lymphocyte count (absolute) Monocyte count (absolute) Eosinophil count (absolute) Basophil count (absolute) Large unstained cells (absolute)

A blood smear will be prepared from each hematology sample. Blood smears will be labeled, stained, and stored. Blood smears may be read to investigate results. If additional examination

Appendix 1

of blood smears is deemed necessary, the smears may be subsequently evaluated and this evaluation will be described in a study plan amendment.

15.1.3. Coagulation

Target Volume: 1.2 mL (in a 1.3 mL tube)

Anticoagulant: Citrate

Processing: To plasma

Coagulation Parameters

Activated partial thromboplastin time Fibrinogen	Prothrombin time Sample Quality

15.1.4. Clinical Chemistry

Target Volume: 0.7 mL

Anticoagulant: None, collected in serum separator tube

Processing: To serum

Clinical Chemistry Parameters

Alanine aminotransferase Aspartate aminotransferase Alkaline phosphatase Gamma-glutamyltransferase Creatine Kinase Total bilirubin[a] Urea nitrogen Creatinine Calcium Phosphorus	Total protein Albumin Globulin Albumin/globulin ratio Glucose Cholesterol Triglycerides Sodium Potassium Chloride Sample Quality

[a] When total bilirubin is > 0.5 mg/dL, indirect and direct bilirubin will also be measured.

15.1.5. Bone Marrow Smear Evaluation (Optional)

Bone marrow smears will be collected and prepared as described in the Tissue Collection and Preservation table (Section 16.5). Evaluation of stained smears may be added by amendment at the discretion of the Study Director in consultation with the pathologist and the Sponsor.

15.1.6. α1-acid Glycoprotein and α2-macroglobulin Analysis

Blood will be collected via the abdominal aorta following isoflurane anesthesia before scheduled and unscheduled euthanasia for all animals.

Target Volume: 0.7 mL

Anticoagulant: None, collected in serum separator tubes

Appendix 1

Processing: Blood samples to clot at ambient room temperature. Centrifugation for (b) (4) set at (b) (4) in a refrigerated centrifuge (set to maintain (b) (4)). Samples will be processed to serum by the Immunology Department. Serum will be aliquoted into 1 x 75 µL aliquot for α2-macroglobulin and 2 x 75 µL aliquot and a leftover (if available) for α1-acid glycoprotein.

Storage conditions: Stored in a freezer set to maintain -20°C, pending analysis.

Analysis for α1-acid glycoprotein and α2-macroglobulin will be conducted using a qualified ELISA method by the Immunology Department. The procedure to be followed along with the assay acceptance criteria will be detailed in the appropriate analytical procedure.

Samples will be analyzed in duplicate. Any residual/retained samples will be discarded prior to report finalization.

15.2. Laboratory Investigations (Cytokine Analysis)

Blood will be collected from the jugular vein of all recovery animals and preterminally euthanized animals (recovery animals only). After collection, blood samples for serum will be **allowed to clot** ~~**transferred**~~ at ambient room temperature and blood samples for plasma will be transferred on wet ice to the appropriate laboratory for processing.

Sample Collection Schedule

Target Blood Volume (mL)			0.5	0.5
Anticoagulant			**None (SST)**	**EDTA**
Centrifugation setting			(b) (4)	
Timepoints			**Sample Type**	
Day	**Hrs**	**No. of Males/ Females**	IFN-α	IL-1ß, IL-6, TNF-α, IP-10, MIP-1-α, MCP-1
1	6	5/5	X	X
15	6	5/5	X	X
29	6	5/5	X	X
43	6	5/5	X	X
57	N/A	5/5	X	X
Matrix			Serum	Plasma
Volume per aliquot (µL)			all volume	all volume
Number of aliquot(s)			1	1
Storage condition (set to maintain)			-80°C	-80°C
Responsible Lab			CR-SHB	CR-SHB

X = Sample to be collected; N/A = not applicable

The number of aliquots and volumes are targets that may be adjusted based on sample volume availability.

Appendix 1

The samples will be analyzed by the Immunology department. Analysis for IL-1ß, IL-6, TNF-α, IP-10, MIP-1-α and MCP-1 will be conducted using a multiplex Luminex method. An ELISA method will be used for the analysis of IFN-α. The procedures to be followed during the course of this study along with the assays acceptance criteria will be detailed in the appropriate analytical procedure. Samples will be analyzed in duplicate.

Following Study Director approval, any residual/retained samples will be discarded prior to report finalization.

An Immunology Report for cytokine analysis will be included as an appendix to the Final Report.

15.3. Anti Therapeutic Antibody (ATA) Analysis

Blood will be collected by jugular venipuncture from the appropriate animals.

Time Points:	Before initiation of dosing, Day 43 (main animals only) and Day 57 (recovery animals).
Target Volume:	0.5 mL
Anticoagulant:	None, collected in serum separator tubes
Processing:	To serum

Samples will be mixed gently and allowed to clot at room temperature until centrifugation, which will be carried out as soon as practical. The samples will be centrifuged for (b) (4) in a refrigerated centrifuge (set to maintain (b) (4)) at (b) (4) The resultant serum will be separated, transferred to uniquely labeled clear polypropylene tubes, frozen immediately over dry ice and transferred to a freezer set to maintain -80°C.
Samples will be shipped on dry ice to:

Shipping Contact
(b) (6)
Integrated BioTherapeutics, Inc.
21 Firstfield Road
Suite 100
Gaithersburg, MD 20878, USA
Tel: (b) (6)
Fax: (b) (6)
E-mail: (b) (6)

The Test Site will be notified before shipment of the samples. Upon receipt at the immunology laboratory, the samples will be stored at -80°C.

The samples will be analyzed for rat anti-CMV antibodies using a qualified ELISA method.

Any residual/retained samples will be maintained for a minimum of 6 months following issuance of the Audited Draft Report after which samples will be discarded. Alternatively, residual/retained samples will be discarded prior to the 6 month period should the issuance of the

Appendix 1

Final Report occur prior to the end of the 6 month retention period. An earlier discard of these residual/retained samples may also be requested and authorized by the Study Director.

An Anti-therapeutic Antibody Report will be included as an appendix to the Final Report.

15.4. PBMC Analysis

Blood will be collected by jugular venipuncture from the appropriate animals.

Time Points:	On Day 44 (main animals only).
Target Volume:	0.5 mL
Anticoagulant:	Sodium Heparin
Storage Conditions:	Kept in a controlled temperature area set to maintain 21°C

Samples will be shipped at controlled temperature set to maintain 21°C via overnight courier to the Immunology laboratory, for whole blood stimulation and cytokine analysis, to:

Shipping Contact
(b) (6)
Cell Biology and Immunology
Southern Research
2000 Ninth Ave S
Birmingham AL 35205
Tel: (b) (6)
E-mail: (b) (6)

The Test Site will be notified before shipment of the samples. Upon receipt at the Immunology laboratory, the samples will be stored at room temperature.

The PBMC samples will be analyzed using a qualified method.

Any residual/retained samples will be maintained for a minimum of 6 months following issuance of the Audited Draft Report after which samples will be discarded. Alternatively, residual/retained samples will be discarded prior to the 6 month period should the issuance of the Final Report occur prior to the end of the 6 month retention period. An earlier discard of these residual/retained samples may also be requested and authorized by the Study Director.

An Immunology Report for PBMC analysis will be included as an appendix to the Final Report.

Appendix 1

16. TERMINAL PROCEDURES

Terminal procedures are summarized in the following table:

Terminal Procedures for Main Study and Recovery Animals

Group No.	No. of Animals		Scheduled Euthanasia Day	Necropsy Procedures			Histology	Histopathology
	M	F		Necropsy	Tissue Collection	Organ Weights		
1	10	10	44	X	X	X	Full Tissue[a]	Full Tissue[a]
2	10	10					Full Tissue[a]	Gross Lesions Target Tissues
3	10	10					Full Tissue[a]	Gross Lesions Target Tissues
4	10	10					Full Tissue[a]	Full Tissue[a]
1	5	5	57	X	X	X	Full Tissue[a]	Full Tissue[a]
4	5	5					Full Tissue[a]	Full Tissue[a]
Unscheduled Deaths				X	X	-	Full Tissue[a]	Full Tissue[a]
Replaced animals (prestudy)[b]				X	Standard Diagnostic List	-	-	-
Replaced animals (after dosing start)				X	X	-	-	-

X = Procedure to be conducted; - = Not applicable.
[a] See Tissue Collection and Preservation table for listing of tissues.
[b] Animals found dead or euthanized before the initiation of dosing.

16.1. Unscheduled Deaths

If a main study or recovery animal dies on study, a complete necropsy examination will be conducted and specified tissues will be saved. If necessary, the animal will be refrigerated to minimize autolysis.

Main or recovery animals may be euthanized for humane reasons as per Test Facility SOPs. The samples for evaluation of laboratory evaluation will be obtained if possible as specified in Section 15. These animals will undergo exsanguination by incision from the abdominal aorta following isoflurane anesthesia unless deemed inappropriate by the Study Director and/or the clinical veterinarian and will undergo complete necropsy examination, and specified tissues will be retained. If necessary, the animal will be refrigerated (set to maintain 4°C) to minimize autolysis.

Animals found dead or euthanized before the initiation of dosing will be subject to complete necropsy examination and limited tissue retention (standard diagnostic tissue list). Any animal replaced after the start of dosing will be subject to complete necropsy examination and tissues will be retained (as per Tissue Collection and Preservation section), and any data generated will not be included in the report unless deemed appropriate by the Study Director.

Appendix 1

16.2. Scheduled Euthanasia

Main study and recovery animals surviving until scheduled euthanasia will have a terminal body weight recorded, samples for laboratory evaluation will be collected (as appropriate), and will be euthanized by exsanguination by incision from the abdominal aorta following isoflurane anesthesia. When possible, the animals will be euthanized rotating across dose groups such that similar numbers of animals from each group, including controls, will be necropsied throughout the day. Animals will be fasted overnight before their scheduled necropsy.

16.3. Necropsy

Main and recovery animals will be subjected to a complete necropsy examination, which will include evaluation of the carcass and musculoskeletal system; all external surfaces and orifices; cranial cavity and external surfaces of the brain; and thoracic, abdominal, and pelvic cavities with their associated organs and tissues.

Necropsy procedures will be performed by qualified personnel with appropriate training and experience in animal anatomy and gross pathology. A veterinary pathologist, or other suitably qualified person, will be available.

At the discretion of the necropsy supervising pathologist, images may be generated for illustration of or consultation on gross observations. Generation of such images will be documented and communicated to the Study Director. Images and associated documentation will be retained and archived.

16.4. Organ Weights

The organs identified for weighing in the Tissues Collection and Preservation table will be weighed at necropsy for all scheduled euthanasia animals. Organ weights will not be recorded for animals found dead or euthanized in poor condition or in extremis. Paired organs will be weighed together. In the event of gross abnormalities, in addition to the combined weight, the weight of each organ of a pair may be taken and entered as a tissue comment. Organ weight as a percent of body weight (using the terminal body weight) and organ weight as a percent of brain weight will be calculated.

16.5. Tissue Collection and Preservation

Representative samples of the tissues identified in the Tissue Collection and Preservation table in ATTACHMENT A will be collected from all animals and preserved in 10% neutral buffered formalin, unless otherwise indicated. Additional tissue samples may be collected to elucidate abnormal findings.

Appendix 1

17. HISTOLOGY AND HISTOPATHOLOGY

17.1. Histology

Tissues in the Tissue Collection and Preservation table from animals identified in the Terminal Procedures table will be embedded in paraffin, sectioned, mounted on glass slides, and stained with hematoxylin and eosin.

17.2. Histopathology

Histopathological evaluation will be performed by a board-certified veterinary pathologist. Target tissues identified by the study pathologist during microscopic evaluation will be communicated to the study Director; tissues will be evaluated and reported. Any additional stains or evaluations, if deemed necessary by the pathologist, will be added by study plan amendment following discussion with the Study Director and in consultation the Sponsor.

At the discretion of the study pathologist and after acknowledgement by the Study Director, images may be captured for consultation purposes.

17.3. Pathology Peer Review

A on-site pathology peer review will be conducted by:

(b) (6)
Moderna Therapeutics
200 Technology Square, 3rd Floor
Cambridge, MA 02116
Tel: (b) (6)
E-mail: (b) (6)

The peer review statement or equivalent documentation will be included as an appendix to the Final Report.

18. CONSTRUCTED VARIABLES

Body Weight Gains	Calculated between at least each interval as well as between the beginning and end of each phase
Organ Weight relative to Body Weight	Calculated against the Terminal body weight for scheduled intervals
Organ Weight relative to Brain Weight	Calculated against the brain weight for scheduled intervals

19. STATISTICAL ANALYSIS

All statistical tests will be conducted at the 5% significance level. All pairwise comparisons will be conducted using two sided tests and will be reported at the 0.1%, 1%, and 5% levels.

Appendix 1

Numerical data collected on scheduled occasions for the listed variables will be analyzed as indicated according to sex and occasion. Descriptive statistics number, mean and standard deviation (or %CV or SE when deemed appropriate) will be reported whenever possible. Values may also be expressed as a percentage of predose or control values when deemed appropriate. Inferential statistics will be performed according to the matrix below when possible, but will exclude semi-quantitative data, and any group with less than 3 observations.

Statistical Matrix

Variables for Inferential Analysis	Statistical Method
	Parametric/ Non-Parametric
Body Weight	X
Body Temperature	X
Hematology Variables	X
Coagulation Variables	X
Clinical Chemistry Variables	X
Cytokines	X
α2-macroglobulin	X
α1-acid glycoprotein	X
Organ Weights	X
Body Weight Gains	X
Organ Weight relative to Body Weight	X
Organ Weight relative to Brain Weight	X

The following pairwise comparisons will be made:

Group 2 vs. Group 1

Group 3 vs. Group 1

Group 4 vs. Group 1

19.1. Parametric/Non-Parametric

Levene's test will be used to assess the homogeneity of group variances.

Datasets with at least 3 groups will be compared using an overall one-way ANOVA *F*-test if Levene's test is not significant or the Kruskal-Wallis test if it is. If the overall *F*-test or Kruskal-Wallis test is found to be significant, then the above pairwise comparisons will be conducted using Dunnett's or Dunn's test, respectively.

Datasets with 2 groups (the designated control group and 1 other group) will be compared using a *t*-test if Levene's test is not significant or Wilcoxon Rank-Sum test if it is.

20. COMPUTERIZED SYSTEMS

The following critical computerized systems may be used in the study. The actual critical computerized systems used will be specified in the Final Report.

Appendix 1

Data for parameters not required by study plan, which are automatically generated by analytical devices used will be retained on file but not reported. Statistical analysis results that are generated by the program but are not required by study plan and/or are not scientifically relevant will be retained on file but will not be included in the tabulations.

Critical Computerized Systems

System Name	Description of Data Collected and/or Analyzed
Provantis	In-life; clinical pathology; postmortem
Dispense	Test Material receipt, accountability and/or formulation activities
SRS (CR-MTL in-house application built with SAS) and SAS system for Windows and/or In-house reporting software Nevis 2012 (using SAS)	Statistical analyses of numerical in-life, clinical pathology and postmortem data
Mesa Laboratories AmegaView CMS	Continuous Monitoring System. Monitoring of standalone fridges, freezers, incubators, and selected laboratories to measure temperature, relative humidity, and CO2, as appropriate
Johnson Controls Metasys	Building Automation System. Control of HVAC and other building systems, as well as temperature/humidity control and trending in selected laboratories and animal rooms
Empower 3 (Waters Corporation)	Data acquisition for dose formulation analysis, including regression analysis and measurement of concentration and recovery of dose formulations using HPLC
BioPlex Manager	Cytokine data collection
Softmax Pro GxP	IFN-α data collection
Watson LIMS	Biomarker data analysis
Dynamics (Wyatt)	Data acquisition for particle size analysis of the test item using DLS

21. AMENDMENTS AND DEVIATIONS

Changes to the approved study plan shall be made in the form of an amendment, which will be signed and dated by the Study Director. Every reasonable effort will be made to discuss any necessary study plan changes in advance with the Sponsor.

All study plan and SOP deviations will be documented in the study records. Deviations from the study plan and/or SOP related to the phase(s) of the study conducted at a Test Site shall be documented, acknowledged by the PI/IS, and reported to the Study Director for authorization/acknowledgement. The Study Director will notify the Sponsor of deviations that may result in a significant impact on the study as soon as possible.

22. RETENTION OF RECORDS, SAMPLES, AND SPECIMENS

All study-specific raw data, electronic data, documentation, study plan, retained samples and specimens, and interim (if applicable) and final reports will be archived by no later than the date of final report issue. All materials generated by Charles River from this study will be transferred

Appendix 1

to CR MTL archive. One year after issue of the draft report, the Sponsor will be contacted to determine the disposition of materials associated with the study.

Records to be maintained will include, but will not be limited to, documentation and data for the following:

- Study Plan, study plan amendments, and deviations
- Study schedule
- Study-related correspondence
- Test system receipt, health, and husbandry
- Test and Reference Item receipt, identification, preparation, and analysis
- In-life measurements and observations
- Clinical pathology sample collection and evaluation
- Gross and microscopic observations and related data
- Organ weight measurements
- Statistical analysis results

23. REPORTING

A comprehensive Draft Report will be prepared following completion of the study and will be finalized following consultation with the Sponsor. The report will include all information necessary to provide a complete and accurate description of the experimental methods and results and any circumstances that may have affected the quality or integrity of the study.

The Sponsor will receive an electronic version of the Draft and Final Report provided in Adobe Acrobat PDF format (hyperlinked and searchable at final) along with a Microsoft Word version of the text. The PDF document will be created from native electronic files to the extent possible, including text and tables generated by the Test Facility. Report components not available in native electronic files and/or original signature pages will be scanned and converted to PDF image files for incorporation. An original copy of the report with the Test Facility's handwritten signatures will be retained.

Reports should be finalized within 6 months of issue of the Draft Report. If the Sponsor has not provided comments to the report within 6 months of draft issue, the report will be finalized by the Test Facility unless other arrangements are made by the Sponsor.

Appendix 1

24. ANIMAL WELFARE

24.1. Institutional Animal Care and Use Committee Approval

The study plan and any amendment(s) or procedures involving the care and use of animals in this study will be reviewed and approved by CR SHB Institutional Animal Care and Use Committee (IACUC). During the study, the care and use of animals will be conducted with guidance from the USA National Research Council and the Canadian Council on Animal Care (CCAC).

SUMMARY OF CHANGES AND JUSTIFICATIONS

Study Plan effective date: 08-Mar-2017

Note: When applicable, additions are indicated in bold underlined text and deletions are indicated in bold strikethrough text in the affected sections of the document.

Item or Section(s)	Justification
Amendment 1	**Date: 15-Mar-2017**
2. PROPOSED STUDY SCHEDULE	To update as per sponsor request.
7. RESPONSIBLE PERSONNEL	To update the contact information of the ATA PI.
10.3.1.2. Stability Analysis	To clarify that stability analysis will be performed on the bulk Test Item.
15.2. Laboratory Investigations (Cytokine Analysis)	To correct a typographical error.
15.3. Anti Therapeutic Antibody (ATA) Analysis	To clarify the processing of samples and update the shipping contact information.
15.4. PBMC Analysis	To change the blood collection procedure.
Amendment 2	**Date: 17-Mar-2017**
1. OBJECTIVE(S)	To correct a typographical error.
8.1. Test Item	To add the concentration of the bulk Test Item.
11.3. Environmental Acclimation	To correct due to schedule modification.
15.2. Laboratory Ivestigations (Cytokine Analysis)	To include clarification for sample processing.
Amendment 3	**Date: 12-Apr-2017**
7. RESPONSIBLE PERSONNEL	To add the email address of the management contact and to assign a pathologist from PAI-FDK.
5.2. Test Facility-designated Subcontractor(s)	To add the histopathology phase as it will be audited by PAI-FDK.
8.4. Analysis of Test Item	To correct the storage conditions for samples transfer.
15.3. Anti Therapeutic Antibody (ATA) Analysis	To correct the shipping contact information and to add a blood collection occasion on Day 29.
17.2. Histopathology	To include that slides will be shipped to the pathologist Test Site.
17.3. Pathology Peer Review	To update as the pathology peer review will not be performed at the Test Facility.

Appendix 1

TABLE OF CONTENTS

Appendix 1

1. OBJECTIVE(S)

The objectives of this study are to determine the potential toxicity of mRNA-1443, when given by intramuscular injection for 6 weeks (4 doses) to rats and to evaluate the potential reversibility of any findings following a 2-week recovery period.

1.1. Study Classification

Study Category:	TOX
Study Type:	Repeat Dose Toxicity
Study Design:	Parallel
Primary Treatment CAS Registry Number:	Not Available
Primary Treatment Unique Ingredient ID:	Not Available
Class of Compound:	mRNA

2. PROPOSED STUDY SCHEDULE

Proposed study dates are listed below. Actual applicable dates will be included in the Final Report.

Experimental Start Date:	08 Mar 2017
Experimental Completion Date:	25 Aug 2017 (Last date data are collected from the study)
Animal Arrival:	08 Mar 2017
Initiation of Dosing:	20 Mar 2017 (Male) 21 Mar 2017 (Female)
Completion of In-life:	03 May 2017 (Main) 16 May 2017 (Recovery) (Last date of necropsy)
Unaudited Draft Report:	13 Jul 2017
Audited Draft Report:	18 Aug 2017
Final Report:	25 Aug 2017

3. GUIDELINES FOR STUDY DESIGN

The design of this study was based on the study objective(s), the overall product development strategy for the Test Item, and the following study design guidelines:

- OECD Guideline 407. *Repeated Dose 28-day Oral Toxicity Study in Rodents*.

Appendix 1

- Committee for Medicinal Products for Human Use (CHMP). *Note for Guidance on Repeated Dose Toxicity*. CPMP/SWP/1042/99corr.
- ICH Harmonised Tripartite Guideline M3 (R2). *Nonclinical Safety Studies for the Conduct of Human Clinical Trials and Marketing Authorization for Pharmaceuticals*.
- Japanese Guidelines for Nonclinical Studies of Drugs Manual (1995). *Guidelines for Toxicity Studies of Drugs (Chapter 3, Repeated Dose Toxicity Studies)*.
- Appendix to Director General Notification, No. 12-Nousan-8147, 24 November 2000, Agricultural Production Bureau, Ministry of Agriculture, Forestry and Fisheries of Japan (JMAFF).

4. REGULATORY COMPLIANCE

The study will be performed in accordance with the OECD Principles of Good Laboratory Practice and as accepted by Regulatory Authorities throughout the European Union, United States of America (FDA), Japan (MHLW), and other countries that are signatories to the OECD Mutual Acceptance of Data Agreement.

Any portion of this study conducted in the USA will be performed in accordance with the U.S. Department of Health and Human Services, Food and Drug Administration. United States Code of Federal Regulations, Title 21, Part 58: Good Laboratory Practice for Nonclinical Laboratory Studies and as accepted by Regulatory Authorities throughout the European Union (OECD Principles of Good Laboratory Practice), Japan (MHLW), and other countries that are signatories to the OECD Mutual Acceptance of Data Agreement.

Exceptions to GLPs include the following study elements:

- Characterization of the Test Item will be performed by the Sponsor or Sponsor subcontractor according to established SOPs, controls, and approved test methodologies to ensure integrity and validity of the results generated; these analyses will not be conducted in compliance with the GLP or GMP regulations.
- Analysis of cytokines, α2-macroglobulin, α1-acid glycoprotein, anti-therapeutic antibody and PBMCs will be conducted using scientifically qualified methods and in accordance with all applicable analytical procedures.
- Pathology peer review

5. QUALITY ASSURANCE

5.1. Test Facility

The Test Facility Quality Assurance Program (QAP) will monitor the study to assure the facilities, equipment, personnel, methods, practices, records, and controls are in conformance with Good Laboratory Practice regulations. The QAP will review the study plan, conduct inspections at intervals adequate to assure the integrity of the study, and audit the Final Report to

Appendix 1

assure that it accurately describes the methods and standard operating procedures and that the reported results accurately reflect the raw data of the study.

The Test Facility QAP contact for this study is indicated below:

(b) (6)
Charles River Laboratories Montreal ULC
Senneville Site (CR-MTL)
22022 Transcanadienne
Senneville, QC H9X 3R3
Canada
Tel: (b) (6)

E-mail: (b) (6)

5.2. Test Facility-designated Subcontractor(s)

The following study phases performed by Test Facility-designated subcontractors will be audited by the Test Facility QAP:

- Ophthalmology

The following study phases performed by Test Facility-designated subcontractors will be audited by the respective subcontractor QAP(s):

- **Histopathology**

For all study phase(s) inspected by subcontractor QAP(s), copies of each periodic inspection report will be made available to the Study Director, Test Facility Management, and the Test Facility QAP.

Each PI will provide a report addressing their assigned phase of the study, which will be included as an appendix to the Final Report. The phase report will include the following:

- The archive site for all records, samples, specimens and reports generated from the phase or segment (alternatively, details regarding the retention of the materials may be provided to the Study Director for inclusion in the Final Report)
- A listing of critical computerized systems used in the conduct and/or interpretation of the assigned study phase

8. TEST AND REFERENCE ITEMS

8.1. Test Item

Identification:	mRNA-1443
Supplier:	Moderna Therapeutics, Inc.
Batch (Lot) Number:	MTDP17017
Concentration:	2.6 mg/mL
Retest Date:	An end-of-use analysis of the bulk Test Item will be performed to demonstrate the stability of the Test Item during the dosing period.
Physical Description:	White to off-white lipid nanopacticle dispersion
Storage Conditions:	Kept in a freezer set to maintain -20°C

Appendix 1

8.2. Reference Item

Identification:	Phosphate-buffered Saline (PBS) pH 7.2
Supplier:	Will be included in the Final Report
Batch (Lot) Number:	Will be included in the Final Report
Expiration Date:	Will be included in the Final Report
Physical Description:	Liquid
Storage Conditions:	Kept in a controlled temperature area set to maintain 21°C

8.3. Test Item Characterization

The Sponsor will provide to the Test Facility documentation of the identity, strength, purity and composition for the Test Item. A Certificate of Analysis or equivalent documentation will be provided for inclusion in the Final Report. The Sponsor will also provide information concerning the regulatory standard that was followed for these evaluations.

The Sponsor has appropriate documentation on file concerning the method of synthesis, fabrication or derivation of the Test Item, and this information is available to the appropriate regulatory agencies should it be requested.

8.4. Analysis of Test Item

A sample (2 vials) of the Test Item will be taken on the completion of the dosing period. Analysis of bulk Test Item for concentration, particle size and purity will be performed.

The first vial will be transferred (on **dry** ice ~~**pack**~~) to the analytical laboratory at the Test Facility for concentration and particle size analysis.

The second vial will be transferred (on **dry** ice ~~**pack**~~) to the molecular biology laboratory at the Test Facility for purity analysis.

Purity and Particle size analysis will be performed by IEX- HPLC, Differential Light Scattering (DLS) and capillary electrophoresis (CE) using validated analytical procedures.

Any residual/retained analytical samples (and Test Item used in analysis) will be discarded before issue of the Final Report.

8.5. Reserve Samples

For each batch (lot) of Test and Reference Items, a reserve sample (1 mL or 1 vial) will be collected and maintained under the appropriate storage conditions by the Test Facility.

8.6. Test and Reference Item Inventory and Disposition

Records of the receipt, distribution, storage, and disposition of Test and Reference Items will be maintained. With the exception of reserve samples, all unused Sponsor-supplied bulk Test Item will be returned to the Sponsor on dry ice (after completion of dosing).

Appendix 1

Shipping Contact
(b) (6)
Moderna Therapeutics
800 Technology Sq, 8th Floor
Cambridge MA 02476
Cell: (b) (6)
E-mail: (b) (6)

9. SAFETY

The safety precautions for the Test Item and dose formulations will be documented in a Test Material Safety Data Sheet (TMSDS) based on the information provided by the Sponsor either by an MSDS or similar document.

10. DOSE FORMULATION AND ANALYSIS

10.1. Preparation of Reference Item

Dose formulation preparations will be performed under a laminar flow hood using clean procedures.

The Reference Item, Phosphate-buffered Saline (PBS) pH 7.2, will be dispensed on days of dosing (i.e. Days 1, 15, 29 and 43) for administration to Group 1 control animals and will be used as required to dilute the bulk Test Item for administration to Groups 2 to 4 animals. The aliquots will be stored in a refrigerator set to maintain 4°C until use. They will be removed from the refrigerator and allowed to warm to room temperature for at least 30 minutes before dosing.

Any residual volumes will be discarded unless otherwise requested by the Study Director.

10.2. Preparation of Test Item

Dose formulation preparations will be performed under a laminar flow hood using clean procedures.

Test Item formulations will be diluted with PBS pH 7.2, as necessary for administration. The dosing formulations will be prepared on each days of dosing (i.e. Days 1, 15, 29 and 43) and will be stored in a refrigerator set to maintain 4°C. The dose formulations will be allowed to warm to room temperature for at least 30 minutes prior to dosing. Alternatively, the aliquots can be transferred directly to room temperature. When possible, stock vials will be used only once.

Any residual volumes of formulated Test Item will be stored in a refrigerator set at 4°C and discarded prior to report finalization.

10.3. Sample Collection and Analysis

Dose formulation samples will be collected for analysis as indicated in the following table. Additional samples may be collected and analyzed at the discretion of the Study Director.

Appendix 1

Dose Formulation Sample Collection Schedule

Interval[b]	Homogeneity	Concentration	Sampling From
Day 1	All groups[a]	All groups	Dosing container
Day 43	N/A	All groups	Dosing container

N/A = Not applicable.

[a] The homogeneity results obtained from the top, middle and bottom preparations will be averaged and utilized as the concentration results.

[b] Samples will be collected on the first preparation of the study and on the last preparation of the study.

Samples to be analyzed will be submitted as soon as possible following collection.

All samples to be analyzed will be transferred (on ice pack) to the analytical laboratory.

Any residual/retained analytical samples (and Test Item used in analysis) will be discarded before issue of the Final Report.

10.3.1. Analytical Method

Analyses described below will be performed by IEX-HPLC using a validated analytical procedure (CR-MTL Study No. 1801913).

10.3.1.1. Concentration and Homogeneity Analysis

Samples for Analysis:	Duplicate top, middle, and bottom samples (duplicate middle only from Group 1); sent for analysis as noted in Section 10.3. On days where only concentration analysis is required, the formulation will only be sampled from the middle.
Backup Samples:	Triplicate top, middle, and bottom samples (triplicate middle only from Group 1); maintained at the Test Facility. Backup samples may be analyzed at the discretion of the Study Director. On days where only concentration analysis is required, the formulation will only be sampled from the middle.
Sampling Containers:	Appropriate sized glass containers.
Sample Volume:	0.5 mL for analysis and backup samples.
Storage Conditions:	Kept in a refrigerator set to maintain 4°C.
Acceptance Criteria:	For concentration, the criteria for acceptability will be mean sample concentration results within or equal to ± 15% of theoretical concentration. Each individual sample concentration result within or equal to ± 20%. For homogeneity, the criteria for acceptability will be a relative standard deviation (RSD) of concentrations of ≤ 5% for each group.

Appendix 1

10.3.1.2. Stability Analysis

There will be no stability analysis performed for concentration used on this study however, end of use stability analysis of the bulk Test Item will be performed at the end of the dosing period.

11. TEST SYSTEM

Species:	Rat
Strain:	Crl:CD(SD) Sprague-Dawley rat
Source:	Charles River Canada Inc., St. Constant, QC, Canada
Number of Males Ordered:	60
Number of Females Ordered:	60
Target Age at Arrival:	4 to 8 weeks
Target Weight at Arrival:	126 to 150 g (males) 101 to 125 g (females)

The actual age, weight, and number of animals received will be listed in the Final Report.

11.1. Justification of Test System and Number of Animals

The Sprague Dawley rat was chosen as the animal model for this study as it is an accepted rodent species for preclinical toxicity testing by regulatory agencies.

The total number of animals to be used in this study is considered to be the minimum required to properly characterize the effects of the Test Item. This study has been designed such that it does not require an unnecessary number of animals to accomplish its objectives.

At this time, studies in laboratory animals provide the best available basis for extrapolation to humans and are required to support regulatory submissions. Acceptable models which do not use live animals currently do not exist.

11.2. Animal Identification

Each animal will be identified using a subcutaneously implanted electronic identification chip.

11.3. Environmental Acclimation

A minimum acclimation period of 12 days will be allowed between animal receipt and the start of dosing in order to accustom the animals to the laboratory environment.

11.4. Selection, Assignment, Replacement, and Disposition of Animals

Animals will be assigned to groups by a stratified randomization scheme designed to achieve similar group mean body weights. Males and females will be randomized separately. Animals in poor health or at extremes of body weight range will not be assigned to groups.

Appendix 1

Before the initiation of dosing, any assigned animals considered unsuitable for use in the study will be replaced by alternate animals obtained from the same shipment and maintained under the same environmental conditions.

After initiation of dosing, study animals may be replaced during the replacement period with alternate animals in the event of accidental injury, non-Test Item-related health issues, or similar circumstances.

The alternate animals may be used as replacements on the study within 3 days.

The disposition of all animals will be documented in the study records.

12. HUSBANDRY

12.1. Housing

Animals will be group housed (up to 3 animals of the same sex and same dosing group together) in polycarbonate cages containing appropriate bedding equipped with an automatic watering valve. These housing conditions will be maintained unless deemed inappropriate by the Study Director and/or Clinical Veterinarian. The room(s) in which the animals will be kept will be documented in the study records.

Animals will be separated during designated procedures/activities. Each cage will be clearly labeled with a color-coded cage card indicating study, group, animal number(s), and sex. Cages will be arranged on the racks in group order. Where possible, control group animals will be housed on a separate rack from the Test Item treated animals.

12.2. Environmental Conditions

The targeted conditions for animal room environment will be as follows:

Temperature:	19°C to 25°C
Humidity:	30% to 70%
Light Cycle:	12 hours light and 12 hours dark (except during designated procedures)

12.3. Food

PMI Nutrition International Certified Rodent Chow No. 5CR4 will be provided ad libitum throughout the study, except during designated procedures. The same diet in meal form may be provided to individual animals as warranted by clinical signs (e.g., broken/damaged incisors or other health changes).

The feed is analyzed by the supplier for nutritional components and environmental contaminants. Results of the analysis are provided by the supplier and are on file at the Test Facility.

It is considered that there are no known contaminants in the feed that would interfere with the objectives of the study.

Appendix 1

12.4. Water

Municipal tap water after treatment by reverse osmosis and ultraviolet irradiation will be freely available to each animal via an automatic watering system (except during designated procedures). Water bottles can be provided, if required.

Periodic analysis of the water is performed, and results of these analyses are on file at the Test Facility.

It is considered that there are no known contaminants in the water that could interfere with the outcome of the study.

12.5. Animal Enrichment

Animals will be socially housed for psychological/environmental enrichment and will be provided with items such as a hiding tube and a chewing object, except during study procedures/activities.

12.6. Veterinary Care

Veterinary care will be available throughout the course of the study and animals will be examined by the veterinary staff as warranted by clinical signs or other changes. All veterinary examinations and recommended therapeutic treatments, if any, will be documented in the study records.

In the event that animals show signs of illness or distress, the responsible veterinarian may make initial recommendations about treatment of the animal(s) and/or alteration of study procedures, which must be approved by the Study Director or Scientific designate. All such actions will be properly documented in the study records and, when appropriate, by study plan amendment. Treatment of the animal(s) for minor injuries or ailments may be approved without prior consultation with the Sponsor representative when such treatment does not impact fulfillment of the study objectives. If the condition of the animal(s) warrants significant therapeutic intervention or alterations in study procedures, the Sponsor representative will be contacted, when possible, to discuss appropriate action. If the condition of the animal(s) is such that emergency measures must be taken, the Study Director and/or clinical veterinarian will attempt to consult with the Sponsor representative prior to responding to the medical crisis, but the Study Director and/or veterinarian has authority to act immediately at his/her discretion to alleviate suffering. The Sponsor representative will be fully informed of any such events.

Appendix 1

13. EXPERIMENTAL DESIGN

Experimental Design

Group No.	Test Material	Dose Level (µg/dose)	Dose Volume (µL/dose)	Dose Concentration (mg/mL)	No. of Animals			
					Main Study		Recovery Study

- : Not applicable

13.1. Administration of Test and Reference Items

The Test and Reference Items will be administered to the appropriate animals via intramuscular injection into the lateral compartment of the thigh on Days 1, 15, 29 and 43, the injection site will be alternated on each dosing occasion (Site 1 left thigh and Site 2 right thigh). The volume for each dose will be administered using a syringe/needle within the demarcated area. The first day of dosing will be designated as Day 1 (exception: alternate animals used for replacement after Day 1 will assume the day of the animal being replaced).

The injection area will be marked as frequently as required to allow appropriate visualization of administration sites. Hair may be clipped or shaved if required to improve visualization of the injection sites. The injection site will be documented in the raw data for each dose administered.

13.2. Justification of Route and Dose Levels

The intramuscular route of exposure was selected because this is the intended route of human exposure.

The dose levels for this toxicology study were chosen to approximate a substantial multiple of the anticipated clinical starting dose and top clinical dose. The highest dose to be tested is expected to represent the intended maximum human clinical dose and volume and will be administered by the clinical route (intramuscular). At this dose level, minimal systemic toxicity is expected, but it is possible mild to moderate injection site reaction (redness, swelling) and potentially elevation of systemic cytokine/acute phase markers may be observed. The mid- and low-dose were selected to evaluate the dose-dependent effect of this compound.

14. IN-LIFE PROCEDURES, OBSERVATIONS, AND MEASUREMENTS

The in-life procedures, observations, and measurements listed below including Laboratory Investigations listed in section below will be performed for all main study and recovery animals, unless otherwise indicated in the respective section. During the study, additional evaluations to those described below and/or scheduled, and considered necessary by the Study Director and/or Veterinarian to assess health status will be conducted and duly documented. More frequent observations may be undertaken if considered appropriate.

Appendix 1

14.1. Mortality/Moribundity Checks

Frequency: Twice daily, once in the morning and once in the afternoon, throughout the study.

Procedure: Animals will be observed for general health/mortality and moribundity. Animals will not be removed from cage during observation, unless necessary for identification or confirmation of possible findings.

14.2. Clinical Observations

14.2.1. Detailed Clinical Observations

Frequency: Weekly during the dosing and recovery periods, and at least every two weeks during the predosing period.

Procedure: Animals removed from the cage for examination.

14.3. Local Irritation Assessment

Frequency: On days of dosing; at least 24 and 72 hours post-dose (end of each group). Weekly when there is no dosing and during the recovery period. Following Day 43 dosing, no assessment will be performed on main animals at 72 hours postdose as animals will be sent to necropsy on Day 44.

Procedure: All animals will have the dose injection site examined for signs of erythema/edema. Observations will be scored according to the Local Irritation Assessment scoring table as follows:

Erythema (Redness)	**Score**
No erythema	0
Very slight erythema (barely perceptible)	1
Mild erythema	2
Moderate to severe erythema	3
Severe erythema (beet redness to slight eschar formation, injury in depth)	4
Notable dermal lesion (maximized)	M
Edema (Swelling)	
No edema	0
Very slight edema (barely perceptible)	1
Slight edema	2
Moderate edema	3
Severe edema	4

Appendix 1

Any other abnormalities will be recorded as they are observed.

14.4. Body Weights

Frequency:	Weekly during the dosing and recovery periods, and at least every two weeks during the predosing period.
Procedure:	Animals will be individually weighed. A fasted weight will be recorded on the day of necropsy. Terminal body weights will not be collected from animals found dead or euthanized moribund.

14.5. Food Consumption

Frequency:	Weekly, starting Day -7, throughout the dosing and recovery periods.
Procedure:	Food consumption will be quantitatively measured except for on the day of scheduled euthanasia.

14.6. Ophthalmic Examinations

Frequency:	Once prestudy and again toward the end of Week 6 of the dosing period. During Week 2 of the recovery period if Test Item-related findings are observed during the dosing period.
Procedure:	All animals will be subjected to funduscopic (indirect ophthalmoscopy) and biomicroscopic (slit lamp) examinations. The mydriatic used will be Atropine 0.126%.
Evaluation:	A report will be included as an appendix to the Final Report.

14.7. Body Temperature

Frequency:	On Day 1 and Day 43 at predose, and 6 and 24 hours post dose (end of each group). If body temperature is significantly above normal range (36.0°C to 38.0°C) the temperature will be monitored daily till return to normal. If clinical observations indicate a possible body temperature changes measurements may be taken at the discretion of the Study Director.
Procedure:	Rectal body temperature will be recorded on un-sedated animals.

Appendix 1

15. LABORATORY EVALUATIONS

15.1. Clinical Pathology

15.1.1. Sample Collection

Blood will be collected from the abdominal aorta following isoflurane anesthesia. After collection, samples will be transferred to the appropriate laboratory for processing.

Animals will be fasted overnight before blood sampling (for clinical chemistry). Samples will be collected according to the following table.

Samples for Clinical Pathology Evaluation

Group Nos.	Time Point	Hematology	Coagulation	Clinical Chemistry	α1-acid glycoprotein/ α2-macroglubulin
1 to 4[a]	Day 44	X	X	X	X
1 and 4	Day 57	X	X	X	X
Unscheduled euthanasia (when possible)	Before euthanasia	X	X	X	X

X = Sample to be collected

[a] Samples will only be collected from those animals scheduled for euthanasia on Day 44.

Any residual/retained clinical pathology samples will be discarded before issue of the Final Report.

15.1.2. Hematology

Target Volume: 0.5 mL

Anticoagulant: EDTA

Hematology Parameters

Red blood cell count Hemoglobin concentration Hematocrit Mean corpuscular volume Red Blood Cell Distribution Width Mean corpuscular hemoglobin concentration Mean corpuscular hemoglobin Reticulocyte count (absolute) Platelet count	White blood cell count Neutrophil count (absolute) Lymphocyte count (absolute) Monocyte count (absolute) Eosinophil count (absolute) Basophil count (absolute) Large unstained cells (absolute)

A blood smear will be prepared from each hematology sample. Blood smears will be labeled, stained, and stored. Blood smears may be read to investigate results. If additional examination of blood smears is deemed necessary, the smears may be subsequently evaluated and this evaluation will be described in a study plan amendment.

Appendix 1

15.1.3. Coagulation

Target Volume: 1.2 mL (in a 1.3 mL tube)

Anticoagulant: Citrate

Processing: To plasma

Coagulation Parameters

Activated partial thromboplastin time Fibrinogen	Prothrombin time Sample Quality

15.1.4. Clinical Chemistry

Target Volume: 0.7 mL

Anticoagulant: None, collected in serum separator tube

Processing: To serum

Clinical Chemistry Parameters

Alanine aminotransferase Aspartate aminotransferase Alkaline phosphatase Gamma-glutamyltransferase Creatine Kinase Total bilirubin[a] Urea nitrogen Creatinine Calcium Phosphorus	Total protein Albumin Globulin Albumin/globulin ratio Glucose Cholesterol Triglycerides Sodium Potassium Chloride Sample Quality

[a] When total bilirubin is > 0.5 mg/dL, indirect and direct bilirubin will also be measured.

15.1.5. Bone Marrow Smear Evaluation (Optional)

Bone marrow smears will be collected and prepared as described in the Tissue Collection and Preservation table (Section 16.5). Evaluation of stained smears may be added by amendment at the discretion of the Study Director in consultation with the pathologist and the Sponsor.

15.1.6. α1-acid Glycoprotein and α2-macroglobulin Analysis

Blood will be collected via the abdominal aorta following isoflurane anesthesia before scheduled and unscheduled euthanasia for all animals.

Target Volume: 0.7 mL

Anticoagulant: None, collected in serum separator tubes

Processing: Blood samples to clot at ambient room temperature. Centrifugation for (b) (4) set at (b) (4) in a refrigerated centrifuge (set to maintain (b) (4)). Samples will be processed to

Appendix 1

serum by the Immunology Department. Serum will be aliquoted into 1 x 75 µL aliquot for α2-macroglobulin and 2 x 75 µL aliquot and a leftover (if available) for α1-acid glycoprotein.

Storage conditions: Stored in a freezer set to maintain -20°C, pending analysis.

Analysis for α1-acid glycoprotein and α2-macroglobulin will be conducted using a qualified ELISA method by the Immunology Department. The procedure to be followed along with the assay acceptance criteria will be detailed in the appropriate analytical procedure.

Samples will be analyzed in duplicate. Any residual/retained samples will be discarded prior to report finalization.

15.2. Laboratory Investigations (Cytokine Analysis)

Blood will be collected from the jugular vein of all recovery animals and preterminally euthanized animals (recovery animals only). After collection, blood samples for serum will be allowed to clot at ambient room temperature and blood samples for plasma will be transferred on wet ice to the appropriate laboratory for processing.

Sample Collection Schedule

Target Blood Volume (mL)			0.5	0.5
Anticoagulant			**None (SST)**	**EDTA**
Centrifugation setting			(b) (4)	
Timepoints			**Sample Type**	
Day	**Hrs**	**No. of Males/ Females**	IFN-α	IL-1ß, IL-6, TNF-α, IP-10, MIP-1-α, MCP-1
1	6	5/5	X	X
15	6	5/5	X	X
29	6	5/5	X	X
43	6	5/5	X	X
57	N/A	5/5	X	X
Matrix			Serum	Plasma
Volume per aliquot (µL)			all volume	all volume
Number of aliquot(s)			1	1
Storage condition (set to maintain)			-80°C	-80°C
Responsible Lab			CR-SHB	CR-SHB

X = Sample to be collected; N/A = not applicable

The number of aliquots and volumes are targets that may be adjusted based on sample volume availability.

The samples will be analyzed by the Immunology department. Analysis for IL-1ß, IL-6, TNF-α, IP-10, MIP-1-α and MCP-1 will be conducted using a multiplex Luminex method. An ELISA

Appendix 1

method will be used for the analysis of IFN-α. The procedures to be followed during the course of this study along with the assays acceptance criteria will be detailed in the appropriate analytical procedure. Samples will be analyzed in duplicate.

Following Study Director approval, any residual/retained samples will be discarded prior to report finalization.

An Immunology Report for cytokine analysis will be included as an appendix to the Final Report.

15.3. Anti Therapeutic Antibody (ATA) Analysis

Blood will be collected by jugular venipuncture from the appropriate animals.

Time Points:	Before initiation of dosing, **Day 29 (before dosing),** Day 43 (main animals only) and Day 57 (recovery animals).
Target Volume:	0.5 mL
Anticoagulant:	None, collected in serum separator tubes
Processing:	To serum

Samples will be mixed gently and allowed to clot at room temperature until centrifugation, which will be carried out as soon as practical. The samples will be centrifuged for (b) (4) in a refrigerated centrifuge (set to maintain (b) (4)) at (b) (4) The resultant serum will be separated, transferred to uniquely labeled clear polypropylene tubes, frozen immediately over dry ice and transferred to a freezer set to maintain -80°C.
Samples will be shipped on dry ice to:

Shipping Contact
(b) (6)
Integrated BioTherapeutics, Inc.
4 Research Court~~21 Firstfield Road~~
Suite **300~~100~~**
Rockville, MD 20850, USA~~Gaithersburg, MD 20878, USA~~
Tel: (b) (6)
Fax: (b) (6)
E-mail: (b) (6)

The Test Site will be notified before shipment of the samples. Upon receipt at the immunology laboratory, the samples will be stored at -80°C.

The samples will be analyzed for rat anti-CMV antibodies using a qualified ELISA method.

Any residual/retained samples will be maintained for a minimum of 6 months following issuance of the Audited Draft Report after which samples will be discarded. Alternatively, residual/retained samples will be discarded prior to the 6 month period should the issuance of the Final Report occur prior to the end of the 6 month retention period. An earlier discard of these residual/retained samples may also be requested and authorized by the Study Director.

Appendix 1

An Anti-therapeutic Antibody Report will be included as an appendix to the Final Report.

15.4. PBMC Analysis

Blood will be collected by jugular venipuncture from the appropriate animals.

Time Points:	On Day 44 (main animals only).
Target Volume:	0.5 mL
Anticoagulant:	Sodium Heparin
Storage Conditions:	Kept in a controlled temperature area set to maintain 21°C

Samples will be shipped at controlled temperature set to maintain 21°C via overnight courier to the Immunology laboratory, for whole blood stimulation and cytokine analysis, to:

Shipping Contact
(b) (6)
Cell Biology and Immunology
Southern Research
2000 Ninth Ave S
Birmingham AL 35205
Tel: (b) (6)
E-mail: (b) (6)

The Test Site will be notified before shipment of the samples. Upon receipt at the Immunology laboratory, the samples will be stored at room temperature.

The PBMC samples will be analyzed using a qualified method.

Any residual/retained samples will be maintained for a minimum of 6 months following issuance of the Audited Draft Report after which samples will be discarded. Alternatively, residual/retained samples will be discarded prior to the 6 month period should the issuance of the Final Report occur prior to the end of the 6 month retention period. An earlier discard of these residual/retained samples may also be requested and authorized by the Study Director.

An Immunology Report for PBMC analysis will be included as an appendix to the Final Report.

Appendix 1

16. TERMINAL PROCEDURES

Terminal procedures are summarized in the following table:

Terminal Procedures for Main Study and Recovery Animals

Group No.	No. of Animals		Scheduled Euthanasia Day	Necropsy Procedures			Histology	Histopathology
	M	F		Necropsy	Tissue Collection	Organ Weights		
1	10	10	44	X	X	X	Full Tissue[a]	Full Tissue[a]
2	10	10					Full Tissue[a]	Gross Lesions Target Tissues
3	10	10					Full Tissue[a]	Gross Lesions Target Tissues
4	10	10					Full Tissue[a]	Full Tissue[a]
1	5	5	57	X	X	X	Full Tissue[a]	Full Tissue[a]
4	5	5					Full Tissue[a]	Full Tissue[a]
Unscheduled Deaths				X	X	-	Full Tissue[a]	Full Tissue[a]
Replaced animals (prestudy)[b]				X	Standard Diagnostic List	-	-	-
Replaced animals (after dosing start)				X	X	-	-	-

X = Procedure to be conducted; - = Not applicable.
[a] See Tissue Collection and Preservation table for listing of tissues.
[b] Animals found dead or euthanized before the initiation of dosing.

16.1. Unscheduled Deaths

If a main study or recovery animal dies on study, a complete necropsy examination will be conducted and specified tissues will be saved. If necessary, the animal will be refrigerated to minimize autolysis.

Main or recovery animals may be euthanized for humane reasons as per Test Facility SOPs. The samples for evaluation of laboratory evaluation will be obtained if possible as specified in Section 15. These animals will undergo exsanguination by incision from the abdominal aorta following isoflurane anesthesia unless deemed inappropriate by the Study Director and/or the clinical veterinarian and will undergo complete necropsy examination, and specified tissues will be retained. If necessary, the animal will be refrigerated (set to maintain 4°C) to minimize autolysis.

Animals found dead or euthanized before the initiation of dosing will be subject to complete necropsy examination and limited tissue retention (standard diagnostic tissue list). Any animal replaced after the start of dosing will be subject to complete necropsy examination and tissues will be retained (as per Tissue Collection and Preservation section), and any data generated will not be included in the report unless deemed appropriate by the Study Director.

Appendix 1

16.2. Scheduled Euthanasia

Main study and recovery animals surviving until scheduled euthanasia will have a terminal body weight recorded, samples for laboratory evaluation will be collected (as appropriate), and will be euthanized by exsanguination by incision from the abdominal aorta following isoflurane anesthesia. When possible, the animals will be euthanized rotating across dose groups such that similar numbers of animals from each group, including controls, will be necropsied throughout the day. Animals will be fasted overnight before their scheduled necropsy.

16.3. Necropsy

Main and recovery animals will be subjected to a complete necropsy examination, which will include evaluation of the carcass and musculoskeletal system; all external surfaces and orifices; cranial cavity and external surfaces of the brain; and thoracic, abdominal, and pelvic cavities with their associated organs and tissues.

Necropsy procedures will be performed by qualified personnel with appropriate training and experience in animal anatomy and gross pathology. A veterinary pathologist, or other suitably qualified person, will be available.

At the discretion of the necropsy supervising pathologist, images may be generated for illustration of or consultation on gross observations. Generation of such images will be documented and communicated to the Study Director. Images and associated documentation will be retained and archived.

16.4. Organ Weights

The organs identified for weighing in the Tissues Collection and Preservation table will be weighed at necropsy for all scheduled euthanasia animals. Organ weights will not be recorded for animals found dead or euthanized in poor condition or in extremis. Paired organs will be weighed together. In the event of gross abnormalities, in addition to the combined weight, the weight of each organ of a pair may be taken and entered as a tissue comment. Organ weight as a percent of body weight (using the terminal body weight) and organ weight as a percent of brain weight will be calculated.

16.5. Tissue Collection and Preservation

Representative samples of the tissues identified in the Tissue Collection and Preservation table in ATTACHMENT A will be collected from all animals and preserved in 10% neutral buffered formalin, unless otherwise indicated. Additional tissue samples may be collected to elucidate abnormal findings.

Appendix 1

17. HISTOLOGY AND HISTOPATHOLOGY

17.1. Histology

Tissues in the Tissue Collection and Preservation table from animals identified in the Terminal Procedures table will be embedded in paraffin, sectioned, mounted on glass slides, and stained with hematoxylin and eosin.

17.2. Histopathology

Histopathological evaluation will be performed by a board-certified veterinary pathologist. Target tissues identified by the study pathologist during microscopic evaluation will be communicated to the study Director; tissues will be evaluated and reported. Any additional stains or evaluations, if deemed necessary by the pathologist, will be added by study plan amendment following discussion with the Study Director and in consultation the Sponsor.

At the discretion of the study pathologist and after acknowledgement by the Study Director, images may be captured for consultation purposes.

The appropriate Charles River Laboratories, Pathology Associates Test Site will be contacted for the slide shipping address.

17.3. Pathology Peer Review

A ~~**on-site**~~ pathology peer review will be conducted by:

(b) (6)
Moderna Therapeutics
200 Technology Square, 3rd Floor
Cambridge, MA 02116
Tel: (b) (6)
E-mail: (b) (6)

The peer review statement or equivalent documentation will be included as an appendix to the Final Report.

18. CONSTRUCTED VARIABLES

Body Weight Gains	Calculated between at least each interval as well as between the beginning and end of each phase
Organ Weight relative to Body Weight	Calculated against the Terminal body weight for scheduled intervals
Organ Weight relative to Brain Weight	Calculated against the brain weight for scheduled intervals

Appendix 1

19. STATISTICAL ANALYSIS

All statistical tests will be conducted at the 5% significance level. All pairwise comparisons will be conducted using two sided tests and will be reported at the 0.1%, 1%, and 5% levels.

Numerical data collected on scheduled occasions for the listed variables will be analyzed as indicated according to sex and occasion. Descriptive statistics number, mean and standard deviation (or %CV or SE when deemed appropriate) will be reported whenever possible. Values may also be expressed as a percentage of predose or control values when deemed appropriate. Inferential statistics will be performed according to the matrix below when possible, but will exclude semi-quantitative data, and any group with less than 3 observations.

Statistical Matrix

Variables for Inferential Analysis	Statistical Method
	Parametric/ Non-Parametric
Body Weight	X
Body Temperature	X
Hematology Variables	X
Coagulation Variables	X
Clinical Chemistry Variables	X
Cytokines	X
α2-macroglobulin	X
α1-acid glycoprotein	X
Organ Weights	X
Body Weight Gains	X
Organ Weight relative to Body Weight	X
Organ Weight relative to Brain Weight	X

The following pairwise comparisons will be made:

Group 2 vs. Group 1

Group 3 vs. Group 1

Group 4 vs. Group 1

19.1. Parametric/Non-Parametric

Levene's test will be used to assess the homogeneity of group variances.

Datasets with at least 3 groups will be compared using an overall one-way ANOVA *F*-test if Levene's test is not significant or the Kruskal-Wallis test if it is. If the overall *F*-test or Kruskal-Wallis test is found to be significant, then the above pairwise comparisons will be conducted using Dunnett's or Dunn's test, respectively.

Datasets with 2 groups (the designated control group and 1 other group) will be compared using a *t*-test if Levene's test is not significant or Wilcoxon Rank-Sum test if it is.

Appendix 1

20. COMPUTERIZED SYSTEMS

The following critical computerized systems may be used in the study. The actual critical computerized systems used will be specified in the Final Report.

Data for parameters not required by study plan, which are automatically generated by analytical devices used will be retained on file but not reported. Statistical analysis results that are generated by the program but are not required by study plan and/or are not scientifically relevant will be retained on file but will not be included in the tabulations.

Critical Computerized Systems

System Name	Description of Data Collected and/or Analyzed
Provantis	In-life; clinical pathology; postmortem
Dispense	Test Material receipt, accountability and/or formulation activities
SRS (CR-MTL in-house application built with SAS) and SAS system for Windows and/or In-house reporting software Nevis 2012 (using SAS)	Statistical analyses of numerical in-life, clinical pathology and postmortem data
Mesa Laboratories AmegaView CMS	Continuous Monitoring System. Monitoring of standalone fridges, freezers, incubators, and selected laboratories to measure temperature, relative humidity, and CO2, as appropriate
Johnson Controls Metasys	Building Automation System. Control of HVAC and other building systems, as well as temperature/humidity control and trending in selected laboratories and animal rooms
Empower 3 (Waters Corporation)	Data acquisition for dose formulation analysis, including regression analysis and measurement of concentration and recovery of dose formulations using HPLC
BioPlex Manager	Cytokine data collection
Softmax Pro GxP	IFN-α data collection
Watson LIMS	Biomarker data analysis
Dynamics (Wyatt)	Data acquisition for particle size analysis of the test item using DLS

21. AMENDMENTS AND DEVIATIONS

Changes to the approved study plan shall be made in the form of an amendment, which will be signed and dated by the Study Director. Every reasonable effort will be made to discuss any necessary study plan changes in advance with the Sponsor.

All study plan and SOP deviations will be documented in the study records. Deviations from the study plan and/or SOP related to the phase(s) of the study conducted at a Test Site shall be documented, acknowledged by the PI/IS, and reported to the Study Director for authorization/acknowledgement. The Study Director will notify the Sponsor of deviations that may result in a significant impact on the study as soon as possible.

Appendix 1

22. RETENTION OF RECORDS, SAMPLES, AND SPECIMENS

All study-specific raw data, electronic data, documentation, study plan, retained samples and specimens, and interim (if applicable) and final reports will be archived by no later than the date of final report issue. All materials generated by Charles River from this study will be transferred to CR MTL archive. One year after issue of the draft report, the Sponsor will be contacted to determine the disposition of materials associated with the study.

Records to be maintained will include, but will not be limited to, documentation and data for the following:

- Study Plan, study plan amendments, and deviations
- Study schedule
- Study-related correspondence
- Test system receipt, health, and husbandry
- Test and Reference Item receipt, identification, preparation, and analysis
- In-life measurements and observations
- Clinical pathology sample collection and evaluation
- Gross and microscopic observations and related data
- Organ weight measurements
- Statistical analysis results

23. REPORTING

A comprehensive Draft Report will be prepared following completion of the study and will be finalized following consultation with the Sponsor. The report will include all information necessary to provide a complete and accurate description of the experimental methods and results and any circumstances that may have affected the quality or integrity of the study.

The Sponsor will receive an electronic version of the Draft and Final Report provided in Adobe Acrobat PDF format (hyperlinked and searchable at final) along with a Microsoft Word version of the text. The PDF document will be created from native electronic files to the extent possible, including text and tables generated by the Test Facility. Report components not available in native electronic files and/or original signature pages will be scanned and converted to PDF image files for incorporation. An original copy of the report with the Test Facility's handwritten signatures will be retained.

Reports should be finalized within 6 months of issue of the Draft Report. If the Sponsor has not provided comments to the report within 6 months of draft issue, the report will be finalized by the Test Facility unless other arrangements are made by the Sponsor.

Appendix 1

24. ANIMAL WELFARE

24.1. Institutional Animal Care and Use Committee Approval

The study plan and any amendment(s) or procedures involving the care and use of animals in this study will be reviewed and approved by CR SHB Institutional Animal Care and Use Committee (IACUC). During the study, the care and use of animals will be conducted with guidance from the USA National Research Council and the Canadian Council on Animal Care (CCAC).

Appendix 1

AMENDMENT APPROVAL

(b) (6) Date: 12 Apr 2017

(b) (6) Date: 12 Apr 2017

Appendix 1

SPONSOR APPROVAL

The Study Plan Amendment was approved by the Sponsor by email on 12 Apr 2017.

Appendix 1

SUMMARY OF CHANGES AND JUSTIFICATIONS

Study Plan effective date: 08-Mar-2017

Note: When applicable, additions are indicated in bold underlined text and deletions are indicated in bold strikethrough text in the affected sections of the document.

Item or Section(s)	Justification
Amendment 1	**Date: 15-Mar-2017**
2. PROPOSED STUDY SCHEDULE	To update as per sponsor request.
7. RESPONSIBLE PERSONNEL	To update the contact information of the ATA PI.
10.3.1.2. Stability Analysis	To clarify that stability analysis will be performed on the bulk Test Item.
15.2. Laboratory Investigations (Cytokine Analysis)	To correct a typographical error.
15.3. Anti Therapeutic Antibody (ATA) Analysis	To clarify the processing of samples and update the shipping contact information.
15.4. PBMC Analysis	To change the blood collection procedure.
Amendment 2	**Date: 17-Mar-2017**
1. OBJECTIVE(S)	To correct a typographical error.
8.1. Test Item	To add the concentration of the bulk Test Item.
11.3. Environmental Acclimation	To correct due to schedule modification.
15.2. Laboratory Ivestigations (Cytokine Analysis)	To include clarification for sample processing.
Amendment 3	**Date: 12-Apr-2017**
7. RESPONSIBLE PERSONNEL	To add the email address of the management contact and to assign a pathologist from PAI-FDK.
5.2. Test Facility-designated Subcontractor(s)	To add the histopathology phase as it will be audited by PAI-FDK.
8.4. Analysis of Test Item	To correct the storage conditions for samples transfer.
15.3. Anti Therapeutic Antibody (ATA) Analysis	To correct the shipping contact information and to add a blood collection occasion on Day 29.
17.2. Histopathology	To include that slides will be shipped to the pathologist Test Site.
17.3. Pathology Peer Review	To update as the pathology peer review will not be performed at the Test Facility.
Amendment 4	**Date: 25-Apr-2017**
4. REGULATORY COMPLIANCE	To remove the ATA analysis.
7. RESPONSIBLE PERSONNEL	To remove the PI responsible for the ATA analysis.
15.3. Anti Therapeutic Antibody (ATA) Analysis	To remove the terminal blood collections and to clarify that ATA samples will not be analyzed.

Appendix 1

TABLE OF CONTENTS

Appendix 1

1. OBJECTIVE(S)

The objectives of this study are to determine the potential toxicity of mRNA-1443, when given by intramuscular injection for 6 weeks (4 doses) to rats and to evaluate the potential reversibility of any findings following a 2-week recovery period.

1.1. Study Classification

Study Category:	TOX
Study Type:	Repeat Dose Toxicity
Study Design:	Parallel
Primary Treatment CAS Registry Number:	Not Available
Primary Treatment Unique Ingredient ID:	Not Available
Class of Compound:	mRNA

2. PROPOSED STUDY SCHEDULE

Proposed study dates are listed below. Actual applicable dates will be included in the Final Report.

Experimental Start Date:	08 Mar 2017
Experimental Completion Date:	25 Aug 2017 (Last date data are collected from the study)
Animal Arrival:	08 Mar 2017
Initiation of Dosing:	20 Mar 2017 (Male) 21 Mar 2017 (Female)
Completion of In-life:	03 May 2017 (Main) 16 May 2017 (Recovery) (Last date of necropsy)
Unaudited Draft Report:	13 Jul 2017
Audited Draft Report:	18 Aug 2017
Final Report:	25 Aug 2017

3. GUIDELINES FOR STUDY DESIGN

The design of this study was based on the study objective(s), the overall product development strategy for the Test Item, and the following study design guidelines:

- OECD Guideline 407. *Repeated Dose 28-day Oral Toxicity Study in Rodents*.

Appendix 1

- Committee for Medicinal Products for Human Use (CHMP). *Note for Guidance on Repeated Dose Toxicity*. CPMP/SWP/1042/99corr.
- ICH Harmonised Tripartite Guideline M3 (R2). *Nonclinical Safety Studies for the Conduct of Human Clinical Trials and Marketing Authorization for Pharmaceuticals*.
- Japanese Guidelines for Nonclinical Studies of Drugs Manual (1995). *Guidelines for Toxicity Studies of Drugs (Chapter 3, Repeated Dose Toxicity Studies)*.
- Appendix to Director General Notification, No. 12-Nousan-8147, 24 November 2000, Agricultural Production Bureau, Ministry of Agriculture, Forestry and Fisheries of Japan (JMAFF).

4. REGULATORY COMPLIANCE

The study will be performed in accordance with the OECD Principles of Good Laboratory Practice and as accepted by Regulatory Authorities throughout the European Union, United States of America (FDA), Japan (MHLW), and other countries that are signatories to the OECD Mutual Acceptance of Data Agreement.

Any portion of this study conducted in the USA will be performed in accordance with the U.S. Department of Health and Human Services, Food and Drug Administration. United States Code of Federal Regulations, Title 21, Part 58: Good Laboratory Practice for Nonclinical Laboratory Studies and as accepted by Regulatory Authorities throughout the European Union (OECD Principles of Good Laboratory Practice), Japan (MHLW), and other countries that are signatories to the OECD Mutual Acceptance of Data Agreement.

Exceptions to GLPs include the following study elements:

- Characterization of the Test Item will be performed by the Sponsor or Sponsor subcontractor according to established SOPs, controls, and approved test methodologies to ensure integrity and validity of the results generated; these analyses will not be conducted in compliance with the GLP or GMP regulations.
- Analysis of cytokines, α2-macroglobulin, α1-acid glycoprotein~~, anti-therapeutic antibody~~ and PBMCs will be conducted using scientifically qualified methods and in accordance with all applicable analytical procedures.
- Pathology peer review

5. QUALITY ASSURANCE

5.1. Test Facility

The Test Facility Quality Assurance Program (QAP) will monitor the study to assure the facilities, equipment, personnel, methods, practices, records, and controls are in conformance with Good Laboratory Practice regulations. The QAP will review the study plan, conduct inspections at intervals adequate to assure the integrity of the study, and audit the Final Report to

Appendix 1

assure that it accurately describes the methods and standard operating procedures and that the reported results accurately reflect the raw data of the study.

The Test Facility QAP contact for this study is indicated below:

E-mail: (b) (6)

5.2. Test Facility-designated Subcontractor(s)

The following study phases performed by Test Facility-designated subcontractors will be audited by the Test Facility QAP:

- Ophthalmology

The following study phases performed by Test Facility-designated subcontractors will be audited by the respective subcontractor QAP(s):

- Histopathology

For all study phase(s) inspected by subcontractor QAP(s), copies of each periodic inspection report will be made available to the Study Director, Test Facility Management, and the Test Facility QAP.

- A listing of critical computerized systems used in the conduct and/or interpretation of the assigned study phase

8. TEST AND REFERENCE ITEMS

8.1. Test Item

Identification:	mRNA-1443
Supplier:	Moderna Therapeutics, Inc.
Batch (Lot) Number:	MTDP17017
Concentration:	2.6 mg/mL
Retest Date:	An end-of-use analysis of the bulk Test Item will be performed to demonstrate the stability of the Test Item during the dosing period.
Physical Description:	White to off-white lipid nanopacticle dispersion
Storage Conditions:	Kept in a freezer set to maintain -20°C

Appendix 1

8.2. Reference Item

Identification:	Phosphate-buffered Saline (PBS) pH 7.2
Supplier:	Will be included in the Final Report
Batch (Lot) Number:	Will be included in the Final Report
Expiration Date:	Will be included in the Final Report
Physical Description:	Liquid
Storage Conditions:	Kept in a controlled temperature area set to maintain 21°C

8.3. Test Item Characterization

The Sponsor will provide to the Test Facility documentation of the identity, strength, purity and composition for the Test Item. A Certificate of Analysis or equivalent documentation will be provided for inclusion in the Final Report. The Sponsor will also provide information concerning the regulatory standard that was followed for these evaluations.

The Sponsor has appropriate documentation on file concerning the method of synthesis, fabrication or derivation of the Test Item, and this information is available to the appropriate regulatory agencies should it be requested.

8.4. Analysis of Test Item

A sample (2 vials) of the Test Item will be taken on the completion of the dosing period. Analysis of bulk Test Item for concentration, particle size and purity will be performed.

The first vial will be transferred (on dry ice) to the analytical laboratory at the Test Facility for concentration and particle size analysis.

The second vial will be transferred (on dry ice) to the molecular biology laboratory at the Test Facility for purity analysis.

Purity and Particle size analysis will be performed by IEX- HPLC, Differential Light Scattering (DLS) and capillary electrophoresis (CE) using validated analytical procedures.

Any residual/retained analytical samples (and Test Item used in analysis) will be discarded before issue of the Final Report.

8.5. Reserve Samples

For each batch (lot) of Test and Reference Items, a reserve sample (1 mL or 1 vial) will be collected and maintained under the appropriate storage conditions by the Test Facility.

8.6. Test and Reference Item Inventory and Disposition

Records of the receipt, distribution, storage, and disposition of Test and Reference Items will be maintained. With the exception of reserve samples, all unused Sponsor-supplied bulk Test Item will be returned to the Sponsor on dry ice (after completion of dosing).

Appendix 1

9. SAFETY

The safety precautions for the Test Item and dose formulations will be documented in a Test Material Safety Data Sheet (TMSDS) based on the information provided by the Sponsor either by an MSDS or similar document.

10. DOSE FORMULATION AND ANALYSIS

10.1. Preparation of Reference Item

Dose formulation preparations will be performed under a laminar flow hood using clean procedures.

The Reference Item, Phosphate-buffered Saline (PBS) pH 7.2, will be dispensed on days of dosing (i.e. Days 1, 15, 29 and 43) for administration to Group 1 control animals and will be used as required to dilute the bulk Test Item for administration to Groups 2 to 4 animals. The aliquots will be stored in a refrigerator set to maintain 4°C until use. They will be removed from the refrigerator and allowed to warm to room temperature for at least 30 minutes before dosing.

Any residual volumes will be discarded unless otherwise requested by the Study Director.

10.2. Preparation of Test Item

Dose formulation preparations will be performed under a laminar flow hood using clean procedures.

Test Item formulations will be diluted with PBS pH 7.2, as necessary for administration. The dosing formulations will be prepared on each days of dosing (i.e. Days 1, 15, 29 and 43) and will be stored in a refrigerator set to maintain 4°C. The dose formulations will be allowed to warm to room temperature for at least 30 minutes prior to dosing. Alternatively, the aliquots can be transferred directly to room temperature. When possible, stock vials will be used only once.

Any residual volumes of formulated Test Item will be stored in a refrigerator set at 4°C and discarded prior to report finalization.

10.3. Sample Collection and Analysis

Dose formulation samples will be collected for analysis as indicated in the following table. Additional samples may be collected and analyzed at the discretion of the Study Director.

Appendix 1

Dose Formulation Sample Collection Schedule

Interval[b]	Homogeneity	Concentration	Sampling From
Day 1	All groups[a]	All groups	Dosing container
Day 43	N/A	All groups	Dosing container

N/A = Not applicable.

[a] The homogeneity results obtained from the top, middle and bottom preparations will be averaged and utilized as the concentration results.

[b] Samples will be collected on the first preparation of the study and on the last preparation of the study.

Samples to be analyzed will be submitted as soon as possible following collection.

All samples to be analyzed will be transferred (on ice pack) to the analytical laboratory.

Any residual/retained analytical samples (and Test Item used in analysis) will be discarded before issue of the Final Report.

10.3.1. Analytical Method

Analyses described below will be performed by IEX-HPLC using a validated analytical procedure (CR-MTL Study No. 1801913).

10.3.1.1. Concentration and Homogeneity Analysis

Samples for Analysis:	Duplicate top, middle, and bottom samples (duplicate middle only from Group 1); sent for analysis as noted in Section 10.3. On days where only concentration analysis is required, the formulation will only be sampled from the middle.
Backup Samples:	Triplicate top, middle, and bottom samples (triplicate middle only from Group 1); maintained at the Test Facility. Backup samples may be analyzed at the discretion of the Study Director. On days where only concentration analysis is required, the formulation will only be sampled from the middle.
Sampling Containers:	Appropriate sized glass containers.
Sample Volume:	0.5 mL for analysis and backup samples.
Storage Conditions:	Kept in a refrigerator set to maintain 4°C.
Acceptance Criteria:	For concentration, the criteria for acceptability will be mean sample concentration results within or equal to ± 15% of theoretical concentration. Each individual sample concentration result within or equal to ± 20%. For homogeneity, the criteria for acceptability will be a relative standard deviation (RSD) of concentrations of ≤ 5% for each group.

Appendix 1

10.3.1.2. Stability Analysis

There will be no stability analysis performed for concentration used on this study however, end of use stability analysis of the bulk Test Item will be performed at the end of the dosing period.

11. TEST SYSTEM

Species:	Rat
Strain:	Crl:CD(SD) Sprague-Dawley rat
Source:	Charles River Canada Inc., St. Constant, QC, Canada
Number of Males Ordered:	60
Number of Females Ordered:	60
Target Age at Arrival:	4 to 8 weeks
Target Weight at Arrival:	126 to 150 g (males) 101 to 125 g (females)

The actual age, weight, and number of animals received will be listed in the Final Report.

11.1. Justification of Test System and Number of Animals

The Sprague Dawley rat was chosen as the animal model for this study as it is an accepted rodent species for preclinical toxicity testing by regulatory agencies.

The total number of animals to be used in this study is considered to be the minimum required to properly characterize the effects of the Test Item. This study has been designed such that it does not require an unnecessary number of animals to accomplish its objectives.

At this time, studies in laboratory animals provide the best available basis for extrapolation to humans and are required to support regulatory submissions. Acceptable models which do not use live animals currently do not exist.

11.2. Animal Identification

Each animal will be identified using a subcutaneously implanted electronic identification chip.

11.3. Environmental Acclimation

A minimum acclimation period of 12 days will be allowed between animal receipt and the start of dosing in order to accustom the animals to the laboratory environment.

11.4. Selection, Assignment, Replacement, and Disposition of Animals

Animals will be assigned to groups by a stratified randomization scheme designed to achieve similar group mean body weights. Males and females will be randomized separately. Animals in poor health or at extremes of body weight range will not be assigned to groups.

Appendix 1

Before the initiation of dosing, any assigned animals considered unsuitable for use in the study will be replaced by alternate animals obtained from the same shipment and maintained under the same environmental conditions.

After initiation of dosing, study animals may be replaced during the replacement period with alternate animals in the event of accidental injury, non-Test Item-related health issues, or similar circumstances.

The alternate animals may be used as replacements on the study within 3 days.

The disposition of all animals will be documented in the study records.

12. HUSBANDRY

12.1. Housing

Animals will be group housed (up to 3 animals of the same sex and same dosing group together) in polycarbonate cages containing appropriate bedding equipped with an automatic watering valve. These housing conditions will be maintained unless deemed inappropriate by the Study Director and/or Clinical Veterinarian. The room(s) in which the animals will be kept will be documented in the study records.

Animals will be separated during designated procedures/activities. Each cage will be clearly labeled with a color-coded cage card indicating study, group, animal number(s), and sex. Cages will be arranged on the racks in group order. Where possible, control group animals will be housed on a separate rack from the Test Item treated animals.

12.2. Environmental Conditions

The targeted conditions for animal room environment will be as follows:

Temperature:	19°C to 25°C
Humidity:	30% to 70%
Light Cycle:	12 hours light and 12 hours dark (except during designated procedures)

12.3. Food

PMI Nutrition International Certified Rodent Chow No. 5CR4 will be provided ad libitum throughout the study, except during designated procedures. The same diet in meal form may be provided to individual animals as warranted by clinical signs (e.g., broken/damaged incisors or other health changes).

The feed is analyzed by the supplier for nutritional components and environmental contaminants. Results of the analysis are provided by the supplier and are on file at the Test Facility.

It is considered that there are no known contaminants in the feed that would interfere with the objectives of the study.

Appendix 1

12.4. Water

Municipal tap water after treatment by reverse osmosis and ultraviolet irradiation will be freely available to each animal via an automatic watering system (except during designated procedures). Water bottles can be provided, if required.

Periodic analysis of the water is performed, and results of these analyses are on file at the Test Facility.

It is considered that there are no known contaminants in the water that could interfere with the outcome of the study.

12.5. Animal Enrichment

Animals will be socially housed for psychological/environmental enrichment and will be provided with items such as a hiding tube and a chewing object, except during study procedures/activities.

12.6. Veterinary Care

Veterinary care will be available throughout the course of the study and animals will be examined by the veterinary staff as warranted by clinical signs or other changes. All veterinary examinations and recommended therapeutic treatments, if any, will be documented in the study records.

In the event that animals show signs of illness or distress, the responsible veterinarian may make initial recommendations about treatment of the animal(s) and/or alteration of study procedures, which must be approved by the Study Director or Scientific designate. All such actions will be properly documented in the study records and, when appropriate, by study plan amendment. Treatment of the animal(s) for minor injuries or ailments may be approved without prior consultation with the Sponsor representative when such treatment does not impact fulfillment of the study objectives. If the condition of the animal(s) warrants significant therapeutic intervention or alterations in study procedures, the Sponsor representative will be contacted, when possible, to discuss appropriate action. If the condition of the animal(s) is such that emergency measures must be taken, the Study Director and/or clinical veterinarian will attempt to consult with the Sponsor representative prior to responding to the medical crisis, but the Study Director and/or veterinarian has authority to act immediately at his/her discretion to alleviate suffering. The Sponsor representative will be fully informed of any such events.

Appendix 1

13. EXPERIMENTAL DESIGN

Experimental Design

Group No.	Test Material	Dose Level (µg/dose)	Dose Volume (µL/dose)	Dose Concentration (mg/mL)	No. of Animals			
					Main Study		Recovery Study	
					Males	Females	Males	Females
1	Reference Item	0	200	0	10	10	5	5
2	mRNA-1443	10	200	0.05	10	10	-	-
3	mRNA-1443	30	200	0.15	10	10	-	-
4	mRNA-1443	100	200	0.5	10	10	5	5

- : Not applicable

13.1. Administration of Test and Reference Items

The Test and Reference Items will be administered to the appropriate animals via intramuscular injection into the lateral compartment of the thigh on Days 1, 15, 29 and 43, the injection site will be alternated on each dosing occasion (Site 1 left thigh and Site 2 right thigh). The volume for each dose will be administered using a syringe/needle within the demarcated area. The first day of dosing will be designated as Day 1 (exception: alternate animals used for replacement after Day 1 will assume the day of the animal being replaced).

The injection area will be marked as frequently as required to allow appropriate visualization of administration sites. Hair may be clipped or shaved if required to improve visualization of the injection sites. The injection site will be documented in the raw data for each dose administered.

13.2. Justification of Route and Dose Levels

The intramuscular route of exposure was selected because this is the intended route of human exposure.

The dose levels for this toxicology study were chosen to approximate a substantial multiple of the anticipated clinical starting dose and top clinical dose. The highest dose to be tested is expected to represent the intended maximum human clinical dose and volume and will be administered by the clinical route (intramuscular). At this dose level, minimal systemic toxicity is expected, but it is possible mild to moderate injection site reaction (redness, swelling) and potentially elevation of systemic cytokine/acute phase markers may be observed. The mid- and low-dose were selected to evaluate the dose-dependent effect of this compound.

14. IN-LIFE PROCEDURES, OBSERVATIONS, AND MEASUREMENTS

The in-life procedures, observations, and measurements listed below including Laboratory Investigations listed in section below will be performed for all main study and recovery animals, unless otherwise indicated in the respective section. During the study, additional evaluations to those described below and/or scheduled, and considered necessary by the Study Director and/or Veterinarian to assess health status will be conducted and duly documented. More frequent observations may be undertaken if considered appropriate.

Appendix 1

14.1. Mortality/Moribundity Checks

Frequency: Twice daily, once in the morning and once in the afternoon, throughout the study.

Procedure: Animals will be observed for general health/mortality and moribundity. Animals will not be removed from cage during observation, unless necessary for identification or confirmation of possible findings.

14.2. Clinical Observations

14.2.1. Detailed Clinical Observations

Frequency: Weekly during the dosing and recovery periods, and at least every two weeks during the predosing period.

Procedure: Animals removed from the cage for examination.

14.3. Local Irritation Assessment

Frequency: On days of dosing; at least 24 and 72 hours post-dose (end of each group). Weekly when there is no dosing and during the recovery period. Following Day 43 dosing, no assessment will be performed on main animals at 72 hours postdose as animals will be sent to necropsy on Day 44.

Procedure: All animals will have the dose injection site examined for signs of erythema/edema. Observations will be scored according to the Local Irritation Assessment scoring table as follows:

Erythema (Redness)	**Score**
No erythema	0
Very slight erythema (barely perceptible)	1
Mild erythema	2
Moderate to severe erythema	3
Severe erythema (beet redness to slight eschar formation, injury in depth)	4
Notable dermal lesion (maximized)	M
Edema (Swelling)	
No edema	0
Very slight edema (barely perceptible)	1
Slight edema	2
Moderate edema	3
Severe edema	4

Appendix 1

Any other abnormalities will be recorded as they are observed.

14.4. Body Weights

Frequency:	Weekly during the dosing and recovery periods, and at least every two weeks during the predosing period.
Procedure:	Animals will be individually weighed. A fasted weight will be recorded on the day of necropsy. Terminal body weights will not be collected from animals found dead or euthanized moribund.

14.5. Food Consumption

Frequency:	Weekly, starting Day -7, throughout the dosing and recovery periods.
Procedure:	Food consumption will be quantitatively measured except for on the day of scheduled euthanasia.

14.6. Ophthalmic Examinations

Frequency:	Once prestudy and again toward the end of Week 6 of the dosing period. During Week 2 of the recovery period if Test Item-related findings are observed during the dosing period.
Procedure:	All animals will be subjected to funduscopic (indirect ophthalmoscopy) and biomicroscopic (slit lamp) examinations. The mydriatic used will be Atropine 0.126%.
Evaluation:	A report will be included as an appendix to the Final Report.

14.7. Body Temperature

Frequency:	On Day 1 and Day 43 at predose, and 6 and 24 hours post dose (end of each group). If body temperature is significantly above normal range (36.0°C to 38.0°C) the temperature will be monitored daily till return to normal. If clinical observations indicate a possible body temperature changes measurements may be taken at the discretion of the Study Director.
Procedure:	Rectal body temperature will be recorded on un-sedated animals.

Appendix 1

15. LABORATORY EVALUATIONS

15.1. Clinical Pathology

15.1.1. Sample Collection

Blood will be collected from the abdominal aorta following isoflurane anesthesia. After collection, samples will be transferred to the appropriate laboratory for processing.

Animals will be fasted overnight before blood sampling (for clinical chemistry). Samples will be collected according to the following table.

Samples for Clinical Pathology Evaluation

Group Nos.	Time Point	Hematology	Coagulation	Clinical Chemistry	α1-acid glycoprotein/ α2-macroglubulin
1 to 4[a]	Day 44	X	X	X	X
1 and 4	Day 57	X	X	X	X
Unscheduled euthanasia (when possible)	Before euthanasia	X	X	X	X

X = Sample to be collected

[a] Samples will only be collected from those animals scheduled for euthanasia on Day 44.

Any residual/retained clinical pathology samples will be discarded before issue of the Final Report.

15.1.2. Hematology

Target Volume: 0.5 mL

Anticoagulant: EDTA

Hematology Parameters

Red blood cell count Hemoglobin concentration Hematocrit Mean corpuscular volume Red Blood Cell Distribution Width Mean corpuscular hemoglobin concentration Mean corpuscular hemoglobin Reticulocyte count (absolute) Platelet count	White blood cell count Neutrophil count (absolute) Lymphocyte count (absolute) Monocyte count (absolute) Eosinophil count (absolute) Basophil count (absolute) Large unstained cells (absolute)

A blood smear will be prepared from each hematology sample. Blood smears will be labeled, stained, and stored. Blood smears may be read to investigate results. If additional examination of blood smears is deemed necessary, the smears may be subsequently evaluated and this evaluation will be described in a study plan amendment.

Appendix 1

15.1.3. Coagulation

Target Volume: 1.2 mL (in a 1.3 mL tube)

Anticoagulant: Citrate

Processing: To plasma

Coagulation Parameters

Activated partial thromboplastin time Fibrinogen	Prothrombin time Sample Quality

15.1.4. Clinical Chemistry

Target Volume: 0.7 mL

Anticoagulant: None, collected in serum separator tube

Processing: To serum

Clinical Chemistry Parameters

Alanine aminotransferase Aspartate aminotransferase Alkaline phosphatase Gamma-glutamyltransferase Creatine Kinase Total bilirubin[a] Urea nitrogen Creatinine Calcium Phosphorus	Total protein Albumin Globulin Albumin/globulin ratio Glucose Cholesterol Triglycerides Sodium Potassium Chloride Sample Quality

[a] When total bilirubin is > 0.5 mg/dL, indirect and direct bilirubin will also be measured.

15.1.5. Bone Marrow Smear Evaluation (Optional)

Bone marrow smears will be collected and prepared as described in the Tissue Collection and Preservation table (Section 16.5). Evaluation of stained smears may be added by amendment at the discretion of the Study Director in consultation with the pathologist and the Sponsor.

15.1.6. α1-acid Glycoprotein and α2-macroglobulin Analysis

Blood will be collected via the abdominal aorta following isoflurane anesthesia before scheduled and unscheduled euthanasia for all animals.

Target Volume: 0.7 mL

Anticoagulant: None, collected in serum separator tubes

Processing: Blood samples to clot at ambient room temperature. Centrifugation for (b) (4) set at (b) (4) in a refrigerated centrifuge (set to maintain (b) (4). Samples will be processed to

Appendix 1

serum by the Immunology Department. Serum will be aliquoted into 1 x 75 µL aliquot for α2-macroglobulin and 2 x 75 µL aliquot and a leftover (if available) for α1-acid glycoprotein.

Storage conditions: Stored in a freezer set to maintain -20°C, pending analysis.

Analysis for α1-acid glycoprotein and α2-macroglobulin will be conducted using a qualified ELISA method by the Immunology Department. The procedure to be followed along with the assay acceptance criteria will be detailed in the appropriate analytical procedure.

Samples will be analyzed in duplicate. Any residual/retained samples will be discarded prior to report finalization.

15.2. Laboratory Investigations (Cytokine Analysis)

Blood will be collected from the jugular vein of all recovery animals and preterminally euthanized animals (recovery animals only). After collection, blood samples for serum will be allowed to clot at ambient room temperature and blood samples for plasma will be transferred on wet ice to the appropriate laboratory for processing.

Sample Collection Schedule

Target Blood Volume (mL)			0.5	0.5
Anticoagulant			**None (SST)**	**EDTA**
Centrifugation setting			(b) (4)	
Timepoints			**Sample Type**	
Day	**Hrs**	**No. of Males/ Females**	IFN-α	IL-1ß, IL-6, TNF-α, IP-10, MIP-1-α, MCP-1
1	6	5/5	X	X
15	6	5/5	X	X
29	6	5/5	X	X
43	6	5/5	X	X
57	N/A	5/5	X	X
Matrix			Serum	Plasma
Volume per aliquot (µL)			all volume	all volume
Number of aliquot(s)			1	1
Storage condition (set to maintain)			-80°C	-80°C
Responsible Lab			CR-SHB	CR-SHB

X = Sample to be collected; N/A = not applicable

The number of aliquots and volumes are targets that may be adjusted based on sample volume availability.

The samples will be analyzed by the Immunology department. Analysis for IL-1ß, IL-6, TNF-α, IP-10, MIP-1-α and MCP-1 will be conducted using a multiplex Luminex method. An ELISA

Appendix 1

method will be used for the analysis of IFN-α. The procedures to be followed during the course of this study along with the assays acceptance criteria will be detailed in the appropriate analytical procedure. Samples will be analyzed in duplicate.

Following Study Director approval, any residual/retained samples will be discarded prior to report finalization.

An Immunology Report for cytokine analysis will be included as an appendix to the Final Report.

15.3. Anti Therapeutic Antibody (ATA) Analysis

Blood will be collected by jugular venipuncture from the appropriate animals.

Time Points:	Before initiation of dosing, Day 29 (before dosing)~~, Day 43 (main animals only) and Day 57 (recovery animals)~~.
Target Volume:	0.5 mL
Anticoagulant:	None, collected in serum separator tubes
Processing:	To serum

Samples will be mixed gently and allowed to clot at room temperature until centrifugation, which will be carried out as soon as practical. The samples will be centrifuged for (b) (4) in a refrigerated centrifuge (set to maintain (b) (4)) at (b) (4). The resultant serum will be separated, transferred to uniquely labeled clear polypropylene tubes, frozen immediately over dry ice and transferred to a freezer set to maintain -80°C.
~~**Samples will be shipped on dry ice to:**~~

ATA samples will not be analyzed and will be discarded prior to report finalization, following Study Director approval.

~~**Shipping Contact**~~
~~(b) (6)~~
~~**Integrated BioTherapeutics, Inc.**~~
~~**4 Research Court**~~
~~**Suite 300**~~
~~**Rockville, MD 20850, USA**~~
~~**Tel:** (b) (6)~~
~~**Fax:** (b) (6)~~
~~**E-mail:** (b) (6)~~

~~**The Test Site will be notified before shipment of the samples. Upon receipt at the immunology laboratory, the samples will be stored at -80°C.**~~

~~**The samples will be analyzed for rat anti-CMV antibodies using a qualified ELISA method.**~~

Appendix 1

~~**Any residual/retained samples will be maintained for a minimum of 6 months following issuance of the Audited Draft Report after which samples will be discarded. Alternatively, residual/retained samples will be discarded prior to the 6 month period should the issuance of the Final Report occur prior to the end of the 6 month retention period. An earlier discard of these residual/retained samples may also be requested and authorized by the Study Director.**~~

~~**An Anti-therapeutic Antibody Report will be included as an appendix to the Final Report.**~~

15.4. PBMC Analysis

Blood will be collected by jugular venipuncture from the appropriate animals.

Time Points:	On Day 44 (main animals only).
Target Volume:	0.5 mL
Anticoagulant:	Sodium Heparin
Storage Conditions:	Kept in a controlled temperature area set to maintain 21°C

Samples will be shipped at controlled temperature set to maintain 21°C via overnight courier to the Immunology laboratory, for whole blood stimulation and cytokine analysis, to:

Shipping Contact
(b) (6)
Cell Biology and Immunology
Southern Research
2000 Ninth Ave S
Birmingham AL 35205
Tel: (b) (6)
E-mail: (b) (6)

The Test Site will be notified before shipment of the samples. Upon receipt at the Immunology laboratory, the samples will be stored at room temperature.

The PBMC samples will be analyzed using a qualified method.

Any residual/retained samples will be maintained for a minimum of 6 months following issuance of the Audited Draft Report after which samples will be discarded. Alternatively, residual/retained samples will be discarded prior to the 6 month period should the issuance of the Final Report occur prior to the end of the 6 month retention period. An earlier discard of these residual/retained samples may also be requested and authorized by the Study Director.

An Immunology Report for PBMC analysis will be included as an appendix to the Final Report.

Appendix 1

16. TERMINAL PROCEDURES

Terminal procedures are summarized in the following table:

Terminal Procedures for Main Study and Recovery Animals

Group No.	No. of Animals		Scheduled Euthanasia Day	Necropsy Procedures			Histology	Histopathology
	M	F		Necropsy	Tissue Collection	Organ Weights		
1	10	10	44	X	X	X	Full Tissue[a]	Full Tissue[a]
2	10	10					Full Tissue[a]	Gross Lesions Target Tissues
3	10	10					Full Tissue[a]	Gross Lesions Target Tissues
4	10	10					Full Tissue[a]	Full Tissue[a]
1	5	5	57	X	X	X	Full Tissue[a]	Full Tissue[a]
4	5	5					Full Tissue[a]	Full Tissue[a]
Unscheduled Deaths				X	X	-	Full Tissue[a]	Full Tissue[a]
Replaced animals (prestudy)[b]				X	Standard Diagnostic List	-	-	-
Replaced animals (after dosing start)				X	X	-	-	-

X = Procedure to be conducted; - = Not applicable.
[a] See Tissue Collection and Preservation table for listing of tissues.
[b] Animals found dead or euthanized before the initiation of dosing.

16.1. Unscheduled Deaths

If a main study or recovery animal dies on study, a complete necropsy examination will be conducted and specified tissues will be saved. If necessary, the animal will be refrigerated to minimize autolysis.

Main or recovery animals may be euthanized for humane reasons as per Test Facility SOPs. The samples for evaluation of laboratory evaluation will be obtained if possible as specified in Section 15. These animals will undergo exsanguination by incision from the abdominal aorta following isoflurane anesthesia unless deemed inappropriate by the Study Director and/or the clinical veterinarian and will undergo complete necropsy examination, and specified tissues will be retained. If necessary, the animal will be refrigerated (set to maintain 4°C) to minimize autolysis.

Animals found dead or euthanized before the initiation of dosing will be subject to complete necropsy examination and limited tissue retention (standard diagnostic tissue list). Any animal replaced after the start of dosing will be subject to complete necropsy examination and tissues will be retained (as per Tissue Collection and Preservation section), and any data generated will not be included in the report unless deemed appropriate by the Study Director.

Appendix 1

16.2. Scheduled Euthanasia

Main study and recovery animals surviving until scheduled euthanasia will have a terminal body weight recorded, samples for laboratory evaluation will be collected (as appropriate), and will be euthanized by exsanguination by incision from the abdominal aorta following isoflurane anesthesia. When possible, the animals will be euthanized rotating across dose groups such that similar numbers of animals from each group, including controls, will be necropsied throughout the day. Animals will be fasted overnight before their scheduled necropsy.

16.3. Necropsy

Main and recovery animals will be subjected to a complete necropsy examination, which will include evaluation of the carcass and musculoskeletal system; all external surfaces and orifices; cranial cavity and external surfaces of the brain; and thoracic, abdominal, and pelvic cavities with their associated organs and tissues.

Necropsy procedures will be performed by qualified personnel with appropriate training and experience in animal anatomy and gross pathology. A veterinary pathologist, or other suitably qualified person, will be available.

At the discretion of the necropsy supervising pathologist, images may be generated for illustration of or consultation on gross observations. Generation of such images will be documented and communicated to the Study Director. Images and associated documentation will be retained and archived.

16.4. Organ Weights

The organs identified for weighing in the Tissues Collection and Preservation table will be weighed at necropsy for all scheduled euthanasia animals. Organ weights will not be recorded for animals found dead or euthanized in poor condition or in extremis. Paired organs will be weighed together. In the event of gross abnormalities, in addition to the combined weight, the weight of each organ of a pair may be taken and entered as a tissue comment. Organ weight as a percent of body weight (using the terminal body weight) and organ weight as a percent of brain weight will be calculated.

16.5. Tissue Collection and Preservation

Representative samples of the tissues identified in the Tissue Collection and Preservation table in ATTACHMENT A will be collected from all animals and preserved in 10% neutral buffered formalin, unless otherwise indicated. Additional tissue samples may be collected to elucidate abnormal findings.

Appendix 1

17. HISTOLOGY AND HISTOPATHOLOGY

17.1. Histology

Tissues in the Tissue Collection and Preservation table from animals identified in the Terminal Procedures table will be embedded in paraffin, sectioned, mounted on glass slides, and stained with hematoxylin and eosin.

17.2. Histopathology

Histopathological evaluation will be performed by a board-certified veterinary pathologist. Target tissues identified by the study pathologist during microscopic evaluation will be communicated to the study Director; tissues will be evaluated and reported. Any additional stains or evaluations, if deemed necessary by the pathologist, will be added by study plan amendment following discussion with the Study Director and in consultation the Sponsor.

At the discretion of the study pathologist and after acknowledgement by the Study Director, images may be captured for consultation purposes.

The appropriate Charles River Laboratories, Pathology Associates Test Site will be contacted for the slide shipping address.

17.3. Pathology Peer Review

A pathology peer review will be conducted by:

(b) (6)
Moderna Therapeutics
200 Technology Square, 3rd Floor
Cambridge, MA 02116
Tel: (b) (6)
E-mail: (b) (6)

The peer review statement or equivalent documentation will be included as an appendix to the Final Report.

18. CONSTRUCTED VARIABLES

Body Weight Gains	Calculated between at least each interval as well as between the beginning and end of each phase
Organ Weight relative to Body Weight	Calculated against the Terminal body weight for scheduled intervals
Organ Weight relative to Brain Weight	Calculated against the brain weight for scheduled intervals

Appendix 1

19. STATISTICAL ANALYSIS

All statistical tests will be conducted at the 5% significance level. All pairwise comparisons will be conducted using two sided tests and will be reported at the 0.1%, 1%, and 5% levels.

Numerical data collected on scheduled occasions for the listed variables will be analyzed as indicated according to sex and occasion. Descriptive statistics number, mean and standard deviation (or %CV or SE when deemed appropriate) will be reported whenever possible. Values may also be expressed as a percentage of predose or control values when deemed appropriate. Inferential statistics will be performed according to the matrix below when possible, but will exclude semi-quantitative data, and any group with less than 3 observations.

Statistical Matrix

Variables for Inferential Analysis	Statistical Method
	Parametric/ Non-Parametric
Body Weight	X
Body Temperature	X
Hematology Variables	X
Coagulation Variables	X
Clinical Chemistry Variables	X
Cytokines	X
α2-macroglobulin	X
α1-acid glycoprotein	X
Organ Weights	X
Body Weight Gains	X
Organ Weight relative to Body Weight	X
Organ Weight relative to Brain Weight	X

The following pairwise comparisons will be made:

Group 2 vs. Group 1

Group 3 vs. Group 1

Group 4 vs. Group 1

19.1. Parametric/Non-Parametric

Levene's test will be used to assess the homogeneity of group variances.

Datasets with at least 3 groups will be compared using an overall one-way ANOVA *F*-test if Levene's test is not significant or the Kruskal-Wallis test if it is. If the overall *F*-test or Kruskal-Wallis test is found to be significant, then the above pairwise comparisons will be conducted using Dunnett's or Dunn's test, respectively.

Datasets with 2 groups (the designated control group and 1 other group) will be compared using a *t*-test if Levene's test is not significant or Wilcoxon Rank-Sum test if it is.

Appendix 1

20. COMPUTERIZED SYSTEMS

The following critical computerized systems may be used in the study. The actual critical computerized systems used will be specified in the Final Report.

Data for parameters not required by study plan, which are automatically generated by analytical devices used will be retained on file but not reported. Statistical analysis results that are generated by the program but are not required by study plan and/or are not scientifically relevant will be retained on file but will not be included in the tabulations.

Critical Computerized Systems

System Name	Description of Data Collected and/or Analyzed
Provantis	In-life; clinical pathology; postmortem
Dispense	Test Material receipt, accountability and/or formulation activities
SRS (CR-MTL in-house application built with SAS) and SAS system for Windows and/or In-house reporting software Nevis 2012 (using SAS)	Statistical analyses of numerical in-life, clinical pathology and postmortem data
Mesa Laboratories AmegaView CMS	Continuous Monitoring System. Monitoring of standalone fridges, freezers, incubators, and selected laboratories to measure temperature, relative humidity, and CO2, as appropriate
Johnson Controls Metasys	Building Automation System. Control of HVAC and other building systems, as well as temperature/humidity control and trending in selected laboratories and animal rooms
Empower 3 (Waters Corporation)	Data acquisition for dose formulation analysis, including regression analysis and measurement of concentration and recovery of dose formulations using HPLC
BioPlex Manager	Cytokine data collection
Softmax Pro GxP	IFN-α data collection
Watson LIMS	Biomarker data analysis
Dynamics (Wyatt)	Data acquisition for particle size analysis of the test item using DLS

21. AMENDMENTS AND DEVIATIONS

Changes to the approved study plan shall be made in the form of an amendment, which will be signed and dated by the Study Director. Every reasonable effort will be made to discuss any necessary study plan changes in advance with the Sponsor.

All study plan and SOP deviations will be documented in the study records. Deviations from the study plan and/or SOP related to the phase(s) of the study conducted at a Test Site shall be documented, acknowledged by the PI/IS, and reported to the Study Director for authorization/acknowledgement. The Study Director will notify the Sponsor of deviations that may result in a significant impact on the study as soon as possible.

Appendix 1

22. RETENTION OF RECORDS, SAMPLES, AND SPECIMENS

All study-specific raw data, electronic data, documentation, study plan, retained samples and specimens, and interim (if applicable) and final reports will be archived by no later than the date of final report issue. All materials generated by Charles River from this study will be transferred to CR MTL archive. One year after issue of the draft report, the Sponsor will be contacted to determine the disposition of materials associated with the study.

Records to be maintained will include, but will not be limited to, documentation and data for the following:

- Study Plan, study plan amendments, and deviations
- Study schedule
- Study-related correspondence
- Test system receipt, health, and husbandry
- Test and Reference Item receipt, identification, preparation, and analysis
- In-life measurements and observations
- Clinical pathology sample collection and evaluation
- Gross and microscopic observations and related data
- Organ weight measurements
- Statistical analysis results

23. REPORTING

A comprehensive Draft Report will be prepared following completion of the study and will be finalized following consultation with the Sponsor. The report will include all information necessary to provide a complete and accurate description of the experimental methods and results and any circumstances that may have affected the quality or integrity of the study.

The Sponsor will receive an electronic version of the Draft and Final Report provided in Adobe Acrobat PDF format (hyperlinked and searchable at final) along with a Microsoft Word version of the text. The PDF document will be created from native electronic files to the extent possible, including text and tables generated by the Test Facility. Report components not available in native electronic files and/or original signature pages will be scanned and converted to PDF image files for incorporation. An original copy of the report with the Test Facility's handwritten signatures will be retained.

Reports should be finalized within 6 months of issue of the Draft Report. If the Sponsor has not provided comments to the report within 6 months of draft issue, the report will be finalized by the Test Facility unless other arrangements are made by the Sponsor.

Appendix 1

24. ANIMAL WELFARE

24.1. Institutional Animal Care and Use Committee Approval

The study plan and any amendment(s) or procedures involving the care and use of animals in this study will be reviewed and approved by CR SHB Institutional Animal Care and Use Committee (IACUC). During the study, the care and use of animals will be conducted with guidance from the USA National Research Council and the Canadian Council on Animal Care (CCAC).

Appendix 1

AMENDMENT APPROVAL

(b) (6) _____ Date: 25 Apr 2017

Appendix 1

SPONSOR APPROVAL

The Study Plan Amendment was approved by the Sponsor by email on 25 Apr 2017.

Appendix 1

SUMMARY OF CHANGES AND JUSTIFICATIONS

Study Plan effective date: 08-Mar-2017

Note: When applicable, additions are indicated in bold underlined text and deletions are indicated in bold strikethrough text in the affected sections of the document.

Item or Section(s)	Justification
Amendment 1	**Date: 15-Mar-2017**
2. PROPOSED STUDY SCHEDULE	To update as per sponsor request.
7. RESPONSIBLE PERSONNEL	To update the contact information of the ATA PI.
10.3.1.2. Stability Analysis	To clarify that stability analysis will be performed on the bulk Test Item.
15.2. Laboratory Investigations (Cytokine Analysis)	To correct a typographical error.
15.3. Anti Therapeutic Antibody (ATA) Analysis	To clarify the processing of samples and update the shipping contact information.
15.4. PBMC Analysis	To change the blood collection procedure.
Amendment 2	**Date: 17-Mar-2017**
1. OBJECTIVE(S)	To correct a typographical error.
8.1. Test Item	To add the concentration of the bulk Test Item.
11.3. Environmental Acclimation	To correct due to schedule modification.
15.2. Laboratory Ivestigations (Cytokine Analysis)	To include clarification for sample processing.
Amendment 3	**Date: 12-Apr-2017**
7. RESPONSIBLE PERSONNEL	To add the email address of the management contact and to assign a pathologist from PAI-FDK.
5.2. Test Facility-designated Subcontractor(s)	To add the histopathology phase as it will be audited by PAI-FDK.
8.4. Analysis of Test Item	To correct the storage conditions for samples transfer.
15.3. Anti Therapeutic Antibody (ATA) Analysis	To correct the shipping contact information and to add a blood collection occasion on Day 29.
17.2. Histopathology	To include that slides will be shipped to the pathologist Test Site.
17.3. Pathology Peer Review	To update as the pathology peer review will not be performed at the Test Facility.
Amendment 4	**Date: 25-Apr-2017**
4. REGULATORY COMPLIANCE	To remove the ATA analysis.
7. RESPONSIBLE PERSONNEL	To remove the PI responsible for the ATA analysis.
15.3. Anti Therapeutic Antibody (ATA) Analysis	To remove the terminal blood collections and to clarify that ATA samples will not be analyzed.
Amendment 5	
8.1. Test Item	To include clarification for TI concentration based on new Summary of Analysis (SoA) issued.
13. EXPERIMENTAL DESIGN	To include clarification to dose levels and dose concentrations based on new SoA issued.

Appendix 1

TABLE OF CONTENTS

Appendix 1

1. OBJECTIVE(S)

The objectives of this study are to determine the potential toxicity of mRNA-1443, when given by intramuscular injection for 6 weeks (4 doses) to rats and to evaluate the potential reversibility of any findings following a 2-week recovery period.

1.1. Study Classification

Study Category:	TOX
Study Type:	Repeat Dose Toxicity
Study Design:	Parallel
Primary Treatment CAS Registry Number:	Not Available
Primary Treatment Unique Ingredient ID:	Not Available
Class of Compound:	mRNA

2. PROPOSED STUDY SCHEDULE

Proposed study dates are listed below. Actual applicable dates will be included in the Final Report.

Experimental Start Date:	08 Mar 2017
Experimental Completion Date:	25 Aug 2017 (Last date data are collected from the study)
Animal Arrival:	08 Mar 2017
Initiation of Dosing:	20 Mar 2017 (Male) 21 Mar 2017 (Female)
Completion of In-life:	03 May 2017 (Main) 16 May 2017 (Recovery) (Last date of necropsy)
Unaudited Draft Report:	13 Jul 2017
Audited Draft Report:	18 Aug 2017
Final Report:	25 Aug 2017

3. GUIDELINES FOR STUDY DESIGN

The design of this study was based on the study objective(s), the overall product development strategy for the Test Item, and the following study design guidelines:

- OECD Guideline 407. *Repeated Dose 28-day Oral Toxicity Study in Rodents*.

Appendix 1

- Committee for Medicinal Products for Human Use (CHMP). *Note for Guidance on Repeated Dose Toxicity*. CPMP/SWP/1042/99corr.
- ICH Harmonised Tripartite Guideline M3 (R2). *Nonclinical Safety Studies for the Conduct of Human Clinical Trials and Marketing Authorization for Pharmaceuticals*.
- Japanese Guidelines for Nonclinical Studies of Drugs Manual (1995). *Guidelines for Toxicity Studies of Drugs (Chapter 3, Repeated Dose Toxicity Studies)*.
- Appendix to Director General Notification, No. 12-Nousan-8147, 24 November 2000, Agricultural Production Bureau, Ministry of Agriculture, Forestry and Fisheries of Japan (JMAFF).

4. REGULATORY COMPLIANCE

The study will be performed in accordance with the OECD Principles of Good Laboratory Practice and as accepted by Regulatory Authorities throughout the European Union, United States of America (FDA), Japan (MHLW), and other countries that are signatories to the OECD Mutual Acceptance of Data Agreement.

Any portion of this study conducted in the USA will be performed in accordance with the U.S. Department of Health and Human Services, Food and Drug Administration. United States Code of Federal Regulations, Title 21, Part 58: Good Laboratory Practice for Nonclinical Laboratory Studies and as accepted by Regulatory Authorities throughout the European Union (OECD Principles of Good Laboratory Practice), Japan (MHLW), and other countries that are signatories to the OECD Mutual Acceptance of Data Agreement.

Exceptions to GLPs include the following study elements:

- Characterization of the Test Item will be performed by the Sponsor or Sponsor subcontractor according to established SOPs, controls, and approved test methodologies to ensure integrity and validity of the results generated; these analyses will not be conducted in compliance with the GLP or GMP regulations.
- Analysis of cytokines, α2-macroglobulin, α1-acid glycoprotein and PBMCs will be conducted using scientifically qualified methods and in accordance with all applicable analytical procedures.
- Pathology peer review

5. QUALITY ASSURANCE

5.1. Test Facility

The Test Facility Quality Assurance Program (QAP) will monitor the study to assure the facilities, equipment, personnel, methods, practices, records, and controls are in conformance with Good Laboratory Practice regulations. The QAP will review the study plan, conduct inspections at intervals adequate to assure the integrity of the study, and audit the Final Report to

Appendix 1

assure that it accurately describes the methods and standard operating procedures and that the reported results accurately reflect the raw data of the study.

The Test Facility QAP contact for this study is indicated below:

(b) (6)
Charles River Laboratories Montreal ULC

E-mail: (b) (6)

5.2. Test Facility-designated Subcontractor(s)

The following study phases performed by Test Facility-designated subcontractors will be audited by the Test Facility QAP:

- Ophthalmology

The following study phases performed by Test Facility-designated subcontractors will be audited by the respective subcontractor QAP(s):

- Histopathology

For all study phase(s) inspected by subcontractor QAP(s), copies of each periodic inspection report will be made available to the Study Director, Test Facility Management, and the Test Facility QAP.

Each IS is required to report any deviations or other circumstances that could affect the quality or integrity of the study to the Study Director in a timely manner. Each IS will provide a report addressing their assigned phase of the study, which will be included as an appendix to the Final Report. The phase report will include the following:

- A listing of critical computerized systems used in the conduct and/or interpretation of the assigned study phase

Principal Investigators (PI) at a Test Facility-designated Test Site

8. TEST AND REFERENCE ITEMS

8.1. Test Item

Identification:	mRNA-1443
Supplier:	Moderna Therapeutics, Inc.
Batch (Lot) Number:	MTDP17017
Concentration:	2.6 **/ 2.5*** mg/mL
Retest Date:	An end-of-use analysis of the bulk Test Item will be performed to demonstrate the stability of the Test Item during the dosing period.
Physical Description:	White to off-white lipid nanopacticle dispersion
Storage Conditions:	Kept in a freezer set to maintain -20°C

*** Concentration based on Summary of Analysis (SoA) released on 16 Mars 2017 / Concentration based on SoA released on 30 May 2017**

8.2. Reference Item

Identification:	Phosphate-buffered Saline (PBS) pH 7.2
Supplier:	Will be included in the Final Report
Batch (Lot) Number:	Will be included in the Final Report
Expiration Date:	Will be included in the Final Report

Appendix 1

Physical Description: Liquid

Storage Conditions: Kept in a controlled temperature area set to maintain 21°C

8.3. Test Item Characterization

The Sponsor will provide to the Test Facility documentation of the identity, strength, purity and composition for the Test Item. A Certificate of Analysis or equivalent documentation will be provided for inclusion in the Final Report. The Sponsor will also provide information concerning the regulatory standard that was followed for these evaluations.

The Sponsor has appropriate documentation on file concerning the method of synthesis, fabrication or derivation of the Test Item, and this information is available to the appropriate regulatory agencies should it be requested.

8.4. Analysis of Test Item

A sample (2 vials) of the Test Item will be taken on the completion of the dosing period. Analysis of bulk Test Item for concentration, particle size and purity will be performed.

The first vial will be transferred (on dry ice) to the analytical laboratory at the Test Facility for concentration and particle size analysis.

The second vial will be transferred (on dry ice) to the molecular biology laboratory at the Test Facility for purity analysis.

Purity and Particle size analysis will be performed by IEX- HPLC, Differential Light Scattering (DLS) and capillary electrophoresis (CE) using validated analytical procedures.

Any residual/retained analytical samples (and Test Item used in analysis) will be discarded before issue of the Final Report.

8.5. Reserve Samples

For each batch (lot) of Test and Reference Items, a reserve sample (1 mL or 1 vial) will be collected and maintained under the appropriate storage conditions by the Test Facility.

8.6. Test and Reference Item Inventory and Disposition

Records of the receipt, distribution, storage, and disposition of Test and Reference Items will be maintained. With the exception of reserve samples, all unused Sponsor-supplied bulk Test Item will be returned to the Sponsor on dry ice (after completion of dosing).

Shipping Contact

Appendix 1

Cell: (b) (6)
E-mail: (b) (6)

9. SAFETY

The safety precautions for the Test Item and dose formulations will be documented in a Test Material Safety Data Sheet (TMSDS) based on the information provided by the Sponsor either by an MSDS or similar document.

10. DOSE FORMULATION AND ANALYSIS

10.1. Preparation of Reference Item

Dose formulation preparations will be performed under a laminar flow hood using clean procedures.

The Reference Item, Phosphate-buffered Saline (PBS) pH 7.2, will be dispensed on days of dosing (i.e. Days 1, 15, 29 and 43) for administration to Group 1 control animals and will be used as required to dilute the bulk Test Item for administration to Groups 2 to 4 animals. The aliquots will be stored in a refrigerator set to maintain 4°C until use. They will be removed from the refrigerator and allowed to warm to room temperature for at least 30 minutes before dosing.

Any residual volumes will be discarded unless otherwise requested by the Study Director.

10.2. Preparation of Test Item

Dose formulation preparations will be performed under a laminar flow hood using clean procedures.

Test Item formulations will be diluted with PBS pH 7.2, as necessary for administration. The dosing formulations will be prepared on each days of dosing (i.e. Days 1, 15, 29 and 43) and will be stored in a refrigerator set to maintain 4°C. The dose formulations will be allowed to warm to room temperature for at least 30 minutes prior to dosing. Alternatively, the aliquots can be transferred directly to room temperature. When possible, stock vials will be used only once.

Any residual volumes of formulated Test Item will be stored in a refrigerator set at 4°C and discarded prior to report finalization.

10.3. Sample Collection and Analysis

Dose formulation samples will be collected for analysis as indicated in the following table. Additional samples may be collected and analyzed at the discretion of the Study Director.

Appendix 1

Dose Formulation Sample Collection Schedule

Interval[b]	Homogeneity	Concentration	Sampling From
Day 1	All groups[a]	All groups	Dosing container
Day 43	N/A	All groups	Dosing container

N/A = Not applicable.

[a] The homogeneity results obtained from the top, middle and bottom preparations will be averaged and utilized as the concentration results.

[b] Samples will be collected on the first preparation of the study and on the last preparation of the study.

Samples to be analyzed will be submitted as soon as possible following collection.

All samples to be analyzed will be transferred (on ice pack) to the analytical laboratory.

Any residual/retained analytical samples (and Test Item used in analysis) will be discarded before issue of the Final Report.

10.3.1. Analytical Method

Analyses described below will be performed by IEX-HPLC using a validated analytical procedure (CR-MTL Study No. 1801913).

10.3.1.1. Concentration and Homogeneity Analysis

Samples for Analysis:	Duplicate top, middle, and bottom samples (duplicate middle only from Group 1); sent for analysis as noted in Section 10.3. On days where only concentration analysis is required, the formulation will only be sampled from the middle.
Backup Samples:	Triplicate top, middle, and bottom samples (triplicate middle only from Group 1); maintained at the Test Facility. Backup samples may be analyzed at the discretion of the Study Director. On days where only concentration analysis is required, the formulation will only be sampled from the middle.
Sampling Containers:	Appropriate sized glass containers.
Sample Volume:	0.5 mL for analysis and backup samples.
Storage Conditions:	Kept in a refrigerator set to maintain 4°C.
Acceptance Criteria:	For concentration, the criteria for acceptability will be mean sample concentration results within or equal to ± 15% of theoretical concentration. Each individual sample concentration result within or equal to ± 20%. For homogeneity, the criteria for acceptability will be a relative standard deviation (RSD) of concentrations of ≤ 5% for each group.

Appendix 1

10.3.1.2. Stability Analysis

There will be no stability analysis performed for concentration used on this study however, end of use stability analysis of the bulk Test Item will be performed at the end of the dosing period.

11. TEST SYSTEM

Species:	Rat
Strain:	Crl:CD(SD) Sprague-Dawley rat
Source:	Charles River Canada Inc., St. Constant, QC, Canada
Number of Males Ordered:	60
Number of Females Ordered:	60
Target Age at Arrival:	4 to 8 weeks
Target Weight at Arrival:	126 to 150 g (males) 101 to 125 g (females)

The actual age, weight, and number of animals received will be listed in the Final Report.

11.1. Justification of Test System and Number of Animals

The Sprague Dawley rat was chosen as the animal model for this study as it is an accepted rodent species for preclinical toxicity testing by regulatory agencies.

The total number of animals to be used in this study is considered to be the minimum required to properly characterize the effects of the Test Item. This study has been designed such that it does not require an unnecessary number of animals to accomplish its objectives.

At this time, studies in laboratory animals provide the best available basis for extrapolation to humans and are required to support regulatory submissions. Acceptable models which do not use live animals currently do not exist.

11.2. Animal Identification

Each animal will be identified using a subcutaneously implanted electronic identification chip.

11.3. Environmental Acclimation

A minimum acclimation period of 12 days will be allowed between animal receipt and the start of dosing in order to accustom the animals to the laboratory environment.

11.4. Selection, Assignment, Replacement, and Disposition of Animals

Animals will be assigned to groups by a stratified randomization scheme designed to achieve similar group mean body weights. Males and females will be randomized separately. Animals in poor health or at extremes of body weight range will not be assigned to groups.

Appendix 1

Before the initiation of dosing, any assigned animals considered unsuitable for use in the study will be replaced by alternate animals obtained from the same shipment and maintained under the same environmental conditions.

After initiation of dosing, study animals may be replaced during the replacement period with alternate animals in the event of accidental injury, non-Test Item-related health issues, or similar circumstances.

The alternate animals may be used as replacements on the study within 3 days.

The disposition of all animals will be documented in the study records.

12. HUSBANDRY

12.1. Housing

Animals will be group housed (up to 3 animals of the same sex and same dosing group together) in polycarbonate cages containing appropriate bedding equipped with an automatic watering valve. These housing conditions will be maintained unless deemed inappropriate by the Study Director and/or Clinical Veterinarian. The room(s) in which the animals will be kept will be documented in the study records.

Animals will be separated during designated procedures/activities. Each cage will be clearly labeled with a color-coded cage card indicating study, group, animal number(s), and sex. Cages will be arranged on the racks in group order. Where possible, control group animals will be housed on a separate rack from the Test Item treated animals.

12.2. Environmental Conditions

The targeted conditions for animal room environment will be as follows:

Temperature:	19°C to 25°C
Humidity:	30% to 70%
Light Cycle:	12 hours light and 12 hours dark (except during designated procedures)

12.3. Food

PMI Nutrition International Certified Rodent Chow No. 5CR4 will be provided ad libitum throughout the study, except during designated procedures. The same diet in meal form may be provided to individual animals as warranted by clinical signs (e.g., broken/damaged incisors or other health changes).

The feed is analyzed by the supplier for nutritional components and environmental contaminants. Results of the analysis are provided by the supplier and are on file at the Test Facility.

It is considered that there are no known contaminants in the feed that would interfere with the objectives of the study.

Appendix 1

12.4. Water

Municipal tap water after treatment by reverse osmosis and ultraviolet irradiation will be freely available to each animal via an automatic watering system (except during designated procedures). Water bottles can be provided, if required.

Periodic analysis of the water is performed, and results of these analyses are on file at the Test Facility.

It is considered that there are no known contaminants in the water that could interfere with the outcome of the study.

12.5. Animal Enrichment

Animals will be socially housed for psychological/environmental enrichment and will be provided with items such as a hiding tube and a chewing object, except during study procedures/activities.

12.6. Veterinary Care

Veterinary care will be available throughout the course of the study and animals will be examined by the veterinary staff as warranted by clinical signs or other changes. All veterinary examinations and recommended therapeutic treatments, if any, will be documented in the study records.

In the event that animals show signs of illness or distress, the responsible veterinarian may make initial recommendations about treatment of the animal(s) and/or alteration of study procedures, which must be approved by the Study Director or Scientific designate. All such actions will be properly documented in the study records and, when appropriate, by study plan amendment. Treatment of the animal(s) for minor injuries or ailments may be approved without prior consultation with the Sponsor representative when such treatment does not impact fulfillment of the study objectives. If the condition of the animal(s) warrants significant therapeutic intervention or alterations in study procedures, the Sponsor representative will be contacted, when possible, to discuss appropriate action. If the condition of the animal(s) is such that emergency measures must be taken, the Study Director and/or clinical veterinarian will attempt to consult with the Sponsor representative prior to responding to the medical crisis, but the Study Director and/or veterinarian has authority to act immediately at his/her discretion to alleviate suffering. The Sponsor representative will be fully informed of any such events.

Appendix 1

13. EXPERIMENTAL DESIGN

Experimental Design

Group No.	Test Material	Dose Level (µg/dose)[a]	Dose Volume (µL/dose)	Dose Concentration (mg/mL)[a]	No. of Animals			
					Main Study		Recovery Study	
					Males	Females	Males	Females
1	Reference Item	0	200	0	10	10	5	5
2	mRNA-1443	10 / **9.6**	200	0.05 / **0.048**	10	10	-	-
3	mRNA-1443	30 / **29**	200	0.15 / **0.145**	10	10	-	-
4	mRNA-1443	100 / **96**	200	0.5 / **0.48**	10	10	5	5

- : Not applicable

[a] **Values based on SoA issued on 16 Mars 2017 / Values based on SoA issued on 30 May 2017.**

13.1. Administration of Test and Reference Items

The Test and Reference Items will be administered to the appropriate animals via intramuscular injection into the lateral compartment of the thigh on Days 1, 15, 29 and 43, the injection site will be alternated on each dosing occasion (Site 1 left thigh and Site 2 right thigh). The volume for each dose will be administered using a syringe/needle within the demarcated area. The first day of dosing will be designated as Day 1 (exception: alternate animals used for replacement after Day 1 will assume the day of the animal being replaced).

The injection area will be marked as frequently as required to allow appropriate visualization of administration sites. Hair may be clipped or shaved if required to improve visualization of the injection sites. The injection site will be documented in the raw data for each dose administered.

13.2. Justification of Route and Dose Levels

The intramuscular route of exposure was selected because this is the intended route of human exposure.

The dose levels for this toxicology study were chosen to approximate a substantial multiple of the anticipated clinical starting dose and top clinical dose. The highest dose to be tested is expected to represent the intended maximum human clinical dose and volume and will be administered by the clinical route (intramuscular). At this dose level, minimal systemic toxicity is expected, but it is possible mild to moderate injection site reaction (redness, swelling) and potentially elevation of systemic cytokine/acute phase markers may be observed. The mid- and low-dose were selected to evaluate the dose-dependent effect of this compound.

14. IN-LIFE PROCEDURES, OBSERVATIONS, AND MEASUREMENTS

The in-life procedures, observations, and measurements listed below including Laboratory Investigations listed in section below will be performed for all main study and recovery animals, unless otherwise indicated in the respective section. During the study, additional evaluations to those described below and/or scheduled, and considered necessary by the Study Director and/or

Appendix 1

Veterinarian to assess health status will be conducted and duly documented. More frequent observations may be undertaken if considered appropriate.

14.1. Mortality/Moribundity Checks

Frequency: Twice daily, once in the morning and once in the afternoon, throughout the study.

Procedure: Animals will be observed for general health/mortality and moribundity. Animals will not be removed from cage during observation, unless necessary for identification or confirmation of possible findings.

14.2. Clinical Observations

14.2.1. Detailed Clinical Observations

Frequency: Weekly during the dosing and recovery periods, and at least every two weeks during the predosing period.

Procedure: Animals removed from the cage for examination.

14.3. Local Irritation Assessment

Frequency: On days of dosing; at least 24 and 72 hours post-dose (end of each group). Weekly when there is no dosing and during the recovery period. Following Day 43 dosing, no assessment will be performed on main animals at 72 hours postdose as animals will be sent to necropsy on Day 44.

Procedure: All animals will have the dose injection site examined for signs of erythema/edema. Observations will be scored according to the Local Irritation Assessment scoring table as follows:

Erythema (Redness)	**Score**
No erythema	0
Very slight erythema (barely perceptible)	1
Mild erythema	2
Moderate to severe erythema	3
Severe erythema (beet redness to slight eschar formation, injury in depth)	4
Notable dermal lesion (maximized)	M
Edema (Swelling)	
No edema	0
Very slight edema (barely perceptible)	1
Slight edema	2
Moderate edema	3
Severe edema	4

Appendix 1

Any other abnormalities will be recorded as they are observed.

14.4. Body Weights

Frequency:	Weekly during the dosing and recovery periods, and at least every two weeks during the predosing period.
Procedure:	Animals will be individually weighed. A fasted weight will be recorded on the day of necropsy. Terminal body weights will not be collected from animals found dead or euthanized moribund.

14.5. Food Consumption

Frequency:	Weekly, starting Day -7, throughout the dosing and recovery periods.
Procedure:	Food consumption will be quantitatively measured except for on the day of scheduled euthanasia.

14.6. Ophthalmic Examinations

Frequency:	Once prestudy and again toward the end of Week 6 of the dosing period. During Week 2 of the recovery period if Test Item-related findings are observed during the dosing period.
Procedure:	All animals will be subjected to funduscopic (indirect ophthalmoscopy) and biomicroscopic (slit lamp) examinations. The mydriatic used will be Atropine 0.126%.
Evaluation:	A report will be included as an appendix to the Final Report.

14.7. Body Temperature

Frequency:	On Day 1 and Day 43 at predose, and 6 and 24 hours post dose (end of each group). If body temperature is significantly above normal range (36.0°C to 38.0°C) the temperature will be monitored daily till return to normal. If clinical observations indicate a possible body temperature changes measurements may be taken at the discretion of the Study Director.
Procedure:	Rectal body temperature will be recorded on un-sedated animals.

Appendix 1

15. LABORATORY EVALUATIONS

15.1. Clinical Pathology

15.1.1. Sample Collection

Blood will be collected from the abdominal aorta following isoflurane anesthesia. After collection, samples will be transferred to the appropriate laboratory for processing.

Animals will be fasted overnight before blood sampling (for clinical chemistry). Samples will be collected according to the following table.

Samples for Clinical Pathology Evaluation

Group Nos.	Time Point	Hematology	Coagulation	Clinical Chemistry	α1-acid glycoprotein/ α2-macroglubulin
1 to 4[a]	Day 44	X	X	X	X
1 and 4	Day 57	X	X	X	X
Unscheduled euthanasia (when possible)	Before euthanasia	X	X	X	X

X = Sample to be collected

[a] Samples will only be collected from those animals scheduled for euthanasia on Day 44.

Any residual/retained clinical pathology samples will be discarded before issue of the Final Report.

15.1.2. Hematology

Target Volume: 0.5 mL

Anticoagulant: EDTA

Hematology Parameters

Red blood cell count Hemoglobin concentration Hematocrit Mean corpuscular volume Red Blood Cell Distribution Width Mean corpuscular hemoglobin concentration Mean corpuscular hemoglobin Reticulocyte count (absolute) Platelet count	White blood cell count Neutrophil count (absolute) Lymphocyte count (absolute) Monocyte count (absolute) Eosinophil count (absolute) Basophil count (absolute) Large unstained cells (absolute)

A blood smear will be prepared from each hematology sample. Blood smears will be labeled, stained, and stored. Blood smears may be read to investigate results. If additional examination of blood smears is deemed necessary, the smears may be subsequently evaluated and this evaluation will be described in a study plan amendment.

Appendix 1

15.1.3. Coagulation

Target Volume: 1.2 mL (in a 1.3 mL tube)

Anticoagulant: Citrate

Processing: To plasma

Coagulation Parameters

Activated partial thromboplastin time Fibrinogen	Prothrombin time Sample Quality

15.1.4. Clinical Chemistry

Target Volume: 0.7 mL

Anticoagulant: None, collected in serum separator tube

Processing: To serum

Clinical Chemistry Parameters

Alanine aminotransferase Aspartate aminotransferase Alkaline phosphatase Gamma-glutamyltransferase Creatine Kinase Total bilirubin[a] Urea nitrogen Creatinine Calcium Phosphorus	Total protein Albumin Globulin Albumin/globulin ratio Glucose Cholesterol Triglycerides Sodium Potassium Chloride Sample Quality

[a] When total bilirubin is > 0.5 mg/dL, indirect and direct bilirubin will also be measured.

15.1.5. Bone Marrow Smear Evaluation (Optional)

Bone marrow smears will be collected and prepared as described in the Tissue Collection and Preservation table (Section 16.5). Evaluation of stained smears may be added by amendment at the discretion of the Study Director in consultation with the pathologist and the Sponsor.

15.1.6. α1-acid Glycoprotein and α2-macroglobulin Analysis

Blood will be collected via the abdominal aorta following isoflurane anesthesia before scheduled and unscheduled euthanasia for all animals.

Target Volume: 0.7 mL

Anticoagulant: None, collected in serum separator tubes

Processing: Blood samples to clot at ambient room temperature. Centrifugation for (b) (4) set at (b) (4) in a refrigerated centrifuge (set to maintain (b) (4)). Samples will be processed to

Appendix 1

serum by the Immunology Department. Serum will be aliquoted into 1 x 75 µL aliquot for α2-macroglobulin and 2 x 75 µL aliquot and a leftover (if available) for α1-acid glycoprotein.

Storage conditions: Stored in a freezer set to maintain -20°C, pending analysis.

Analysis for α1-acid glycoprotein and α2-macroglobulin will be conducted using a qualified ELISA method by the Immunology Department. The procedure to be followed along with the assay acceptance criteria will be detailed in the appropriate analytical procedure.

Samples will be analyzed in duplicate. Any residual/retained samples will be discarded prior to report finalization.

15.2. Laboratory Investigations (Cytokine Analysis)

Blood will be collected from the jugular vein of all recovery animals and preterminally euthanized animals (recovery animals only). After collection, blood samples for serum will be allowed to clot at ambient room temperature and blood samples for plasma will be transferred on wet ice to the appropriate laboratory for processing.

Sample Collection Schedule

Target Blood Volume (mL)			0.5	0.5
Anticoagulant			**None (SST)**	**EDTA**
Centrifugation setting			(b) (4)	
Timepoints			**Sample Type**	
Day	**Hrs**	**No. of Males/ Females**	IFN-α	IL-1ß, IL-6, TNF-α, IP-10, MIP-1-α, MCP-1
1	6	5/5	X	X
15	6	5/5	X	X
29	6	5/5	X	X
43	6	5/5	X	X
57	N/A	5/5	X	X
Matrix			Serum	Plasma
Volume per aliquot (µL)			all volume	all volume
Number of aliquot(s)			1	1
Storage condition (set to maintain)			-80°C	-80°C
Responsible Lab			CR-SHB	CR-SHB

X = Sample to be collected; N/A = not applicable

The number of aliquots and volumes are targets that may be adjusted based on sample volume availability.

The samples will be analyzed by the Immunology department. Analysis for IL-1ß, IL-6, TNF-α, IP-10, MIP-1-α and MCP-1 will be conducted using a multiplex Luminex method. An ELISA

Appendix 1

method will be used for the analysis of IFN-α. The procedures to be followed during the course of this study along with the assays acceptance criteria will be detailed in the appropriate analytical procedure. Samples will be analyzed in duplicate.

Following Study Director approval, any residual/retained samples will be discarded prior to report finalization.

An Immunology Report for cytokine analysis will be included as an appendix to the Final Report.

15.3. Anti Therapeutic Antibody (ATA) Analysis

Blood will be collected by jugular venipuncture from the appropriate animals.

Time Points:	Before initiation of dosing, Day 29 (before dosing).
Target Volume:	0.5 mL
Anticoagulant:	None, collected in serum separator tubes
Processing:	To serum

Samples will be mixed gently and allowed to clot at room temperature until centrifugation, which will be carried out as soon as practical. The samples will be centrifuged for (b) (4) in a refrigerated centrifuge (set to maintain (b) (4) at (b) (4) The resultant serum will be separated, transferred to uniquely labeled clear polypropylene tubes, frozen immediately over dry ice and transferred to a freezer set to maintain -80°C.

ATA samples will not be analyzed and will be discarded prior to report finalization, following Study Director approval.

15.4. PBMC Analysis

Blood will be collected by jugular venipuncture from the appropriate animals.

Time Points:	On Day 44 (main animals only).
Target Volume:	0.5 mL
Anticoagulant:	Sodium Heparin
Storage Conditions:	Kept in a controlled temperature area set to maintain 21°C

Samples will be shipped at controlled temperature set to maintain 21°C via overnight courier to the Immunology laboratory, for whole blood stimulation and cytokine analysis, to:

Shipping Contact
(b) (6)

Cell Biology and Immunology
Southern Research
2000 Ninth Ave S

Appendix 1

Birmingham AL 35205
Tel: (b) (6)
E-mail: (b) (6)

The Test Site will be notified before shipment of the samples. Upon receipt at the Immunology laboratory, the samples will be stored at room temperature.

The PBMC samples will be analyzed using a qualified method.

Any residual/retained samples will be maintained for a minimum of 6 months following issuance of the Audited Draft Report after which samples will be discarded. Alternatively, residual/retained samples will be discarded prior to the 6 month period should the issuance of the Final Report occur prior to the end of the 6 month retention period. An earlier discard of these residual/retained samples may also be requested and authorized by the Study Director.

An Immunology Report for PBMC analysis will be included as an appendix to the Final Report.

Appendix 1

16. TERMINAL PROCEDURES

Terminal procedures are summarized in the following table:

Terminal Procedures for Main Study and Recovery Animals

Group No.	No. of Animals		Scheduled Euthanasia Day	Necropsy Procedures			Histology	Histopathology
	M	F		Necropsy	Tissue Collection	Organ Weights		
1	10	10	44	X	X	X	Full Tissue[a]	Full Tissue[a]
2	10	10					Full Tissue[a]	Gross Lesions Target Tissues
3	10	10					Full Tissue[a]	Gross Lesions Target Tissues
4	10	10					Full Tissue[a]	Full Tissue[a]
1	5	5	57	X	X	X	Full Tissue[a]	Full Tissue[a]
4	5	5					Full Tissue[a]	Full Tissue[a]
Unscheduled Deaths				X	X	-	Full Tissue[a]	Full Tissue[a]
Replaced animals (prestudy)[b]				X	Standard Diagnostic List	-	-	-
Replaced animals (after dosing start)				X	X	-	-	-

X = Procedure to be conducted; - = Not applicable.
[a] See Tissue Collection and Preservation table for listing of tissues.
[b] Animals found dead or euthanized before the initiation of dosing.

16.1. Unscheduled Deaths

If a main study or recovery animal dies on study, a complete necropsy examination will be conducted and specified tissues will be saved. If necessary, the animal will be refrigerated to minimize autolysis.

Main or recovery animals may be euthanized for humane reasons as per Test Facility SOPs. The samples for evaluation of laboratory evaluation will be obtained if possible as specified in Section 15. These animals will undergo exsanguination by incision from the abdominal aorta following isoflurane anesthesia unless deemed inappropriate by the Study Director and/or the clinical veterinarian and will undergo complete necropsy examination, and specified tissues will be retained. If necessary, the animal will be refrigerated (set to maintain 4°C) to minimize autolysis.

Animals found dead or euthanized before the initiation of dosing will be subject to complete necropsy examination and limited tissue retention (standard diagnostic tissue list). Any animal replaced after the start of dosing will be subject to complete necropsy examination and tissues will be retained (as per Tissue Collection and Preservation section), and any data generated will not be included in the report unless deemed appropriate by the Study Director.

Appendix 1

16.2. Scheduled Euthanasia

Main study and recovery animals surviving until scheduled euthanasia will have a terminal body weight recorded, samples for laboratory evaluation will be collected (as appropriate), and will be euthanized by exsanguination by incision from the abdominal aorta following isoflurane anesthesia. When possible, the animals will be euthanized rotating across dose groups such that similar numbers of animals from each group, including controls, will be necropsied throughout the day. Animals will be fasted overnight before their scheduled necropsy.

16.3. Necropsy

Main and recovery animals will be subjected to a complete necropsy examination, which will include evaluation of the carcass and musculoskeletal system; all external surfaces and orifices; cranial cavity and external surfaces of the brain; and thoracic, abdominal, and pelvic cavities with their associated organs and tissues.

Necropsy procedures will be performed by qualified personnel with appropriate training and experience in animal anatomy and gross pathology. A veterinary pathologist, or other suitably qualified person, will be available.

At the discretion of the necropsy supervising pathologist, images may be generated for illustration of or consultation on gross observations. Generation of such images will be documented and communicated to the Study Director. Images and associated documentation will be retained and archived.

16.4. Organ Weights

The organs identified for weighing in the Tissues Collection and Preservation table will be weighed at necropsy for all scheduled euthanasia animals. Organ weights will not be recorded for animals found dead or euthanized in poor condition or in extremis. Paired organs will be weighed together. In the event of gross abnormalities, in addition to the combined weight, the weight of each organ of a pair may be taken and entered as a tissue comment. Organ weight as a percent of body weight (using the terminal body weight) and organ weight as a percent of brain weight will be calculated.

16.5. Tissue Collection and Preservation

Representative samples of the tissues identified in the Tissue Collection and Preservation table in ATTACHMENT A will be collected from all animals and preserved in 10% neutral buffered formalin, unless otherwise indicated. Additional tissue samples may be collected to elucidate abnormal findings.

Appendix 1

17. HISTOLOGY AND HISTOPATHOLOGY

17.1. Histology

Tissues in the Tissue Collection and Preservation table from animals identified in the Terminal Procedures table will be embedded in paraffin, sectioned, mounted on glass slides, and stained with hematoxylin and eosin.

17.2. Histopathology

Histopathological evaluation will be performed by a board-certified veterinary pathologist. Target tissues identified by the study pathologist during microscopic evaluation will be communicated to the study Director; tissues will be evaluated and reported. Any additional stains or evaluations, if deemed necessary by the pathologist, will be added by study plan amendment following discussion with the Study Director and in consultation the Sponsor.

At the discretion of the study pathologist and after acknowledgement by the Study Director, images may be captured for consultation purposes.

The appropriate Charles River Laboratories, Pathology Associates Test Site will be contacted for the slide shipping address.

17.3. Pathology Peer Review

A pathology peer review will be conducted by:

(b) (6)
Moderna Therapeutics
200 Technology Square, 3rd Floor
Cambridge, MA 02116
Tel: (b) (6)
E-mail: (b) (6)

The peer review statement or equivalent documentation will be included as an appendix to the Final Report.

18. CONSTRUCTED VARIABLES

Body Weight Gains	Calculated between at least each interval as well as between the beginning and end of each phase
Organ Weight relative to Body Weight	Calculated against the Terminal body weight for scheduled intervals
Organ Weight relative to Brain Weight	Calculated against the brain weight for scheduled intervals

Appendix 1

19. STATISTICAL ANALYSIS

All statistical tests will be conducted at the 5% significance level. All pairwise comparisons will be conducted using two sided tests and will be reported at the 0.1%, 1%, and 5% levels.

Numerical data collected on scheduled occasions for the listed variables will be analyzed as indicated according to sex and occasion. Descriptive statistics number, mean and standard deviation (or %CV or SE when deemed appropriate) will be reported whenever possible. Values may also be expressed as a percentage of predose or control values when deemed appropriate. Inferential statistics will be performed according to the matrix below when possible, but will exclude semi-quantitative data, and any group with less than 3 observations.

Statistical Matrix

Variables for Inferential Analysis	Statistical Method
	Parametric/ Non-Parametric
Body Weight	X
Body Temperature	X
Hematology Variables	X
Coagulation Variables	X
Clinical Chemistry Variables	X
Cytokines	X
α2-macroglobulin	X
α1-acid glycoprotein	X
Organ Weights	X
Body Weight Gains	X
Organ Weight relative to Body Weight	X
Organ Weight relative to Brain Weight	X

The following pairwise comparisons will be made:

Group 2 vs. Group 1

Group 3 vs. Group 1

Group 4 vs. Group 1

19.1. Parametric/Non-Parametric

Levene's test will be used to assess the homogeneity of group variances.

Datasets with at least 3 groups will be compared using an overall one-way ANOVA *F*-test if Levene's test is not significant or the Kruskal-Wallis test if it is. If the overall *F*-test or Kruskal-Wallis test is found to be significant, then the above pairwise comparisons will be conducted using Dunnett's or Dunn's test, respectively.

Datasets with 2 groups (the designated control group and 1 other group) will be compared using a *t*-test if Levene's test is not significant or Wilcoxon Rank-Sum test if it is.

Appendix 1

20. COMPUTERIZED SYSTEMS

The following critical computerized systems may be used in the study. The actual critical computerized systems used will be specified in the Final Report.

Data for parameters not required by study plan, which are automatically generated by analytical devices used will be retained on file but not reported. Statistical analysis results that are generated by the program but are not required by study plan and/or are not scientifically relevant will be retained on file but will not be included in the tabulations.

Critical Computerized Systems

System Name	Description of Data Collected and/or Analyzed
Provantis	In-life; clinical pathology; postmortem
Dispense	Test Material receipt, accountability and/or formulation activities
SRS (CR-MTL in-house application built with SAS) and SAS system for Windows and/or In-house reporting software Nevis 2012 (using SAS)	Statistical analyses of numerical in-life, clinical pathology and postmortem data
Mesa Laboratories AmegaView CMS	Continuous Monitoring System. Monitoring of standalone fridges, freezers, incubators, and selected laboratories to measure temperature, relative humidity, and CO2, as appropriate
Johnson Controls Metasys	Building Automation System. Control of HVAC and other building systems, as well as temperature/humidity control and trending in selected laboratories and animal rooms
Empower 3 (Waters Corporation)	Data acquisition for dose formulation analysis, including regression analysis and measurement of concentration and recovery of dose formulations using HPLC
BioPlex Manager	Cytokine data collection
Softmax Pro GxP	IFN-α data collection
Watson LIMS	Biomarker data analysis
Dynamics (Wyatt)	Data acquisition for particle size analysis of the test item using DLS

21. AMENDMENTS AND DEVIATIONS

Changes to the approved study plan shall be made in the form of an amendment, which will be signed and dated by the Study Director. Every reasonable effort will be made to discuss any necessary study plan changes in advance with the Sponsor.

All study plan and SOP deviations will be documented in the study records. Deviations from the study plan and/or SOP related to the phase(s) of the study conducted at a Test Site shall be documented, acknowledged by the PI/IS, and reported to the Study Director for authorization/acknowledgement. The Study Director will notify the Sponsor of deviations that may result in a significant impact on the study as soon as possible.

Appendix 1

22. RETENTION OF RECORDS, SAMPLES, AND SPECIMENS

All study-specific raw data, electronic data, documentation, study plan, retained samples and specimens, and interim (if applicable) and final reports will be archived by no later than the date of final report issue. All materials generated by Charles River from this study will be transferred to CR MTL archive. One year after issue of the draft report, the Sponsor will be contacted to determine the disposition of materials associated with the study.

Records to be maintained will include, but will not be limited to, documentation and data for the following:

- Study Plan, study plan amendments, and deviations
- Study schedule
- Study-related correspondence
- Test system receipt, health, and husbandry
- Test and Reference Item receipt, identification, preparation, and analysis
- In-life measurements and observations
- Clinical pathology sample collection and evaluation
- Gross and microscopic observations and related data
- Organ weight measurements
- Statistical analysis results

23. REPORTING

A comprehensive Draft Report will be prepared following completion of the study and will be finalized following consultation with the Sponsor. The report will include all information necessary to provide a complete and accurate description of the experimental methods and results and any circumstances that may have affected the quality or integrity of the study.

The Sponsor will receive an electronic version of the Draft and Final Report provided in Adobe Acrobat PDF format (hyperlinked and searchable at final) along with a Microsoft Word version of the text. The PDF document will be created from native electronic files to the extent possible, including text and tables generated by the Test Facility. Report components not available in native electronic files and/or original signature pages will be scanned and converted to PDF image files for incorporation. An original copy of the report with the Test Facility's handwritten signatures will be retained.

Reports should be finalized within 6 months of issue of the Draft Report. If the Sponsor has not provided comments to the report within 6 months of draft issue, the report will be finalized by the Test Facility unless other arrangements are made by the Sponsor.

Appendix 1

24. ANIMAL WELFARE

24.1. Institutional Animal Care and Use Committee Approval

The study plan and any amendment(s) or procedures involving the care and use of animals in this study will be reviewed and approved by CR SHB Institutional Animal Care and Use Committee (IACUC). During the study, the care and use of animals will be conducted with guidance from the USA National Research Council and the Canadian Council on Animal Care (CCAC).

Appendix 1

AMENDMENT APPROVAL

(b) (6) _____ Date: 29 Jun 2017

Appendix 1

SPONSOR APPROVAL

The Study Plan Amendment was approved by the Sponsor by email on 28 Jun 2017.

Appendix 1

SUMMARY OF CHANGES AND JUSTIFICATIONS

Study Plan effective date: 08-Mar-2017

Note: When applicable, additions are indicated in bold underlined text and deletions are indicated in bold strikethrough text in the affected sections of the document.

Item or Section(s)	Justification
Amendment 1	**Date: 15-Mar-2017**
2. PROPOSED STUDY SCHEDULE	To update as per sponsor request.
7. RESPONSIBLE PERSONNEL	To update the contact information of the ATA PI.
10.3.1.2. Stability Analysis	To clarify that stability analysis will be performed on the bulk Test Item.
15.2. Laboratory Investigations (Cytokine Analysis)	To correct a typographical error.
15.3. Anti Therapeutic Antibody (ATA) Analysis	To clarify the processing of samples and update the shipping contact information.
15.4. PBMC Analysis	To change the blood collection procedure.
Amendment 2	**Date: 17-Mar-2017**
1. OBJECTIVE(S)	To correct a typographical error.
8.1. Test Item	To add the concentration of the bulk Test Item.
11.3. Environmental Acclimation	To correct due to schedule modification.
15.2. Laboratory Ivestigations (Cytokine Analysis)	To include clarification for sample processing.
Amendment 3	**Date: 12-Apr-2017**
7. RESPONSIBLE PERSONNEL	To add the email address of the management contact and to assign a pathologist from PAI-FDK.
5.2. Test Facility-designated Subcontractor(s)	To add the histopathology phase as it will be audited by PAI-FDK.
8.4. Analysis of Test Item	To correct the storage conditions for samples transfer.
15.3. Anti Therapeutic Antibody (ATA) Analysis	To correct the shipping contact information and to add a blood collection occasion on Day 29.
17.2. Histopathology	To include that slides will be shipped to the pathologist Test Site.
17.3. Pathology Peer Review	To update as the pathology peer review will not be performed at the Test Facility.
Amendment 4	**Date: 25-Apr-2017**
4. REGULATORY COMPLIANCE	To remove the ATA analysis.
7. RESPONSIBLE PERSONNEL	To remove the PI responsible for the ATA analysis.
15.3. Anti Therapeutic Antibody (ATA) Analysis	To remove the terminal blood collections and to clarify that ATA samples will not be analyzed.
Amendment 5	**Date: 29-Jun-2017**
8.1. Test Item	To include clarification for TI concentration based on new Summary of Analysis (SoA) issued.
13. EXPERIMENTAL DESIGN	To include clarification to dose levels and dose concentrations based on new SoA issued.
Amendment 6	
8.1. Test Item	To correct a typographical error.
13. EXPERIMENTAL DESIGN	To correct a typographical error.

Appendix 1

Item or Section(s)	Justification
15.2 Laboratory Investigations (Cytokine Analysis)	To remove IFN-α from the list of cytokine to be analyzed as we were not able to appropriately validate an assay for the analysis.

Appendix 1

TABLE OF CONTENTS

Appendix 1

1. OBJECTIVE(S)

The objectives of this study are to determine the potential toxicity of mRNA-1443, when given by intramuscular injection for 6 weeks (4 doses) to rats and to evaluate the potential reversibility of any findings following a 2-week recovery period.

1.1. Study Classification

Study Category:	TOX
Study Type:	Repeat Dose Toxicity
Study Design:	Parallel
Primary Treatment CAS Registry Number:	Not Available
Primary Treatment Unique Ingredient ID:	Not Available
Class of Compound:	mRNA

2. PROPOSED STUDY SCHEDULE

Proposed study dates are listed below. Actual applicable dates will be included in the Final Report.

Experimental Start Date:	08 Mar 2017
Experimental Completion Date:	25 Aug 2017 (Last date data are collected from the study)
Animal Arrival:	08 Mar 2017
Initiation of Dosing:	20 Mar 2017 (Male) 21 Mar 2017 (Female)
Completion of In-life:	03 May 2017 (Main) 16 May 2017 (Recovery) (Last date of necropsy)
Unaudited Draft Report:	13 Jul 2017
Audited Draft Report:	18 Aug 2017
Final Report:	25 Aug 2017

3. GUIDELINES FOR STUDY DESIGN

The design of this study was based on the study objective(s), the overall product development strategy for the Test Item, and the following study design guidelines:

- OECD Guideline 407. *Repeated Dose 28-day Oral Toxicity Study in Rodents*.

Appendix 1

- Committee for Medicinal Products for Human Use (CHMP). *Note for Guidance on Repeated Dose Toxicity*. CPMP/SWP/1042/99corr.
- ICH Harmonised Tripartite Guideline M3 (R2). *Nonclinical Safety Studies for the Conduct of Human Clinical Trials and Marketing Authorization for Pharmaceuticals*.
- Japanese Guidelines for Nonclinical Studies of Drugs Manual (1995). *Guidelines for Toxicity Studies of Drugs (Chapter 3, Repeated Dose Toxicity Studies)*.
- Appendix to Director General Notification, No. 12-Nousan-8147, 24 November 2000, Agricultural Production Bureau, Ministry of Agriculture, Forestry and Fisheries of Japan (JMAFF).

4. REGULATORY COMPLIANCE

The study will be performed in accordance with the OECD Principles of Good Laboratory Practice and as accepted by Regulatory Authorities throughout the European Union, United States of America (FDA), Japan (MHLW), and other countries that are signatories to the OECD Mutual Acceptance of Data Agreement.

Any portion of this study conducted in the USA will be performed in accordance with the U.S. Department of Health and Human Services, Food and Drug Administration. United States Code of Federal Regulations, Title 21, Part 58: Good Laboratory Practice for Nonclinical Laboratory Studies and as accepted by Regulatory Authorities throughout the European Union (OECD Principles of Good Laboratory Practice), Japan (MHLW), and other countries that are signatories to the OECD Mutual Acceptance of Data Agreement.

Exceptions to GLPs include the following study elements:

- Characterization of the Test Item will be performed by the Sponsor or Sponsor subcontractor according to established SOPs, controls, and approved test methodologies to ensure integrity and validity of the results generated; these analyses will not be conducted in compliance with the GLP or GMP regulations.
- Analysis of cytokines, α2-macroglobulin, α1-acid glycoprotein and PBMCs will be conducted using scientifically qualified methods and in accordance with all applicable analytical procedures.
- Pathology peer review

5. QUALITY ASSURANCE

5.1. Test Facility

The Test Facility Quality Assurance Program (QAP) will monitor the study to assure the facilities, equipment, personnel, methods, practices, records, and controls are in conformance with Good Laboratory Practice regulations. The QAP will review the study plan, conduct inspections at intervals adequate to assure the integrity of the study, and audit the Final Report to

Appendix 1

assure that it accurately describes the methods and standard operating procedures and that the reported results accurately reflect the raw data of the study.

The Test Facility QAP contact for this study is indicated below:

(b) (6)
Charles River Laboratories Montreal ULC
Senneville Site (CR-MTL)
22022 Transcanadienne
Senneville, QC H9X 3R3
Canada
Tel: (b) (6)
Fax: (b) (6)
E-mail: (b) (6)

5.2. Test Facility-designated Subcontractor(s)

The following study phases performed by Test Facility-designated subcontractors will be audited by the Test Facility QAP:

- Ophthalmology

The following study phases performed by Test Facility-designated subcontractors will be audited by the respective subcontractor QAP(s):

- Histopathology

For all study phase(s) inspected by subcontractor QAP(s), copies of each periodic inspection report will be made available to the Study Director, Test Facility Management, and the Test Facility QAP.

Each PI is required to report any deviations or other circumstances that could affect the quality or integrity of the study to the Study Director in a timely manner. Each PI will provide a report addressing their assigned phase of the study, which will be included as an appendix to the Final Report. The phase report will include the following:

- The archive site for all records, samples, specimens and reports generated from the phase or segment (alternatively, details regarding the retention of the materials may be provided to the Study Director for inclusion in the Final Report)
- A listing of critical computerized systems used in the conduct and/or interpretation of the assigned study phase

8. TEST AND REFERENCE ITEMS

8.1. Test Item

Identification:	mRNA-1443
Supplier:	Moderna Therapeutics, Inc.
Batch (Lot) Number:	MTDP17017
Concentration:	2.6 / 2.5* mg/mL
Retest Date:	An end-of-use analysis of the bulk Test Item will be performed to demonstrate the stability of the Test Item during the dosing period.
Physical Description:	White to off-white lipid nanopacticle dispersion
Storage Conditions:	Kept in a freezer set to maintain -20°C

* Concentration based on Summary of Analysis (SoA) released on 16 **March**~~**Mars**~~ 2017 / Concentration based on SoA released on 30 May 2017

8.2. Reference Item

Identification:	Phosphate-buffered Saline (PBS) pH 7.2
Supplier:	Will be included in the Final Report
Batch (Lot) Number:	Will be included in the Final Report
Expiration Date:	Will be included in the Final Report

Appendix 1

Physical Description: Liquid

Storage Conditions: Kept in a controlled temperature area set to maintain 21°C

8.3. Test Item Characterization

The Sponsor will provide to the Test Facility documentation of the identity, strength, purity and composition for the Test Item. A Certificate of Analysis or equivalent documentation will be provided for inclusion in the Final Report. The Sponsor will also provide information concerning the regulatory standard that was followed for these evaluations.

The Sponsor has appropriate documentation on file concerning the method of synthesis, fabrication or derivation of the Test Item, and this information is available to the appropriate regulatory agencies should it be requested.

8.4. Analysis of Test Item

A sample (2 vials) of the Test Item will be taken on the completion of the dosing period. Analysis of bulk Test Item for concentration, particle size and purity will be performed.

The first vial will be transferred (on dry ice) to the analytical laboratory at the Test Facility for concentration and particle size analysis.

The second vial will be transferred (on dry ice) to the molecular biology laboratory at the Test Facility for purity analysis.

Purity and Particle size analysis will be performed by IEX- HPLC, Differential Light Scattering (DLS) and capillary electrophoresis (CE) using validated analytical procedures.

Any residual/retained analytical samples (and Test Item used in analysis) will be discarded before issue of the Final Report.

8.5. Reserve Samples

For each batch (lot) of Test and Reference Items, a reserve sample (1 mL or 1 vial) will be collected and maintained under the appropriate storage conditions by the Test Facility.

8.6. Test and Reference Item Inventory and Disposition

Records of the receipt, distribution, storage, and disposition of Test and Reference Items will be maintained. With the exception of reserve samples, all unused Sponsor-supplied bulk Test Item will be returned to the Sponsor on dry ice (after completion of dosing).

Shipping Contact
(b) (6)
Moderna Therapeutics
800 Technology Sq, 8th Floor
Cambridge MA 02476

Appendix 1

Cell: (b) (6)
E-mail: (b) (6)

9. SAFETY

The safety precautions for the Test Item and dose formulations will be documented in a Test Material Safety Data Sheet (TMSDS) based on the information provided by the Sponsor either by an MSDS or similar document.

10. DOSE FORMULATION AND ANALYSIS

10.1. Preparation of Reference Item

Dose formulation preparations will be performed under a laminar flow hood using clean procedures.

The Reference Item, Phosphate-buffered Saline (PBS) pH 7.2, will be dispensed on days of dosing (i.e. Days 1, 15, 29 and 43) for administration to Group 1 control animals and will be used as required to dilute the bulk Test Item for administration to Groups 2 to 4 animals. The aliquots will be stored in a refrigerator set to maintain 4°C until use. They will be removed from the refrigerator and allowed to warm to room temperature for at least 30 minutes before dosing.

Any residual volumes will be discarded unless otherwise requested by the Study Director.

10.2. Preparation of Test Item

Dose formulation preparations will be performed under a laminar flow hood using clean procedures.

Test Item formulations will be diluted with PBS pH 7.2, as necessary for administration. The dosing formulations will be prepared on each days of dosing (i.e. Days 1, 15, 29 and 43) and will be stored in a refrigerator set to maintain 4°C. The dose formulations will be allowed to warm to room temperature for at least 30 minutes prior to dosing. Alternatively, the aliquots can be transferred directly to room temperature. When possible, stock vials will be used only once.

Any residual volumes of formulated Test Item will be stored in a refrigerator set at 4°C and discarded prior to report finalization.

10.3. Sample Collection and Analysis

Dose formulation samples will be collected for analysis as indicated in the following table. Additional samples may be collected and analyzed at the discretion of the Study Director.

Appendix 1

Dose Formulation Sample Collection Schedule

Interval[b]	Homogeneity	Concentration	Sampling From
Day 1	All groups[a]	All groups	Dosing container
Day 43	N/A	All groups	Dosing container

N/A = Not applicable.

[a] The homogeneity results obtained from the top, middle and bottom preparations will be averaged and utilized as the concentration results.

[b] Samples will be collected on the first preparation of the study and on the last preparation of the study.

Samples to be analyzed will be submitted as soon as possible following collection.

All samples to be analyzed will be transferred (on ice pack) to the analytical laboratory.

Any residual/retained analytical samples (and Test Item used in analysis) will be discarded before issue of the Final Report.

10.3.1. Analytical Method

Analyses described below will be performed by IEX-HPLC using a validated analytical procedure (CR-MTL Study No. 1801913).

10.3.1.1. Concentration and Homogeneity Analysis

Samples for Analysis:	Duplicate top, middle, and bottom samples (duplicate middle only from Group 1); sent for analysis as noted in Section 10.3. On days where only concentration analysis is required, the formulation will only be sampled from the middle.
Backup Samples:	Triplicate top, middle, and bottom samples (triplicate middle only from Group 1); maintained at the Test Facility. Backup samples may be analyzed at the discretion of the Study Director. On days where only concentration analysis is required, the formulation will only be sampled from the middle.
Sampling Containers:	Appropriate sized glass containers.
Sample Volume:	0.5 mL for analysis and backup samples.
Storage Conditions:	Kept in a refrigerator set to maintain 4°C.
Acceptance Criteria:	For concentration, the criteria for acceptability will be mean sample concentration results within or equal to ± 15% of theoretical concentration. Each individual sample concentration result within or equal to ± 20%. For homogeneity, the criteria for acceptability will be a relative standard deviation (RSD) of concentrations of ≤ 5% for each group.

Appendix 1

10.3.1.2. Stability Analysis

There will be no stability analysis performed for concentration used on this study however, end of use stability analysis of the bulk Test Item will be performed at the end of the dosing period.

11. TEST SYSTEM

Species:	Rat
Strain:	Crl:CD(SD) Sprague-Dawley rat
Source:	Charles River Canada Inc., St. Constant, QC, Canada
Number of Males Ordered:	60
Number of Females Ordered:	60
Target Age at Arrival:	4 to 8 weeks
Target Weight at Arrival:	126 to 150 g (males) 101 to 125 g (females)

The actual age, weight, and number of animals received will be listed in the Final Report.

11.1. Justification of Test System and Number of Animals

The Sprague Dawley rat was chosen as the animal model for this study as it is an accepted rodent species for preclinical toxicity testing by regulatory agencies.

The total number of animals to be used in this study is considered to be the minimum required to properly characterize the effects of the Test Item. This study has been designed such that it does not require an unnecessary number of animals to accomplish its objectives.

At this time, studies in laboratory animals provide the best available basis for extrapolation to humans and are required to support regulatory submissions. Acceptable models which do not use live animals currently do not exist.

11.2. Animal Identification

Each animal will be identified using a subcutaneously implanted electronic identification chip.

11.3. Environmental Acclimation

A minimum acclimation period of 12 days will be allowed between animal receipt and the start of dosing in order to accustom the animals to the laboratory environment.

11.4. Selection, Assignment, Replacement, and Disposition of Animals

Animals will be assigned to groups by a stratified randomization scheme designed to achieve similar group mean body weights. Males and females will be randomized separately. Animals in poor health or at extremes of body weight range will not be assigned to groups.

Appendix 1

Before the initiation of dosing, any assigned animals considered unsuitable for use in the study will be replaced by alternate animals obtained from the same shipment and maintained under the same environmental conditions.

After initiation of dosing, study animals may be replaced during the replacement period with alternate animals in the event of accidental injury, non-Test Item-related health issues, or similar circumstances.

The alternate animals may be used as replacements on the study within 3 days.

The disposition of all animals will be documented in the study records.

12. HUSBANDRY

12.1. Housing

Animals will be group housed (up to 3 animals of the same sex and same dosing group together) in polycarbonate cages containing appropriate bedding equipped with an automatic watering valve. These housing conditions will be maintained unless deemed inappropriate by the Study Director and/or Clinical Veterinarian. The room(s) in which the animals will be kept will be documented in the study records.

Animals will be separated during designated procedures/activities. Each cage will be clearly labeled with a color-coded cage card indicating study, group, animal number(s), and sex. Cages will be arranged on the racks in group order. Where possible, control group animals will be housed on a separate rack from the Test Item treated animals.

12.2. Environmental Conditions

The targeted conditions for animal room environment will be as follows:

Temperature:	19°C to 25°C
Humidity:	30% to 70%
Light Cycle:	12 hours light and 12 hours dark (except during designated procedures)

12.3. Food

PMI Nutrition International Certified Rodent Chow No. 5CR4 will be provided ad libitum throughout the study, except during designated procedures. The same diet in meal form may be provided to individual animals as warranted by clinical signs (e.g., broken/damaged incisors or other health changes).

The feed is analyzed by the supplier for nutritional components and environmental contaminants. Results of the analysis are provided by the supplier and are on file at the Test Facility.

It is considered that there are no known contaminants in the feed that would interfere with the objectives of the study.

Appendix 1

12.4. Water

Municipal tap water after treatment by reverse osmosis and ultraviolet irradiation will be freely available to each animal via an automatic watering system (except during designated procedures). Water bottles can be provided, if required.

Periodic analysis of the water is performed, and results of these analyses are on file at the Test Facility.

It is considered that there are no known contaminants in the water that could interfere with the outcome of the study.

12.5. Animal Enrichment

Animals will be socially housed for psychological/environmental enrichment and will be provided with items such as a hiding tube and a chewing object, except during study procedures/activities.

12.6. Veterinary Care

Veterinary care will be available throughout the course of the study and animals will be examined by the veterinary staff as warranted by clinical signs or other changes. All veterinary examinations and recommended therapeutic treatments, if any, will be documented in the study records.

In the event that animals show signs of illness or distress, the responsible veterinarian may make initial recommendations about treatment of the animal(s) and/or alteration of study procedures, which must be approved by the Study Director or Scientific designate. All such actions will be properly documented in the study records and, when appropriate, by study plan amendment. Treatment of the animal(s) for minor injuries or ailments may be approved without prior consultation with the Sponsor representative when such treatment does not impact fulfillment of the study objectives. If the condition of the animal(s) warrants significant therapeutic intervention or alterations in study procedures, the Sponsor representative will be contacted, when possible, to discuss appropriate action. If the condition of the animal(s) is such that emergency measures must be taken, the Study Director and/or clinical veterinarian will attempt to consult with the Sponsor representative prior to responding to the medical crisis, but the Study Director and/or veterinarian has authority to act immediately at his/her discretion to alleviate suffering. The Sponsor representative will be fully informed of any such events.

Appendix 1

13. EXPERIMENTAL DESIGN

Experimental Design

Group No.	Test Material	Dose Level (µg/dose)[a]	Dose Volume (µL/dose)	Dose Concentration (mg/mL)[a]	No. of Animals			
					Main Study		Recovery Study	
					Males	Females	Males	Females
1	Reference Item	0	200	0	10	10	5	5
2	mRNA-1443	10 / 9.6	200	0.05 / 0.048	10	10	-	-
3	mRNA-1443	30 / 29	200	0.15 / 0.145	10	10	-	-
4	mRNA-1443	100 / 96	200	0.5 / 0.48	10	10	5	5

- : Not applicable
[a] Values based on SoA issued on 16 **March**~~**Mars**~~ 2017 / Values based on SoA issued on 30 May 2017.

13.1. Administration of Test and Reference Items

The Test and Reference Items will be administered to the appropriate animals via intramuscular injection into the lateral compartment of the thigh on Days 1, 15, 29 and 43, the injection site will be alternated on each dosing occasion (Site 1 left thigh and Site 2 right thigh). The volume for each dose will be administered using a syringe/needle within the demarcated area. The first day of dosing will be designated as Day 1 (exception: alternate animals used for replacement after Day 1 will assume the day of the animal being replaced).

The injection area will be marked as frequently as required to allow appropriate visualization of administration sites. Hair may be clipped or shaved if required to improve visualization of the injection sites. The injection site will be documented in the raw data for each dose administered.

13.2. Justification of Route and Dose Levels

The intramuscular route of exposure was selected because this is the intended route of human exposure.

The dose levels for this toxicology study were chosen to approximate a substantial multiple of the anticipated clinical starting dose and top clinical dose. The highest dose to be tested is expected to represent the intended maximum human clinical dose and volume and will be administered by the clinical route (intramuscular). At this dose level, minimal systemic toxicity is expected, but it is possible mild to moderate injection site reaction (redness, swelling) and potentially elevation of systemic cytokine/acute phase markers may be observed. The mid- and low-dose were selected to evaluate the dose-dependent effect of this compound.

14. IN-LIFE PROCEDURES, OBSERVATIONS, AND MEASUREMENTS

The in-life procedures, observations, and measurements listed below including Laboratory Investigations listed in section below will be performed for all main study and recovery animals, unless otherwise indicated in the respective section. During the study, additional evaluations to those described below and/or scheduled, and considered necessary by the Study Director and/or

Appendix 1

Veterinarian to assess health status will be conducted and duly documented. More frequent observations may be undertaken if considered appropriate.

14.1. Mortality/Moribundity Checks

Frequency: Twice daily, once in the morning and once in the afternoon, throughout the study.

Procedure: Animals will be observed for general health/mortality and moribundity. Animals will not be removed from cage during observation, unless necessary for identification or confirmation of possible findings.

14.2. Clinical Observations

14.2.1. Detailed Clinical Observations

Frequency: Weekly during the dosing and recovery periods, and at least every two weeks during the predosing period.

Procedure: Animals removed from the cage for examination.

14.3. Local Irritation Assessment

Frequency: On days of dosing; at least 24 and 72 hours post-dose (end of each group). Weekly when there is no dosing and during the recovery period. Following Day 43 dosing, no assessment will be performed on main animals at 72 hours postdose as animals will be sent to necropsy on Day 44.

Procedure: All animals will have the dose injection site examined for signs of erythema/edema. Observations will be scored according to the Local Irritation Assessment scoring table as follows:

Erythema (Redness)	**Score**
No erythema	0
Very slight erythema (barely perceptible)	1
Mild erythema	2
Moderate to severe erythema	3
Severe erythema (beet redness to slight eschar formation, injury in depth)	4
Notable dermal lesion (maximized)	M
Edema (Swelling)	
No edema	0
Very slight edema (barely perceptible)	1
Slight edema	2
Moderate edema	3
Severe edema	4

Appendix 1

Any other abnormalities will be recorded as they are observed.

14.4. Body Weights

Frequency:	Weekly during the dosing and recovery periods, and at least every two weeks during the predosing period.
Procedure:	Animals will be individually weighed. A fasted weight will be recorded on the day of necropsy. Terminal body weights will not be collected from animals found dead or euthanized moribund.

14.5. Food Consumption

Frequency:	Weekly, starting Day -7, throughout the dosing and recovery periods.
Procedure:	Food consumption will be quantitatively measured except for on the day of scheduled euthanasia.

14.6. Ophthalmic Examinations

Frequency:	Once prestudy and again toward the end of Week 6 of the dosing period. During Week 2 of the recovery period if Test Item-related findings are observed during the dosing period.
Procedure:	All animals will be subjected to funduscopic (indirect ophthalmoscopy) and biomicroscopic (slit lamp) examinations. The mydriatic used will be Atropine 0.126%.
Evaluation:	A report will be included as an appendix to the Final Report.

14.7. Body Temperature

Frequency:	On Day 1 and Day 43 at predose, and 6 and 24 hours post dose (end of each group). If body temperature is significantly above normal range (36.0°C to 38.0°C) the temperature will be monitored daily till return to normal. If clinical observations indicate a possible body temperature changes measurements may be taken at the discretion of the Study Director.
Procedure:	Rectal body temperature will be recorded on un-sedated animals.

Appendix 1

15. LABORATORY EVALUATIONS

15.1. Clinical Pathology

15.1.1. Sample Collection

Blood will be collected from the abdominal aorta following isoflurane anesthesia. After collection, samples will be transferred to the appropriate laboratory for processing.

Animals will be fasted overnight before blood sampling (for clinical chemistry). Samples will be collected according to the following table.

Samples for Clinical Pathology Evaluation

Group Nos.	Time Point	Hematology	Coagulation	Clinical Chemistry	α1-acid glycoprotein/ α2-macroglubulin
1 to 4[a]	Day 44	X	X	X	X
1 and 4	Day 57	X	X	X	X
Unscheduled euthanasia (when possible)	Before euthanasia	X	X	X	X

X = Sample to be collected

[a] Samples will only be collected from those animals scheduled for euthanasia on Day 44.

Any residual/retained clinical pathology samples will be discarded before issue of the Final Report.

15.1.2. Hematology

Target Volume: 0.5 mL

Anticoagulant: EDTA

Hematology Parameters

Red blood cell count Hemoglobin concentration Hematocrit Mean corpuscular volume Red Blood Cell Distribution Width Mean corpuscular hemoglobin concentration Mean corpuscular hemoglobin Reticulocyte count (absolute) Platelet count	White blood cell count Neutrophil count (absolute) Lymphocyte count (absolute) Monocyte count (absolute) Eosinophil count (absolute) Basophil count (absolute) Large unstained cells (absolute)

A blood smear will be prepared from each hematology sample. Blood smears will be labeled, stained, and stored. Blood smears may be read to investigate results. If additional examination of blood smears is deemed necessary, the smears may be subsequently evaluated and this evaluation will be described in a study plan amendment.

Appendix 1

15.1.3. Coagulation

Target Volume: 1.2 mL (in a 1.3 mL tube)

Anticoagulant: Citrate

Processing: To plasma

Coagulation Parameters

Activated partial thromboplastin time Fibrinogen	Prothrombin time Sample Quality

15.1.4. Clinical Chemistry

Target Volume: 0.7 mL

Anticoagulant: None, collected in serum separator tube

Processing: To serum

Clinical Chemistry Parameters

Alanine aminotransferase Aspartate aminotransferase Alkaline phosphatase Gamma-glutamyltransferase Creatine Kinase Total bilirubin[a] Urea nitrogen Creatinine Calcium Phosphorus	Total protein Albumin Globulin Albumin/globulin ratio Glucose Cholesterol Triglycerides Sodium Potassium Chloride Sample Quality

[a] When total bilirubin is > 0.5 mg/dL, indirect and direct bilirubin will also be measured.

15.1.5. Bone Marrow Smear Evaluation (Optional)

Bone marrow smears will be collected and prepared as described in the Tissue Collection and Preservation table (Section 16.5). Evaluation of stained smears may be added by amendment at the discretion of the Study Director in consultation with the pathologist and the Sponsor.

15.1.6. α1-acid Glycoprotein and α2-macroglobulin Analysis

Blood will be collected via the abdominal aorta following isoflurane anesthesia before scheduled and unscheduled euthanasia for all animals.

Target Volume: 0.7 mL

Anticoagulant: None, collected in serum separator tubes

Processing: Blood samples to clot at ambient room temperature. Centrifugation for (b) (4) set at (b) (4) in a refrigerated centrifuge (set to maintain (b) (4) Samples will be processed to

Appendix 1

serum by the Immunology Department. Serum will be aliquoted into 1 x 75 µL aliquot for α2-macroglobulin and 2 x 75 µL aliquot and a leftover (if available) for α1-acid glycoprotein.

Storage conditions: Stored in a freezer set to maintain -20°C, pending analysis.

Analysis for α1-acid glycoprotein and α2-macroglobulin will be conducted using a qualified ELISA method by the Immunology Department. The procedure to be followed along with the assay acceptance criteria will be detailed in the appropriate analytical procedure.

Samples will be analyzed in duplicate. Any residual/retained samples will be discarded prior to report finalization.

15.2. Laboratory Investigations (Cytokine Analysis)

Blood will be collected from the jugular vein of all recovery animals and preterminally euthanized animals (recovery animals only). After collection, blood samples for serum will be allowed to clot at ambient room temperature and blood samples for plasma will be transferred on wet ice to the appropriate laboratory for processing.

Sample Collection Schedule

Target Blood Volume (mL)			0.5	0.5
Anticoagulant			**None (SST)**	**EDTA**
Centrifugation setting			(b) (4)	
Timepoints			**Sample Type**	
Day	**Hrs**	**No. of Males/ Females**	IFN-α*	IL-1ß, IL-6, TNF-α, IP-10, MIP-1-α, MCP-1
1	6	5/5	X	X
15	6	5/5	X	X
29	6	5/5	X	X
43	6	5/5	X	X
57	N/A	5/5	X	X
Matrix			Serum	Plasma
Volume per aliquot (µL)			all volume	all volume
Number of aliquot(s)			1	1
Storage condition (set to maintain)			-80°C	-80°C
Responsible Lab			CR-SHB	CR-SHB

X = Sample to be collected; N/A = not applicable

*** The assay validation of IFN-α did not work appropriately and serum samples analysis will not be conducted.**

The number of aliquots and volumes are targets that may be adjusted based on sample volume availability.

Appendix 1

The samples will be analyzed by the Immunology department. Analysis for IL-1ß, IL-6, TNF-α, IP-10, MIP-1-α and MCP-1 will be conducted using a multiplex Luminex method. ~~**An ELISA method will be used for the analysis of IFN-α.**~~ The procedures to be followed during the course of this study along with the assays acceptance criteria will be detailed in the appropriate analytical procedure. Samples will be analyzed in duplicate.

Following Study Director approval, any residual/retained samples will be discarded prior to report finalization.

An Immunology Report for cytokine analysis will be included as an appendix to the Final Report.

15.3. Anti Therapeutic Antibody (ATA) Analysis

Blood will be collected by jugular venipuncture from the appropriate animals.

Time Points:	Before initiation of dosing, Day 29 (before dosing).
Target Volume:	0.5 mL
Anticoagulant:	None, collected in serum separator tubes
Processing:	To serum

Samples will be mixed gently and allowed to clot at room temperature until centrifugation, which will be carried out as soon as practical. The samples will be centrifuged for (b) (4) in a refrigerated centrifuge (set to maintain (b) (4)) at (b) (4) The resultant serum will be separated, transferred to uniquely labeled clear polypropylene tubes, frozen immediately over dry ice and transferred to a freezer set to maintain -80°C.

ATA samples will not be analyzed and will be discarded prior to report finalization, following Study Director approval.

15.4. PBMC Analysis

Blood will be collected by jugular venipuncture from the appropriate animals.

Time Points:	On Day 44 (main animals only).
Target Volume:	0.5 mL
Anticoagulant:	Sodium Heparin
Storage Conditions:	Kept in a controlled temperature area set to maintain 21°C

Samples will be shipped at controlled temperature set to maintain 21°C via overnight courier to the Immunology laboratory, for whole blood stimulation and cytokine analysis, to:

Shipping Contact
(b) (6)
Cell Biology and Immunology

Appendix 1

Southern Research
2000 Ninth Ave S
Birmingham AL 35205
Tel: (b) (6)
E-mail: (b) (6)

The Test Site will be notified before shipment of the samples. Upon receipt at the Immunology laboratory, the samples will be stored at room temperature.

The PBMC samples will be analyzed using a qualified method.

Any residual/retained samples will be maintained for a minimum of 6 months following issuance of the Audited Draft Report after which samples will be discarded. Alternatively, residual/retained samples will be discarded prior to the 6 month period should the issuance of the Final Report occur prior to the end of the 6 month retention period. An earlier discard of these residual/retained samples may also be requested and authorized by the Study Director.

An Immunology Report for PBMC analysis will be included as an appendix to the Final Report.

16. TERMINAL PROCEDURES

Terminal procedures are summarized in the following table:

Terminal Procedures for Main Study and Recovery Animals

Group No.	No. of Animals		Scheduled Euthanasia Day	Necropsy Procedures			Histology	Histopathology
	M	F		Necropsy	Tissue Collection	Organ Weights		
1	10	10	44	X	X	X	Full Tissue[a]	Full Tissue[a]
2	10	10					Full Tissue[a]	Gross Lesions Target Tissues
3	10	10					Full Tissue[a]	Gross Lesions Target Tissues
4	10	10					Full Tissue[a]	Full Tissue[a]
1	5	5	57	X	X	X	Full Tissue[a]	Full Tissue[a]
4	5	5					Full Tissue[a]	Full Tissue[a]
Unscheduled Deaths				X	X	-	Full Tissue[a]	Full Tissue[a]
Replaced animals (prestudy)[b]				X	Standard Diagnostic List	-	-	-
Replaced animals (after dosing start)				X	X	-	-	-

X = Procedure to be conducted; - = Not applicable.
[a] See Tissue Collection and Preservation table for listing of tissues.
[b] Animals found dead or euthanized before the initiation of dosing.

Appendix 1

16.1. Unscheduled Deaths

If a main study or recovery animal dies on study, a complete necropsy examination will be conducted and specified tissues will be saved. If necessary, the animal will be refrigerated to minimize autolysis.

Main or recovery animals may be euthanized for humane reasons as per Test Facility SOPs. The samples for evaluation of laboratory evaluation will be obtained if possible as specified in Section 15. These animals will undergo exsanguination by incision from the abdominal aorta following isoflurane anesthesia unless deemed inappropriate by the Study Director and/or the clinical veterinarian and will undergo complete necropsy examination, and specified tissues will be retained. If necessary, the animal will be refrigerated (set to maintain 4°C) to minimize autolysis.

Animals found dead or euthanized before the initiation of dosing will be subject to complete necropsy examination and limited tissue retention (standard diagnostic tissue list). Any animal replaced after the start of dosing will be subject to complete necropsy examination and tissues will be retained (as per Tissue Collection and Preservation section), and any data generated will not be included in the report unless deemed appropriate by the Study Director.

16.2. Scheduled Euthanasia

Main study and recovery animals surviving until scheduled euthanasia will have a terminal body weight recorded, samples for laboratory evaluation will be collected (as appropriate), and will be euthanized by exsanguination by incision from the abdominal aorta following isoflurane anesthesia. When possible, the animals will be euthanized rotating across dose groups such that similar numbers of animals from each group, including controls, will be necropsied throughout the day. Animals will be fasted overnight before their scheduled necropsy.

16.3. Necropsy

Main and recovery animals will be subjected to a complete necropsy examination, which will include evaluation of the carcass and musculoskeletal system; all external surfaces and orifices; cranial cavity and external surfaces of the brain; and thoracic, abdominal, and pelvic cavities with their associated organs and tissues.

Necropsy procedures will be performed by qualified personnel with appropriate training and experience in animal anatomy and gross pathology. A veterinary pathologist, or other suitably qualified person, will be available.

At the discretion of the necropsy supervising pathologist, images may be generated for illustration of or consultation on gross observations. Generation of such images will be documented and communicated to the Study Director. Images and associated documentation will be retained and archived.

Appendix 1

16.4. Organ Weights

The organs identified for weighing in the Tissues Collection and Preservation table will be weighed at necropsy for all scheduled euthanasia animals. Organ weights will not be recorded for animals found dead or euthanized in poor condition or in extremis. Paired organs will be weighed together. In the event of gross abnormalities, in addition to the combined weight, the weight of each organ of a pair may be taken and entered as a tissue comment. Organ weight as a percent of body weight (using the terminal body weight) and organ weight as a percent of brain weight will be calculated.

16.5. Tissue Collection and Preservation

Representative samples of the tissues identified in the Tissue Collection and Preservation table in ATTACHMENT A will be collected from all animals and preserved in 10% neutral buffered formalin, unless otherwise indicated. Additional tissue samples may be collected to elucidate abnormal findings.

17. HISTOLOGY AND HISTOPATHOLOGY

17.1. Histology

Tissues in the Tissue Collection and Preservation table from animals identified in the Terminal Procedures table will be embedded in paraffin, sectioned, mounted on glass slides, and stained with hematoxylin and eosin.

17.2. Histopathology

Histopathological evaluation will be performed by a board-certified veterinary pathologist. Target tissues identified by the study pathologist during microscopic evaluation will be communicated to the study Director; tissues will be evaluated and reported. Any additional stains or evaluations, if deemed necessary by the pathologist, will be added by study plan amendment following discussion with the Study Director and in consultation the Sponsor.

At the discretion of the study pathologist and after acknowledgement by the Study Director, images may be captured for consultation purposes.

The appropriate Charles River Laboratories, Pathology Associates Test Site will be contacted for the slide shipping address.

17.3. Pathology Peer Review

A pathology peer review will be conducted by:

(b) (6)
Moderna Therapeutics
200 Technology Square, 3rd Floor
Cambridge, MA 02116

Appendix 1

Tel: (b) (6)
E-mail: (b) (6)

The peer review statement or equivalent documentation will be included as an appendix to the Final Report.

18. CONSTRUCTED VARIABLES

Body Weight Gains	Calculated between at least each interval as well as between the beginning and end of each phase
Organ Weight relative to Body Weight	Calculated against the Terminal body weight for scheduled intervals
Organ Weight relative to Brain Weight	Calculated against the brain weight for scheduled intervals

19. STATISTICAL ANALYSIS

All statistical tests will be conducted at the 5% significance level. All pairwise comparisons will be conducted using two sided tests and will be reported at the 0.1%, 1%, and 5% levels.

Numerical data collected on scheduled occasions for the listed variables will be analyzed as indicated according to sex and occasion. Descriptive statistics number, mean and standard deviation (or %CV or SE when deemed appropriate) will be reported whenever possible. Values may also be expressed as a percentage of predose or control values when deemed appropriate. Inferential statistics will be performed according to the matrix below when possible, but will exclude semi-quantitative data, and any group with less than 3 observations.

Statistical Matrix

Variables for Inferential Analysis	Statistical Method
	Parametric/ Non-Parametric
Body Weight	X
Body Temperature	X
Hematology Variables	X
Coagulation Variables	X
Clinical Chemistry Variables	X
Cytokines	X
α2-macroglobulin	X
α1-acid glycoprotein	X
Organ Weights	X
Body Weight Gains	X
Organ Weight relative to Body Weight	X
Organ Weight relative to Brain Weight	X

The following pairwise comparisons will be made:

Group 2 vs. Group 1

Appendix 1

Group 3 vs. Group 1

Group 4 vs. Group 1

19.1. Parametric/Non-Parametric

Levene's test will be used to assess the homogeneity of group variances.

Datasets with at least 3 groups will be compared using an overall one-way ANOVA *F*-test if Levene's test is not significant or the Kruskal-Wallis test if it is. If the overall *F*-test or Kruskal-Wallis test is found to be significant, then the above pairwise comparisons will be conducted using Dunnett's or Dunn's test, respectively.

Datasets with 2 groups (the designated control group and 1 other group) will be compared using a *t*-test if Levene's test is not significant or Wilcoxon Rank-Sum test if it is.

20. COMPUTERIZED SYSTEMS

The following critical computerized systems may be used in the study. The actual critical computerized systems used will be specified in the Final Report.

Data for parameters not required by study plan, which are automatically generated by analytical devices used will be retained on file but not reported. Statistical analysis results that are generated by the program but are not required by study plan and/or are not scientifically relevant will be retained on file but will not be included in the tabulations.

Critical Computerized Systems

System Name	Description of Data Collected and/or Analyzed
Provantis	In-life; clinical pathology; postmortem
Dispense	Test Material receipt, accountability and/or formulation activities
SRS (CR-MTL in-house application built with SAS) and SAS system for Windows and/or In-house reporting software Nevis 2012 (using SAS)	Statistical analyses of numerical in-life, clinical pathology and postmortem data
Mesa Laboratories AmegaView CMS	Continuous Monitoring System. Monitoring of standalone fridges, freezers, incubators, and selected laboratories to measure temperature, relative humidity, and CO2, as appropriate
Johnson Controls Metasys	Building Automation System. Control of HVAC and other building systems, as well as temperature/humidity control and trending in selected laboratories and animal rooms
Empower 3 (Waters Corporation)	Data acquisition for dose formulation analysis, including regression analysis and measurement of concentration and recovery of dose formulations using HPLC
BioPlex Manager	Cytokine data collection
Softmax Pro GxP	IFN-α data collection
Watson LIMS	Biomarker data analysis
Dynamics (Wyatt)	Data acquisition for particle size analysis of the test item using

Appendix 1

	DLS

21. AMENDMENTS AND DEVIATIONS

Changes to the approved study plan shall be made in the form of an amendment, which will be signed and dated by the Study Director. Every reasonable effort will be made to discuss any necessary study plan changes in advance with the Sponsor.

All study plan and SOP deviations will be documented in the study records. Deviations from the study plan and/or SOP related to the phase(s) of the study conducted at a Test Site shall be documented, acknowledged by the PI/IS, and reported to the Study Director for authorization/acknowledgement. The Study Director will notify the Sponsor of deviations that may result in a significant impact on the study as soon as possible.

22. RETENTION OF RECORDS, SAMPLES, AND SPECIMENS

All study-specific raw data, electronic data, documentation, study plan, retained samples and specimens, and interim (if applicable) and final reports will be archived by no later than the date of final report issue. All materials generated by Charles River from this study will be transferred to CR MTL archive. One year after issue of the draft report, the Sponsor will be contacted to determine the disposition of materials associated with the study.

Records to be maintained will include, but will not be limited to, documentation and data for the following:

- Study Plan, study plan amendments, and deviations
- Study schedule
- Study-related correspondence
- Test system receipt, health, and husbandry
- Test and Reference Item receipt, identification, preparation, and analysis
- In-life measurements and observations
- Clinical pathology sample collection and evaluation
- Gross and microscopic observations and related data
- Organ weight measurements
- Statistical analysis results

23. REPORTING

A comprehensive Draft Report will be prepared following completion of the study and will be finalized following consultation with the Sponsor. The report will include all information necessary to provide a complete and accurate description of the experimental methods and results and any circumstances that may have affected the quality or integrity of the study.

Appendix 1

The Sponsor will receive an electronic version of the Draft and Final Report provided in Adobe Acrobat PDF format (hyperlinked and searchable at final) along with a Microsoft Word version of the text. The PDF document will be created from native electronic files to the extent possible, including text and tables generated by the Test Facility. Report components not available in native electronic files and/or original signature pages will be scanned and converted to PDF image files for incorporation. An original copy of the report with the Test Facility's handwritten signatures will be retained.

Reports should be finalized within 6 months of issue of the Draft Report. If the Sponsor has not provided comments to the report within 6 months of draft issue, the report will be finalized by the Test Facility unless other arrangements are made by the Sponsor.

24. ANIMAL WELFARE

24.1. Institutional Animal Care and Use Committee Approval

The study plan and any amendment(s) or procedures involving the care and use of animals in this study will be reviewed and approved by CR SHB Institutional Animal Care and Use Committee (IACUC). During the study, the care and use of animals will be conducted with guidance from the USA National Research Council and the Canadian Council on Animal Care (CCAC).

Appendix 1

AMENDMENT APPROVAL

(b) (6) _____ Date: 13 Sep 2017

Appendix 1

SPONSOR APPROVAL

The Study Plan Amendment was approved by the Sponsor by email on 13 Sep 2017.

Appendix 1

ATTACHMENT A

Tissue Collection and Preservation

Tissue	Weigh	Collect	Histology	Microscopic Evaluation[a]	Comment
Animal identification	-	X	-	-	-
Artery, aorta	-	X	X	X	-
Body cavity, nasal	-	X	X	-	Level 4 processed to slide for evaluation of olfactory bulb. Nasal structures will not be examined.
Bone marrow smear	-	X	-	-	Two bone marrow smears will be collected from the femur at scheduled and unscheduled necropsies (for possible examination). Smears will not be collected from animals that are found dead or from animals that were euthanized moribund and then stored in the refrigerator prior to necropsy. Bone marrow smears are allowed to air dry and are not fixed in formalin.

[a] At the discretion of the Study Pathologist, findings for extraneous tissues (nonspecified tissues in the Study Plan that may be present on a slide as a result of collection of Study Plan tissues) will be recorded when observed.

Appendix 1

DEVIATIONS

All deviations that occurred during the study have been authorized/acknowledged by the Study Director, assessed for impact, and documented in the study records. All study plan deviations that could have impacted the quality or integrity of the study are listed below.

None of the deviations were considered to have impacted the overall integrity of the study or the interpretation of the study results and conclusions.

In-life Observations, Measurements, and Evaluations

- Due to a change in the date of initiation of dosing, food consumption was measured starting on Day -5 instead of Day -7 as required in the per Study Plan. This deviation has no impact on the study integrity since sufficient data were available for interpretation.

Postmortem and Pathology

- During necropsies of all recovery animals, the biceps femoris was submitted as a regular section of the muscle skeletal instead of the quadriceps due to a technical error. This deviation had no impact on the pathology evaluation since this tissue did not include the injection site.
- Some miscellaneous tissues were not available for microscopic evaluation. This deviation had no impact on the pathology evaluation since missing tissues were scattered in male and female groups.
- Tissues that were supposed to be microscopically evaluated were not available on slides and therefore, were not evaluated. Tissues are listed in the Individual Animal Data of the Pathology report as not present. This deviation had no impact on the study integrity since sufficient tissues were examined.

Memorandum

moderna

To: (b) (6), Charles River Laboratory, Montréal ULC

From: (b) (6)

Date: 13Jun17

Subject: Revised mRNA concentration determination for mRNA-1443 reference standard lot MTDS16032, and subsequent revised final concentration of mRNA-1443 drug product lot MTDP17017

The revised mRNA concentration reported in the revised SoA dated 30May17 and described in memo (reference[1]) directly impacts the effective doses for the GLP toxicology study referenced 5002158. Both the original and revised Summary of Analysis documents reporting the concentration of MTDP17017 will be reported in the toxicology report such that all doses are presented as a pre- and post-method change. The change in the reported RNA content for the mRNA-1443 is -4%, and this percentage difference in reported RNA content was used to revise the calculated doses.

The original doses calculated for dose groups 2, 3 and 4 in study 5002158 were revised based on the updated concentration reported for the mRNA-1443 lot MTDP17017 (Table 2). All calculations and projected margins derived from the GLP toxicology studies should utilize the new effective doses described herein.

Table 2. Revised mRNA-1443 Dose Levels based on Ref Standard MTDS16032(reference[2]) **and drug product lot MTDP17017** (reference[3])

Appendix 3

TABLE OF CONTENTS

Appendix 3

LIST OF TABLES

LIST OF APPENDICES

Appendix 3

1. SUMMARY

Dose formulation samples have been analyzed by Ion Exchange High Performance Liquid Chromatography (IEX-HPLC) for the determination of mRNA-1443.

In addition, at the end of the study dosing phase, the bulk test item was analyzed by Ion Exchange High Performance Liquid Chromatography (IEX-HPLC) for concentration analysis and by Dynamic Light Scattering (DLS) for particle size analysis.

The dose formulations were within specification, except for Day 1, Group 2 and Group 3. Homogeneity testing showed that the formulation technique used produced homogeneous preparations.

The end of use bulk Test Item analysis demonstrated that the test item was suitable for use during the study period.

2. INTRODUCTION

This report describes the analytical evaluation of mRNA-1443 in dose formulations (phosphate-buffered saline (PBS) pH 7.2) in the bulk test item from Study 5002158.

For the work detailed in this report, the analytical phase experimental start date was 22 Mar 2017, and the analytical phase experimental completion date was 08 May 2017.

3. EXPERIMENTAL DESIGN

3.1. Dose Formulation Analysis

Analysis of dose formulations was carried out with regard to concentration and homogeneity.

On Day 1 of the study, duplicate samples were collected from the top, middle and bottom strata of the test item Groups for concentration and homogeneity verification while duplicate samples were collected from the middle strata of the control group. Duplicate samples were also collected from the middle strata of all Groups for concentration verification on Day 43 of the study. The samples were shipped on ice packs, stored refrigerated upon receipt and analyzed within the established stability.

3.2. Bulk Test Item Analysis

Analysis of the bulk test item was carried out with regard to concentration and particle size analysis.

At the end of the study dosing phase, one unopened vial of test item was transferred for concentration and particle size analysis.

Appendix 3

4. MATERIALS AND METHODS

4.1. Materials

4.1.1. Reference Standard

Identification:	CX-000479 mRNA
Physical Description:	Clear, colorless solution
Batch/Lot No.:	MTDS16032
Concentration:	2.47 mg/mL / 2.19 mg/mL (used for calculations) *
Retest Date:	Nov 2017
Storage Conditions:	Kept in a freezer set to maintain -20°C
Supplier:	Moderna Therapeutics, Inc.

* Corrected concentration as per SoA issued on 12 Apr 2017.

4.1.2. Reference Material (Bulk Test Item)

Identification:	mRNA-1443
Physical Description:	0.5 mL per vial, white to off-white lipid nanoparticle dispersion
Batch/Lot No.:	MTDP17017
Concentration:	2.6 mg/mL / 2.5 mg/mL (used for calculations) **
Date of manufacture:	23 Feb 2017
Retest Date:	23 Feb 2018
Storage Conditions:	Kept in a freezer set to maintain -20°C
Supplier:	Moderna Therapeutics, Inc.

** Re-calculated concentration as per SoA issued on 31 May 2017.

4.1.3. Characterization of Reference Standard and Reference Material

The Sponsor provided the documentation for the identity, strength, purity, composition, and stability for the reference standard and reference material. Copies of the supplied Summary of Analysis (SoA) or equivalent documentation are presented in Appendix 2.

Appendix 3

4.1.4. Inventory and Disposition of Reference Standard and Reference Material

Records of the receipt, distribution, and storage of the reference standard and reference material were maintained. All unused Sponsor-supplied reference standard and reference material were retained for use on subsequent studies for the Sponsor.

4.2. Methods

4.2.1. Analytical Procedures

The method for concentration analysis is documented in Analytical Procedure AP.5002158.SP.03 (Appendix 1) and was previously validated under Study Nos. 1801913. Concentration stability data were generated by the department of Analytical Chemistry, Charles River, CR MTL for 1 day, 5 days, and 8 days, for formulation samples stored at ambient temperature, in a refrigerator set to maintain 4°C and in a freezer set to maintain a temperature of -20°C, respectively, over the concentration range of 0.0100 – 2.50 mg/mL, under Study No. 1801913.

The method for particle size analysis is documented in Analytical Procedure AP.5002158.DLS.02 (Appendix 1).

4.3. Computerized Systems

Critical computerized systems used in this study phase are listed below (see Text Table 1).

Text Table 1
Computerized Systems

System Name	Version No.	Description of Data Collected and/or Analyzed
Empower 3 (Waters Corporation)	Build 3471 SR1	Data acquisition for dose formulation analysis, including regression analysis and measurement of concentration and recovery of dose formulations using HPLC
Dynamics (Wyatt)	7.1.9.3	Data acquisition for particle size analysis for the test item using DLS
Mesa Laboratories AmegaView CMS	v3.0 Build 1208.8	Continuous Monitoring System. Monitoring of standalone fridges, freezers, incubators, and selected laboratories to measure temperature, relative humidity, and CO_2, as appropriate
Johnson Controls Metasys	MVE 7.0	Building Automation System. Control of HVAC and other building systems, as well as temperature/humidity control and trending in selected laboratories and animal rooms

5. RESULTS AND DISCUSSIONS

All results presented in the tables of the report are calculated using non-rounded values as per the raw data rounding procedure and may not be exactly reproduced from the individual data presented.

Appendix 3

5.1. Dose Formulation Analysis

All study samples analyzed had mean concentrations within or equal to the acceptance criteria of ± 15% (individual values within or equal to ± 20%) of their theoretical concentrations, except for Day 1, Group 2 (mean: 126%, respectively); therefore as part the the investigation the retention samples were analyzed and confirmed the initial results. It was concluded that the concentration for Day 1, Group 2 formulations was out of specification. Results are presented in Table 1.

For homogeneity, the RSD of concentrations for all samples in each group tested was within the acceptance criteria of ≤ 5%. Results are presented in Table 1.

5.2. Bulk Test Item Analysis

The concentration and the particle size was measured. Concentration and particle size results were consistent with the initial Certificate of Analysis provided by the Sponsor. Results are presented in Table 2 and Table 3.

6. CONCLUSION

The dose formulations were within specification, except for Day 1, Group 2. Homogeneity testing showed that the formulation technique used produced homogeneous preparations.

The bulk Test Item analysis demonstrated that the test item was suitable for use during the study period.

ND = None detected.

[a] Re-calculated theoretical dose concentration as per SoA issued on 31 May 2017.

[b] Retention samples analyzed since initial results were out of acceptance criteria; re-processed results using latest SoA values were within acceptance criteria.

Appendix 3

Table 2 Bulk Test Item - Concentration

Occasion (Analysis Date)	Theoretical Concentration (mg/mL)	Measured Concentration (mg/mL)	Percent of Theoretical	Mean Measured Concentration (mg/mL)
End of study (08 May 2016)	(b) (4)			

Table 3 Bulk Test Item - Particle Size Analysis

Occasion (Analysis Date)	Theoretical Diameter (nm)	Measured Diameter (nm)	PD Index	% Difference Between Duplicate	% RSD	Mean Measured Diameter (nm)
End of study (08 May 2017)	(b) (4)					

[a] % Difference between duplicate was not within 5%; therefore all four measurements were reported.

Analytical Procedures

Appendix 3

Analytical Procedure (AP.5002158.SP.03)

Determination of mRNA-1443 in Dose Formulations by Ion Exchange High Performance Chromatography Using Ultraviolet/Visible Detection

Reference Standard, Reference Material and Vehicle

Reference Standard	CX-000479 mRNA
Lot number	MTDS16032
Concentration (actual)	2.19 mg/mL
Reference material	mRNA-1443
Description	White dispersion in lipid nanoparticles
Lot number	MTDP17017
Concentration (nominal)	2.5 mg/mL (to be used for calculations)
Vehicle	Phosphate-buffered Saline (PBS) pH 7.2

For storage conditions for reference standard and reference material supplied by the Sponsor, refer to the corresponding log sheets.

NOTES:

- ❑ Modifications may be made to the chromatographic conditions in order to optimize the chromatography.
- ❑ Solution volumes throughout this AP (including reagent solutions, blanks, standard stocks, standards and spiked samples) may be scaled up or down as long as the final concentration remains the same as specified in the procedure.
- ❑ Any changes made are to be documented in the raw data of the run.
- ❑ Unless otherwise indicated, information relating to the time of mixing/stirring, temperature or mixing method used in the preparation of solutions, diluents, mobile phases and vehicle will be considered non-critical. If a step is deemed critical, it will be noted within the procedure, and a positive entry will be made in the raw data
- ❑ **The compound is a mRNA, benchwork and handling should be performed under clean conditions to limit RNase contamination. When possible use RNase free tubes, pipette and repeater tips for reference standard/test item dilutions. DO NOT VORTEX, mix manually by inversion.**
- ❑ The method was previously validated under study 1801913.

Acceptance criteria

Unless specified in the following or in the Study Plan, refer to SOP CAD-002 and SOP CAD-003 for acceptance criteria.

Appendix 3

AP Version Control

First update:
- Updated actual concentration of the reference standard and reference material as per latest certificate of analysis; updated concentrations throughout the AP accordingly.
- Updated sample concentrations in Table 3 and 4 as per Study Plan amendment 05.
- Corrected the sonication time for the bulk test item analysis.
- Included all missing expiry periods.

Second update:
- Included missing expiry period for standards.

Individual Animal Mortality Explanation Page

Abbreviation	Description	Abbreviation	Description
AD or ACCD	Accidental death	REC	Recovery euthanasia
FD	Found dead	REL	Released
INTM	Interim	TE or TERM	Terminal euthanasia
NR	Not recorded	UE or UNSC	Unscheduled euthanasia

Note: This is a comprehensive list of abbreviations. All of the abbreviations listed may not be applicable to this report.

Note: Removal Time represents the time the removal was entered into the Provantis system and may not be representative of the time of death.

Dosing Information

Dosing information is abbreviated on various data outputs; the following represents the dosing information for this study.

Group No.	Test Material	Dose Level (µg/dose)[a]
1	Reference Item	0
2	mRNA-1443	10 / 9.6
3	mRNA-1443	30 / 29
4	mRNA-1443	100 / 96

[a] Values based on SoA issued on 16 Mar 2017 / Values based on SoA issued on 30 May 2017.

Appendix 5

Individual Clinical Observations Explanation Page

Abbreviation	Description	Abbreviation	Description
AM SIRT	Signs of ill health or reaction to treatment check in the morning	PM SIRT	Signs of ill health or reaction to treatment check in the afternoon
CSO	Cage side observation	PostRx #	Observation post dosing
DE	Detailed examination	PreRx #	Observation predosing
During Rx/R #	Observation during dosing	Unsc #	Unscheduled examination
Vet Aid	Anything observed by Vet Aid	#	Number to avoid using the same timeslot/animal/day

Note: This is a comprehensive list of abbreviations. All of the abbreviations listed may not be applicable to this report.

Note: Only animals with findings are presented in this appendix.

Dosing Information

Dosing information is abbreviated on various data outputs; the following represents the dosing information for this study.

Group No.	Test Material	Dose Level (µg/dose)[a]
1	Reference Item	0
2	mRNA-1443	10 / 9.6
3	mRNA-1443	30 / 29
4	mRNA-1443	100 / 96

[a] Values based on SoA issued on 16 Mar 2017 / Values based on SoA issued on 30 May 2017.

Group 4 - 96 ug/dose

Appendix 6

Individual Palpable Masses Explanation Page

Abbreviation	Description	Abbreviation	Description
AVS	Suspected aberrant value	NR	Not recorded

Note: This is a comprehensive list of abbreviations. All of the abbreviations listed may not be applicable to this report.

Note: Only animals with findings are presented in this appendix.

Dosing Information

Dosing information is abbreviated on various data outputs; the following represents the dosing information for this study.

Group No.	Test Material	Dose Level (µg/dose)[a]
1	Reference Item	0
2	mRNA-1443	10 / 9.6
3	mRNA-1443	30 / 29
4	mRNA-1443	100 / 96

[a] Values based on SoA issued on 16 Mar 2017 / Values based on SoA issued on 30 May 2017.

Appendix 6

Individual Palpable Masses

5002158

Group: 2 Animal: 2504 Sex: Female

Mass	Day (Week)	Time	Location	Size	Description
1	21(3)	15:52	Abdominal	3 mm	Firm
1	28(4)	8:35	Abdominal	3 mm	Firm
1	35(5)	15:40	Abdominal	3 mm	Firm
1	42(6)	9:18	Abdominal	3 mm	Firm
1	44(7)	11:11	Abdominal	3 mm	Firm

Appendix 7

Individual Local Irritation Assessment Explanation Page

Score	Erythema (Redness) Description
0	No erythema
1	Very slight erythema (barely perceptible)
2	Well-defined erythema and/or Mild erythema
3	Moderate to severe erythema
4	Severe erythema (beet redness to slight eschar formation, injuries in depth)
M	Notable dermal lesions (maximized)

Score	Edema (Swelling) Description
0	No edema
1	Very slight edema (barely perceptible)
2	Slight edema (edges of area are well-defined by definite raising)
3	Moderate edema (raised approximately 1 mm)
4	Severe edema (raised more than 1 mm and extending beyond area of exposure)

Other Abbreviations

Abbreviation	Description	Abbreviation	Description
AVS	Suspected aberrant value	Post Rx	Observation Post dosing
NR	Not recorded	PreRx	Observation predosing
OA	Omitted activity	DE	Detailed examination

Note: This is a comprehensive list of abbreviations. All of the abbreviations listed may not be applicable to this report.

Dosing Information

Dosing information is abbreviated on various data outputs; the following represents the dosing information for this study.

Appendix 8

Individual Body Weights Explanation Page

Abbreviation	Description	Abbreviation	Description
--	Not scheduled to be performed / dead	TERR	Technical error
AVS	Suspected aberrant value	UPTD	Unable to perform due to technical difficulty
OA	Omitted activity	X	Excluded from mean

Note: This is a comprehensive list of abbreviations. All of the abbreviations listed may not be applicable to this report.

Dosing Information

Dosing information is abbreviated on various data outputs; the following represents the dosing information for this study.

Group No.	Test Material	Dose Level (µg/dose)[a]
1	Reference Item	0
2	mRNA-1443	10 / 9.6
3	mRNA-1443	30 / 29
4	mRNA-1443	100 / 96

[a] Values based on SoA issued on 16 Mar 2017 / Values based on SoA issued on 30 May 2017.

Individual Body Weight Gains Explanation Page

Abbreviation	Description	Abbreviation	Description
--	Not scheduled to be performed / dead	TERR	Technical error
AVS	Suspected aberrant value	UPTD	Unable to perform due to technical difficulty
NC	Not calculable	X	Excluded from mean
OA	Omitted activity		

Note: This is a comprehensive list of abbreviations. All of the abbreviations listed may not be applicable to this report.

Dosing Information

Dosing information is abbreviated on various data outputs; the following represents the dosing information for this study.

Group No.	Test Material	Dose Level (µg/dose)[a]
1	Reference Item	0
2	mRNA-1443	10 / 9.6
3	mRNA-1443	30 / 29
4	mRNA-1443	100 / 96

[a] Values based on SoA issued on 16 Mar 2017 / Values based on SoA issued on 30 May 2017.

Individual Food Consumption Explanation Page

Abbreviation	Description	Abbreviation	Description
--	Not scheduled to be performed / dead	OA	Omitted activity
AFE	Animal found with no food during measurement interval-Exclude	ONEG	Original value negative, animal did not eat
AFNF	Animal found with no food during measurement interval	POWF	Powdered food
ANH	Animal found with no hopper during measurement interval	REHO	Animal rehoused during measurement interval
ANIC	Animal not in cage or in incorrect cage during measurement	REPL	Animal replaced during measurement interval
ANW	Animal found with no water access during measurement intervals	SPIL	Spilled food (by animal)
ANWB	Animal found with no water bottle during measurement interval	TERR	Technical error
AVS	Suspected aberrant value	UPTD	Unable to perform due to technical difficulty
AWE	Animal found with no water in bottle during measurement interval-Exclude	WAFE	Water added to food during measurement interval
FSG	Food supplementation given during interval, included in feed weight	WAFI	Water added to food during measurement interval, included
FSNC	Food supplementation given during interval, value not calculable	WETF	Wet or contaminated food (in container)
NC	Not calculable	X	Excluded from mean

Note: This is a comprehensive list of abbreviations. All of the abbreviations listed may not be applicable to this report.

Dosing Information

Dosing information is abbreviated on various data outputs; the following represents the dosing information for this study.

Group No.	Test Material	Dose Level (µg/dose)[a]
1	Reference Item	0
2	mRNA-1443	10 / 9.6
3	mRNA-1443	30 / 29
4	mRNA-1443	100 / 96

[a] Values based on SoA issued on 16 Mar 2017 / Values based on SoA issued on 30 May 2017.

Individual Body Temperature Values Explanation Page

Abbreviation	Description	Abbreviation	Description
--	Not scheduled to be performed / dead	TERR	Technical error
AVS	Suspected aberrant value	X	Excluded from mean
NR	Not recorded	pr	Body temperature at predosing
p	Body temperature at post dosing		

Note: This is a comprehensive list of abbreviations. All of the abbreviations listed may not be applicable to this report.

Dosing Information

Dosing information is abbreviated on various data outputs; the following represents the dosing information for this study.

Group No.	Test Material	Dose Level (µg/dose)[a]
1	Reference Item	0
2	mRNA-1443	10 / 9.6
3	mRNA-1443	30 / 29
4	mRNA-1443	100 / 96

[a] Values based on SoA issued on 16 Mar 2017 / Values based on SoA issued on 30 May 2017.

Analyzed Parameter Descriptions

Parameter	Abbreviation	Units	Methodology
Hematocrit	HCT	%	Calculated
Hemoglobin	HGB	g/dL	Colorimetric
Mean Corpuscular Hemoglobin	MCH	pg	Calculated
Mean Corpuscular Hemoglobin Concentration	MCHC	g/dL	Calculated
Mean Corpuscular Volume	MCV	fL(μm^3)	Calculated
Mean Platelet Volume	MPV	fL(μm^3)	Calculated
Platelet Count	PLT	$x10^3/\mu L$	Light scatter
Red Blood Cell Count	RBC	$x10^6/\mu L$	Light scatter
Red Blood Cell Distribution Width	RDW	%	Calculated
Reticulocytes	RETIC	$x10^9/L$	Calculated
Reticulocytes Percent	RETIC	%	Light scatter
White Blood Cell Count	WBC	$x10^3/\mu L$	Light scatter
White Blood Cell Differential Count			
Neutrophils Percent	NEUT	%	Light scatter
Lymphocytes Percent	LYMPH	%	Light scatter
Monocytes Percent	MONO	%	Light scatter
Eosinophils Percent	EOS	%	Light scatter
Basophils Percent	BASO	%	Light scatter
Large Unstained Cells Percent	LUC	%	Light scatter
Neutrophils	NEUT	$x10^3/\mu L$	Calculated
Lymphocytes	LYMPH	$x10^3/\mu L$	Calculated
Monocytes	MONO	$x10^3/\mu L$	Calculated
Eosinophils	EOS	$x10^3/\mu L$	Calculated
Basophils	BASO	$x10^3/\mu L$	Calculated
Large Unstained Cells	LUC	$x10^3/\mu L$	Calculated

Manual and Visual

Analyzed Parameter Descriptions

Parameter	Abbreviation	Units	Methodology
White Blood Cell Differential Count		% and/or $x10^3/\mu L$	Microscopic enumeration (100 white cells)
- Immature Neutrophils Count	IMM NEUT		
- Immature Neutrophils Percent	IMM NEUT		
- Immature Cells Percent	IMM CELL		
- Immature Cells Count	IMM CELL		
- Large Platelets	LPLT		
- Neutrophils Band Form	NEUT BAND		
- Neutrophils Band Form Percent	NEUT BAND		
- Packed Cell Volume	PCV		
- Neutrophils	NEUT		
- Lymphocytes	LYMPH

- Large Platelets Alpha	LARGE PLATELETS		
- Immature Neutrophils Morphology	IMM NEUT MORPH		
- Heinz Bodies	HEINZ BODY		
- Plasmodium	PLASMOD		
- Kurloff Cell	KURL		

Appendix 12

- Burr Cells	BURR		
- Neutrophils Band Form Morphology	NEUT BAND MORPH		
- Nuclear Swelling	NUC SWELL NEUT		
- Red Blood Cell Morphology	RBC MORPH		
- White Blood Cell Morphology	WBC MORPH		
- Toxic Granulation	TOXG		
- Platelet Morphology	PLT MORPH		
Heinz Bodies Percent	HEINZ BODY	%	Microscopic examination. Methyl violet in physiological saline
Reticulocyte Percent	RETIC	%	Microscopic enumeration, (b) (4)
Bone Marrow Stain		None	Manual, Wright-Giemsa stain
Bone Marrow Slide Fixation		None	Manual, Fixative

Aerospray Automated Slide Stainer

Analyzed Parameter Descriptions

Parameter	Abbreviation	Units	Methodology
White Blood Cell Differential Stain		None	2 parts aqueous stain (Eosin-Thiazin)

Midas III Slide Stainer

Analyzed Parameter Descriptions

Parameter	Abbreviation	Units	Methodology
White Blood Cell Differential Stain		None	Wright-Giemsa stain
Bone Marrow Stain		None	Wright-Giemsa stain
Bone Marrow Slide Fixation		None	Fixative

Other Abbreviations

Abbreviation	Description	Abbreviation	Description
--	Not required for veterinary monitoring / No findings / Not scheduled to be performed/Dead	QNS	Quantity not sufficient
ADQ	Adequate	RSV	Refer to source data
AVS	Suspected aberrant value	SAMU	Large number of smudge cells
CLOT	Sample clotted	SND	Stability not documented
COMM	Comment added	SNR	Sample not received
DEC	Decreased	UDPC	Results not confirmed by smear review
INC	Increased	Unsc	Unscheduled bleed
MDIFF	Manual differential	UPTD	Unable to perform due to technical difficulty
NAF	No abnormal findings	UTD	Unable to determine
NRBC	WBC corrected for presence of nucleated RBC	UTDM	Unable to determine, not confirmed by microscopy
NSCH	Not scheduled to be performed	UTDR	Unable to determine, results not reproducible

Appendix 12

OA	Omitted activity	Vet	Bleed for veterinary monitoring
OOS	Sample analysed outside of established stability, results for information only	VNC	Value not calculable
		X	Excluded from mean

Note: This is a comprehensive list of parameters and abbreviations. All of the parameters and abbreviations listed may not be applicable to this report.

Note: Additional morphology for flagged samples has been reported for the following animals: 2001, 4005 and 4009.

Dosing Information

Dosing information is abbreviated on various data outputs; the following represents the dosing information for this study.

Group No.	Test Material	Dose Level (µg/dose)[a]
1	Reference Item	0
2	mRNA-1443	10 / 9.6
3	mRNA-1443	30 / 29
4	mRNA-1443	100 / 96

[a] Values based on SoA issued on 16 Mar 2017 / Values based on SoA issued on 30 May 2017.

START 4 Compact Stago Analyzer

Analyzed Parameter Descriptions

Parameter	Abbreviation	Units	Methodology
Activated Partial Thromboplastin Time	APTT	sec	Viscosity
Fibrinogen	FIB	mg/dL	Viscosity
Prothrombin Time	PT	sec	Viscosity

STA Compact Stago Analyser

Analyzed Parameter Descriptions

Parameter	Abbreviation	Units	Methodology
Prothrombin Time	PT	sec	Viscosity
Activated Partial Thromboplastin Time	APTT	sec	Viscosity
Fibrinogen	FIB	mg/dL	Viscosity

Plasma Appearance (Reported as SAMQ PLASMA)

Analyzed Parameter Descriptions

Parameter	Abbreviation	Degree is graded as	Methodology
Normal sample	N	Normal	Manual and visual
Hemolyzed sample	H	+ = slight (pale/light red) ++ = moderate (red) +++ = severe (dark red)	Manual and visual
Lipemic sample	L	+ = slight (cloudy) ++ = moderate (turbid) +++ = severe (lactescent)	Manual and visual
Icterus sample	I	+ = slight (dark yellow) ++ = moderate (very dark yellow) +++ = severe (dark yellow-green)	Manual and visual

Appendix 13

Other Abbreviations

Abbreviation	Description	Abbreviation	Description
--	Not required for veterinary monitoring / Not scheduled to be performed / Dead	RSV	Refer to source data
AVS	Suspected aberrant value	SND	Stability not documented
CLOT	Sample clotted	SNR	Sample not received
COMM	Comment added	Unsc	Unscheduled bleed
NCD	No clot detected	UPTD	Unable to perform due to technical difficulty
NSCH	Not scheduled to be performed	UTD	Unable to determine
OA	Omitted activity	UTDR	Unable to determine, results not reproducible
OOS	Sample analysed outside of established stability, results for information only	Vet	Bleed for veterinary monitoring
QNS	Quantity not sufficient	VNC	Value not calculable
		X	Excluded from mean

Note: This is a comprehensive list of parameters and abbreviations. All of the parameters and abbreviations listed may not be applicable to this report.

Dosing Information

Dosing information is abbreviated on various data outputs; the following represents the dosing information for this study.

Group No.	Test Material	Dose Level (µg/dose)[a]
1	Reference Item	0
2	mRNA-1443	10 / 9.6
3	mRNA-1443	30 / 29
4	mRNA-1443	100 / 96

[a] Values based on SoA issued on 16 Mar 2017 / Values based on SoA issued on 30 May 2017.

Modular Analytics

Analyzed Parameter Descriptions

Parameter	Abbreviation	Units	Methodology
Alanine Aminotransferase	ALT	U/L	ALT IFCC UV
Albumin	ALB	g/dL	Bromcresol green colorimetric
Alkaline Phosphatase	ALP	U/L	ALP IFCC liquid colorimetric
Aspartate Aminotransferase	AST	U/L	AST IFCC UV
Calcium	CA	mg/dL	O-cresolphthalein complexone colorimetric
Cholesterol	CHOL	mg/dL	CHOD-PAP enzymatic colorimetric
Creatinine	CREAT	mg/dL	Jaffe kinetic colorimetric. Rate-blanked and compensated
Creatine Kinase	CK	U/L	NAC activated UV
Direct Bilirubin	DBIL	mg/dL	Jendrassik colorimetric
GAMMA-Glutamyl Transferase	GGT	U/L	Nitro-Anilide, Glycylglycine; enzymatic colorimetric
Glucose	GLUC	mg/dL	Hexokinase UV
Iron	FE	µg/dL	Colorimetric
Lactate	LACT	mg/dL	Enzymatic colorimetric
Magnesium	MG	mg/dL	Colorimetric
Phosphorus	PHOS	mg/dL	Molybdate UV
Sodium, Potassium, Chloride (SI)	NA,K,CL	mmol/L	Indirect measurement (Ion selective electrode)
Total Bilirubin	TBIL	mg/dL	DPD colorimetric
Total Protein	TPROT	g/dL	Biuret colorimetric
Triglycerides	TRIG	mg/dL	GPO-PAP enzymatic colorimetric
Urea Nitrogen	UREAN	mg/dL	Urease kinetic UV

Calculations

Analyzed Parameter Descriptions

Parameter	Abbreviation	Units	Calculation
Albumin/Globulin ratio	A/G	None	Albumin / Globulin
Globulin	GLOB	g/dL	Total Protein - Albumin
Indirect Bilirubin	IBIL	mg/dL	Total Bilirubin - Direct Bilirubin

Appendix 14

Serum Appearance
(Reported as SAMQ SERUM)

Analyzed Parameter Descriptions

Parameter	Abbreviation	Key to Results (Code)	Methodology
Normal sample	N	Normal	Manual and visual
Hemolyzed sample	H	+ = slight (pale/light red) ++ = moderate (red) +++ = severe (dark red)	Manual and visual
Lipemic sample	L	+ = slight (cloudy) ++ = moderate (turbid) +++ = severe (lactescent)	Manual and visual
Icterus sample	I	+ = slight (dark yellow) ++ = moderate (very dark yellow) +++ = severe (dark yellow-green)	Manual and visual

Other Abbreviations

Abbreviation	Description	Abbreviation	Description
--	Not evaluated/Not required for veterinary monitoring	SNR	Sample not received
AVS	Suspected aberrant value	TNR	Test not reported
COMM	Comment added	Unsc	Unscheduled bleed
CLOT	Sample clotted	UPTD	Unable to perform due to technical difficulty
LLD	Less than lower limit of detection	UTD	Unable to determine
LLOQ/LLQ	Less than lower limit of quantitation	UTDH	Unable to determine due to marked hemolysis
NSCH	Not scheduled to be performed	UTDL	Unable to determine due to marked lipemia
OA	Omitted activity	UTDR	Unable to determine, results not reproducible
OOS	Sample analysed outside of established stability, results for information only	VARR	Assigned value above reportable range
QNS	Quantity not sufficient	VBRR	Assigned value below reportable range
RSV	Refer to source data	Vet	Bleed for veterinary monitoring
SND	Stability not documented	VNC	Value not calculable
		X	Excluded from mean

Note: This is a comprehensive list of parameters and abbreviations. All of the parameters and abbreviations listed may not be applicable to this report.

Appendix 14

Dosing Information

Dosing information is abbreviated on various data outputs; the following represents the dosing information for this study.

Group No.	Test Material	Dose Level (µg/dose)[a]
1	Reference Item	0
2	mRNA-1443	10 / 9.6
3	mRNA-1443	30 / 29
4	mRNA-1443	100 / 96

[a] Values based on SoA issued on 16 Mar 2017 / Values based on SoA issued on 30 May 2017.

Appendix 15

Individual α1-acid Glycoprotein and α2-macroglobulin Values Explanation Page

Abbreviation	Description	Abbreviation	Description
--	No findings / Dead	QNS	Quantity not sufficient
CLOT	Sample clotted	SNR	Sample not received
NA	Not applicable	TNR	Test not reported
NC	Not calculable	X	Excluded from mean
NR	Not reported		

Note: This is a comprehensive list of abbreviations. All of the abbreviations listed may not be applicable to this report.

Note:

For α1-acid Glycoprotein

Lower Limit of Quantification (LLOQ) = 12.50 ng/mL, <12.50 was assigned as 12.50/2 (6.25 ng/mL) for statistical analysis purposes.

Dosing Information

Dosing information is abbreviated on various data outputs; the following represents the dosing information for this study.

Group No.	Test Material	Dose Level (µg/dose)[a]
1	Reference Item	0
2	mRNA-1443	10 / 9.6
3	mRNA-1443	30 / 29
4	mRNA-1443	100 / 96

[a] Values based on SoA issued on 16 Mar 2017 / Values based on SoA issued on 30 May 2017.

Appendix 16

Individual Cytokines Values Explanation Page

Abbreviation	Description	Abbreviation	Description
--	No findings / Dead	QNS	Quantity not sufficient
CLOT	Sample clotted	SNR	Sample not received
NA	Not applicable	TNR	Test not reported
NC	Not calculable	X	Excluded from mean
NR	Not reported	b	Less than 30 beads acquired in 2 different analysis. A mean of both analysis was reported
SNC	Sample not collected		

Note: This is a comprehensive list of abbreviations. All of the abbreviations listed may not be applicable to this report.

Note:

For IL-1β and MIP-1α

Lower Limit of Quantification (LLOQ) = 11.70 pg/mL, <11.70 was assigned as 11.70/2 (5.85 pg/mL) for statistical analysis purposes

For IL-6

Lower Limit of Quantification (LLOQ) = 352.00 pg/mL, <352.00 was assigned as 352.00/2 (176.00 pg/mL) for statistical analysis purposes

For MCP-1

Lower Limit of Quantification (LLOQ) = 141.00 pg/mL, <141.00 was assigned as 141.00/2 (70.50 pg/mL) for statistical analysis purposes

For TNF-α

Lower Limit of Quantification (LLOQ) = 2.93 pg/mL, <2.93 was assigned as 2.93/2 (1.47 pg/mL) for statistical analysis purposes

Dosing Information

Dosing information is abbreviated on various data outputs; the following represents the dosing information for this study.

Group No.	Test Material	Dose Level (µg/dose)[a]
1	Reference Item	0
2	mRNA-1443	10 / 9.6
3	mRNA-1443	30 / 29
4	mRNA-1443	100 / 96

[a] Values based on SoA issued on 16 Mar 2017 / Values based on SoA issued on 30 May 2017.

TABLE OF CONTENTS

Appendix 17

LIST OF APPENDICES

Appendix 17

1. INTRODUCTION

This report presents the ophthalmology evaluations for the study entitled *A 6-Week (4 doses) Intramuscular Injection Toxicity Study of mRNA-1443 in Sprague-Dawley Rats followed by a 2-Week Recovery Period* (Study No. 5002158).

For the work detailed in this report, the ophthalmology phase start date was 13 Mar 2017, and the ophthalmology phase completion date was 30 Apr 2017.

2. MATERIALS AND METHODS

Experimental procedures applicable to ophthalmology evaluations are summarized in Text Table 1.

Text Table 1
Experimental Design

Group No.	Test Material	Dose Level (µg/dose)[a]	Dose Volume (µL/dose)	Dose Concentration (mg/mL)[a]	No. of Animals			
					Main Study		Recovery Study	
					Males	Females	Males	Females
1	Reference Item	0	200	0	10	10	5	5
2	mRNA-1443	10 / 9.6	200	0.05 / 0.048	10	10	-	-
3	mRNA-1443	30 / 29	200	0.15 / 0.145	10	10	-	-
4	mRNA-1443	100 / 96	200	0.5 / 0.48	10	10	5	5

- : Not applicable
[a] Values based on SoA issued on 16 Mars 2017 / Values based on SoA issued on 30 May 2017

2.1. Ophthalmic Examinations

Frequency: Examinations were performed once prestudy and again toward the end of Week 6 of the dosing period.

Procedure: All animals were subjected to funduscopic (indirect ophthalmoscopy) and biomicroscopic (slit lamp) examinations. The mydriatic used was 0.126% Atropine.

2.2. Computerized Systems

The following critical computerized system was used by the Test Facility in the generation of this report (Text Table 2).

Text Table 2
Computerized Systems

System Name	Version No.	Description of Data Collected and/or Analyzed
Provantis	8	Ophthalmic evaluations

Appendix 17

3. RESULTS AND DISCUSSION

(Appendix 1)

3.1. Pretreatment Evaluation

Background findings were recorded and recommendations for rejection from study groups were made when appropriate.

3.2. End of Week 6 Evaluation

There were no test item-related ocular changes observed during the course of the study. The findings noted were age-related or incidental in origin and to be expected in this population of animals.

4. CONCLUSIONS

Administration of mRNA-1443 by Intramuscular Injection to Sprague Dawley Rats for 6 Weeks at doses of 10 / 9.6, 30 / 29, and 100 / 96 µg/dose did not result in any test item-related ophthalmic changes.

TABLE OF CONTENTS

Appendix 18

INTRODUCTION

The objective of the present study was to evaluate the T cell responses of rats vaccinated with mRNA-1443. Rat blood cells were stimulated with overlapping peptide library for pp65 and interferon gamma (INFγ) producing T cells assessed by intracellular cytokine staining (ICS) and flow cytometric analysis.

MATERIALS AND METHODS

Blood Samples

Blood samples for evaluation were generated as part of a study conducted at Charles River Laboratories Montreal, CRLM (Test Facility Study No. 5002158). In total, 80 blood samples were received from CRLM over the course of two days, 03-May-2017 (male rat samples) and 04-May-2017 (female rat samples). Each shipment consisted of 40 whole blood samples in sodium heparin blood collection tubes with 10 samples from each of 4 study groups. Upon receipt, samples were verified against the shipping manifest and immediately processed and analyzed.

(b) (4)

Statistical Analysis

Means and standard deviations for each analyzed parameter were determined for each sex of each treatment group.

Study Design

The detailed Study Design is included in the Appendix (p. 5-6).

Appendix 18

RESULTS and **CONCLUSIONS**

The objective of this study was to evaluate the T cell responses of rats vaccinated with mRNA-1443 by assessment of Interferon gamma (INFγ) producing T cells by intracellular cytokine staining and flow cytometric analysis. There was minimal noted antigen-specific response to the pp-65 peptide library seen in this study.

A detailed table of individual animal responses is presented in the Appendix (p.7-14). A summary of INFγ production responses are presented in the table below.

Summary of Results - pp65 Specific INFγ Response

	Group	Test material	N	Dose level (μg)	pp65 specific CD4+ T cells Range (%)*;	Mean (%);	SD	pp65 specific CD8+ T cells Range (%)*;	Mean (%);	SD

*For purpose of Range and Mean calculation, values < 0.00 following Unstimulated Control subtraction were set to 0.00 for reporting.

Conclusions

The mRNA-1443 elicited minimal CD4 and CD8 T cell responses to pp65. The animals that received all dose levels of mRNA-1443 showed minimal and varying T cell responses for pp65 peptide library. In male rats immunized with 96 μg of mRNA-1443, the range of pp65-specific CD4 and CD8 T cells secreting IFNγ were 0-0.10% and 0-0.41%, respectively. In female rats that received 96 μg of mRNA-1443, the range of pp65-specific CD4 and CD8 T cells were 0-0.68% and 0-0.55%, respectively.

Male rats immunized with 29 μg of mRNA-1443, the range of pp65-specific CD4 and CD8 T cells secreting IFNγ were 0-0.22% and 0-0.57%, respectively. In female rats that received 29 μg of mRNA-1443, the range of pp65-specific CD4 and CD8 T cells were 0-0.48% and 0-0.17%, respectively.

Male rats immunized with 9.6 μg of mRNA-1443, the range of pp65-specific CD4 and CD8 T cells secreting IFNγ were 0-0.27% and 0-1.07%, respectively. In female rats that received 9.6 μg of mRNA-1443, the range of pp65-specific CD4 and CD8 T cells were 0-0.62% and 0-0.22%, respectively.

Appendix 19

TABLE OF CONTENTS

Appendix 19

LIST OF TABLES

LIST OF APPENDICES

Appendix 19

1. SUMMARY

The bulk test item was analyzed using the (b) (4) System for the determination of mRNA-1443 purity.

The bulk test item was collected at the end of the dosing period of Study No. 5002158 entitled "A 6-Week (4 Doses) Intramuscular Injection Toxicity Study of mRNA-1443 in Sprague-Dawley Rats followed by a 2-Week Recovery Period."

The end of use bulk test item analysis demonstrated purity results of (b) (4)

2. INTRODUCTION

This report describes the analytical evaluation of mRNA-1443 purity in the bulk test item from Study No. 5002158.

For the work detailed in this report, the analytical experimental phase start date was 10 May 2017 and the end date was 12 Jun 2017.

3. EXPERIMENTAL DESIGN

3.1. Bulk Test Item End of Use Analysis

Analysis of the bulk test item was carried out with regards to the purity analysis.

At the end of the study dosing phase, one vial of test item was received for purity analysis.

4. MATERIALS AND METHODS

4.1. Materials

4.1.1. Reference Standard

Identification:	CX-000479 mRNA
Physical Description:	Clear, colorless solution, no visible particulates
Batch/Lot No.:	MTDS16032
Concentration:	2.19 mg/mL
Retest Date:	Nov 2017
Storage Conditions:	Kept in a freezer set to maintain -20°C
Supplier:	Moderna Therapeutics, Inc.

Appendix 19

4.1.2. Bulk Test Item

Identification:	mRNA-1443 (in lipid nanoparticles)
Physical Description:	0.5 mL per vial, white to off-white lipid nanoparticle dispersion
Batch/Lot No.:	MTDP17017
Concentration:	2.6 /2.5* mg/mL
Retest Date:	23 Feb 2018
Storage Conditions:	Kept in a freezer set to maintain -20°C
Supplier:	Moderna Therapeutics, Inc.

* Concentration based on SoA released on 16 March 2017 /Concentration based on SoA released on 22 Jun 2017.

4.1.3. Characterization of Reference Standard and Bulk Test Item Sample

The Sponsor provided the documentation for the identity, strength, purity, and composition of the reference standard and bulk test item sample. Copies of the supplied Certificates of Analysis (CofA) or equivalent documentation are presented in Appendix 3.

4.1.4. Inventory and Disposition of Reference Standard and Bulk Test Item Sample

Records of the receipt, distribution, and storage of the reference standard and bulk test item sample were maintained. All unused Sponsor-supplied reference standard and bulk test item sample will be discarded before issue of the final report.

4.2. Methods

(b) (4)

4.3. Computerized Systems

Critical computerized systems used in this study phase are listed below (see Text Table 1).

Appendix 19

Text Table 1
Computerized Systems

System Name	Version No.	Description of Data Collected and/or Analyzed
(b) (4)	1.1.0.11	Data acquisition
Empower 3 (Waters Corporation)	Build 3471 SR1	Data regression analysis and measurement of purity
Excel	2007	Data analysis and tabulation
Mesa Laboratories AmegaView CMS	v3.0 Build 1208.8	Continuous Monitoring System. Monitoring of standalone fridges, freezers, incubators, and selected laboratories to measure temperature, relative humidity, and CO_2, as appropriate
Johnson Controls Metasys	MVE 7	Building Automation System. Control of HVAC and other building systems, as well as temperature/humidity control and trending in selected laboratories and animal rooms

5. DEVIATIONS

Deviations from the analytical procedure occurred during this phase of the study. These deviations were documented in the raw data and study records. They were minor in nature and had no impact upon the integrity of the data for its intended purpose.

No study plan deviation occurred during this phase of the study.

6. RESULTS AND CONCLUSION

(b) (4)

The end of use bulk test item analysis demonstrate a purity of (b) (4) which is similar to the original results provided by the Sponsor on the Certificate of Analysis. As per Certificate of Analysis, the purity specification is expected to be (b) (4)

LIST OF APPENDICES

Appendix 20

1. INTRODUCTION

This report describes the evaluation of alpha-1-acid glycoprotein, alpha-2-macroglobulin and cytokines in rat plasma (EDTA) or serum samples from Study No. 5002158 titled "*A 6-Week (4 doses) Intramuscular Injection Toxicity Study of mRNA-1443 in Sprague-Dawley Rats followed by a 2-Week Recovery Period*".

For the work detailed in this report, the phase experimental start date was 19 May 2017, and the phase experimental completion date was 08 Jun 2017

1.1. Materials and Methods

The methodology and materials used for the analyses were detailed in their respective analytical procedures (only the latest version is appended) and listed in the table below:

Analyte	Analytical Procedure(s) No.
Alpha-1-acid glycoprotein (AGP)	AP.5002158.AGP.02
Alpha-2-macroglobulin (A2M)	AP.5002158.A2M.01
IL-1β, IL-6, IP-10, MCP-1, MIP-1α and TNF-α	AP.5002158.Cyt.01

The methods were not validated.

1.2. Computerized Systems

Critical computerized systems used in this study phase are listed below (see Text Table 1)

Text Table 1
Computerized Systems

System Name	Version No.	Description of Data Collected and/or Analyzed
Softmax Pro GxP	5.4.6	Data collection
Bio Plex Manager (Bio-Rad)	Version 6.1	Data collection
Watson LIMS	7.4.2 SP1	Sample tracking/ analysis/regression
Microsoft Excel	2007	Descriptive statistics
Microsoft Word	2007	Data reporting
Mesa Laboratories AmegaView CMS	v3.0 Build 1208.8	Continuous Monitoring System. Monitoring of standalone fridges, freezers, incubators, and selected laboratories to measure temperature, relative humidity, and CO_2, as appropriate
Johnson Controls Metasys	MVE 4.0.4	Building Automation System. Control of HVAC and other building systems, as well as temperature/humidity control and trending in selected laboratories and animal rooms

Appendix 20

2. RESULTS AND DISCUSSIONS

2.1. Standards and Quality Control Samples for alpha-1-acid Glycoprotein

Standards, Quality Control (QC) preparation and acceptance criteria are described in the latest version of the analytical procedure (Appendix 2). Standard curve and QC specifications are presented in (Text Table 2).

Text Table 2
Alpha-1-acid Glycoprotein Standard Curve and Quality Controls Specifications

Range of the curve (ng/mL)	LLOQ (ng/mL)	ULOQ (ng/mL)	HQC (ng/mL)	MQC (ng/mL)	LQC (ng/mL)
3.13 to 800*	12.5	400	320	160	20.0

* Standard 3.13, 6.25 and 800 ng/mL are accessory standards used to define the lower and upper portion of the curve.

A total of 7 AGP assays were performed and one assay was out of the method's acceptance criteria. All results were reported from the assays that met the acceptance criteria.

2.2. Standards and Quality Control Samples for alpha-2-macroglobulin

Standards, Quality Control (QC) preparation and acceptance criteria are described in the latest version of the analytical procedure (Appendix 3). Standard curve and QC specifications are presented in (Text Table 3).

Text Table 3
Alpha-2-Macroglobulin Standard Curve and Quality Controls Specifications

Range of the curve (ng/mL)	LLOQ (ng/mL)	ULOQ (ng/mL)	HQC (ng/mL)	MQC (ng/mL)	LQC (ng/mL)
3.13 to 400*	6.25	400	240	80.0	8.00

* Standard 3.13 ng/mL is an accessory standard used to define the lower portion of the curve.

A total of 8 A2M assays were performed and two assays were out of the method's acceptance criteria. All results were reported from the assays that met the acceptance criteria.

2.3. Standards and Quality Control Samples for Cytokine Panel

Standard, Quality control (QC) preparation and acceptance criteria are described in the latest version of the analytical procedure (Appendix 4). Standard curve and quality control specifications are presented in (Text Table 4).

Appendix 20

Text Table 4
Cytokine Standard Curves and Quality Controls Specifications

Cytokine Panel	Range of the Curve (pg/mL)	LLOQ (pg/mL)	ULOQ (pg/mL)	HQC (pg/mL)	MQC (pg/mL)	LQC (pg/mL)
IL-1β	11.7 to 1500	11.7	1500	1200	150	15.6
IL-6	352 to 45000	352	45000	36000	4500	469
IP-10	11.7 to 1500	11.7	1500	1200	150	15.6
MCP-1	141 to 18000	141	18000	14400	1800	188
MIP-1α	11.7 to 1500	11.7	1500	1200	150	15.6
TNF-α	2.93 to 375	2.93	375	300	37.5	7.81

A total of 9 cytokine assays were performed and 3 assays were out of the method's acceptance criteria due to technical oversight during the standard curve preparation. All results were reported from the assays that met the acceptance criteria.

2.4. Study Samples

For blood markers (AGP and A2M) analysis, approximately 0.7 mL of blood was collected from all animals (unscheduled and scheduled euthanasia) from the abdominal aorta on days 44 and 57. Blood samples were processed to serum and were stored in a freezer set to maintain -20°C until analysis.

Blood was collected from the jugular vein of all recovery animals on Days 1, 15, 29, 43 and 57 at 6 hours post dose for cytokine analysis (IL-1β, IL-6, TNF-α, IP-10, MIP-1α and MCP-1). Blood samples were processed to plasma, and to serum for IFN-α. Samples were stored in a freezer set to maintain -80°C until analysis. However due to method development issues, IFN-α analysis was withdrawn from the cytokine list and therefore IFN-α serum samples were not analyzed.

2.5. Cytokines

The study samples were analyzed in duplicate and results are presented in Table 10 and Appendix 16.

IL-1β

The quantifiable IL-1β concentration range in the reference item group was 29.24 pg/mL to 373.33 pg/mL. All IL-1β concentrations observed amongst the dosed group were lower or within the control group range. No statistically significant changes were observed.

IL-6

Quantifiable results were observed in only 3 animals on Day 43, 6 hours post dose: males 4013 and 4015 and female 4512.

For all other animals, males and females, at all time points, the IL-6 concentrations observed were below the LLOQ. No statistically significant changes were observed.

Appendix 20

TNF-α

Punctual TNF-α concentrations similar to the concentrations observed in the control group were detected in males. TNF-α concentrations detected in females were all below the LLOQ except for 2 dosed females on Day 43 6 hours post dose. No statistically significant changes were observed.

IP-10

Higher concentrations of IP-10, when compared to the reference item group, were observed in the high dosed group of mRNA-1443 with the highest concentrations being generally observed on Days 29 and 43, 6 hours post dose in both genders. On Days 29 and Day 43, a 2.8 to 2.9-fold increase in males and a 6.2 to 6.8-fold increase in females were observed when compared to the mean IP-10 concentration detected in the control group.

The changes were statistically significant on days 29 and 43 6 hours post dose for males and on day 29 6 hours post dose in females.

On day 57, the concentration of IP-10 for the animal assigned to the dosed groups was very similar to the control group concentration for most animals, suggesting that animals had fully recovered.

MIP-1α

The MIP-1α concentrations observed across all males, at all time points were below the LLOQ. MIP-1α concentration close to the LLOQ was detected in one female. No statistically significant changes were observed.

MCP-1

In males, MCP-1 concentrations were similar between dosed and control animals. In females, a 7.4-fold increase was observed on Day 1, a 1.9-fold increase on day 15, a 1.7-fold increase on day 29 and a 2.8-fold increase on Day 43 6 hours post dose when compared to the mean MCP-1 concentration detected in the control group.

The changes were statistically significant on day 1, 15, 29 and 43 6 hours post dose for females.

On day 57, the concentration of MCP-1 for the animal assigned to the dosed groups was very similar to the control group concentration for most animals, suggesting that animals had fully recovered.

Appendix 20

3. CONCLUSION

Statistically significant increases of IP-10 concentrations were observed in both genders dosed with mRNA-1443 at 96 μg/dose. Higher concentrations were generally observed on Day 43. IP-10 concentrations were back to control level on Day 57.

In dosed females, MCP-1 concentrations were increased on Days 1, 15, 29 and 43 6 hours post dose when compared to the control group, and the increases were statistically significant. MCP-1 concentrations were back to normal level on Day 57

No changes were observed in the IL-1β, IL-6, MIP-1α and TNF-α levels following dosing.

All samples collected for the AGP, A2M and cytokines analyses were analyzed using qualified immunoassay methods. Based on the acceptable performance of the standards and QCs during sample analysis, it is concluded that the concentration values reported for the study samples are valid.

DEVIATIONS

All deviations that occurred during this study phase have been acknowledged by the Study Director, assessed for impact, and documented in the study records. None of the deviations were considered to have impacted the overall integrity of this study phase or the interpretation of the study phase results and conclusions.

ANALYTICAL PROCEDURE

charles river | every step of the way.

Title: ELISA METHOD FOR THE QUANTITATIVE DETECTION OF ALPHA 1 ACID GLYCOPROTEIN IN RAT SERUM	AP Number: AP.5002158.AGP.02	Effective Date: Signature of AP
	Page 1 of 6 pages	Supersedes: 08 Mar 2017
Prepared and approved by: (b) (6) (b) (6)		Date: 18 May 2017
Authorized by: (b) (6) (b) (6)		Date: 18/May 2017

1. **PURPOSE**

The purpose of this assay is to describe an ELISA method for the quantitation of alpha 1 acid glycoprotein in rat serum.

2. **SCOPE**

This analytical procedure applies to all personnel performing activities related to this method.

3. **RESPONSIBILITY**

All staff performing this assay are responsible for compliance with this analytical procedure.

4. **DEFINITIONS/ABBREVIATIONS**

ELISA:	enzyme-linked immunosorbent assay
% Diff:	% difference
LLOQ:	lower limit of quantitation
LQC:	low concentration quality control sample
MQC:	mid concentration quality control sample
HQC:	high concentration quality control sample
ULOQ:	upper limit of quantitation
N/A:	not applicable
QC:	quality control sample
RT:	ambient room temperature in a non-controlled environment in a normally acceptable room temperature
RF:	refrigerated in a refrigerator set at 4°C
F:	frozen in a freezer set at -20°C
STD:	standard
TBD:	to be determined
UPW:	Ultra Pure Water

ANALYTICAL PROCEDURE

charles river | every step of the way.

Title: ELISA METHOD FOR THE QUANTITATIVE DETECTION OF ALPHA 2-MACROGLOBULIN IN RAT SERUM	AP Number: AP.5002158.A2M.01	Effective Date: Signature of AP
	Page 1 of 5 pages	Supersedes: N/A
Approved by: (b) (6) (b) (6)		Date: 18 May 2017
Authorized by: (b) (6) (b) (6)		Date: 18/May 2017

1. **PURPOSE**
The purpose of this assay is to describe an ELISA method for the quantitation of alpha 2-macroglobulin in rat serum.

2. **SCOPE**
This analytical procedure applies to all personnel performing activities related to this method.

3. **RESPONSIBILITY**
All staff performing this assay are responsible for compliance with this analytical procedure.

4. **REQUIRED FORM**
Appendix #1: Assay information sheet

COMPLIANCE STATEMENT AND REPORT APPROVAL

The pathology phase of this study conducted in the USA was performed in accordance with the U.S. Department of Health and Human Services, Food and Drug Administration, United States Code of Federal Regulations, Title 21, Part 58: Good Laboratory Practice for Nonclinical Laboratory Studies and as accepted by Regulatory Authorities throughout the European Union (OECD Principles of Good Laboratory Practice), Japan (MHLW), and other countries that are signatories to the OECD Mutual Acceptance of Data Agreement.

This phase of the study was conducted in accordance with the procedures described herein. All deviations (if any) authorized/acknowledged by the Study Director are documented in the Study Records. The report represents an accurate and complete record of the results obtained for this study phase.

There were no deviations from the above regulations that affected the overall integrity of this study phase or the interpretation of the phase results and conclusions.

Appendix 21

1. SUMMARY

The objective of this study was to determine the potential toxicity of mRNA-1443, when given by intramuscular injection for 6 weeks (4 doses) to rats and to evaluate the potential reversibility of any findings following a 2-week recovery period.

Ten rats/sex/group were assigned to the Main Study and were distributed as follows: Group 1 received the Reference article, Groups 2, 3, and 4 received mRNA-1443 at doses of 10/9.6, 30/29, and 100/96 µg/dose, respectively, given into the lateral compartment of the thigh via intramuscular injection on days 1, 15, 29, and 43. Five rats/sex/group were assigned to the Recovery Study in either Group 1 or 4.

A complete gross pathological examination was performed on Main and Recovery rats and organ weights were recorded. A detailed microscopic evaluation was performed on Main animals from Groups 1 and 4 and Recovery animals (Groups 1 and 4). A microscopic evaluation limited to gross lesions and target organs was performed on Main animals from Groups 2 and 3. There were no early deaths during the Main Study or Recovery period.

At the end of the Main Study 6-week dosing period , test article-related gross changes were noted at the injection sites to include abnormal (firm) consistency, swelling, and dark or pale foci. At the end of the Recovery period, no test article-related gross pathology or organ weight changes were noted.

Test article-related increases in splenic weights were noted in males and females and were statistically significant at dosages ≥ 10/9.6 µg in males and 100/9.6 µg in females. There was no histologic correlate to the weight change.

Test article-related related gross findings at the injection site (firm consistency, swelling, and pale and/or dark foci) had histologic correlates of regionally extensive mixed cellular inflammation (neutrophils, macrophages, and lymphocytes) with edema, variably accompanied by hemorrhage. This stereotypic acute inflammatory response occurred predominantly within dermal, subcuticular, and intermuscular fascial planes, reflecting extension along non-specific, regionally extensive paths of least resistance that continued to lateral and deep margins of injection site sections. Perineurial mixed-cell inflammation was observed associated with the sciatic nerve and is considered an extension of regionally extensive acute inflammation occurring at the test article injection site. Of note, the sciatic nerve contained no changes within the nerve fibers, inflammation did not broach the epineurium, and inflammation/edema was generally of a lesser severity than the injection site proper.

The regionally extensive acute inflammatory response observed at the injection site in all Main Study male and females ≥10/9.6 µg/dose demonstrated marked improvement in the Recovery Group. Recovery group males and females (100/96 µg/dose) had resolution of edema and mixed cellular inflammation at the injection site that was replaced by minimal mononuclear interstitial inflammation variably comprising lymphocytes, macrophages, and infrequent plasma cells. These changes reflect resolution of the acute inflammatory response in recovery 100 µg/dose males and females following a two-week recovery period.

Appendix 21

Locoregional relevant lymph nodes (popliteal and inguinal) in both sexes displayed dose-dependent, minimal to moderate lymphoid hyperplasia, and minimal to mild medullary plasmacytosis. These lymph node changes reflect a non-specific, secondary reactive immunologic response to local acute inflammation at the injection site. Inguinal and popliteal lymph nodes occasionally had locally extensive, minimal to mild peripheral (interstitial) inflammation and edema. The peripheral interstitial edema and inflammation are presumed to be secondary to extension of the local inflammatory response centered at the injection site; additionally, the relatively dependent location of these lymph nodes likely contributed to accumulation of locally extensive interstitial inflammation and edema.

Test article-related decreased cellularity of the splenic periarteriolar lymphoid sheath occurred at low incidence in males and females at ≥ 10/9.6 µg/dose, with females having slightly increased incidence vs. males. Although males did not display any evident dose-dependent trend, increased incidence in females at 100/96 µg/dose may indicate a dose-dependent effect.

In the bone marrow, test article-related increased myeloid hematopoiesis occurred in males ≥ 10/9.6 µg/dose and females at ≥ 30/29 µg/dose. Incidence in males and females generally trended upward with increasing dose, suggesting a dose-dependent effect. Microscopically, this change had a consistent appearance comprising distinctive islands of early myeloid precursors with no appreciable atypia.

Liver sections displayed a periportal to midzonal microvesicular vacuolar change with minimal to moderate magnitude. While present in all groups including controls, this change demonstrated a slight dose-dependent increase in incidence and magnitude consistent with a test article exacerbation of a background lesion. This change was also observed within recovery animals, but with decreased magnitude and incidence (partial resolution).

All other histological changes observed in the study were considered incidental, of the nature commonly observed in this strain and age of rats and/or were of similar incidence in control and treated animals and, therefore, were considered unrelated to administration of mRNA-1443.

- : Not applicable
[a] Values based on SoA issued on 16 March 2017 / Values based on SoA issued on 30 May 2017.

All animals were submitted for necropsy on Day 44 (Terminal Euthanasia) or Day 57 (Recovery Euthanasia). Necropsies were performed and organ weights were collected by Test Facility personnel. Statistical analysis of organ weight data was performed by the Test Facility. Tissues required for microscopic evaluation were trimmed, processed routinely, embedded in paraffin, and stained with hematoxylin and eosin at the Test Facility. Microscopic evaluation was conducted by the Principal Investigator, a board-certified veterinary pathologist on protocol-specified tissues from all animals in Groups 1 and 4, all Recovery euthanasia animals, and all gross lesions from all animals. Additionally, potential target tissues (liver, injection site, bone marrow, spleen, sciatic nerve, popliteal lymph node, and inguinal lymph node) were evaluated in all Group 2 and 3 animals.

4.1. Computerized Systems

Critical computerized systems used in the study by the Test Site are listed in Text Table 2.

Text Table 2
Computerized Systems

System Name	Version No.	Description of Data Collected and/or Analyzed
Provantis	8	Histopathology

Appendix 21

4.2. Disposition of Study Materials

All study-specific raw data, pathology materials, documentation and Final Report generated from this study phase are to be sent to the Test Facility for archiving. Study materials will be retained for a period of 1 year following issue of the audited Draft Report. One year after issue of the draft report, the Sponsor will be contacted to determine the disposition of materials associated with the study. Electronic Provantis data generated by the Test Site will be archived, and the software and hardware required to produce it in a readable form will be maintained and available. The electronic data will be archived in Charles River Laboratories, Inc., Wilmington, MA.

5. RESULTS AND DISCUSSIONS

5.1. Mortality

No unscheduled deaths occurred during the course of this study.

5.2. Gross Pathology

5.2.1. Terminal Euthanasia Animals (Day 44)

(Table 1 and Appendix 8).

Test article-related gross pathology findings are summarized in Text Table 3.

Text Table 3
Summary of Gross Pathology Findings – Terminal Euthanasia (Day 44)

Other gross findings observed were considered incidental, of the nature commonly observed in this strain and age of rats, and/or were of similar incidence in control and treated animals and, therefore, were considered unrelated to administration of mRNA-1443.

Appendix 21

5.2.2. Recovery Euthanasia Animals (Day 57)

(Table 2 and Appendix 8)

At the end of the recovery period, no test article-related gross findings were noted. The gross findings observed were considered incidental, of the nature commonly observed in this strain and age of rats and/or were of similar incidence in control and treated animals and, therefore, were considered unrelated to administration of mRNA-1443.

5.3. Organ Weights

5.3.1. Terminal Euthanasia Animals (Day 44)

(Table 3, Table 4, Table 5, Appendix 2, Appendix 3, and Appendix 4)

Test article-related organ weight changes are summarized in Text Table 4.

[a] All values expressed as percent difference of control group means.
Based upon statistical analysis of group means, values highlighted in bold are significantly different from control group – $P \leq 0.05$; refer to data tables for actual significance levels and tests used.

Test article-related organ weight changes

Statistically significant increased splenic weights were noted in males at ≥10/9.6 µg/dose and females at 100/96 µg/dose. There were no gross or microscopic changes that correlated to the above weight changes.

No other test article-related organ weight changes were noted. There were other isolated organ weight values that were statistically different from their respective controls. There were, however, no patterns, trends, or correlating data to suggest these values were toxicologically relevant. Thus, other organ weight differences observed were considered incidental and/or related to difference of sexual maturity and unrelated to administration of mRNA-1443.

5.3.2. Recovery Euthanasia Animals (Day 57)

(Table 6, Table 7, Table 8, Appendix 5, Appendix 6, and Appendix 7)

Appendix 21

Test article-related organ weight changes noted at the terminal euthanasia were not observed at the end of the recovery period (Day 57). There were isolated organ weight values that were statistically different from their respective controls. There were, however, no patterns, trends or correlating data to suggest these values were toxicologically relevant. Thus, the organ weight differences observed were considered incidental and/or related to difference of sexual maturity and unrelated to administration of mRNA-1443.

5.4. Histopathology

5.4.1. Terminal Euthanasia (Day 44)

(Table 9 and Appendix 8)

Test article-related microscopic findings are summarized in Text Table 5.

[a] Numbers in parentheses represent the number of animals with the finding.

Injection Site

A dose-dependent, minimal to marked mixed cellular inflammation accompanied by edema was noted in males and females at dosages equal to or greater than 10/9.6 µg/dose. This change was characterized by a stereotypic acute inflammatory milieu comprising increased clear space expanding the interstitium (edema) accompanied by numerous neutrophils variably admixed with foamy macrophages, lymphocytes, and rare plasma cells and hemosiderophages, as well as variable quantities of extravasated erythrocytes (hemorrhage).

Sciatic Nerve

A dose-dependent, minimal to marked mixed cellular inflammation of the perineurial tissue was observed and was variably accompanied by edema. Of note, the sciatic nerve contained no changes within the nerve fibers, inflammation did not broach the epidneurium, and inflammation/edema was generally of a lesser severity than the injection site proper.

Inguinal and popliteal lymph nodes

Similar to the sciatic nerve, a minimal to moderate mixed cellular inflammation surrounded the inguinal and/or popliteal lymph node in males and females at ≥ 10/9.6 µg/dose, reflected as perinodal interstitial mixed cell inflammation variably accompanied by small amounts of edema. Inflammation did not extend into the lymph node capsule. The inguinal lymph node site generally had less incidence and severity of peripheral inflammation vs. the popliteal site.

Appendix 21

Intrinsic lymph node changes included lymphoid hyperplasia and medullary plasmacytosis; these changes were orderly and of a character and magnitude that would be expected of reactive lymph nodes that are a non-specific and appropriate secondary consequence of injection site inflammation. These non-specific reactive changes were observed in relevant locoregional injection site lymph nodes (inguinal, popliteal) at a higher rate and slightly higher magnitude than controls.

Spleen

Males and females at ≥ 10/9.6 µg/dose had slightly increased incidence of a minimally decreased cellularity of the periarteriolar lymphoid sheath. Although males did not display any evident dose-dependent trend, increased incidence in females at 100/96 µg/dose may indicate a dose-dependent effect. Microscopically, this change was characterized by subtle attrition of periarteriolar lymphocytes and variably accompanied by a slight increase in tingible body macrophages.

Bone Marrow

Males at ≥ 10/9.6 µg/dose and females at ≥ 30/29 µg/dose had increased incidence of minimal to mild increased myeloid hematopoiesis (myeloid hyperplasia) with a distinctive appearance. Incidence in males and females generally trends upward with increasing dose, suggesting a dose-dependent effect. Microscopically, this change was consistently characterized by multifocal aggregates of precursor cells predominantly composed of early myeloid lineage and typically found adjacent to the cortex and/or trabeculae.

Liver

Males and females in control and treated groups display microvescular hepatocellular vacuolation without nuclear displacement throughout periportal to midzonal regions. However, this change demonstrated a dose-dependent increase in incidence and magnitude at ≥ 10/9.6 µg/dose in both genders, consistent with a test-article exacerbation of a background lesion.

Other microscopic findings observed were considered incidental, of the nature commonly observed in this strain and age of rats, and/or were of similar incidence and severity in control and treated animals and, therefore, were considered unrelated to administration of mRNA-1443.

5.4.2. Recovery Euthanasia (Day 57)

(Table 10 and Appendix 8)

Microscopic findings noted at the terminal euthanasia were observed at the end of the recovery period (Day 57) and are summarized in Text Table 6.

Appendix 21

[a] Numbers in parentheses represent the number of animals with the finding.

Injection Site

In 100/96 µg dose recovery group males and females there is resolution of edema and acute mixed cellular inflammation when compared with Main Study (Day 44) 100/96 µg dose animals. When present, the interstitial to perivascular inflammatory population is minimal and comprises a mixture of lymphocytes and macrophages with rare plasma cells and is consistent with a healing process.

Appendix 21

Sciatic nerve

Minimal to mild infiltration of mononuclear cells was noted in both sexes, suggesting partial recovery from the mixed cellular inflammation observed by the end of the Recovery period.

Inguinal and popliteal lymph nodes

Perinodal mixed-cell inflammation is absent in 100/96 µg dose group males and females following recovery. As part of the resolving/resolved acute inflammation, a minimal mononuclear cell infiltration is occasionally present within the interstitium and/or perivascularly, albeit with much decreased frequency and incidence when compared with initial perinodal inflammation at Day 44.

Intrinsic lymph node changes including lymphoid hyperplasia and medullary plasmacytosis have decreased incidence and magnitude following recovery, consistent with a resolving/resolved inflammatory response.

Liver

Males and females in control and treated groups display microvescular hepatocelluar vacuolation throughout periportal to midzonal regions. This change occurred at decreased incidence and magnitude when compared with Main Study (Day 44) animals indicating improvement. Amongst recovery animals, this change was observed in (2) control females (minimal), (1) 100/96 µg dose male (mild), and (4) (1 minimal, 3 mild) 100/96 µg dose females. However, the higher incidence in 100/96 µg dose recovery animals suggests that this test-article effect has not fully resolved.

Microscopic findings noted in the bone marrow and spleen at terminal euthanasia were no longer observed at the end of the recovery period and therefore were considered completely recovered.

Other microscopic findings observed were considered incidental, of the nature commonly observed in this strain and age of rats, and/or were of similar incidence and severity in control and treated animals and, therefore, were considered unrelated to administration of mRNA-1443.

6. CONCLUSIONS

Intramuscular injection of mRNA-1443 for 6 weeks (4 doses) in rats for up to 44 days at doses of 0, 10/9.6, 30/29, or 100/96 µg/dose resulted in locally extensive interstitial inflammation and edema at the intramuscular injection site (correlating with abnormal firm consistency and swelling). This inflammation extended to the connective tissues surrounding the sciatic nerve and popliteal and inguinal lymph nodes (correlating with inguinal and popliteal lymph node enlargement), plasmacytosis and lymphoid hyperplasia in the politeal and inguinal lymph nodes, myeloid hyperplasia in the bone marrow, decreased cellularity in the periarteriolar sheath of the spleen, and microvesicular vacuolation in the periportal to midzonal area in the liver.

Appendix 21

After a 2 week recovery period, macroscopic and organ weights differences were completely recovered. The microscopic changes observed in the inguinal and popliteal lymph nodes were nearly or fully resolved, and changes in the spleen and the bone marrow were completely resolved. The mixed cellular inflammation observed at injection sites and in the connective tissues surrounding the sciatic nerve and inguinal and popliteal lymph node was replaced by an infiltrate of mononucluear cells and was considered as a healing process from the previous inflammation. There was a decrease in incidence and severity of the of the hepatocellular microvesicular vacuolation noted at the end of the Main phase, suggesting partial resolution.

Deviations

Appendix 21

DEVIATIONS

All deviations (if any) that occurred during this study phase have been acknowledged by the Study Director, assessed for impact, and documented in the study records. All protocol deviations and those SOP deviations regarded as significant are listed below. None of the deviations were considered to have impacted the overall integrity of the study or the interpretation of the study results and conclusions.

- Tissues that were supposed to be microscopically evaluated per protocol but were not available on the slide (and therefore not evaluated) are listed in the Individual Animal Data of the Pathology report as not present.

Appendix 8
Individual Animal Data Gross and Histopathology Findings

Appendix 21

5002158 - Individual Animal Data Gross and Histopathology Findings

Animal:	1001	Group: 1	Sex: Male
Species:	Rat	Strain: Sprague-Dawley	
		Dose: 0 ug/dose	
		Removal Reason: Terminal Euthanasia	
		Day (Week) of Death: 44 (7)	

Gross Pathology Animal Details:

Comments: Tissues submitted Into 10% neutral buffered formalin except eyes and optic nerves submitted in Davidson`s and testes in modified Davidson`s Fixative.

Animal Notes: EUTHANASIA VIA ANESTHESIA AND EXSANGUINATION

Gross Pathology Observations:

LIVER : Focus; pale : 1, near hilus, right lateral (TGL)
THYMUS : Focus; dark : 2, right (TGL)

Any remaining protocol required tissues, which have been examined, have no visible lesions

Gross Pathology - The following Tissues were Not Examined:

None

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

GLAND, PARATHYROID : One Of A Pair Available For Evaluation.
GLAND, PARATHYROID : Examined
HEART : Murine progressive cardiomyopathy; minimal
KIDNEY : Infiltration, mononuclear cell; minimal : with fibrosis
LIVER : Infiltration, mixed cell; mild [LIVER : Focus; pale : 1, near hilus, right lateral (G)]
LYMPH NODE, INGUINAL : Hyperplasia; lymphoid, minimal
LYMPH NODE, POPLITEAL : No Glandular Tissue In Section
SITE, INJECTION : Degeneration/necrosis; minimal, myofiber
THYMUS : Hemorrhage; minimal [THYMUS : Focus; dark : 2, right (G)]

Histo Pathology - The following Tissues were Within Normal Limits:

ARTERY, AORTA; BONE MARROW; BONE, FEMUR; BONE, STERNUM; BRAIN; EPIDIDYMIS; ESOPHAGUS; EYE; GALT; GLAND, ADRENAL; GLAND, HARDERIAN; GLAND, MAMMARY; GLAND, PARATHYROID; GLAND, PITUITARY; GLAND, PROSTATE; GLAND, SALIVARY, MANDIBULAR; GLAND, SEMINAL VESICLE; GLAND, THYROID; LARGE INTESTINE, CECUM; LARGE INTESTINE, COLON; LARGE INTESTINE, RECTUM; LUNG; LYMPH NODE, MANDIBULAR; LYMPH NODE, MESENTERIC; MUSCLE, SKELETAL; NERVE, OPTIC; NERVE, SCIATIC; PANCREAS; SKIN; SMALL INTESTINE, DUODENUM; SMALL INTESTINE, ILEUM; SMALL INTESTINE, JEJUNUM; SPINAL CORD, CERVICAL; SPINAL CORD, LUMBAR; SPINAL CORD, THORACIC; SPLEEN; STOMACH; TESTIS; TONGUE; TRACHEA; URINARY BLADDER

Histo Pathology - The following Tissues were Not Examined:

LYMPH NODE, POPLITEAL - Not Present In Section.

Appendix 21

5002158 - Individual Animal Data Gross and Histopathology Findings

Animal:	1002	Group: 1	Sex: Male
Species:	Rat	Strain: Sprague-Dawley	
		Dose: 0 ug/dose	
		Removal Reason: Terminal Euthanasia	
		Day (Week) of Death: 44 (7)	

Gross Pathology Animal Details:

Comments: Tissues submitted Into 10% neutral buffered formalin except eyes and optic nerves submitted in Davidson`s and testes in modified Davidson`s Fixative.

Animal Notes: EUTHANASIA VIA ANESTHESIA AND EXSANGUINATION

Gross Pathology Observations:

KIDNEY : Focus; depressed : 1, dark, corticomedullary junction, left. (TGL)
LIVER : Focus; depressed : 2, dark, left lateral. (TGL)
LIVER : Focus; pale : 1, near hilus, right lateral. (TGL)
LUNG : Focus; dark : 1 to 7. (TGL)
LYMPH NODE, MANDIBULAR : Focus; dark : >10, bilateral. (TGL)
LYMPH NODE, MESENTERIC : Focus; dark : 1. (TGL)
THYMUS : Focus; dark : 6. (TGL)

Any remaining protocol required tissues, which have been examined, have no visible lesions

Gross Pathology - The following Tissues were Not Examined:

None

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

GLAND, THYROID : Thyroglossal duct remnant, squamous epithelium; minimal
HEART : Murine progressive cardiomyopathy; minimal
KIDNEY : Chronic progressive nephropathy; minimal [KIDNEY : Focus; depressed : 1, dark, corticomedullary junction, left. (G)]
LIVER : Infiltration, mixed cell; minimal [LIVER : Focus; pale : 1, near hilus, right lateral. (G)]
LYMPH NODE, MANDIBULAR : Hemorrhage; minimal [LYMPH NODE, MANDIBULAR : Focus; dark : >10, bilateral. (G)]
SPINAL CORD, LUMBAR : Infiltration, mononuclear cell; perivascular, minimal
THYMUS : Hemorrhage; minimal [THYMUS : Focus; dark : 6. (G)]
NO CORRELATE : No correlating lesion [LIVER : Focus; depressed : 2, dark, left lateral. (G) | LYMPH NODE, MESENTERIC : Focus; dark : 1. (G) | LUNG : Focus; dark : 1 to 7. (G)]

Histo Pathology - The following Tissues were Within Normal Limits:

Appendix 21

5002158 - Individual Animal Data Gross and Histopathology Findings

ARTERY, AORTA; BONE MARROW; BONE, FEMUR; BONE, STERNUM; BRAIN; EPIDIDYMIS; ESOPHAGUS; EYE; GALT; GLAND, ADRENAL; GLAND, HARDERIAN; GLAND, MAMMARY; GLAND, PITUITARY; GLAND, PROSTATE; GLAND, SALIVARY, MANDIBULAR; GLAND, SEMINAL VESICLE; LARGE INTESTINE, CECUM; LARGE INTESTINE, COLON; LARGE INTESTINE, RECTUM; LUNG; LYMPH NODE, INGUINAL; LYMPH NODE, MESENTERIC; LYMPH NODE, POPLITEAL; MUSCLE, SKELETAL; NERVE, OPTIC; NERVE, SCIATIC; PANCREAS; SITE, INJECTION; SKIN; SMALL INTESTINE, DUODENUM; SMALL INTESTINE, ILEUM; SMALL INTESTINE, JEJUNUM; SPINAL CORD, CERVICAL; SPINAL CORD, THORACIC; SPLEEN; STOMACH; TESTIS; TONGUE; TRACHEA; URINARY BLADDER

Histo Pathology - The following Tissues were Not Examined:

GLAND, PARATHYROID - Not Present In Section.

Appendix 21

5002158 - Individual Animal Data Gross and Histopathology Findings

Animal:	1003	Group: 1	Sex: Male
Species:	Rat	Strain: Sprague-Dawley	
		Dose: 0 ug/dose	
		Removal Reason: Terminal Euthanasia	
		Day (Week) of Death: 44 (7)	

Gross Pathology Animal Details:

Comments: Tissues submitted Into 10% neutral buffered formalin except eyes and optic nerves submitted in Davidson`s and testes in modified Davidson`s Fixative.

Animal Notes: EUTHANASIA VIA ANESTHESIA AND EXSANGUINATION

Gross Pathology Observations:

LIVER : Focus; pale : 1, near hilus, right lateral (TGL)

Any remaining protocol required tissues, which have been examined, have no visible lesions

Gross Pathology - The following Tissues were Not Examined:

None

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

HEART : Murine progressive cardiomyopathy; minimal
KIDNEY : Cast; hyaline, minimal
KIDNEY : Infiltration, mononuclear cell; minimal
LIVER : Infiltration, mixed cell; minimal [LIVER : Focus; pale : 1, near hilus, right lateral (G)]

Histo Pathology - The following Tissues were Within Normal Limits:

ARTERY, AORTA; BONE MARROW; BONE, FEMUR; BONE, STERNUM; BRAIN; EPIDIDYMIS; ESOPHAGUS; EYE; GALT; GLAND, ADRENAL; GLAND, HARDERIAN; GLAND, MAMMARY; GLAND, PITUITARY; GLAND, PROSTATE; GLAND, SALIVARY, MANDIBULAR; GLAND, SEMINAL VESICLE; GLAND, THYROID; LARGE INTESTINE, CECUM; LARGE INTESTINE, COLON; LARGE INTESTINE, RECTUM; LUNG; LYMPH NODE, INGUINAL; LYMPH NODE, MANDIBULAR; LYMPH NODE, MESENTERIC; LYMPH NODE, POPLITEAL; MUSCLE, SKELETAL; NERVE, OPTIC; NERVE, SCIATIC; PANCREAS; SITE, INJECTION; SKIN; SMALL INTESTINE, DUODENUM; SMALL INTESTINE, ILEUM; SMALL INTESTINE, JEJUNUM; SPINAL CORD, CERVICAL; SPINAL CORD, LUMBAR; SPINAL CORD, THORACIC; SPLEEN; STOMACH; TESTIS; THYMUS; TONGUE; TRACHEA; URINARY BLADDER

Histo Pathology - The following Tissues were Not Examined:

GLAND, PARATHYROID - Not Present In Section.

Appendix 21

5002158 - Individual Animal Data Gross and Histopathology Findings

Animal:	1004	Group: 1	Sex: Male
Species:	Rat	Strain: Sprague-Dawley	
		Dose: 0 ug/dose	
		Removal Reason: Terminal Euthanasia	
		Day (Week) of Death: 44 (7)	

Gross Pathology Animal Details:

Comments: Tissues submitted Into 10% neutral buffered formalin except eyes and optic nerves submitted in Davidson`s and testes in modified Davidson`s Fixative.

Animal Notes: EUTHANASIA VIA ANESTHESIA AND EXSANGUINATION

Gross Pathology Observations:

LUNG : Focus; dark : 1 to 2, right middle, right accessory. (TGL)

Any remaining protocol required tissues, which have been examined, have no visible lesions

Gross Pathology - The following Tissues were Not Examined:

None

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

GLAND, PARATHYROID : One Of A Pair Available For Evaluation.
GLAND, PARATHYROID : Examined
GLAND, THYROID : Thyroglossal duct remnant, squamous epithelium; minimal
HEART : Murine progressive cardiomyopathy; minimal
KIDNEY : Chronic progressive nephropathy; minimal
LIVER : Infiltration, mixed cell; minimal
LUNG : Hyperplasia; focal, minimal, pneumocyte, type 2
LUNG : Crystal; minimal : with hemorrhage
LUNG : Infiltration, mixed cell; minimal [LUNG : Focus; dark : 1 to 2, right middle, right accessory. (G)]
SITE, INJECTION : Inflammation, mixed cell; minimal
SITE, INJECTION : Degeneration/necrosis; minimal, myofiber
TRACHEA : Infiltration, mononuclear cell; minimal

Histo Pathology - The following Tissues were Within Normal Limits:

ARTERY, AORTA; BONE MARROW; BONE, FEMUR; BONE, STERNUM; BRAIN; EPIDIDYMIS; ESOPHAGUS; EYE; GALT; GLAND, ADRENAL; GLAND, HARDERIAN; GLAND, PARATHYROID; GLAND, PITUITARY; GLAND, PROSTATE; GLAND, SALIVARY, MANDIBULAR; GLAND, SEMINAL VESICLE; LARGE INTESTINE, CECUM; LARGE INTESTINE, COLON; LARGE INTESTINE, RECTUM; LYMPH NODE, INGUINAL; LYMPH NODE, MANDIBULAR; LYMPH NODE, MESENTERIC; LYMPH NODE, POPLITEAL; MUSCLE, SKELETAL; NERVE, OPTIC; NERVE, SCIATIC; PANCREAS; SMALL INTESTINE, DUODENUM; SMALL INTESTINE, ILEUM; SMALL INTESTINE, JEJUNUM; SPINAL CORD, CERVICAL; SPINAL CORD, LUMBAR; SPINAL CORD, THORACIC; SPLEEN; STOMACH; TESTIS; THYMUS; TONGUE; URINARY BLADDER

Appendix 21

5002158 - Individual Animal Data Gross and Histopathology Findings

Histo Pathology - The following Tissues were Not Examined:

GLAND, MAMMARY - Not Present In Section.
SKIN - Not Present In Section.

Appendix 21

5002158 - Individual Animal Data Gross and Histopathology Findings

Animal:	1005	Group: 1	Sex: Male
Species:	Rat	Strain: Sprague-Dawley	
		Dose: 0 ug/dose	
		Removal Reason: Terminal Euthanasia	
		Day (Week) of Death: 44 (7)	

Gross Pathology Animal Details:

Comments: Tissues submitted Into 10% neutral buffered formalin except eyes and optic nerves submitted in Davidson`s and testes in modified Davidson`s Fixative.

Animal Notes: EUTHANASIA VIA ANESTHESIA AND EXSANGUINATION

Gross Pathology Observations:

LIVER : Focus; pale : 1, fissure, right medial, near hilus, right lateral (TGL)

Any remaining protocol required tissues, which have been examined, have no visible lesions

Gross Pathology - The following Tissues were Not Examined:

None

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

GLAND, PARATHYROID : One Of A Pair Available For Evaluation.
GLAND, PARATHYROID : Examined
GLAND, THYROID : Thyroglossal duct remnant, squamous epithelium; minimal
HEART : Murine progressive cardiomyopathy; minimal
KIDNEY : Infiltration, mononuclear cell; minimal
LIVER : Tension lipidosis; minimal [LIVER : Focus; pale : 1, fissure, right medial, near hilus, right lateral (G)]
LIVER : Infiltration, mixed cell; minimal
TONGUE : Infiltration, mononuclear cell; minimal
TRACHEA : Infiltration, mononuclear cell; minimal

5002158 - Individual Animal Data Gross and Histopathology Findings

Animal:	1008	Group: 1	Sex: Male
Species:	Rat	Strain: Sprague-Dawley	
		Dose: 0 ug/dose	
		Removal Reason: Terminal Euthanasia	
		Day (Week) of Death: 44 (7)	

Gross Pathology Animal Details:

Comments: Tissues submitted Into 10% neutral buffered formalin except eyes and optic nerves submitted in Davidson`s and testes in modified Davidson`s Fixative.

Animal Notes: EUTHANASIA VIA ANESTHESIA AND EXSANGUINATION

Gross Pathology Observations:

EPIDIDYMIS : Small : Right. (TGL)
EPIDIDYMIS : Abnormal consistency; soft : Right. (TGL)
EPIDIDYMIS : Focus; pale : 1, caput, right. (TGL)
EPIDIDYMIS : Focus; raised : 3, pale, caput, right. (TGL)
LIVER : Focus; pale : >10, papillary process of caudate. (TGL)
TESTIS : Abnormal consistency; soft : Right. (TGL)
TESTIS : Focus; pale : 2, right. (TGL)
THYMUS : Focus; dark : >10, right. (TGL)

Any remaining protocol required tissues, which have been examined, have no visible lesions

Gross Pathology - The following Tissues were Not Examined:

None

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

EPIDIDYMIS : Sperm granuloma; unilateral, regionally extensive, moderate [EPIDIDYMIS : Abnormal consistency; soft : Right. (G) | EPIDIDYMIS : Focus; raised : 3, pale, caput, right. (G) | EPIDIDYMIS : Focus; pale : 1, caput, right. (G)]
EPIDIDYMIS : Infiltration, mononuclear cell; minimal
EPIDIDYMIS : Cribriform change; unilateral, mild
EPIDIDYMIS : Hypospermia; unilateral, moderate [EPIDIDYMIS : Small : Right. (G)]
GLAND, PITUITARY : Pars Distalis Available For Evaluation.
GLAND, PITUITARY : Examined
GLAND, THYROID : Thyroglossal duct remnant, squamous epithelium; minimal
HEART : Murine progressive cardiomyopathy; minimal
KIDNEY : Infiltration, mononuclear cell; minimal
LIVER : Vacuolation, microvesicular, periportal to midzonal; minimal
LIVER : Infiltration, mixed cell; minimal [LIVER : Focus; pale : >10, papillary process of caudate. (G)]
SITE, INJECTION : Inflammation, mixed cell; minimal
SITE, INJECTION : Degeneration/necrosis; minimal, myofiber
TESTIS : Vacuolation; unilateral, mild, sertoli cell

Appendix 21

5002158 - Individual Animal Data Gross and Histopathology Findings

Histo Pathology Observations [Correlation] (Continued):

TESTIS : Atrophy; unilateral, marked, seminiferous tubule : With mononuclear infiltration [TESTIS : Abnormal consistency; soft : Right. (G) | TESTIS : Focus; pale : 2, right. (G)]

THYMUS : Congestion; minimal [THYMUS : Focus; dark : >10, right. (G)]

TRACHEA : Infiltration, mononuclear cell; minimal

URINARY BLADDER : Infiltration, mononuclear cell; minimal

Histo Pathology - The following Tissues were Within Normal Limits:

ARTERY, AORTA; BONE MARROW; BONE, FEMUR; BONE, STERNUM; BRAIN; ESOPHAGUS; EYE; GALT; GLAND, ADRENAL; GLAND, HARDERIAN; GLAND, PARATHYROID; GLAND, PITUITARY; GLAND, PROSTATE; GLAND, SALIVARY, MANDIBULAR; GLAND, SEMINAL VESICLE; LARGE INTESTINE, CECUM; LARGE INTESTINE, COLON; LARGE INTESTINE, RECTUM; LUNG; LYMPH NODE, INGUINAL; LYMPH NODE, MANDIBULAR; LYMPH NODE, MESENTERIC; LYMPH NODE, POPLITEAL; MUSCLE, SKELETAL; NERVE, OPTIC; NERVE, SCIATIC; PANCREAS; SKIN; SMALL INTESTINE, DUODENUM; SMALL INTESTINE, ILEUM; SMALL INTESTINE, JEJUNUM; SPINAL CORD, CERVICAL; SPINAL CORD, LUMBAR; SPINAL CORD, THORACIC; SPLEEN; STOMACH; TONGUE

Histo Pathology - The following Tissues were Not Examined:

GLAND, MAMMARY - Not Present In Section.

Appendix 21

5002158 - Individual Animal Data Gross and Histopathology Findings

None

Appendix 21

5002158 - Individual Animal Data Gross and Histopathology Findings

Animal:	1010	Group: 1	Sex: Male
Species:	Rat	Strain: Sprague-Dawley	
		Dose: 0 ug/dose	
		Removal Reason: Terminal Euthanasia	
		Day (Week) of Death: 44 (7)	

Gross Pathology Animal Details:

Comments: Tissues submitted Into 10% neutral buffered formalin except eyes and optic nerves submitted in Davidson`s and testes in modified Davidson`s Fixative.

Animal Notes: EUTHANASIA VIA ANESTHESIA AND EXSANGUINATION

Gross Pathology Observations:

KIDNEY : Focus; pale : >10, bilateral. (TGL)

Any remaining protocol required tissues, which have been examined, have no visible lesions

Gross Pathology - The following Tissues were Not Examined:

None

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

GLAND, HARDERIAN : Infiltration, mononuclear cell; minimal
GLAND, PARATHYROID : One Of A Pair Available For Evaluation.
GLAND, PARATHYROID : Examined
GLAND, PITUITARY : Pars Distalis Available For Evaluation.
GLAND, PITUITARY : Examined
GLAND, THYROID : One Of A Pair Available For Evaluation.
GLAND, THYROID : Examined
HEART : Murine progressive cardiomyopathy; minimal
KIDNEY : Degeneration; hyaline droplets, moderate [KIDNEY : Focus; pale : >10, bilateral. (G)]
KIDNEY : Infiltration, mononuclear cell; minimal
LIVER : Infiltration, mixed cell; minimal
LUNG : Infiltration, mixed cell; minimal
SITE, INJECTION : Inflammation, mixed cell; minimal
SITE, INJECTION : Degeneration/necrosis; minimal, myofiber

Histo Pathology - The following Tissues were Within Normal Limits:

Appendix 21

5002158 - Individual Animal Data Gross and Histopathology Findings

ARTERY, AORTA; BONE MARROW; BONE, FEMUR; BONE, STERNUM; BRAIN; EPIDIDYMIS; ESOPHAGUS; EYE; GALT; GLAND, ADRENAL; GLAND, MAMMARY; GLAND, PARATHYROID; GLAND, PITUITARY; GLAND, PROSTATE; GLAND, SALIVARY, MANDIBULAR; GLAND, SEMINAL VESICLE; GLAND, THYROID; LARGE INTESTINE, CECUM; LARGE INTESTINE, COLON; LARGE INTESTINE, RECTUM; LYMPH NODE, INGUINAL; LYMPH NODE, MANDIBULAR; LYMPH NODE, MESENTERIC; LYMPH NODE, POPLITEAL; MUSCLE, SKELETAL; NERVE, OPTIC; NERVE, SCIATIC; PANCREAS; SKIN; SMALL INTESTINE, DUODENUM; SMALL INTESTINE, ILEUM; SMALL INTESTINE, JEJUNUM; SPINAL CORD, CERVICAL; SPINAL CORD, LUMBAR; SPINAL CORD, THORACIC; SPLEEN; STOMACH; TESTIS; THYMUS; TONGUE; TRACHEA; URINARY BLADDER

Histo Pathology - The following Tissues were Not Examined:

None

Appendix 21

5002158 - Individual Animal Data Gross and Histopathology Findings

Animal:	1011	Group: 1	Sex: Male
Species:	Rat	Strain: Sprague-Dawley	
		Dose: 0 ug/dose	
		Removal Reason: Recovery Euthanasia	
		Day (Week) of Death: 57 (9)	

Gross Pathology Animal Details:

Comments: Tissues submitted Into 10% neutral buffered formalin except eyes and optic nerves submitted in Davidson`s and testes in modified Davidson`s Fixative.

Animal Notes: EUTHANASIA VIA ANESTHESIA AND EXSANGUINATION

Gross Pathology Observations:

THYMUS : Focus; dark : 1 (TGL)

Any remaining protocol required tissues, which have been examined, have no visible lesions

Gross Pathology - The following Tissues were Not Examined:

None

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

KIDNEY : Chronic progressive nephropathy; minimal
LIVER : Infiltration, mixed cell; minimal
LYMPH NODE, INGUINAL : Hyperplasia; lymphoid, minimal
LYMPH NODE, POPLITEAL : Plasmacytosis; minimal
PANCREAS : Infiltration, mixed cell; mild : with focal necrosis and minimal chronic mononuclear infiltration with fibrosis
SITE, INJECTION : Degeneration/necrosis; minimal, myofiber
SPLEEN : Hyperplasia; lymphoid, minimal
THYMUS : Hemorrhage; minimal [THYMUS : Focus; dark : 1 (G)]

Histo Pathology - The following Tissues were Within Normal Limits:

ARTERY, AORTA; BONE MARROW; BONE, FEMUR; BONE, STERNUM; BRAIN; EPIDIDYMIS; ESOPHAGUS; EYE; GALT; GLAND, ADRENAL; GLAND, HARDERIAN; GLAND, MAMMARY; GLAND, PARATHYROID; GLAND, PITUITARY; GLAND, PROSTATE; GLAND, SALIVARY, MANDIBULAR; GLAND, SEMINAL VESICLE; GLAND, THYROID; HEART; LARGE INTESTINE, CECUM; LARGE INTESTINE, COLON; LARGE INTESTINE, RECTUM; LUNG; LYMPH NODE, MANDIBULAR; LYMPH NODE, MESENTERIC; MUSCLE, SKELETAL; NERVE, OPTIC; NERVE, SCIATIC; SKIN; SMALL INTESTINE, DUODENUM; SMALL INTESTINE, ILEUM; SMALL INTESTINE, JEJUNUM; SPINAL CORD, CERVICAL; SPINAL CORD, LUMBAR; SPINAL CORD, THORACIC; STOMACH; TESTIS; TONGUE; TRACHEA; URINARY BLADDER

Histo Pathology - The following Tissues were Not Examined:

None

Appendix 21

5002158 - Individual Animal Data Gross and Histopathology Findings

Animal:	1012	Group: 1	Sex: Male
Species:	Rat	Strain: Sprague-Dawley	
		Dose: 0 ug/dose	
		Removal Reason: Recovery Euthanasia	
		Day (Week) of Death: 57 (9)	

Gross Pathology Animal Details:

Comments: Tissues submitted Into 10% neutral buffered formalin except eyes and optic nerves submitted in Davidson`s and testes in modified Davidson`s Fixative.

Animal Notes: EUTHANASIA VIA ANESTHESIA AND EXSANGUINATION

Gross Pathology Observations:

LIVER : Focus; pale : 1, fissure, right medial (TGL)
LYMPH NODE : Discoloration; dark : Mediastinal (TGL)

Any remaining protocol required tissues, which have been examined, have no visible lesions

Gross Pathology - The following Tissues were Not Examined:

None

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

GLAND, THYROID : Thyroglossal duct remnant, squamous epithelium; minimal
KIDNEY : Cast; hyaline, minimal
KIDNEY : Chronic progressive nephropathy; minimal
LIVER : Infiltration, mixed cell; minimal [LIVER : Focus; pale : 1, fissure, right medial (G)]
LYMPH NODE, MEDIASTINAL : Hemorrhage; mild [LYMPH NODE : Discoloration; dark : Mediastinal (G)]
LYMPH NODE, POPLITEAL : Hyperplasia; lymphoid, mild
SITE, INJECTION : Degeneration/necrosis; minimal, myofiber
THYMUS : Hemorrhage; minimal
URINARY BLADDER : Infiltration, mononuclear cell; minimal

Histo Pathology - The following Tissues were Within Normal Limits:

ARTERY, AORTA; BONE MARROW; BONE, FEMUR; BONE, STERNUM; BRAIN; EPIDIDYMIS; ESOPHAGUS; EYE; GALT; GLAND, ADRENAL; GLAND, HARDERIAN; GLAND, MAMMARY; GLAND, PARATHYROID; GLAND, PITUITARY; GLAND, PROSTATE; GLAND, SALIVARY, MANDIBULAR; GLAND, SEMINAL VESICLE; HEART; LARGE INTESTINE, CECUM; LARGE INTESTINE, COLON; LARGE INTESTINE, RECTUM; LUNG; LYMPH NODE, INGUINAL; LYMPH NODE, MANDIBULAR; LYMPH NODE, MESENTERIC; MUSCLE, SKELETAL; NERVE, OPTIC; NERVE, SCIATIC; PANCREAS; SKIN; SMALL INTESTINE, DUODENUM; SMALL INTESTINE, ILEUM; SMALL INTESTINE, JEJUNUM; SPINAL CORD, CERVICAL; SPINAL CORD, LUMBAR; SPINAL CORD, THORACIC; SPLEEN; STOMACH; TESTIS; TONGUE; TRACHEA

Histo Pathology - The following Tissues were Not Examined:

None

Appendix 21

5002158 - Individual Animal Data Gross and Histopathology Findings

Animal:	1013	Group: 1	Sex: Male
Species:	Rat	Strain: Sprague-Dawley	
		Dose: 0 ug/dose	
		Removal Reason: Recovery Euthanasia	
		Day (Week) of Death: 57 (9)	

Gross Pathology Animal Details:

Comments: Tissues submitted Into 10% neutral buffered formalin except eyes and optic nerves submitted in Davidson`s and testes in modified Davidson`s Fixative.

Animal Notes: EUTHANASIA VIA ANESTHESIA AND EXSANGUINATION

Gross Pathology Observations:

GLAND, ADRENAL : Enlargement : Bilateral (TGL)
SPLEEN : Focus; raised : 2, pale, firm (TGL)
SPLEEN : Enlargement (TGL)
SPLEEN : Irregular surface (TGL)

Any remaining protocol required tissues, which have been examined, have no visible lesions

Gross Pathology - The following Tissues were Not Examined:

None

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

KIDNEY : Chronic progressive nephropathy; minimal
LIVER : Necrosis; minimal : focal
LIVER : Infiltration, mixed cell; mild : more lymphocytic in periportal regions
LUNG : Hyperplasia; focal, minimal, pneumocyte, type 2
LUNG : Infiltration, mixed cell; minimal
LUNG : Metaplasia; osseous, focal, minimal
LYMPH NODE, POPLITEAL : Plasmacytosis; minimal
SITE, INJECTION : Degeneration/necrosis; minimal, myofiber
SITE, INJECTION : Infiltration, mononuclear cell; minimal
SPLEEN : Congestion; moderate [SPLEEN : Enlargement (G)]
SPLEEN : Hyperplasia; lymphoid, mild
SPLEEN : Hyperplasia; stromal, focal, moderate : with mild associated mixed cell inflammation (reactive stromal hyperplasia) [SPLEEN : Focus; raised : 2, pale, firm (G) | SPLEEN : Irregular surface (G)]
NO CORRELATE : No correlating lesion [GLAND, ADRENAL : Enlargement : Bilateral (G)]

Histo Pathology - The following Tissues were Within Normal Limits:

Appendix 21

5002158 - Individual Animal Data Gross and Histopathology Findings

ARTERY, AORTA; BONE MARROW; BONE, FEMUR; BONE, STERNUM; BRAIN; EPIDIDYMIS; ESOPHAGUS; EYE; GALT; GLAND, ADRENAL; GLAND, HARDERIAN; GLAND, MAMMARY; GLAND, PARATHYROID; GLAND, PITUITARY; GLAND, PROSTATE; GLAND, SALIVARY, MANDIBULAR; GLAND, SEMINAL VESICLE; GLAND, THYROID; HEART; LARGE INTESTINE, CECUM; LARGE INTESTINE, COLON; LARGE INTESTINE, RECTUM; LYMPH NODE, INGUINAL; LYMPH NODE, MANDIBULAR; LYMPH NODE, MESENTERIC; MUSCLE, SKELETAL; NERVE, OPTIC; NERVE, SCIATIC; PANCREAS; SKIN; SMALL INTESTINE, DUODENUM; SMALL INTESTINE, ILEUM; SMALL INTESTINE, JEJUNUM; SPINAL CORD, CERVICAL; SPINAL CORD, LUMBAR; SPINAL CORD, THORACIC; STOMACH; TESTIS; THYMUS; TONGUE; TRACHEA; URINARY BLADDER

Histo Pathology - The following Tissues were Not Examined:

None

Appendix 21

5002158 - Individual Animal Data Gross and Histopathology Findings

Animal: 1014	Group: 1		Sex: Male
Species: Rat	Strain: Sprague-Dawley		
	Dose: 0 ug/dose		
	Removal Reason: Recovery Euthanasia		
	Day (Week) of Death: 57 (9)		

Gross Pathology Animal Details:

Comments: Tissues submitted Into 10% neutral buffered formalin except eyes and optic nerves submitted in Davidson`s and testes in modified Davidson`s Fixative.

Animal Notes: EUTHANASIA VIA ANESTHESIA AND EXSANGUINATION

Gross Pathology Observations:

GLAND, ADRENAL : Enlargement : Left (TGL)

Any remaining protocol required tissues, which have been examined, have no visible lesions

Gross Pathology - The following Tissues were Not Examined:

None

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

GLAND, HARDERIAN : Infiltration, mononuclear cell; minimal
GLAND, PARATHYROID : One Of A Pair Available For Evaluation.
GLAND, PARATHYROID : Examined
GLAND, THYROID : Thyroglossal duct remnant, squamous epithelium; minimal
HEART : Murine progressive cardiomyopathy; minimal
KIDNEY : Chronic progressive nephropathy; minimal
LIVER : Infiltration, mixed cell; minimal
LUNG : Infiltration, mixed cell; minimal
LYMPH NODE, INGUINAL : Plasmacytosis; minimal
PANCREAS : Infiltration, mixed cell; minimal : with fibrosis
STOMACH : Cyst; epithelial, single
TESTIS : Atrophy; minimal, seminiferous tubule
THYMUS : Hemorrhage; minimal
NO CORRELATE : No correlating lesion [GLAND, ADRENAL : Enlargement : Left (G)]

Histo Pathology - The following Tissues were Within Normal Limits:

Appendix 21

5002158 - Individual Animal Data Gross and Histopathology Findings

ARTERY, AORTA; BONE MARROW; BONE, FEMUR; BONE, STERNUM; BRAIN; EPIDIDYMIS; ESOPHAGUS; EYE; GALT; GLAND, ADRENAL; GLAND, MAMMARY; GLAND, PARATHYROID; GLAND, PITUITARY; GLAND, PROSTATE; GLAND, SALIVARY, MANDIBULAR; GLAND, SEMINAL VESICLE; LARGE INTESTINE, CECUM; LARGE INTESTINE, COLON; LARGE INTESTINE, RECTUM; LYMPH NODE, MANDIBULAR; LYMPH NODE, MESENTERIC; LYMPH NODE, POPLITEAL; MUSCLE, SKELETAL; NERVE, OPTIC; NERVE, SCIATIC; SITE, INJECTION; SKIN; SMALL INTESTINE, DUODENUM; SMALL INTESTINE, ILEUM; SMALL INTESTINE, JEJUNUM; SPINAL CORD, CERVICAL; SPINAL CORD, LUMBAR; SPINAL CORD, THORACIC; SPLEEN; TONGUE; TRACHEA; URINARY BLADDER

Histo Pathology - The following Tissues were Not Examined:

None

Appendix 21

5002158 - Individual Animal Data Gross and Histopathology Findings

Animal:	1015	Group: 1	Sex: Male
Species:	Rat	Strain: Sprague-Dawley	
		Dose: 0 ug/dose	
		Removal Reason: Recovery Euthanasia	
		Day (Week) of Death: 57 (9)	

Gross Pathology Animal Details:

Comments: Tissues submitted Into 10% neutral buffered formalin except eyes and optic nerves submitted in Davidson`s and testes in modified Davidson`s Fixative.

Animal Notes: EUTHANASIA VIA ANESTHESIA AND EXSANGUINATION

Gross Pathology Observations:

LIVER : Focus; pale : 2, near hilus, right lateral (TGL)
LYMPH NODE, MANDIBULAR : Focus; dark : 2, bilateral (TGL)

Any remaining protocol required tissues, which have been examined, have no visible lesions

Gross Pathology - The following Tissues were Not Examined:

None

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

GLAND, MAMMARY : Immaturity; diffuse, marked, alveolus/duct
KIDNEY : Cast; hyaline, minimal
KIDNEY : Infiltration, mononuclear cell; minimal
LIVER : Infiltration, mixed cell; minimal [LIVER : Focus; pale : 2, near hilus, right lateral (G)]
LYMPH NODE, INGUINAL : Hyperplasia; lymphoid, minimal
LYMPH NODE, MANDIBULAR : Hemorrhage; minimal [LYMPH NODE, MANDIBULAR : Focus; dark : 2, bilateral (G)]
PANCREAS : Infiltration, mononuclear cell; minimal : with fibrosis
SITE, INJECTION : Degeneration/necrosis; minimal, myofiber
THYMUS : Hemorrhage; minimal

Histo Pathology - The following Tissues were Within Normal Limits:

ARTERY, AORTA; BONE MARROW; BONE, FEMUR; BONE, STERNUM; BRAIN; EPIDIDYMIS; ESOPHAGUS; EYE; GALT; GLAND, ADRENAL; GLAND, HARDERIAN; GLAND, PARATHYROID; GLAND, PITUITARY; GLAND, PROSTATE; GLAND, SALIVARY, MANDIBULAR; GLAND, SEMINAL VESICLE; GLAND, THYROID; HEART; LARGE INTESTINE, CECUM; LARGE INTESTINE, COLON; LARGE INTESTINE, RECTUM; LUNG; LYMPH NODE, MESENTERIC; LYMPH NODE, POPLITEAL; MUSCLE, SKELETAL; NERVE, OPTIC; NERVE, SCIATIC; SKIN; SMALL INTESTINE, DUODENUM; SMALL INTESTINE, ILEUM; SMALL INTESTINE, JEJUNUM; SPINAL CORD, CERVICAL; SPINAL CORD, LUMBAR; SPINAL CORD, THORACIC; SPLEEN; STOMACH; TESTIS; TONGUE; TRACHEA; URINARY BLADDER

Histo Pathology - The following Tissues were Not Examined:

None

Appendix 21

5002158 - Individual Animal Data Gross and Histopathology Findings

Animal:	1501	Group: 1	Sex: Female
Species:	Rat	Strain: Sprague-Dawley	
		Dose: 0 ug/dose	
		Removal Reason: Terminal Euthanasia	
		Day (Week) of Death: 44 (7)	

Gross Pathology Animal Details:

Comments: Tissues submitted in 10% neutral buffered formalin except eyes and optic nerves submitted in Davidson`s fixative

No animal details found

Histo Pathology Observations [Correlation]:

GLAND, PARATHYROID : One Of A Pair Available For Evaluation.
GLAND, PARATHYROID : Examined
GLAND, THYROID : Thyroglossal duct remnant, squamous epithelium; minimal
HEART : Murine progressive cardiomyopathy; minimal
LIVER : Tension lipidosis; minimal [LIVER : Focus; pale : 1, fissure, right medial. (G)]
LIVER : Vacuolation, microvesicular, periportal to midzonal; minimal
LIVER : Infiltration, mixed cell; minimal
LYMPH NODE, POPLITEAL : Plasmacytosis; minimal
SITE, INJECTION : Degeneration/necrosis; minimal, myofiber
THYMUS : Congestion; minimal [THYMUS : Focus; dark : 1, right. (G)]
URINARY BLADDER : Infiltration, mononuclear cell; minimal

Histo Pathology - The following Tissues were Within Normal Limits:

ARTERY, AORTA; BONE MARROW; BONE, FEMUR; BONE, STERNUM; BRAIN; CERVIX; ESOPHAGUS; EYE; GALT; GLAND, ADRENAL; GLAND, HARDERIAN; GLAND, MAMMARY; GLAND, PARATHYROID; GLAND, PITUITARY; GLAND, SALIVARY, MANDIBULAR; KIDNEY; LARGE INTESTINE, CECUM; LARGE INTESTINE, COLON; LARGE INTESTINE, RECTUM; LUNG; LYMPH NODE, INGUINAL; LYMPH NODE, MANDIBULAR; LYMPH NODE, MESENTERIC; MUSCLE, SKELETAL; NERVE, OPTIC; NERVE, SCIATIC; OVARY; PANCREAS; SKIN; SMALL INTESTINE, DUODENUM; SMALL INTESTINE, ILEUM; SMALL INTESTINE, JEJUNUM; SPINAL CORD, CERVICAL; SPINAL CORD, LUMBAR; SPINAL CORD, THORACIC; SPLEEN; STOMACH; TONGUE; TRACHEA; UTERUS; VAGINA

Histo Pathology - The following Tissues were Not Examined:

Appendix 21

5002158 - Individual Animal Data Gross and Histopathology Findings

None

Appendix 21

5002158 - Individual Animal Data Gross and Histopathology Findings

Animal:	1507	Group: 1	Sex: Female
Species:	Rat	Strain: Sprague-Dawley	
		Dose: 0 ug/dose	
		Removal Reason: Terminal Euthanasia	
		Day (Week) of Death: 44 (7)	

Gross Pathology Animal Details:

Comments: Tissues submitted in 10% neutral buffered formalin except eyes and optic nerves submitted in Davidson`s fixative

Animal Notes: EUTHANASIA VIA ANESTHESIA AND EXSANGUINATION

Gross Pathology Observations:

THYMUS : Small (TGL)

Any remaining protocol required tissues, which have been examined, have no visible lesions

Gross Pathology - The following Tissues were Not Examined:

None

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

GLAND, PARATHYROID : One Of A Pair Available For Evaluation.
GLAND, PARATHYROID : Examined
KIDNEY : Infiltration, mononuclear cell; minimal
LIVER : Infiltration, mixed cell; minimal
LUNG : Infiltration, mixed cell; minimal : with foamy macrophages
SITE, INJECTION : Degeneration/necrosis; minimal, myofiber
THYMUS : Hemorrhage; minimal
NO CORRELATE : No correlating lesion [THYMUS : Small (G)]

Histo Pathology - The following Tissues were Within Normal Limits:

ARTERY, AORTA; BONE MARROW; BONE, FEMUR; BONE, STERNUM; BRAIN; CERVIX; ESOPHAGUS; EYE; GALT; GLAND, ADRENAL; GLAND, HARDERIAN; GLAND, MAMMARY; GLAND, PARATHYROID; GLAND, PITUITARY; GLAND, SALIVARY, MANDIBULAR; GLAND, THYROID; HEART; LARGE INTESTINE, CECUM; LARGE INTESTINE, COLON; LARGE INTESTINE, RECTUM; LYMPH NODE, INGUINAL; LYMPH NODE, MANDIBULAR; LYMPH NODE, MESENTERIC; LYMPH NODE, POPLITEAL; MUSCLE, SKELETAL; NERVE, OPTIC; NERVE, SCIATIC; OVARY; PANCREAS; SKIN; SMALL INTESTINE, DUODENUM; SMALL INTESTINE, ILEUM; SMALL INTESTINE, JEJUNUM; SPINAL CORD, CERVICAL; SPINAL CORD, LUMBAR; SPINAL CORD, THORACIC; SPLEEN; STOMACH; TONGUE; TRACHEA; URINARY BLADDER; UTERUS; VAGINA

Histo Pathology - The following Tissues were Not Examined:

None

Appendix 21

5002158 - Individual Animal Data Gross and Histopathology Findings

Animal:	1508	Group: 1	Sex: Female
Species:	Rat	Strain: Sprague-Dawley	
		Dose: 0 ug/dose	
		Removal Reason: Terminal Euthanasia	
		Day (Week) of Death: 44 (7)	

Gross Pathology Animal Details:

Comments: Tissues submitted in 10% neutral buffered formalin except eyes and optic nerves submitted in Davidson`s fixative.

Animal Notes: EUTHANASIA VIA ANESTHESIA AND EXSANGUINATION

Gross Pathology Observations:

LIVER : Focus; pale : 1, fissure, right medial. (TGL)
LYMPH NODE, MANDIBULAR : Focus; dark : 3 to 4, bilateral. (TGL)
MUSCLE, SKELETAL : Material accumulation; clot : Ventral cervical, left. (TGL)

Any remaining protocol required tissues, which have been examined, have no visible lesions

Gross Pathology - The following Tissues were Not Examined:

None

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

GLAND, HARDERIAN : Infiltration, mononuclear cell; minimal
KIDNEY : Chronic progressive nephropathy; minimal
LARGE INTESTINE, CECUM : Dilatation; minimal, crypt
LARGE INTESTINE, RECTUM : Dilatation; minimal, crypt
LIVER : Tension lipidosis; minimal [LIVER : Focus; pale : 1, fissure, right medial. (G)]
LIVER : Infiltration, mixed cell; minimal
LUNG : Infiltration, mixed cell; minimal
LYMPH NODE, MANDIBULAR : Hemorrhage; minimal [LYMPH NODE, MANDIBULAR : Focus; dark : 3 to 4, bilateral. (G)]
SITE, INJECTION : Degeneration/necrosis; minimal, myofiber
THYMUS : Hemorrhage; minimal
NO CORRELATE : No correlating lesion [MUSCLE, SKELETAL : Material accumulation; clot : Ventral cervical, left. (G)]

Histo Pathology - The following Tissues were Within Normal Limits:

Appendix 21

5002158 - Individual Animal Data Gross and Histopathology Findings

ARTERY, AORTA; BONE MARROW; BONE, FEMUR; BONE, STERNUM; BRAIN; CERVIX; ESOPHAGUS; EYE; GALT; GLAND, ADRENAL; GLAND, MAMMARY; GLAND, PARATHYROID; GLAND, PITUITARY; GLAND, SALIVARY, MANDIBULAR; GLAND, THYROID; HEART; LARGE INTESTINE, COLON; LYMPH NODE, INGUINAL; LYMPH NODE, MESENTERIC; LYMPH NODE, POPLITEAL; MUSCLE, SKELETAL; NERVE, OPTIC; NERVE, SCIATIC; OVARY; PANCREAS; SKIN; SMALL INTESTINE, DUODENUM; SMALL INTESTINE, ILEUM; SMALL INTESTINE, JEJUNUM; SPINAL CORD, CERVICAL; SPINAL CORD, LUMBAR; SPINAL CORD, THORACIC; SPLEEN; STOMACH; TONGUE; TRACHEA; URINARY BLADDER; UTERUS; VAGINA

Histo Pathology - The following Tissues were Not Examined:

None

Appendix 21

5002158 - Individual Animal Data Gross and Histopathology Findings

Animal:	1509	Group: 1	Sex: Female
Species:	Rat	Strain: Sprague-Dawley	
		Dose: 0 ug/dose	
		Removal Reason: Terminal Euthanasia	
		Day (Week) of Death: 44 (7)	

Gross Pathology Animal Details:

Comments: Tissues submitted in 10% neutral buffered formalin except eyes and optic nerves submitted in Davidson`s fixative

Animal Notes: EUTHANASIA VIA ANESTHESIA AND EXSANGUINATION

Gross Pathology Observations:

LIVER : Focus; pale : 1, fissure, right medial (TGL)
LYMPH NODE, MANDIBULAR : Focus; dark : >10, bilateral (TGL)
STOMACH : Focus; pale : >10, mucosa, glandular (TGL)
THYMUS : Focus; dark : >10, right (TGL)

Any remaining protocol required tissues, which have been examined, have no visible lesions

Gross Pathology - The following Tissues were Not Examined:

None

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

GLAND, PARATHYROID : One Of A Pair Available For Evaluation.
GLAND, PARATHYROID : Examined
GLAND, THYROID : Thyroglossal duct remnant, squamous epithelium; minimal
HEART : Murine progressive cardiomyopathy; minimal
KIDNEY : Cast; hyaline, minimal
KIDNEY : Infiltration, mononuclear cell; minimal
LARGE INTESTINE, RECTUM : Hemorrhage; minimal
LIVER : Tension lipidosis; minimal [LIVER : Focus; pale : 1, fissure, right medial (G)]
LIVER : Vacuolation, microvesicular, periportal to midzonal; minimal
LIVER : Infiltration, mixed cell; minimal
LUNG : Infiltration, mixed cell; minimal
LYMPH NODE, MANDIBULAR : Hemorrhage; minimal [LYMPH NODE, MANDIBULAR : Focus; dark : >10, bilateral (G)]
NERVE, SCIATIC : Inflammation, mixed cell; perineurial, minimal
SITE, INJECTION : Degeneration/necrosis; minimal, myofiber
THYMUS : Hemorrhage; minimal [THYMUS : Focus; dark : >10, right (G)]
NO CORRELATE : No correlating lesion [STOMACH : Focus; pale : >10, mucosa, glandular (G)]

Histo Pathology - The following Tissues were Within Normal Limits:

Appendix 21

5002158 - Individual Animal Data Gross and Histopathology Findings

ARTERY, AORTA; BONE MARROW; BONE, FEMUR; BONE, STERNUM; BRAIN; CERVIX; ESOPHAGUS; EYE; GALT; GLAND, ADRENAL; GLAND, HARDERIAN; GLAND, MAMMARY; GLAND, PARATHYROID; GLAND, PITUITARY; GLAND, SALIVARY, MANDIBULAR; LARGE INTESTINE, CECUM; LARGE INTESTINE, COLON; LYMPH NODE, INGUINAL; LYMPH NODE, MESENTERIC; LYMPH NODE, POPLITEAL; MUSCLE, SKELETAL; NERVE, OPTIC; OVARY; PANCREAS; SKIN; SMALL INTESTINE, DUODENUM; SMALL INTESTINE, ILEUM; SMALL INTESTINE, JEJUNUM; SPINAL CORD, CERVICAL; SPINAL CORD, LUMBAR; SPINAL CORD, THORACIC; SPLEEN; STOMACH; TONGUE; TRACHEA; URINARY BLADDER; UTERUS; VAGINA

Histo Pathology - The following Tissues were Not Examined:

None

Appendix 21

5002158 - Individual Animal Data Gross and Histopathology Findings

Animal:	1510	Group: 1	Sex: Female
Species:	Rat	Strain: Sprague-Dawley	
		Dose: 0 ug/dose	
		Removal Reason: Terminal Euthanasia	
		Day (Week) of Death: 44 (7)	

Gross Pathology Animal Details:

Comments: Tissues submitted in 10% neutral buffered formalin except eyes and optic nerves submitted in Davidson`s fixative.

Animal Notes: EUTHANASIA VIA ANESTHESIA AND EXSANGUINATION

Gross Pathology Observations:

KIDNEY : Focus; depressed : 1, dark, cortex, left. (TGL)
LIVER : Focus; pale : 1, near hilus, right lateral. (TGL)
LYMPH NODE, MANDIBULAR : Focus; dark : 3, bilateral. (TGL)
STOMACH : Focus; dark : 2, mucosa, glandular. (TGL)

Any remaining protocol required tissues, which have been examined, have no visible lesions

Gross Pathology - The following Tissues were Not Examined:

None

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

GLAND, ADRENAL : Infiltration, lymphocytic; focal, minimal
GLAND, PARATHYROID : One Of A Pair Available For Evaluation.
GLAND, PARATHYROID : Examined
GLAND, PARATHYROID : Fibrosis; interstitial, minimal
KIDNEY : Chronic progressive nephropathy; minimal [KIDNEY : Focus; depressed : 1, dark, cortex, left. (G)]
LIVER : Tension lipidosis; minimal [LIVER : Focus; pale : 1, near hilus, right lateral. (G)]
LIVER : Vacuolation, microvesicular, periportal to midzonal; minimal
LIVER : Infiltration, mixed cell; minimal
LYMPH NODE, MANDIBULAR : Congestion; minimal [LYMPH NODE, MANDIBULAR : Focus; dark : 3, bilateral. (G)]
NERVE, SCIATIC : Inflammation, mixed cell; perineurial, minimal
SITE, INJECTION : Degeneration/necrosis; minimal, myofiber
STOMACH : Congestion; minimal [STOMACH : Focus; dark : 2, mucosa, glandular. (G)]
TRACHEA : Dilatation; submucosal, minimal, glandular

Histo Pathology - The following Tissues were Within Normal Limits:

Appendix 21

5002158 - Individual Animal Data Gross and Histopathology Findings

ARTERY, AORTA; BONE MARROW; BONE, FEMUR; BONE, STERNUM; BRAIN; CERVIX; ESOPHAGUS; EYE; GALT; GLAND, HARDERIAN; GLAND, MAMMARY; GLAND, PITUITARY; GLAND, SALIVARY, MANDIBULAR; GLAND, THYROID; HEART; LARGE INTESTINE, CECUM; LARGE INTESTINE, COLON; LARGE INTESTINE, RECTUM; LUNG; LYMPH NODE, INGUINAL; LYMPH NODE, MESENTERIC; LYMPH NODE, POPLITEAL; MUSCLE, SKELETAL; NERVE, OPTIC; OVARY; PANCREAS; SKIN; SMALL INTESTINE, DUODENUM; SMALL INTESTINE, ILEUM; SMALL INTESTINE, JEJUNUM; SPINAL CORD, CERVICAL; SPINAL CORD, LUMBAR; SPINAL CORD, THORACIC; SPLEEN; THYMUS; TONGUE; URINARY BLADDER; UTERUS; VAGINA

Histo Pathology - The following Tissues were Not Examined:

None

Appendix 21

5002158 - Individual Animal Data Gross and Histopathology Findings

Animal:	1511	Group: 1	Sex: Female
Species:	Rat	Strain: Sprague-Dawley	
		Dose: 0 ug/dose	
		Removal Reason: Recovery Euthanasia	
		Day (Week) of Death: 57 (9)	

Gross Pathology Animal Details:

Comments: Tissues submitted in 10% neutral buffered formalin except eyes and optic nerves submitted in Davidson`s fixative

Animal Notes: EUTHANASIA VIA ANESTHESIA AND EXSANGUINATION

Gross Pathology Observations:

No observations found

Any remaining protocol required tissues, which have been examined, have no visible lesions

Gross Pathology - The following Tissues were Not Examined:

None

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

GLAND, PARATHYROID : One Of A Pair Available For Evaluation.
GLAND, PARATHYROID : Examined
GLAND, PITUITARY : Cyst
GLAND, THYROID : Thyroglossal duct remnant, squamous epithelium; minimal
LIVER : Vacuolation, microvesicular, periportal to midzonal; minimal
LIVER : Infiltration, mixed cell; minimal
PANCREAS : Fibrosis; minimal
URINARY BLADDER : Accumulation; granular, minimal, transitional epithelium

Histo Pathology - The following Tissues were Within Normal Limits:

ARTERY, AORTA; BONE MARROW; BONE, FEMUR; BONE, STERNUM; BRAIN; CERVIX; ESOPHAGUS; EYE; GALT; GLAND, ADRENAL; GLAND, HARDERIAN; GLAND, MAMMARY; GLAND, PARATHYROID; GLAND, SALIVARY, MANDIBULAR; HEART; KIDNEY; LARGE INTESTINE, CECUM; LARGE INTESTINE, COLON; LARGE INTESTINE, RECTUM; LUNG; LYMPH NODE, INGUINAL; LYMPH NODE, MANDIBULAR; LYMPH NODE, MESENTERIC; LYMPH NODE, POPLITEAL; MUSCLE, SKELETAL; NERVE, OPTIC; NERVE, SCIATIC; OVARY; SITE, INJECTION; SKIN; SMALL INTESTINE, DUODENUM; SMALL INTESTINE, ILEUM; SMALL INTESTINE, JEJUNUM; SPINAL CORD, CERVICAL; SPINAL CORD, LUMBAR; SPINAL CORD, THORACIC; SPLEEN; STOMACH; THYMUS; TONGUE; TRACHEA; UTERUS; VAGINA

Histo Pathology - The following Tissues were Not Examined:

None

None

Appendix 21

5002158 - Individual Animal Data Gross and Histopathology Findings

Animal: 2001	Group: 2	Sex: Male
Species: Rat	Strain: Sprague-Dawley	
	Dose: 9.6 ug/dose	
	Removal Reason: Terminal Euthanasia	
	Day (Week) of Death: 44 (7)	

Gross Pathology Animal Details:

Comments: Tissues submitted Into 10% neutral buffered formalin except eyes and optic nerves submitted in Davidson`s and testes in modified Davidson`s Fixative.

Animal Notes: EUTHANASIA VIA ANESTHESIA AND EXSANGUINATION

Gross Pathology Observations:

LIVER : Focus; pale : >10, papillary process of caudate (TGL)
SKIN : Scab; dark : 2, pinna, bilateral (TGL)

Any remaining protocol required tissues, which have been examined, have no visible lesions

Gross Pathology - The following Tissues were Not Examined:

None

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

LIVER : Necrosis; minimal [LIVER : Focus; pale : >10, papillary process of caudate (G)]
LIVER : Vacuolation, microvesicular, periportal to midzonal; minimal
LIVER : Infiltration, mixed cell; minimal
LYMPH NODE, INGUINAL : Hyperplasia; lymphoid, minimal
LYMPH NODE, POPLITEAL : Hyperplasia; lymphoid, minimal
LYMPH NODE, POPLITEAL : Inflammation, mixed cell; minimal, perinodal
NERVE, SCIATIC : Inflammation, mixed cell; perineurial, mild
SITE, INJECTION : Inflammation, mixed cell; mild
SITE, INJECTION : Degeneration/necrosis; minimal, myofiber
SKIN : Pinna skin
SKIN : Hyperkeratosis; moderate : with epithelial hyperplasia and regionally extensive mixed cell infiltration [SKIN : Scab; dark : 2, pinna, bilateral (G)]

Histo Pathology - The following Tissues were Within Normal Limits:

BONE MARROW; SPLEEN

Histo Pathology - The following Tissues were Not Examined:

None

Appendix 21

5002158 - Individual Animal Data Gross and Histopathology Findings

Animal: 2002	Group: 2	Sex: Male
Species: Rat	Strain: Sprague-Dawley	
	Dose: 9.6 ug/dose	
	Removal Reason: Terminal Euthanasia	
	Day (Week) of Death: 44 (7)	

Gross Pathology Animal Details:

Comments: Tissues submitted Into 10% neutral buffered formalin except eyes and optic nerves submitted in Davidson`s and testes in modified Davidson`s Fixative.

Animal Notes: EUTHANASIA VIA ANESTHESIA AND EXSANGUINATION

Gross Pathology Observations:

LIVER : Focus; pale : 1, fissure, right medial. (TGL)
LUNG : Focus; dark : 2 to 5, right middle, right accessory, right caudal. (TGL)
LYMPH NODE, INGUINAL : Focus; dark : 3 to >10, bilateral. (TGL)
STOMACH : Focus; dark : >10, mucosa, glandular. (TGL)
THYMUS : Enlargement (TGL)

Any remaining protocol required tissues, which have been examined, have no visible lesions

Gross Pathology - The following Tissues were Not Examined:

None

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

LIVER : Tension lipidosis; minimal [LIVER : Focus; pale : 1, fissure, right medial. (G)]
LIVER : Vacuolation, microvesicular, periportal to midzonal; minimal
LIVER : Infiltration, mixed cell; minimal
LUNG : Crystal; minimal : with hemorrhage [LUNG : Focus; dark : 2 to 5, right middle, right accessory, right caudal. (G)]
LUNG : Infiltration, mixed cell; minimal
LYMPH NODE, INGUINAL : Hyperplasia; lymphoid, minimal
LYMPH NODE, INGUINAL : Hemorrhage; minimal [LYMPH NODE, INGUINAL : Focus; dark : 3 to >10, bilateral. (G)]
LYMPH NODE, POPLITEAL : Hyperplasia; lymphoid, mild
LYMPH NODE, POPLITEAL : Inflammation, mixed cell; mild, perinodal
NERVE, SCIATIC : Inflammation, mixed cell; perineurial, moderate
SITE, INJECTION : Inflammation, mixed cell; mild
SITE, INJECTION : Degeneration/necrosis; minimal, myofiber
THYMUS : Hyperplasia; lymphoid, diffuse, mild [THYMUS : Enlargement (G)]
NO CORRELATE : No correlating lesion [STOMACH : Focus; dark : >10, mucosa, glandular. (G)]

None

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

BONE MARROW : Increased hematopoiesis; myeloid, minimal
GLAND, ADRENAL : Congestion; mild [GLAND, ADRENAL : Focus; dark : 1, right (G)]
LIVER : Necrosis; mild [LIVER : Focus; pale : >10, papillary process of caudate (G)]
LIVER : Infiltration, mixed cell; minimal
LYMPH NODE, MANDIBULAR : Hemorrhage; minimal [LYMPH NODE, MANDIBULAR : Focus; dark : 1, right (G)]

LYMPH NODE, POPLITEAL : Hyperplasia; lymphoid, mild
LYMPH NODE, POPLITEAL : Inflammation, mixed cell; mild, perinodal
NERVE, SCIATIC : Inflammation, mixed cell; perineurial, moderate
SITE, INJECTION : Inflammation, mixed cell; moderate
SITE, INJECTION : Degeneration/necrosis; minimal, myofiber

Histo Pathology - The following Tissues were Within Normal Limits:

LYMPH NODE, INGUINAL; SPLEEN

Histo Pathology - The following Tissues were Not Examined:

None

Appendix 21

5002158 - Individual Animal Data Gross and Histopathology Findings

Animal: 2004	Group: 2		Sex: Male
Species: Rat	Strain: Sprague-Dawley		
	Dose: 9.6 ug/dose		
	Removal Reason: Terminal Euthanasia		
	Day (Week) of Death: 44 (7)		

Gross Pathology Animal Details:

Comments: Tissues submitted Into 10% neutral buffered formalin except eyes and optic nerves submitted in Davidson`s and testes in modified Davidson`s Fixative.

Animal Notes: EUTHANASIA VIA ANESTHESIA AND EXSANGUINATION

Gross Pathology Observations:

LYMPH NODE, INGUINAL : Enlargement : Bilateral. (TGL)
LYMPH NODE, MESENTERIC : Enlargement (TGL)
LYMPH NODE, POPLITEAL : Enlargement : Bilateral. (TGL)
SITE, INJECTION : Abnormal consistency; firm : Right. (TGL)

Any remaining protocol required tissues, which have been examined, have no visible lesions

Gross Pathology - The following Tissues were Not Examined:

None

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

LIVER : Infiltration, mixed cell; minimal
LYMPH NODE, INGUINAL : Hyperplasia; lymphoid, mild [LYMPH NODE, INGUINAL : Enlargement : Bilateral. (G)]

LYMPH NODE, INGUINAL : Plasmacytosis; minimal
LYMPH NODE, MESENTERIC : Hyperplasia; lymphoid, moderate [LYMPH NODE, MESENTERIC : Enlargement (G)]
LYMPH NODE, POPLITEAL : Hyperplasia; lymphoid, minimal
LYMPH NODE, POPLITEAL : Inflammation, mixed cell; mild, perinodal [LYMPH NODE, POPLITEAL : Enlargement : Bilateral. (G)]
NERVE, SCIATIC : Inflammation, mixed cell; perineurial, mild
SITE, INJECTION : Inflammation, mixed cell; moderate [SITE, INJECTION : Abnormal consistency; firm : Right. (G)]

SITE, INJECTION : Degeneration/necrosis; mild, myofiber

Histo Pathology - The following Tissues were Within Normal Limits:

BONE MARROW; SPLEEN

Histo Pathology - The following Tissues were Not Examined:

None

LUNG : Focus; dark : 1, left lobe (TGL)

Any remaining protocol required tissues, which have been examined, have no visible lesions

Gross Pathology - The following Tissues were Not Examined:

None

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

LIVER : Vacuolation, microvesicular, periportal to midzonal; minimal
LIVER : Infiltration, mixed cell; minimal
LYMPH NODE, INGUINAL : Hyperplasia; lymphoid, minimal
LYMPH NODE, POPLITEAL : Hyperplasia; lymphoid, mild
LYMPH NODE, POPLITEAL : Inflammation, mixed cell; mild, perinodal
NERVE, SCIATIC : Inflammation, mixed cell; perineurial, moderate : with edema
SITE, INJECTION : Inflammation, mixed cell; mild
SITE, INJECTION : Degeneration/necrosis; minimal, myofiber
NO CORRELATE : No correlating lesion [LIVER : Focus; pale : 1, near hilus, right lateral (G) | LUNG : Focus; dark : 1, left lobe (G)]

Histo Pathology - The following Tissues were Within Normal Limits:

BONE MARROW; LUNG; SPLEEN

Histo Pathology - The following Tissues were Not Examined:

None

Appendix 21

5002158 - Individual Animal Data Gross and Histopathology Findings

Animal: 2510	Group: 2		Sex: Female
Species: Rat	Strain: Sprague-Dawley		
	Dose: 9.6 ug/dose		
	Removal Reason: Terminal Euthanasia		
	Day (Week) of Death: 44 (7)		

Gross Pathology Animal Details:

Comments: Tissues submitted in 10% neutral buffered formalin except eyes and optic nerves submitted in Davidson`s fixative.

Animal Notes: EUTHANASIA VIA ANESTHESIA AND EXSANGUINATION

Gross Pathology Observations:

LIVER : Focus; pale : 1, fissure, right medial. (TGL)

Any remaining protocol required tissues, which have been examined, have no visible lesions

Gross Pathology - The following Tissues were Not Examined:

None

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

LIVER : Vacuolation, microvesicular, periportal to midzonal; mild
LIVER : Infiltration, mixed cell; minimal
LYMPH NODE, POPLITEAL : Hyperplasia; lymphoid, mild
LYMPH NODE, POPLITEAL : Inflammation, mixed cell; mild, perinodal
NERVE, SCIATIC : Inflammation, mixed cell; perineurial, mild
SITE, INJECTION : Inflammation, mixed cell; moderate
SITE, INJECTION : Degeneration/necrosis; minimal, myofiber
NO CORRELATE : No correlating lesion [LIVER : Focus; pale : 1, fissure, right medial. (G)]

Histo Pathology - The following Tissues were Within Normal Limits:

BONE MARROW; LYMPH NODE, INGUINAL; SPLEEN

Histo Pathology - The following Tissues were Not Examined:

None

Appendix 21

5002158 - Individual Animal Data Gross and Histopathology Findings

Animal: 3001	Group: 3	Sex: Male
Species: Rat	Strain: Sprague-Dawley	
	Dose: 29 ug/dose	
	Removal Reason: Terminal Euthanasia	
	Day (Week) of Death: 44 (7)	

Gross Pathology Animal Details:

Comments: Tissues submitted Into 10% neutral buffered formalin except eyes and optic nerves submitted in Davidson`s and testes in modified Davidson`s Fixative.

Animal Notes: EUTHANASIA VIA ANESTHESIA AND EXSANGUINATION

Gross Pathology Observations:

LIVER : Focus; pale : 1, fissure, right medial (TGL)
SITE, INJECTION : Abnormal consistency; firm : Right (TGL)

Any remaining protocol required tissues, which have been examined, have no visible lesions

Gross Pathology - The following Tissues were Not Examined:

None

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

BONE MARROW : Increased hematopoiesis; myeloid, minimal
LIVER : Tension lipidosis; minimal [LIVER : Focus; pale : 1, fissure, right medial (G)]
LIVER : Vacuolation, microvesicular, periportal to midzonal; minimal
LIVER : Infiltration, mixed cell; minimal
LYMPH NODE, INGUINAL : Hyperplasia; lymphoid, minimal
LYMPH NODE, POPLITEAL : Inflammation, mixed cell; minimal, perinodal
NERVE, SCIATIC : Inflammation, mixed cell; perineurial, moderate
SITE, INJECTION : Inflammation, mixed cell; marked [SITE, INJECTION : Abnormal consistency; firm : Right (G)]

SITE, INJECTION : Degeneration/necrosis; mild, myofiber

Histo Pathology - The following Tissues were Within Normal Limits:

SPLEEN

Histo Pathology - The following Tissues were Not Examined:

None

Appendix 21

5002158 - Individual Animal Data Gross and Histopathology Findings

Animal:	3002	Group: 3	Sex: Male
Species:	Rat	Strain: Sprague-Dawley	
		Dose: 29 ug/dose	
		Removal Reason: Terminal Euthanasia	
		Day (Week) of Death: 44 (7)	

Gross Pathology Animal Details:

Comments: Tissues submitted Into 10% neutral buffered formalin except eyes and optic nerves submitted in Davidson`s and testes in modified Davidson`s Fixative.

Animal Notes: EUTHANASIA VIA ANESTHESIA AND EXSANGUINATION

Gross Pathology Observations:

GLAND, PITUITARY : Focus; dark : 2. (TGL)
KIDNEY : Focus; depressed : 3 to 7, dark, bilateral. (TGL)
KIDNEY : Focus; pale : 3, left. (TGL)
LUNG : Focus; dark : 3 to >10, right cranial, right caudal, left lobe. (TGL)
LUNG : Focus; depressed : 1, dark, edge, left lobe. (TGL)
LUNG : Discoloration; dark : Cranial half, left lobe. (TGL)
LUNG : Abnormal consistency : Spongy, cranial half, left lobe. (TGL)
LYMPH NODE, MANDIBULAR : Focus; dark : >10, bilateral. (TGL)
MUSCLE, SKELETAL : Material accumulation; clot : Ventral cervical. (TGL)
SITE, INJECTION : Swelling : right (TGL)
THYMUS : Focus; dark : 2. (TGL)

Any remaining protocol required tissues, which have been examined, have no visible lesions

Gross Pathology - The following Tissues were Not Examined:

None

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

GLAND, PITUITARY : Pars Distalis Available For Evaluation.
GLAND, PITUITARY : Examined
GLAND, PITUITARY : Congestion; mild [GLAND, PITUITARY : Focus; dark : 2. (G)]
KIDNEY : Cast; hyaline, minimal
KIDNEY : Cyst; tubular, multiple, mild [KIDNEY : Focus; pale : 3, left. (G)]
KIDNEY : Chronic progressive nephropathy; mild [KIDNEY : Focus; depressed : 3 to 7, dark, bilateral. (G)]
LIVER : Vacuolation, microvesicular, periportal to midzonal; mild
LIVER : Infiltration, mixed cell; minimal
LUNG : Atelectasis; regionally extensive, minimal [LUNG : Focus; depressed : 1, dark, edge, left lobe. (G)]
LUNG : Hemorrhage; marked [LUNG : Discoloration; dark : Cranial half, left lobe. (G) | LUNG : Abnormal consistency : Spongy, cranial half, left lobe. (G) | LUNG : Focus; dark : 3 to >10, right cranial, right caudal, left lobe. (G)]

Appendix 21

5002158 - Individual Animal Data Gross and Histopathology Findings

Histo Pathology Observations [Correlation] (Continued):

LYMPH NODE, MANDIBULAR : Hemorrhage; minimal [LYMPH NODE, MANDIBULAR : Focus; dark : >10, bilateral. (G)]
LYMPH NODE, POPLITEAL : Hyperplasia; lymphoid, minimal
LYMPH NODE, POPLITEAL : Inflammation, mixed cell; minimal, perinodal
MUSCLE, SKELETAL : Ventral cervical.
MUSCLE, SKELETAL : Hemorrhage; acute, regionally extensive, marked [MUSCLE, SKELETAL : Material accumulation; clot : Ventral cervical. (G)]
NERVE, SCIATIC : Inflammation, mixed cell; perineurial, minimal
SITE, INJECTION : Inflammation, mixed cell; moderate [SITE, INJECTION : Swelling : right (G)]
SITE, INJECTION : Degeneration/necrosis; minimal, myofiber
THYMUS : Congestion; mild [THYMUS : Focus; dark : 2. (G)]

Histo Pathology - The following Tissues were Within Normal Limits:

BONE MARROW; LYMPH NODE, INGUINAL; SPLEEN

Histo Pathology - The following Tissues were Not Examined:

None

Appendix 21

5002158 - Individual Animal Data Gross and Histopathology Findings

Animal:	3003	Group: 3	Sex: Male
Species:	Rat	Strain: Sprague-Dawley	
		Dose: 29 ug/dose	
		Removal Reason: Terminal Euthanasia	
		Day (Week) of Death: 44 (7)	

Gross Pathology Animal Details:

Comments: Tissues submitted Into 10% neutral buffered formalin except eyes and optic nerves submitted in Davidson`s and testes in modified Davidson`s Fixative.

Animal Notes: EUTHANASIA VIA ANESTHESIA AND EXSANGUINATION

Gross Pathology Observations:

LIVER : Focus; pale : 1, fissure, right medial (TGL)
LUNG : Focus; dark : 1 to 2, right middle, edge right caudal (TGL)
LYMPH NODE, INGUINAL : Enlargement : Bilateral (TGL)
SITE, INJECTION : Abnormal consistency; firm : Right (TGL)
SITE, INJECTION : Swelling : right (TGL)
STOMACH : Focus; dark : >10, mucosa. glandular (TGL)
THYMUS : Focus; dark : 4, right (TGL)

Any remaining protocol required tissues, which have been examined, have no visible lesions

Gross Pathology - The following Tissues were Not Examined:

None

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

LIVER : Vacuolation, microvesicular, periportal to midzonal; minimal
LIVER : Infiltration, mixed cell; minimal [LIVER : Focus; pale : 1, fissure, right medial (G)]
LUNG : Atelectasis; regionally extensive, minimal [LUNG : Focus; dark : 1 to 2, right middle, edge right caudal (G)]

LUNG : Infiltration, mixed cell; minimal
LYMPH NODE, INGUINAL : Hyperplasia; lymphoid, mild [LYMPH NODE, INGUINAL : Enlargement : Bilateral (G)]

LYMPH NODE, POPLITEAL : Hyperplasia; lymphoid, minimal
LYMPH NODE, POPLITEAL : Inflammation, mixed cell; moderate, perinodal
NERVE, SCIATIC : Inflammation, mixed cell; perineurial, minimal
SITE, INJECTION : Inflammation, mixed cell; marked [SITE, INJECTION : Abnormal consistency; firm : Right (G) | SITE, INJECTION : Swelling : right (G)]
SITE, INJECTION : Degeneration/necrosis; minimal, myofiber
STOMACH : Hemorrhage; minimal [STOMACH : Focus; dark : >10, mucosa. glandular (G)]
THYMUS : Hemorrhage; minimal [THYMUS : Focus; dark : 4, right (G)]

Histo Pathology - The following Tissues were Within Normal Limits:

Appendix 21

5002158 - Individual Animal Data Gross and Histopathology Findings

BONE MARROW; SPLEEN

Histo Pathology - The following Tissues were Not Examined:

None

Appendix 21

5002158 - Individual Animal Data Gross and Histopathology Findings

Animal:	3004	Group: 3	Sex: Male
Species:	Rat	Strain: Sprague-Dawley	
		Dose: 29 ug/dose	
		Removal Reason: Terminal Euthanasia	
		Day (Week) of Death: 44 (7)	

Gross Pathology Animal Details:

Comments: Tissues submitted Into 10% neutral buffered formalin except eyes and optic nerves submitted in Davidson`s and testes in modified Davidson`s Fixative.

Animal Notes: EUTHANASIA VIA ANESTHESIA AND EXSANGUINATION

Gross Pathology Observations:

LUNG : Focus; dark : 1, left lobe (TGL)
LYMPH NODE, MANDIBULAR : Focus; dark : 2, left. (TGL)
LYMPH NODE, POPLITEAL : Enlargement : Right. (TGL)
SITE, INJECTION : Abnormal consistency; firm : Right. (TGL)
SITE, INJECTION : Focus; dark : 1, right (TGL)
STOMACH : Focus; dark : 3, mucosa, glandular. (TGL)
THYMUS : Focus; dark : >10, right. (TGL)

Any remaining protocol required tissues, which have been examined, have no visible lesions

Gross Pathology - The following Tissues were Not Examined:

None

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

LIVER : Vacuolation, microvesicular, periportal to midzonal; mild
LIVER : Infiltration, mixed cell; minimal
LUNG : Atelectasis; regionally extensive, minimal [LUNG : Focus; dark : 1, left lobe (G)]
LUNG : Infiltration, mixed cell; minimal
LYMPH NODE, MANDIBULAR : Congestion; minimal [LYMPH NODE, MANDIBULAR : Focus; dark : 2, left. (G)]

LYMPH NODE, POPLITEAL : Hyperplasia; lymphoid, minimal [LYMPH NODE, POPLITEAL : Enlargement : Right. (G)]
LYMPH NODE, POPLITEAL : Inflammation, mixed cell; minimal, perinodal
NERVE, SCIATIC : Inflammation, mixed cell; perineurial, minimal
SITE, INJECTION : with locally extensive hemorrhage
SITE, INJECTION : Inflammation, mixed cell; marked [SITE, INJECTION : Abnormal consistency; firm : Right. (G) | SITE, INJECTION : Focus; dark : 1, right (G)]
SITE, INJECTION : Degeneration/necrosis; mild, myofiber
SPLEEN : Decreased cellularity; minimal, periarteriolar lymphoid sheath
STOMACH : Hemorrhage; minimal [STOMACH : Focus; dark : 3, mucosa, glandular. (G)]
THYMUS : Hemorrhage; mild [THYMUS : Focus; dark : >10, right. (G)]

Animal: 3503	Group: 3		Sex: Female
Species: Rat	Strain: Sprague-Dawley		
	Dose: 29 ug/dose		
	Removal Reason: Terminal Euthanasia		
	Day (Week) of Death: 44 (7)		

Gross Pathology Animal Details:

Comments: Tissues submitted in 10% neutral buffered formalin except eyes and optic nerves submitted in Davidson`s fixative

Animal Notes: EUTHANASIA VIA ANESTHESIA AND EXSANGUINATION

Gross Pathology Observations:

SITE, INJECTION : Abnormal consistency; firm : Right (TGL)

Any remaining protocol required tissues, which have been examined, have no visible lesions

Gross Pathology - The following Tissues were Not Examined:

None

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

LIVER : Vacuolation, microvesicular, periportal to midzonal; minimal
LIVER : Infiltration, mixed cell; minimal
LYMPH NODE, INGUINAL : Hyperplasia; lymphoid, minimal
LYMPH NODE, POPLITEAL : Inflammation, mixed cell; mild, perinodal
NERVE, SCIATIC : Inflammation, mixed cell; perineurial, mild
SITE, INJECTION : Inflammation, mixed cell; moderate [SITE, INJECTION : Abnormal consistency; firm : Right (G)]

Histo Pathology - The following Tissues were Within Normal Limits:

BONE MARROW; SPLEEN

Histo Pathology - The following Tissues were Not Examined:

None

Appendix 21

5002158 - Individual Animal Data Gross and Histopathology Findings

Animal: 3504	Group: 3		Sex: Female
Species: Rat	Strain: Sprague-Dawley		
	Dose: 29 ug/dose		
	Removal Reason: Terminal Euthanasia		
	Day (Week) of Death: 44 (7)		

Gross Pathology Animal Details:

Comments: Tissues submitted in 10% neutral buffered formalin except eyes and optic nerves submitted in Davidson`s fixative.

Animal Notes: EUTHANASIA VIA ANESTHESIA AND EXSANGUINATION

Gross Pathology Observations:

GLAND, ADRENAL : Focus; dark : 1 to 2, bilateral. (TGL)
SITE, INJECTION : Abnormal consistency; firm : Right. (TGL)

Any remaining protocol required tissues, which have been examined, have no visible lesions

Gross Pathology - The following Tissues were Not Examined:

None

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

GLAND, ADRENAL : Congestion; mild [GLAND, ADRENAL : Focus; dark : 1 to 2, bilateral. (G)]
LIVER : Vacuolation, microvesicular, periportal to midzonal; minimal
LIVER : Infiltration, mixed cell; minimal
LYMPH NODE, INGUINAL : Hyperplasia; lymphoid, mild
LYMPH NODE, POPLITEAL : Hyperplasia; lymphoid, mild
LYMPH NODE, POPLITEAL : Inflammation, mixed cell; mild, perinodal
NERVE, SCIATIC : Inflammation, mixed cell; perineurial, mild
SITE, INJECTION : Inflammation, mixed cell; moderate [SITE, INJECTION : Abnormal consistency; firm : Right. (G)]

SITE, INJECTION : Degeneration/necrosis; minimal, myofiber

Histo Pathology - The following Tissues were Within Normal Limits:

BONE MARROW; SPLEEN

Histo Pathology - The following Tissues were Not Examined:

None

Appendix 21

5002158 - Individual Animal Data Gross and Histopathology Findings

Animal:	3505	Group: 3	Sex: Female
Species:	Rat	Strain: Sprague-Dawley	
		Dose: 29 ug/dose	
		Removal Reason: Terminal Euthanasia	
		Day (Week) of Death: 44 (7)	

Gross Pathology Animal Details:

Comments: Tissues submitted in 10% neutral buffered formalin except eyes and optic nerves submitted in Davidson`s fixative

Animal Notes: EUTHANASIA VIA ANESTHESIA AND EXSANGUINATION

Gross Pathology Observations:

LIVER : Focus; pale : 1, near hilus, right lateral (TGL)
SITE, INJECTION : Abnormal consistency; firm : Right (TGL)

Any remaining protocol required tissues, which have been examined, have no visible lesions

Gross Pathology - The following Tissues were Not Examined:

None

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

LIVER : Tension lipidosis; minimal [LIVER : Focus; pale : 1, near hilus, right lateral (G)]
LIVER : Vacuolation, microvesicular, periportal to midzonal; minimal
LIVER : Infiltration, mixed cell; minimal
LYMPH NODE, POPLITEAL : Hyperplasia; lymphoid, minimal : perinodal;with edema
NERVE, SCIATIC : Inflammation, mixed cell; perineurial, mild : with edema
SITE, INJECTION : Inflammation, mixed cell; moderate [SITE, INJECTION : Abnormal consistency; firm : Right (G)]

SITE, INJECTION : Degeneration/necrosis; minimal, myofiber

Histo Pathology - The following Tissues were Within Normal Limits:

BONE MARROW; LYMPH NODE, INGUINAL; SPLEEN

Histo Pathology - The following Tissues were Not Examined:

None

Appendix 21

5002158 - Individual Animal Data Gross and Histopathology Findings

Animal:	3506	Group: 3	Sex: Female
Species:	Rat	Strain: Sprague-Dawley	
		Dose: 29 ug/dose	
		Removal Reason: Terminal Euthanasia	
		Day (Week) of Death: 44 (7)	

Gross Pathology Animal Details:

Comments: Tissues submitted in 10% neutral buffered formalin except eyes and optic nerves submitted in Davidson`s fixative.

Animal Notes: EUTHANASIA VIA ANESTHESIA AND EXSANGUINATION

Gross Pathology Observations:

EYE : Focus; dark : 3, sclera, right. (TGL)
LUNG : Focus; dark : 1, right caudal, left lobe. (TGL)
LUNG : Focus; depressed : 1, dark, ventral, left lobe. (TGL)
LYMPH NODE, MANDIBULAR : Focus; dark : 2 to 3, bilateral. (TGL)
SITE, INJECTION : Abnormal consistency; firm : Right. (TGL)

Any remaining protocol required tissues, which have been examined, have no visible lesions

Gross Pathology - The following Tissues were Not Examined:

None

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

LIVER : Vacuolation, microvesicular, periportal to midzonal; minimal
LIVER : Infiltration, mixed cell; minimal
LUNG : Crystal; minimal : with hemorrhage
LUNG : Infiltration, mixed cell; minimal [LUNG : Focus; depressed : 1, dark, ventral, left lobe. (G) | LUNG : Focus; dark : 1, right caudal, left lobe. (G)]
LYMPH NODE, INGUINAL : Hyperplasia; lymphoid, mild
LYMPH NODE, MANDIBULAR : Congestion; mild [LYMPH NODE, MANDIBULAR : Focus; dark : 2 to 3, bilateral. (G)]
LYMPH NODE, POPLITEAL : Hyperplasia; lymphoid, minimal
LYMPH NODE, POPLITEAL : Inflammation, mixed cell; mild, perinodal
NERVE, SCIATIC : Inflammation, mixed cell; perineurial, minimal
SITE, INJECTION : Inflammation, mixed cell; marked [SITE, INJECTION : Abnormal consistency; firm : Right. (G)]

SITE, INJECTION : Degeneration/necrosis; minimal, myofiber
NO CORRELATE : No correlating lesion [EYE : Focus; dark : 3, sclera, right. (G)]

Histo Pathology - The following Tissues were Within Normal Limits:

BONE MARROW; EYE; SPLEEN

Histo Pathology - The following Tissues were Not Examined:

Appendix 21

5002158 - Individual Animal Data Gross and Histopathology Findings

None

Appendix 21

5002158 - Individual Animal Data Gross and Histopathology Findings

Animal: 3507	Group: 3		Sex: Female
Species: Rat	Strain: Sprague-Dawley		
	Dose: 29 ug/dose		
	Removal Reason: Terminal Euthanasia		
	Day (Week) of Death: 44 (7)		

Gross Pathology Animal Details:

Comments: Tissues submitted in 10% neutral buffered formalin except eyes and optic nerves submitted in Davidson`s fixative

Animal Notes: EUTHANASIA VIA ANESTHESIA AND EXSANGUINATION

Gross Pathology Observations:

LIVER : Focus; pale : 1, near hilus, right lateral (TGL)
LYMPH NODE, MANDIBULAR : Focus; dark : >10, bilateral (TGL)
SITE, INJECTION : Abnormal consistency; firm : Right (TGL)
THYMUS : Focus; dark : 5 (TGL)

Any remaining protocol required tissues, which have been examined, have no visible lesions

Gross Pathology - The following Tissues were Not Examined:

None

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

BONE MARROW : Increased hematopoiesis; myeloid, minimal
LIVER : Hepatodiaphragmatic nodule [LIVER : Focus; pale : 1, near hilus, right lateral (G)]
LIVER : Infiltration, mixed cell; minimal
LYMPH NODE, INGUINAL : Hyperplasia; lymphoid, minimal
LYMPH NODE, MANDIBULAR : Congestion; minimal [LYMPH NODE, MANDIBULAR : Focus; dark : >10, bilateral (G)]
LYMPH NODE, POPLITEAL : Hyperplasia; lymphoid, minimal
LYMPH NODE, POPLITEAL : Inflammation, mixed cell; minimal, perinodal
NERVE, SCIATIC : Inflammation, mixed cell; perineurial, minimal
SITE, INJECTION : Inflammation, mixed cell; moderate [SITE, INJECTION : Abnormal consistency; firm : Right (G)]

SITE, INJECTION : Degeneration/necrosis; minimal, myofiber
THYMUS : Hemorrhage; minimal [THYMUS : Focus; dark : 5 (G)]

Histo Pathology - The following Tissues were Within Normal Limits:

SPLEEN

Histo Pathology - The following Tissues were Not Examined:

None

Appendix 21

5002158 - Individual Animal Data Gross and Histopathology Findings

Animal:	3508	Group: 3	Sex: Female
Species:	Rat	Strain: Sprague-Dawley	
		Dose: 29 ug/dose	
		Removal Reason: Terminal Euthanasia	
		Day (Week) of Death: 44 (7)	

Gross Pathology Animal Details:

Comments: Tissues submitted in 10% neutral buffered formalin except eyes and optic nerves submitted in Davidson`s fixative.

Animal Notes: EUTHANASIA VIA ANESTHESIA AND EXSANGUINATION

Gross Pathology Observations:

LIVER : Focus; pale : 1, fissure, right medial. (TGL)
LYMPH NODE : Enlargement : Iliac, right. (TGL)
LYMPH NODE, POPLITEAL : Enlargement : Right. (TGL)
SITE, INJECTION : Abnormal consistency; firm : Right. (TGL)

Any remaining protocol required tissues, which have been examined, have no visible lesions

Gross Pathology - The following Tissues were Not Examined:

None

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

BONE MARROW : Increased hematopoiesis; myeloid, minimal
LIVER : Tension lipidosis; minimal [LIVER : Focus; pale : 1, fissure, right medial. (G)]
LIVER : Vacuolation, microvesicular, periportal to midzonal; mild
LIVER : Infiltration, mixed cell; minimal
LYMPH NODE : Infiltration, mononuclear cell; interstitial, regionally extensive, minimal
LYMPH NODE : Hyperplasia; lymphoid, minimal [LYMPH NODE : Enlargement : Iliac, right. (G)]
LYMPH NODE, POPLITEAL : Hyperplasia; lymphoid, minimal [LYMPH NODE, POPLITEAL : Enlargement : Right. (G)]
LYMPH NODE, POPLITEAL : Inflammation, mixed cell; mild, perinodal
NERVE, SCIATIC : Inflammation, mixed cell; perineurial, minimal
SITE, INJECTION : Inflammation, mixed cell; moderate [SITE, INJECTION : Abnormal consistency; firm : Right. (G)]

SITE, INJECTION : Degeneration/necrosis; minimal, myofiber

Histo Pathology - The following Tissues were Within Normal Limits:

LYMPH NODE, INGUINAL; SPLEEN

Histo Pathology - The following Tissues were Not Examined:

None

Appendix 21

5002158 - Individual Animal Data Gross and Histopathology Findings

Animal: 3509	Group: 3		Sex: Female
Species: Rat	Strain: Sprague-Dawley		
	Dose: 29 ug/dose		
	Removal Reason: Terminal Euthanasia		
	Day (Week) of Death: 44 (7)		

Gross Pathology Animal Details:

Comments: Tissues submitted in 10% neutral buffered formalin except eyes and optic nerves submitted in Davidson`s fixative

Animal Notes: EUTHANASIA VIA ANESTHESIA AND EXSANGUINATION

Gross Pathology Observations:

LIVER : Focus; pale : 1, near hilus, right lateral (TGL)
SITE, INJECTION : Abnormal consistency; firm : Right (TGL)

Any remaining protocol required tissues, which have been examined, have no visible lesions

Gross Pathology - The following Tissues were Not Examined:

None

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

LIVER : Tension lipidosis; minimal [LIVER : Focus; pale : 1, near hilus, right lateral (G)]
LIVER : Vacuolation, microvesicular, periportal to midzonal; mild
LIVER : Infiltration, mixed cell; minimal
LYMPH NODE, POPLITEAL : Hyperplasia; lymphoid, minimal
LYMPH NODE, POPLITEAL : Inflammation, mixed cell; minimal, perinodal
NERVE, SCIATIC : Inflammation, mixed cell; perineurial, moderate : with edema
SITE, INJECTION : Inflammation, mixed cell; marked [SITE, INJECTION : Abnormal consistency; firm : Right (G)]

SITE, INJECTION : Degeneration/necrosis; minimal, myofiber

Histo Pathology - The following Tissues were Within Normal Limits:

BONE MARROW; SPLEEN

Histo Pathology - The following Tissues were Not Examined:

LYMPH NODE, INGUINAL - Not Present In Section.

Appendix 21

5002158 - Individual Animal Data Gross and Histopathology Findings

Animal: 3510	Group: 3		Sex: Female
Species: Rat	Strain: Sprague-Dawley		
	Dose: 29 ug/dose		
	Removal Reason: Terminal Euthanasia		
	Day (Week) of Death: 44 (7)		

Gross Pathology Animal Details:

Comments: Tissues submitted in 10% neutral buffered formalin except eyes and optic nerves submitted in Davidson`s fixative.

Animal Notes: EUTHANASIA VIA ANESTHESIA AND EXSANGUINATION

Gross Pathology Observations:

LYMPH NODE, POPLITEAL : Enlargement : Right. (TGL)
SITE, INJECTION : Abnormal consistency; firm : Right. (TGL)

Any remaining protocol required tissues, which have been examined, have no visible lesions

Gross Pathology - The following Tissues were Not Examined:

None

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

BONE MARROW : Increased hematopoiesis; myeloid, minimal
LIVER : Vacuolation, microvesicular, periportal to midzonal; minimal
LIVER : Infiltration, mixed cell; minimal
LYMPH NODE, INGUINAL : Hyperplasia; lymphoid, mild
LYMPH NODE, POPLITEAL : Plasmacytosis; minimal
LYMPH NODE, POPLITEAL : Hyperplasia; lymphoid, minimal
LYMPH NODE, POPLITEAL : Inflammation, mixed cell; mild, perinodal [LYMPH NODE, POPLITEAL : Enlargement : Right. (G)]
SITE, INJECTION : Inflammation, mixed cell; marked [SITE, INJECTION : Abnormal consistency; firm : Right. (G)]

SITE, INJECTION : Degeneration/necrosis; minimal, myofiber

Histo Pathology - The following Tissues were Within Normal Limits:

NERVE, SCIATIC; SPLEEN

Histo Pathology - The following Tissues were Not Examined:

None

Appendix 21

5002158 - Individual Animal Data Gross and Histopathology Findings

Animal: 4001	Group: 4		Sex: Male
Species: Rat	Strain: Sprague-Dawley		
	Dose: 96 ug/dose		
	Removal Reason: Terminal Euthanasia		
	Day (Week) of Death: 44 (7)		

Gross Pathology Animal Details:

Comments: Tissues submitted Into 10% neutral buffered formalin except eyes and optic nerves submitted in Davidson`s and testes in modified Davidson`s Fixative.

Animal Notes: EUTHANASIA VIA ANESTHESIA AND EXSANGUINATION

Gross Pathology Observations:

SITE, INJECTION : Abnormal consistency; firm : Right (TGL)
THYMUS : Focus; dark : 6, right (TGL)

Any remaining protocol required tissues, which have been examined, have no visible lesions

Gross Pathology - The following Tissues were Not Examined:

None

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

GLAND, HARDERIAN : Infiltration, mononuclear cell; minimal
LIVER : Vacuolation, microvesicular, periportal to midzonal; mild
LIVER : Infiltration, mixed cell; minimal
LUNG : Infiltration, mononuclear cell; perivascular, minimal
LUNG : Infiltration, mixed cell; minimal
LYMPH NODE, INGUINAL : Hyperplasia; lymphoid, minimal
LYMPH NODE, POPLITEAL : Hyperplasia; lymphoid, mild
NERVE, SCIATIC : Inflammation, mixed cell; perineurial, mild
SITE, INJECTION : Inflammation, mixed cell; marked [SITE, INJECTION : Abnormal consistency; firm : Right (G)]

SPLEEN : Increased hematopoiesis; minimal
SPLEEN : Decreased cellularity; minimal, periarteriolar lymphoid sheath
THYMUS : Hemorrhage; minimal [THYMUS : Focus; dark : 6, right (G)]
TONGUE : Infiltration, mononuclear cell; minimal
TRACHEA : Infiltration, mononuclear cell; minimal

Histo Pathology - The following Tissues were Within Normal Limits:

Appendix 21

5002158 - Individual Animal Data Gross and Histopathology Findings

ARTERY, AORTA; BONE MARROW; BONE, FEMUR; BONE, STERNUM; BRAIN; EPIDIDYMIS; ESOPHAGUS; EYE; GALT; GLAND, ADRENAL; GLAND, MAMMARY; GLAND, PARATHYROID; GLAND, PITUITARY; GLAND, PROSTATE; GLAND, SALIVARY, MANDIBULAR; GLAND, SEMINAL VESICLE; GLAND, THYROID; HEART; KIDNEY; LARGE INTESTINE, CECUM; LARGE INTESTINE, COLON; LARGE INTESTINE, RECTUM; LYMPH NODE, MANDIBULAR; LYMPH NODE, MESENTERIC; MUSCLE, SKELETAL; NERVE, OPTIC; PANCREAS; SKIN; SMALL INTESTINE, DUODENUM; SMALL INTESTINE, ILEUM; SMALL INTESTINE, JEJUNUM; SPINAL CORD, CERVICAL; SPINAL CORD, LUMBAR; SPINAL CORD, THORACIC; STOMACH; TESTIS; URINARY BLADDER

Histo Pathology - The following Tissues were Not Examined:

None

Appendix 21

5002158 - Individual Animal Data Gross and Histopathology Findings

Animal:	4002	Group: 4	Sex: Male
Species:	Rat	Strain: Sprague-Dawley	
		Dose: 96 ug/dose	
		Removal Reason: Terminal Euthanasia	
		Day (Week) of Death: 44 (7)	

Gross Pathology Animal Details:

Comments: Tissues submitted Into 10% neutral buffered formalin except eyes and optic nerves submitted in Davidson`s and testes in modified Davidson`s Fixative.

Animal Notes: EUTHANASIA VIA ANESTHESIA AND EXSANGUINATION

Gross Pathology Observations:

LYMPH NODE, POPLITEAL : Enlargement : Right. (TGL)
SITE, INJECTION : Abnormal consistency; firm : right (TGL)
SITE, INJECTION : Swelling : right (TGL)
STOMACH : Focus; dark : 5, mucosa, glandular. (TGL)

Any remaining protocol required tissues, which have been examined, have no visible lesions

Gross Pathology - The following Tissues were Not Examined:

None

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

BONE MARROW : Increased hematopoiesis; myeloid, minimal
GLAND, PARATHYROID : One Of A Pair Available For Evaluation.
GLAND, PARATHYROID : Examined
GLAND, THYROID : Thyroglossal duct remnant, squamous epithelium; minimal
KIDNEY : Infiltration, mononuclear cell; minimal
LIVER : Vacuolation, microvesicular, periportal to midzonal; mild
LIVER : Infiltration, mixed cell; minimal
LYMPH NODE, INGUINAL : Hyperplasia; lymphoid, minimal
LYMPH NODE, POPLITEAL : Hyperplasia; lymphoid, minimal [LYMPH NODE, POPLITEAL : Enlargement : Right. (G)]
LYMPH NODE, POPLITEAL : Inflammation, mixed cell; mild, perinodal [LYMPH NODE, POPLITEAL : Enlargement : Right. (G)]
NERVE, SCIATIC : Inflammation, mixed cell; perineurial, mild
SITE, INJECTION : Inflammation, mixed cell; marked [SITE, INJECTION : Abnormal consistency; firm : right (G) | SITE, INJECTION : Swelling : right (G)]
SITE, INJECTION : Degeneration/necrosis; mild, myofiber
STOMACH : Congestion; minimal [STOMACH : Focus; dark : 5, mucosa, glandular. (G)]

Histo Pathology - The following Tissues were Within Normal Limits:

Appendix 21

5002158 - Individual Animal Data Gross and Histopathology Findings

ARTERY, AORTA; BONE, FEMUR; BONE, STERNUM; BRAIN; EPIDIDYMIS; ESOPHAGUS; EYE; GALT; GLAND, ADRENAL; GLAND, HARDERIAN; GLAND, MAMMARY; GLAND, PARATHYROID; GLAND, PITUITARY; GLAND, PROSTATE; GLAND, SALIVARY, MANDIBULAR; GLAND, SEMINAL VESICLE; HEART; LARGE INTESTINE, CECUM; LARGE INTESTINE, COLON; LARGE INTESTINE, RECTUM; LUNG; LYMPH NODE, MANDIBULAR; LYMPH NODE, MESENTERIC; MUSCLE, SKELETAL; NERVE, OPTIC; PANCREAS; SKIN; SMALL INTESTINE, DUODENUM; SMALL INTESTINE, ILEUM; SMALL INTESTINE, JEJUNUM; SPINAL CORD, CERVICAL; SPINAL CORD, LUMBAR; SPINAL CORD, THORACIC; SPLEEN; TESTIS; THYMUS; TONGUE; TRACHEA; URINARY BLADDER

Appendix 21

5002158 - Individual Animal Data Gross and Histopathology Findings

ARTERY, AORTA; BONE MARROW; BONE, FEMUR; BONE, STERNUM; BRAIN; EPIDIDYMIS; ESOPHAGUS; EYE; GALT; GLAND, ADRENAL; GLAND, HARDERIAN; GLAND, MAMMARY; GLAND, PARATHYROID; GLAND, PITUITARY; GLAND, PROSTATE; GLAND, SALIVARY, MANDIBULAR; GLAND, SEMINAL VESICLE; LARGE INTESTINE, CECUM; LARGE INTESTINE, COLON; LARGE INTESTINE, RECTUM; LUNG; LYMPH NODE, MANDIBULAR; LYMPH NODE, MESENTERIC; MUSCLE, SKELETAL; NERVE, OPTIC; PANCREAS; SKIN; SMALL INTESTINE, DUODENUM; SMALL INTESTINE, ILEUM; SMALL INTESTINE, JEJUNUM; SPINAL CORD, CERVICAL; SPINAL CORD, LUMBAR; SPINAL CORD, THORACIC; SPLEEN; STOMACH; TESTIS; THYMUS; TONGUE; TRACHEA; URINARY BLADDER

Histo Pathology - The following Tissues were Not Examined:

None

Appendix 21

5002158 - Individual Animal Data Gross and Histopathology Findings

Animal:	4006	Group: 4	Sex: Male
Species:	Rat	Strain: Sprague-Dawley	
		Dose: 96 ug/dose	
		Removal Reason: Terminal Euthanasia	
		Day (Week) of Death: 44 (7)	

Gross Pathology Animal Details:

Comments: Tissues submitted Into 10% neutral buffered formalin except eyes and optic nerves submitted in Davidson`s and testes in modified Davidson`s Fixative.

Animal Notes: EUTHANASIA VIA ANESTHESIA AND EXSANGUINATION

Gross Pathology Observations:

LUNG : Focus; dark : 1 to 7, right cranial, right middle, right accessory, left lobe. (TGL)
LYMPH NODE, MANDIBULAR : Focus; dark : 1, right. (TGL)
SITE, INJECTION : Abnormal consistency; firm : Right. (TGL)
SITE, INJECTION : Swelling : Right. (TGL)

Any remaining protocol required tissues, which have been examined, have no visible lesions

Gross Pathology - The following Tissues were Not Examined:

None

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

BONE MARROW : Increased hematopoiesis; myeloid, mild
GLAND, PARATHYROID : One Of A Pair Available For Evaluation.
GLAND, PARATHYROID : Examined
GLAND, THYROID : Thyroglossal duct remnant, squamous epithelium; minimal
KIDNEY : Cast; hyaline, minimal
KIDNEY : Chronic progressive nephropathy; minimal
LIVER : Infiltration, mixed cell; minimal
LUNG : Crystal; minimal : with hemorrhage [LUNG : Focus; dark : 1 to 7, right cranial, right middle, right accessory, left lobe. (G)]
LUNG : Infiltration, mixed cell; minimal
LYMPH NODE, MANDIBULAR : Congestion; minimal [LYMPH NODE, MANDIBULAR : Focus; dark : 1, right. (G)]

LYMPH NODE, POPLITEAL : Plasmacytosis; minimal
NERVE, SCIATIC : Inflammation, mixed cell; perineurial, mild
SITE, INJECTION : Inflammation, mixed cell; marked [SITE, INJECTION : Swelling : Right. (G) | SITE, INJECTION : Abnormal consistency; firm : Right. (G)]
SITE, INJECTION : Degeneration/necrosis; minimal, myofiber

Histo Pathology - The following Tissues were Within Normal Limits:

Appendix 21

5002158 - Individual Animal Data Gross and Histopathology Findings

ARTERY, AORTA; BONE, FEMUR; BONE, STERNUM; BRAIN; EPIDIDYMIS; ESOPHAGUS; EYE; GALT; GLAND, ADRENAL; GLAND, HARDERIAN; GLAND, MAMMARY; GLAND, PARATHYROID; GLAND, PITUITARY; GLAND, PROSTATE; GLAND, SALIVARY, MANDIBULAR; GLAND, SEMINAL VESICLE; HEART; LARGE INTESTINE, CECUM; LARGE INTESTINE, COLON; LARGE INTESTINE, RECTUM; LYMPH NODE, INGUINAL; LYMPH NODE, MESENTERIC; MUSCLE, SKELETAL; NERVE, OPTIC; PANCREAS; SKIN; SMALL INTESTINE, DUODENUM; SMALL INTESTINE, ILEUM; SMALL INTESTINE, JEJUNUM; SPINAL CORD, CERVICAL; SPINAL CORD, LUMBAR; SPINAL CORD, THORACIC; SPLEEN; STOMACH; TESTIS; THYMUS; TONGUE; TRACHEA; URINARY BLADDER

Histo Pathology - The following Tissues were Not Examined:

None

Appendix 21

5002158 - Individual Animal Data Gross and Histopathology Findings

Animal:	4007	Group: 4	Sex: Male
Species:	Rat	Strain: Sprague-Dawley	
		Dose: 96 ug/dose	
		Removal Reason: Terminal Euthanasia	
		Day (Week) of Death: 44 (7)	

Gross Pathology Animal Details:

Comments: Tissues submitted Into 10% neutral buffered formalin except eyes and optic nerves submitted in Davidson`s and testes in modified Davidson`s Fixative.

Animal Notes: EUTHANASIA VIA ANESTHESIA AND EXSANGUINATION

Gross Pathology Observations:

LIVER : Focus; pale : 1, fissure, right medial, near hilus, right lateral (TGL)
LUNG : Focus; dark : 1 to 2 (TGL)
SITE, INJECTION : Abnormal consistency; firm : Right (TGL)
SITE, INJECTION : Swelling : Right (TGL)

Any remaining protocol required tissues, which have been examined, have no visible lesions

Gross Pathology - The following Tissues were Not Examined:

None

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

GLAND, PARATHYROID : One Of A Pair Available For Evaluation.
GLAND, PARATHYROID : Examined
HEART : Murine progressive cardiomyopathy; minimal
KIDNEY : Chronic progressive nephropathy; minimal
LIVER : Vacuolation, microvesicular, periportal to midzonal; minimal
LIVER : Infiltration, mixed cell; minimal [LIVER : Focus; pale : 1, fissure, right medial, near hilus, right lateral (G)]

LUNG : Crystal; minimal
LUNG : Infiltration, mixed cell; minimal
LYMPH NODE, INGUINAL : Plasmacytosis; minimal
LYMPH NODE, POPLITEAL : Plasmacytosis; minimal
LYMPH NODE, POPLITEAL : Inflammation, mixed cell; minimal, perinodal
NERVE, SCIATIC : Inflammation, mixed cell; perineurial, moderate
SITE, INJECTION : Inflammation, mixed cell; marked [SITE, INJECTION : Abnormal consistency; firm : Right (G) | SITE, INJECTION : Swelling : Right (G)]
SITE, INJECTION : Degeneration/necrosis; minimal, myofiber
THYMUS : Hemorrhage; minimal
NO CORRELATE : No correlating lesion [LUNG : Focus; dark : 1 to 2 (G)]

Histo Pathology - The following Tissues were Within Normal Limits:

Appendix 21

5002158 - Individual Animal Data Gross and Histopathology Findings

ARTERY, AORTA; BONE MARROW; BONE, FEMUR; BONE, STERNUM; BRAIN; EPIDIDYMIS; ESOPHAGUS; EYE; GALT; GLAND, ADRENAL; GLAND, HARDERIAN; GLAND, MAMMARY; GLAND, PARATHYROID; GLAND, PITUITARY; GLAND, PROSTATE; GLAND, SALIVARY, MANDIBULAR; GLAND, SEMINAL VESICLE; GLAND, THYROID; LARGE INTESTINE, CECUM; LARGE INTESTINE, COLON; LARGE INTESTINE, RECTUM; LYMPH NODE, MANDIBULAR; LYMPH NODE, MESENTERIC; MUSCLE, SKELETAL; NERVE, OPTIC; PANCREAS; SKIN; SMALL INTESTINE, DUODENUM; SMALL INTESTINE, ILEUM; SMALL INTESTINE, JEJUNUM; SPINAL CORD, CERVICAL; SPINAL CORD, LUMBAR; SPINAL CORD, THORACIC; SPLEEN; STOMACH; TESTIS; TONGUE; TRACHEA; URINARY BLADDER

Histo Pathology - The following Tissues were Not Examined:

None

Appendix 21

5002158 - Individual Animal Data Gross and Histopathology Findings

Animal:	4008	Group: 4	Sex: Male
Species:	Rat	Strain: Sprague-Dawley	
		Dose: 96 ug/dose	
		Removal Reason: Terminal Euthanasia	
		Day (Week) of Death: 44 (7)	

Gross Pathology Animal Details:

Comments: Tissues submitted Into 10% neutral buffered formalin except eyes and optic nerves submitted in Davidson`s and testes in modified Davidson`s Fixative.

Animal Notes: EUTHANASIA VIA ANESTHESIA AND EXSANGUINATION

Gross Pathology Observations:

LIVER : Focus; pale : 1, near hilus, right lateral, fissure, right medial. (TGL)
LYMPH NODE, POPLITEAL : Enlargement : Right. (TGL)
SITE, INJECTION : Abnormal consistency; firm : Right. (TGL)
SITE, INJECTION : Swelling : Right. (TGL)

Any remaining protocol required tissues, which have been examined, have no visible lesions

Gross Pathology - The following Tissues were Not Examined:

None

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

GLAND, PARATHYROID : One Of A Pair Available For Evaluation.
GLAND, PARATHYROID : Examined
GLAND, THYROID : Thyroglossal duct remnant, squamous epithelium; minimal
HEART : Murine progressive cardiomyopathy; minimal
KIDNEY : Chronic progressive nephropathy; minimal
LIVER : Necrosis; minimal
LIVER : Tension lipidosis; minimal
LIVER : Fibrosis; focal, minimal [LIVER : Focus; pale : 1, near hilus, right lateral, fissure, right medial. (G)]
LIVER : Vacuolation, microvesicular, periportal to midzonal; mild
LIVER : Infiltration, mixed cell; minimal
LUNG : Crystal; minimal : with hemorrhage
LUNG : Infiltration, mixed cell; minimal
LYMPH NODE, INGUINAL : Plasmacytosis; minimal
LYMPH NODE, POPLITEAL : Hyperplasia; lymphoid, mild
LYMPH NODE, POPLITEAL : Inflammation, mixed cell; moderate, perinodal [LYMPH NODE, POPLITEAL : Enlargement : Right. (G)]
NERVE, SCIATIC : Inflammation, mixed cell; perineurial, mild
PANCREAS : Infiltration, mononuclear cell; minimal : with fibrosis
SITE, INJECTION : Inflammation, mixed cell; marked [SITE, INJECTION : Abnormal consistency; firm : Right. (G) | SITE, INJECTION : Swelling : Right. (G)]

Appendix 21

5002158 - Individual Animal Data Gross and Histopathology Findings

Histo Pathology Observations [Correlation] (Continued):

SITE, INJECTION : Degeneration/necrosis; minimal, myofiber
TRACHEA : Infiltration, mononuclear cell; minimal

Histo Pathology - The following Tissues were Within Normal Limits:

ARTERY, AORTA; BONE MARROW; BONE, FEMUR; BONE, STERNUM; BRAIN; EPIDIDYMIS; ESOPHAGUS; EYE; GALT; GLAND, ADRENAL; GLAND, HARDERIAN; GLAND, PARATHYROID; GLAND, PITUITARY; GLAND, PROSTATE; GLAND, SALIVARY, MANDIBULAR; GLAND, SEMINAL VESICLE; LARGE INTESTINE, CECUM; LARGE INTESTINE, COLON; LARGE INTESTINE, RECTUM; LYMPH NODE, MANDIBULAR; LYMPH NODE, MESENTERIC; MUSCLE, SKELETAL; NERVE, OPTIC; SKIN; SMALL INTESTINE, DUODENUM; SMALL INTESTINE, ILEUM; SMALL INTESTINE, JEJUNUM; SPINAL CORD, CERVICAL; SPINAL CORD, LUMBAR; SPINAL CORD, THORACIC; SPLEEN; STOMACH; TESTIS; THYMUS; TONGUE; URINARY BLADDER

Histo Pathology - The following Tissues were Not Examined:

GLAND, MAMMARY - Not Present In Section.

Appendix 21

5002158 - Individual Animal Data Gross and Histopathology Findings

Animal:	4009	Group: 4	Sex: Male
Species:	Rat	Strain: Sprague-Dawley	
		Dose: 96 ug/dose	
		Removal Reason: Terminal Euthanasia	
		Day (Week) of Death: 44 (7)	

Gross Pathology Animal Details:

Comments: Tissues submitted Into 10% neutral buffered formalin except eyes and optic nerves submitted in Davidson`s and testes in modified Davidson`s Fixative.

Animal Notes: EUTHANASIA VIA ANESTHESIA AND EXSANGUINATION

Gross Pathology Observations:

LIVER : Focus; pale : 1, near hilus, right lateral (TGL)
LYMPH NODE, INGUINAL : Enlargement : Right (TGL)
SITE, INJECTION : Abnormal consistency; firm : Right (TGL)
SITE, INJECTION : Swelling : Right (TGL)
SITE, INJECTION : Focus; dark : 2, right (TGL)

Any remaining protocol required tissues, which have been examined, have no visible lesions

Gross Pathology - The following Tissues were Not Examined:

None

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

BONE MARROW : Increased hematopoiesis; myeloid, minimal
GLAND, THYROID : Thyroglossal duct remnant, squamous epithelium; minimal
HEART : Murine progressive cardiomyopathy; minimal
LIVER : Tension lipidosis; minimal [LIVER : Focus; pale : 1, near hilus, right lateral (G)]
LIVER : Vacuolation, microvesicular, periportal to midzonal; minimal
LIVER : Infiltration, mixed cell; minimal
LYMPH NODE, INGUINAL : Hyperplasia; lymphoid, minimal [LYMPH NODE, INGUINAL : Enlargement : Right (G)]

LYMPH NODE, INGUINAL : Plasmacytosis; minimal
LYMPH NODE, POPLITEAL : Inflammation, mixed cell; mild, perinodal
NERVE, SCIATIC : Inflammation, mixed cell; perineurial, mild
PANCREAS : Infiltration, mononuclear cell; minimal
SITE, INJECTION : with regionally extensive hemorrhage
SITE, INJECTION : Inflammation, mixed cell; marked [SITE, INJECTION : Abnormal consistency; firm : Right (G) | SITE, INJECTION : Swelling : Right (G) | SITE, INJECTION : Focus; dark : 2, right (G)]
SITE, INJECTION : Degeneration/necrosis; minimal, myofiber
THYMUS : Hemorrhage; minimal

Histo Pathology - The following Tissues were Within Normal Limits:

Appendix 21

5002158 - Individual Animal Data Gross and Histopathology Findings

ARTERY, AORTA; BONE, FEMUR; BONE, STERNUM; BRAIN; EPIDIDYMIS; ESOPHAGUS; EYE; GALT; GLAND, ADRENAL; GLAND, HARDERIAN; GLAND, MAMMARY; GLAND, PARATHYROID; GLAND, PITUITARY; GLAND, PROSTATE; GLAND, SALIVARY, MANDIBULAR; GLAND, SEMINAL VESICLE; KIDNEY; LARGE INTESTINE, CECUM; LARGE INTESTINE, COLON; LARGE INTESTINE, RECTUM; LUNG; LYMPH NODE, MANDIBULAR; LYMPH NODE, MESENTERIC; MUSCLE, SKELETAL; NERVE, OPTIC; SKIN; SMALL INTESTINE, DUODENUM; SMALL INTESTINE, ILEUM; SMALL INTESTINE, JEJUNUM; SPINAL CORD, CERVICAL; SPINAL CORD, LUMBAR; SPINAL CORD, THORACIC; SPLEEN; STOMACH; TESTIS; TONGUE; TRACHEA; URINARY BLADDER

Histo Pathology - The following Tissues were Not Examined:

None

Appendix 21

5002158 - Individual Animal Data Gross and Histopathology Findings

Animal: 4010	Group: 4	Sex: Male
Species: Rat	Strain: Sprague-Dawley	
	Dose: 96 ug/dose	
	Removal Reason: Terminal Euthanasia	
	Day (Week) of Death: 44 (7)	

Gross Pathology Animal Details:

Comments: Tissues submitted Into 10% neutral buffered formalin except eyes and optic nerves submitted in Davidson`s and testes in modified Davidson`s Fixative.

Animal Notes: EUTHANASIA VIA ANESTHESIA AND EXSANGUINATION

Gross Pathology Observations:

SITE, INJECTION : Abnormal consistency; firm : Right. (TGL)
STOMACH : Focus; dark : 5, mucosa, glandular. (TGL)
THYMUS : Focus; dark : 1, left. (TGL)

Any remaining protocol required tissues, which have been examined, have no visible lesions

Gross Pathology - The following Tissues were Not Examined:

None

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

BONE MARROW : Increased hematopoiesis; myeloid, minimal
GLAND, PARATHYROID : Infiltration, mononuclear cell; mild
KIDNEY : Infiltration, mononuclear cell; minimal
LIVER : Vacuolation, microvesicular, periportal to midzonal; minimal

No animal details found

Histo Pathology Observations [Correlation]:

GLAND, PARATHYROID : One Of A Pair Available For Evaluation.
GLAND, PARATHYROID : Examined
GLAND, THYROID : Thyroglossal duct remnant, squamous epithelium; minimal
HEART : Murine progressive cardiomyopathy; minimal
KIDNEY : Chronic progressive nephropathy; minimal
LIVER : Infiltration, mixed cell; minimal
LYMPH NODE, MESENTERIC : Hemorrhage; moderate [LYMPH NODE, MESENTERIC : Focus; dark : 1 (G)]
LYMPH NODE, POPLITEAL : Plasmacytosis; minimal
MUSCLE, SKELETAL : Infiltration, mononuclear cell; minimal
NERVE, SCIATIC : Infiltration, mononuclear cell; perineurial, minimal
PANCREAS : Infiltration, mononuclear cell; minimal : with fibrosis
SITE, INJECTION : Infiltration, mononuclear cell; minimal
THYMUS : Congestion; mild [THYMUS : Focus; dark : 1 (G)]
URINARY BLADDER : Infiltration, mononuclear cell; minimal

Histo Pathology - The following Tissues were Within Normal Limits:

Appendix 21

5002158 - Individual Animal Data Gross and Histopathology Findings

ARTERY, AORTA; BONE MARROW; BONE, FEMUR; BONE, STERNUM; BRAIN; EPIDIDYMIS; ESOPHAGUS; EYE; GALT; GLAND, ADRENAL; GLAND, HARDERIAN; GLAND, MAMMARY; GLAND, PARATHYROID; GLAND, PITUITARY; GLAND, PROSTATE; GLAND, SALIVARY, MANDIBULAR; GLAND, SEMINAL VESICLE; LARGE INTESTINE, CECUM; LARGE INTESTINE, COLON; LARGE INTESTINE, RECTUM; LUNG; LYMPH NODE, INGUINAL; LYMPH NODE, MANDIBULAR; NERVE, OPTIC; SKIN; SMALL INTESTINE, DUODENUM; SMALL INTESTINE, ILEUM; SMALL INTESTINE, JEJUNUM; SPINAL CORD, CERVICAL; SPINAL CORD, LUMBAR; SPINAL CORD, THORACIC; SPLEEN; STOMACH; TESTIS; TONGUE; TRACHEA

Histo Pathology - The following Tissues were Not Examined:

None

Appendix 21

5002158 - Individual Animal Data Gross and Histopathology Findings

Animal:	4012	Group: 4	Sex: Male
Species:	Rat	Strain: Sprague-Dawley	
		Dose: 96 ug/dose	
		Removal Reason: Recovery Euthanasia	
		Day (Week) of Death: 57 (9)	

Gross Pathology Animal Details:

Comments: Tissues submitted Into 10% neutral buffered formalin except eyes and optic nerves submitted in Davidson`s and testes in modified Davidson`s Fixative.

Animal Notes: EUTHANASIA VIA ANESTHESIA AND EXSANGUINATION

Gross Pathology Observations:

LYMPH NODE : Enlargement : Axillary, left (TGL)

Any remaining protocol required tissues, which have been examined, have no visible lesions

Gross Pathology - The following Tissues were Not Examined:

None

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

GLAND, PARATHYROID : One Of A Pair Available For Evaluation.
GLAND, PARATHYROID : Examined
GLAND, PITUITARY : Pars Distalis Available For Evaluation.
GLAND, PITUITARY : Examined
KIDNEY : Chronic progressive nephropathy; minimal
LIVER : Infiltration, mixed cell; minimal
LUNG : Infiltration, mixed cell; minimal
LYMPH NODE, AXILLARY, LEFT : Sinus histiocytosis; minimal
LYMPH NODE, AXILLARY, LEFT : Hyperplasia; lymphoid, mild [LYMPH NODE : Enlargement : Axillary, left (G)]

LYMPH NODE, INGUINAL : Hyperplasia; lymphoid, minimal
LYMPH NODE, INGUINAL : Plasmacytosis; minimal
LYMPH NODE, POPLITEAL : Plasmacytosis; mild
LYMPH NODE, POPLITEAL : Hyperplasia; lymphoid, minimal
NERVE, SCIATIC : Infiltration, mononuclear cell; perineurial, minimal
PANCREAS : Infiltration, mononuclear cell; minimal : with fibrosis

Appendix 21

5002158 - Individual Animal Data Gross and Histopathology Findings

None

Appendix 21

5002158 - Individual Animal Data Gross and Histopathology Findings

Animal: 4014	Group: 4	Sex: Male
Species: Rat	Strain: Sprague-Dawley	
	Dose: 96 ug/dose	
	Removal Reason: Recovery Euthanasia	
	Day (Week) of Death: 57 (9)	

Gross Pathology Animal Details:

Comments: Tissues submitted Into 10% neutral buffered formalin except eyes and optic nerves submitted in Davidson`s and testes in modified Davidson`s Fixative.

Animal Notes: EUTHANASIA VIA ANESTHESIA AND EXSANGUINATION

Gross Pathology Observations:

LIVER : Focus; pale : 1, fissure, right medial, near hilus, right lateral (TGL)
LYMPH NODE : Enlargement : Iliac right, Deep cervical right (TGL)

Any remaining protocol required tissues, which have been examined, have no visible lesions

Gross Pathology - The following Tissues were Not Examined:

None

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

GLAND, PARATHYROID : Fibrosis; interstitial, minimal
GLAND, PROSTATE : Infiltration, mononuclear cell; regionally extensive, marked
KIDNEY : Infiltration, mononuclear cell; minimal
LIVER : Tension lipidosis; minimal [LIVER : Focus; pale : 1, fissure, right medial, near hilus, right lateral (G)]
LIVER : Vacuolation, microvesicular, periportal to midzonal; mild
LIVER : Infiltration, mixed cell; minimal
LYMPH NODE, ILIAC, RIGHT : Hemorrhage; interstitial, moderate [LYMPH NODE : Enlargement : Iliac right, Deep cervical right (G)]
LYMPH NODE, INGUINAL : Hyperplasia; lymphoid, mild
LYMPH NODE, INGUINAL : Plasmacytosis; minimal
LYMPH NODE, POPLITEAL : Hyperplasia; lymphoid, minimal
LYMPH NODE, POPLITEAL : Infiltration, mononuclear cell; minimal, perinodal
NERVE, SCIATIC : Infiltration, mononuclear cell; perineurial, minimal
PANCREAS : Infiltration, mononuclear cell; minimal
SITE, INJECTION : Degeneration/necrosis; minimal, myofiber
SITE, INJECTION : Infiltration, mononuclear cell; minimal
SKIN : Crust; serocellular, focal, mild : with associated minimal mononuclear inflammation
THYMUS : Hemorrhage; minimal

Histo Pathology - The following Tissues were Within Normal Limits:

Appendix 21

5002158 - Individual Animal Data Gross and Histopathology Findings

ARTERY, AORTA; BONE MARROW; BONE, FEMUR; BONE, STERNUM; BRAIN; EPIDIDYMIS; ESOPHAGUS; EYE; GALT; GLAND, ADRENAL; GLAND, HARDERIAN; GLAND, MAMMARY; GLAND, PITUITARY; GLAND, SALIVARY, MANDIBULAR; GLAND, SEMINAL VESICLE; GLAND, THYROID; HEART; LARGE INTESTINE, CECUM; LARGE INTESTINE, COLON; LARGE INTESTINE, RECTUM; LUNG; LYMPH NODE, MANDIBULAR; LYMPH NODE, MESENTERIC; MUSCLE, SKELETAL; NERVE, OPTIC; SMALL INTESTINE, DUODENUM; SMALL INTESTINE, ILEUM; SMALL INTESTINE, JEJUNUM; SPINAL CORD, CERVICAL; SPINAL CORD, LUMBAR; SPINAL CORD, THORACIC; SPLEEN; STOMACH; TESTIS; TONGUE; TRACHEA; URINARY BLADDER

Histo Pathology - The following Tissues were Not Examined:

None

Appendix 21

5002158 - Individual Animal Data Gross and Histopathology Findings

Animal:	4015	Group: 4	Sex: Male
Species:	Rat	Strain: Sprague-Dawley	
		Dose: 96 ug/dose	
		Removal Reason: Recovery Euthanasia	
		Day (Week) of Death: 57 (9)	

Gross Pathology Animal Details:

Comments: Tissues submitted Into 10% neutral buffered formalin except eyes and optic nerves submitted in Davidson`s and testes in modified Davidson`s Fixative.

Animal Notes: EUTHANASIA VIA ANESTHESIA AND EXSANGUINATION

Gross Pathology Observations:

KIDNEY : Focus; pale : 1 to 2, bilateral (TGL)
LYMPH NODE, MANDIBULAR : Focus; dark : >10, right (TGL)

Any remaining protocol required tissues, which have been examined, have no visible lesions

Gross Pathology - The following Tissues were Not Examined:

None

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

GLAND, PROSTATE : Infiltration, mononuclear cell; moderate
KIDNEY : Infiltration, mononuclear cell; minimal
LIVER : Infiltration, mixed cell; minimal
LYMPH NODE, INGUINAL : Hyperplasia; lymphoid, minimal
LYMPH NODE, MANDIBULAR : Hemorrhage; minimal [LYMPH NODE, MANDIBULAR : Focus; dark : >10, right (G)]
NERVE, SCIATIC : Infiltration, mononuclear cell; perineurial, minimal
SITE, INJECTION : Degeneration/necrosis; minimal, myofiber
SITE, INJECTION : Infiltration, mononuclear cell; minimal
NO CORRELATE : No correlating lesion [KIDNEY : Focus; pale : 1 to 2, bilateral (G)]

Histo Pathology - The following Tissues were Within Normal Limits:

ARTERY, AORTA; BONE MARROW; BONE, FEMUR; BONE, STERNUM; BRAIN; EPIDIDYMIS; ESOPHAGUS; EYE; GALT; GLAND, ADRENAL; GLAND, HARDERIAN; GLAND, MAMMARY; GLAND, PARATHYROID; GLAND, PITUITARY; GLAND, SALIVARY, MANDIBULAR; GLAND, SEMINAL VESICLE; GLAND, THYROID; HEART; LARGE INTESTINE, CECUM; LARGE INTESTINE, COLON; LARGE INTESTINE, RECTUM; LUNG; LYMPH NODE, MESENTERIC; LYMPH NODE, POPLITEAL; MUSCLE, SKELETAL; NERVE, OPTIC; PANCREAS; SKIN; SMALL INTESTINE, DUODENUM; SMALL INTESTINE, ILEUM; SMALL INTESTINE, JEJUNUM; SPINAL CORD, CERVICAL; SPINAL CORD, LUMBAR; SPINAL CORD, THORACIC; SPLEEN; STOMACH; TESTIS; THYMUS; TONGUE; TRACHEA; URINARY BLADDER

Histo Pathology - The following Tissues were Not Examined:

None

Appendix 21

5002158 - Individual Animal Data Gross and Histopathology Findings

Animal: 4501	Group: 4	Sex: Female
Species: Rat	Strain: Sprague-Dawley	
	Dose: 96 ug/dose	
	Removal Reason: Terminal Euthanasia	
	Day (Week) of Death: 44 (7)	

Gross Pathology Animal Details:

Comments: Tissues submitted in 10% neutral buffered formalin except eyes and optic nerves submitted in Davidson`s fixative

Animal Notes: EUTHANASIA VIA ANESTHESIA AND EXSANGUINATION

Gross Pathology Observations:

LIVER : Focus; pale : 1, fissure, medial lobe (TGL)
SITE, INJECTION : Abnormal consistency; firm : Right (TGL)

Any remaining protocol required tissues, which have been examined, have no visible lesions

Gross Pathology - The following Tissues were Not Examined:

None

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

BONE MARROW : Increased hematopoiesis; myeloid, minimal
GLAND, PARATHYROID : One Of A Pair Available For Evaluation.
GLAND, PARATHYROID : Examined
GLAND, PARATHYROID : Fibrosis; interstitial, mild
GLAND, THYROID : Thyroglossal duct remnant, squamous epithelium; mild
GLAND, THYROID : Fibrosis; interstitial, mild
KIDNEY : Chronic progressive nephropathy; minimal
LIVER : Necrosis; minimal [LIVER : Focus; pale : 1, fissure, medial lobe (G)]
LIVER : Vacuolation, microvesicular, periportal to midzonal; minimal
LIVER : Infiltration, mixed cell; minimal
LUNG : Infiltration, mixed cell; perivascular, minimal
NERVE, SCIATIC : Inflammation, mixed cell; perineurial, mild
SITE, INJECTION : Inflammation, mixed cell; marked [SITE, INJECTION : Abnormal consistency; firm : Right (G)]

SITE, INJECTION : Degeneration/necrosis; minimal, myofiber
THYMUS : Cyst; epithelial, minimal
THYMUS : Infiltration, mixed cell; perivascular, minimal

Histo Pathology - The following Tissues were Within Normal Limits:

Appendix 21

5002158 - Individual Animal Data Gross and Histopathology Findings

ARTERY, AORTA; BONE, FEMUR; BONE, STERNUM; BRAIN; CERVIX; ESOPHAGUS; EYE; GALT; GLAND, ADRENAL; GLAND, HARDERIAN; GLAND, MAMMARY; GLAND, PITUITARY; GLAND, SALIVARY, MANDIBULAR; HEART; LARGE INTESTINE, CECUM; LARGE INTESTINE, COLON; LARGE INTESTINE, RECTUM; LYMPH NODE, INGUINAL; LYMPH NODE, MANDIBULAR; LYMPH NODE, MESENTERIC; LYMPH NODE, POPLITEAL; MUSCLE, SKELETAL; NERVE, OPTIC; OVARY; PANCREAS; SKIN; SMALL INTESTINE, DUODENUM; SMALL INTESTINE, ILEUM; SMALL INTESTINE, JEJUNUM; SPINAL CORD, CERVICAL; SPINAL CORD, LUMBAR; SPINAL CORD, THORACIC; SPLEEN; STOMACH; TONGUE; TRACHEA; URINARY BLADDER; UTERUS; VAGINA

Histo Pathology - The following Tissues were Not Examined:

None

Appendix 21

5002158 - Individual Animal Data Gross and Histopathology Findings

Animal:	4502	Group: 4	Sex: Female
Species:	Rat	Strain: Sprague-Dawley	
		Dose: 96 ug/dose	
		Removal Reason: Terminal Euthanasia	
		Day (Week) of Death: 44 (7)	

Gross Pathology Animal Details:

Comments: Tissues submitted in 10% neutral buffered formalin except eyes and optic nerves submitted in Davidson`s fixative.

Animal Notes: EUTHANASIA VIA ANESTHESIA AND EXSANGUINATION

Gross Pathology Observations:

LYMPH NODE : Discoloration; dark : Mediastinal. (TGL)
LYMPH NODE, POPLITEAL : Enlargement : Right. (TGL)
SITE, INJECTION : Abnormal consistency; firm : Right. (TGL)
THYMUS : Focus; dark : >10. (TGL)

Any remaining protocol required tissues, which have been examined, have no visible lesions

Gross Pathology - The following Tissues were Not Examined:

None

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

GLAND, HARDERIAN : Infiltration, mononuclear cell; minimal
HEART : Murine progressive cardiomyopathy; minimal
KIDNEY : Infiltration, mononuclear cell; minimal
LIVER : Infiltration, mixed cell; minimal
LUNG : Infiltration, mononuclear cell; minimal
LYMPH NODE, INGUINAL : Hyperplasia; lymphoid, mild
LYMPH NODE, MEDIASTINAL : Hemorrhage; mild [LYMPH NODE : Discoloration; dark : Mediastinal. (G)]
LYMPH NODE, POPLITEAL : Plasmacytosis; minimal
LYMPH NODE, POPLITEAL : Hyperplasia; lymphoid, minimal [LYMPH NODE, POPLITEAL : Enlargement : Right. (G)]
LYMPH NODE, POPLITEAL : Inflammation, mixed cell; mild, perinodal
NERVE, SCIATIC : Inflammation, mixed cell; perineurial, mild
SITE, INJECTION : Inflammation, mixed cell; marked [SITE, INJECTION : Abnormal consistency; firm : Right. (G)]

SITE, INJECTION : Degeneration/necrosis; minimal, myofiber
STOMACH : Infiltration, mixed cell; minimal
THYMUS : Hemorrhage; minimal [THYMUS : Focus; dark : >10. (G)]

Histo Pathology - The following Tissues were Within Normal Limits:

Appendix 21

5002158 - Individual Animal Data Gross and Histopathology Findings

ARTERY, AORTA; BONE MARROW; BONE, FEMUR; BONE, STERNUM; BRAIN; CERVIX; ESOPHAGUS; EYE; GALT; GLAND, ADRENAL; GLAND, MAMMARY; GLAND, PARATHYROID; GLAND, PITUITARY; GLAND, SALIVARY, MANDIBULAR; GLAND, THYROID; LARGE INTESTINE, CECUM; LARGE INTESTINE, COLON; LARGE INTESTINE, RECTUM; LYMPH NODE, MANDIBULAR; LYMPH NODE, MESENTERIC; MUSCLE, SKELETAL; NERVE, OPTIC; OVARY; PANCREAS; SKIN; SMALL INTESTINE, DUODENUM; SMALL INTESTINE, ILEUM; SMALL INTESTINE, JEJUNUM; SPINAL CORD, CERVICAL; SPINAL CORD, LUMBAR; SPINAL CORD, THORACIC; SPLEEN; TONGUE; TRACHEA; URINARY BLADDER; UTERUS; VAGINA

Histo Pathology - The following Tissues were Not Examined:

None

Appendix 21

5002158 - Individual Animal Data Gross and Histopathology Findings

Animal:	4503	Group: 4	Sex: Female
Species:	Rat	Strain: Sprague-Dawley	
		Dose: 96 ug/dose	
		Removal Reason: Terminal Euthanasia	
		Day (Week) of Death: 44 (7)	

Gross Pathology Animal Details:

Comments: Tissues submitted in 10% neutral buffered formalin except eyes and optic nerves submitted in Davidson`s fixative

Animal Notes: EUTHANASIA VIA ANESTHESIA AND EXSANGUINATION

Gross Pathology Observations:

LIVER : Focus; pale : 1, near hilus, right lateral (TGL)
SITE, INJECTION : Abnormal consistency; firm : Right (TGL)

Any remaining protocol required tissues, which have been examined, have no visible lesions

Gross Pathology - The following Tissues were Not Examined:

None

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

GLAND, HARDERIAN : Infiltration, mononuclear cell; minimal
GLAND, PARATHYROID : One Of A Pair Available For Evaluation.
GLAND, PARATHYROID : Examined
GLAND, THYROID : Thyroglossal duct remnant, squamous epithelium; minimal
HEART : Murine progressive cardiomyopathy; minimal
LIVER : Tension lipidosis; minimal [LIVER : Focus; pale : 1, near hilus, right lateral (G)]
LIVER : Vacuolation, microvesicular, periportal to midzonal; mild
LIVER : Infiltration, mixed cell; minimal
LUNG : Infiltration, mixed cell; minimal
LYMPH NODE, POPLITEAL : Hyperplasia; lymphoid, minimal
LYMPH NODE, POPLITEAL : Inflammation, mixed cell; minimal, perinodal
NERVE, SCIATIC : Inflammation, mixed cell; perineurial, minimal
SITE, INJECTION : Inflammation, mixed cell; marked [SITE, INJECTION : Abnormal consistency; firm : Right (G)]

SITE, INJECTION : Degeneration/necrosis; minimal, myofiber
SKIN : Haired skin from recut evaluated
THYMUS : Hemorrhage; minimal

Histo Pathology - The following Tissues were Within Normal Limits:

Appendix 21

5002158 - Individual Animal Data Gross and Histopathology Findings

ARTERY, AORTA; BONE MARROW; BONE, FEMUR; BONE, STERNUM; BRAIN; CERVIX; ESOPHAGUS; EYE; GLAND, ADRENAL; GLAND, MAMMARY; GLAND, PARATHYROID; GLAND, PITUITARY; GLAND, SALIVARY, MANDIBULAR; KIDNEY; LARGE INTESTINE, CECUM; LARGE INTESTINE, COLON; LARGE INTESTINE, RECTUM; LYMPH NODE, INGUINAL; LYMPH NODE, MANDIBULAR; LYMPH NODE, MESENTERIC; MUSCLE, SKELETAL; NERVE, OPTIC; OVARY; PANCREAS; SKIN; SMALL INTESTINE, DUODENUM; SMALL INTESTINE, ILEUM; SMALL INTESTINE, JEJUNUM; SPINAL CORD, CERVICAL; SPINAL CORD, LUMBAR; SPINAL CORD, THORACIC; SPLEEN; STOMACH; TONGUE; TRACHEA; URINARY BLADDER; UTERUS; VAGINA

Histo Pathology - The following Tissues were Not Examined:

GALT - Not Present In Section.

Appendix 21

5002158 - Individual Animal Data Gross and Histopathology Findings

Animal:	4504	Group: 4	Sex: Female
Species:	Rat	Strain: Sprague-Dawley	
		Dose: 96 ug/dose	
		Removal Reason: Terminal Euthanasia	
		Day (Week) of Death: 44 (7)	

Gross Pathology Animal Details:

Comments: Tissues submitted in 10% neutral buffered formalin except eyes and optic nerves submitted in Davidson`s fixative.

Animal Notes: EUTHANASIA VIA ANESTHESIA AND EXSANGUINATION

Gross Pathology Observations:

LUNG : Focus; dark : 1 to 2, right caudal, left lobe. (TGL)
LYMPH NODE, POPLITEAL : Enlargement : Right. (TGL)
SITE, INJECTION : Abnormal consistency; firm : Right. (TGL)
SITE, INJECTION : Swelling : Right. (TGL)

Any remaining protocol required tissues, which have been examined, have no visible lesions

Gross Pathology - The following Tissues were Not Examined:

None

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

KIDNEY : Infiltration, mononuclear cell; minimal
LIVER : Necrosis; minimal
LIVER : Vacuolation, microvesicular, periportal to midzonal; mild
LIVER : Infiltration, mixed cell; minimal
LUNG : Atelectasis; regionally extensive, mild [LUNG : Focus; dark : 1 to 2, right caudal, left lobe. (G)]
LYMPH NODE, INGUINAL : Hyperplasia; lymphoid, minimal
LYMPH NODE, INGUINAL : Plasmacytosis; minimal
LYMPH NODE, POPLITEAL : Hyperplasia; lymphoid, minimal [LYMPH NODE, POPLITEAL : Enlargement : Right. (G)]
LYMPH NODE, POPLITEAL : Inflammation, mixed cell; minimal, perinodal
NERVE, SCIATIC : Inflammation, mixed cell; perineurial, mild
SITE, INJECTION : Inflammation, mixed cell; marked [SITE, INJECTION : Abnormal consistency; firm : Right. (G) | SITE, INJECTION : Swelling : Right. (G)]

Histo Pathology - The following Tissues were Within Normal Limits:

Appendix 21

5002158 - Individual Animal Data Gross and Histopathology Findings

GLAND, THYROID : Thyroglossal duct remnant, squamous epithelium; minimal
HEART : Murine progressive cardiomyopathy; minimal
KIDNEY : Chronic progressive nephropathy; minimal
LIVER : Tension lipidosis; minimal [LIVER : Focus; pale : 1, near hilus, right lateral. (G)]
LIVER : Vacuolation, microvesicular, periportal to midzonal; moderate
LIVER : Infiltration, mixed cell; minimal
LUNG : Infiltration, mixed cell; minimal
LYMPH NODE, INGUINAL : Plasmacytosis; minimal
LYMPH NODE, POPLITEAL : Plasmacytosis; mild
LYMPH NODE, POPLITEAL : Inflammation, mixed cell; moderate, perinodal
NERVE, SCIATIC : Inflammation, mixed cell; perineurial, minimal
SITE, INJECTION : Inflammation, mixed cell; marked [SITE, INJECTION : Abnormal consistency; firm : Right. (G)]

SITE, INJECTION : Degeneration/necrosis; minimal, myofiber
SPLEEN : Decreased cellularity; minimal, periarteriolar lymphoid sheath

Histo Pathology - The following Tissues were Within Normal Limits:

Appendix 21

5002158 - Individual Animal Data Gross and Histopathology Findings

ARTERY, AORTA; BONE, FEMUR; BONE, STERNUM; BRAIN; CERVIX; ESOPHAGUS; EYE; GALT; GLAND, ADRENAL; GLAND, HARDERIAN; GLAND, MAMMARY; GLAND, PITUITARY; GLAND, SALIVARY, MANDIBULAR; LARGE INTESTINE, CECUM; LARGE INTESTINE, COLON; LARGE INTESTINE, RECTUM; LYMPH NODE, MANDIBULAR; LYMPH NODE, MESENTERIC; MUSCLE, SKELETAL; NERVE, OPTIC; OVARY; PANCREAS; SKIN; SMALL INTESTINE, DUODENUM; SMALL INTESTINE, ILEUM; SMALL INTESTINE, JEJUNUM; SPINAL CORD, CERVICAL; SPINAL CORD, LUMBAR; SPINAL CORD, THORACIC; STOMACH; THYMUS; TONGUE; TRACHEA; URINARY BLADDER; UTERUS; VAGINA

Histo Pathology - The following Tissues were Not Examined:

None

Appendix 21

5002158 - Individual Animal Data Gross and Histopathology Findings

Animal:	4511	Group: 4	Sex: Female
Species:	Rat	Strain: Sprague-Dawley	
		Dose: 96 ug/dose	
		Removal Reason: Recovery Euthanasia	
		Day (Week) of Death: 57 (9)	

Gross Pathology Animal Details:

Comments: Tissues submitted in 10% neutral buffered formalin except eyes and optic nerves submitted in Davidson`s fixative.

Animal Notes: EUTHANASIA VIA ANESTHESIA AND EXSANGUINATION

Gross Pathology Observations:

GLAND, THYROID : Enlargement : Left (TGL)
LIVER : Focus; pale : 1, near hilus, right lateral (TGL)

Any remaining protocol required tissues, which have been examined, have no visible lesions

Gross Pathology - The following Tissues were Not Examined:

None

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

GLAND, HARDERIAN : Infiltration, mononuclear cell; minimal
GLAND, PITUITARY : Pars Distalis Available For Evaluation.
GLAND, PITUITARY : Examined
GLAND, THYROID : Hyperplasia; diffuse, mild, follicle [GLAND, THYROID : Enlargement : Left (G)]
LIVER : Vacuolation, microvesicular, periportal to midzonal; mild
LIVER : Infiltration, mixed cell; minimal
LYMPH NODE, INGUINAL : Hyperplasia; lymphoid, minimal
LYMPH NODE, POPLITEAL : Hyperplasia; lymphoid, minimal
MUSCLE, SKELETAL : Infiltration, mononuclear cell; minimal
SITE, INJECTION : Degeneration/necrosis; minimal, myofiber
URINARY BLADDER : Infiltration, mononuclear cell; minimal
NO CORRELATE : No correlating lesion [LIVER : Focus; pale : 1, near hilus, right lateral (G)]

Histo Pathology - The following Tissues were Within Normal Limits:

ARTERY, AORTA; BONE MARROW; BONE, FEMUR; BONE, STERNUM; BRAIN; CERVIX; ESOPHAGUS; EYE; GALT; GLAND, ADRENAL; GLAND, MAMMARY; GLAND, PARATHYROID; GLAND, PITUITARY; GLAND, SALIVARY, MANDIBULAR; HEART; KIDNEY; LARGE INTESTINE, CECUM; LARGE INTESTINE, COLON; LARGE INTESTINE, RECTUM; LUNG; LYMPH NODE, MANDIBULAR; LYMPH NODE, MESENTERIC; NERVE, OPTIC; NERVE, SCIATIC; OVARY; PANCREAS; SKIN; SMALL INTESTINE, DUODENUM; SMALL INTESTINE, ILEUM; SMALL INTESTINE, JEJUNUM; SPINAL CORD, CERVICAL; SPINAL CORD, LUMBAR; SPINAL CORD, THORACIC; SPLEEN; STOMACH; THYMUS; TONGUE; TRACHEA; UTERUS; VAGINA

PEER-REVIEW STATEMENT

Study Number: 5002158

Study Title: A 6-Week (4 doses) Intramuscular Injection Toxicity Study of mRNA-1443 in Sprague-Dawley Rats followed by a 2-Week Recovery Period

EXPERIMENTAL DESIGN:

Group No.	Test Material	Dose Level (µg/dose)[a]	Dose Volume (µL/dose)	Dose Concentration (mg/mL)[a]	No. of Animals			
					Main Study		Recovery Study	
					Males	Females	Males	Females
1	Reference Article	0	200	0	10	10	5	5
2	mRNA-1443	10 / 9.6	200	0.05 / 0.048	10	10	-	-
3	mRNA-1443	30 / 29	200	0.15 / 0.145	10	10	-	-
4	mRNA-1443	100 / 96	200	0.5 /0.48	10	10	5	5

- : Not applicable
[a] Values based on SoA issued on 16 March 2017 / Values based on SoA issued on 30 May 2017.

PURPOSE: The purpose of this peer review was to assess the overall quality and consistency of the microscopic data and determine the validity of the study pathologist's conclusions.

METHODS:

1. Study plan and amendments, narrative pathology report, histology records, clinical observations, and organ weight data were reviewed
2. Review of all tissues from the Male and Female Groups 1 and Group 4, animal numbers: 1003, 1007, 1014, 1501, 1508, 1512, 4002, 4004, 4009, 4012, 4013, 4503, 4505, 4510, 4511 and 4515.
3. The following organs from all animals in all Groups were reviewed: Bone Marrow, Sciatic Nerve, Injection Site, Liver, Spleen and lymph node popliteal and inguinal.
4. In addition, Heart from animals 4008 and 4514, Eye from animals 4005 and 4006, Brain from animals 4001, Kidney from animals 1012 and 3002, Spleen from animal 1013 and Lung from animals 4007 and 4008.

Phone 617-714-6500 • Fax 617-583-1998

RESULTS:

Differences of opinion were resolved and mutual agreement on terminology and diagnoses were achieved. The histopathology tables and corresponding narrative contained in the pathology report reflect diagnoses and conclusions agreed to by the peer reviewer and study pathologist
