COMPLIANCE STATEMENT

The study was performed in accordance with the OECD Principles of Good Laboratory Practice and as accepted by Regulatory Authorities throughout the European Union, United States of America (FDA), Japan (MHLW), and other countries that are signatories to the OECD Mutual Acceptance of Data Agreement.

Any portion of this study conducted in the USA was performed in accordance with the U.S. Department of Health and Human Services, Food and Drug Administration. United States Code of Federal Regulations, Title 21, Part 58: Good Laboratory Practice for Nonclinical Laboratory Studies and as accepted by Regulatory Authorities throughout the European Union (OECD Principles of Good Laboratory Practice) and Japan (MHLW).

Exceptions from the above regulations are listed below.

- Characterization of the Test Item was performed by the Sponsor subcontractor according to established SOPs, controls, and approved test methodologies to ensure integrity and validity of the results generated; these analyses were not conducted in compliance with the GLP or GMP regulations.
- Analysis of cytokines and anti-therapeutic antibody were conducted using scientifically qualified methods and in accordance with all applicable analytical procedures.
- Pathology peer review

This study was conducted in accordance with the procedures described herein. All deviations authorized/acknowledged by the Study Director are documented in the Study Records. The report represents an accurate and complete record of the results obtained.

There were no deviations from the above regulations that affected the overall integrity of the study or the interpretation of the study results and conclusions.

2. SUMMARY

The objective of this study were to determine the potential toxicity of mRNA-1706, when given by intramuscular injection for 1 month (3 doses) to rats and to evaluate the potential reversibility of any findings following a 2-week recovery period.

The study design was as follows:

Text Table 1
Experimental Design

Group No.	Test Material	Dose Level (µg/dose)	Dose Volume (µL/dose)	Dose Concentration (mg/mL)	No. of Animals			
					Main Study		Recovery Study	
					Males	Females	Males	Females
1	Reference Item	0	200	0	10	10	5	5
2	mRNA-1706	10	200	0.05	10	10	-	-
3	mRNA-1706	50	200	0.25	10	10	-	-
4	mRNA-1706	100	200	0.5	10	10	5	5

The following parameters and endpoints were evaluated in this study: clinical observations consisting of twice daily examinations for mortality/moribundity and weekly detailed examinations; detailed examination of the injection sites; weekly body weights and food consumption measurements; ophthalmic examinations; body temperature; clinical pathology assessment (hematology, coagulation, clinical chemistry) at termination; cytokine analysis (IL-1ß, IL-6, TNF-α, IP-10, MIP-1-α and MCP-1); Anti-Drug Antibody (ATA – antibody titer) analysis prior to dosing initiation and at termination; gross necropsy findings, organ weights, and histopathologic examinations.

On Day 30, following the last dose injection, all animals (with the exception of animal no.2001) were positive for antibodies against ZIKV lysate, showing a dose responsive increase. On Day 43, following the recovery period, animals dosed at 100 µg/dose showed higher response when compared to Day 30.

There were no mRNA-1706-related changes in food consumption and ophthalmology.

There were no unscheduled deaths during the course of this study.

The primary mRNA-1706-related findings were observed at the site of injection of animals given ≥ 10 µg/dose. A generally dose responsive increase in incidence and/or severity of swelling was noted at the injection site, following dose administration of both males and females. Extension of the injection site swelling to hindlimb and inguinal areas was also noted in animals given 100 µg/dose. In addition, skin redness at the injection site, was noted with a higher incidence throughout the dosing period for animals given ≥ 50 µg/dose. Macroscopically, the injection sites were characterized by firmness, swelling and occasionally by the presence of a clot in the thigh muscle used for the injection. These macroscopic findings were observed in males and females at all dose levels with no clear dose relationship and correlated histologically with inflammation and/or hemorrhage. In addition, enlargement of the draining lymph nodes (inguinal, popliteal and iliac) was observed in males and females at all dose levels with no evidence of dose relationship and correlated histologically with mixed cell infiltration. Clinical signs (i.e. swelling and redness of the skin) observed at the injection site and gross pathology findings as well as microscopic findings observed at the inguinal, iliac and popliteal lymph nodes

were no longer observed in recovery animals, indicating a complete to recovery for these changes and partial recovery for the findings at injection site.

mRNA-1706-related systemic changes associated with inflammation were also observed in animals given ≥ 10 µg/dose and included minimally increased cellularity of the myeloid lineage in the bone marrow. This change was likely a reactive response to the pronounced inflammation observed at the injection site. Other systemic findings included minimal to mild decreased lymphoid cellularity of the splenic periarteriolar lymphoid sheathand the paracortex of the mesenteric lymph node. In the liver, minimal to mild hypertrophy of the Kupffer cell was noted with occasional centrilobular degeneration characterized by the presence of mixed inflammatory cells in the sinusoid accompagnied by single cell necrosis or degeneration of hepatocytes. Clinical pathology changes suggestive of inflammation were also observed in males and/or females given mRNA-1706 at all doses (unless noted otherwise) and included: minimal to moderate increases in neutrophil, monocyte, eosinophil and large unstained cell counts with concomitant increases in white blood cell counts, minimal to moderate decreases in lymphocyte counts and platelet counts (females at ≥50 µg/dose), minimal increases in activated partial thromboplastin time and mild increases in fibrinogen, minimal increases in globulin, minimal decreases in albumin, with concomitant decreases in A/G ratio. Increase in body temperature postdose (≥ 50 µg/dose), along with elevations of cytokine levels IP-10, MIP-1α and MCP-1, were all suggestive of inflammation. All mRNA-1706-related systemic changes returned close to control values and, as such, were considered fully recovered.

Additional findings related to mRNA-1706 were observed in the adrenal glands of animals given ≥ 50 µg/dose and consisted of dose-related to minimal cortical hypertrophy and correlated with increased adrenal weights. This finding showed significance at 100 µg/dose. Single cell necrosis was also observed in the thymus. These findings were all fully recovered following the 2-week recovery period.

When compared to controls, following each dose, a tendency towards lower mean body weight gains was noted in males and females given ≥ 10 µg/dose; these changes sometimes reached statistical significance in both genders. From Day -1 to 28, the changes were down to 0.60X controls in males and 0.78X controls in females. The body weight changes were generally comparable or rebounded during the 2-week recovery period.

In conclusion, administration of mRNA-1706 by intramuscular injection for 1 month (3 doses) was clinically well tolerated (no mortality, no major decreases in body weight and no changes in food consumption or deleterious changes in hematology, coagulation or clinical chemistry parameters) in rats up to 100 µg/dose. Starting at 10 µg/dose, generally dose-dependent changes in clinical signs at the injection site, clinical pathology parameters and cytokines were consistent with an inflammatory response at the injection site. Dose-related target organ effects were limited to the injection site, the bone marrow, the inguinal, mesenteric, iliac and popliteal lymph nodes, adrenal gland, liver, spleen and thymus of animals given mRNA-1706. At the end of the 2-week recovery period, all changes were fully recovered.

3. INTRODUCTION

The objectives of this study were to determine the potential toxicity of mRNA-1706, when given by intramuscular injection for 1 month (3 doses) to rats and to evaluate the potential reversibility of any findings following a 2-week recovery period.

The design of this study is based on the study objectives, the overall product development strategy for the Test Item, and the following study design guidelines:

- OECD Guideline 407. *Repeated Dose 28-day Oral Toxicity Study in Rodents*.
- Committee for Medicinal Products for Human Use (CHMP). *Note for Guidance on Repeated Dose Toxicity*. CPMP/SWP/1042/99corr.
- ICH Harmonised Tripartite Guideline M3 (R2). *Nonclinical Safety Studies for the Conduct of Human Clinical Trials and Marketing Authorization for Pharmaceuticals*.
- Japanese Guidelines for Nonclinical Studies of Drugs Manual (1995). *Guidelines for Nonclinical Pharmacokinetic Studies*, *Guidelines for Toxicity Studies of Drugs (Chapter 3, Repeated Dose Toxicity Studies)*
- Appendix to Director General Notification, No. 12-Nousan-8147, 24 Nov 2000, Agricultural Production Bureau, Ministry of Agriculture, Forestry and Fisheries of Japan (JMAFF).

The Study Director signed the study plan on 15 Mar 2017, and dosing was initiated on 03 May 2017 (males) and 04 May 2017 (females). The in-life phase of the study was completed on 02 Jun 2017 (main animals) and 15 Jun 2017 (recovery animals); the last date of necropsy. The experimental start date was 16 Mar 2017, and the experimental completion date is 31 Oct 2017. The study plan, study plan amendments, and deviations are presented in Appendix 1.

4. MATERIALS AND METHODS

4.1. Test Item

Identification:	mRNA-1706
Batch (Lot) No.:	MTDP17036
Concentration:	2.1 mg/mL
Retest Date:	An end-of-use analysis of the bulk Test Item was performed to demonstrate the stability of the Test Item during the dosing period.
Physical Description:	White to off-white lipid nanoparticle dispersion
Storage Conditions:	Kept in a freezer set to maintain -20°C
Supplier:	Moderna Therapeutics, Inc.

4.2. Reference Item

Identification:	Phosphate-buffered Saline (PBS) pH 7.2
Supplier:	Life Technologies

Lot Number:	1854892
Expiration Date:	Dec 2018
Physical Description:	Liquid
Storage Conditions:	Kept in a controlled temperature area set to maintain 21°C

4.3. Test and Reference Item Characterization

The Sponsor provided to the Test Facility documentation of the identity, strength, purity, composition, and stability for the Test Item. A Summary of Analysis was provided to the Test Facility and is presented in Appendix 2.

4.4. Analysis of Test Item

A sample (2 vials) of the Test Item was taken on the completion of the dosing period. Analysis of bulk Test Item for concentration, particle size and purity was performed.

The first vial was transferred on ice pack to the analytical laboratory at the Test Facility for concentration and particle size analysis.

The second vial was transferred on ice pack to the molecular biology laboratory at the Test Facility for purity analysis.

Purity-and Particle size analysis was performed by IEX- HPLC, Differential Light Scattering (DLS) and capillary electrophoresis (CE) using validated analytical procedures.

4.5. Reserve Samples

For each batch (lot) of Test and Reference Item components, a reserve sample (1 mL or 1 vial) was collected and maintained under the appropriate storage conditions by the Test Facility.

4.6. Test and Reference Item Inventory and Disposition

Records of the receipt, distribution, and storage of Test and Reference Items were maintained. With the exception of reserve samples, all unused Sponsor-supplied bulk Test Item was returned to the Sponsor.

4.7. Dose Formulation and Analysis

Dose formulation preparations were performed under a laminar flow hood using clean procedures.

4.7.1. Preparation of Reference Item

The Reference Item, Phosphate Buffered Saline pH 7.2, was dispensed on days of dosing (i.e. Days 1, 15 and 29) for administration to Group 1 control animals and as required to dilute the bulk Test Item for administration to Groups 2 to 4 animals. The aliquots were transferred directly to room temperature.

Details of the preparation and dispensing of the Reference Item have been retained in the Study Records.

4.7.2. Preparation of Test Item

Test Item dosing formulations were diluted with Phosphate Buffered Saline, pH 7.2, as necessary for administration. The dosing formulations were prepared on each days of dosing (i.e. Days 1, 15 and 29) and were transferred directly to room temperature.

Any residual volumes of formulated Test Item were stored in a refrigerator set at 4°C and were discarded prior to finalisation following approval by the Study Director.

Details of the preparation and dispensing of the Test Item have been retained in the Study Records.

4.7.3. Sample Collection and Analysis

Dose formulation samples were collected for analysis as indicated in Text Table 2.

Text Table 2
Dose Formulation Sample Collection Schedule

Interval	Homogeneity	Concentration	Sampling From
Day 1[b]	2 to 4[a]	All groups	Preparation vessel
Day 29[b]	N/A	All groups	Preparation vessel

N/A = not applicable.
[a] The homogeneity results obtained from the top, middle and bottom preparations were averaged and utilized as the concentration results.
[b] Samples were collected on the first preparation of the study and on the last preparation of the study.

Samples to be analyzed were transferred on ice pack as soon as possible following preparation to the analytical laboratory (CR MTL).

4.7.3.1. Analytical Method

Analyses were performed by HPLC using a validated analytical procedure (Validation Study Number 1801737).

4.7.3.2. Concentration and Homogeneity Analysis

Duplicate sets of samples (0.5 mL) for each sampling time point were sent to the analytical laboratory; triplicate set of samples (0.5 mL) were retained at the Test Facility as backup samples. Samples were collected from the top, middle and bottom of the preparation vessel for each concentration except for Group 1 and on Day 29 (the last preparation of the study) where only concentration analysis was required; the formulation was then only sampled from the middle.

Concentration results were considered acceptable if mean sample concentration results were within or equal to ± 15% of theoretical concentration. Each individual sample concentration result was considered acceptable if it was within or equal to ± 20%.

Homogeneity results were considered acceptable if the relative standard deviation (RSD) of the mean value at each sampling location was ≤ 5%.

After acceptance of the analytical results, backup samples were discarded.

4.7.3.3. Stability Analysis

There was no stability analysis performed for concentration used on this study, however, end of use stability analysis on the bulk test item was performed at the end of the dosing period.

4.8. Test System

4.8.1. Receipt

On 16 Mar 2017, one hundred and twenty-one Crl:CD(SD) Sprague-Dawley rats (61 males and 60 females) were received from Charles River Canada Inc., St. Constant, QC, Canada. At the dosing onset, animals were 13 weeks old and males weighed between 375 and 520 g and females weighed between 221 and 295 g.

4.8.2. Justification for Test System and Number of Animals

The Sprague Dawley rat was chosen as the animal model for this study as it is an accepted rodent species for preclinical toxicity testing by regulatory agencies.

The total number of animals to be used in this study was considered to be the minimum required to properly characterize the effects of the Test Item. This study has been designed such that it does not require an unnecessary number of animals to accomplish its objectives.

At this time, studies in laboratory animals provide the best available basis for extrapolation to humans and are required to support regulatory submissions. Acceptable models which do not use live animals currently do not exist.

4.8.3. Animal Identification

Each animal was identified using a subcutaneously implanted electronic identification chip.

4.8.4. Environmental Acclimation

A minimum acclimation period of 48 days was allowed between animal receipt and the start of dosing in order to accustom the animals to the laboratory environment

4.8.5. Selection, Assignment, Replacement, and Disposition of Animals

Animals were assigned to groups by a stratified randomization scheme designed to achieve similar group mean body weights. Males and females were randomized separately. Animals at extremes of body weight range were not assigned to groups.

No animal were replaced before or after the initiation of dosing.

All rats remaining unassigned to groups after Day 2 were released from the study and their disposition documented in the study records.

4.8.6. Husbandry

4.8.6.1. Housing

Animals were group housed (up to 3 animals of the same sex and same dosing group together) in polycarbonate cages containing appropriate bedding equipped with an automatic watering valve.

These housing conditions were maintained throughout the study. The rooms in which the animals were kept were documented in the study records.

Animals were separated during designated procedures/activities. Each cage was clearly labeled with a color-coded cage card indicating study, group, animal number(s), and sex. Cages were arranged on the racks in group order. Control group animals were housed on a separate rack from the Test Item-treated animals.

4.8.6.2. Environmental Conditions

Target temperatures of 19°C to 25°C with a relative target humidity of 30% to 70% were generally maintained. A 12-hour light/12-hour dark cycle was maintained (refer to Appendix 1 for one exception), except when interrupted for designated procedures.

4.8.6.3. Food

PMI Nutrition International Certified Rodent Chow No. 5CR4 (14% protein) was provided ad libitum throughout the study, except during designated procedures (refer to Appendix 1 for one exception). Wet pellets were provided to all animals of Group 4 as warranted by clinical signs.

The feed was analyzed by the supplier for nutritional components and environmental contaminants. Results of the analysis are provided by the supplier and are on file at the Test Facility.

It is considered that there are no known contaminants in the feed that would interfere with the objectives of the study.

4.8.6.4. Water

Municipal tap water after treatment by reverse osmosis and ultraviolet irradiation was freely available to each animal via an automatic watering system (except during designated procedures) (refer to Appendix 1 for one exception). Water bottles were provided, when required.

Periodic analysis of the water is performed, and results of these analyses are on file at the Test Facility.

It is considered that there are no known contaminants in the water that could interfere with the outcome of the study.

4.8.6.5. Animal Enrichment

Animals were socially housed for psychological/environmental enrichment and were provided with items such as a hiding device and a chewing object, except when interrupted by study procedures/activities.

4.8.6.6. Veterinary Care

Veterinary care was available throughout the course of the study, and animals were examined by the veterinary staff as warranted by clinical signs or other changes.

Hydrotherapy was provided to Animal No. 4513 from Day 2 to 4, due to swollen at injection site. This treatment was considered necessary for the well-being of the animal.

All veterinary examinations and recommended therapeutic treatments were documented in the study records.

4.9. Experimental Design

Text Table 3
Experimental Design

Group No.	Test Material	Dose Level (µg/dose)	Dose Volume (µL/dose)	Dose Concentration (mg/mL)	Animals No.			
					Main Study		Recovery Study	
					Males	Females	Males	Females
1	Reference Item	0	200	0	1001-1010	1501-1510	1011-1015	1511-1515
2	mRNA-1706	10	200	0.05	2001-2010	2501-2510	-	-
3	mRNA-1706	50	200	0.25	3001-3010	3501-3510	-	-
4	mRNA-1706	100	200	0.5	4001-4010	4501-4510	4011-4015	4511-4515

4.9.1. Administration of Test Materials

The Test and Reference Items were administered to the appropriate animals from Groups 1 to 4 via intramuscular injection into the lateral compartment of the thigh alternating legs on Days 1, 15 and 29 (site 1= left thigh, site 2 = right thigh). The volume for each dose was administered using a syringe/needle within the demarcated area. The first day of dosing was designated as Day 1.

The injection area was marked as frequently as required to allow appropriate visualization of administration sites. Hair have been clipped or shaved as required to improve visualization of the injection sites. The injection site was documented in the raw data for each dose administered.

4.9.2. Justification of Route and Dose Levels

The intramuscular route of exposure was selected because this is the intended route of human exposure.

The dose levels for this toxicology study were chosen to approximate a substantial multiple of the anticipated clinical starting dose and top clinical dose. The highest dose tested was expected to represent the intended maximum human clinical dose and volume and were administered by the clinical route (intramuscular). At this dose level, minimal systemic toxicity was expected, but it was possible mild to moderate injection site reaction (redness, swelling) and potentially elevation of systemic cytokine/acute phase markers may have been observed. The mid- and low-dose were selected to evaluate the dose-dependent effect of this compound.

4.10. In-life Procedures, Observations, and Measurements

4.10.1. Mortality/Moribundity Checks

Throughout the study, animals were observed for general health/mortality and moribundity twice daily, once in the morning and once in the afternoon (refer to Appendix 1 for exceptions). Animals were not removed from cage during observation, unless necessary for identification or confirmation of possible findings.

4.10.2. Clinical Observations

4.10.2.1. Detailed Clinical Observations

The animals were removed from the cage, and a detailed clinical observation was performed every two weeks during the predosing period and weekly during the dosing and recovery periods, starting Day -1.

In addition detailed examination of the injection sites was performed at predose, 24, 48 and 72 hours post each dose (refer to Appendix 1 for exceptions). Following Day 29 dosing, no assessment was performed on main study animals at 72 hours post dose as animals were sent to necropsy on Day 30. Any clinical signs at the injection site such as swelling, redness, vocalization upon palpation, warm to the touch, etc. were recorded as observed.

4.10.3. Body Weights

Animals were weighed individually every two weeks during the predosing period and weekly during the dosing and recovery periods, starting Day -1. A fasted weight was recorded on the day of necropsy.

4.10.4. Food Consumption

Food consumption was quantitatively measured weekly during the dosing and recovery periods, starting on Day -7.

4.10.5. Ophthalmic Examinations

Animals had funduscopic (indirect ophthalmoscopy) and biomicroscopic (slit lamp) examinations once prior to the dosing initiation (all animals) and on Day 23 for males and Day 22 for females of the dosing period. As there were no Test Item-related ophthalmoscopic findings at the end of the dosing period, examinations were not performed on recovery animals. The mydriatic used was 1% tropicamide.

4.10.6. Body Temperature

Rectal body temperature was recorded on un-sedated animals on Day 1 and on Day 29 at predose, 6 and 24 hours post dose (end of each group). Additional body temperature measurement was performed on all Group 4 female animals (Day 1) and on Animals Nos. 4511 to 4513 (Day 29) at 48 hours postdose since the 24 hours postdose values were significantly above normal range.

4.11. Laboratory Evaluations

4.11.1. Clinical Pathology

4.11.1.1. Sample Collection

Blood was collected from the abdominal aorta following isoflurane anesthesia. After collection, samples were transferred to the appropriate laboratory for processing.

Animals were fasted overnight before blood sampling (for clinical chemistry). Samples were collected according to Text Table 4.

Text Table 4
Samples for Clinical Pathology Evaluation

Group Nos.	Time Point	Hematology	Coagulation	Clinical Chemistry
1 to 4[a]	Day 30	X	X	X
1 and 4	Day 43	X	X	X

[a] Samples were collected from animals sent to euthanasia on Day 30.

4.11.1.2. Hematology

Blood samples (target volume of 0.5 mL collected in a tube containing EDTA as anticoagulant) were analyzed for the parameters specified in Text Table 5.

Text Table 5
Hematology Parameters

Red blood cell count Hemoglobin concentration Hematocrit Mean corpuscular volume Red Blood Cell Distribution Width Mean corpuscular hemoglobin concentration Mean corpuscular hemoglobin Reticulocyte count (absolute) Platelet count	White blood cell count Neutrophil count (absolute) Lymphocyte count (absolute) Monocyte count (absolute) Eosinophil count (absolute) Basophil count (absolute) Large unstained cells (absolute) Other cells (as appropriate)

A blood smear was prepared from each hematology sample. Blood smears were labeled, stained, and stored. Some blood smears were read to investigate results.

4.11.1.3. Coagulation

Blood samples (target volume of 0.9 mL collected in a 1.0 mL tube containing citrate as anticoagulant) were processed for plasma, and plasma was analyzed for the parameters listed in Text Table 6.

Text Table 6
Coagulation Parameters

Activated partial thromboplastin time Fibrinogen	Prothrombin time Sample Quality

4.11.1.4. Clinical Chemistry

Blood samples (target volume of 0.7 mL collected in a serum separator tube) were processed for serum, and the serum was analyzed for the parameters specified in Text Table 7.

Text Table 7
Clinical Chemistry Parameters

Alanine aminotransferase	Total protein
Aspartate aminotransferase	Albumin
Alkaline phosphatase	Globulin
Gamma-glutamyltransferase	Albumin/globulin ratio
Creatine Kinase	Glucose
Total bilirubin	Cholesterol
Urea nitrogen	Triglycerides
Creatinine	Sodium
Calcium	Potassium
Phosphorus	Chloride
Sample Quality	

4.11.2. Cytokine Analysis

Blood was collected from the jugular vein of all recovery animals. After collection, blood samples for serum were allowed to clot at ambient room temperature and blood samples for plasma were transferred on wet ice to the appropriate laboratory for processing.

Text Table 8
Sample Collection Schedule

Target Blood Volume (mL)			0.5	0.5
Anticoagulant			**None (SST)**	**EDTA**
Centrifugation settings			(b) (4)	
Timepoints			**Sample Type**	
Day	**Hrs**	**No. of Males/ Females**	IFN-α*	IL-1ß, IL-6, TNF-α, IP-10, MIP-1-α, MCP-1
1	6	5/5	X	X
15	6	5/5	X	X
29	6	5/5	X	X
43	NAp	5/5	X	X
Matrix			Serum	Plasma
Volume per aliquot (µL)			All volume	All volume
Number of aliquot(s)			1	1
Storage condition (set to maintain)			-80°C	-80°C
Responsible Lab (processing)			CR-SHB	CR-SHB

X = Sample collected, NAp = Not applicable
* The assay validation of IFN-α did not work appropriately and serum samples analysis was not conducted.

The number of aliquots and volumes were targets that may have been adjusted based on sample volume availability.

The samples for IL-1ß, IL-6, TNF-α, IP-10, MIP-1-α and MCP-1 were analyzed by the Biomarkers department at CR MTL. Analysis for IL-1ß, IL-6, TNF-α, IP-10, MIP-1-α and MCP-1 was conducted using a multiplex Luminex method. The procedures followed during the

course of this study along with the assays acceptance criteria were detailed in the appropriate analytical procedure. Samples were analyzed in duplicate.

A Biomarkers interpretative report (IL-1ß, IL-6, TNF-α, IP-10, MIP-1-α and MCP-1) is included as an appendix to the Final Report.

4.11.3. Anti-Drug Antibody (ADA) Sample Collection, Processing and Analysis.

Before initiation of dosing and at study termination (on Day 30 for main animals and on Day 43 for recovery animals), blood was collected from all animals by jugular venipuncture and/or via the abdominal aorta while under isoflurane anesthesia (terminal samples).

Samples were mixed gently and allowed to clot at room temperature until centrifugation which was carried out as soon as practical (not exceeding 60 minutes after collection, refer to Appendix 1 for exceptions). The samples were centrifuged for (b) (4) in a refrigerated centrifuge (set to maintain (b) (4) at (b) (4) The resultant serum was separated, transferred to uniquely labeled clear polypropylene tubes, frozen immediately over dry ice and transferred to a freezer set to maintain -80°C. Samples were shipped on dry ice to Integrated BioTherapeutics, Inc., Rockville, MD, USA

The samples were analyzed for rat anti-ZIKV antibodies using a qualified ELISA method.

Residual/retained samples were discarded prior issuance of the Final Report.

An Anti-therapeutic Antibody Report is included as an appendix to the Final Report

4.12. Terminal Procedures

Terminal procedures are summarized in Text Table 9.

Text Table 9
Terminal Procedures

Group No.	No. of Animals		Scheduled Euthanasia Day	Necropsy Procedures			Histology[a]	Histopathology[a]
	M	F		Necropsy	Tissue Collection	Organ Weights		
1	10	10	30	X	X	X	Full Tissue	Full Tissue
2	10	10					Full Tissue	Gross Lesions Target Tissues
3	10	10					Full Tissue	Gross Lesions Target Tissues
4	10	10					Full Tissue	Full Tissue
1	5	5	43	X	X	X	Full Tissue	Gross Lesions Target Tissues
4	5	5					Full Tissue	Gross Lesions Target Tissues

X = Procedure conducted; - = Not applicable.
[a] See Tissue Collection and Preservation table for listing of tissues.

4.12.1. Unscheduled Deaths

No animals died during the course of the study.

4.12.2. Scheduled Euthanasia

Main study and recovery animals surviving until scheduled euthanasia had a terminal body weight recorded, samples for clinical pathology, anti-drug antibodies and cytokines collected (as appropriate), and were euthanized by exsanguination by incision from the abdominal aorta following isoflurane anesthesia. The animals were euthanized rotating across dose groups such that similar numbers of animals from each group, including controls, were necropsied throughout the day. Animals were fasted overnight before their scheduled necropsy.

4.12.3. Necropsy

Main study and recovery animals were subjected to a complete necropsy examination, which included evaluation of the carcass and musculoskeletal system; all external surfaces and orifices; cranial cavity and external surfaces of the brain; and thoracic, abdominal, and pelvic cavities with their associated organs and tissues.

Necropsy procedures were performed by qualified personnel with appropriate training and experience in animal anatomy and gross pathology. A veterinary pathologist, or other suitably qualified person, was available.

4.12.4. Organ Weights

The organs identified in Text Table 10 were weighed at necropsy for all scheduled euthanasia animals. Paired organs were weighed together. In the event of gross abnormalities, in addition to the combined weight, the weight of each organ of a pair may be taken and entered as a tissue comment. Organ weight as a percent of body weight (using the terminal body weight) and organ weight as a percent of brain weight were calculated.

Text Table 10
Organs Weighed at Necropsy

Brain	Liver
Epididymis[a]	Lung
Gland, adrenal[a]	Ovary[a]
Gland, pituitary	Spleen
Gland, prostate	Testis[a]
Gland, thyroid[a]	Thymus
Heart	Uterus
Kidney[a]	

[a] Paired organ weight.

4.12.5. Tissue Collection and Preservation

Representative samples of the tissues identified in Text Table 11 were collected from all animals and preserved in 10% neutral buffered formalin, unless otherwise indicated.

Text Table 11
Tissue Collection and Preservation

Site, Injection	Large intestine, cecum
Animal identification	Large intestine, colon
Artery, aorta	Large intestine, rectum
Body cavity, nasal	Larynx

Gut-associated lymphoid tissue	Thymus
Heart	Tongue
Kidney	Trachea
	Urinary bladder
	Uterus
	Vagina

[a] Preserved in Davidson's fixative.
[b] Preserved in Modified Davidson's fixative.

4.12.6. Histology

Tissues identified in Text Table 11 (except animal identification and bone marrow smears) were embedded in paraffin, sectioned, mounted on glass slides, and stained with hematoxylin and eosin.

4.12.7. Histopathology

Histopathological evaluation was performed by a board-certified veterinary pathologist. The following target tissues identified by the study pathologist during microscopic evaluation were communicated to the study Director, evaluated and reported: gland adrenal, liver, spleen, injection site, lymph nodes (inguinal, popliteal and mesenteric), thymus and galt-associated lymphoid tissue.

4.12.8. Peer Review

A pathology peer review was conducted by (b) (6) from Moderna Therapeutics, Cambridge, MA, USA.

4.12.9. Bone Marrow Smear Analysis

Two bone marrow smears were prepared from each euthanized animal, air dried, stained with Wright's Giemsa stain, and not coverslipped. Bone marrow smears were not evaluated.

5. CONSTRUCTED VARIABLES

Body Weight Gains	calculated between each scheduled interval as well as between the beginning and end of each phase
Organ Weight relative to Body Weight	calculated against the Terminal body weight for scheduled intervals
Organ Weight relative to Brain Weight	calculated against the brain weight for scheduled intervals

All results presented in the tables of the report are calculated using non-rounded values as per the raw data rounding procedure and may not be exactly reproduced from the individual data presented.

6. STATISTICAL ANALYSIS

All statistical tests were conducted at the 5% significance level. All pairwise comparisons were conducted using two sided tests and were reported at the 0.1%, 1%, and 5% levels.

Numerical data collected on scheduled occasions for the listed variables were analyzed as indicated according to sex and occasion. Descriptive statistics number, mean and standard deviation (or %CV or SE when deemed appropriate) were reported whenever possible. Values may also have been expressed as a percentage of predose or control values when deemed appropriate. Inferential statistics were performed according to the matrix below when possible, but excluded semi-quantitative data, and any group with less than 3 observations.

Text Table 12
Statistical Matrix

Variables for Inferential Analysis	Statistical Method Parametric/ Non-Parametric
Body Weight	X
Body Temperature	X
Hematology Variables	X
Coagulation Variables	X
Clinical Chemistry Variables	X
Cytokines	X
Organ Weights	X
Body Weight Changes	X
Organ Weight relative to Body Weight	X
Organ Weight relative to Brain Weight	X

The following pairwise comparisons were made:

Group 2 vs. Group 1

Group 3 vs. Group 1

Group 4 vs. Group 1

6.1. Parametric/Non-Parametric

Levene's test was used to assess the homogeneity of group variances.

Datasets with at least 3 groups were compared using an overall one-way ANOVA *F*-test if Levene's test was not significant or the Kruskal-Wallis test if it was. If the overall *F*-test or Kruskal-Wallis test was found to be significant, then the above pairwise comparisons were conducted using Dunnett's or Dunn's test, respectively.

Datasets with 2 groups (the designated control group and 1 other group) were compared using a *t*-test if Levene's test was not significant or Wilcoxon Rank-Sum test if it was.

7. COMPUTERIZED SYSTEMS

Critical computerized systems used in the study are listed below or presented in the appropriate Phase Report. All computerized systems used in the conduct of this study have been validated; when a particular system has not satisfied all requirements, appropriate administrative and procedural controls were implemented to assure the quality and integrity of data.

Text Table 13
Critical Computerized Systems

System Name	Version No.	Description of Data Collected and/or Analyzed
Provantis	8	In-life; clinical pathology; postmortem
Dispense	8	Test Material receipt, accountability and/or formulation activities
In-house reporting software Nevis 2012 (using SAS)	Nevis 2 (SAS 9.2)	Statistical analyses of numerical in-life, clinical pathology and postmortem data
Mesa Laboratories AmegaView CMS	v3.0 Build 1208.8	Continuous Monitoring System. Monitoring of standalone fridges, freezers, incubators, and selected laboratories to measure temperature, relative humidity, and CO2, as appropriate
Johnson Controls Metasys	MVE 7.0 and 4.0	Building Automation System. Control of HVAC and other building systems, as well as temperature/humidity control and trending in selected laboratories and animal rooms
Empower 3 (Waters Corporation)	Build 3471 SR1	Data acquisition for dose formulation analysis, including regression analysis and measurement of concentration and recovery of dose formulations using HPLC and measurement of purity.
BioPlex Manager	6.1	Cytokines (IL-1ß, IL-6, TNF-α, IP-10, MIP-1-α, MCP-1) data collection
Watson LIMS	7.4.2 SP1	Cytokines (IL-1ß, IL-6, TNF-α, IP-10, MIP-1-α, MCP-1) data regression
Dynamics (Wyatt)	7.1.9.3.	Data acquisition for particle size analysis of the test item using DLS
(b) (4)	1.1.0.11	Data acquisition
Excel	2007	Data analyses and tabulation
SRS (PCS-MTL in-house application built with SAS and SAS system for Windows)	1.4	Statistical analyses of cytokines

8. RETENTION OF RECORDS, SAMPLES, AND SPECIMENS

All study-specific raw data, documentation, study plan, samples, specimens, and final reports from this study were archived at the Test Facility by no later than the date of final report issue unless otherwise specified in the study plan. At least one year after issue of the draft report, the Sponsor will be contacted to determine disposition of materials associated with the study.

Electronic data generated by the Test Facility were archived as noted above, except that the data collected using Provantis 8 and reporting files stored on SDMS, which were archived at the Charles River Laboratories facility location in Wilmington, MA.

All records, retained samples and specimens, and reports generated from phases or segments performed by Sponsor-designated subcontractors were returned to the Test Facility for archiving. Archival location and duration are detailed in the applicable PI report(s) or details regarding the retention of the materials were provided to the Study Director for inclusion in the Final Report.

9. RESULTS

9.1. Dose Formulation Analyses

(Appendix 3)

The dose formulations were within specification. Homogeneity testing showed that the formulation technique used produced homogeneous preparations.

In addition, the end of use bulk Test Item analysis demonstrated that the test item was suitable for use during the study period.

9.2. Mortality

(Appendix 4)

There were no unscheduled deaths during the course of this study.

9.3. Clinical Observations

(Table 1 and Appendix 5)

Following each dosing, warm to the touch was observed for females given 100 µg/dose. This observation was also noted following the second dose administration for males given 100 µg/dose and for females given 50 µg/dose. Those observations correlate with higher body temperature observed (Refer to Section 9.7)

During the dosing period, some females given 100 µg/dose were also observed with prominent backbone, thinness, hunched posture and suspected dehydration. Those observations were not observed during the recovery period.

Following each dosing occasions, a dose-related swelling (soft to firm) was noted on the injection site and extended to hindlimb and inguinal areas for some animals given 100 µg/dose. In addition, skin redness at the injection site, was noted with a higher incidence throughout the dosing period for animals given ≥ 50 µg/dose. Given the absence of swelling and redness at the injection site at the end of the recovery period, these clinical observations were considered fully reversed.

9.4. Body Weights and Body Weight Gains

(Figure 1, Figure 2, Table 2, Table 3, Appendix 6, and Appendix 7)

When compared to controls, following each dose, a tendency towards lower mean body weight gains was noted in males and females given ≥ 10 µg/dose; these changes sometimes reached statistical significance in both genders. From Day -1 to 28, the changes were down to 0.60X controls in males and 0.78X controls in females. The body weight changes were generally comparable or rebounded during the 2-week recovery period.

9.5. Food Consumption

(Table 4 and Appendix 8)

Given the variability in weekly food consumption results, the occasional weekly changes, with no clear dose-relationship, were considered not mRNA-1706-related.

9.6. Ophthalmic Examinations

(Appendix 13)

There were no mRNA-1706-related ocular changes observed during the course of the study. The findings noted were age-related or incidental in origin and to be expected in this population of animals.

9.7. Body Temperature

(Table 5 and Appendix 9)

In general body temperatures were within normal ranges of 36-38°C. When compared to control animals and pre-dose body temperature measurements, the mean body temperature appeared minimally increased in males and females given ≥ 50 µg/dose at 6 and/or 24 hours post Day 1 and Day 29 doses. These statistically-significant changes were considered mRNA-1706-related.

9.8. Hematology

(Table 6 and Appendix 10)

mRNA-1706-related hematology changes were noted for males and females starting at 10 µg/dose and included increases in neutrophil (NEUT), monocytes (MONO), eosinophil (EOS) and/or large unstained cell (LUC) counts (with concomitant increases in white blood cell [WBC] counts) and decreases in lymphocyte (LYMPH), reticulocytes (RETIC) and platelet (PLT) counts. These changes are illustrated in Text Table 14.

Text Table 14
Hematology Changes

Dose (µg/dose)	10		50		100	
Parameter	**Males**	**Females**	**Males**	**Females**	**Males**	**Females**
WBC						
Day 30	**2.1**	**2.5**	**2.3**	**1.8**	**1.8**	0.90
Day 43					1.1	1.1
NEUT						
Day 30	**10.0**	**9.7**	**13.0**	**7.9**	**11.3**	4.0
Day 43					1.7	1.6
MONO						
Day 30	**2.0**	**1.8**	**2.1**	1.3	1.5	0.85
Day 43					1.5	1.2
LYMPH						
Day 30	0.78	0.97	**0.49**	**0.48**	**0.26**	**0.24**
Day 43					1.0	1.1
EOS						
Day 30	**3.0**	**6.5**	**2.3**	**3.8**	1.1	1.6
Day 43					0.86	0.96
LUC						
Day 30	**4.7**	**3.0**	**5.1**	**2.4**	3.0	1.3
Day 43					1.5	1.2
PLT						
Day 30	-	1.01	-	0.96	-	**0.80**
Day 43					-	1.1
RETIC						
Day 30	0.87	0.90	**0.80**	0.98	**0.72**	0.82
Day 43					**1.2**	1.2

Changes are expressed as X Fold from mean Group 1 (control) value.
–: indicates results were considered not to be meaningfully different from mean control value.
Bolded values were statistically significant.
Shaded boxes indicate no collection at this timepoint for corresponding groups.

Mild to moderate increases in WBC counts (up to 2.3X and 2.5X controls, respectively) were noted in males and females given ≥ 10 µg/dose, mainly due to minimal to moderate increases in NEUT, MONO, LUC, and EOS (up to 13.0X, 2.1X, 5.1X and 3.0X controls for males and 9.7X, 1.8X, 3.0X and 6.5X controls for females). Minimal to moderate dose-related decreases in LYMPH and RETIC counts were noted for males and females at ≥ 10 µg/dose (down to 0.26X and 0.24X controls, respectively). Increased observed in WBC, NEUT, MONO, LUC and EOS in animals given ≤ 50 µg/dose were followed by a decreased in the animals given 100 µg/dose. At the end of the recovery period, values for NEUT, MONO, LUC, were almost back to normal and LYMPH and RETIC values return to normal values.

Minimal dose-related decreases in PLT were noted in females given ≥ 50 µg/dose (down to 0.80X controls) with full recovery at the end of the recovery period.

Any other differences in hematology parameters, including those attaining statistical significance, were judged to be due to individual or biological variation or lacked true dose relationship and therefore were considered not mRNA-1706-related.

9.9. Coagulation

(Table 7 and Appendix 11)

mRNA-1706-related increases in activated partial thromboplastin time (APTT) and in fibrinogen (FIB) were noted in males and females given ≥ 10 µg/dose. The changes are illustrated in Text Table 15.

Text Table 15
Coagulation Changes

Dose (µg/dose)	10		50		100	
Parameter	**Males**	**Females**	**Males**	**Females**	**Males**	**Females**
APTT						
Day 30	**1.2**	**1.2**	**1.2**	**1.4**	**1.3**	**1.4**
Day 43					1.0	1.0
FIB						
Day 30	**2.3**	**2.4**	**2.5**	**2.6**	**2.3**	**2.4**
Day 43					**0.9**	1.0

Changes are expressed as X Fold from mean (Group 1) control value.
Bolded values were statistically significant.
Shaded boxes indicate no collection at this timepoint for corresponding groups.

Minimal increases in APTT were noted for males and females given ≥ 10 µg/dose (up to 1.3X controls for males and 1.4X controls for females). Mild increases in FIB were noted for males and females given ≥ 10 µg/dose (up to 2.5X controls for males and 2.6X controls in females). At the end of the 2-week recovery period, changes were fully recovered.

Any other differences in the coagulation parameters were judged to be due to individual or biological variability or lacked true dose relationship and therefore were considered not mRNA-1706-related.

9.10. Clinical Chemistry

(Table 8 and Appendix 12)

mRNA-1706-related decreases in albumin (ALB) and increases in globulin (GLOB) were noted for males and females reflected by overall decrease in A/G ratio. Dose-related decrease in glucose concentration (GLUC) and increase in aspartate aminotransferase were also observed. The changes are illustrated in Text Table 16.

Text Table 16
Clinical Chemistry Changes

Dose (µg/dose)	10		50		100	
Parameter	**Males**	**Females**	**Males**	**Females**	**Males**	**Females**
ALB						
Day 30	**0.9**	**0.9**	**0.9**	0.9	**0.9**	**0.9**
Day 43					1.0	1.0
GLOB						
Day 30	**1.2**	**1.1**	**1.2**	1.1	**1.2**	1.0
Day 43					0.9	1.0
A/G						
Day 30	**0.8**	**0.8**	**0.8**	**0.8**	**0.8**	**0.8**
Day 43					1.1	1.0
GLUC						
Day 30	**0.8**	0.9	**0.8**	**0.8**	**0.7**	**0.7**
Day 43					1.0	**1.3**

Changes are expressed as X Fold from mean Group 1 (control) value.
Bolded values were statistically significant.
Shaded boxes indicate no collection at this timepoint for corresponding groups.

Minimal decreases in ALB and minimal increases in GLOB were noted for males and females given ≥ 10 µg/dose (0.9X controls and up to 1.2X controls for each parameter) and affected the A/G ratio (down to 0.8X controls, for both genders). At the end of the 2-week recovery period, changes were fully recovered.

Minimal decreased in GLUC were noted for males and females given ≥ 10 µg/dose (down to 0.7X controls, for both genders). At the end of the recovery period, changes were fully recovered.

Increase in AST was observed for females given 100 µg/dose but is mainly related to the increase in AST level in female no.4501 and is not considered mRNA-1706-related.

Any other differences in the clinical chemistry parameters, including those attaining statistical significance, were judged to be due to individual or biological variability or lacked true dose relationship and therefore were considered not mRNA-1706-related.

9.11. Cytokines Analysis

(Appendix 14 and Appendix 15)

When compared to control, statistically-significant higher concentrations of IP-10 were observed in both genders given 100 µg/dose, high incidence and magnitude of change observed for males and females of higher dose group (100 µg/dose) were considered to be mRNA-1706-related.

Higher concentrations of MIP-1α and MCP-1 were also observed in both genders given 100 µg/dose. Concentrations were comparable to control levels on Day 43.

No mRNA-1706 changes were observed for IL-1β, TNF-α and IL-6.

All the mRNA-1706-related increases observed tent to be reversible.

9.12. Anti-Drug Antibody (ADA)

(Appendix 16)

The Day 30 samples from mRNA-1706-treated Main Study animals had detectable antibody responses against ZIKV lysate. The Day 43 samples from Recovery Study animals previously given 100 µg/dose had higher response when compared to Day 30 results.

9.13. Gross Pathology

(Appendix 17)

9.13.1. Terminal Euthanasia Animals (Day 30)

mRNA-1706-related gross pathology findings were observed in lymph nodes (iliac, inguinal, popliteal) and at the injection site and their incidences are summarized in Tox Table 17.

Text Table 17
Summary of Gross Pathology Findings – Scheduled Euthanasia (Day 30)

	Males				Females

Enlargement	1	3	0	1	0	3	0	0

[a] Iliac left as documented in individual animals.

Macroscopic findings attributed to the administration of mRNA-1706 at the injection site were characterized by firmness, swelling and occasionally by the presence of a clot in the thigh muscle used for the injection. These macroscopic findings were observed in males and females at all dose levels with no clear dose relationship and correlated histologically with inflammation and/or hemorrhage.

In addition, enlargement of the draining lymph nodes (inguinal, popliteal and iliac) was observed in males and females at all dose levels with no evidence of dose relationship and correlated histologically with mixed cell infiltration.

Other gross findings observed were considered incidental, of the nature commonly observed in this strain and age of rats, and/or were of similar incidence in reference and treated animals and, therefore, were considered unrelated to administration of mRNA-1706.

9.13.2. Recovery Euthanasia Animals (Day 43)

mRNA-1706-related gross findings noted at the terminal euthanasia in the injection site and draining lymph nodes were not observed at the end of the recovery period (Day 43). Other gross findings observed were considered incidental, of the nature commonly observed in this strain and age of rats, and/or were of similar incidence in reference and treated animals and, therefore, were considered unrelated to administration of mRNA-1706.

9.14. Organ Weights

(Appendix 17)

9.14.1. Terminal Euthanasia Animals (Day 30)

mRNA-1706-related organ weight changes were observed in the adrenal glands and are summarized in Text Table 18.

% of brain weight	7	-2	11	3	13	**24**

[a] All values expressed as percent difference of reference group means.
Based upon statistical analysis of group means, values highlighted in bold are significantly different from reference group – $P \leq 0.05$; refer to data tables for actual significance levels and tests used.

The group means for absolute and relative (to body and brain) weight of the adrenal were significantly higher in females given mRNA-1706 at 100 µg/dose compared to the concurrent reference. There was also a trend toward higher group means for absolute and relative (to body and brain) weight in males given mRNA-1706 at 100 µg/dose and females at 50 µg/dose but these values were statistically significant only in for absolute (females) or relative to body (males) weights. These increases of adrenal weights correlated histologically with cortical hypertrophy.

No other mRNA-1706-related organ weight changes were noted. There were other isolated organ weight values that were statistically different from their respective references. There were, however, no patterns, trends, or correlating data to suggest these values were toxicologically relevant. Thus, other organ weight differences observed were considered incidental and/or related to difference of terminal body weight and unrelated to administration of mRNA-1706.

9.14.2. Recovery Euthanasia Animals (Day 43)

mRNA-1706-related organ weight changes noted in the adrenal glands at the terminal euthanasia were not observed at the end of the recovery period (Day 43). There were isolated organ weight values that were statistically different from their respective references. There were, however, no patterns, trends or correlating data to suggest these values were toxicologically relevant. Thus,

the organ weight differences observed were considered incidental and/or related to difference of terminal body weight and unrelated to administration of mRNA-1706.

9.15. Histopathology

(Appendix 17)

9.15.1. Terminal Euthanasia Animals (Day 30)

mRNA-1706-related microscopic findings were observed at the injection site, in the draining lymph nodes (inguinal, popliteal, iliac), bone marrow, adrenal glands, liver, mesenteric lymph node, thymus and spleen and their incidence and severity are summarized in Text Table 19.

[a] Numbers in parentheses represent the number of animals with the finding.
[b] Iliac lymph node, examined only if gross abnormality observed.

At the injection site, the microscopic findings attributed to the administration of mRNA-1706 were minimal to marked inflammation and minimal to moderate hemorrhage. The inflammation was observed in males and females at all dose levels with no dose relationship between 50 µg/dose and 100 µg/dose but with lower severity of the findings at 10 µg/dose. It was characterized locally by extensive infiltration of mixed inflammatory cells, mainly granulocytes, with associated edema and fibrin exudates and correlated macroscopically with firmness of the thigh (abnormal consistency; firm). It was accompanied by mild to moderate hemorrhage (correlating macroscopically with material accumulation; clot) in some males at 50 µg/dose. This inflammatory process was not otherwise associated with degeneration of the muscle. Similar incidence and severity of minimal degeneration/necrosis of myofiber was observed in reference and mRNA-1706-dosed animals and was considered related to the experimental procedures (intramuscular injection).

In the inguinal, popliteal and iliac lymph nodes (considered as draining injection site), there was minimal to moderate mixed cell infiltration in males and/or females administered mRNA-1706 at all dose levels. The inflammatory infiltrate was composed of clusters of degenerated granulocytes in the lymph node sinuses or in the adjacent adipose/connective tissue.

A dose related minimal increase of myeloid cellularity was observed in the bone marrow of males and females at all dose levels.

In the adrenal glands, a dose related minimal cortical hypertrophy was present in males and females administered mRNA-1706 at ≥ 50 µg/dose and correlated with the increased adrenal weights.

In the liver, a low incidence of minimal to mild hypertrophy of the Kupffer cell was observed in males and females at all dose levels with no clear dose relationship. The hypertrophied Kupffer cells sometimes contained finely granular brownish pigment. In one male at 10 µg/dose, one female at 50 µg/dose and three females at 100 µg/dose, there was minimal to mild degeneration in the centrilobular region characterized by presence of mixed inflammatory cell in the sinusoid with single cell necrosis or degeneration of hepatocytes.

Microscopic findings similar in nature were observed in the spleen and mesenteric lymph nodes at all dose levels as well as in thymus at ≥ 50 µg/dose. They consisted of minimal to mild decreased lymphoid cellularity and/or single cell necrosis of lymphocyte. The decreased lymphoid cellularity was present in the periarteriolar sheath of the spleen, in the cortex of the thymus and in the paracortex of the mesenteric lymph node. In these areas, the lymphoid cells were less densely populated with prominent dendric cells. Single cell lymphoid necrosis was observed in the depleted region in these organs, mainly at 100 µg/dose.

After evaluation of all dose group animals, the GALT was no longer considered as a target organ.

Other microscopic findings observed were considered incidental, of the nature commonly observed in this strain and age of rats, and/or were of similar incidence and severity in reference and treated animals and, therefore, were considered unrelated to administration of mRNA-1706.

9.15.2. Recovery Euthanasia Animals (Day 43)

Microscopic findings noted in the adrenal glands, bone marrow, lymph nodes (mesenteric, popliteal, inguinal), thymus, spleen and liver at the terminal euthanasia were not observed at the end of the recovery period (Day 43) and therefore, considered completely recovered.

At the injection site, the inflammation and hemorrhage present at the end of dosing were no longer observed but minimal mononuclear cell infiltration was noted in males and females at 100 µg/dose as well as in one control female. This microscopic finding was interpreted to result from the healing process from previous inflammation at the injection site. The incidence and severity are summarized in Text Table 20.

Text Table 20
Summary of Microscopic Findings – Scheduled Euthanasia (Day 43)

[a] Numbers in parentheses represent the number of animals with the finding.

Other microscopic findings observed were considered incidental, of the nature commonly observed in this strain and age of rats, and/or were of similar incidence and severity in reference and treated animals and, therefore, were considered unrelated to administration of mRNA-1706.

10. CONCLUSION

In conclusion, administration of mRNA-1706 by intramuscular injection for 1 month (3 doses) was clinically well tolerated (no mortality, major decreases in body weight and no changes in food consumption or deleterious changes in hematology, coagulation or clinical chemistry parameters) in rats up to 100 µg/dose. Starting at 10 µg/dose, generally dose-dependent changes in clinical signs at the injection site, clinical pathology parameters and cytokines were consistent with an inflammatory response at the injection site. Dose-related target organ effects were limited to the injection site, the bone marrow, the inguinal, mesenteric, iliac and popliteal lymph nodes, adrenal gland, liver, spleen and thymus of animals given mRNA-1706. At the end of the 2-week recovery period, all changes were partially or fully recovered.

Page 1 of 31

Appendix 1

TABLE OF CONTENTS

Appendix 1

1. OBJECTIVE(S)

The objectives of this study are to determine the potential toxicity of mRNA-1706, when given by intramuscular injection for 1 month (3 doses) to rats and to evaluate the potential reversibility of any findings following a 2-week recovery period.

1.1. Study Classification

Study Category:	TOX
Study Type:	Repeat Dose Toxicity
Study Design:	Parallel
Primary Treatment CAS Registry Number:	Not Available
Primary Treatment Unique Ingredient ID:	Not Available
Class of Compound:	mRNA

2. PROPOSED STUDY SCHEDULE

Proposed study dates are listed below. Actual applicable dates will be included in the Final Report.

Experimental Start Date:	15 Mar 2017 (First date of study-specific data collection)
Experimental Completion Date:	18 Aug 2017 (Last date data are collected from the study)
Animal Arrival:	15 Mar 2017
Initiation of Dosing:	27 Mar 2017
Completion of In-life:	26 Apr 2017 (main study animals) 09 May 2017 (recovery animals) (Last date of necropsy)
Unaudited Draft Report:	06 Jul 2017
Draft Report:	11 Aug 2017
Final Report:	18 Aug 2017 (Expected date of Study Director signature)

3. GUIDELINES FOR STUDY DESIGN

The design of this study was based on the study objective(s), the overall product development strategy for the Test Item, and the following study design guidelines:

- OECD Guideline 407. *Repeated Dose 28-day Oral Toxicity Study in Rodents*.

Appendix 1

- Committee for Medicinal Products for Human Use (CHMP). *Note for Guidance on Repeated Dose Toxicity*. CPMP/SWP/1042/99corr.
- ICH Harmonised Tripartite Guideline M3 (R2). *Nonclinical Safety Studies for the Conduct of Human Clinical Trials and Marketing Authorization for Pharmaceuticals*.
- Japanese Guidelines for Nonclinical Studies of Drugs Manual (1995). *Guidelines for Nonclinical Pharmacokinetic Studies*, *Guidelines for Toxicity Studies of Drugs (Chapter 3, Repeated Dose Toxicity Studies)*
- Appendix to Director General Notification, No. 12-Nousan-8147, 24 November 2000, Agricultural Production Bureau, Ministry of Agriculture, Forestry and Fisheries of Japan (JMAFF).

4. REGULATORY COMPLIANCE

The study will be performed in accordance with the OECD Principles of Good Laboratory Practice and as accepted by Regulatory Authorities throughout the European Union, United States of America (FDA), Japan (MHLW), and other countries that are signatories to the OECD Mutual Acceptance of Data Agreement.

Any portion of this study conducted in the USA will be performed in accordance with the U.S. Department of Health and Human Services, Food and Drug Administration. United States Code of Federal Regulations, Title 21, Part 58: Good Laboratory Practice for Nonclinical Laboratory Studies and as accepted by Regulatory Authorities throughout the European Union (OECD Principles of Good Laboratory Practice), Japan (MHLW), and other countries that are signatories to the OECD Mutual Acceptance of Data Agreement.

Exceptions to GLPs include the following study elements:

- Characterization of the Test Item will be performed by the Sponsor or Sponsor subcontractor according to established SOPs, controls, and approved test methodologies to ensure integrity and validity of the results generated; these analyses will not be conducted in compliance with the GLP or GMP regulations.
- Analysis of cytokines and anti-therapeutic antibody will be conducted using scientifically qualified methods and in accordance with all applicable analytical procedures.
- Pathology peer review

5. QUALITY ASSURANCE

5.1. Test Facility

The Test Facility Quality Assurance Program (QAP) will monitor the study to assure the facilities, equipment, personnel, methods, practices, records, and controls are in conformance with Good Laboratory Practice regulations. The QAP will review the study plan, conduct inspections at intervals adequate to assure the integrity of the study, and audit the Final Report to

Appendix 1

assure that it accurately describes the methods and standard operating procedures and that the reported results accurately reflect the raw data of the study.

The Test Facility QAP contact for this study is indicated below:

(b) (6)
Charles River Laboratories Montreal ULC
22022 Transcanadienne
Senneville Quebec
Canada H9X 3R3
Tel: (b) (6)
E-mail: (b) (6)

5.2. Test Facility-designated Subcontractor(s)

The following study phases performed by Test Facility-designated subcontractors will be audited by the Test Facility QAP:

- Ophthalmology

E-mail: (b) (6)

Each PI is required to report any deviations or other circumstances that could affect the quality or integrity of the study to the Study Director in a timely manner. Each PI will provide a report addressing their assigned phase of the study, which will be included as an appendix to the Final Report. The phase report will include the following:

- The archive site for all records, samples, specimens and reports generated from the phase or segment (alternatively, details regarding the retention of the materials may be provided to the Study Director for inclusion in the Final Report)
- A listing of critical computerized systems used in the conduct and/or interpretation of the assigned study phase

8. TEST AND REFERENCE ITEMS

8.1. Test Item

Identification:	mRNA-1706
Supplier:	Moderna Therapeutics, Inc.
Batch (Lot) Number:	MTDP17025
Concentration:	To be included by amendment
Retest Date:	Concomitant assessment, ongoing
Physical Description:	White to off-white lipid nanoparticle dispersion
Storage Conditions:	Kept in a freezer set to maintain -20°C

Appendix 1

8.2. Reference Item

Identification:	Phosphate-buffered Saline (PBS) pH 7.2
Supplier:	Will be included in the Final Report
Batch (Lot) Number:	Will be included in the Final Report
Expiration Date:	Will be included in the Final Report
Physical Description:	Liquid
Storage Conditions:	Kept in a controlled temperature area set to maintain 21°C

8.3. Test and Reference Item Characterization

The Sponsor will provide to the Test Facility documentation of the identity, strength, purity, and composition for the Test Item. A Certificate of Analysis or equivalent documentation will be provided for inclusion in the Final Report. The Sponsor will also provide information concerning the regulatory standard that was followed for these evaluations.

The Sponsor has appropriate documentation on file concerning the method of synthesis, fabrication or derivation of the Test Item, and this information is available to the appropriate regulatory agencies should it be requested.

8.4. Analysis of Test Item

A sample (2 vials) of the Test Item will be taken on the completion of the dosing period. Analysis of bulk Test Item for concentration, particle size and purity will be performed.

The first vial will be transferred on ice pack to the analytical laboratory at the Test Facility for concentration and particle size analysis.

The second vial will be transferred on ice pack to the molecular biology laboratory at the Test Facility for purity analysis.

Purity-and Particle size analysis will be performed by IEX- HPLC, Differential Light Scattering (DLS) and capillary electrophoresis (CE) using validated analytical procedures.

Any residual/retained analytical samples (and Test Item used in analysis) will be discarded before issue of the Final Report.

8.5. Reserve Samples

For each batch (lot) of Test and Reference Item components, a reserve sample (1 mL, 100 mg or 1 vial) will be collected and maintained under the appropriate storage conditions by the Test Facility.

Appendix 1

8.6. Test and Reference Item Inventory and Disposition

Records of the receipt, distribution, storage, and disposition of Test and Reference Items will be maintained. With the exception of reserve samples, all unused Sponsor-supplied bulk Test Item will be returned to the Sponsor

Shipping Contact
(b) (6)
Moderna Therapeutics
800 Technology Sq, 8th Floor

E-mail: (b) (6)

9. SAFETY

The safety precautions for the Test Item and dose formulations will be documented in a Test Material Safety Data Sheet (TMSDS) based on the information provided by the Sponsor either by an MSDS or similar document.

10. DOSE FORMULATION AND ANALYSIS

10.1. Preparation of Reference Item

Dose formulation preparations will be performed under a laminar flow hood using clean procedures.

The Reference Item, Phosphate Buffered Saline pH 7.2, will be dispensed on days of dosing (i.e. Days 1, 15 and 29) for administration to Group 1 control animals and as required to dilute the bulk Test Item for administration to Groups 2 to 4 animals. The aliquots will be stored in a refrigerator set to maintain 4°C until use. They will be removed from the refrigerator and allowed to warm to room temperature for at least 30 minutes before dosing.

Any residual volumes will be discarded unless otherwise requested by the Study Director.

10.2. Preparation of Test Item

Dose formulation preparations will be performed under a laminar flow hood using clean procedures.

Test Item dosing formulations will be diluted with Phosphate Buffered Saline, pH 7.2, as necessary for administration. The dosing formulations will be prepared on each days of dosing (i.e. Days 1, 15 and 29) and will be stored in a refrigerator set to maintain 4°C. The dose formulations will be allowed to warm to room temperature for at least 30 minutes prior to dosing. Alternatively, the aliquots can be transferred directly to room temperature.

Any residual volumes of formulated Test Item will be stored in a refrigerator set at 4°C and will be discarded prior to finalisation following approval by the Study Director.

Appendix 1

10.3. Sample Collection and Analysis

Dose formulation samples will be collected for analysis as indicated in the following table. Additional samples may be collected and analyzed at the discretion of the Study Director.

Dose Formulation Sample Collection Schedule

Interval	Homogeneity	Concentration	Sampling From
Day 1[b]	All groups[a]	All groups	Preparation vessel
Day 29[b]	N/A	All groups	Preparation vessel

N/A = not applicable.

[a] The homogeneity results obtained from the top, middle and bottom preparations will be averaged and utilized as the concentration results.

[b] Samples will be collected on the first preparation of the study and on the last preparation of the study.

Samples to be analyzed will be submitted as soon as possible following preparation.

All samples to be analyzed will be transferred on ice packs to the analytical laboratory (CR-MTL).

Any residual/retained analytical samples (and Test Item used in analysis) will be discarded before issue of the Final Report.

10.3.1. Analytical Method

Analyses described below will be performed by HPLC using a validated analytical procedure (Validation Study Number 1801997).

10.3.1.1. Concentration and Homogeneity Analysis

Samples for Analysis:	Duplicate top, middle, and bottom samples (duplicate middle only from Group 1); sent for analysis as noted in Section 10.3. On days where only concentration analysis is required, the formulation will only be sampled from the middle.
Backup Samples:	Triplicate top, middle, and bottom samples (duplicate middle only from Group 1); maintained at the Test Facility. Backup samples may be analyzed at the discretion of the Study Director. On days where only concentration analysis is required, the formulation will only be sampled from the middle.
Sampling Containers:	Appropriate sized containers.
Sample Volume:	0.5 mL for analysis and backup samples
Storage Conditions:	Kept in a refrigerator set to maintain 4°C.
Acceptance Criteria:	For concentration, the criteria for acceptability will be mean sample concentration results within or equal to ± 15% of theoretical concentration. Each individual sample concentration result within or equal to ± 20%. For homogeneity, the criteria for

Appendix 1

acceptability will be a relative standard deviation (RSD) of concentrations of ≤ 5% for each group.

10.3.1.2. Stability Analysis

There will be no stability analysis performed for concentration used on this study.

11. TEST SYSTEM

Species:	Rat
Strain:	Crl:CD(SD) Sprague-Dawley rat
Source:	Charles River Canada Inc., St. Constant, QC, Canada
Number of Males Ordered:	60
Number of Females Ordered:	60
Target Age at Arrival:	4 to 8 weeks
Target Weight at Arrival:	126 to 150 g (males) 101 to 125 g (females)

The actual age and weight of animals received will be listed in the Final Report.

The actual age, weight, and number of animals received will be listed in the Final Report.

11.1. Justification of Test System and Number of Animals

The Sprague Dawley rat was chosen as the animal model for this study as it is an accepted rodent species for preclinical toxicity testing by regulatory agencies.

The total number of animals to be used in this study is considered to be the minimum required to properly characterize the effects of the Test Item. This study has been designed such that it does not require an unnecessary number of animals to accomplish its objectives.

At this time, studies in laboratory animals provide the best available basis for extrapolation to humans and are required to support regulatory submissions. Acceptable models which do not use live animals currently do not exist.

11.2. Animal Identification

Each animal will be identified using a subcutaneously implanted electronic identification chip.

11.3. Environmental Acclimation

A minimum acclimation period of 12 days will be allowed between animal receipt and the start of dosing in order to accustom the animals to the laboratory environment.

Appendix 1

11.4. Selection, Assignment, Replacement, and Disposition of Animals

Animals will be assigned to groups by a stratified randomization scheme designed to achieve similar group mean body weights. Males and females will be randomized separately. Animals in poor health or at extremes of body weight range will not be assigned to groups.

Before the initiation of dosing, any assigned animals considered unsuitable for use in the study will be replaced by alternate animals obtained from the same shipment and maintained under the same environmental conditions.

After initiation of dosing, study animals may be replaced during the replacement period with alternate animals in the event of accidental injury, non-Test Item-related health issues, or similar circumstances.

The alternate animals may be used as replacements on the study within 1 day.

The disposition of all animals will be documented in the study records.

12. HUSBANDRY

12.1. Housing

Animals will be group housed (up to 3 animals of the same sex and same dosing group together) in polycarbonate cages containing appropriate bedding equipped with an automatic watering valve. These housing conditions will be maintained unless deemed inappropriate by the Study Director and/or Clinical Veterinarian. The room(s) in which the animals will be kept will be documented in the study records.

Animals will be separated during designated procedures/activities. Each cage will be clearly labeled with a color-coded cage card indicating study, group, animal number(s), and sex. Cages will be arranged on the racks in group order. Where possible, control group animals will be housed on a separate rack from the Test Item treated animals.

12.2. Environmental Conditions

The targeted conditions for animal room environment will be as follows:

Temperature:	19°C to 25°C
Humidity:	30% to 70%
Light Cycle:	12 hours light and 12 hours dark (except during designated procedures)

12.3. Food

PMI Nutrition International Certified Rodent Chow No. 5CR4 will be provided ad libitum throughout the study, except during designated procedures. The same diet in meal form may be provided to individual animals as warranted by clinical signs (e.g., broken/damaged incisors or other health changes).

Appendix 1

The feed is analyzed by the supplier for nutritional components and environmental contaminants. Results of the analysis are provided by the supplier and are on file at the Test Facility.

It is considered that there are no known contaminants in the feed that would interfere with the objectives of the study.

12.4. Water

Municipal tap water after treatment by reverse osmosis and ultraviolet irradiation will be freely available to each animal via an automatic watering system (except during designated procedures). Water bottles can be provided, if required.

Periodic analysis of the water is performed, and results of these analyses are on file at the Test Facility.

It is considered that there are no known contaminants in the water that could interfere with the outcome of the study.

12.5. Animal Enrichment

Animals will be socially housed for psychological/environmental enrichment and will be provided with items such as a hiding tube and a chewing object, except during study procedures/activities.

12.6. Veterinary Care

Veterinary care will be available throughout the course of the study and animals will be examined by the veterinary staff as warranted by clinical signs or other changes. All veterinary examinations and recommended therapeutic treatments, if any, will be documented in the study records.

In the event that animals show signs of illness or distress, the responsible veterinarian may make initial recommendations about treatment of the animal(s) and/or alteration of study procedures, which must be approved by the Study Director or Scientific designate. All such actions will be properly documented in the study records and, when appropriate, by study plan amendment. Treatment of the animal(s) for minor injuries or ailments may be approved without prior consultation with the Sponsor representative when such treatment does not impact fulfillment of the study objectives. If the condition of the animal(s) warrants significant therapeutic intervention or alterations in study procedures, the Sponsor representative will be contacted, when possible, to discuss appropriate action. If the condition of the animal(s) is such that emergency measures must be taken, the Study Director and/or clinical veterinarian will attempt to consult with the Sponsor representative prior to responding to the medical crisis, but the Study Director and/or veterinarian has authority to act immediately at his/her discretion to alleviate suffering. The Sponsor representative will be fully informed of any such events.

Appendix 1

2	mRNA-1706	10	200	0.05	10	10	-	-
3	mRNA-1706	50	200	0.5	10	10	-	-
4	mRNA-1706	100	200	0.5	10	10	5	5

13.1. Administration of Test and Reference Items

The Test and Reference Items will be administered to the appropriate animals from Groups 1 to 4 via intramuscular injection into the lateral compartment of the thigh alternating legs on Days 1, 15 and 29 (site 1= left thigh, site 2 = right thigh). The volume for each dose will be administered using a syringe/needle within the demarcated area. The first day of dosing will be designated as Day 1 (exception: alternate animals used for replacement after Day 1 will assume the day of the animal being replaced).

The injection area will be marked as frequently as required to allow appropriate visualization of administration sites. Hair may be clipped or shaved if required to improve visualization of the injection sites. The injection site will be documented in the raw data for each dose administered.

13.2. Justification of Route and Dose Levels

The intramuscular route of exposure was selected because this is the intended route of human exposure.

The dose levels for this toxicology study were chosen to approximate a substantial multiple of the anticipated clinical starting dose and top clinical dose. The highest dose to be tested is expected to represent the intended maximum human clinical dose and volume and will be administered by the clinical route (intramuscular). At this dose level, minimal systemic toxicity is expected, but it is possible mild to moderate injection site reaction (redness, swelling) and potentially elevation of systemic cytokine/acute phase markers may be observed. The mid- and low-dose were selected to evaluate the dose-dependent effect of this compound.

14. IN-LIFE PROCEDURES, OBSERVATIONS, AND MEASUREMENTS

The in-life procedures, observations, and measurements listed below will be performed for all main study and recovery animals. These data will be included in an appendix to the study report, but not used in the evaluation of the results, unless considered appropriate by the Study Director. During the study, additional evaluations to those described below and/or scheduled, and considered necessary by the Study Director and/or Veterinarian to assess health status will be

Appendix 1

conducted and duly documented. More frequent observations may be undertaken if considered appropriate.

14.1. Mortality/Moribundity Checks

Frequency:	Twice daily, once in the morning and once in the afternoon, throughout the study.
Procedure:	Animals will be observed for general health/mortality and moribundity. Animals will not be removed from cage during observation, unless necessary for identification or confirmation of possible findings.

14.2. Clinical Observations

14.2.1. Detailed Clinical Observations

Frequency:	Weekly during the dosing and recovery periods, and at least every 2 weeks during the predosing period.
Procedure:	Animals removed from the cage for examination.

14.3. Local Irritation Assessment

Frequency:	On days of dosing; at least 24 and 72 hours post-dose (end of each group). Weekly when there is no dosing and during the recovery period. Following Day 29 dosing, no assessment will be performed on main animals at 72 hours postdose as animals will be sent to necropsy on Day 30.
Procedure:	All animals will have the dose injection site examined for signs of erythema/edema. The Local Irritation Assessment scoring will be performed as follows:

Appendix 1

Erythema (Redness)	Score
No erythema	0
Very slight erythema	1
Mild erythema	2
Moderate to severe erythema	3
Severe erythema (beet redness to slight eschar formation, injury in depth)	4
Notable dermal lesion (maximized)	M
Edema (Swelling)	
No edema	0
Very slight edema	1
Slight edema	2
Moderate edema	3
Severe edema	4

Any other abnormalities will be recorded as they are observed.

14.4. Body Weights

Frequency: Weekly during the dosing and recovery periods, and at least every 2 weeks during the prestudy period.

Procedure: Animals will be individually weighed. A fasted weight will be recorded on the day of necropsy. Terminal body weights will not be collected from animals found dead or euthanized moribund.

14.5. Food Consumption

Frequency: Weekly, starting Day -7, throughout the dosing and recovery periods.

Procedure: Food consumption will be quantitatively measured except for on the day of scheduled euthanasia.

14.6. Ophthalmic Examinations

Frequency: Once prestudy and again at the end of the dosing period. During Week 2 of the recovery period if Test-Item related findings are observed during the dosing period.

Procedure: All animals will be subjected to funduscopic (indirect ophthalmoscopy) and biomicroscopic (slit lamp) examinations. The mydriatic used will be 1% tropicamide.

Evaluation: A report will be included as an appendix to the Final Report.

Appendix 1

14.7. Body Temperature

Frequency: On Day 1 and Day 29 at predose, 6 and 24 hours post dose (end of each group). If body temperature is significantly above normal range (36.0C to 38.0C) the temperature will be monitored daily till return to normal. If clinical observations indicate a possible body temperature changes, measurement may be taken at the discretion of the Study Director.

Procedure: Body temperature will be recorded via subcutaneous implanted transponder.

15. LABORATORY EVALUATIONS

15.1. Clinical Pathology

15.1.1. Sample Collection

Blood will be collected from the abdominal aorta following isoflurane anesthesia. After collection, samples will be transferred to the appropriate laboratory for processing.

Animals will be fasted overnight before blood sampling (for clinical chemistry). Samples will be collected according to the following table.

Samples for Clinical Pathology Evaluation

Group Nos.	Time Point	Hematology	Coagulation	Clinical Chemistry
1-4[a]	Day 30	X	X	X
1 to 4	Day 43	X	X	X
Unscheduled euthanasia (when possible)	Before euthanasia	X	X	X

X = Samples to be collected
a Samples will only be collected from those animals scheduled for euthanasia on Day 30.

Any residual/retained clinical pathology samples will be discarded before issue of the Final Report.

15.1.2. Hematology

Target Volume: 0.5 mL

Anticoagulant: EDTA

Appendix 1

Hematology Parameters

Red blood cell count	White blood cell count
Hemoglobin concentration	Neutrophil count (absolute)
Hematocrit	Lymphocyte count (absolute)
Mean corpuscular volume	Monocyte count (absolute)
Red Blood Cell Distribution Width	Eosinophil count (absolute)
Mean corpuscular hemoglobin concentration	Basophil count (absolute)
Mean corpuscular hemoglobin	Large unstained cells (absolute)
Reticulocyte count (absolute)	Other cells (as appropriate)
Platelet count	

A blood smear will be prepared from each hematology sample. Blood smears will be labeled, stained, and stored. Blood smears may be read to investigate results. If additional examination of blood smears is deemed necessary, the smears may be subsequently evaluated and this evaluation will be described in a study plan amendment.

15.1.3. Coagulation

Target Volume: 0.9 mL (in a 1.0 mL tube)

Anticoagulant: Citrate

Processing: To plasma

Coagulation Parameters

Activated partial thromboplastin time	Prothrombin time
Fibrinogen	Sample Quality

15.1.4. Clinical Chemistry

Target Volume: 0.7 mL

Anticoagulant: None, collected in serum separator tubes

Processing: To serum

Clinical Chemistry Parameters

Alanine aminotransferase	Total protein
Aspartate aminotransferase	Albumin
Alkaline phosphatase	Globulin
Gamma-glutamyltransferase	Albumin/globulin ratio
Creatine Kinase	Glucose
Total bilirubin[a]	Cholesterol
Urea nitrogen	Triglycerides
Creatinine	Sodium
Calcium	Potassium
Phosphorus	Chloride
Sample Quality	

[a] When total bilirubin is > 0.5 mg/dL, indirect and direct bilirubin will also be measured.

Appendix 1

15.1.5. Bone Marrow Smear Evaluation (Optional)

Bone marrow smears will be collected and prepared as described in the Tissue Collection and Preservation table (ATTACHMENT A).

Evaluation of stained smears may be added by amendment at the discretion of the Study Director in consultation with the pathologist and the Sponsor.

15.2. Cytokine Analysis

Blood will be collected from the jugular vein of all recovery animals and preterminally euthanized animals (recovery animals only). After collection, blood samples for serum will be allowed to clot at ambient room temperature and blood samples for plasma will be transferred on wet ice to the appropriate laboratory for processing.

Sample Collection Schedule

Target Blood Volume (mL)			0.5	0.5
Anticoagulant			**None (SST)**	**EDTA**
Centrifugation settings			(b) (4)	
Timepoints			**Sample Type**	
Day	**Hrs**	**No. of Males/ Females**	IFN-α	IL-1ß, IL-6, TNF-α, IP-10, MIP-1-α, MCP-1
1	6	5/5	X	X
15	6	5/5	X	X
29	6	5/5	X	X
43	NAp	5/5	X	X
Matrix			Serum	Plasma
Volume per aliquot (µL)			All volume	All volume
Number of aliquot(s)			1	1
Storage condition (set to maintain)			-80°C	-80°C
Responsible Lab			CR-SHB	CR-SHB

X = Sample to be collected, NAp = Not applicable

The number of aliquots and volumes are targets that may be adjusted based on sample volume availability.

The samples will be analyzed by the Immunology department. Analysis for IL-1ß, IL-6, TNF-α, IP-10, MIP-1-α and MCP-1 will be conducted using a multiplex Luminex method. An ELISA method will be used for the analysis of IFN-α. The procedures to be followed during the course of this study along with the assays acceptance criteria will be detailed in the appropriate analytical procedure. Samples will be analyzed in duplicate.

Appendix 1

Following Study Director approval, any residual/retained samples will be discarded prior to report finalization.

An Immunology Report will be included as an appendix to the Final Report.

15.3. Anti-drug Antibody (ADA) Sample Collection, Processing, and Analysis

Blood will be collected from all animals by jugular venipuncture and/or via the abdominal aorta while under isoflurane anesthesia (terminal and unscheduled samples).

Time Points:	Before initiation of dosing and at study termination (on Day 30 for main animals and on Day 43 for recovery animals).
Target Volume:	0.5 mL
Anticoagulant:	None, collected in serum separator tubes
Processing:	To serum

Samples will be mixed gently and allowed to clot at room temperature until centrifugation which will be carried out as soon as practical (not exceeding 60 minutes after collection). The samples will be centrifuged for (b) (4) in a refrigerated centrifuge (set to maintain (b) (4) at (b) (4) The resultant serum will be separated, transferred to uniquely labeled clear polypropylene tubes, frozen immediately over dry ice and transferred to a freezer set to maintain -80°C.
Samples will be shipped on dry ice to:

Shipping Contact
(b) (6)
Integrated BioTherapeutics, Inc.
4 Research Court
Suite 300
Rockville, MD 20850, USA
Tel: (b) (6)
Fax: (b) (6)
E-mail: (b) (6)

The test site will be notified before shipment of the samples. Upon receipt at the immunology laboratory, the samples will be stored at -80°C.

The samples will be analyzed for rat anti-ZIKA antibodies using a qualified ELISA method.

Any residual/retained samples will be maintained for a minimum of 6 months following issuance of the Draft Report after which samples will be discarded. Alternatively, residual/retained samples will be discarded prior to the 6 month period should the issuance of the Final Report occur prior to the end of the 6 month retention period. An earlier discard of these residual/retained samples may also be requested and authorized by the Study Director.

An Anti-therapeutic Antibody Report will be included as an appendix to the Final Report.

Appendix 1

16. TERMINAL PROCEDURES

Terminal procedures are summarized in the following table:

Terminal Procedures for Main Study and Recovery Animals

Group No.	No. of Animals		Scheduled Euthanasia Day	Necropsy Procedures			Histology[a]	Histopathology[a]
	M	F		Necropsy	Tissue Collection	Organ Weights		
1	10	10	30	X	X	X	Full Tissue	Full Tissue
2	10	10					Full Tissue	Gross Lesions Target Tissues
3	10	10					Full Tissue	Gross Lesions Target Tissues
4	10	10					Full Tissue	Full Tissue
1	5	5	43	X	X	X	Full Tissue	Gross Lesions Target Tissues
4	5	5					Full Tissue	Gross Lesions Target Tissues
Unscheduled Deaths				X	X	-	Full Tissue	Full Tissue
Replaced animals (prestudy)				X	Standard Diagnostic List	-	-	-
Replaced animals (after dosing start)				X	X	-	-	-

X = Procedure to be conducted; - = Not applicable.
[a] See Tissue Collection and Preservation table for listing of tissues.

16.1. Unscheduled Deaths

If a main study or recovery animal dies on study, a necropsy will be conducted and specified tissues will be saved. If necessary, the animal will be refrigerated to minimize autolysis.

Main study or recovery animals may be euthanized for humane reasons as per Test Facility SOPs. The samples for evaluation of clinical pathology parameters and antibody analysis will be obtained if possible as specified in Section 15.

These animals will undergo exsanguination by incision from the abdominal aorta following isoflurane anesthesia unless deemed inappropriate by the Study Director and/or the clinical veterinarian and will undergo necropsy, and specified tissues will be retained. If necessary, the animal will be refrigerated (set to maintain 4°C) to minimize autolysis.

Animals found dead or euthanized before the initiation of dosing will be subject to necropsy and limited tissue retention (standard diagnostic tissue list). Any animal replaced after the start of dosing will be subject to necropsy and tissues will be retained (as per Tissue Collection and Preservation section), and any data generated will not be included in the report unless deemed appropriate by the Study Director.

Appendix 1

16.2. Scheduled Euthanasia

Main study and recovery animals surviving until scheduled euthanasia will have a terminal body weight recorded, samples for clinical pathology, anti-drug antibodies and cytokines will be collected (as appropriate), and will be euthanized by exsanguination by incision from the abdominal aorta following isoflurane anesthesia. When possible, the animals will be euthanized rotating across dose groups such that similar numbers of animals from each group, including controls, will be necropsied throughout the day. Animals will be fasted overnight before their scheduled necropsy.

16.3. Necropsy

Main study and recovery animals will be subjected to a complete necropsy examination, which will include evaluation of the carcass and musculoskeletal system; all external surfaces and orifices; cranial cavity and external surfaces of the brain; and thoracic, abdominal, and pelvic cavities with their associated organs and tissues.

Necropsy procedures will be performed by qualified personnel with appropriate training and experience in animal anatomy and gross pathology. A veterinary pathologist, or other suitably qualified person, will be available.

At the discretion of the necropsy supervising pathologist, images may be generated for illustration of or consultation on gross observations. Generation of such images will be documented and communicated to the Study Director. Images and associated documentation will be retained and archived.

16.4. Organ Weights

The organs identified for weighing in the Tissues Collection and Preservation table will be weighed at necropsy for all scheduled euthanasia animals. Organ weights will not be recorded for animals found dead or euthanized in poor condition or in extremis. Paired organs will be weighed together. In the event of gross abnormalities, in addition to the combined weight, the weight of each organ of a pair may be taken and entered as a tissue comment. Organ weight as a percent of body weight (using the terminal body weight) and organ weight as a percent of brain weight will be calculated.

16.5. Tissue Collection and Preservation

Representative samples of the tissues identified in the Tissue Collection and Preservation table in ATTACHMENT A will be collected from all animals and preserved in 10% neutral buffered formalin, unless otherwise indicated. Additional tissue samples may be collected to elucidate abnormal findings.

Appendix 1

17. HISTOLOGY AND HISTOPATHOLOGY

17.1. Histology

Tissues in the Tissue Collection and Preservation table from animals identified in the Terminal Procedures table will be embedded in paraffin, sectioned, mounted on glass slides, and stained with hematoxylin and eosin.

17.2. Histopathology

Histopathological evaluation will be performed by a board-certified veterinary pathologist Tissues identified by the study pathologist during microscopic evaluation will be communicated to the study Director; tissues will be evaluated and reported. Any additional stains or evaluations, if deemed necessary by the pathologist, will be added by study plan amendment following discussion with the Study Director and in consultation the Sponsor.

At the discretion of the study pathologist and after acknowledgement by the Study Director, images may be captured for consultation purposes.

17.3. Pathology Peer Review

A pathology peer review will be conducted by:

(b) (6)
Moderna Therapeutics
200 Technology Square, 3rd Floor
Cambridge, MA 02116
Tel: (b) (6)
E-mail: (b) (6)

The peer review statement or equivalent documentation will be included as an appendix to the Final Report.

18. CONSTRUCTED VARIABLES

Body Weight Gains	Calculated between at least each interval as well as between the beginning and end of each phase
Organ Weight relative to Body Weight	Calculated against the Terminal body weight for scheduled intervals
Organ Weight relative to Brain Weight	Calculated against the brain weight for scheduled intervals

19. STATISTICAL ANALYSIS

All statistical tests will be conducted at the 5% significance level. All pairwise comparisons will be conducted using two sided tests and will be reported at the 0.1%, 1%, and 5% levels

Appendix 1

Numerical data collected on scheduled occasions for the listed variables will be analyzed as indicated according to sex and occasion. Descriptive statistics number, mean and standard deviation (or %CV or SE when deemed appropriate) will be reported whenever possible. Values may also be expressed as a percentage of predose or control values when deemed appropriate. Inferential statistics will be performed according to the matrix below when possible, but will exclude semi-quantitative data, and any group with less than 3 observations.

Statistical Matrix

Variables for Inferential Analysis	Statistical Method Parametric/ Non-Parametric
Body Weight	X
Body Temperature	X
Hematology Variables	X
Coagulation Variables	X
Clinical Chemistry Variables	X
Cytokines	X
Organ Weights	X
Body Weight Changes	X
Organ Weight relative to Body Weight	X
Organ Weight relative to Brain Weight	X

The following pairwise comparisons will be made:

Group 2 vs. Group 1

Group 3 vs. Group 1

Group 4 vs. Group 1

19.1. Parametric/Non-Parametric

Levene's test will be used to assess the homogeneity of group variances.

Datasets with at least 3 groups will be compared using an overall one-way ANOVA *F*-test if Levene's test is not significant or the Kruskal-Wallis test if it is. If the overall *F*-test or Kruskal-Wallis test is found to be significant, then the above pairwise comparisons will be conducted using Dunnett's or Dunn's test, respectively.

Datasets with 2 groups (the designated control group and 1 other group) will be compared using a *t*-test if Levene's test is not significant or Wilcoxon Rank-Sum test if it is.

20. COMPUTERIZED SYSTEMS

The following critical computerized systems may be used in the study. The actual critical computerized systems used will be specified in the Final Report.

Data for parameters not required by study plan, which are automatically generated by analytical devices used will be retained on file but not reported. Statistical analysis results that are

Appendix 1

generated by the program but are not required by study plan and/or are not scientifically relevant will be retained on file but will not be included in the tabulations.

Critical Computerized Systems

System Name	Description of Data Collected and/or Analyzed
Provantis	In-life; clinical pathology; postmortem
Dispense	Test Material receipt, accountability and/or formulation activities
SRS (CR MTL in-house application built with SAS) and SAS system for Windows and/or In-house reporting software Nevis 2012 (using SAS)	Statistical analyses of numerical in-life, clinical pathology and postmortem data
Mesa Laboratories AmegaView CMS	Continuous Monitoring System. Monitoring of standalone fridges, freezers, incubators, and selected laboratories to measure temperature, relative humidity, and CO2, as appropriate
Johnson Controls Metasys	Building Automation System. Control of HVAC and other building systems, as well as temperature/humidity control and trending in selected laboratories and animal rooms
Empower 3 (Waters Corporation)	Data acquisition for dose formulation analysis, including regression analysis and measurement of concentration and recovery of dose formulations using HPLC. Data regression analysis and measurement of purity.
BioPlex Manager	Cytokine data collection and regression
Softmax Pro GxP	IFN-α data collection
Watson LIMS	Biomarker data analysis
Dynamics (Wyatt)	Data acquisition for particle size analysis of the test item using DLS
(b) (4)	Data acquisition
Excel	Data analyses and tabulation

21. AMENDMENTS AND DEVIATIONS

Changes to the approved study plan shall be made in the form of an amendment, which will be signed and dated by the Study Director. Every reasonable effort will be made to discuss any necessary study plan changes in advance with the Sponsor.

All study plan and SOP deviations will be documented in the study records. Deviations from the study plan and/or SOP related to the phase(s) of the study conducted at a Test Site shall be documented, acknowledged by the PI/IS, and reported to the Study Director for authorization/acknowledgement. The Study Director will notify the Sponsor of deviations that may result in a significant impact on the study as soon as possible.

22. RETENTION OF RECORDS, SAMPLES, AND SPECIMENS

All study-specific raw data, electronic data, documentation, study plan, retained samples and specimens, and interim (if applicable) and final reports will be archived by no later than the date of final report issue. All materials generated by Charles River from this study will be transferred

Appendix 1

to a CR-MTL archives. At least one year after issue of the draft report, the Sponsor will be contacted.

Records to be maintained will include, but will not be limited to, documentation and data for the following:

- Study Plan, study plan amendments, and deviations
- Study schedule
- Study-related correspondence
- Test system receipt, health, and husbandry
- Test and Reference Item receipt, identification, preparation, and analysis
- In-life measurements and observations
- Clinical pathology and cytokine sample collection and evaluation
- Anti-drug Antibodies sample collection
- Gross and microscopic observations and related data
- Organ weight measurements
- Statistical analysis results

23. REPORTING

A comprehensive Draft Report will be prepared following completion of the study and will be finalized following consultation with the Sponsor. The report will include all information necessary to provide a complete and accurate description of the experimental methods and results and any circumstances that may have affected the quality or integrity of the study.

The Sponsor will receive an electronic version of the Draft and Final Report provided in Adobe Acrobat PDF format (hyperlinked and searchable at final) along with a Microsoft Word version of the text. The PDF document will be created from native electronic files to the extent possible, including text and tables generated by the Test Facility. Report components not available in native electronic files and/or original signature pages will be scanned and converted to PDF image files for incorporation. An original copy of the report with the Test Facility's handwritten signatures will be retained.

Reports should be finalized within 6 months of issue of the Draft Report. If the Sponsor has not provided comments to the report within 6 months of draft issue, the report will be finalized by the Test Facility unless other arrangements are made by the Sponsor.

Appendix 1

24. ANIMAL WELFARE

24.1. Institutional Animal Care and Use Committee Approval

The study plan and any amendment(s) or procedures involving the care and use of animals in this study will be reviewed and approved by CR SHB Institutional Animal Care and Use Committee (IACUC). During the study, the care and use of animals will be conducted with guidance from the USA National Research Council and the Canadian Council on Animal Care (CCAC).

Appendix 1

TEST FACILITY APPROVAL

The signature below acknowledges Test Facility Management's responsibility to the study as defined by the relevant GLP regulations.

(b) (6) _____ Date: 15 March 2017

The signature below indicates that the Study Director approves the study plan.

Appendix 1

SUMMARY OF CHANGES AND JUSTIFICATIONS

Study Plan effective date: 15 Mar 2017

Note: When applicable, additions are indicated in bold underlined text and deletions are indicated in bold strikethrough text in the affected sections of the document.

Item or Section(s)	Justification
Amendment 1	**Date: 27-Mar-2017**
2. PROPOSED STUDY SCHEDULE	To include new schedule following delay in dosing initiation due to test item delivery date.
10.3.Sample Collection and Analysis	To remove homogeneity for Group 1 based on sample collection in section 10.3.1.1.
10.3.1. Analytical Method	To correct the dose formulation analysis validation number.
10.3.1.2. Stability Analysis	To include end of use for bulk test item.
13. EXPERIMENTAL DESIGN	To correct the dose concentration for mid dose group.
15.1.1. Sample Collection	To correct the group numbers to be evaluation on both occasions.

Appendix 1

TABLE OF CONTENTS

Appendix 1

1. OBJECTIVE(S)

The objectives of this study are to determine the potential toxicity of mRNA-1706, when given by intramuscular injection for 1 month (3 doses) to rats and to evaluate the potential reversibility of any findings following a 2-week recovery period.

1.1. Study Classification

Study Category:	TOX
Study Type:	Repeat Dose Toxicity
Study Design:	Parallel
Primary Treatment CAS Registry Number:	Not Available
Primary Treatment Unique Ingredient ID:	Not Available
Class of Compound:	mRNA

2. PROPOSED STUDY SCHEDULE

Proposed study dates are listed below. Actual applicable dates will be included in the Final Report.

Experimental Start Date:	~~**15**~~ **16** Mar 2017 (First date of study-specific data collection)
Experimental Completion Date:	~~**18 Aug 2017**~~ **Week of 25 Sep 2017** (Last date data are collected from the study)
Animal Arrival:	~~**15**~~ **16** Mar 2017
Initiation of Dosing:	~~**27 Mar 2017**~~ **03 May 2017**
Completion of In-life:	~~**26 Apr 2017**~~ **02 Jun 2017** (main study animals) ~~**09 May 2017**~~ **15 Jun 2017** (recovery animals) (Last date of necropsy)
Unaudited Draft Report:	~~**06 Jul 2017**~~ **Will be included by amendment**
Draft Report:	~~**11 Aug 2017**~~ **Will be included by amendment**
Final Report:	~~**18 Aug 2017**~~ **Week of 25 Sep 2017** (Expected date of Study Director signature)

3. GUIDELINES FOR STUDY DESIGN

The design of this study was based on the study objective(s), the overall product development strategy for the Test Item, and the following study design guidelines:

- OECD Guideline 407. *Repeated Dose 28-day Oral Toxicity Study in Rodents*.

Appendix 1

- Committee for Medicinal Products for Human Use (CHMP). *Note for Guidance on Repeated Dose Toxicity*. CPMP/SWP/1042/99corr.
- ICH Harmonised Tripartite Guideline M3 (R2). *Nonclinical Safety Studies for the Conduct of Human Clinical Trials and Marketing Authorization for Pharmaceuticals*.
- Japanese Guidelines for Nonclinical Studies of Drugs Manual (1995). *Guidelines for Nonclinical Pharmacokinetic Studies*, *Guidelines for Toxicity Studies of Drugs (Chapter 3, Repeated Dose Toxicity Studies)*
- Appendix to Director General Notification, No. 12-Nousan-8147, 24 November 2000, Agricultural Production Bureau, Ministry of Agriculture, Forestry and Fisheries of Japan (JMAFF).

4. REGULATORY COMPLIANCE

The study will be performed in accordance with the OECD Principles of Good Laboratory Practice and as accepted by Regulatory Authorities throughout the European Union, United States of America (FDA), Japan (MHLW), and other countries that are signatories to the OECD Mutual Acceptance of Data Agreement.

Any portion of this study conducted in the USA will be performed in accordance with the U.S. Department of Health and Human Services, Food and Drug Administration. United States Code of Federal Regulations, Title 21, Part 58: Good Laboratory Practice for Nonclinical Laboratory Studies and as accepted by Regulatory Authorities throughout the European Union (OECD Principles of Good Laboratory Practice), Japan (MHLW), and other countries that are signatories to the OECD Mutual Acceptance of Data Agreement.

Exceptions to GLPs include the following study elements:

- Characterization of the Test Item will be performed by the Sponsor or Sponsor subcontractor according to established SOPs, controls, and approved test methodologies to ensure integrity and validity of the results generated; these analyses will not be conducted in compliance with the GLP or GMP regulations.
- Analysis of cytokines and anti-therapeutic antibody will be conducted using scientifically qualified methods and in accordance with all applicable analytical procedures.
- Pathology peer review

5. QUALITY ASSURANCE

5.1. Test Facility

The Test Facility Quality Assurance Program (QAP) will monitor the study to assure the facilities, equipment, personnel, methods, practices, records, and controls are in conformance with Good Laboratory Practice regulations. The QAP will review the study plan, conduct inspections at intervals adequate to assure the integrity of the study, and audit the Final Report to

Appendix 1

assure that it accurately describes the methods and standard operating procedures and that the reported results accurately reflect the raw data of the study.

The Test Facility QAP contact for this study is indicated below:

(b) (6)
Charles River Laboratories Montreal ULC
22022 Transcanadienne
Senneville Quebec
Canada H9X 3R3
Tel: (b) (6)
E-mail: (b) (6)

5.2. Test Facility-designated Subcontractor(s)

The following study phases performed by Test Facility-designated subcontractors will be audited by the Test Facility QAP:

- Ophthalmology

6. SPONSOR

Sponsor Representative

Each PI is required to report any deviations or other circumstances that could affect the quality or integrity of the study to the Study Director in a timely manner. Each PI will provide a report addressing their assigned phase of the study, which will be included as an appendix to the Final Report. The phase report will include the following:

- The archive site for all records, samples, specimens and reports generated from the phase or segment (alternatively, details regarding the retention of the materials may be provided to the Study Director for inclusion in the Final Report)
- A listing of critical computerized systems used in the conduct and/or interpretation of the assigned study phase

8. TEST AND REFERENCE ITEMS

8.1. Test Item

Identification:	mRNA-1706
Supplier:	Moderna Therapeutics, Inc.
Batch (Lot) Number:	MTDP17025
Concentration:	To be included by amendment
Retest Date:	Concomitant assessment, ongoing
Physical Description:	White to off-white lipid nanoparticle dispersion
Storage Conditions:	Kept in a freezer set to maintain -20°C

Appendix 1

8.2. Reference Item

Identification:	Phosphate-buffered Saline (PBS) pH 7.2
Supplier:	Will be included in the Final Report
Batch (Lot) Number:	Will be included in the Final Report
Expiration Date:	Will be included in the Final Report
Physical Description:	Liquid
Storage Conditions:	Kept in a controlled temperature area set to maintain 21°C

8.3. Test and Reference Item Characterization

The Sponsor will provide to the Test Facility documentation of the identity, strength, purity, and composition for the Test Item. A Certificate of Analysis or equivalent documentation will be provided for inclusion in the Final Report. The Sponsor will also provide information concerning the regulatory standard that was followed for these evaluations.

The Sponsor has appropriate documentation on file concerning the method of synthesis, fabrication or derivation of the Test Item, and this information is available to the appropriate regulatory agencies should it be requested.

8.4. Analysis of Test Item

A sample (2 vials) of the Test Item will be taken on the completion of the dosing period. Analysis of bulk Test Item for concentration, particle size and purity will be performed.

The first vial will be transferred on ice pack to the analytical laboratory at the Test Facility for concentration and particle size analysis.

The second vial will be transferred on ice pack to the molecular biology laboratory at the Test Facility for purity analysis.

Purity-and Particle size analysis will be performed by IEX- HPLC, Differential Light Scattering (DLS) and capillary electrophoresis (CE) using validated analytical procedures.

Any residual/retained analytical samples (and Test Item used in analysis) will be discarded before issue of the Final Report.

8.5. Reserve Samples

For each batch (lot) of Test and Reference Item components, a reserve sample (1 mL, 100 mg or 1 vial) will be collected and maintained under the appropriate storage conditions by the Test Facility.

Appendix 1

8.6. Test and Reference Item Inventory and Disposition

Records of the receipt, distribution, storage, and disposition of Test and Reference Items will be maintained. With the exception of reserve samples, all unused Sponsor-supplied bulk Test Item will be returned to the Sponsor

Shipping Contact
(b) (6)

Cell: (b) (6)
E-mail: (b) (6)

9. SAFETY

The safety precautions for the Test Item and dose formulations will be documented in a Test Material Safety Data Sheet (TMSDS) based on the information provided by the Sponsor either by an MSDS or similar document.

10. DOSE FORMULATION AND ANALYSIS

10.1. Preparation of Reference Item

Dose formulation preparations will be performed under a laminar flow hood using clean procedures.

The Reference Item, Phosphate Buffered Saline pH 7.2, will be dispensed on days of dosing (i.e. Days 1, 15 and 29) for administration to Group 1 control animals and as required to dilute the bulk Test Item for administration to Groups 2 to 4 animals. The aliquots will be stored in a refrigerator set to maintain 4°C until use. They will be removed from the refrigerator and allowed to warm to room temperature for at least 30 minutes before dosing.

Any residual volumes will be discarded unless otherwise requested by the Study Director.

10.2. Preparation of Test Item

Dose formulation preparations will be performed under a laminar flow hood using clean procedures.

Test Item dosing formulations will be diluted with Phosphate Buffered Saline, pH 7.2, as necessary for administration. The dosing formulations will be prepared on each days of dosing (i.e. Days 1, 15 and 29) and will be stored in a refrigerator set to maintain 4°C. The dose formulations will be allowed to warm to room temperature for at least 30 minutes prior to dosing. Alternatively, the aliquots can be transferred directly to room temperature.

Any residual volumes of formulated Test Item will be stored in a refrigerator set at 4°C and will be discarded prior to finalisation following approval by the Study Director.

Appendix 1

10.3. Sample Collection and Analysis

Dose formulation samples will be collected for analysis as indicated in the following table. Additional samples may be collected and analyzed at the discretion of the Study Director.

Dose Formulation Sample Collection Schedule

Interval	Homogeneity	Concentration	Sampling From
Day 1[b]	~~All groups~~ **2 to 4**[a]	All groups	Preparation vessel
Day 29[b]	N/A	All groups	Preparation vessel

N/A = not applicable.

[a] The homogeneity results obtained from the top, middle and bottom preparations will be averaged and utilized as the concentration results.

[b] Samples will be collected on the first preparation of the study and on the last preparation of the study.

Samples to be analyzed will be submitted as soon as possible following preparation.

All samples to be analyzed will be transferred on ice packs to the analytical laboratory (CR-MTL).

Any residual/retained analytical samples (and Test Item used in analysis) will be discarded before issue of the Final Report.

10.3.1. Analytical Method

Analyses described below will be performed by HPLC using a validated analytical procedure (Validation Study Number ~~**1801997**~~ **1801737**).

10.3.1.1. Concentration and Homogeneity Analysis

Samples for Analysis:	Duplicate top, middle, and bottom samples (duplicate middle only from Group 1); sent for analysis as noted in Section 10.3. On days where only concentration analysis is required, the formulation will only be sampled from the middle.
Backup Samples:	Triplicate top, middle, and bottom samples (duplicate middle only from Group 1); maintained at the Test Facility. Backup samples may be analyzed at the discretion of the Study Director. On days where only concentration analysis is required, the formulation will only be sampled from the middle.
Sampling Containers:	Appropriate sized containers.
Sample Volume:	0.5 mL for analysis and backup samples
Storage Conditions:	Kept in a refrigerator set to maintain 4°C.
Acceptance Criteria:	For concentration, the criteria for acceptability will be mean sample concentration results within or equal to ± 15% of theoretical concentration. Each individual sample concentration result within or equal to ± 20%. For homogeneity, the criteria for

Appendix 1

acceptability will be a relative standard deviation (RSD) of concentrations of ≤ 5% for each group.

10.3.1.2. Stability Analysis

There will be no stability analysis performed for concentration used on this study**, however, end of use stability analysis on the bulk test item will be performed at the end of the dosing period**.

11. TEST SYSTEM

Species:	Rat
Strain:	Crl:CD(SD) Sprague-Dawley rat
Source:	Charles River Canada Inc., St. Constant, QC, Canada
Number of Males Ordered:	60
Number of Females Ordered:	60
Target Age at Arrival:	4 to 8 weeks
Target Weight at Arrival:	126 to 150 g (males) 101 to 125 g (females)

The actual age and weight of animals received will be listed in the Final Report.

The actual age, weight, and number of animals received will be listed in the Final Report.

11.1. Justification of Test System and Number of Animals

The Sprague Dawley rat was chosen as the animal model for this study as it is an accepted rodent species for preclinical toxicity testing by regulatory agencies.

The total number of animals to be used in this study is considered to be the minimum required to properly characterize the effects of the Test Item. This study has been designed such that it does not require an unnecessary number of animals to accomplish its objectives.

At this time, studies in laboratory animals provide the best available basis for extrapolation to humans and are required to support regulatory submissions. Acceptable models which do not use live animals currently do not exist.

11.2. Animal Identification

Each animal will be identified using a subcutaneously implanted electronic identification chip.

11.3. Environmental Acclimation

A minimum acclimation period of 12 days will be allowed between animal receipt and the start of dosing in order to accustom the animals to the laboratory environment.

Appendix 1

11.4. Selection, Assignment, Replacement, and Disposition of Animals

Animals will be assigned to groups by a stratified randomization scheme designed to achieve similar group mean body weights. Males and females will be randomized separately. Animals in poor health or at extremes of body weight range will not be assigned to groups.

Before the initiation of dosing, any assigned animals considered unsuitable for use in the study will be replaced by alternate animals obtained from the same shipment and maintained under the same environmental conditions.

After initiation of dosing, study animals may be replaced during the replacement period with alternate animals in the event of accidental injury, non-Test Item-related health issues, or similar circumstances.

The alternate animals may be used as replacements on the study within 1 day.

The disposition of all animals will be documented in the study records.

12. HUSBANDRY

12.1. Housing

Animals will be group housed (up to 3 animals of the same sex and same dosing group together) in polycarbonate cages containing appropriate bedding equipped with an automatic watering valve. These housing conditions will be maintained unless deemed inappropriate by the Study Director and/or Clinical Veterinarian. The room(s) in which the animals will be kept will be documented in the study records.

Animals will be separated during designated procedures/activities. Each cage will be clearly labeled with a color-coded cage card indicating study, group, animal number(s), and sex. Cages will be arranged on the racks in group order. Where possible, control group animals will be housed on a separate rack from the Test Item treated animals.

12.2. Environmental Conditions

The targeted conditions for animal room environment will be as follows:

Temperature:	19°C to 25°C
Humidity:	30% to 70%
Light Cycle:	12 hours light and 12 hours dark (except during designated procedures)

12.3. Food

PMI Nutrition International Certified Rodent Chow No. 5CR4 will be provided ad libitum throughout the study, except during designated procedures. The same diet in meal form may be provided to individual animals as warranted by clinical signs (e.g., broken/damaged incisors or other health changes).

Appendix 1

The feed is analyzed by the supplier for nutritional components and environmental contaminants. Results of the analysis are provided by the supplier and are on file at the Test Facility.

It is considered that there are no known contaminants in the feed that would interfere with the objectives of the study.

12.4. Water

Municipal tap water after treatment by reverse osmosis and ultraviolet irradiation will be freely available to each animal via an automatic watering system (except during designated procedures). Water bottles can be provided, if required.

Periodic analysis of the water is performed, and results of these analyses are on file at the Test Facility.

It is considered that there are no known contaminants in the water that could interfere with the outcome of the study.

12.5. Animal Enrichment

Animals will be socially housed for psychological/environmental enrichment and will be provided with items such as a hiding tube and a chewing object, except during study procedures/activities.

12.6. Veterinary Care

Veterinary care will be available throughout the course of the study and animals will be examined by the veterinary staff as warranted by clinical signs or other changes. All veterinary examinations and recommended therapeutic treatments, if any, will be documented in the study records.

In the event that animals show signs of illness or distress, the responsible veterinarian may make initial recommendations about treatment of the animal(s) and/or alteration of study procedures, which must be approved by the Study Director or Scientific designate. All such actions will be properly documented in the study records and, when appropriate, by study plan amendment. Treatment of the animal(s) for minor injuries or ailments may be approved without prior consultation with the Sponsor representative when such treatment does not impact fulfillment of the study objectives. If the condition of the animal(s) warrants significant therapeutic intervention or alterations in study procedures, the Sponsor representative will be contacted, when possible, to discuss appropriate action. If the condition of the animal(s) is such that emergency measures must be taken, the Study Director and/or clinical veterinarian will attempt to consult with the Sponsor representative prior to responding to the medical crisis, but the Study Director and/or veterinarian has authority to act immediately at his/her discretion to alleviate suffering. The Sponsor representative will be fully informed of any such events.

Appendix 1

13. EXPERIMENTAL DESIGN

Experimental Design

Group No.	Test Material	Dose Level (µg/dose)	Dose Volume (µL/dose)	Dose Concentration (mg/mL)	No. of Animals			
					Main Study		Recovery Study	
					Males	Females	Males	Females
1	Reference Item	0	200	0	10	10	5	5
2	mRNA-1706	10	200	0.05	10	10	-	-
3	mRNA-1706	50	200	0.25	10	10	-	-
4	mRNA-1706	100	200	0.5	10	10	5	5

13.1. Administration of Test and Reference Items

The Test and Reference Items will be administered to the appropriate animals from Groups 1 to 4 via intramuscular injection into the lateral compartment of the thigh alternating legs on Days 1, 15 and 29 (site 1= left thigh, site 2 = right thigh). The volume for each dose will be administered using a syringe/needle within the demarcated area. The first day of dosing will be designated as Day 1 (exception: alternate animals used for replacement after Day 1 will assume the day of the animal being replaced).

The injection area will be marked as frequently as required to allow appropriate visualization of administration sites. Hair may be clipped or shaved if required to improve visualization of the injection sites. The injection site will be documented in the raw data for each dose administered.

13.2. Justification of Route and Dose Levels

The intramuscular route of exposure was selected because this is the intended route of human exposure.

The dose levels for this toxicology study were chosen to approximate a substantial multiple of the anticipated clinical starting dose and top clinical dose. The highest dose to be tested is expected to represent the intended maximum human clinical dose and volume and will be administered by the clinical route (intramuscular). At this dose level, minimal systemic toxicity is expected, but it is possible mild to moderate injection site reaction (redness, swelling) and potentially elevation of systemic cytokine/acute phase markers may be observed. The mid- and low-dose were selected to evaluate the dose-dependent effect of this compound.

14. IN-LIFE PROCEDURES, OBSERVATIONS, AND MEASUREMENTS

The in-life procedures, observations, and measurements listed below will be performed for all main study and recovery animals. These data will be included in an appendix to the study report, but not used in the evaluation of the results, unless considered appropriate by the Study Director. During the study, additional evaluations to those described below and/or scheduled, and considered necessary by the Study Director and/or Veterinarian to assess health status will be

Appendix 1

conducted and duly documented. More frequent observations may be undertaken if considered appropriate.

14.1. Mortality/Moribundity Checks

Frequency:	Twice daily, once in the morning and once in the afternoon, throughout the study.
Procedure:	Animals will be observed for general health/mortality and moribundity. Animals will not be removed from cage during observation, unless necessary for identification or confirmation of possible findings.

14.2. Clinical Observations

14.2.1. Detailed Clinical Observations

Frequency:	Weekly during the dosing and recovery periods, and at least every 2 weeks during the predosing period.
Procedure:	Animals removed from the cage for examination.

14.3. Local Irritation Assessment

Frequency:	On days of dosing; at least 24 and 72 hours post-dose (end of each group). Weekly when there is no dosing and during the recovery period. Following Day 29 dosing, no assessment will be performed on main animals at 72 hours postdose as animals will be sent to necropsy on Day 30.
Procedure:	All animals will have the dose injection site examined for signs of erythema/edema. The Local Irritation Assessment scoring will be performed as follows:

Appendix 1

Erythema (Redness)	Score
No erythema	0
Very slight erythema	1
Mild erythema	2
Moderate to severe erythema	3
Severe erythema (beet redness to slight eschar formation, injury in depth)	4
Notable dermal lesion (maximized)	M
Edema (Swelling)	
No edema	0
Very slight edema	1
Slight edema	2
Moderate edema	3
Severe edema	4

Any other abnormalities will be recorded as they are observed.

14.4. Body Weights

Frequency: Weekly during the dosing and recovery periods, and at least every 2 weeks during the prestudy period.

Procedure: Animals will be individually weighed. A fasted weight will be recorded on the day of necropsy. Terminal body weights will not be collected from animals found dead or euthanized moribund.

14.5. Food Consumption

Frequency: Weekly, starting Day -7, throughout the dosing and recovery periods.

Procedure: Food consumption will be quantitatively measured except for on the day of scheduled euthanasia.

14.6. Ophthalmic Examinations

Frequency: Once prestudy and again at the end of the dosing period. During Week 2 of the recovery period if Test-Item related findings are observed during the dosing period.

Procedure: All animals will be subjected to funduscopic (indirect ophthalmoscopy) and biomicroscopic (slit lamp) examinations. The mydriatic used will be 1% tropicamide.

Evaluation: A report will be included as an appendix to the Final Report.

Appendix 1

14.7. Body Temperature

Frequency: On Day 1 and Day 29 at predose, 6 and 24 hours post dose (end of each group). If body temperature is significantly above normal range (36.0C to 38.0C) the temperature will be monitored daily till return to normal. If clinical observations indicate a possible body temperature changes, measurement may be taken at the discretion of the Study Director.

Procedure: Body temperature will be recorded via subcutaneous implanted transponder.

15. LABORATORY EVALUATIONS

15.1. Clinical Pathology

15.1.1. Sample Collection

Blood will be collected from the abdominal aorta following isoflurane anesthesia. After collection, samples will be transferred to the appropriate laboratory for processing.

Animals will be fasted overnight before blood sampling (for clinical chemistry). Samples will be collected according to the following table.

Samples for Clinical Pathology Evaluation

Group Nos.	Time Point	Hematology	Coagulation	Clinical Chemistry
~~1~~ ~~4~~[a] **1 to 4**[a]	Day 30	X	X	X
1 ~~to~~ **and** 4	Day 43	X	X	X
Unscheduled euthanasia (when possible)	Before euthanasia	X	X	X

X = Samples to be collected
a Samples will only be collected from those animals scheduled for euthanasia on Day 30.

Any residual/retained clinical pathology samples will be discarded before issue of the Final Report.

15.1.2. Hematology

Target Volume: 0.5 mL

Anticoagulant: EDTA

Appendix 1

Hematology Parameters

Red blood cell count	White blood cell count
Hemoglobin concentration	Neutrophil count (absolute)
Hematocrit	Lymphocyte count (absolute)
Mean corpuscular volume	Monocyte count (absolute)
Red Blood Cell Distribution Width	Eosinophil count (absolute)
Mean corpuscular hemoglobin concentration	Basophil count (absolute)
Mean corpuscular hemoglobin	Large unstained cells (absolute)
Reticulocyte count (absolute)	Other cells (as appropriate)
Platelet count	

A blood smear will be prepared from each hematology sample. Blood smears will be labeled, stained, and stored. Blood smears may be read to investigate results. If additional examination of blood smears is deemed necessary, the smears may be subsequently evaluated and this evaluation will be described in a study plan amendment.

15.1.3. Coagulation

Target Volume: 0.9 mL (in a 1.0 mL tube)

Anticoagulant: Citrate

Processing: To plasma

Coagulation Parameters

Activated partial thromboplastin time	Prothrombin time
Fibrinogen	Sample Quality

15.1.4. Clinical Chemistry

Target Volume: 0.7 mL

Anticoagulant: None, collected in serum separator tubes

Processing: To serum

Clinical Chemistry Parameters

Alanine aminotransferase	Total protein
Aspartate aminotransferase	Albumin
Alkaline phosphatase	Globulin
Gamma-glutamyltransferase	Albumin/globulin ratio
Creatine Kinase	Glucose
Total bilirubin[a]	Cholesterol
Urea nitrogen	Triglycerides
Creatinine	Sodium
Calcium	Potassium
Phosphorus	Chloride
Sample Quality	

[a] When total bilirubin is > 0.5 mg/dL, indirect and direct bilirubin will also be measured.

Appendix 1

15.1.5. Bone Marrow Smear Evaluation (Optional)

Bone marrow smears will be collected and prepared as described in the Tissue Collection and Preservation table (ATTACHMENT A).

Evaluation of stained smears may be added by amendment at the discretion of the Study Director in consultation with the pathologist and the Sponsor.

15.2. Cytokine Analysis

Blood will be collected from the jugular vein of all recovery animals and preterminally euthanized animals (recovery animals only). After collection, blood samples for serum will be allowed to clot at ambient room temperature and blood samples for plasma will be transferred on wet ice to the appropriate laboratory for processing.

Sample Collection Schedule

Target Blood Volume (mL)			0.5	0.5
Anticoagulant			**None (SST)**	**EDTA**
Centrifugation settings			(b) (4)	
Timepoints			**Sample Type**	
Day	**Hrs**	**No. of Males/ Females**	IFN-α	IL-1ß, IL-6, TNF-α, IP-10, MIP-1-α, MCP-1
1	6	5/5	X	X
15	6	5/5	X	X
29	6	5/5	X	X
43	NAp	5/5	X	X
Matrix			Serum	Plasma
Volume per aliquot (µL)			All volume	All volume
Number of aliquot(s)			1	1
Storage condition (set to maintain)			-80°C	-80°C
Responsible Lab			CR-SHB	CR-SHB

X = Sample to be collected, NAp = Not applicable

The number of aliquots and volumes are targets that may be adjusted based on sample volume availability.

The samples will be analyzed by the Immunology department. Analysis for IL-1ß, IL-6, TNF-α, IP-10, MIP-1-α and MCP-1 will be conducted using a multiplex Luminex method. An ELISA method will be used for the analysis of IFN-α. The procedures to be followed during the course of this study along with the assays acceptance criteria will be detailed in the appropriate analytical procedure. Samples will be analyzed in duplicate.

Appendix 1

Following Study Director approval, any residual/retained samples will be discarded prior to report finalization.

An Immunology Report will be included as an appendix to the Final Report.

15.3. Anti-drug Antibody (ADA) Sample Collection, Processing, and Analysis

Blood will be collected from all animals by jugular venipuncture and/or via the abdominal aorta while under isoflurane anesthesia (terminal and unscheduled samples).

Time Points:	Before initiation of dosing and at study termination (on Day 30 for main animals and on Day 43 for recovery animals).
Target Volume:	0.5 mL
Anticoagulant:	None, collected in serum separator tubes
Processing:	To serum

Samples will be mixed gently and allowed to clot at room temperature until centrifugation which will be carried out as soon as practical (not exceeding 60 minutes after collection). The samples will be centrifuged for (b) (4) in a refrigerated centrifuge (set to maintain (b) (4)) at (b) (4) The resultant serum will be separated, transferred to uniquely labeled clear polypropylene tubes, frozen immediately over dry ice and transferred to a freezer set to maintain -80°C.
Samples will be shipped on dry ice to:

Shipping Contact
(b) (6)
Integrated BioTherapeutics, Inc.
4 Research Court
Suite 300
Rockville, MD 20850, USA
Tel: (b) (6)
Fax: (b) (6)
E-mail: (b) (6)

The test site will be notified before shipment of the samples. Upon receipt at the immunology laboratory, the samples will be stored at -80°C.

The samples will be analyzed for rat anti-ZIKA antibodies using a qualified ELISA method.

Any residual/retained samples will be maintained for a minimum of 6 months following issuance of the Draft Report after which samples will be discarded. Alternatively, residual/retained samples will be discarded prior to the 6 month period should the issuance of the Final Report occur prior to the end of the 6 month retention period. An earlier discard of these residual/retained samples may also be requested and authorized by the Study Director.

An Anti-therapeutic Antibody Report will be included as an appendix to the Final Report.

Appendix 1

16. TERMINAL PROCEDURES

Terminal procedures are summarized in the following table:

Terminal Procedures for Main Study and Recovery Animals

Group No.	No. of Animals		Scheduled Euthanasia Day	Necropsy Procedures			Histology[a]	Histopathology[a]
	M	F		Necropsy	Tissue Collection	Organ Weights		
1	10	10	30	X	X	X	Full Tissue	Full Tissue
2	10	10					Full Tissue	Gross Lesions Target Tissues
3	10	10					Full Tissue	Gross Lesions Target Tissues
4	10	10					Full Tissue	Full Tissue
1	5	5	43	X	X	X	Full Tissue	Gross Lesions Target Tissues
4	5	5					Full Tissue	Gross Lesions Target Tissues
Unscheduled Deaths				X	X	-	Full Tissue	Full Tissue
Replaced animals (prestudy)				X	Standard Diagnostic List	-	-	-
Replaced animals (after dosing start)				X	X	-	-	-

X = Procedure to be conducted; - = Not applicable.
[a] See Tissue Collection and Preservation table for listing of tissues.

16.1. Unscheduled Deaths

If a main study or recovery animal dies on study, a necropsy will be conducted and specified tissues will be saved. If necessary, the animal will be refrigerated to minimize autolysis.

Main study or recovery animals may be euthanized for humane reasons as per Test Facility SOPs. The samples for evaluation of clinical pathology parameters and antibody analysis will be obtained if possible as specified in Section 15.

These animals will undergo exsanguination by incision from the abdominal aorta following isoflurane anesthesia unless deemed inappropriate by the Study Director and/or the clinical veterinarian and will undergo necropsy, and specified tissues will be retained. If necessary, the animal will be refrigerated (set to maintain 4°C) to minimize autolysis.

Animals found dead or euthanized before the initiation of dosing will be subject to necropsy and limited tissue retention (standard diagnostic tissue list). Any animal replaced after the start of dosing will be subject to necropsy and tissues will be retained (as per Tissue Collection and Preservation section), and any data generated will not be included in the report unless deemed appropriate by the Study Director.

Appendix 1

16.2. Scheduled Euthanasia

Main study and recovery animals surviving until scheduled euthanasia will have a terminal body weight recorded, samples for clinical pathology, anti-drug antibodies and cytokines will be collected (as appropriate), and will be euthanized by exsanguination by incision from the abdominal aorta following isoflurane anesthesia. When possible, the animals will be euthanized rotating across dose groups such that similar numbers of animals from each group, including controls, will be necropsied throughout the day. Animals will be fasted overnight before their scheduled necropsy.

16.3. Necropsy

Main study and recovery animals will be subjected to a complete necropsy examination, which will include evaluation of the carcass and musculoskeletal system; all external surfaces and orifices; cranial cavity and external surfaces of the brain; and thoracic, abdominal, and pelvic cavities with their associated organs and tissues.

Necropsy procedures will be performed by qualified personnel with appropriate training and experience in animal anatomy and gross pathology. A veterinary pathologist, or other suitably qualified person, will be available.

At the discretion of the necropsy supervising pathologist, images may be generated for illustration of or consultation on gross observations. Generation of such images will be documented and communicated to the Study Director. Images and associated documentation will be retained and archived.

16.4. Organ Weights

The organs identified for weighing in the Tissues Collection and Preservation table will be weighed at necropsy for all scheduled euthanasia animals. Organ weights will not be recorded for animals found dead or euthanized in poor condition or in extremis. Paired organs will be weighed together. In the event of gross abnormalities, in addition to the combined weight, the weight of each organ of a pair may be taken and entered as a tissue comment. Organ weight as a percent of body weight (using the terminal body weight) and organ weight as a percent of brain weight will be calculated.

16.5. Tissue Collection and Preservation

Representative samples of the tissues identified in the Tissue Collection and Preservation table in ATTACHMENT A will be collected from all animals and preserved in 10% neutral buffered formalin, unless otherwise indicated. Additional tissue samples may be collected to elucidate abnormal findings.

Appendix 1

17. HISTOLOGY AND HISTOPATHOLOGY

17.1. Histology

Tissues in the Tissue Collection and Preservation table from animals identified in the Terminal Procedures table will be embedded in paraffin, sectioned, mounted on glass slides, and stained with hematoxylin and eosin.

17.2. Histopathology

Histopathological evaluation will be performed by a board-certified veterinary pathologist Tissues identified by the study pathologist during microscopic evaluation will be communicated to the study Director; tissues will be evaluated and reported. Any additional stains or evaluations, if deemed necessary by the pathologist, will be added by study plan amendment following discussion with the Study Director and in consultation the Sponsor.

At the discretion of the study pathologist and after acknowledgement by the Study Director, images may be captured for consultation purposes.

17.3. Pathology Peer Review

A pathology peer review will be conducted by:

(b) (6)
Moderna Therapeutics
200 Technology Square, 3rd Floor
Cambridge, MA 02116
Tel: (b) (6)
E-mail: (b) (6)

The peer review statement or equivalent documentation will be included as an appendix to the Final Report.

18. CONSTRUCTED VARIABLES

Body Weight Gains	Calculated between at least each interval as well as between the beginning and end of each phase
Organ Weight relative to Body Weight	Calculated against the Terminal body weight for scheduled intervals
Organ Weight relative to Brain Weight	Calculated against the brain weight for scheduled intervals

19. STATISTICAL ANALYSIS

All statistical tests will be conducted at the 5% significance level. All pairwise comparisons will be conducted using two sided tests and will be reported at the 0.1%, 1%, and 5% levels

Appendix 1

Numerical data collected on scheduled occasions for the listed variables will be analyzed as indicated according to sex and occasion. Descriptive statistics number, mean and standard deviation (or %CV or SE when deemed appropriate) will be reported whenever possible. Values may also be expressed as a percentage of predose or control values when deemed appropriate. Inferential statistics will be performed according to the matrix below when possible, but will exclude semi-quantitative data, and any group with less than 3 observations.

Statistical Matrix

Variables for Inferential Analysis	Statistical Method Parametric/ Non-Parametric
Body Weight	X
Body Temperature	X
Hematology Variables	X
Coagulation Variables	X
Clinical Chemistry Variables	X
Cytokines	X
Organ Weights	X
Body Weight Changes	X
Organ Weight relative to Body Weight	X
Organ Weight relative to Brain Weight	X

The following pairwise comparisons will be made:

Group 2 vs. Group 1

Group 3 vs. Group 1

Group 4 vs. Group 1

19.1. Parametric/Non-Parametric

Levene's test will be used to assess the homogeneity of group variances.

Datasets with at least 3 groups will be compared using an overall one-way ANOVA *F*-test if Levene's test is not significant or the Kruskal-Wallis test if it is. If the overall *F*-test or Kruskal-Wallis test is found to be significant, then the above pairwise comparisons will be conducted using Dunnett's or Dunn's test, respectively.

Datasets with 2 groups (the designated control group and 1 other group) will be compared using a *t*-test if Levene's test is not significant or Wilcoxon Rank-Sum test if it is.

20. COMPUTERIZED SYSTEMS

The following critical computerized systems may be used in the study. The actual critical computerized systems used will be specified in the Final Report.

Data for parameters not required by study plan, which are automatically generated by analytical devices used will be retained on file but not reported. Statistical analysis results that are

Appendix 1

generated by the program but are not required by study plan and/or are not scientifically relevant will be retained on file but will not be included in the tabulations.

Critical Computerized Systems

System Name	Description of Data Collected and/or Analyzed
Provantis	In-life; clinical pathology; postmortem
Dispense	Test Material receipt, accountability and/or formulation activities
SRS (CR MTL in-house application built with SAS) and SAS system for Windows and/or In-house reporting software Nevis 2012 (using SAS)	Statistical analyses of numerical in-life, clinical pathology and postmortem data
Mesa Laboratories AmegaView CMS	Continuous Monitoring System. Monitoring of standalone fridges, freezers, incubators, and selected laboratories to measure temperature, relative humidity, and CO2, as appropriate
Johnson Controls Metasys	Building Automation System. Control of HVAC and other building systems, as well as temperature/humidity control and trending in selected laboratories and animal rooms
Empower 3 (Waters Corporation)	Data acquisition for dose formulation analysis, including regression analysis and measurement of concentration and recovery of dose formulations using HPLC. Data regression analysis and measurement of purity.
BioPlex Manager	Cytokine data collection and regression
Softmax Pro GxP	IFN-α data collection
Watson LIMS	Biomarker data analysis
Dynamics (Wyatt)	Data acquisition for particle size analysis of the test item using DLS
(b) (4)	Data acquisition
Excel	Data analyses and tabulation

21. AMENDMENTS AND DEVIATIONS

Changes to the approved study plan shall be made in the form of an amendment, which will be signed and dated by the Study Director. Every reasonable effort will be made to discuss any necessary study plan changes in advance with the Sponsor.

All study plan and SOP deviations will be documented in the study records. Deviations from the study plan and/or SOP related to the phase(s) of the study conducted at a Test Site shall be documented, acknowledged by the PI/IS, and reported to the Study Director for authorization/acknowledgement. The Study Director will notify the Sponsor of deviations that may result in a significant impact on the study as soon as possible.

22. RETENTION OF RECORDS, SAMPLES, AND SPECIMENS

All study-specific raw data, electronic data, documentation, study plan, retained samples and specimens, and interim (if applicable) and final reports will be archived by no later than the date of final report issue. All materials generated by Charles River from this study will be transferred

Appendix 1

to a CR-MTL archives. At least one year after issue of the draft report, the Sponsor will be contacted.

Records to be maintained will include, but will not be limited to, documentation and data for the following:

- Study Plan, study plan amendments, and deviations
- Study schedule
- Study-related correspondence
- Test system receipt, health, and husbandry
- Test and Reference Item receipt, identification, preparation, and analysis
- In-life measurements and observations
- Clinical pathology and cytokine sample collection and evaluation
- Anti-drug Antibodies sample collection
- Gross and microscopic observations and related data
- Organ weight measurements
- Statistical analysis results

23. REPORTING

A comprehensive Draft Report will be prepared following completion of the study and will be finalized following consultation with the Sponsor. The report will include all information necessary to provide a complete and accurate description of the experimental methods and results and any circumstances that may have affected the quality or integrity of the study.

The Sponsor will receive an electronic version of the Draft and Final Report provided in Adobe Acrobat PDF format (hyperlinked and searchable at final) along with a Microsoft Word version of the text. The PDF document will be created from native electronic files to the extent possible, including text and tables generated by the Test Facility. Report components not available in native electronic files and/or original signature pages will be scanned and converted to PDF image files for incorporation. An original copy of the report with the Test Facility's handwritten signatures will be retained.

Reports should be finalized within 6 months of issue of the Draft Report. If the Sponsor has not provided comments to the report within 6 months of draft issue, the report will be finalized by the Test Facility unless other arrangements are made by the Sponsor.

Appendix 1

24. ANIMAL WELFARE

24.1. Institutional Animal Care and Use Committee Approval

The study plan and any amendment(s) or procedures involving the care and use of animals in this study will be reviewed and approved by CR SHB Institutional Animal Care and Use Committee (IACUC). During the study, the care and use of animals will be conducted with guidance from the USA National Research Council and the Canadian Council on Animal Care (CCAC).

Appendix 1

AMENDMENT APPROVAL

(b) (6) _____ Date: 27 Mar 2017

As authorized by the Sponsor on 27 Mar 2017

Appendix 1

SUMMARY OF CHANGES AND JUSTIFICATIONS

Study Plan effective date: 15 Mar 2017

Note: When applicable, additions are indicated in bold underlined text and deletions are indicated in bold strikethrough text in the affected sections of the document.

Item or Section(s)	Justification
Amendment 1	**Date: 27-Mar-2017**
2. PROPOSED STUDY SCHEDULE	To include new schedule following delay in dosing initiation due to test item delivery date.
10.3.Sample Collection and Analysis	To remove homogeneity for Group 1 based on sample collection in section 10.3.1.1.
10.3.1. Analytical Method	To correct the dose formulation analysis validation number.
10.3.1.2. Stability Analysis	To include end of use for bulk test item.
13. EXPERIMENTAL DESIGN	To correct the dose concentration for mid dose group.
15.1.1. Sample Collection	To correct the group numbers to be evaluation on both occasions.
Amendment 2	**Date: 02-May-2017**
2. PROPOSED STUDY SCHEDULE	To include reporting schedule.
7. RESPONSIBLE PERSONNEL	To update PIs description based on wording used in section 15.3.
8.1. Test Item	To include information from Summary of Analysis.
14.2.1. Detailed Clinical Observations	To include detailed examination of the injection site following each dosing.
14.3. Local Irritation Assessment	Section deleted. Replaced by detailed examination of the injection site (refer to section 14.2.1.)
14.7. Body Temperature	To update the procedure as animals were not identified with the appropriate microship for body weight recording with scanner.

Appendix 1

TABLE OF CONTENTS

Appendix 1

1. OBJECTIVE(S)

The objectives of this study are to determine the potential toxicity of mRNA-1706, when given by intramuscular injection for 1 month (3 doses) to rats and to evaluate the potential reversibility of any findings following a 2-week recovery period.

1.1. Study Classification

Study Category:	TOX
Study Type:	Repeat Dose Toxicity
Study Design:	Parallel
Primary Treatment CAS Registry Number:	Not Available
Primary Treatment Unique Ingredient ID:	Not Available
Class of Compound:	mRNA

2. PROPOSED STUDY SCHEDULE

Proposed study dates are listed below. Actual applicable dates will be included in the Final Report.

Experimental Start Date:	16 Mar 2017 (First date of study-specific data collection)
Experimental Completion Date:	Week of 25 Sep 2017 (Last date data are collected from the study)
Animal Arrival:	16 Mar 2017
Initiation of Dosing:	03 May 2017
Completion of In-life:	02 Jun 2017 (main study animals) 15 Jun 2017 (recovery animals) (Last date of necropsy)
Unaudited Draft Report:	**14 Aug 2017** ~~**Will be included by amendment**~~
Draft Report:	**19 Sep 2017** ~~**Will be included by amendment**~~
Final Report:	**26 Sep 2017** ~~**Week of 25 Sep 2017**~~ (Expected date of Study Director signature)

3. GUIDELINES FOR STUDY DESIGN

The design of this study was based on the study objective(s), the overall product development strategy for the Test Item, and the following study design guidelines:

- OECD Guideline 407. *Repeated Dose 28-day Oral Toxicity Study in Rodents*.

Appendix 1

- Committee for Medicinal Products for Human Use (CHMP). *Note for Guidance on Repeated Dose Toxicity*. CPMP/SWP/1042/99corr.
- ICH Harmonised Tripartite Guideline M3 (R2). *Nonclinical Safety Studies for the Conduct of Human Clinical Trials and Marketing Authorization for Pharmaceuticals*.
- Japanese Guidelines for Nonclinical Studies of Drugs Manual (1995). *Guidelines for Nonclinical Pharmacokinetic Studies*, *Guidelines for Toxicity Studies of Drugs (Chapter 3, Repeated Dose Toxicity Studies)*
- Appendix to Director General Notification, No. 12-Nousan-8147, 24 November 2000, Agricultural Production Bureau, Ministry of Agriculture, Forestry and Fisheries of Japan (JMAFF).

4. REGULATORY COMPLIANCE

The study will be performed in accordance with the OECD Principles of Good Laboratory Practice and as accepted by Regulatory Authorities throughout the European Union, United States of America (FDA), Japan (MHLW), and other countries that are signatories to the OECD Mutual Acceptance of Data Agreement.

Any portion of this study conducted in the USA will be performed in accordance with the U.S. Department of Health and Human Services, Food and Drug Administration. United States Code of Federal Regulations, Title 21, Part 58: Good Laboratory Practice for Nonclinical Laboratory Studies and as accepted by Regulatory Authorities throughout the European Union (OECD Principles of Good Laboratory Practice), Japan (MHLW), and other countries that are signatories to the OECD Mutual Acceptance of Data Agreement.

Exceptions to GLPs include the following study elements:

- Characterization of the Test Item will be performed by the Sponsor or Sponsor subcontractor according to established SOPs, controls, and approved test methodologies to ensure integrity and validity of the results generated; these analyses will not be conducted in compliance with the GLP or GMP regulations.
- Analysis of cytokines and anti-therapeutic antibody will be conducted using scientifically qualified methods and in accordance with all applicable analytical procedures.
- Pathology peer review

5. QUALITY ASSURANCE

5.1. Test Facility

The Test Facility Quality Assurance Program (QAP) will monitor the study to assure the facilities, equipment, personnel, methods, practices, records, and controls are in conformance with Good Laboratory Practice regulations. The QAP will review the study plan, conduct inspections at intervals adequate to assure the integrity of the study, and audit the Final Report to

Appendix 1

assure that it accurately describes the methods and standard operating procedures and that the reported results accurately reflect the raw data of the study.

The Test Facility QAP contact for this study is indicated below:

(b) (6)
Charles River Laboratories Montreal ULC
22022 Transcanadienne
Senneville Quebec
Canada H9X 3R3
Tel: (b) (6)
E-mail: (b) (6)

5.2. Test Facility-designated Subcontractor(s)

The following study phases performed by Test Facility-designated subcontractors will be audited by the Test Facility QAP:

- Ophthalmology

6. SPONSOR

Sponsor Representative

(b) (6)
Address as cited for Sponsor

Each PI is required to report any deviations or other circumstances that could affect the quality or integrity of the study to the Study Director in a timely manner. Each PI will provide a report addressing their assigned phase of the study, which will be included as an appendix to the Final Report. The phase report will include the following:

- The archive site for all records, samples, specimens and reports generated from the phase or segment (alternatively, details regarding the retention of the materials may be provided to the Study Director for inclusion in the Final Report)
- A listing of critical computerized systems used in the conduct and/or interpretation of the assigned study phase

8. TEST AND REFERENCE ITEMS

8.1. Test Item

Identification:	mRNA-1706
Supplier:	Moderna Therapeutics, Inc.
Batch (Lot) Number:	MTDP170~~**25**~~**536**
Concentration:	**2.1 mg/mL** ~~**To be included by amendment**~~
Retest Date:	Concomitant assessment, ongoing
Physical Description:	White to off-white lipid nanoparticle dispersion
Storage Conditions:	Kept in a freezer set to maintain -20°C

Appendix 1

8.2. Reference Item

Identification:	Phosphate-buffered Saline (PBS) pH 7.2
Supplier:	Will be included in the Final Report
Batch (Lot) Number:	Will be included in the Final Report
Expiration Date:	Will be included in the Final Report
Physical Description:	Liquid
Storage Conditions:	Kept in a controlled temperature area set to maintain 21°C

8.3. Test and Reference Item Characterization

The Sponsor will provide to the Test Facility documentation of the identity, strength, purity, and composition for the Test Item. A Certificate of Analysis or equivalent documentation will be provided for inclusion in the Final Report. The Sponsor will also provide information concerning the regulatory standard that was followed for these evaluations.

The Sponsor has appropriate documentation on file concerning the method of synthesis, fabrication or derivation of the Test Item, and this information is available to the appropriate regulatory agencies should it be requested.

8.4. Analysis of Test Item

A sample (2 vials) of the Test Item will be taken on the completion of the dosing period. Analysis of bulk Test Item for concentration, particle size and purity will be performed.

The first vial will be transferred on ice pack to the analytical laboratory at the Test Facility for concentration and particle size analysis.

The second vial will be transferred on ice pack to the molecular biology laboratory at the Test Facility for purity analysis.

Purity-and Particle size analysis will be performed by IEX- HPLC, Differential Light Scattering (DLS) and capillary electrophoresis (CE) using validated analytical procedures.

Any residual/retained analytical samples (and Test Item used in analysis) will be discarded before issue of the Final Report.

8.5. Reserve Samples

For each batch (lot) of Test and Reference Item components, a reserve sample (1 mL, 100 mg or 1 vial) will be collected and maintained under the appropriate storage conditions by the Test Facility.

Appendix 1

8.6. Test and Reference Item Inventory and Disposition

Records of the receipt, distribution, storage, and disposition of Test and Reference Items will be maintained. With the exception of reserve samples, all unused Sponsor-supplied bulk Test Item will be returned to the Sponsor

Shipping Contact
(b) (6)
Moderna Therapeutics
800 Technology Sq, 8th Floor
Cambridge MA 02476
Cell: (b) (6)
E-mail: (b) (6)

9. SAFETY

The safety precautions for the Test Item and dose formulations will be documented in a Test Material Safety Data Sheet (TMSDS) based on the information provided by the Sponsor either by an MSDS or similar document.

10. DOSE FORMULATION AND ANALYSIS

10.1. Preparation of Reference Item

Dose formulation preparations will be performed under a laminar flow hood using clean procedures.

The Reference Item, Phosphate Buffered Saline pH 7.2, will be dispensed on days of dosing (i.e. Days 1, 15 and 29) for administration to Group 1 control animals and as required to dilute the bulk Test Item for administration to Groups 2 to 4 animals. The aliquots will be stored in a refrigerator set to maintain 4°C until use. They will be removed from the refrigerator and allowed to warm to room temperature for at least 30 minutes before dosing.

Any residual volumes will be discarded unless otherwise requested by the Study Director.

10.2. Preparation of Test Item

Dose formulation preparations will be performed under a laminar flow hood using clean procedures.

Test Item dosing formulations will be diluted with Phosphate Buffered Saline, pH 7.2, as necessary for administration. The dosing formulations will be prepared on each days of dosing (i.e. Days 1, 15 and 29) and will be stored in a refrigerator set to maintain 4°C. The dose formulations will be allowed to warm to room temperature for at least 30 minutes prior to dosing. Alternatively, the aliquots can be transferred directly to room temperature.

Any residual volumes of formulated Test Item will be stored in a refrigerator set at 4°C and will be discarded prior to finalisation following approval by the Study Director.

Appendix 1

10.3. Sample Collection and Analysis

Dose formulation samples will be collected for analysis as indicated in the following table. Additional samples may be collected and analyzed at the discretion of the Study Director.

Dose Formulation Sample Collection Schedule

Interval	Homogeneity	Concentration	Sampling From
Day 1[b]	2 to 4[a]	All groups	Preparation vessel
Day 29[b]	N/A	All groups	Preparation vessel

N/A = not applicable.

[a] The homogeneity results obtained from the top, middle and bottom preparations will be averaged and utilized as the concentration results.

[b] Samples will be collected on the first preparation of the study and on the last preparation of the study.

Samples to be analyzed will be submitted as soon as possible following preparation.

All samples to be analyzed will be transferred on ice packs to the analytical laboratory (CR-MTL).

Any residual/retained analytical samples (and Test Item used in analysis) will be discarded before issue of the Final Report.

10.3.1. Analytical Method

Analyses described below will be performed by HPLC using a validated analytical procedure (Validation Study Number 1801737).

10.3.1.1. Concentration and Homogeneity Analysis

Samples for Analysis:	Duplicate top, middle, and bottom samples (duplicate middle only from Group 1); sent for analysis as noted in Section 10.3. On days where only concentration analysis is required, the formulation will only be sampled from the middle.
Backup Samples:	Triplicate top, middle, and bottom samples (duplicate middle only from Group 1); maintained at the Test Facility. Backup samples may be analyzed at the discretion of the Study Director. On days where only concentration analysis is required, the formulation will only be sampled from the middle.
Sampling Containers:	Appropriate sized containers.
Sample Volume:	0.5 mL for analysis and backup samples
Storage Conditions:	Kept in a refrigerator set to maintain 4°C.
Acceptance Criteria:	For concentration, the criteria for acceptability will be mean sample concentration results within or equal to ± 15% of theoretical concentration. Each individual sample concentration result within or equal to ± 20%. For homogeneity, the criteria for

Appendix 1

acceptability will be a relative standard deviation (RSD) of concentrations of ≤ 5% for each group.

10.3.1.2. Stability Analysis

There will be no stability analysis performed for concentration used on this study, however, end of use stability analysis on the bulk test item will be performed at the end of the dosing period.

11. TEST SYSTEM

Species:	Rat
Strain:	Crl:CD(SD) Sprague-Dawley rat
Source:	Charles River Canada Inc., St. Constant, QC, Canada
Number of Males Ordered:	60
Number of Females Ordered:	60
Target Age at Arrival:	4 to 8 weeks
Target Weight at Arrival:	126 to 150 g (males) 101 to 125 g (females)

The actual age and weight of animals received will be listed in the Final Report.

The actual age, weight, and number of animals received will be listed in the Final Report.

11.1. Justification of Test System and Number of Animals

The Sprague Dawley rat was chosen as the animal model for this study as it is an accepted rodent species for preclinical toxicity testing by regulatory agencies.

The total number of animals to be used in this study is considered to be the minimum required to properly characterize the effects of the Test Item. This study has been designed such that it does not require an unnecessary number of animals to accomplish its objectives.

At this time, studies in laboratory animals provide the best available basis for extrapolation to humans and are required to support regulatory submissions. Acceptable models which do not use live animals currently do not exist.

11.2. Animal Identification

Each animal will be identified using a subcutaneously implanted electronic identification chip.

11.3. Environmental Acclimation

A minimum acclimation period of 12 days will be allowed between animal receipt and the start of dosing in order to accustom the animals to the laboratory environment.

Appendix 1

11.4. Selection, Assignment, Replacement, and Disposition of Animals

Animals will be assigned to groups by a stratified randomization scheme designed to achieve similar group mean body weights. Males and females will be randomized separately. Animals in poor health or at extremes of body weight range will not be assigned to groups.

Before the initiation of dosing, any assigned animals considered unsuitable for use in the study will be replaced by alternate animals obtained from the same shipment and maintained under the same environmental conditions.

After initiation of dosing, study animals may be replaced during the replacement period with alternate animals in the event of accidental injury, non-Test Item-related health issues, or similar circumstances.

The alternate animals may be used as replacements on the study within 1 day.

The disposition of all animals will be documented in the study records.

12. HUSBANDRY

12.1. Housing

Animals will be group housed (up to 3 animals of the same sex and same dosing group together) in polycarbonate cages containing appropriate bedding equipped with an automatic watering valve. These housing conditions will be maintained unless deemed inappropriate by the Study Director and/or Clinical Veterinarian. The room(s) in which the animals will be kept will be documented in the study records.

Animals will be separated during designated procedures/activities. Each cage will be clearly labeled with a color-coded cage card indicating study, group, animal number(s), and sex. Cages will be arranged on the racks in group order. Where possible, control group animals will be housed on a separate rack from the Test Item treated animals.

12.2. Environmental Conditions

The targeted conditions for animal room environment will be as follows:

Temperature:	19°C to 25°C
Humidity:	30% to 70%
Light Cycle:	12 hours light and 12 hours dark (except during designated procedures)

12.3. Food

PMI Nutrition International Certified Rodent Chow No. 5CR4 will be provided ad libitum throughout the study, except during designated procedures. The same diet in meal form may be provided to individual animals as warranted by clinical signs (e.g., broken/damaged incisors or other health changes).

Appendix 1

The feed is analyzed by the supplier for nutritional components and environmental contaminants. Results of the analysis are provided by the supplier and are on file at the Test Facility.

It is considered that there are no known contaminants in the feed that would interfere with the objectives of the study.

12.4. Water

Municipal tap water after treatment by reverse osmosis and ultraviolet irradiation will be freely available to each animal via an automatic watering system (except during designated procedures). Water bottles can be provided, if required.

Periodic analysis of the water is performed, and results of these analyses are on file at the Test Facility.

It is considered that there are no known contaminants in the water that could interfere with the outcome of the study.

12.5. Animal Enrichment

Animals will be socially housed for psychological/environmental enrichment and will be provided with items such as a hiding tube and a chewing object, except during study procedures/activities.

12.6. Veterinary Care

Veterinary care will be available throughout the course of the study and animals will be examined by the veterinary staff as warranted by clinical signs or other changes. All veterinary examinations and recommended therapeutic treatments, if any, will be documented in the study records.

In the event that animals show signs of illness or distress, the responsible veterinarian may make initial recommendations about treatment of the animal(s) and/or alteration of study procedures, which must be approved by the Study Director or Scientific designate. All such actions will be properly documented in the study records and, when appropriate, by study plan amendment. Treatment of the animal(s) for minor injuries or ailments may be approved without prior consultation with the Sponsor representative when such treatment does not impact fulfillment of the study objectives. If the condition of the animal(s) warrants significant therapeutic intervention or alterations in study procedures, the Sponsor representative will be contacted, when possible, to discuss appropriate action. If the condition of the animal(s) is such that emergency measures must be taken, the Study Director and/or clinical veterinarian will attempt to consult with the Sponsor representative prior to responding to the medical crisis, but the Study Director and/or veterinarian has authority to act immediately at his/her discretion to alleviate suffering. The Sponsor representative will be fully informed of any such events.

Appendix 1

13. EXPERIMENTAL DESIGN

Experimental Design

Group No.	Test Material	Dose Level (µg/dose)	Dose Volume (µL/dose)	Dose Concentration (mg/mL)	No. of Animals			
					Main Study		Recovery Study	
					Males	Females	Males	Females
1	Reference Item	0	200	0	10	10	5	5
2	mRNA-1706	10	200	0.05	10	10	-	-
3	mRNA-1706	50	200	0.25	10	10	-	-
4	mRNA-1706	100	200	0.5	10	10	5	5

13.1. Administration of Test and Reference Items

The Test and Reference Items will be administered to the appropriate animals from Groups 1 to 4 via intramuscular injection into the lateral compartment of the thigh alternating legs on Days 1, 15 and 29 (site 1= left thigh, site 2 = right thigh). The volume for each dose will be administered using a syringe/needle within the demarcated area. The first day of dosing will be designated as Day 1 (exception: alternate animals used for replacement after Day 1 will assume the day of the animal being replaced).

The injection area will be marked as frequently as required to allow appropriate visualization of administration sites. Hair may be clipped or shaved if required to improve visualization of the injection sites. The injection site will be documented in the raw data for each dose administered.

13.2. Justification of Route and Dose Levels

The intramuscular route of exposure was selected because this is the intended route of human exposure.

The dose levels for this toxicology study were chosen to approximate a substantial multiple of the anticipated clinical starting dose and top clinical dose. The highest dose to be tested is expected to represent the intended maximum human clinical dose and volume and will be administered by the clinical route (intramuscular). At this dose level, minimal systemic toxicity is expected, but it is possible mild to moderate injection site reaction (redness, swelling) and potentially elevation of systemic cytokine/acute phase markers may be observed. The mid- and low-dose were selected to evaluate the dose-dependent effect of this compound.

14. IN-LIFE PROCEDURES, OBSERVATIONS, AND MEASUREMENTS

The in-life procedures, observations, and measurements listed below will be performed for all main study and recovery animals. These data will be included in an appendix to the study report, but not used in the evaluation of the results, unless considered appropriate by the Study Director. During the study, additional evaluations to those described below and/or scheduled, and considered necessary by the Study Director and/or Veterinarian to assess health status will be

Appendix 1

conducted and duly documented. More frequent observations may be undertaken if considered appropriate.

14.1. Mortality/Moribundity Checks

Frequency:	Twice daily, once in the morning and once in the afternoon, throughout the study.
Procedure:	Animals will be observed for general health/mortality and moribundity. Animals will not be removed from cage during observation, unless necessary for identification or confirmation of possible findings.

14.2. Clinical Observations

14.2.1. Detailed Clinical Observations

Frequency:	Weekly during the dosing and recovery periods, and at least every 2 weeks during the predosing period. **In addition detailed examination of the injection sites will be performed at predose, 24, 48 and 72 hours post each dose. Following Day 29 dosing, no assessment will be perfomed on main study animals at 72 hours post dose as animals will be sent to necropsy on Day 30. Any clinical signs at the injection site (e.g. erythema/redness, skin thickening, edema/swelling, vocalization upon palpation, ulceration, necrosis, warm to the touch, etc...) will be recorded as observed.**
Procedure:	Animals removed from the cage for examination.

14.3. Local Irritation Assessment

Section deleted

14.4. Body Weights

Frequency:	Weekly during the dosing and recovery periods, and at least every 2 weeks during the prestudy period.
Procedure:	Animals will be individually weighed. A fasted weight will be recorded on the day of necropsy. Terminal body weights will not be collected from animals found dead or euthanized moribund.

14.5. Food Consumption

Frequency:	Weekly, starting Day -7, throughout the dosing and recovery periods.

Appendix 1

Procedure: Food consumption will be quantitatively measured except for on the day of scheduled euthanasia.

14.6. Ophthalmic Examinations

Frequency: Once prestudy and again at the end of the dosing period. During Week 2 of the recovery period if Test-Item related findings are observed during the dosing period.

Procedure: All animals will be subjected to funduscopic (indirect ophthalmoscopy) and biomicroscopic (slit lamp) examinations. The mydriatic used will be 1% tropicamide.

Evaluation: A report will be included as an appendix to the Final Report.

14.7. Body Temperature

Frequency: On Day 1 and Day 29 at predose, 6 and 24 hours post dose (end of each group). If body temperature is significantly above normal range (36.0C to 38.0C) the temperature will be monitored daily till return to normal. If clinical observations indicate a possible body temperature changes, measurement may be taken at the discretion of the Study Director.

Procedure: ~~**Body temperature will be recorded via subcutaneous implanted transponder.**~~ **Rectal body temperature will be recorded on un-sedated animals.**

15. LABORATORY EVALUATIONS

15.1. Clinical Pathology

15.1.1. Sample Collection

Blood will be collected from the abdominal aorta following isoflurane anesthesia. After collection, samples will be transferred to the appropriate laboratory for processing.

Animals will be fasted overnight before blood sampling (for clinical chemistry). Samples will be collected according to the following table.

Samples for Clinical Pathology Evaluation

Group Nos.	Time Point	Hematology	Coagulation	Clinical Chemistry
1 to 4[a]	Day 30	X	X	X
1 and 4	Day 43	X	X	X
Unscheduled euthanasia (when possible)	Before euthanasia	X	X	X

X = Samples to be collected

a Samples will only be collected from those animals scheduled for euthanasia on Day 30.

Appendix 1

Any residual/retained clinical pathology samples will be discarded before issue of the Final Report.

15.1.2. Hematology

Target Volume: 0.5 mL

Anticoagulant: EDTA

Hematology Parameters

Red blood cell count Hemoglobin concentration Hematocrit Mean corpuscular volume Red Blood Cell Distribution Width Mean corpuscular hemoglobin concentration Mean corpuscular hemoglobin Reticulocyte count (absolute) Platelet count	White blood cell count Neutrophil count (absolute) Lymphocyte count (absolute) Monocyte count (absolute) Eosinophil count (absolute) Basophil count (absolute) Large unstained cells (absolute) Other cells (as appropriate)

A blood smear will be prepared from each hematology sample. Blood smears will be labeled, stained, and stored. Blood smears may be read to investigate results. If additional examination of blood smears is deemed necessary, the smears may be subsequently evaluated and this evaluation will be described in a study plan amendment.

15.1.3. Coagulation

Target Volume: 0.9 mL (in a 1.0 mL tube)

Anticoagulant: Citrate

Processing: To plasma

Coagulation Parameters

Activated partial thromboplastin time Fibrinogen	Prothrombin time Sample Quality

15.1.4. Clinical Chemistry

Target Volume: 0.7 mL

Anticoagulant: None, collected in serum separator tubes

Processing: To serum

Appendix 1

Clinical Chemistry Parameters

Alanine aminotransferase Aspartate aminotransferase Alkaline phosphatase Gamma-glutamyltransferase Creatine Kinase Total bilirubin[a] Urea nitrogen Creatinine Calcium Phosphorus Sample Quality	Total protein Albumin Globulin Albumin/globulin ratio Glucose Cholesterol Triglycerides Sodium Potassium Chloride

[a] When total bilirubin is > 0.5 mg/dL, indirect and direct bilirubin will also be measured.

15.1.5. Bone Marrow Smear Evaluation (Optional)

Bone marrow smears will be collected and prepared as described in the Tissue Collection and Preservation table (ATTACHMENT A).

Evaluation of stained smears may be added by amendment at the discretion of the Study Director in consultation with the pathologist and the Sponsor.

15.2. Cytokine Analysis

Blood will be collected from the jugular vein of all recovery animals and preterminally euthanized animals (recovery animals only). After collection, blood samples for serum will be allowed to clot at ambient room temperature and blood samples for plasma will be transferred on wet ice to the appropriate laboratory for processing.

Sample Collection Schedule

Target Blood Volume (mL)			0.5	0.5
Anticoagulant			**None (SST)**	**EDTA**
Centrifugation settings			(b) (4)	
Timepoints			**Sample Type**	
Day	**Hrs**	**No. of Males/ Females**	IFN-α	IL-1ß, IL-6, TNF-α, IP-10, MIP-1-α, MCP-1
1	6	5/5	X	X
15	6	5/5	X	X
29	6	5/5	X	X
43	NAp	5/5	X	X
Matrix			Serum	Plasma
Volume per aliquot (µL)			All volume	All volume
Number of aliquot(s)			1	1
Storage condition			-80°C	-80°C

Appendix 1

Target Blood Volume (mL)			0.5	0.5
Anticoagulant			None (SST)	EDTA
Centrifugation settings			(b) (4)	
Timepoints			Sample Type	
Day	Hrs	No. of Males/ Females	IFN-α	IL-1ß, IL-6, TNF-α, IP-10, MIP-1-α, MCP-1
(set to maintain)				
Responsible Lab			CR-SHB	CR-SHB

X = Sample to be collected, NAp = Not applicable

The number of aliquots and volumes are targets that may be adjusted based on sample volume availability.

The samples will be analyzed by the Immunology department. Analysis for IL-1ß, IL-6, TNF-α, IP-10, MIP-1-α and MCP-1 will be conducted using a multiplex Luminex method. An ELISA method will be used for the analysis of IFN-α. The procedures to be followed during the course of this study along with the assays acceptance criteria will be detailed in the appropriate analytical procedure. Samples will be analyzed in duplicate.

Following Study Director approval, any residual/retained samples will be discarded prior to report finalization.

An Immunology Report will be included as an appendix to the Final Report.

15.3. Anti-drug Antibody (ADA) Sample Collection, Processing, and Analysis

Blood will be collected from all animals by jugular venipuncture and/or via the abdominal aorta while under isoflurane anesthesia (terminal and unscheduled samples).

Time Points:	Before initiation of dosing and at study termination (on Day 30 for main animals and on Day 43 for recovery animals).
Target Volume:	0.5 mL
Anticoagulant:	None, collected in serum separator tubes
Processing:	To serum

Samples will be mixed gently and allowed to clot at room temperature until centrifugation which will be carried out as soon as practical (not exceeding 60 minutes after collection). The samples will be centrifuged for (b) (4) in a refrigerated centrifuge (set to maintain (b) (4) at (b) (4) The resultant serum will be separated, transferred to uniquely labeled clear polypropylene tubes, frozen immediately over dry ice and transferred to a freezer set to maintain -80°C.
Samples will be shipped on dry ice to:

Shipping Contact

Appendix 1

(b) (6)
Integrated BioTherapeutics, Inc.
4 Research Court
Suite 300
Rockville, MD 20850, USA
Tel: (b) (6)
Fax: (b) (6)
E-mail: (b) (6)

The test site will be notified before shipment of the samples. Upon receipt at the immunology laboratory, the samples will be stored at -80°C.

The samples will be analyzed for rat anti-ZIKA antibodies using a qualified ELISA method.

Any residual/retained samples will be maintained for a minimum of 6 months following issuance of the Draft Report after which samples will be discarded. Alternatively, residual/retained samples will be discarded prior to the 6 month period should the issuance of the Final Report occur prior to the end of the 6 month retention period. An earlier discard of these residual/retained samples may also be requested and authorized by the Study Director.

An Anti-therapeutic Antibody Report will be included as an appendix to the Final Report.

16. TERMINAL PROCEDURES

Terminal procedures are summarized in the following table:

Terminal Procedures for Main Study and Recovery Animals

Group No.	No. of Animals		Scheduled Euthanasia Day	Necropsy Procedures			Histology[a]	Histopathology[a]
	M	F		Necropsy	Tissue Collection	Organ Weights		
1	10	10	30	X	X	X	Full Tissue	Full Tissue
2	10	10					Full Tissue	Gross Lesions Target Tissues
3	10	10					Full Tissue	Gross Lesions Target Tissues
4	10	10					Full Tissue	Full Tissue
1	5	5	43	X	X	X	Full Tissue	Gross Lesions Target Tissues
4	5	5					Full Tissue	Gross Lesions Target Tissues
Unscheduled Deaths				X	X	-	Full Tissue	Full Tissue
Replaced animals (prestudy)				X	Standard Diagnostic List	-	-	-
Replaced animals (after dosing start)				X	X	-	-	-

X = Procedure to be conducted; - = Not applicable.

Appendix 1

Group No.	No. of Animals		Scheduled Euthanasia Day	Necropsy Procedures			Histology[a]	Histopathology[a]
	M	F		Necropsy	Tissue Collection	Organ Weights		

[a] See Tissue Collection and Preservation table for listing of tissues.

16.1. Unscheduled Deaths

If a main study or recovery animal dies on study, a necropsy will be conducted and specified tissues will be saved. If necessary, the animal will be refrigerated to minimize autolysis.

Main study or recovery animals may be euthanized for humane reasons as per Test Facility SOPs. The samples for evaluation of clinical pathology parameters and antibody analysis will be obtained if possible as specified in Section 15.

These animals will undergo exsanguination by incision from the abdominal aorta following isoflurane anesthesia unless deemed inappropriate by the Study Director and/or the clinical veterinarian and will undergo necropsy, and specified tissues will be retained. If necessary, the animal will be refrigerated (set to maintain 4°C) to minimize autolysis.

Animals found dead or euthanized before the initiation of dosing will be subject to necropsy and limited tissue retention (standard diagnostic tissue list). Any animal replaced after the start of dosing will be subject to necropsy and tissues will be retained (as per Tissue Collection and Preservation section), and any data generated will not be included in the report unless deemed appropriate by the Study Director.

16.2. Scheduled Euthanasia

Main study and recovery animals surviving until scheduled euthanasia will have a terminal body weight recorded, samples for clinical pathology, anti-drug antibodies and cytokines will be collected (as appropriate), and will be euthanized by exsanguination by incision from the abdominal aorta following isoflurane anesthesia. When possible, the animals will be euthanized rotating across dose groups such that similar numbers of animals from each group, including controls, will be necropsied throughout the day. Animals will be fasted overnight before their scheduled necropsy.

16.3. Necropsy

Main study and recovery animals will be subjected to a complete necropsy examination, which will include evaluation of the carcass and musculoskeletal system; all external surfaces and orifices; cranial cavity and external surfaces of the brain; and thoracic, abdominal, and pelvic cavities with their associated organs and tissues.

Necropsy procedures will be performed by qualified personnel with appropriate training and experience in animal anatomy and gross pathology. A veterinary pathologist, or other suitably qualified person, will be available.

Appendix 1

At the discretion of the necropsy supervising pathologist, images may be generated for illustration of or consultation on gross observations. Generation of such images will be documented and communicated to the Study Director. Images and associated documentation will be retained and archived.

16.4. Organ Weights

The organs identified for weighing in the Tissues Collection and Preservation table will be weighed at necropsy for all scheduled euthanasia animals. Organ weights will not be recorded for animals found dead or euthanized in poor condition or in extremis. Paired organs will be weighed together. In the event of gross abnormalities, in addition to the combined weight, the weight of each organ of a pair may be taken and entered as a tissue comment. Organ weight as a percent of body weight (using the terminal body weight) and organ weight as a percent of brain weight will be calculated.

16.5. Tissue Collection and Preservation

Representative samples of the tissues identified in the Tissue Collection and Preservation table in ATTACHMENT A will be collected from all animals and preserved in 10% neutral buffered formalin, unless otherwise indicated. Additional tissue samples may be collected to elucidate abnormal findings.

17. HISTOLOGY AND HISTOPATHOLOGY

17.1. Histology

Tissues in the Tissue Collection and Preservation table from animals identified in the Terminal Procedures table will be embedded in paraffin, sectioned, mounted on glass slides, and stained with hematoxylin and eosin.

17.2. Histopathology

Histopathological evaluation will be performed by a board-certified veterinary pathologist Tissues identified by the study pathologist during microscopic evaluation will be communicated to the study Director; tissues will be evaluated and reported. Any additional stains or evaluations, if deemed necessary by the pathologist, will be added by study plan amendment following discussion with the Study Director and in consultation the Sponsor.

At the discretion of the study pathologist and after acknowledgement by the Study Director, images may be captured for consultation purposes.

17.3. Pathology Peer Review

A pathology peer review will be conducted by:

(b) (6)
Moderna Therapeutics

Appendix 1

200 Technology Square, 3rd Floor
Cambridge, MA 02116
Tel: (b) (6)
E-mail: (b) (6)

The peer review statement or equivalent documentation will be included as an appendix to the Final Report.

18. CONSTRUCTED VARIABLES

Body Weight Gains	Calculated between at least each interval as well as between the beginning and end of each phase
Organ Weight relative to Body Weight	Calculated against the Terminal body weight for scheduled intervals
Organ Weight relative to Brain Weight	Calculated against the brain weight for scheduled intervals

19. STATISTICAL ANALYSIS

All statistical tests will be conducted at the 5% significance level. All pairwise comparisons will be conducted using two sided tests and will be reported at the 0.1%, 1%, and 5% levels

Numerical data collected on scheduled occasions for the listed variables will be analyzed as indicated according to sex and occasion. Descriptive statistics number, mean and standard deviation (or %CV or SE when deemed appropriate) will be reported whenever possible. Values may also be expressed as a percentage of predose or control values when deemed appropriate. Inferential statistics will be performed according to the matrix below when possible, but will exclude semi-quantitative data, and any group with less than 3 observations.

Statistical Matrix

Variables for Inferential Analysis	Statistical Method Parametric/ Non-Parametric
Body Weight	X
Body Temperature	X
Hematology Variables	X
Coagulation Variables	X
Clinical Chemistry Variables	X
Cytokines	X
Organ Weights	X
Body Weight Changes	X
Organ Weight relative to Body Weight	X
Organ Weight relative to Brain Weight	X

The following pairwise comparisons will be made:

Group 2 vs. Group 1

Appendix 1

Group 3 vs. Group 1

Group 4 vs. Group 1

19.1. Parametric/Non-Parametric

Levene's test will be used to assess the homogeneity of group variances.

Datasets with at least 3 groups will be compared using an overall one-way ANOVA *F*-test if Levene's test is not significant or the Kruskal-Wallis test if it is. If the overall *F*-test or Kruskal-Wallis test is found to be significant, then the above pairwise comparisons will be conducted using Dunnett's or Dunn's test, respectively.

Datasets with 2 groups (the designated control group and 1 other group) will be compared using a *t*-test if Levene's test is not significant or Wilcoxon Rank-Sum test if it is.

20. COMPUTERIZED SYSTEMS

The following critical computerized systems may be used in the study. The actual critical computerized systems used will be specified in the Final Report.

Data for parameters not required by study plan, which are automatically generated by analytical devices used will be retained on file but not reported. Statistical analysis results that are generated by the program but are not required by study plan and/or are not scientifically relevant will be retained on file but will not be included in the tabulations.

Critical Computerized Systems

System Name	Description of Data Collected and/or Analyzed
Provantis	In-life; clinical pathology; postmortem
Dispense	Test Material receipt, accountability and/or formulation activities
SRS (CR MTL in-house application built with SAS) and SAS system for Windows and/or In-house reporting software Nevis 2012 (using SAS)	Statistical analyses of numerical in-life, clinical pathology and postmortem data
Mesa Laboratories AmegaView CMS	Continuous Monitoring System. Monitoring of standalone fridges, freezers, incubators, and selected laboratories to measure temperature, relative humidity, and CO2, as appropriate
Johnson Controls Metasys	Building Automation System. Control of HVAC and other building systems, as well as temperature/humidity control and trending in selected laboratories and animal rooms
Empower 3 (Waters Corporation)	Data acquisition for dose formulation analysis, including regression analysis and measurement of concentration and recovery of dose formulations using HPLC. Data regression analysis and measurement of purity.
BioPlex Manager	Cytokine data collection and regression
Softmax Pro GxP	IFN-α data collection
Watson LIMS	Biomarker data analysis

Appendix 1

Dynamics (Wyatt)	Data acquisition for particle size analysis of the test item using DLS
(b) (4)	Data acquisition
Excel	Data analyses and tabulation

21. AMENDMENTS AND DEVIATIONS

Changes to the approved study plan shall be made in the form of an amendment, which will be signed and dated by the Study Director. Every reasonable effort will be made to discuss any necessary study plan changes in advance with the Sponsor.

All study plan and SOP deviations will be documented in the study records. Deviations from the study plan and/or SOP related to the phase(s) of the study conducted at a Test Site shall be documented, acknowledged by the PI/IS, and reported to the Study Director for authorization/acknowledgement. The Study Director will notify the Sponsor of deviations that may result in a significant impact on the study as soon as possible.

22. RETENTION OF RECORDS, SAMPLES, AND SPECIMENS

All study-specific raw data, electronic data, documentation, study plan, retained samples and specimens, and interim (if applicable) and final reports will be archived by no later than the date of final report issue. All materials generated by Charles River from this study will be transferred to a CR-MTL archives. At least one year after issue of the draft report, the Sponsor will be contacted.

Records to be maintained will include, but will not be limited to, documentation and data for the following:

- Study Plan, study plan amendments, and deviations
- Study schedule
- Study-related correspondence
- Test system receipt, health, and husbandry
- Test and Reference Item receipt, identification, preparation, and analysis
- In-life measurements and observations
- Clinical pathology and cytokine sample collection and evaluation
- Anti-drug Antibodies sample collection
- Gross and microscopic observations and related data
- Organ weight measurements
- Statistical analysis results

Appendix 1

23. REPORTING

A comprehensive Draft Report will be prepared following completion of the study and will be finalized following consultation with the Sponsor. The report will include all information necessary to provide a complete and accurate description of the experimental methods and results and any circumstances that may have affected the quality or integrity of the study.

The Sponsor will receive an electronic version of the Draft and Final Report provided in Adobe Acrobat PDF format (hyperlinked and searchable at final) along with a Microsoft Word version of the text. The PDF document will be created from native electronic files to the extent possible, including text and tables generated by the Test Facility. Report components not available in native electronic files and/or original signature pages will be scanned and converted to PDF image files for incorporation. An original copy of the report with the Test Facility's handwritten signatures will be retained.

Reports should be finalized within 6 months of issue of the Draft Report. If the Sponsor has not provided comments to the report within 6 months of draft issue, the report will be finalized by the Test Facility unless other arrangements are made by the Sponsor.

24. ANIMAL WELFARE

24.1. Institutional Animal Care and Use Committee Approval

The study plan and any amendment(s) or procedures involving the care and use of animals in this study will be reviewed and approved by CR SHB Institutional Animal Care and Use Committee (IACUC). During the study, the care and use of animals will be conducted with guidance from the USA National Research Council and the Canadian Council on Animal Care (CCAC).

Appendix 1

AMENDMENT APPROVAL

(b) (6) Date: 02 May 2017

As authorized by the Sponsor on 02 May 2017

SUMMARY OF CHANGES AND JUSTIFICATIONS

Study Plan effective date: 15 Mar 2017

Note: When applicable, additions are indicated in bold underlined text and deletions are indicated in bold strikethrough text in the affected sections of the document.

Item or Section(s)	Justification
Amendment 1	**Date: 27-Mar-2017**
2. PROPOSED STUDY SCHEDULE	To include new schedule following delay in dosing initiation due to test item delivery date.
10.3.Sample Collection and Analysis	To remove homogeneity for Group 1 based on sample collection in section 10.3.1.1.
10.3.1. Analytical Method	To correct the dose formulation analysis validation number.
10.3.1.2. Stability Analysis	To include end of use for bulk test item.
13. EXPERIMENTAL DESIGN	To correct the dose concentration for mid dose group.
15.1.1. Sample Collection	To correct the group numbers to be evaluation on both occasions.
Amendment 2	**Date: 02-May-2017**
2. PROPOSED STUDY SCHEDULE	To include reporting schedule.
7. RESPONSIBLE PERSONNEL	To update PIs description based on wording used in section 15.3.
8.1. Test Item	To include information from Summary of Analysis.
14.2.1. Detailed Clinical Observations	To include detailed examination of the injection site following each dosing.
14.3. Local Irritation Assessment	Section deleted. Replaced by detailed examination of the injection site (refer to section 14.2.1.)
14.7. Body Temperature	To update the procedure as animals were not identified with the appropriate microship for body weight recording with scanner.
Amendment 3	**Date: 07-Jun-2017**
7. RESPONSIBLE PERSONNEL	To include the pathology IS.

Appendix 1

TABLE OF CONTENTS

Appendix 1

1. OBJECTIVE(S)

The objectives of this study are to determine the potential toxicity of mRNA-1706, when given by intramuscular injection for 1 month (3 doses) to rats and to evaluate the potential reversibility of any findings following a 2-week recovery period.

1.1. Study Classification

Study Category:	TOX
Study Type:	Repeat Dose Toxicity
Study Design:	Parallel
Primary Treatment CAS Registry Number:	Not Available
Primary Treatment Unique Ingredient ID:	Not Available
Class of Compound:	mRNA

2. PROPOSED STUDY SCHEDULE

Proposed study dates are listed below. Actual applicable dates will be included in the Final Report.

Experimental Start Date:	16 Mar 2017 (First date of study-specific data collection)
Experimental Completion Date:	Week of 25 Sep 2017 (Last date data are collected from the study)
Animal Arrival:	16 Mar 2017
Initiation of Dosing:	03 May 2017
Completion of In-life:	02 Jun 2017 (main study animals) 15 Jun 2017 (recovery animals) (Last date of necropsy)
Unaudited Draft Report:	14 Aug 2017
Draft Report:	19 Sep 2017
Final Report:	26 Sep 2017 (Expected date of Study Director signature)

3. GUIDELINES FOR STUDY DESIGN

The design of this study was based on the study objective(s), the overall product development strategy for the Test Item, and the following study design guidelines:

- OECD Guideline 407. *Repeated Dose 28-day Oral Toxicity Study in Rodents*.

Appendix 1

- Committee for Medicinal Products for Human Use (CHMP). *Note for Guidance on Repeated Dose Toxicity*. CPMP/SWP/1042/99corr.
- ICH Harmonised Tripartite Guideline M3 (R2). *Nonclinical Safety Studies for the Conduct of Human Clinical Trials and Marketing Authorization for Pharmaceuticals*.
- Japanese Guidelines for Nonclinical Studies of Drugs Manual (1995). *Guidelines for Nonclinical Pharmacokinetic Studies*, *Guidelines for Toxicity Studies of Drugs (Chapter 3, Repeated Dose Toxicity Studies)*
- Appendix to Director General Notification, No. 12-Nousan-8147, 24 November 2000, Agricultural Production Bureau, Ministry of Agriculture, Forestry and Fisheries of Japan (JMAFF).

4. REGULATORY COMPLIANCE

The study will be performed in accordance with the OECD Principles of Good Laboratory Practice and as accepted by Regulatory Authorities throughout the European Union, United States of America (FDA), Japan (MHLW), and other countries that are signatories to the OECD Mutual Acceptance of Data Agreement.

Any portion of this study conducted in the USA will be performed in accordance with the U.S. Department of Health and Human Services, Food and Drug Administration. United States Code of Federal Regulations, Title 21, Part 58: Good Laboratory Practice for Nonclinical Laboratory Studies and as accepted by Regulatory Authorities throughout the European Union (OECD Principles of Good Laboratory Practice), Japan (MHLW), and other countries that are signatories to the OECD Mutual Acceptance of Data Agreement.

Exceptions to GLPs include the following study elements:

- Characterization of the Test Item will be performed by the Sponsor or Sponsor subcontractor according to established SOPs, controls, and approved test methodologies to ensure integrity and validity of the results generated; these analyses will not be conducted in compliance with the GLP or GMP regulations.
- Analysis of cytokines and anti-therapeutic antibody will be conducted using scientifically qualified methods and in accordance with all applicable analytical procedures.
- Pathology peer review

5. QUALITY ASSURANCE

5.1. Test Facility

The Test Facility Quality Assurance Program (QAP) will monitor the study to assure the facilities, equipment, personnel, methods, practices, records, and controls are in conformance with Good Laboratory Practice regulations. The QAP will review the study plan, conduct inspections at intervals adequate to assure the integrity of the study, and audit the Final Report to

Appendix 1

assure that it accurately describes the methods and standard operating procedures and that the reported results accurately reflect the raw data of the study.

The Test Facility QAP contact for this study is indicated below:

Each IS is required to report any deviations or other circumstances that could affect the quality or integrity of the study to the Study Director in a timely manner. Each IS will provide a report addressing their assigned phase of the study, which will be included as an appendix to the Final Report. The phase report will include the following:

- A listing of critical computerized systems used in the conduct and/or interpretation of the assigned study phase

Each PI is required to report any deviations or other circumstances that could affect the quality or integrity of the study to the Study Director in a timely manner. Each PI will provide a report addressing their assigned phase of the study, which will be included as an appendix to the Final Report. The phase report will include the following:

- The archive site for all records, samples, specimens and reports generated from the phase or segment (alternatively, details regarding the retention of the materials may be provided to the Study Director for inclusion in the Final Report)
- A listing of critical computerized systems used in the conduct and/or interpretation of the assigned study phase

8. TEST AND REFERENCE ITEMS

8.1. Test Item

Identification:	mRNA-1706
Supplier:	Moderna Therapeutics, Inc.
Batch (Lot) Number:	MTDP17036
Concentration:	2.1 mg/mL

Appendix 1

Retest Date:	Concomitant assessment, ongoing
Physical Description:	White to off-white lipid nanoparticle dispersion
Storage Conditions:	Kept in a freezer set to maintain -20°C

8.2. Reference Item

Identification:	Phosphate-buffered Saline (PBS) pH 7.2
Supplier:	Will be included in the Final Report
Batch (Lot) Number:	Will be included in the Final Report
Expiration Date:	Will be included in the Final Report
Physical Description:	Liquid
Storage Conditions:	Kept in a controlled temperature area set to maintain 21°C

8.3. Test and Reference Item Characterization

The Sponsor will provide to the Test Facility documentation of the identity, strength, purity, and composition for the Test Item. A Certificate of Analysis or equivalent documentation will be provided for inclusion in the Final Report. The Sponsor will also provide information concerning the regulatory standard that was followed for these evaluations.

The Sponsor has appropriate documentation on file concerning the method of synthesis, fabrication or derivation of the Test Item, and this information is available to the appropriate regulatory agencies should it be requested.

8.4. Analysis of Test Item

A sample (2 vials) of the Test Item will be taken on the completion of the dosing period. Analysis of bulk Test Item for concentration, particle size and purity will be performed.

The first vial will be transferred on ice pack to the analytical laboratory at the Test Facility for concentration and particle size analysis.

The second vial will be transferred on ice pack to the molecular biology laboratory at the Test Facility for purity analysis.

Purity-and Particle size analysis will be performed by IEX- HPLC, Differential Light Scattering (DLS) and capillary electrophoresis (CE) using validated analytical procedures.

Any residual/retained analytical samples (and Test Item used in analysis) will be discarded before issue of the Final Report.

Appendix 1

8.5. Reserve Samples

For each batch (lot) of Test and Reference Item components, a reserve sample (1 mL, 100 mg or 1 vial) will be collected and maintained under the appropriate storage conditions by the Test Facility.

8.6. Test and Reference Item Inventory and Disposition

Records of the receipt, distribution, storage, and disposition of Test and Reference Items will be maintained. With the exception of reserve samples, all unused Sponsor-supplied bulk Test Item will be returned to the Sponsor

E-mail: (b) (6)

9. SAFETY

The safety precautions for the Test Item and dose formulations will be documented in a Test Material Safety Data Sheet (TMSDS) based on the information provided by the Sponsor either by an MSDS or similar document.

10. DOSE FORMULATION AND ANALYSIS

10.1. Preparation of Reference Item

Dose formulation preparations will be performed under a laminar flow hood using clean procedures.

The Reference Item, Phosphate Buffered Saline pH 7.2, will be dispensed on days of dosing (i.e. Days 1, 15 and 29) for administration to Group 1 control animals and as required to dilute the bulk Test Item for administration to Groups 2 to 4 animals. The aliquots will be stored in a refrigerator set to maintain 4°C until use. They will be removed from the refrigerator and allowed to warm to room temperature for at least 30 minutes before dosing.

Any residual volumes will be discarded unless otherwise requested by the Study Director.

10.2. Preparation of Test Item

Dose formulation preparations will be performed under a laminar flow hood using clean procedures.

Test Item dosing formulations will be diluted with Phosphate Buffered Saline, pH 7.2, as necessary for administration. The dosing formulations will be prepared on each days of dosing

Appendix 1

(i.e. Days 1, 15 and 29) and will be stored in a refrigerator set to maintain 4°C. The dose formulations will be allowed to warm to room temperature for at least 30 minutes prior to dosing. Alternatively, the aliquots can be transferred directly to room temperature.

Any residual volumes of formulated Test Item will be stored in a refrigerator set at 4°C and will be discarded prior to finalisation following approval by the Study Director.

10.3. Sample Collection and Analysis

Dose formulation samples will be collected for analysis as indicated in the following table. Additional samples may be collected and analyzed at the discretion of the Study Director.

Dose Formulation Sample Collection Schedule

Interval	Homogeneity	Concentration	Sampling From
Day 1[b]	2 to 4[a]	All groups	Preparation vessel
Day 29[b]	N/A	All groups	Preparation vessel

N/A = not applicable.

[a] The homogeneity results obtained from the top, middle and bottom preparations will be averaged and utilized as the concentration results.

[b] Samples will be collected on the first preparation of the study and on the last preparation of the study.

Samples to be analyzed will be submitted as soon as possible following preparation.

All samples to be analyzed will be transferred on ice packs to the analytical laboratory (CR-MTL).

Any residual/retained analytical samples (and Test Item used in analysis) will be discarded before issue of the Final Report.

10.3.1. Analytical Method

Analyses described below will be performed by HPLC using a validated analytical procedure (Validation Study Number 1801737).

10.3.1.1. Concentration and Homogeneity Analysis

Samples for Analysis:	Duplicate top, middle, and bottom samples (duplicate middle only from Group 1); sent for analysis as noted in Section 10.3. On days where only concentration analysis is required, the formulation will only be sampled from the middle.
Backup Samples:	Triplicate top, middle, and bottom samples (duplicate middle only from Group 1); maintained at the Test Facility. Backup samples may be analyzed at the discretion of the Study Director. On days where only concentration analysis is required, the formulation will only be sampled from the middle.
Sampling Containers:	Appropriate sized containers.

Appendix 1

Sample Volume:	0.5 mL for analysis and backup samples
Storage Conditions:	Kept in a refrigerator set to maintain 4°C.
Acceptance Criteria:	For concentration, the criteria for acceptability will be mean sample concentration results within or equal to ± 15% of theoretical concentration. Each individual sample concentration result within or equal to ± 20%. For homogeneity, the criteria for acceptability will be a relative standard deviation (RSD) of concentrations of ≤ 5% for each group.

10.3.1.2. Stability Analysis

There will be no stability analysis performed for concentration used on this study, however, end of use stability analysis on the bulk test item will be performed at the end of the dosing period.

11. TEST SYSTEM

Species:	Rat
Strain:	Crl:CD(SD) Sprague-Dawley rat
Source:	Charles River Canada Inc., St. Constant, QC, Canada
Number of Males Ordered:	60
Number of Females Ordered:	60
Target Age at Arrival:	4 to 8 weeks
Target Weight at Arrival:	126 to 150 g (males) 101 to 125 g (females)

The actual age and weight of animals received will be listed in the Final Report.

The actual age, weight, and number of animals received will be listed in the Final Report.

11.1. Justification of Test System and Number of Animals

The Sprague Dawley rat was chosen as the animal model for this study as it is an accepted rodent species for preclinical toxicity testing by regulatory agencies.

The total number of animals to be used in this study is considered to be the minimum required to properly characterize the effects of the Test Item. This study has been designed such that it does not require an unnecessary number of animals to accomplish its objectives.

At this time, studies in laboratory animals provide the best available basis for extrapolation to humans and are required to support regulatory submissions. Acceptable models which do not use live animals currently do not exist.

Appendix 1

11.2. Animal Identification

Each animal will be identified using a subcutaneously implanted electronic identification chip.

11.3. Environmental Acclimation

A minimum acclimation period of 12 days will be allowed between animal receipt and the start of dosing in order to accustom the animals to the laboratory environment.

11.4. Selection, Assignment, Replacement, and Disposition of Animals

Animals will be assigned to groups by a stratified randomization scheme designed to achieve similar group mean body weights. Males and females will be randomized separately. Animals in poor health or at extremes of body weight range will not be assigned to groups.

Before the initiation of dosing, any assigned animals considered unsuitable for use in the study will be replaced by alternate animals obtained from the same shipment and maintained under the same environmental conditions.

After initiation of dosing, study animals may be replaced during the replacement period with alternate animals in the event of accidental injury, non-Test Item-related health issues, or similar circumstances.

The alternate animals may be used as replacements on the study within 1 day.

The disposition of all animals will be documented in the study records.

12. HUSBANDRY

12.1. Housing

Animals will be group housed (up to 3 animals of the same sex and same dosing group together) in polycarbonate cages containing appropriate bedding equipped with an automatic watering valve. These housing conditions will be maintained unless deemed inappropriate by the Study Director and/or Clinical Veterinarian. The room(s) in which the animals will be kept will be documented in the study records.

Animals will be separated during designated procedures/activities. Each cage will be clearly labeled with a color-coded cage card indicating study, group, animal number(s), and sex. Cages will be arranged on the racks in group order. Where possible, control group animals will be housed on a separate rack from the Test Item treated animals.

12.2. Environmental Conditions

The targeted conditions for animal room environment will be as follows:

Temperature:	19°C to 25°C
Humidity:	30% to 70%

Appendix 1

Light Cycle:	12 hours light and 12 hours dark (except during designated procedures)

12.3. Food

PMI Nutrition International Certified Rodent Chow No. 5CR4 will be provided ad libitum throughout the study, except during designated procedures. The same diet in meal form may be provided to individual animals as warranted by clinical signs (e.g., broken/damaged incisors or other health changes).

The feed is analyzed by the supplier for nutritional components and environmental contaminants. Results of the analysis are provided by the supplier and are on file at the Test Facility.

It is considered that there are no known contaminants in the feed that would interfere with the objectives of the study.

12.4. Water

Municipal tap water after treatment by reverse osmosis and ultraviolet irradiation will be freely available to each animal via an automatic watering system (except during designated procedures). Water bottles can be provided, if required.

Periodic analysis of the water is performed, and results of these analyses are on file at the Test Facility.

It is considered that there are no known contaminants in the water that could interfere with the outcome of the study.

12.5. Animal Enrichment

Animals will be socially housed for psychological/environmental enrichment and will be provided with items such as a hiding tube and a chewing object, except during study procedures/activities.

12.6. Veterinary Care

Veterinary care will be available throughout the course of the study and animals will be examined by the veterinary staff as warranted by clinical signs or other changes. All veterinary examinations and recommended therapeutic treatments, if any, will be documented in the study records.

In the event that animals show signs of illness or distress, the responsible veterinarian may make initial recommendations about treatment of the animal(s) and/or alteration of study procedures, which must be approved by the Study Director or Scientific designate. All such actions will be properly documented in the study records and, when appropriate, by study plan amendment. Treatment of the animal(s) for minor injuries or ailments may be approved without prior consultation with the Sponsor representative when such treatment does not impact fulfillment of the study objectives. If the condition of the animal(s) warrants significant therapeutic

Appendix 1

intervention or alterations in study procedures, the Sponsor representative will be contacted, when possible, to discuss appropriate action. If the condition of the animal(s) is such that emergency measures must be taken, the Study Director and/or clinical veterinarian will attempt to consult with the Sponsor representative prior to responding to the medical crisis, but the Study Director and/or veterinarian has authority to act immediately at his/her discretion to alleviate suffering. The Sponsor representative will be fully informed of any such events.

13. EXPERIMENTAL DESIGN

Experimental Design

Group No.	Test Material	Dose Level (µg/dose)	Dose Volume (µL/dose)	Dose Concentration (mg/mL)	No. of Animals			
					Main Study		Recovery Study	
					Males	Females	Males	Females
1	Reference Item	0	200	0	10	10	5	5
2	mRNA-1706	10	200	0.05	10	10	-	-
3	mRNA-1706	50	200	0.25	10	10	-	-
4	mRNA-1706	100	200	0.5	10	10	5	5

13.1. Administration of Test and Reference Items

The Test and Reference Items will be administered to the appropriate animals from Groups 1 to 4 via intramuscular injection into the lateral compartment of the thigh alternating legs on Days 1, 15 and 29 (site 1= left thigh, site 2 = right thigh). The volume for each dose will be administered using a syringe/needle within the demarcated area. The first day of dosing will be designated as Day 1 (exception: alternate animals used for replacement after Day 1 will assume the day of the animal being replaced).

The injection area will be marked as frequently as required to allow appropriate visualization of administration sites. Hair may be clipped or shaved if required to improve visualization of the injection sites. The injection site will be documented in the raw data for each dose administered.

13.2. Justification of Route and Dose Levels

The intramuscular route of exposure was selected because this is the intended route of human exposure.

The dose levels for this toxicology study were chosen to approximate a substantial multiple of the anticipated clinical starting dose and top clinical dose. The highest dose to be tested is expected to represent the intended maximum human clinical dose and volume and will be administered by the clinical route (intramuscular). At this dose level, minimal systemic toxicity is expected, but it is possible mild to moderate injection site reaction (redness, swelling) and potentially elevation of systemic cytokine/acute phase markers may be observed. The mid- and low-dose were selected to evaluate the dose-dependent effect of this compound.

Appendix 1

14. IN-LIFE PROCEDURES, OBSERVATIONS, AND MEASUREMENTS

The in-life procedures, observations, and measurements listed below will be performed for all main study and recovery animals. These data will be included in an appendix to the study report, but not used in the evaluation of the results, unless considered appropriate by the Study Director. During the study, additional evaluations to those described below and/or scheduled, and considered necessary by the Study Director and/or Veterinarian to assess health status will be conducted and duly documented. More frequent observations may be undertaken if considered appropriate.

14.1. Mortality/Moribundity Checks

Frequency:	Twice daily, once in the morning and once in the afternoon, throughout the study.
Procedure:	Animals will be observed for general health/mortality and moribundity. Animals will not be removed from cage during observation, unless necessary for identification or confirmation of possible findings.

14.2. Clinical Observations

14.2.1. Detailed Clinical Observations

Frequency:	Weekly during the dosing and recovery periods, and at least every 2 weeks during the predosing period. In addition detailed examination of the injection sites will be performed at predose, 24, 48 and 72 hours post each dose. Following Day 29 dosing, no assessment will be perfomed on main study animals at 72 hours post dose as animals will be sent to necropsy on Day 30. Any clinical signs at the injection site (e.g. erythema/redness, skin thickening, edema/swelling, vocalization upon palpation, ulceration, necrosis, warm to the touch, etc...) will be recorded as observed.
Procedure:	Animals removed from the cage for examination.

14.3. Local Irritation Assessment

Section deleted

14.4. Body Weights

Frequency:	Weekly during the dosing and recovery periods, and at least every 2 weeks during the prestudy period.

Appendix 1

Procedure:	Animals will be individually weighed. A fasted weight will be recorded on the day of necropsy. Terminal body weights will not be collected from animals found dead or euthanized moribund.

14.5. Food Consumption

Frequency:	Weekly, starting Day -7, throughout the dosing and recovery periods.
Procedure:	Food consumption will be quantitatively measured except for on the day of scheduled euthanasia.

14.6. Ophthalmic Examinations

Frequency:	Once prestudy and again at the end of the dosing period. During Week 2 of the recovery period if Test-Item related findings are observed during the dosing period.
Procedure:	All animals will be subjected to funduscopic (indirect ophthalmoscopy) and biomicroscopic (slit lamp) examinations. The mydriatic used will be 1% tropicamide.
Evaluation:	A report will be included as an appendix to the Final Report.

14.7. Body Temperature

Frequency:	On Day 1 and Day 29 at predose, 6 and 24 hours post dose (end of each group). If body temperature is significantly above normal range (36.0C to 38.0C) the temperature will be monitored daily till return to normal. If clinical observations indicate a possible body temperature changes, measurement may be taken at the discretion of the Study Director.
Procedure:	Rectal body temperature will be recorded on un-sedated animals.

15. LABORATORY EVALUATIONS

15.1. Clinical Pathology

15.1.1. Sample Collection

Blood will be collected from the abdominal aorta following isoflurane anesthesia. After collection, samples will be transferred to the appropriate laboratory for processing.

Animals will be fasted overnight before blood sampling (for clinical chemistry). Samples will be collected according to the following table.

Appendix 1

Samples for Clinical Pathology Evaluation

Group Nos.	Time Point	Hematology	Coagulation	Clinical Chemistry
1 to 4[a]	Day 30	X	X	X
1 and 4	Day 43	X	X	X
Unscheduled euthanasia (when possible)	Before euthanasia	X	X	X

X = Samples to be collected
a Samples will only be collected from those animals scheduled for euthanasia on Day 30.

Any residual/retained clinical pathology samples will be discarded before issue of the Final Report.

15.1.2. Hematology

Target Volume: 0.5 mL

Anticoagulant: EDTA

Hematology Parameters

Red blood cell count	White blood cell count
Hemoglobin concentration	Neutrophil count (absolute)
Hematocrit	Lymphocyte count (absolute)
Mean corpuscular volume	Monocyte count (absolute)
Red Blood Cell Distribution Width	Eosinophil count (absolute)
Mean corpuscular hemoglobin concentration	Basophil count (absolute)
Mean corpuscular hemoglobin	Large unstained cells (absolute)
Reticulocyte count (absolute)	Other cells (as appropriate)
Platelet count	

A blood smear will be prepared from each hematology sample. Blood smears will be labeled, stained, and stored. Blood smears may be read to investigate results. If additional examination of blood smears is deemed necessary, the smears may be subsequently evaluated and this evaluation will be described in a study plan amendment.

15.1.3. Coagulation

Target Volume: 0.9 mL (in a 1.0 mL tube)

Anticoagulant: Citrate

Processing: To plasma

Coagulation Parameters

Activated partial thromboplastin time	Prothrombin time
Fibrinogen	Sample Quality

15.1.4. Clinical Chemistry

Target Volume: 0.7 mL

Appendix 1

Anticoagulant: None, collected in serum separator tubes

Processing: To serum

Clinical Chemistry Parameters

Alanine aminotransferase	Total protein
Aspartate aminotransferase	Albumin
Alkaline phosphatase	Globulin
Gamma-glutamyltransferase	Albumin/globulin ratio
Creatine Kinase	Glucose
Total bilirubin[a]	Cholesterol
Urea nitrogen	Triglycerides
Creatinine	Sodium
Calcium	Potassium
Phosphorus	Chloride
Sample Quality	

[a] When total bilirubin is > 0.5 mg/dL, indirect and direct bilirubin will also be measured.

15.1.5. Bone Marrow Smear Evaluation (Optional)

Bone marrow smears will be collected and prepared as described in the Tissue Collection and Preservation table (ATTACHMENT A).

Evaluation of stained smears may be added by amendment at the discretion of the Study Director in consultation with the pathologist and the Sponsor.

15.2. Cytokine Analysis

Blood will be collected from the jugular vein of all recovery animals and preterminally euthanized animals (recovery animals only). After collection, blood samples for serum will be allowed to clot at ambient room temperature and blood samples for plasma will be transferred on wet ice to the appropriate laboratory for processing.

Sample Collection Schedule

Target Blood Volume (mL)			0.5	0.5
Anticoagulant			**None (SST)**	**EDTA**
Centrifugation settings			(b) (4)	
Timepoints			**Sample Type**	
Day	**Hrs**	**No. of Males/ Females**	IFN-α	IL-1ß, IL-6, TNF-α, IP-10, MIP-1-α, MCP-1
1	6	5/5	X	X
15	6	5/5	X	X
29	6	5/5	X	X
43	NAp	5/5	X	X
Matrix			Serum	Plasma

Appendix 1

Target Blood Volume (mL)			0.5	0.5
Anticoagulant			None (SST)	EDTA
Centrifugation settings			(b) (4)	
Timepoints			Sample Type	
Day	Hrs	No. of Males/ Females	IFN-α	IL-1ß, IL-6, TNF-α, IP-10, MIP-1-α, MCP-1
Volume per aliquot (µL)			All volume	All volume
Number of aliquot(s)			1	1
Storage condition (set to maintain)			-80°C	-80°C
Responsible Lab			CR-SHB	CR-SHB

X = Sample to be collected, NAp = Not applicable

The number of aliquots and volumes are targets that may be adjusted based on sample volume availability.

The samples will be analyzed by the Immunology department. Analysis for IL-1ß, IL-6, TNF-α, IP-10, MIP-1-α and MCP-1 will be conducted using a multiplex Luminex method. An ELISA method will be used for the analysis of IFN-α. The procedures to be followed during the course of this study along with the assays acceptance criteria will be detailed in the appropriate analytical procedure. Samples will be analyzed in duplicate.

Following Study Director approval, any residual/retained samples will be discarded prior to report finalization.

An Immunology Report will be included as an appendix to the Final Report.

15.3. Anti-drug Antibody (ADA) Sample Collection, Processing, and Analysis

Blood will be collected from all animals by jugular venipuncture and/or via the abdominal aorta while under isoflurane anesthesia (terminal and unscheduled samples).

Time Points: Before initiation of dosing and at study termination (on Day 30 for main animals and on Day 43 for recovery animals).

Target Volume: 0.5 mL

Anticoagulant: None, collected in serum separator tubes

Processing: To serum

Samples will be mixed gently and allowed to clot at room temperature until centrifugation which will be carried out as soon as practical (not exceeding 60 minutes after collection). The samples will be centrifuged for (b) (4) in a refrigerated centrifuge (set to maintain (b) (4)) at (b) (4) The resultant serum will be separated, transferred to uniquely labeled clear polypropylene tubes, frozen immediately over dry ice and transferred to a freezer set to maintain -80°C.

Appendix 1

Samples will be shipped on dry ice to:

Shipping Contact
(b) (6)
Integrated BioTherapeutics, Inc.
4 Research Court
Suite 300
Rockville, MD 20850, USA
Tel: (b) (6)
Fax: (b) (6)
E-mail: (b) (6)

The test site will be notified before shipment of the samples. Upon receipt at the immunology laboratory, the samples will be stored at -80°C.

The samples will be analyzed for rat anti-ZIKA antibodies using a qualified ELISA method.

Any residual/retained samples will be maintained for a minimum of 6 months following issuance of the Draft Report after which samples will be discarded. Alternatively, residual/retained samples will be discarded prior to the 6 month period should the issuance of the Final Report occur prior to the end of the 6 month retention period. An earlier discard of these residual/retained samples may also be requested and authorized by the Study Director.

An Anti-therapeutic Antibody Report will be included as an appendix to the Final Report.

16. TERMINAL PROCEDURES

Terminal procedures are summarized in the following table:

Terminal Procedures for Main Study and Recovery Animals

Group No.	No. of Animals		Scheduled Euthanasia Day	Necropsy Procedures			Histology[a]	Histopathology[a]
	M	F		Necropsy	Tissue Collection	Organ Weights		
1	10	10	30	X	X	X	Full Tissue	Full Tissue
2	10	10					Full Tissue	Gross Lesions Target Tissues
3	10	10					Full Tissue	Gross Lesions Target Tissues
4	10	10					Full Tissue	Full Tissue
1	5	5	43	X	X	X	Full Tissue	Gross Lesions Target Tissues
4	5	5					Full Tissue	Gross Lesions Target Tissues
Unscheduled Deaths				X	X	-	Full Tissue	Full Tissue
Replaced animals (prestudy)				X	Standard Diagnostic	-	-	-

Appendix 1

Group No.	No. of Animals		Scheduled Euthanasia Day	Necropsy Procedures			Histology[a]	Histopathology[a]
	M	F		Necropsy	Tissue Collection	Organ Weights		
					List			
Replaced animals (after dosing start)				X	X	-	-	-

X = Procedure to be conducted; - = Not applicable.
[a] See Tissue Collection and Preservation table for listing of tissues.

16.1. Unscheduled Deaths

If a main study or recovery animal dies on study, a necropsy will be conducted and specified tissues will be saved. If necessary, the animal will be refrigerated to minimize autolysis.

Main study or recovery animals may be euthanized for humane reasons as per Test Facility SOPs. The samples for evaluation of clinical pathology parameters and antibody analysis will be obtained if possible as specified in Section **Error! Reference source not found.**15.

These animals will undergo exsanguination by incision from the abdominal aorta following isoflurane anesthesia unless deemed inappropriate by the Study Director and/or the clinical veterinarian and will undergo necropsy, and specified tissues will be retained. If necessary, the animal will be refrigerated (set to maintain 4°C) to minimize autolysis.

Animals found dead or euthanized before the initiation of dosing will be subject to necropsy and limited tissue retention (standard diagnostic tissue list). Any animal replaced after the start of dosing will be subject to necropsy and tissues will be retained (as per Tissue Collection and Preservation section), and any data generated will not be included in the report unless deemed appropriate by the Study Director.

16.2. Scheduled Euthanasia

Main study and recovery animals surviving until scheduled euthanasia will have a terminal body weight recorded, samples for clinical pathology, anti-drug antibodies and cytokines will be collected (as appropriate), and will be euthanized by exsanguination by incision from the abdominal aorta following isoflurane anesthesia. When possible, the animals will be euthanized rotating across dose groups such that similar numbers of animals from each group, including controls, will be necropsied throughout the day. Animals will be fasted overnight before their scheduled necropsy.

16.3. Necropsy

Main study and recovery animals will be subjected to a complete necropsy examination, which will include evaluation of the carcass and musculoskeletal system; all external surfaces and orifices; cranial cavity and external surfaces of the brain; and thoracic, abdominal, and pelvic cavities with their associated organs and tissues.

Appendix 1

Necropsy procedures will be performed by qualified personnel with appropriate training and experience in animal anatomy and gross pathology. A veterinary pathologist, or other suitably qualified person, will be available.

At the discretion of the necropsy supervising pathologist, images may be generated for illustration of or consultation on gross observations. Generation of such images will be documented and communicated to the Study Director. Images and associated documentation will be retained and archived.

16.4. Organ Weights

The organs identified for weighing in the Tissues Collection and Preservation table will be weighed at necropsy for all scheduled euthanasia animals. Organ weights will not be recorded for animals found dead or euthanized in poor condition or in extremis. Paired organs will be weighed together. In the event of gross abnormalities, in addition to the combined weight, the weight of each organ of a pair may be taken and entered as a tissue comment. Organ weight as a percent of body weight (using the terminal body weight) and organ weight as a percent of brain weight will be calculated.

16.5. Tissue Collection and Preservation

Representative samples of the tissues identified in the Tissue Collection and Preservation table in **Error! Reference source not found.**ATTACHMENT A will be collected from all animals and preserved in 10% neutral buffered formalin, unless otherwise indicated. Additional tissue samples may be collected to elucidate abnormal findings.

17. HISTOLOGY AND HISTOPATHOLOGY

17.1. Histology

Tissues in the Tissue Collection and Preservation table from animals identified in the Terminal Procedures table will be embedded in paraffin, sectioned, mounted on glass slides, and stained with hematoxylin and eosin.

17.2. Histopathology

Histopathological evaluation will be performed by a board-certified veterinary pathologist Tissues identified by the study pathologist during microscopic evaluation will be communicated to the study Director; tissues will be evaluated and reported. Any additional stains or evaluations, if deemed necessary by the pathologist, will be added by study plan amendment following discussion with the Study Director and in consultation the Sponsor.

At the discretion of the study pathologist and after acknowledgement by the Study Director, images may be captured for consultation purposes.

Appendix 1

17.3. Pathology Peer Review

A pathology peer review will be conducted by:

(b) (6)
Moderna Therapeutics
200 Technology Square, 3rd Floor
Cambridge, MA 02116
Tel: (b) (6)
E-mail: (b) (6)

The peer review statement or equivalent documentation will be included as an appendix to the Final Report.

18. CONSTRUCTED VARIABLES

Body Weight Gains	Calculated between at least each interval as well as between the beginning and end of each phase
Organ Weight relative to Body Weight	Calculated against the Terminal body weight for scheduled intervals
Organ Weight relative to Brain Weight	Calculated against the brain weight for scheduled intervals

19. STATISTICAL ANALYSIS

All statistical tests will be conducted at the 5% significance level. All pairwise comparisons will be conducted using two sided tests and will be reported at the 0.1%, 1%, and 5% levels

Numerical data collected on scheduled occasions for the listed variables will be analyzed as indicated according to sex and occasion. Descriptive statistics number, mean and standard deviation (or %CV or SE when deemed appropriate) will be reported whenever possible. Values may also be expressed as a percentage of predose or control values when deemed appropriate. Inferential statistics will be performed according to the matrix below when possible, but will exclude semi-quantitative data, and any group with less than 3 observations.

Statistical Matrix

Variables for Inferential Analysis	Statistical Method Parametric/ Non-Parametric
Body Weight	X
Body Temperature	X
Hematology Variables	X
Coagulation Variables	X
Clinical Chemistry Variables	X
Cytokines	X
Organ Weights	X
Body Weight Changes	X

Appendix 1

Variables for Inferential Analysis	Statistical Method Parametric/ Non-Parametric
Organ Weight relative to Body Weight	X
Organ Weight relative to Brain Weight	X

The following pairwise comparisons will be made:

Group 2 vs. Group 1

Group 3 vs. Group 1

Group 4 vs. Group 1

19.1. Parametric/Non-Parametric

Levene's test will be used to assess the homogeneity of group variances.

Datasets with at least 3 groups will be compared using an overall one-way ANOVA *F*-test if Levene's test is not significant or the Kruskal-Wallis test if it is. If the overall *F*-test or Kruskal-Wallis test is found to be significant, then the above pairwise comparisons will be conducted using Dunnett's or Dunn's test, respectively.

Datasets with 2 groups (the designated control group and 1 other group) will be compared using a *t*-test if Levene's test is not significant or Wilcoxon Rank-Sum test if it is.

20. COMPUTERIZED SYSTEMS

The following critical computerized systems may be used in the study. The actual critical computerized systems used will be specified in the Final Report.

Data for parameters not required by study plan, which are automatically generated by analytical devices used will be retained on file but not reported. Statistical analysis results that are generated by the program but are not required by study plan and/or are not scientifically relevant will be retained on file but will not be included in the tabulations.

Critical Computerized Systems

System Name	Description of Data Collected and/or Analyzed
Provantis	In-life; clinical pathology; postmortem
Dispense	Test Material receipt, accountability and/or formulation activities
SRS (CR MTL in-house application built with SAS) and SAS system for Windows and/or In-house reporting software Nevis 2012 (using SAS)	Statistical analyses of numerical in-life, clinical pathology and postmortem data
Mesa Laboratories AmegaView CMS	Continuous Monitoring System. Monitoring of standalone fridges, freezers, incubators, and selected laboratories to measure temperature, relative humidity, and CO2, as appropriate
Johnson Controls Metasys	Building Automation System. Control of HVAC and other building systems, as well as temperature/humidity control and

Appendix 1

	trending in selected laboratories and animal rooms
Empower 3 (Waters Corporation)	Data acquisition for dose formulation analysis, including regression analysis and measurement of concentration and recovery of dose formulations using HPLC. Data regression analysis and measurement of purity.
BioPlex Manager	Cytokine data collection and regression
Softmax Pro GxP	IFN-α data collection
Watson LIMS	Biomarker data analysis
Dynamics (Wyatt)	Data acquisition for particle size analysis of the test item using DLS
(b) (4)	Data acquisition
Excel	Data analyses and tabulation

21. AMENDMENTS AND DEVIATIONS

Changes to the approved study plan shall be made in the form of an amendment, which will be signed and dated by the Study Director. Every reasonable effort will be made to discuss any necessary study plan changes in advance with the Sponsor.

All study plan and SOP deviations will be documented in the study records. Deviations from the study plan and/or SOP related to the phase(s) of the study conducted at a Test Site shall be documented, acknowledged by the PI/IS, and reported to the Study Director for authorization/acknowledgement. The Study Director will notify the Sponsor of deviations that may result in a significant impact on the study as soon as possible.

22. RETENTION OF RECORDS, SAMPLES, AND SPECIMENS

All study-specific raw data, electronic data, documentation, study plan, retained samples and specimens, and interim (if applicable) and final reports will be archived by no later than the date of final report issue. All materials generated by Charles River from this study will be transferred to a CR-MTL archives. At least one year after issue of the draft report, the Sponsor will be contacted.

Records to be maintained will include, but will not be limited to, documentation and data for the following:

- Study Plan, study plan amendments, and deviations
- Study schedule
- Study-related correspondence
- Test system receipt, health, and husbandry
- Test and Reference Item receipt, identification, preparation, and analysis
- In-life measurements and observations
- Clinical pathology and cytokine sample collection and evaluation
- Anti-drug Antibodies sample collection

Appendix 1

- Gross and microscopic observations and related data
- Organ weight measurements
- Statistical analysis results

23. REPORTING

A comprehensive Draft Report will be prepared following completion of the study and will be finalized following consultation with the Sponsor. The report will include all information necessary to provide a complete and accurate description of the experimental methods and results and any circumstances that may have affected the quality or integrity of the study.

The Sponsor will receive an electronic version of the Draft and Final Report provided in Adobe Acrobat PDF format (hyperlinked and searchable at final) along with a Microsoft Word version of the text. The PDF document will be created from native electronic files to the extent possible, including text and tables generated by the Test Facility. Report components not available in native electronic files and/or original signature pages will be scanned and converted to PDF image files for incorporation. An original copy of the report with the Test Facility's handwritten signatures will be retained.

Reports should be finalized within 6 months of issue of the Draft Report. If the Sponsor has not provided comments to the report within 6 months of draft issue, the report will be finalized by the Test Facility unless other arrangements are made by the Sponsor.

24. ANIMAL WELFARE

24.1. Institutional Animal Care and Use Committee Approval

The study plan and any amendment(s) or procedures involving the care and use of animals in this study will be reviewed and approved by CR SHB Institutional Animal Care and Use Committee (IACUC). During the study, the care and use of animals will be conducted with guidance from the USA National Research Council and the Canadian Council on Animal Care (CCAC).

Appendix 1

AMENDMENT APPROVAL

(b) (6) _____ Date: 07 Jun 2017

As authorized by the Sponsor on 07 Jun 2017

STUDY PLAN AMENDMENT 04

Test Facility Study No. 5002231

A 1 Month (3 doses) Intramuscular Injection Vaccine Study of mRNA-1706 in Sprague-Dawley Rats With a 2-Week Recovery Period

SPONSOR:
Moderna Therapeutics, Inc.
200 Technology Square, Third Floor
Cambridge, MA 02139, USA

TEST FACILITY:
Charles River Laboratories Montreal ULC
Sherbrooke Site (CR SHB)
1580 Ida-Metivier
Sherbrooke, QC J1E 0B5
Canada

Appendix 1

SUMMARY OF CHANGES AND JUSTIFICATIONS

Study Plan effective date: 15 Mar 2017

Note: When applicable, additions are indicated in bold underlined text and deletions are indicated in bold strikethrough text in the affected sections of the document.

Item or Section(s)	Justification
Amendment 1	**Date: 27-Mar-2017**
2. PROPOSED STUDY SCHEDULE	To include new schedule following delay in dosing initiation due to test item delivery date.
10.3.Sample Collection and Analysis	To remove homogeneity for Group 1 based on sample collection in section 10.3.1.1.
10.3.1. Analytical Method	To correct the dose formulation analysis validation number.
10.3.1.2. Stability Analysis	To include end of use for bulk test item.
13. EXPERIMENTAL DESIGN	To correct the dose concentration for mid dose group.
15.1.1. Sample Collection	To correct the group numbers to be evaluation on both occasions.
Amendment 2	**Date: 02-May-2017**
2. PROPOSED STUDY SCHEDULE	To include reporting schedule.
7. RESPONSIBLE PERSONNEL	To update PIs description based on wording used in section 15.3.
8.1. Test Item	To include information from Summary of Analysis.
14.2.1. Detailed Clinical Observations	To include detailed examination of the injection site following each dosing.
14.3. Local Irritation Assessment	Section deleted. Replaced by detailed examination of the injection site (refer to section 14.2.1.)
14.7. Body Temperature	To update the procedure as animals were not identified with the appropriate microship for body weight recording with scanner.
Amendment 3	**Date: 07-Jun-2017**
7. RESPONSIBLE PERSONNEL	To include the pathology IS.
Amendment 4	
7. RESPONSIBLE PERSONNEL	To include clarification for immunology analysis and to include a biomarker IS.
15.2. Cytokines Analysis	To include clarification for cytokine analysis..

Appendix 1

TABLE OF CONTENTS

Appendix 1

1. OBJECTIVE(S)

The objectives of this study are to determine the potential toxicity of mRNA-1706, when given by intramuscular injection for 1 month (3 doses) to rats and to evaluate the potential reversibility of any findings following a 2-week recovery period.

1.1. Study Classification

Study Category:	TOX
Study Type:	Repeat Dose Toxicity
Study Design:	Parallel
Primary Treatment CAS Registry Number:	Not Available
Primary Treatment Unique Ingredient ID:	Not Available
Class of Compound:	mRNA

2. PROPOSED STUDY SCHEDULE

Proposed study dates are listed below. Actual applicable dates will be included in the Final Report.

Experimental Start Date:	16 Mar 2017 (First date of study-specific data collection)
Experimental Completion Date:	Week of 25 Sep 2017 (Last date data are collected from the study)
Animal Arrival:	16 Mar 2017
Initiation of Dosing:	03 May 2017
Completion of In-life:	02 Jun 2017 (main study animals) 15 Jun 2017 (recovery animals) (Last date of necropsy)
Unaudited Draft Report:	14 Aug 2017
Draft Report:	19 Sep 2017
Final Report:	26 Sep 2017 (Expected date of Study Director signature)

3. GUIDELINES FOR STUDY DESIGN

The design of this study was based on the study objective(s), the overall product development strategy for the Test Item, and the following study design guidelines:

- OECD Guideline 407. *Repeated Dose 28-day Oral Toxicity Study in Rodents*.

Appendix 1

- Committee for Medicinal Products for Human Use (CHMP). *Note for Guidance on Repeated Dose Toxicity*. CPMP/SWP/1042/99corr.
- ICH Harmonised Tripartite Guideline M3 (R2). *Nonclinical Safety Studies for the Conduct of Human Clinical Trials and Marketing Authorization for Pharmaceuticals*.
- Japanese Guidelines for Nonclinical Studies of Drugs Manual (1995). *Guidelines for Nonclinical Pharmacokinetic Studies*, *Guidelines for Toxicity Studies of Drugs (Chapter 3, Repeated Dose Toxicity Studies)*
- Appendix to Director General Notification, No. 12-Nousan-8147, 24 November 2000, Agricultural Production Bureau, Ministry of Agriculture, Forestry and Fisheries of Japan (JMAFF).

4. REGULATORY COMPLIANCE

The study will be performed in accordance with the OECD Principles of Good Laboratory Practice and as accepted by Regulatory Authorities throughout the European Union, United States of America (FDA), Japan (MHLW), and other countries that are signatories to the OECD Mutual Acceptance of Data Agreement.

Any portion of this study conducted in the USA will be performed in accordance with the U.S. Department of Health and Human Services, Food and Drug Administration. United States Code of Federal Regulations, Title 21, Part 58: Good Laboratory Practice for Nonclinical Laboratory Studies and as accepted by Regulatory Authorities throughout the European Union (OECD Principles of Good Laboratory Practice), Japan (MHLW), and other countries that are signatories to the OECD Mutual Acceptance of Data Agreement.

Exceptions to GLPs include the following study elements:

- Characterization of the Test Item will be performed by the Sponsor or Sponsor subcontractor according to established SOPs, controls, and approved test methodologies to ensure integrity and validity of the results generated; these analyses will not be conducted in compliance with the GLP or GMP regulations.
- Analysis of cytokines and anti-therapeutic antibody will be conducted using scientifically qualified methods and in accordance with all applicable analytical procedures.
- Pathology peer review

5. QUALITY ASSURANCE

5.1. Test Facility

The Test Facility Quality Assurance Program (QAP) will monitor the study to assure the facilities, equipment, personnel, methods, practices, records, and controls are in conformance with Good Laboratory Practice regulations. The QAP will review the study plan, conduct inspections at intervals adequate to assure the integrity of the study, and audit the Final Report to

Appendix 1

assure that it accurately describes the methods and standard operating procedures and that the reported results accurately reflect the raw data of the study.

Each PI is required to report any deviations or other circumstances that could affect the quality or integrity of the study to the Study Director in a timely manner. Each PI will provide a report addressing their assigned phase of the study, which will be included as an appendix to the Final Report. The phase report will include the following:

- The archive site for all records, samples, specimens and reports generated from the phase or segment (alternatively, details regarding the retention of the materials may be provided to the Study Director for inclusion in the Final Report)
- A listing of critical computerized systems used in the conduct and/or interpretation of the assigned study phase

8. TEST AND REFERENCE ITEMS

8.1. Test Item

Identification:	mRNA-1706
Supplier:	Moderna Therapeutics, Inc.
Batch (Lot) Number:	MTDP17036
Concentration:	2.1 mg/mL
Retest Date:	Concomitant assessment, ongoing
Physical Description:	White to off-white lipid nanoparticle dispersion
Storage Conditions:	Kept in a freezer set to maintain -20°C

8.2. Reference Item

Identification:	Phosphate-buffered Saline (PBS) pH 7.2
Supplier:	Will be included in the Final Report
Batch (Lot) Number:	Will be included in the Final Report
Expiration Date:	Will be included in the Final Report
Physical Description:	Liquid
Storage Conditions:	Kept in a controlled temperature area set to maintain 21°C

8.3. Test and Reference Item Characterization

The Sponsor will provide to the Test Facility documentation of the identity, strength, purity, and composition for the Test Item. A Certificate of Analysis or equivalent documentation will be provided for inclusion in the Final Report. The Sponsor will also provide information concerning the regulatory standard that was followed for these evaluations.

Appendix 1

The Sponsor has appropriate documentation on file concerning the method of synthesis, fabrication or derivation of the Test Item, and this information is available to the appropriate regulatory agencies should it be requested.

8.4. Analysis of Test Item

A sample (2 vials) of the Test Item will be taken on the completion of the dosing period. Analysis of bulk Test Item for concentration, particle size and purity will be performed.

The first vial will be transferred on ice pack to the analytical laboratory at the Test Facility for concentration and particle size analysis.

The second vial will be transferred on ice pack to the molecular biology laboratory at the Test Facility for purity analysis.

Purity-and Particle size analysis will be performed by IEX- HPLC, Differential Light Scattering (DLS) and capillary electrophoresis (CE) using validated analytical procedures.

Any residual/retained analytical samples (and Test Item used in analysis) will be discarded before issue of the Final Report.

8.5. Reserve Samples

For each batch (lot) of Test and Reference Item components, a reserve sample (1 mL, 100 mg or 1 vial) will be collected and maintained under the appropriate storage conditions by the Test Facility.

8.6. Test and Reference Item Inventory and Disposition

Records of the receipt, distribution, storage, and disposition of Test and Reference Items will be maintained. With the exception of reserve samples, all unused Sponsor-supplied bulk Test Item will be returned to the Sponsor

Shipping Contact
(b) (6)
Moderna Therapeutics
800 Technology Sq, 8th Floor
Cambridge MA 02476
Cell: (b) (6)
E-mail: (b) (6)

9. SAFETY

The safety precautions for the Test Item and dose formulations will be documented in a Test Material Safety Data Sheet (TMSDS) based on the information provided by the Sponsor either by an MSDS or similar document.

Appendix 1

10. DOSE FORMULATION AND ANALYSIS

10.1. Preparation of Reference Item

Dose formulation preparations will be performed under a laminar flow hood using clean procedures.

The Reference Item, Phosphate Buffered Saline pH 7.2, will be dispensed on days of dosing (i.e. Days 1, 15 and 29) for administration to Group 1 control animals and as required to dilute the bulk Test Item for administration to Groups 2 to 4 animals. The aliquots will be stored in a refrigerator set to maintain 4°C until use. They will be removed from the refrigerator and allowed to warm to room temperature for at least 30 minutes before dosing.

Any residual volumes will be discarded unless otherwise requested by the Study Director.

10.2. Preparation of Test Item

Dose formulation preparations will be performed under a laminar flow hood using clean procedures.

Test Item dosing formulations will be diluted with Phosphate Buffered Saline, pH 7.2, as necessary for administration. The dosing formulations will be prepared on each days of dosing (i.e. Days 1, 15 and 29) and will be stored in a refrigerator set to maintain 4°C. The dose formulations will be allowed to warm to room temperature for at least 30 minutes prior to dosing. Alternatively, the aliquots can be transferred directly to room temperature.

Any residual volumes of formulated Test Item will be stored in a refrigerator set at 4°C and will be discarded prior to finalisation following approval by the Study Director.

10.3. Sample Collection and Analysis

Dose formulation samples will be collected for analysis as indicated in the following table. Additional samples may be collected and analyzed at the discretion of the Study Director.

Dose Formulation Sample Collection Schedule

Interval	Homogeneity	Concentration	Sampling From
Day 1[b]	2 to 4[a]	All groups	Preparation vessel
Day 29[b]	N/A	All groups	Preparation vessel

N/A = not applicable.

[a] The homogeneity results obtained from the top, middle and bottom preparations will be averaged and utilized as the concentration results.

[b] Samples will be collected on the first preparation of the study and on the last preparation of the study.

Samples to be analyzed will be submitted as soon as possible following preparation.

All samples to be analyzed will be transferred on ice packs to the analytical laboratory (CR-MTL).

Appendix 1

Any residual/retained analytical samples (and Test Item used in analysis) will be discarded before issue of the Final Report.

10.3.1. Analytical Method

Analyses described below will be performed by HPLC using a validated analytical procedure (Validation Study Number 1801737).

10.3.1.1. Concentration and Homogeneity Analysis

Samples for Analysis:	Duplicate top, middle, and bottom samples (duplicate middle only from Group 1); sent for analysis as noted in Section 10.3. On days where only concentration analysis is required, the formulation will only be sampled from the middle.
Backup Samples:	Triplicate top, middle, and bottom samples (duplicate middle only from Group 1); maintained at the Test Facility. Backup samples may be analyzed at the discretion of the Study Director. On days where only concentration analysis is required, the formulation will only be sampled from the middle.
Sampling Containers:	Appropriate sized containers.
Sample Volume:	0.5 mL for analysis and backup samples
Storage Conditions:	Kept in a refrigerator set to maintain 4°C.
Acceptance Criteria:	For concentration, the criteria for acceptability will be mean sample concentration results within or equal to ± 15% of theoretical concentration. Each individual sample concentration result within or equal to ± 20%. For homogeneity, the criteria for acceptability will be a relative standard deviation (RSD) of concentrations of ≤ 5% for each group.

10.3.1.2. Stability Analysis

There will be no stability analysis performed for concentration used on this study, however, end of use stability analysis on the bulk test item will be performed at the end of the dosing period.

11. TEST SYSTEM

Species:	Rat
Strain:	Crl:CD(SD) Sprague-Dawley rat
Source:	Charles River Canada Inc., St. Constant, QC, Canada
Number of Males Ordered:	60

Appendix 1

Number of Females Ordered:	60
Target Age at Arrival:	4 to 8 weeks
Target Weight at Arrival:	126 to 150 g (males) 101 to 125 g (females)

The actual age and weight of animals received will be listed in the Final Report.

The actual age, weight, and number of animals received will be listed in the Final Report.

11.1. Justification of Test System and Number of Animals

The Sprague Dawley rat was chosen as the animal model for this study as it is an accepted rodent species for preclinical toxicity testing by regulatory agencies.

The total number of animals to be used in this study is considered to be the minimum required to properly characterize the effects of the Test Item. This study has been designed such that it does not require an unnecessary number of animals to accomplish its objectives.

At this time, studies in laboratory animals provide the best available basis for extrapolation to humans and are required to support regulatory submissions. Acceptable models which do not use live animals currently do not exist.

11.2. Animal Identification

Each animal will be identified using a subcutaneously implanted electronic identification chip.

11.3. Environmental Acclimation

A minimum acclimation period of 12 days will be allowed between animal receipt and the start of dosing in order to accustom the animals to the laboratory environment.

11.4. Selection, Assignment, Replacement, and Disposition of Animals

Animals will be assigned to groups by a stratified randomization scheme designed to achieve similar group mean body weights. Males and females will be randomized separately. Animals in poor health or at extremes of body weight range will not be assigned to groups.

Before the initiation of dosing, any assigned animals considered unsuitable for use in the study will be replaced by alternate animals obtained from the same shipment and maintained under the same environmental conditions.

After initiation of dosing, study animals may be replaced during the replacement period with alternate animals in the event of accidental injury, non-Test Item-related health issues, or similar circumstances.

The alternate animals may be used as replacements on the study within 1 day.

The disposition of all animals will be documented in the study records.

Appendix 1

12. HUSBANDRY

12.1. Housing

Animals will be group housed (up to 3 animals of the same sex and same dosing group together) in polycarbonate cages containing appropriate bedding equipped with an automatic watering valve. These housing conditions will be maintained unless deemed inappropriate by the Study Director and/or Clinical Veterinarian. The room(s) in which the animals will be kept will be documented in the study records.

Animals will be separated during designated procedures/activities. Each cage will be clearly labeled with a color-coded cage card indicating study, group, animal number(s), and sex. Cages will be arranged on the racks in group order. Where possible, control group animals will be housed on a separate rack from the Test Item treated animals.

12.2. Environmental Conditions

The targeted conditions for animal room environment will be as follows:

Temperature:	19°C to 25°C
Humidity:	30% to 70%
Light Cycle:	12 hours light and 12 hours dark (except during designated procedures)

12.3. Food

PMI Nutrition International Certified Rodent Chow No. 5CR4 will be provided ad libitum throughout the study, except during designated procedures. The same diet in meal form may be provided to individual animals as warranted by clinical signs (e.g., broken/damaged incisors or other health changes).

The feed is analyzed by the supplier for nutritional components and environmental contaminants. Results of the analysis are provided by the supplier and are on file at the Test Facility.

It is considered that there are no known contaminants in the feed that would interfere with the objectives of the study.

12.4. Water

Municipal tap water after treatment by reverse osmosis and ultraviolet irradiation will be freely available to each animal via an automatic watering system (except during designated procedures). Water bottles can be provided, if required.

Periodic analysis of the water is performed, and results of these analyses are on file at the Test Facility.

It is considered that there are no known contaminants in the water that could interfere with the outcome of the study.

Appendix 1

12.5. Animal Enrichment

Animals will be socially housed for psychological/environmental enrichment and will be provided with items such as a hiding tube and a chewing object, except during study procedures/activities.

12.6. Veterinary Care

Veterinary care will be available throughout the course of the study and animals will be examined by the veterinary staff as warranted by clinical signs or other changes. All veterinary examinations and recommended therapeutic treatments, if any, will be documented in the study records.

In the event that animals show signs of illness or distress, the responsible veterinarian may make initial recommendations about treatment of the animal(s) and/or alteration of study procedures, which must be approved by the Study Director or Scientific designate. All such actions will be properly documented in the study records and, when appropriate, by study plan amendment. Treatment of the animal(s) for minor injuries or ailments may be approved without prior consultation with the Sponsor representative when such treatment does not impact fulfillment of the study objectives. If the condition of the animal(s) warrants significant therapeutic intervention or alterations in study procedures, the Sponsor representative will be contacted, when possible, to discuss appropriate action. If the condition of the animal(s) is such that emergency measures must be taken, the Study Director and/or clinical veterinarian will attempt to consult with the Sponsor representative prior to responding to the medical crisis, but the Study Director and/or veterinarian has authority to act immediately at his/her discretion to alleviate suffering. The Sponsor representative will be fully informed of any such events.

13. EXPERIMENTAL DESIGN

Experimental Design

Group No.	Test Material	Dose Level (µg/dose)	Dose Volume (µL/dose)	Dose Concentration (mg/mL)	No. of Animals			
					Main Study		Recovery Study	
					Males	Females	Males	Females
1	Reference Item	0	200	0	10	10	5	5
2	mRNA-1706	10	200	0.05	10	10	-	-
3	mRNA-1706	50	200	0.25	10	10	-	-
4	mRNA-1706	100	200	0.5	10	10	5	5

13.1. Administration of Test and Reference Items

The Test and Reference Items will be administered to the appropriate animals from Groups 1 to 4 via intramuscular injection into the lateral compartment of the thigh alternating legs on Days 1, 15 and 29 (site 1= left thigh, site 2 = right thigh). The volume for each dose will be administered using a syringe/needle within the demarcated area. The first day of dosing will be designated as

Appendix 1

Day 1 (exception: alternate animals used for replacement after Day 1 will assume the day of the animal being replaced).

The injection area will be marked as frequently as required to allow appropriate visualization of administration sites. Hair may be clipped or shaved if required to improve visualization of the injection sites. The injection site will be documented in the raw data for each dose administered.

13.2. Justification of Route and Dose Levels

The intramuscular route of exposure was selected because this is the intended route of human exposure.

The dose levels for this toxicology study were chosen to approximate a substantial multiple of the anticipated clinical starting dose and top clinical dose. The highest dose to be tested is expected to represent the intended maximum human clinical dose and volume and will be administered by the clinical route (intramuscular). At this dose level, minimal systemic toxicity is expected, but it is possible mild to moderate injection site reaction (redness, swelling) and potentially elevation of systemic cytokine/acute phase markers may be observed. The mid- and low-dose were selected to evaluate the dose-dependent effect of this compound.

14. IN-LIFE PROCEDURES, OBSERVATIONS, AND MEASUREMENTS

The in-life procedures, observations, and measurements listed below will be performed for all main study and recovery animals. These data will be included in an appendix to the study report, but not used in the evaluation of the results, unless considered appropriate by the Study Director. During the study, additional evaluations to those described below and/or scheduled, and considered necessary by the Study Director and/or Veterinarian to assess health status will be conducted and duly documented. More frequent observations may be undertaken if considered appropriate.

14.1. Mortality/Moribundity Checks

Frequency:	Twice daily, once in the morning and once in the afternoon, throughout the study.
Procedure:	Animals will be observed for general health/mortality and moribundity. Animals will not be removed from cage during observation, unless necessary for identification or confirmation of possible findings.

14.2. Clinical Observations

14.2.1. Detailed Clinical Observations

Frequency:	Weekly during the dosing and recovery periods, and at least every 2 weeks during the predosing period.

Appendix 1

	In addition detailed examination of the injection sites will be performed at predose, 24, 48 and 72 hours post each dose. Following Day 29 dosing, no assessment will be perfomed on main study animals at 72 hours post dose as animals will be sent to necropsy on Day 30. Any clinical signs at the injection site (e.g. erythema/redness, skin thickening, edema/swelling, vocalization upon palpation, ulceration, necrosis, warm to the touch, etc...) will be recorded as observed.
Procedure:	Animals removed from the cage for examination.

14.3. Local Irritation Assessment

Section deleted

14.4. Body Weights

Frequency:	Weekly during the dosing and recovery periods, and at least every 2 weeks during the prestudy period.
Procedure:	Animals will be individually weighed. A fasted weight will be recorded on the day of necropsy. Terminal body weights will not be collected from animals found dead or euthanized moribund.

14.5. Food Consumption

Frequency:	Weekly, starting Day -7, throughout the dosing and recovery periods.
Procedure:	Food consumption will be quantitatively measured except for on the day of scheduled euthanasia.

14.6. Ophthalmic Examinations

Frequency:	Once prestudy and again at the end of the dosing period. During Week 2 of the recovery period if Test-Item related findings are observed during the dosing period.
Procedure:	All animals will be subjected to funduscopic (indirect ophthalmoscopy) and biomicroscopic (slit lamp) examinations. The mydriatic used will be 1% tropicamide.
Evaluation:	A report will be included as an appendix to the Final Report.

14.7. Body Temperature

Frequency:	On Day 1 and Day 29 at predose, 6 and 24 hours post dose (end of each group). If body temperature is significantly above normal range (36.0C to 38.0C) the temperature will be monitored daily till

Appendix 1

return to normal. If clinical observations indicate a possible body temperature changes, measurement may be taken at the discretion of the Study Director.

Procedure: Rectal body temperature will be recorded on un-sedated animals.

15. LABORATORY EVALUATIONS

15.1. Clinical Pathology

15.1.1. Sample Collection

Blood will be collected from the abdominal aorta following isoflurane anesthesia. After collection, samples will be transferred to the appropriate laboratory for processing.

Animals will be fasted overnight before blood sampling (for clinical chemistry). Samples will be collected according to the following table.

Samples for Clinical Pathology Evaluation

Group Nos.	Time Point	Hematology	Coagulation	Clinical Chemistry
1 to 4[a]	Day 30	X	X	X
1 and 4	Day 43	X	X	X
Unscheduled euthanasia (when possible)	Before euthanasia	X	X	X

X = Samples to be collected
a Samples will only be collected from those animals scheduled for euthanasia on Day 30.

Any residual/retained clinical pathology samples will be discarded before issue of the Final Report.

15.1.2. Hematology

Target Volume: 0.5 mL

Anticoagulant: EDTA

Hematology Parameters

Red blood cell count	White blood cell count
Hemoglobin concentration	Neutrophil count (absolute)
Hematocrit	Lymphocyte count (absolute)
Mean corpuscular volume	Monocyte count (absolute)
Red Blood Cell Distribution Width	Eosinophil count (absolute)
Mean corpuscular hemoglobin concentration	Basophil count (absolute)
Mean corpuscular hemoglobin	Large unstained cells (absolute)
Reticulocyte count (absolute)	Other cells (as appropriate)
Platelet count	

Appendix 1

A blood smear will be prepared from each hematology sample. Blood smears will be labeled, stained, and stored. Blood smears may be read to investigate results. If additional examination of blood smears is deemed necessary, the smears may be subsequently evaluated and this evaluation will be described in a study plan amendment.

15.1.3. Coagulation

Target Volume: 0.9 mL (in a 1.0 mL tube)

Anticoagulant: Citrate

Processing: To plasma

Coagulation Parameters

Activated partial thromboplastin time Fibrinogen	Prothrombin time Sample Quality

15.1.4. Clinical Chemistry

Target Volume: 0.7 mL

Anticoagulant: None, collected in serum separator tubes

Processing: To serum

Clinical Chemistry Parameters

Alanine aminotransferase Aspartate aminotransferase Alkaline phosphatase Gamma-glutamyltransferase Creatine Kinase Total bilirubin[a] Urea nitrogen Creatinine Calcium Phosphorus Sample Quality	Total protein Albumin Globulin Albumin/globulin ratio Glucose Cholesterol Triglycerides Sodium Potassium Chloride

[a] When total bilirubin is > 0.5 mg/dL, indirect and direct bilirubin will also be measured.

15.1.5. Bone Marrow Smear Evaluation (Optional)

Bone marrow smears will be collected and prepared as described in the Tissue Collection and Preservation table (ATTACHMENT A).

Evaluation of stained smears may be added by amendment at the discretion of the Study Director in consultation with the pathologist and the Sponsor.

15.2. Cytokine Analysis

Blood will be collected from the jugular vein of all recovery animals and preterminally euthanized animals (recovery animals only). After collection, blood samples for serum will be

Appendix 1

allowed to clot at ambient room temperature and blood samples for plasma will be transferred on wet ice to the appropriate laboratory for processing.

Sample Collection Schedule

Target Blood Volume (mL)			0.5	0.5
Anticoagulant			**None (SST)**	**EDTA**
Centrifugation settings			(b) (4)	
Timepoints			**Sample Type**	
Day	**Hrs**	**No. of Males/ Females**	IFN-α	IL-1ß, IL-6, TNF-α, IP-10, MIP-1-α, MCP-1
1	6	5/5	X	X
15	6	5/5	X	X
29	6	5/5	X	X
43	NAp	5/5	X	X
Matrix			Serum	Plasma
Volume per aliquot (µL)			All volume	All volume
Number of aliquot(s)			1	1
Storage condition (set to maintain)			-80°C	-80°C
Responsible Lab **(processing)**			CR-SHB	CR-SHB

X = Sample to be collected, NAp = Not applicable

The number of aliquots and volumes are targets that may be adjusted based on sample volume availability.

The samples **for IL-1ß, IL-6, TNF-α, IP-10, MIP-1-α and MCP-1** will be analyzed by the ~~**Immunology**~~ **Biomarkers** department **at CR MTL**. Analysis for IL-1ß, IL-6, TNF-α, IP-10, MIP-1-α and MCP-1 will be conducted using a multiplex Luminex method. ~~**An ELISA method will be used for the analysis of IFN-α**~~. The procedures to be followed during the course of this study along with the assays acceptance criteria will be detailed in the appropriate analytical procedure. Samples will be analyzed in duplicate.

The samples for IFN- α will be analyzed by the Immunology department (CR SHB). An ELISA method will be used for the analysis of IFN-α. The procedures to be followed during the course of this study along with the assays acceptance criteria will be detailed in the appropriate analytical procedure. Samples will be analyzed in duplicate.

Following Study Director approval, any residual/retained samples will be discarded prior to report finalization.

Appendix 1

A Biomarkers interpretative report (IL-1ß, IL-6, TNF-α, IP-10, MIP-1-α and MCP-1) and ~~A~~an Immunology Report **(IFN- α)** will be included as an appendix to the Final Report.

15.3. Anti-drug Antibody (ADA) Sample Collection, Processing, and Analysis

Blood will be collected from all animals by jugular venipuncture and/or via the abdominal aorta while under isoflurane anesthesia (terminal and unscheduled samples).

Time Points:	Before initiation of dosing and at study termination (on Day 30 for main animals and on Day 43 for recovery animals).
Target Volume:	0.5 mL
Anticoagulant:	None, collected in serum separator tubes
Processing:	To serum

Samples will be mixed gently and allowed to clot at room temperature until centrifugation which will be carried out as soon as practical (not exceeding 60 minutes after collection). The samples will be centrifuged for (b) (4) in a refrigerated centrifuge (set to maintain (b) (4) at (b) (4)
The resultant serum will be separated, transferred to uniquely labeled clear polypropylene tubes, frozen immediately over dry ice and transferred to a freezer set to maintain -80°C.
Samples will be shipped on dry ice to:

Shipping Contact
(b) (6)
Integrated BioTherapeutics, Inc.
4 Research Court
Suite 300
Rockville, MD 20850, USA
Tel: (b) (6)
Fax: (b) (6)
E-mail: (b) (6)

The test site will be notified before shipment of the samples. Upon receipt at the immunology laboratory, the samples will be stored at -80°C.

The samples will be analyzed for rat anti-ZIKA antibodies using a qualified ELISA method.

Any residual/retained samples will be maintained for a minimum of 6 months following issuance of the Draft Report after which samples will be discarded. Alternatively, residual/retained samples will be discarded prior to the 6 month period should the issuance of the Final Report occur prior to the end of the 6 month retention period. An earlier discard of these residual/retained samples may also be requested and authorized by the Study Director.

An Anti-therapeutic Antibody Report will be included as an appendix to the Final Report.

16. TERMINAL PROCEDURES

Terminal procedures are summarized in the following table:

Appendix 1

Terminal Procedures for Main Study and Recovery Animals

Group No.	No. of Animals		Scheduled Euthanasia Day	Necropsy Procedures			Histology[a]	Histopathology[a]
	M	F		Necropsy	Tissue Collection	Organ Weights		
1	10	10	30	X	X	X	Full Tissue	Full Tissue
2	10	10					Full Tissue	Gross Lesions Target Tissues
3	10	10					Full Tissue	Gross Lesions Target Tissues
4	10	10					Full Tissue	Full Tissue
1	5	5	43	X	X	X	Full Tissue	Gross Lesions Target Tissues
4	5	5					Full Tissue	Gross Lesions Target Tissues
Unscheduled Deaths				X	X	-	Full Tissue	Full Tissue
Replaced animals (prestudy)				X	Standard Diagnostic List	-	-	-
Replaced animals (after dosing start)				X	X	-	-	-

X = Procedure to be conducted; - = Not applicable.
[a] See Tissue Collection and Preservation table for listing of tissues.

16.1. Unscheduled Deaths

If a main study or recovery animal dies on study, a necropsy will be conducted and specified tissues will be saved. If necessary, the animal will be refrigerated to minimize autolysis.

Main study or recovery animals may be euthanized for humane reasons as per Test Facility SOPs. The samples for evaluation of clinical pathology parameters and antibody analysis will be obtained if possible as specified in Section **Error! Reference source not found.**15.

These animals will undergo exsanguination by incision from the abdominal aorta following isoflurane anesthesia unless deemed inappropriate by the Study Director and/or the clinical veterinarian and will undergo necropsy, and specified tissues will be retained. If necessary, the animal will be refrigerated (set to maintain 4°C) to minimize autolysis.

Animals found dead or euthanized before the initiation of dosing will be subject to necropsy and limited tissue retention (standard diagnostic tissue list). Any animal replaced after the start of dosing will be subject to necropsy and tissues will be retained (as per Tissue Collection and Preservation section), and any data generated will not be included in the report unless deemed appropriate by the Study Director.

Appendix 1

16.2. Scheduled Euthanasia

Main study and recovery animals surviving until scheduled euthanasia will have a terminal body weight recorded, samples for clinical pathology, anti-drug antibodies and cytokines will be collected (as appropriate), and will be euthanized by exsanguination by incision from the abdominal aorta following isoflurane anesthesia. When possible, the animals will be euthanized rotating across dose groups such that similar numbers of animals from each group, including controls, will be necropsied throughout the day. Animals will be fasted overnight before their scheduled necropsy.

16.3. Necropsy

Main study and recovery animals will be subjected to a complete necropsy examination, which will include evaluation of the carcass and musculoskeletal system; all external surfaces and orifices; cranial cavity and external surfaces of the brain; and thoracic, abdominal, and pelvic cavities with their associated organs and tissues.

Necropsy procedures will be performed by qualified personnel with appropriate training and experience in animal anatomy and gross pathology. A veterinary pathologist, or other suitably qualified person, will be available.

At the discretion of the necropsy supervising pathologist, images may be generated for illustration of or consultation on gross observations. Generation of such images will be documented and communicated to the Study Director. Images and associated documentation will be retained and archived.

16.4. Organ Weights

The organs identified for weighing in the Tissues Collection and Preservation table will be weighed at necropsy for all scheduled euthanasia animals. Organ weights will not be recorded for animals found dead or euthanized in poor condition or in extremis. Paired organs will be weighed together. In the event of gross abnormalities, in addition to the combined weight, the weight of each organ of a pair may be taken and entered as a tissue comment. Organ weight as a percent of body weight (using the terminal body weight) and organ weight as a percent of brain weight will be calculated.

16.5. Tissue Collection and Preservation

Representative samples of the tissues identified in the Tissue Collection and Preservation table in **Error! Reference source not found.**ATTACHMENT A will be collected from all animals and preserved in 10% neutral buffered formalin, unless otherwise indicated. Additional tissue samples may be collected to elucidate abnormal findings.

Appendix 1

17. HISTOLOGY AND HISTOPATHOLOGY

17.1. Histology

Tissues in the Tissue Collection and Preservation table from animals identified in the Terminal Procedures table will be embedded in paraffin, sectioned, mounted on glass slides, and stained with hematoxylin and eosin.

17.2. Histopathology

Histopathological evaluation will be performed by a board-certified veterinary pathologist Tissues identified by the study pathologist during microscopic evaluation will be communicated to the study Director; tissues will be evaluated and reported. Any additional stains or evaluations, if deemed necessary by the pathologist, will be added by study plan amendment following discussion with the Study Director and in consultation the Sponsor.

At the discretion of the study pathologist and after acknowledgement by the Study Director, images may be captured for consultation purposes.

17.3. Pathology Peer Review

A pathology peer review will be conducted by:

(b) (6)
Moderna Therapeutics
200 Technology Square, 3rd Floor
Cambridge, MA 02116
Tel: (b) (6)
E-mail: (b) (6)

The peer review statement or equivalent documentation will be included as an appendix to the Final Report.

18. CONSTRUCTED VARIABLES

Body Weight Gains	Calculated between at least each interval as well as between the beginning and end of each phase
Organ Weight relative to Body Weight	Calculated against the Terminal body weight for scheduled intervals
Organ Weight relative to Brain Weight	Calculated against the brain weight for scheduled intervals

19. STATISTICAL ANALYSIS

All statistical tests will be conducted at the 5% significance level. All pairwise comparisons will be conducted using two sided tests and will be reported at the 0.1%, 1%, and 5% levels

Appendix 1

Numerical data collected on scheduled occasions for the listed variables will be analyzed as indicated according to sex and occasion. Descriptive statistics number, mean and standard deviation (or %CV or SE when deemed appropriate) will be reported whenever possible. Values may also be expressed as a percentage of predose or control values when deemed appropriate. Inferential statistics will be performed according to the matrix below when possible, but will exclude semi-quantitative data, and any group with less than 3 observations.

Statistical Matrix

Variables for Inferential Analysis	Statistical Method Parametric/ Non-Parametric
Body Weight	X
Body Temperature	X
Hematology Variables	X
Coagulation Variables	X
Clinical Chemistry Variables	X
Cytokines	X
Organ Weights	X
Body Weight Changes	X
Organ Weight relative to Body Weight	X
Organ Weight relative to Brain Weight	X

The following pairwise comparisons will be made:

Group 2 vs. Group 1

Group 3 vs. Group 1

Group 4 vs. Group 1

19.1. Parametric/Non-Parametric

Levene's test will be used to assess the homogeneity of group variances.

Datasets with at least 3 groups will be compared using an overall one-way ANOVA *F*-test if Levene's test is not significant or the Kruskal-Wallis test if it is. If the overall *F*-test or Kruskal-Wallis test is found to be significant, then the above pairwise comparisons will be conducted using Dunnett's or Dunn's test, respectively.

Datasets with 2 groups (the designated control group and 1 other group) will be compared using a *t*-test if Levene's test is not significant or Wilcoxon Rank-Sum test if it is.

20. COMPUTERIZED SYSTEMS

The following critical computerized systems may be used in the study. The actual critical computerized systems used will be specified in the Final Report.

Data for parameters not required by study plan, which are automatically generated by analytical devices used will be retained on file but not reported. Statistical analysis results that are

Appendix 1

generated by the program but are not required by study plan and/or are not scientifically relevant will be retained on file but will not be included in the tabulations.

Critical Computerized Systems

System Name	Description of Data Collected and/or Analyzed
Provantis	In-life; clinical pathology; postmortem
Dispense	Test Material receipt, accountability and/or formulation activities
SRS (CR MTL in-house application built with SAS) and SAS system for Windows and/or In-house reporting software Nevis 2012 (using SAS)	Statistical analyses of numerical in-life, clinical pathology and postmortem data
Mesa Laboratories AmegaView CMS	Continuous Monitoring System. Monitoring of standalone fridges, freezers, incubators, and selected laboratories to measure temperature, relative humidity, and CO2, as appropriate
Johnson Controls Metasys	Building Automation System. Control of HVAC and other building systems, as well as temperature/humidity control and trending in selected laboratories and animal rooms
Empower 3 (Waters Corporation)	Data acquisition for dose formulation analysis, including regression analysis and measurement of concentration and recovery of dose formulations using HPLC. Data regression analysis and measurement of purity.
BioPlex Manager	Cytokines (IL-1ß, IL-6, TNF-α, IP-10, MIP-1-α, MCP-1) data collection
Softmax Pro GxP	IFN-α data collection
Watson LIMS	Cytokines (IL-1ß, IL-6, TNF-α, IP-10, MIP-1-α, MCP-1) data regression
Dynamics (Wyatt)	Data acquisition for particle size analysis of the test item using DLS
(b) (4)	Data acquisition
Excel	Data analyses and tabulation

21. AMENDMENTS AND DEVIATIONS

Changes to the approved study plan shall be made in the form of an amendment, which will be signed and dated by the Study Director. Every reasonable effort will be made to discuss any necessary study plan changes in advance with the Sponsor.

All study plan and SOP deviations will be documented in the study records. Deviations from the study plan and/or SOP related to the phase(s) of the study conducted at a Test Site shall be documented, acknowledged by the PI/IS, and reported to the Study Director for authorization/acknowledgement. The Study Director will notify the Sponsor of deviations that may result in a significant impact on the study as soon as possible.

22. RETENTION OF RECORDS, SAMPLES, AND SPECIMENS

All study-specific raw data, electronic data, documentation, study plan, retained samples and specimens, and interim (if applicable) and final reports will be archived by no later than the date

Appendix 1

of final report issue. All materials generated by Charles River from this study will be transferred to a CR-MTL archives. At least one year after issue of the draft report, the Sponsor will be contacted.

Records to be maintained will include, but will not be limited to, documentation and data for the following:

- Study Plan, study plan amendments, and deviations
- Study schedule
- Study-related correspondence
- Test system receipt, health, and husbandry
- Test and Reference Item receipt, identification, preparation, and analysis
- In-life measurements and observations
- Clinical pathology and cytokine sample collection and evaluation
- Anti-drug Antibodies sample collection
- Gross and microscopic observations and related data
- Organ weight measurements
- Statistical analysis results

23. REPORTING

A comprehensive Draft Report will be prepared following completion of the study and will be finalized following consultation with the Sponsor. The report will include all information necessary to provide a complete and accurate description of the experimental methods and results and any circumstances that may have affected the quality or integrity of the study.

The Sponsor will receive an electronic version of the Draft and Final Report provided in Adobe Acrobat PDF format (hyperlinked and searchable at final) along with a Microsoft Word version of the text. The PDF document will be created from native electronic files to the extent possible, including text and tables generated by the Test Facility. Report components not available in native electronic files and/or original signature pages will be scanned and converted to PDF image files for incorporation. An original copy of the report with the Test Facility's handwritten signatures will be retained.

Reports should be finalized within 6 months of issue of the Draft Report. If the Sponsor has not provided comments to the report within 6 months of draft issue, the report will be finalized by the Test Facility unless other arrangements are made by the Sponsor.

Appendix 1

24. ANIMAL WELFARE

24.1. Institutional Animal Care and Use Committee Approval

The study plan and any amendment(s) or procedures involving the care and use of animals in this study will be reviewed and approved by CR SHB Institutional Animal Care and Use Committee (IACUC). During the study, the care and use of animals will be conducted with guidance from the USA National Research Council and the Canadian Council on Animal Care (CCAC).

Appendix 1

AMENDMENT APPROVAL

(b) (6) _____ Date: 15 Jun 2017

As authorized by the Sponsor on 15 Jun 2017

Appendix 1

SUMMARY OF CHANGES AND JUSTIFICATIONS

Study Plan effective date: 15 Mar 2017

Note: When applicable, additions are indicated in bold underlined text and deletions are indicated in bold strikethrough text in the affected sections of the document.

Item or Section(s)	Justification
Amendment 1	**Date: 27-Mar-2017**
2. PROPOSED STUDY SCHEDULE	To include new schedule following delay in dosing initiation due to test item delivery date.
10.3.Sample Collection and Analysis	To remove homogeneity for Group 1 based on sample collection in section 10.3.1.1.
10.3.1. Analytical Method	To correct the dose formulation analysis validation number.
10.3.1.2. Stability Analysis	To include end of use for bulk test item.
13. EXPERIMENTAL DESIGN	To correct the dose concentration for mid dose group.
15.1.1. Sample Collection	To correct the group numbers to be evaluation on both occasions.
Amendment 2	**Date: 02-May-2017**
2. PROPOSED STUDY SCHEDULE	To include reporting schedule.
7. RESPONSIBLE PERSONNEL	To update PIs description based on wording used in section 15.3.
8.1. Test Item	To include information from Summary of Analysis.
14.2.1. Detailed Clinical Observations	To include detailed examination of the injection site following each dosing.
14.3. Local Irritation Assessment	Section deleted. Replaced by detailed examination of the injection site (refer to section 14.2.1.)
14.7. Body Temperature	To update the procedure as animals were not identified with the appropriate microship for body weight recording with scanner.
Amendment 3	**Date: 07-Jun-2017**
7. RESPONSIBLE PERSONNEL	To include the pathology IS.
Amendment 4	**Date: 15-Jun-2017**
7. RESPONSIBLE PERSONNEL	To include clarification for immunology analysis and to include a biomarker IS.
15.2. Cytokines Analysis	To include clarification for cytokine analysis..
Amendment 5	
8.6. Test and Reference Items Disposition and Inventory	To update shipping contact information.

Appendix 1

TABLE OF CONTENTS

Appendix 1

1. OBJECTIVE(S)

The objectives of this study are to determine the potential toxicity of mRNA-1706, when given by intramuscular injection for 1 month (3 doses) to rats and to evaluate the potential reversibility of any findings following a 2-week recovery period.

1.1. Study Classification

Study Category:	TOX
Study Type:	Repeat Dose Toxicity
Study Design:	Parallel
Primary Treatment CAS Registry Number:	Not Available
Primary Treatment Unique Ingredient ID:	Not Available
Class of Compound:	mRNA

2. PROPOSED STUDY SCHEDULE

Proposed study dates are listed below. Actual applicable dates will be included in the Final Report.

Experimental Start Date:	16 Mar 2017 (First date of study-specific data collection)
Experimental Completion Date:	Week of 25 Sep 2017 (Last date data are collected from the study)
Animal Arrival:	16 Mar 2017
Initiation of Dosing:	03 May 2017
Completion of In-life:	02 Jun 2017 (main study animals) 15 Jun 2017 (recovery animals) (Last date of necropsy)
Unaudited Draft Report:	14 Aug 2017
Draft Report:	19 Sep 2017
Final Report:	26 Sep 2017 (Expected date of Study Director signature)

3. GUIDELINES FOR STUDY DESIGN

The design of this study was based on the study objective(s), the overall product development strategy for the Test Item, and the following study design guidelines:

- OECD Guideline 407. *Repeated Dose 28-day Oral Toxicity Study in Rodents*.

Appendix 1

- Committee for Medicinal Products for Human Use (CHMP). *Note for Guidance on Repeated Dose Toxicity*. CPMP/SWP/1042/99corr.
- ICH Harmonised Tripartite Guideline M3 (R2). *Nonclinical Safety Studies for the Conduct of Human Clinical Trials and Marketing Authorization for Pharmaceuticals*.
- Japanese Guidelines for Nonclinical Studies of Drugs Manual (1995). *Guidelines for Nonclinical Pharmacokinetic Studies*, *Guidelines for Toxicity Studies of Drugs (Chapter 3, Repeated Dose Toxicity Studies)*
- Appendix to Director General Notification, No. 12-Nousan-8147, 24 November 2000, Agricultural Production Bureau, Ministry of Agriculture, Forestry and Fisheries of Japan (JMAFF).

4. REGULATORY COMPLIANCE

The study will be performed in accordance with the OECD Principles of Good Laboratory Practice and as accepted by Regulatory Authorities throughout the European Union, United States of America (FDA), Japan (MHLW), and other countries that are signatories to the OECD Mutual Acceptance of Data Agreement.

Any portion of this study conducted in the USA will be performed in accordance with the U.S. Department of Health and Human Services, Food and Drug Administration. United States Code of Federal Regulations, Title 21, Part 58: Good Laboratory Practice for Nonclinical Laboratory Studies and as accepted by Regulatory Authorities throughout the European Union (OECD Principles of Good Laboratory Practice), Japan (MHLW), and other countries that are signatories to the OECD Mutual Acceptance of Data Agreement.

Exceptions to GLPs include the following study elements:

- Characterization of the Test Item will be performed by the Sponsor or Sponsor subcontractor according to established SOPs, controls, and approved test methodologies to ensure integrity and validity of the results generated; these analyses will not be conducted in compliance with the GLP or GMP regulations.
- Analysis of cytokines and anti-therapeutic antibody will be conducted using scientifically qualified methods and in accordance with all applicable analytical procedures.
- Pathology peer review

5. QUALITY ASSURANCE

5.1. Test Facility

The Test Facility Quality Assurance Program (QAP) will monitor the study to assure the facilities, equipment, personnel, methods, practices, records, and controls are in conformance with Good Laboratory Practice regulations. The QAP will review the study plan, conduct inspections at intervals adequate to assure the integrity of the study, and audit the Final Report to

Appendix 1

assure that it accurately describes the methods and standard operating procedures and that the reported results accurately reflect the raw data of the study.

The Test Facility QAP contact for this study is indicated below:

Appendix 1

Each PI is required to report any deviations or other circumstances that could affect the quality or integrity of the study to the Study Director in a timely manner. Each PI will provide a report addressing their assigned phase of the study, which will be included as an appendix to the Final Report. The phase report will include the following:

- The archive site for all records, samples, specimens and reports generated from the phase or segment (alternatively, details regarding the retention of the materials may be provided to the Study Director for inclusion in the Final Report)
- A listing of critical computerized systems used in the conduct and/or interpretation of the assigned study phase

8. TEST AND REFERENCE ITEMS

8.1. Test Item

Identification:	mRNA-1706
Supplier:	Moderna Therapeutics, Inc.
Batch (Lot) Number:	MTDP17036
Concentration:	2.1 mg/mL
Retest Date:	Concomitant assessment, ongoing
Physical Description:	White to off-white lipid nanoparticle dispersion
Storage Conditions:	Kept in a freezer set to maintain -20°C

8.2. Reference Item

Identification:	Phosphate-buffered Saline (PBS) pH 7.2
Supplier:	Will be included in the Final Report
Batch (Lot) Number:	Will be included in the Final Report
Expiration Date:	Will be included in the Final Report
Physical Description:	Liquid
Storage Conditions:	Kept in a controlled temperature area set to maintain 21°C

8.3. Test and Reference Item Characterization

The Sponsor will provide to the Test Facility documentation of the identity, strength, purity, and composition for the Test Item. A Certificate of Analysis or equivalent documentation will be provided for inclusion in the Final Report. The Sponsor will also provide information concerning the regulatory standard that was followed for these evaluations.

Appendix 1

The Sponsor has appropriate documentation on file concerning the method of synthesis, fabrication or derivation of the Test Item, and this information is available to the appropriate regulatory agencies should it be requested.

8.4. Analysis of Test Item

A sample (2 vials) of the Test Item will be taken on the completion of the dosing period. Analysis of bulk Test Item for concentration, particle size and purity will be performed.

The first vial will be transferred on ice pack to the analytical laboratory at the Test Facility for concentration and particle size analysis.

The second vial will be transferred on ice pack to the molecular biology laboratory at the Test Facility for purity analysis.

Purity-and Particle size analysis will be performed by IEX- HPLC, Differential Light Scattering (DLS) and capillary electrophoresis (CE) using validated analytical procedures.

Any residual/retained analytical samples (and Test Item used in analysis) will be discarded before issue of the Final Report.

8.5. Reserve Samples

For each batch (lot) of Test and Reference Item components, a reserve sample (1 mL, 100 mg or 1 vial) will be collected and maintained under the appropriate storage conditions by the Test Facility.

8.6. Test and Reference Item Inventory and Disposition

Records of the receipt, distribution, storage, and disposition of Test and Reference Items will be maintained. With the exception of reserve samples, all unused Sponsor-supplied bulk Test Item will be returned to the Sponsor

9. SAFETY

The safety precautions for the Test Item and dose formulations will be documented in a Test Material Safety Data Sheet (TMSDS) based on the information provided by the Sponsor either by an MSDS or similar document.

Appendix 1

10. DOSE FORMULATION AND ANALYSIS

10.1. Preparation of Reference Item

Dose formulation preparations will be performed under a laminar flow hood using clean procedures.

The Reference Item, Phosphate Buffered Saline pH 7.2, will be dispensed on days of dosing (i.e. Days 1, 15 and 29) for administration to Group 1 control animals and as required to dilute the bulk Test Item for administration to Groups 2 to 4 animals. The aliquots will be stored in a refrigerator set to maintain 4°C until use. They will be removed from the refrigerator and allowed to warm to room temperature for at least 30 minutes before dosing.

Any residual volumes will be discarded unless otherwise requested by the Study Director.

10.2. Preparation of Test Item

Dose formulation preparations will be performed under a laminar flow hood using clean procedures.

Test Item dosing formulations will be diluted with Phosphate Buffered Saline, pH 7.2, as necessary for administration. The dosing formulations will be prepared on each days of dosing (i.e. Days 1, 15 and 29) and will be stored in a refrigerator set to maintain 4°C. The dose formulations will be allowed to warm to room temperature for at least 30 minutes prior to dosing. Alternatively, the aliquots can be transferred directly to room temperature.

Any residual volumes of formulated Test Item will be stored in a refrigerator set at 4°C and will be discarded prior to finalisation following approval by the Study Director.

10.3. Sample Collection and Analysis

Dose formulation samples will be collected for analysis as indicated in the following table. Additional samples may be collected and analyzed at the discretion of the Study Director.

Dose Formulation Sample Collection Schedule

Interval	Homogeneity	Concentration	Sampling From
Day 1[b]	2 to 4[a]	All groups	Preparation vessel
Day 29[b]	N/A	All groups	Preparation vessel

N/A = not applicable.

[a] The homogeneity results obtained from the top, middle and bottom preparations will be averaged and utilized as the concentration results.

[b] Samples will be collected on the first preparation of the study and on the last preparation of the study.

Samples to be analyzed will be submitted as soon as possible following preparation.

All samples to be analyzed will be transferred on ice packs to the analytical laboratory (CR-MTL).

Appendix 1

Any residual/retained analytical samples (and Test Item used in analysis) will be discarded before issue of the Final Report.

10.3.1. Analytical Method

Analyses described below will be performed by HPLC using a validated analytical procedure (Validation Study Number 1801737).

10.3.1.1. Concentration and Homogeneity Analysis

Samples for Analysis:	Duplicate top, middle, and bottom samples (duplicate middle only from Group 1); sent for analysis as noted in Section 10.3. On days where only concentration analysis is required, the formulation will only be sampled from the middle.
Backup Samples:	Triplicate top, middle, and bottom samples (duplicate middle only from Group 1); maintained at the Test Facility. Backup samples may be analyzed at the discretion of the Study Director. On days where only concentration analysis is required, the formulation will only be sampled from the middle.
Sampling Containers:	Appropriate sized containers.
Sample Volume:	0.5 mL for analysis and backup samples
Storage Conditions:	Kept in a refrigerator set to maintain 4°C.
Acceptance Criteria:	For concentration, the criteria for acceptability will be mean sample concentration results within or equal to ± 15% of theoretical concentration. Each individual sample concentration result within or equal to ± 20%. For homogeneity, the criteria for acceptability will be a relative standard deviation (RSD) of concentrations of ≤ 5% for each group.

10.3.1.2. Stability Analysis

There will be no stability analysis performed for concentration used on this study, however, end of use stability analysis on the bulk test item will be performed at the end of the dosing period.

11. TEST SYSTEM

Species:	Rat
Strain:	Crl:CD(SD) Sprague-Dawley rat
Source:	Charles River Canada Inc., St. Constant, QC, Canada
Number of Males Ordered:	60

Appendix 1

Number of Females Ordered:	60
Target Age at Arrival:	4 to 8 weeks
Target Weight at Arrival:	126 to 150 g (males) 101 to 125 g (females)

The actual age and weight of animals received will be listed in the Final Report.

The actual age, weight, and number of animals received will be listed in the Final Report.

11.1. Justification of Test System and Number of Animals

The Sprague Dawley rat was chosen as the animal model for this study as it is an accepted rodent species for preclinical toxicity testing by regulatory agencies.

The total number of animals to be used in this study is considered to be the minimum required to properly characterize the effects of the Test Item. This study has been designed such that it does not require an unnecessary number of animals to accomplish its objectives.

At this time, studies in laboratory animals provide the best available basis for extrapolation to humans and are required to support regulatory submissions. Acceptable models which do not use live animals currently do not exist.

11.2. Animal Identification

Each animal will be identified using a subcutaneously implanted electronic identification chip.

11.3. Environmental Acclimation

A minimum acclimation period of 12 days will be allowed between animal receipt and the start of dosing in order to accustom the animals to the laboratory environment.

11.4. Selection, Assignment, Replacement, and Disposition of Animals

Animals will be assigned to groups by a stratified randomization scheme designed to achieve similar group mean body weights. Males and females will be randomized separately. Animals in poor health or at extremes of body weight range will not be assigned to groups.

Before the initiation of dosing, any assigned animals considered unsuitable for use in the study will be replaced by alternate animals obtained from the same shipment and maintained under the same environmental conditions.

After initiation of dosing, study animals may be replaced during the replacement period with alternate animals in the event of accidental injury, non-Test Item-related health issues, or similar circumstances.

The alternate animals may be used as replacements on the study within 1 day.

The disposition of all animals will be documented in the study records.

Appendix 1

12. HUSBANDRY

12.1. Housing

Animals will be group housed (up to 3 animals of the same sex and same dosing group together) in polycarbonate cages containing appropriate bedding equipped with an automatic watering valve. These housing conditions will be maintained unless deemed inappropriate by the Study Director and/or Clinical Veterinarian. The room(s) in which the animals will be kept will be documented in the study records.

Animals will be separated during designated procedures/activities. Each cage will be clearly labeled with a color-coded cage card indicating study, group, animal number(s), and sex. Cages will be arranged on the racks in group order. Where possible, control group animals will be housed on a separate rack from the Test Item treated animals.

12.2. Environmental Conditions

The targeted conditions for animal room environment will be as follows:

Temperature:	19°C to 25°C
Humidity:	30% to 70%
Light Cycle:	12 hours light and 12 hours dark (except during designated procedures)

12.3. Food

PMI Nutrition International Certified Rodent Chow No. 5CR4 will be provided ad libitum throughout the study, except during designated procedures. The same diet in meal form may be provided to individual animals as warranted by clinical signs (e.g., broken/damaged incisors or other health changes).

The feed is analyzed by the supplier for nutritional components and environmental contaminants. Results of the analysis are provided by the supplier and are on file at the Test Facility.

It is considered that there are no known contaminants in the feed that would interfere with the objectives of the study.

12.4. Water

Municipal tap water after treatment by reverse osmosis and ultraviolet irradiation will be freely available to each animal via an automatic watering system (except during designated procedures). Water bottles can be provided, if required.

Periodic analysis of the water is performed, and results of these analyses are on file at the Test Facility.

It is considered that there are no known contaminants in the water that could interfere with the outcome of the study.

Appendix 1

12.5. Animal Enrichment

Animals will be socially housed for psychological/environmental enrichment and will be provided with items such as a hiding tube and a chewing object, except during study procedures/activities.

12.6. Veterinary Care

Veterinary care will be available throughout the course of the study and animals will be examined by the veterinary staff as warranted by clinical signs or other changes. All veterinary examinations and recommended therapeutic treatments, if any, will be documented in the study records.

In the event that animals show signs of illness or distress, the responsible veterinarian may make initial recommendations about treatment of the animal(s) and/or alteration of study procedures, which must be approved by the Study Director or Scientific designate. All such actions will be properly documented in the study records and, when appropriate, by study plan amendment. Treatment of the animal(s) for minor injuries or ailments may be approved without prior consultation with the Sponsor representative when such treatment does not impact fulfillment of the study objectives. If the condition of the animal(s) warrants significant therapeutic intervention or alterations in study procedures, the Sponsor representative will be contacted, when possible, to discuss appropriate action. If the condition of the animal(s) is such that emergency measures must be taken, the Study Director and/or clinical veterinarian will attempt to consult with the Sponsor representative prior to responding to the medical crisis, but the Study Director and/or veterinarian has authority to act immediately at his/her discretion to alleviate suffering. The Sponsor representative will be fully informed of any such events.

13. EXPERIMENTAL DESIGN

Experimental Design

Group No.	Test Material	Dose Level (µg/dose)	Dose Volume (µL/dose)	Dose Concentration (mg/mL)	No. of Animals			
					Main Study		Recovery Study	
					Males	Females	Males	Females
1	Reference Item	0	200	0	10	10	5	5
2	mRNA-1706	10	200	0.05	10	10	-	-
3	mRNA-1706	50	200	0.25	10	10	-	-
4	mRNA-1706	100	200	0.5	10	10	5	5

13.1. Administration of Test and Reference Items

The Test and Reference Items will be administered to the appropriate animals from Groups 1 to 4 via intramuscular injection into the lateral compartment of the thigh alternating legs on Days 1, 15 and 29 (site 1= left thigh, site 2 = right thigh). The volume for each dose will be administered using a syringe/needle within the demarcated area. The first day of dosing will be designated as

Appendix 1

Day 1 (exception: alternate animals used for replacement after Day 1 will assume the day of the animal being replaced).

The injection area will be marked as frequently as required to allow appropriate visualization of administration sites. Hair may be clipped or shaved if required to improve visualization of the injection sites. The injection site will be documented in the raw data for each dose administered.

13.2. Justification of Route and Dose Levels

The intramuscular route of exposure was selected because this is the intended route of human exposure.

The dose levels for this toxicology study were chosen to approximate a substantial multiple of the anticipated clinical starting dose and top clinical dose. The highest dose to be tested is expected to represent the intended maximum human clinical dose and volume and will be administered by the clinical route (intramuscular). At this dose level, minimal systemic toxicity is expected, but it is possible mild to moderate injection site reaction (redness, swelling) and potentially elevation of systemic cytokine/acute phase markers may be observed. The mid- and low-dose were selected to evaluate the dose-dependent effect of this compound.

14. IN-LIFE PROCEDURES, OBSERVATIONS, AND MEASUREMENTS

The in-life procedures, observations, and measurements listed below will be performed for all main study and recovery animals. These data will be included in an appendix to the study report, but not used in the evaluation of the results, unless considered appropriate by the Study Director. During the study, additional evaluations to those described below and/or scheduled, and considered necessary by the Study Director and/or Veterinarian to assess health status will be conducted and duly documented. More frequent observations may be undertaken if considered appropriate.

14.1. Mortality/Moribundity Checks

Frequency:	Twice daily, once in the morning and once in the afternoon, throughout the study.
Procedure:	Animals will be observed for general health/mortality and moribundity. Animals will not be removed from cage during observation, unless necessary for identification or confirmation of possible findings.

14.2. Clinical Observations

14.2.1. Detailed Clinical Observations

Frequency:	Weekly during the dosing and recovery periods, and at least every 2 weeks during the predosing period.

Appendix 1

	In addition detailed examination of the injection sites will be performed at predose, 24, 48 and 72 hours post each dose. Following Day 29 dosing, no assessment will be perfomed on main study animals at 72 hours post dose as animals will be sent to necropsy on Day 30. Any clinical signs at the injection site (e.g. erythema/redness, skin thickening, edema/swelling, vocalization upon palpation, ulceration, necrosis, warm to the touch, etc...) will be recorded as observed.
Procedure:	Animals removed from the cage for examination.

14.3. Local Irritation Assessment

Section deleted

14.4. Body Weights

Frequency:	Weekly during the dosing and recovery periods, and at least every 2 weeks during the prestudy period.
Procedure:	Animals will be individually weighed. A fasted weight will be recorded on the day of necropsy. Terminal body weights will not be collected from animals found dead or euthanized moribund.

14.5. Food Consumption

Frequency:	Weekly, starting Day -7, throughout the dosing and recovery periods.
Procedure:	Food consumption will be quantitatively measured except for on the day of scheduled euthanasia.

14.6. Ophthalmic Examinations

Frequency:	Once prestudy and again at the end of the dosing period. During Week 2 of the recovery period if Test-Item related findings are observed during the dosing period.
Procedure:	All animals will be subjected to funduscopic (indirect ophthalmoscopy) and biomicroscopic (slit lamp) examinations. The mydriatic used will be 1% tropicamide.
Evaluation:	A report will be included as an appendix to the Final Report.

14.7. Body Temperature

Frequency:	On Day 1 and Day 29 at predose, 6 and 24 hours post dose (end of each group). If body temperature is significantly above normal range (36.0C to 38.0C) the temperature will be monitored daily till

Appendix 1

return to normal. If clinical observations indicate a possible body temperature changes, measurement may be taken at the discretion of the Study Director.

Procedure: Rectal body temperature will be recorded on un-sedated animals.

15. LABORATORY EVALUATIONS

15.1. Clinical Pathology

15.1.1. Sample Collection

Blood will be collected from the abdominal aorta following isoflurane anesthesia. After collection, samples will be transferred to the appropriate laboratory for processing.

Animals will be fasted overnight before blood sampling (for clinical chemistry). Samples will be collected according to the following table.

Samples for Clinical Pathology Evaluation

Group Nos.	Time Point	Hematology	Coagulation	Clinical Chemistry
1 to 4[a]	Day 30	X	X	X
1 and 4	Day 43	X	X	X
Unscheduled euthanasia (when possible)	Before euthanasia	X	X	X

X = Samples to be collected
a Samples will only be collected from those animals scheduled for euthanasia on Day 30.

Any residual/retained clinical pathology samples will be discarded before issue of the Final Report.

15.1.2. Hematology

Target Volume: 0.5 mL

Anticoagulant: EDTA

Hematology Parameters

Red blood cell count	White blood cell count
Hemoglobin concentration	Neutrophil count (absolute)
Hematocrit	Lymphocyte count (absolute)
Mean corpuscular volume	Monocyte count (absolute)
Red Blood Cell Distribution Width	Eosinophil count (absolute)
Mean corpuscular hemoglobin concentration	Basophil count (absolute)
Mean corpuscular hemoglobin	Large unstained cells (absolute)
Reticulocyte count (absolute)	Other cells (as appropriate)
Platelet count	

Appendix 1

A blood smear will be prepared from each hematology sample. Blood smears will be labeled, stained, and stored. Blood smears may be read to investigate results. If additional examination of blood smears is deemed necessary, the smears may be subsequently evaluated and this evaluation will be described in a study plan amendment.

15.1.3. Coagulation

Target Volume: 0.9 mL (in a 1.0 mL tube)

Anticoagulant: Citrate

Processing: To plasma

Coagulation Parameters

Activated partial thromboplastin time Fibrinogen	Prothrombin time Sample Quality

15.1.4. Clinical Chemistry

Target Volume: 0.7 mL

Anticoagulant: None, collected in serum separator tubes

Processing: To serum

Clinical Chemistry Parameters

Alanine aminotransferase Aspartate aminotransferase Alkaline phosphatase Gamma-glutamyltransferase Creatine Kinase Total bilirubin[a] Urea nitrogen Creatinine Calcium Phosphorus Sample Quality	Total protein Albumin Globulin Albumin/globulin ratio Glucose Cholesterol Triglycerides Sodium Potassium Chloride

[a] When total bilirubin is > 0.5 mg/dL, indirect and direct bilirubin will also be measured.

15.1.5. Bone Marrow Smear Evaluation (Optional)

Bone marrow smears will be collected and prepared as described in the Tissue Collection and Preservation table (ATTACHMENT A).

Evaluation of stained smears may be added by amendment at the discretion of the Study Director in consultation with the pathologist and the Sponsor.

15.2. Cytokine Analysis

Blood will be collected from the jugular vein of all recovery animals and preterminally euthanized animals (recovery animals only). After collection, blood samples for serum will be

Appendix 1

allowed to clot at ambient room temperature and blood samples for plasma will be transferred on wet ice to the appropriate laboratory for processing.

Sample Collection Schedule

Target Blood Volume (mL)			0.5	0.5
Anticoagulant			**None (SST)**	**EDTA**
Centrifugation settings			(b) (4)	
Timepoints			**Sample Type**	
Day	**Hrs**	**No. of Males/ Females**	IFN-α	IL-1ß, IL-6, TNF-α, IP-10, MIP-1-α, MCP-1
1	6	5/5	X	X
15	6	5/5	X	X
29	6	5/5	X	X
43	NAp	5/5	X	X
Matrix			Serum	Plasma
Volume per aliquot (µL)			All volume	All volume
Number of aliquot(s)			1	1
Storage condition (set to maintain)			-80°C	-80°C
Responsible Lab (processing)			CR-SHB	CR-SHB

X = Sample to be collected, NAp = Not applicable

The number of aliquots and volumes are targets that may be adjusted based on sample volume availability.

The samples for IL-1ß, IL-6, TNF-α, IP-10, MIP-1-α and MCP-1 will be analyzed by the Biomarkers department at CR MTL. Analysis for IL-1ß, IL-6, TNF-α, IP-10, MIP-1-α and MCP-1 will be conducted using a multiplex Luminex method. . The procedures to be followed during the course of this study along with the assays acceptance criteria will be detailed in the appropriate analytical procedure. Samples will be analyzed in duplicate.

The samples for IFN- α will be analyzed by the Immunology department (CR SHB). An ELISA method will be used for the analysis of IFN-α. The procedures to be followed during the course of this study along with the assays acceptance criteria will be detailed in the appropriate analytical procedure. Samples will be analyzed in duplicate.

Following Study Director approval, any residual/retained samples will be discarded prior to report finalization.

A Biomarkers interpretative report (IL-1ß, IL-6, TNF-α, IP-10, MIP-1-α and MCP-1) and an Immunology Report (IFN- α) will be included as an appendix to the Final Report.

Appendix 1

15.3. Anti-drug Antibody (ADA) Sample Collection, Processing, and Analysis

Blood will be collected from all animals by jugular venipuncture and/or via the abdominal aorta while under isoflurane anesthesia (terminal and unscheduled samples).

Time Points:	Before initiation of dosing and at study termination (on Day 30 for main animals and on Day 43 for recovery animals).
Target Volume:	0.5 mL
Anticoagulant:	None, collected in serum separator tubes
Processing:	To serum

Samples will be mixed gently and allowed to clot at room temperature until centrifugation which will be carried out as soon as practical (not exceeding 60 minutes after collection). The samples will be centrifuged for (b) (4) in a refrigerated centrifuge (set to maintain (b) (4) at (b) (4) The resultant serum will be separated, transferred to uniquely labeled clear polypropylene tubes, frozen immediately over dry ice and transferred to a freezer set to maintain -80°C.
Samples will be shipped on dry ice to:

Shipping Contact
(b) (6)
Integrated BioTherapeutics, Inc.
4 Research Court
Suite 300
Rockville, MD 20850, USA
Tel: (b) (6)
Fax: (b) (6)
E-mail: (b) (6)

The test site will be notified before shipment of the samples. Upon receipt at the immunology laboratory, the samples will be stored at -80°C.

The samples will be analyzed for rat anti-ZIKA antibodies using a qualified ELISA method.

Any residual/retained samples will be maintained for a minimum of 6 months following issuance of the Draft Report after which samples will be discarded. Alternatively, residual/retained samples will be discarded prior to the 6 month period should the issuance of the Final Report occur prior to the end of the 6 month retention period. An earlier discard of these residual/retained samples may also be requested and authorized by the Study Director.

An Anti-therapeutic Antibody Report will be included as an appendix to the Final Report.

16. TERMINAL PROCEDURES

Terminal procedures are summarized in the following table:

Appendix 1

Terminal Procedures for Main Study and Recovery Animals

Group No.	No. of Animals		Scheduled Euthanasia Day	Necropsy Procedures			Histology[a]	Histopathology[a]
	M	F		Necropsy	Tissue Collection	Organ Weights		
1	10	10	30	X	X	X	Full Tissue	Full Tissue
2	10	10					Full Tissue	Gross Lesions Target Tissues
3	10	10					Full Tissue	Gross Lesions Target Tissues
4	10	10					Full Tissue	Full Tissue
1	5	5	43	X	X	X	Full Tissue	Gross Lesions Target Tissues
4	5	5					Full Tissue	Gross Lesions Target Tissues
Unscheduled Deaths				X	X	-	Full Tissue	Full Tissue
Replaced animals (prestudy)				X	Standard Diagnostic List	-	-	-
Replaced animals (after dosing start)				X	X	-	-	-

X = Procedure to be conducted; - = Not applicable.
[a] See Tissue Collection and Preservation table for listing of tissues.

16.1. Unscheduled Deaths

If a main study or recovery animal dies on study, a necropsy will be conducted and specified tissues will be saved. If necessary, the animal will be refrigerated to minimize autolysis.

Main study or recovery animals may be euthanized for humane reasons as per Test Facility SOPs. The samples for evaluation of clinical pathology parameters and antibody analysis will be obtained if possible as specified in Section **Error! Reference source not found.**15.

These animals will undergo exsanguination by incision from the abdominal aorta following isoflurane anesthesia unless deemed inappropriate by the Study Director and/or the clinical veterinarian and will undergo necropsy, and specified tissues will be retained. If necessary, the animal will be refrigerated (set to maintain 4°C) to minimize autolysis.

Animals found dead or euthanized before the initiation of dosing will be subject to necropsy and limited tissue retention (standard diagnostic tissue list). Any animal replaced after the start of dosing will be subject to necropsy and tissues will be retained (as per Tissue Collection and Preservation section), and any data generated will not be included in the report unless deemed appropriate by the Study Director.

Appendix 1

16.2. Scheduled Euthanasia

Main study and recovery animals surviving until scheduled euthanasia will have a terminal body weight recorded, samples for clinical pathology, anti-drug antibodies and cytokines will be collected (as appropriate), and will be euthanized by exsanguination by incision from the abdominal aorta following isoflurane anesthesia. When possible, the animals will be euthanized rotating across dose groups such that similar numbers of animals from each group, including controls, will be necropsied throughout the day. Animals will be fasted overnight before their scheduled necropsy.

16.3. Necropsy

Main study and recovery animals will be subjected to a complete necropsy examination, which will include evaluation of the carcass and musculoskeletal system; all external surfaces and orifices; cranial cavity and external surfaces of the brain; and thoracic, abdominal, and pelvic cavities with their associated organs and tissues.

Necropsy procedures will be performed by qualified personnel with appropriate training and experience in animal anatomy and gross pathology. A veterinary pathologist, or other suitably qualified person, will be available.

At the discretion of the necropsy supervising pathologist, images may be generated for illustration of or consultation on gross observations. Generation of such images will be documented and communicated to the Study Director. Images and associated documentation will be retained and archived.

16.4. Organ Weights

The organs identified for weighing in the Tissues Collection and Preservation table will be weighed at necropsy for all scheduled euthanasia animals. Organ weights will not be recorded for animals found dead or euthanized in poor condition or in extremis. Paired organs will be weighed together. In the event of gross abnormalities, in addition to the combined weight, the weight of each organ of a pair may be taken and entered as a tissue comment. Organ weight as a percent of body weight (using the terminal body weight) and organ weight as a percent of brain weight will be calculated.

16.5. Tissue Collection and Preservation

Representative samples of the tissues identified in the Tissue Collection and Preservation table in **Error! Reference source not found.**ATTACHMENT A will be collected from all animals and preserved in 10% neutral buffered formalin, unless otherwise indicated. Additional tissue samples may be collected to elucidate abnormal findings.

Appendix 1

17. HISTOLOGY AND HISTOPATHOLOGY

17.1. Histology

Tissues in the Tissue Collection and Preservation table from animals identified in the Terminal Procedures table will be embedded in paraffin, sectioned, mounted on glass slides, and stained with hematoxylin and eosin.

17.2. Histopathology

Histopathological evaluation will be performed by a board-certified veterinary pathologist Tissues identified by the study pathologist during microscopic evaluation will be communicated to the study Director; tissues will be evaluated and reported. Any additional stains or evaluations, if deemed necessary by the pathologist, will be added by study plan amendment following discussion with the Study Director and in consultation the Sponsor.

At the discretion of the study pathologist and after acknowledgement by the Study Director, images may be captured for consultation purposes.

17.3. Pathology Peer Review

A pathology peer review will be conducted by:

(b) (6)
Moderna Therapeutics
200 Technology Square, 3rd Floor
Cambridge, MA 02116
Tel: (b) (6)
E-mail: (b) (6)

The peer review statement or equivalent documentation will be included as an appendix to the Final Report.

18. CONSTRUCTED VARIABLES

Body Weight Gains	Calculated between at least each interval as well as between the beginning and end of each phase
Organ Weight relative to Body Weight	Calculated against the Terminal body weight for scheduled intervals
Organ Weight relative to Brain Weight	Calculated against the brain weight for scheduled intervals

19. STATISTICAL ANALYSIS

All statistical tests will be conducted at the 5% significance level. All pairwise comparisons will be conducted using two sided tests and will be reported at the 0.1%, 1%, and 5% levels

Appendix 1

Numerical data collected on scheduled occasions for the listed variables will be analyzed as indicated according to sex and occasion. Descriptive statistics number, mean and standard deviation (or %CV or SE when deemed appropriate) will be reported whenever possible. Values may also be expressed as a percentage of predose or control values when deemed appropriate. Inferential statistics will be performed according to the matrix below when possible, but will exclude semi-quantitative data, and any group with less than 3 observations.

Statistical Matrix

Variables for Inferential Analysis	Statistical Method Parametric/ Non-Parametric
Body Weight	X
Body Temperature	X
Hematology Variables	X
Coagulation Variables	X
Clinical Chemistry Variables	X
Cytokines	X
Organ Weights	X
Body Weight Changes	X
Organ Weight relative to Body Weight	X
Organ Weight relative to Brain Weight	X

The following pairwise comparisons will be made:

Group 2 vs. Group 1

Group 3 vs. Group 1

Group 4 vs. Group 1

19.1. Parametric/Non-Parametric

Levene's test will be used to assess the homogeneity of group variances.

Datasets with at least 3 groups will be compared using an overall one-way ANOVA *F*-test if Levene's test is not significant or the Kruskal-Wallis test if it is. If the overall *F*-test or Kruskal-Wallis test is found to be significant, then the above pairwise comparisons will be conducted using Dunnett's or Dunn's test, respectively.

Datasets with 2 groups (the designated control group and 1 other group) will be compared using a *t*-test if Levene's test is not significant or Wilcoxon Rank-Sum test if it is.

20. COMPUTERIZED SYSTEMS

The following critical computerized systems may be used in the study. The actual critical computerized systems used will be specified in the Final Report.

Data for parameters not required by study plan, which are automatically generated by analytical devices used will be retained on file but not reported. Statistical analysis results that are

Appendix 1

generated by the program but are not required by study plan and/or are not scientifically relevant will be retained on file but will not be included in the tabulations.

Critical Computerized Systems

System Name	Description of Data Collected and/or Analyzed
Provantis	In-life; clinical pathology; postmortem
Dispense	Test Material receipt, accountability and/or formulation activities
SRS (CR MTL in-house application built with SAS) and SAS system for Windows and/or In-house reporting software Nevis 2012 (using SAS)	Statistical analyses of numerical in-life, clinical pathology and postmortem data
Mesa Laboratories AmegaView CMS	Continuous Monitoring System. Monitoring of standalone fridges, freezers, incubators, and selected laboratories to measure temperature, relative humidity, and CO2, as appropriate
Johnson Controls Metasys	Building Automation System. Control of HVAC and other building systems, as well as temperature/humidity control and trending in selected laboratories and animal rooms
Empower 3 (Waters Corporation)	Data acquisition for dose formulation analysis, including regression analysis and measurement of concentration and recovery of dose formulations using HPLC. Data regression analysis and measurement of purity.
BioPlex Manager	Cytokines (IL-1ß, IL-6, TNF-α, IP-10, MIP-1-α, MCP-1) data collection
Softmax Pro GxP	IFN-α data collection
Watson LIMS	Cytokines (IL-1ß, IL-6, TNF-α, IP-10, MIP-1-α, MCP-1) data regression
Dynamics (Wyatt)	Data acquisition for particle size analysis of the test item using DLS
(b) (4)	Data acquisition
Excel	Data analyses and tabulation

21. AMENDMENTS AND DEVIATIONS

Changes to the approved study plan shall be made in the form of an amendment, which will be signed and dated by the Study Director. Every reasonable effort will be made to discuss any necessary study plan changes in advance with the Sponsor.

All study plan and SOP deviations will be documented in the study records. Deviations from the study plan and/or SOP related to the phase(s) of the study conducted at a Test Site shall be documented, acknowledged by the PI/IS, and reported to the Study Director for authorization/acknowledgement. The Study Director will notify the Sponsor of deviations that may result in a significant impact on the study as soon as possible.

22. RETENTION OF RECORDS, SAMPLES, AND SPECIMENS

All study-specific raw data, electronic data, documentation, study plan, retained samples and specimens, and interim (if applicable) and final reports will be archived by no later than the date

Appendix 1

of final report issue. All materials generated by Charles River from this study will be transferred to a CR-MTL archives. At least one year after issue of the draft report, the Sponsor will be contacted.

Records to be maintained will include, but will not be limited to, documentation and data for the following:

- Study Plan, study plan amendments, and deviations
- Study schedule
- Study-related correspondence
- Test system receipt, health, and husbandry
- Test and Reference Item receipt, identification, preparation, and analysis
- In-life measurements and observations
- Clinical pathology and cytokine sample collection and evaluation
- Anti-drug Antibodies sample collection
- Gross and microscopic observations and related data
- Organ weight measurements
- Statistical analysis results

23. REPORTING

A comprehensive Draft Report will be prepared following completion of the study and will be finalized following consultation with the Sponsor. The report will include all information necessary to provide a complete and accurate description of the experimental methods and results and any circumstances that may have affected the quality or integrity of the study.

The Sponsor will receive an electronic version of the Draft and Final Report provided in Adobe Acrobat PDF format (hyperlinked and searchable at final) along with a Microsoft Word version of the text. The PDF document will be created from native electronic files to the extent possible, including text and tables generated by the Test Facility. Report components not available in native electronic files and/or original signature pages will be scanned and converted to PDF image files for incorporation. An original copy of the report with the Test Facility's handwritten signatures will be retained.

Reports should be finalized within 6 months of issue of the Draft Report. If the Sponsor has not provided comments to the report within 6 months of draft issue, the report will be finalized by the Test Facility unless other arrangements are made by the Sponsor.

Appendix 1

24. ANIMAL WELFARE

24.1. Institutional Animal Care and Use Committee Approval

The study plan and any amendment(s) or procedures involving the care and use of animals in this study will be reviewed and approved by CR SHB Institutional Animal Care and Use Committee (IACUC). During the study, the care and use of animals will be conducted with guidance from the USA National Research Council and the Canadian Council on Animal Care (CCAC).

Appendix 1

SUMMARY OF CHANGES AND JUSTIFICATIONS

Study Plan effective date: 15 Mar 2017

Note: When applicable, additions are indicated in bold underlined text and deletions are indicated in bold strikethrough text in the affected sections of the document.

Item or Section(s)	Justification
Amendment 1	**Date: 27-Mar-2017**
2. PROPOSED STUDY SCHEDULE	To include new schedule following delay in dosing initiation due to test item delivery date.
10.3.Sample Collection and Analysis	To remove homogeneity for Group 1 based on sample collection in section 10.3.1.1.
10.3.1. Analytical Method	To correct the dose formulation analysis validation number.
10.3.1.2. Stability Analysis	To include end of use for bulk test item.
13. EXPERIMENTAL DESIGN	To correct the dose concentration for mid dose group.
15.1.1. Sample Collection	To correct the group numbers to be evaluation on both occasions.
Amendment 2	**Date: 02-May-2017**
2. PROPOSED STUDY SCHEDULE	To include reporting schedule.
7. RESPONSIBLE PERSONNEL	To update PIs description based on wording used in section 15.3.
8.1. Test Item	To include information from Summary of Analysis.
14.2.1. Detailed Clinical Observations	To include detailed examination of the injection site following each dosing.
14.3. Local Irritation Assessment	Section deleted. Replaced by detailed examination of the injection site (refer to section 14.2.1.)
14.7. Body Temperature	To update the procedure as animals were not identified with the appropriate microship for body weight recording with scanner.
Amendment 3	**Date: 07-Jun-2017**
7. RESPONSIBLE PERSONNEL	To include the pathology IS.
Amendment 4	**Date: 15-Jun-2017**
7. RESPONSIBLE PERSONNEL	To include clarification for immunology analysis and to include a biomarker IS.
15.2. Cytokines Analysis	To include clarification for cytokine analysis..
Amendment 5	**Date: 26-Jun-2017**
8.6. Test and Reference Items Disposition and Inventory	To update shipping contact information.
Amendment 6	
7. RESPONSIBLE PERSONNEL	To change the IS for Analytical Chemistry due to workload reassignment and to update Study Director's phone extension number.

Appendix 1

TABLE OF CONTENTS

Appendix 1

1. OBJECTIVE(S)

The objectives of this study are to determine the potential toxicity of mRNA-1706, when given by intramuscular injection for 1 month (3 doses) to rats and to evaluate the potential reversibility of any findings following a 2-week recovery period.

1.1. Study Classification

Study Category:	TOX
Study Type:	Repeat Dose Toxicity
Study Design:	Parallel
Primary Treatment CAS Registry Number:	Not Available
Primary Treatment Unique Ingredient ID:	Not Available
Class of Compound:	mRNA

2. PROPOSED STUDY SCHEDULE

Proposed study dates are listed below. Actual applicable dates will be included in the Final Report.

Experimental Start Date:	16 Mar 2017 (First date of study-specific data collection)
Experimental Completion Date:	Week of 25 Sep 2017 (Last date data are collected from the study)
Animal Arrival:	16 Mar 2017
Initiation of Dosing:	03 May 2017
Completion of In-life:	02 Jun 2017 (main study animals) 15 Jun 2017 (recovery animals) (Last date of necropsy)
Unaudited Draft Report:	14 Aug 2017
Draft Report:	19 Sep 2017
Final Report:	26 Sep 2017 (Expected date of Study Director signature)

3. GUIDELINES FOR STUDY DESIGN

The design of this study was based on the study objective(s), the overall product development strategy for the Test Item, and the following study design guidelines:

- OECD Guideline 407. *Repeated Dose 28-day Oral Toxicity Study in Rodents*.

Appendix 1

- Committee for Medicinal Products for Human Use (CHMP). *Note for Guidance on Repeated Dose Toxicity*. CPMP/SWP/1042/99corr.
- ICH Harmonised Tripartite Guideline M3 (R2). *Nonclinical Safety Studies for the Conduct of Human Clinical Trials and Marketing Authorization for Pharmaceuticals*.
- Japanese Guidelines for Nonclinical Studies of Drugs Manual (1995). *Guidelines for Nonclinical Pharmacokinetic Studies*, *Guidelines for Toxicity Studies of Drugs (Chapter 3, Repeated Dose Toxicity Studies)*
- Appendix to Director General Notification, No. 12-Nousan-8147, 24 November 2000, Agricultural Production Bureau, Ministry of Agriculture, Forestry and Fisheries of Japan (JMAFF).

4. REGULATORY COMPLIANCE

The study will be performed in accordance with the OECD Principles of Good Laboratory Practice and as accepted by Regulatory Authorities throughout the European Union, United States of America (FDA), Japan (MHLW), and other countries that are signatories to the OECD Mutual Acceptance of Data Agreement.

Any portion of this study conducted in the USA will be performed in accordance with the U.S. Department of Health and Human Services, Food and Drug Administration. United States Code of Federal Regulations, Title 21, Part 58: Good Laboratory Practice for Nonclinical Laboratory Studies and as accepted by Regulatory Authorities throughout the European Union (OECD Principles of Good Laboratory Practice), Japan (MHLW), and other countries that are signatories to the OECD Mutual Acceptance of Data Agreement.

Exceptions to GLPs include the following study elements:

- Characterization of the Test Item will be performed by the Sponsor or Sponsor subcontractor according to established SOPs, controls, and approved test methodologies to ensure integrity and validity of the results generated; these analyses will not be conducted in compliance with the GLP or GMP regulations.
- Analysis of cytokines and anti-therapeutic antibody will be conducted using scientifically qualified methods and in accordance with all applicable analytical procedures.
- Pathology peer review

5. QUALITY ASSURANCE

5.1. Test Facility

The Test Facility Quality Assurance Program (QAP) will monitor the study to assure the facilities, equipment, personnel, methods, practices, records, and controls are in conformance with Good Laboratory Practice regulations. The QAP will review the study plan, conduct inspections at intervals adequate to assure the integrity of the study, and audit the Final Report to

Appendix 1

assure that it accurately describes the methods and standard operating procedures and that the reported results accurately reflect the raw data of the study.

The Test Facility QAP contact for this study is indicated below:

(b) (6)
Charles River Laboratories Montreal ULC
22022 Transcanadienne
Senneville Quebec
Canada H9X 3R3
Tel: (b) (6)
E-mail: (b) (6)

5.2. Test Facility-designated Subcontractor(s)

The following study phases performed by Test Facility-designated subcontractors will be audited by the Test Facility QAP:

- Ophthalmology

6. SPONSOR

Sponsor Representative

Each IS is required to report any deviations or other circumstances that could affect the quality or integrity of the study to the Study Director in a timely manner. Each IS will provide a report addressing their assigned phase of the study, which will be included as an appendix to the Final Report. The phase report will include the following:

- A listing of critical computerized systems used in the conduct and/or interpretation of the assigned study phase

Appendix 1

Each PI is required to report any deviations or other circumstances that could affect the quality or integrity of the study to the Study Director in a timely manner. Each PI will provide a report addressing their assigned phase of the study, which will be included as an appendix to the Final Report. The phase report will include the following:

- The archive site for all records, samples, specimens and reports generated from the phase or segment (alternatively, details regarding the retention of the materials may be provided to the Study Director for inclusion in the Final Report)
- A listing of critical computerized systems used in the conduct and/or interpretation of the assigned study phase

8. TEST AND REFERENCE ITEMS

8.1. Test Item

Identification:	mRNA-1706
Supplier:	Moderna Therapeutics, Inc.
Batch (Lot) Number:	MTDP17036
Concentration:	2.1 mg/mL
Retest Date:	Concomitant assessment, ongoing
Physical Description:	White to off-white lipid nanoparticle dispersion
Storage Conditions:	Kept in a freezer set to maintain -20°C

8.2. Reference Item

Identification:	Phosphate-buffered Saline (PBS) pH 7.2
Supplier:	Will be included in the Final Report
Batch (Lot) Number:	Will be included in the Final Report
Expiration Date:	Will be included in the Final Report
Physical Description:	Liquid
Storage Conditions:	Kept in a controlled temperature area set to maintain 21°C

8.3. Test and Reference Item Characterization

The Sponsor will provide to the Test Facility documentation of the identity, strength, purity, and composition for the Test Item. A Certificate of Analysis or equivalent documentation will be provided for inclusion in the Final Report. The Sponsor will also provide information concerning the regulatory standard that was followed for these evaluations.

Appendix 1

The Sponsor has appropriate documentation on file concerning the method of synthesis, fabrication or derivation of the Test Item, and this information is available to the appropriate regulatory agencies should it be requested.

8.4. Analysis of Test Item

A sample (2 vials) of the Test Item will be taken on the completion of the dosing period. Analysis of bulk Test Item for concentration, particle size and purity will be performed.

The first vial will be transferred on ice pack to the analytical laboratory at the Test Facility for concentration and particle size analysis.

The second vial will be transferred on ice pack to the molecular biology laboratory at the Test Facility for purity analysis.

Purity-and Particle size analysis will be performed by IEX- HPLC, Differential Light Scattering (DLS) and capillary electrophoresis (CE) using validated analytical procedures.

Any residual/retained analytical samples (and Test Item used in analysis) will be discarded before issue of the Final Report.

8.5. Reserve Samples

For each batch (lot) of Test and Reference Item components, a reserve sample (1 mL, 100 mg or 1 vial) will be collected and maintained under the appropriate storage conditions by the Test Facility.

8.6. Test and Reference Item Inventory and Disposition

Records of the receipt, distribution, storage, and disposition of Test and Reference Items will be maintained. With the exception of reserve samples, all unused Sponsor-supplied bulk Test Item will be returned to the Sponsor

E-mail: (b) (6)

9. SAFETY

The safety precautions for the Test Item and dose formulations will be documented in a Test Material Safety Data Sheet (TMSDS) based on the information provided by the Sponsor either by an MSDS or similar document.

Appendix 1

10. DOSE FORMULATION AND ANALYSIS

10.1. Preparation of Reference Item

Dose formulation preparations will be performed under a laminar flow hood using clean procedures.

The Reference Item, Phosphate Buffered Saline pH 7.2, will be dispensed on days of dosing (i.e. Days 1, 15 and 29) for administration to Group 1 control animals and as required to dilute the bulk Test Item for administration to Groups 2 to 4 animals. The aliquots will be stored in a refrigerator set to maintain 4°C until use. They will be removed from the refrigerator and allowed to warm to room temperature for at least 30 minutes before dosing.

Any residual volumes will be discarded unless otherwise requested by the Study Director.

10.2. Preparation of Test Item

Dose formulation preparations will be performed under a laminar flow hood using clean procedures.

Test Item dosing formulations will be diluted with Phosphate Buffered Saline, pH 7.2, as necessary for administration. The dosing formulations will be prepared on each days of dosing (i.e. Days 1, 15 and 29) and will be stored in a refrigerator set to maintain 4°C. The dose formulations will be allowed to warm to room temperature for at least 30 minutes prior to dosing. Alternatively, the aliquots can be transferred directly to room temperature.

Any residual volumes of formulated Test Item will be stored in a refrigerator set at 4°C and will be discarded prior to finalisation following approval by the Study Director.

10.3. Sample Collection and Analysis

Dose formulation samples will be collected for analysis as indicated in the following table. Additional samples may be collected and analyzed at the discretion of the Study Director.

Dose Formulation Sample Collection Schedule

Interval	Homogeneity	Concentration	Sampling From
Day 1[b]	2 to 4[a]	All groups	Preparation vessel
Day 29[b]	N/A	All groups	Preparation vessel

N/A = not applicable.

[a] The homogeneity results obtained from the top, middle and bottom preparations will be averaged and utilized as the concentration results.

[b] Samples will be collected on the first preparation of the study and on the last preparation of the study.

Samples to be analyzed will be submitted as soon as possible following preparation.

All samples to be analyzed will be transferred on ice packs to the analytical laboratory (CR-MTL).

Appendix 1

Any residual/retained analytical samples (and Test Item used in analysis) will be discarded before issue of the Final Report.

10.3.1. Analytical Method

Analyses described below will be performed by HPLC using a validated analytical procedure (Validation Study Number 1801737).

10.3.1.1. Concentration and Homogeneity Analysis

Samples for Analysis:	Duplicate top, middle, and bottom samples (duplicate middle only from Group 1); sent for analysis as noted in Section 10.3. On days where only concentration analysis is required, the formulation will only be sampled from the middle.
Backup Samples:	Triplicate top, middle, and bottom samples (duplicate middle only from Group 1); maintained at the Test Facility. Backup samples may be analyzed at the discretion of the Study Director. On days where only concentration analysis is required, the formulation will only be sampled from the middle.
Sampling Containers:	Appropriate sized containers.
Sample Volume:	0.5 mL for analysis and backup samples
Storage Conditions:	Kept in a refrigerator set to maintain 4°C.
Acceptance Criteria:	For concentration, the criteria for acceptability will be mean sample concentration results within or equal to ± 15% of theoretical concentration. Each individual sample concentration result within or equal to ± 20%. For homogeneity, the criteria for acceptability will be a relative standard deviation (RSD) of concentrations of ≤ 5% for each group.

10.3.1.2. Stability Analysis

There will be no stability analysis performed for concentration used on this study, however, end of use stability analysis on the bulk test item will be performed at the end of the dosing period.

11. TEST SYSTEM

Species:	Rat
Strain:	Crl:CD(SD) Sprague-Dawley rat
Source:	Charles River Canada Inc., St. Constant, QC, Canada
Number of Males Ordered:	60

Appendix 1

Number of Females Ordered:	60
Target Age at Arrival:	4 to 8 weeks
Target Weight at Arrival:	126 to 150 g (males) 101 to 125 g (females)

The actual age and weight of animals received will be listed in the Final Report.

The actual age, weight, and number of animals received will be listed in the Final Report.

11.1. Justification of Test System and Number of Animals

The Sprague Dawley rat was chosen as the animal model for this study as it is an accepted rodent species for preclinical toxicity testing by regulatory agencies.

The total number of animals to be used in this study is considered to be the minimum required to properly characterize the effects of the Test Item. This study has been designed such that it does not require an unnecessary number of animals to accomplish its objectives.

At this time, studies in laboratory animals provide the best available basis for extrapolation to humans and are required to support regulatory submissions. Acceptable models which do not use live animals currently do not exist.

11.2. Animal Identification

Each animal will be identified using a subcutaneously implanted electronic identification chip.

11.3. Environmental Acclimation

A minimum acclimation period of 12 days will be allowed between animal receipt and the start of dosing in order to accustom the animals to the laboratory environment.

11.4. Selection, Assignment, Replacement, and Disposition of Animals

Animals will be assigned to groups by a stratified randomization scheme designed to achieve similar group mean body weights. Males and females will be randomized separately. Animals in poor health or at extremes of body weight range will not be assigned to groups.

Before the initiation of dosing, any assigned animals considered unsuitable for use in the study will be replaced by alternate animals obtained from the same shipment and maintained under the same environmental conditions.

After initiation of dosing, study animals may be replaced during the replacement period with alternate animals in the event of accidental injury, non-Test Item-related health issues, or similar circumstances.

The alternate animals may be used as replacements on the study within 1 day.

The disposition of all animals will be documented in the study records.

Appendix 1

12. HUSBANDRY

12.1. Housing

Animals will be group housed (up to 3 animals of the same sex and same dosing group together) in polycarbonate cages containing appropriate bedding equipped with an automatic watering valve. These housing conditions will be maintained unless deemed inappropriate by the Study Director and/or Clinical Veterinarian. The room(s) in which the animals will be kept will be documented in the study records.

Animals will be separated during designated procedures/activities. Each cage will be clearly labeled with a color-coded cage card indicating study, group, animal number(s), and sex. Cages will be arranged on the racks in group order. Where possible, control group animals will be housed on a separate rack from the Test Item treated animals.

12.2. Environmental Conditions

The targeted conditions for animal room environment will be as follows:

Temperature:	19°C to 25°C
Humidity:	30% to 70%
Light Cycle:	12 hours light and 12 hours dark (except during designated procedures)

12.3. Food

PMI Nutrition International Certified Rodent Chow No. 5CR4 will be provided ad libitum throughout the study, except during designated procedures. The same diet in meal form may be provided to individual animals as warranted by clinical signs (e.g., broken/damaged incisors or other health changes).

The feed is analyzed by the supplier for nutritional components and environmental contaminants. Results of the analysis are provided by the supplier and are on file at the Test Facility.

It is considered that there are no known contaminants in the feed that would interfere with the objectives of the study.

12.4. Water

Municipal tap water after treatment by reverse osmosis and ultraviolet irradiation will be freely available to each animal via an automatic watering system (except during designated procedures). Water bottles can be provided, if required.

Periodic analysis of the water is performed, and results of these analyses are on file at the Test Facility.

It is considered that there are no known contaminants in the water that could interfere with the outcome of the study.

Appendix 1

12.5. Animal Enrichment

Animals will be socially housed for psychological/environmental enrichment and will be provided with items such as a hiding tube and a chewing object, except during study procedures/activities.

12.6. Veterinary Care

Veterinary care will be available throughout the course of the study and animals will be examined by the veterinary staff as warranted by clinical signs or other changes. All veterinary examinations and recommended therapeutic treatments, if any, will be documented in the study records.

In the event that animals show signs of illness or distress, the responsible veterinarian may make initial recommendations about treatment of the animal(s) and/or alteration of study procedures, which must be approved by the Study Director or Scientific designate. All such actions will be properly documented in the study records and, when appropriate, by study plan amendment. Treatment of the animal(s) for minor injuries or ailments may be approved without prior consultation with the Sponsor representative when such treatment does not impact fulfillment of the study objectives. If the condition of the animal(s) warrants significant therapeutic intervention or alterations in study procedures, the Sponsor representative will be contacted, when possible, to discuss appropriate action. If the condition of the animal(s) is such that emergency measures must be taken, the Study Director and/or clinical veterinarian will attempt to consult with the Sponsor representative prior to responding to the medical crisis, but the Study Director and/or veterinarian has authority to act immediately at his/her discretion to alleviate suffering. The Sponsor representative will be fully informed of any such events.

13. EXPERIMENTAL DESIGN

Experimental Design

Group No.	Test Material	Dose Level (µg/dose)	Dose Volume (µL/dose)	Dose Concentration (mg/mL)	No. of Animals			
					Main Study		Recovery Study	
					Males	Females	Males	Females
1	Reference Item	0	200	0	10	10	5	5
2	mRNA-1706	10	200	0.05	10	10	-	-
3	mRNA-1706	50	200	0.25	10	10	-	-
4	mRNA-1706	100	200	0.5	10	10	5	5

13.1. Administration of Test and Reference Items

The Test and Reference Items will be administered to the appropriate animals from Groups 1 to 4 via intramuscular injection into the lateral compartment of the thigh alternating legs on Days 1, 15 and 29 (site 1= left thigh, site 2 = right thigh). The volume for each dose will be administered using a syringe/needle within the demarcated area. The first day of dosing will be designated as

Appendix 1

Day 1 (exception: alternate animals used for replacement after Day 1 will assume the day of the animal being replaced).

The injection area will be marked as frequently as required to allow appropriate visualization of administration sites. Hair may be clipped or shaved if required to improve visualization of the injection sites. The injection site will be documented in the raw data for each dose administered.

13.2. Justification of Route and Dose Levels

The intramuscular route of exposure was selected because this is the intended route of human exposure.

The dose levels for this toxicology study were chosen to approximate a substantial multiple of the anticipated clinical starting dose and top clinical dose. The highest dose to be tested is expected to represent the intended maximum human clinical dose and volume and will be administered by the clinical route (intramuscular). At this dose level, minimal systemic toxicity is expected, but it is possible mild to moderate injection site reaction (redness, swelling) and potentially elevation of systemic cytokine/acute phase markers may be observed. The mid- and low-dose were selected to evaluate the dose-dependent effect of this compound.

14. IN-LIFE PROCEDURES, OBSERVATIONS, AND MEASUREMENTS

The in-life procedures, observations, and measurements listed below will be performed for all main study and recovery animals. These data will be included in an appendix to the study report, but not used in the evaluation of the results, unless considered appropriate by the Study Director. During the study, additional evaluations to those described below and/or scheduled, and considered necessary by the Study Director and/or Veterinarian to assess health status will be conducted and duly documented. More frequent observations may be undertaken if considered appropriate.

14.1. Mortality/Moribundity Checks

Frequency:	Twice daily, once in the morning and once in the afternoon, throughout the study.
Procedure:	Animals will be observed for general health/mortality and moribundity. Animals will not be removed from cage during observation, unless necessary for identification or confirmation of possible findings.

14.2. Clinical Observations

14.2.1. Detailed Clinical Observations

Frequency:	Weekly during the dosing and recovery periods, and at least every 2 weeks during the predosing period.

Appendix 1

	In addition detailed examination of the injection sites will be performed at predose, 24, 48 and 72 hours post each dose. Following Day 29 dosing, no assessment will be perfomed on main study animals at 72 hours post dose as animals will be sent to necropsy on Day 30. Any clinical signs at the injection site (e.g. erythema/redness, skin thickening, edema/swelling, vocalization upon palpation, ulceration, necrosis, warm to the touch, etc...) will be recorded as observed.
Procedure:	Animals removed from the cage for examination.

14.3. Local Irritation Assessment

Section deleted

14.4. Body Weights

Frequency:	Weekly during the dosing and recovery periods, and at least every 2 weeks during the prestudy period.
Procedure:	Animals will be individually weighed. A fasted weight will be recorded on the day of necropsy. Terminal body weights will not be collected from animals found dead or euthanized moribund.

14.5. Food Consumption

Frequency:	Weekly, starting Day -7, throughout the dosing and recovery periods.
Procedure:	Food consumption will be quantitatively measured except for on the day of scheduled euthanasia.

14.6. Ophthalmic Examinations

Frequency:	Once prestudy and again at the end of the dosing period. During Week 2 of the recovery period if Test-Item related findings are observed during the dosing period.
Procedure:	All animals will be subjected to funduscopic (indirect ophthalmoscopy) and biomicroscopic (slit lamp) examinations. The mydriatic used will be 1% tropicamide.
Evaluation:	A report will be included as an appendix to the Final Report.

14.7. Body Temperature

Frequency:	On Day 1 and Day 29 at predose, 6 and 24 hours post dose (end of each group). If body temperature is significantly above normal range (36.0C to 38.0C) the temperature will be monitored daily till

Appendix 1

return to normal. If clinical observations indicate a possible body temperature changes, measurement may be taken at the discretion of the Study Director.

Procedure: Rectal body temperature will be recorded on un-sedated animals.

15. LABORATORY EVALUATIONS

15.1. Clinical Pathology

15.1.1. Sample Collection

Blood will be collected from the abdominal aorta following isoflurane anesthesia. After collection, samples will be transferred to the appropriate laboratory for processing.

Animals will be fasted overnight before blood sampling (for clinical chemistry). Samples will be collected according to the following table.

Samples for Clinical Pathology Evaluation

Group Nos.	Time Point	Hematology	Coagulation	Clinical Chemistry
1 to 4[a]	Day 30	X	X	X
1 and 4	Day 43	X	X	X
Unscheduled euthanasia (when possible)	Before euthanasia	X	X	X

X = Samples to be collected
a Samples will only be collected from those animals scheduled for euthanasia on Day 30.

Any residual/retained clinical pathology samples will be discarded before issue of the Final Report.

15.1.2. Hematology

Target Volume: 0.5 mL

Anticoagulant: EDTA

Hematology Parameters

Red blood cell count	White blood cell count
Hemoglobin concentration	Neutrophil count (absolute)
Hematocrit	Lymphocyte count (absolute)
Mean corpuscular volume	Monocyte count (absolute)
Red Blood Cell Distribution Width	Eosinophil count (absolute)
Mean corpuscular hemoglobin concentration	Basophil count (absolute)
Mean corpuscular hemoglobin	Large unstained cells (absolute)
Reticulocyte count (absolute)	Other cells (as appropriate)
Platelet count	

Appendix 1

A blood smear will be prepared from each hematology sample. Blood smears will be labeled, stained, and stored. Blood smears may be read to investigate results. If additional examination of blood smears is deemed necessary, the smears may be subsequently evaluated and this evaluation will be described in a study plan amendment.

15.1.3. Coagulation

Target Volume: 0.9 mL (in a 1.0 mL tube)

Anticoagulant: Citrate

Processing: To plasma

Coagulation Parameters

Activated partial thromboplastin time Fibrinogen	Prothrombin time Sample Quality

15.1.4. Clinical Chemistry

Target Volume: 0.7 mL

Anticoagulant: None, collected in serum separator tubes

Processing: To serum

Clinical Chemistry Parameters

Alanine aminotransferase Aspartate aminotransferase Alkaline phosphatase Gamma-glutamyltransferase Creatine Kinase Total bilirubin[a] Urea nitrogen Creatinine Calcium Phosphorus Sample Quality	Total protein Albumin Globulin Albumin/globulin ratio Glucose Cholesterol Triglycerides Sodium Potassium Chloride

[a] When total bilirubin is > 0.5 mg/dL, indirect and direct bilirubin will also be measured.

15.1.5. Bone Marrow Smear Evaluation (Optional)

Bone marrow smears will be collected and prepared as described in the Tissue Collection and Preservation table (ATTACHMENT A).

Evaluation of stained smears may be added by amendment at the discretion of the Study Director in consultation with the pathologist and the Sponsor.

15.2. Cytokine Analysis

Blood will be collected from the jugular vein of all recovery animals and preterminally euthanized animals (recovery animals only). After collection, blood samples for serum will be

Appendix 1

allowed to clot at ambient room temperature and blood samples for plasma will be transferred on wet ice to the appropriate laboratory for processing.

Sample Collection Schedule

Target Blood Volume (mL)			0.5	0.5
Anticoagulant			**None (SST)**	**EDTA**
Centrifugation settings			(b) (4)	
Timepoints			**Sample Type**	
Day	**Hrs**	**No. of Males/ Females**	IFN-α	IL-1ß, IL-6, TNF-α, IP-10, MIP-1-α, MCP-1
1	6	5/5	X	X
15	6	5/5	X	X
29	6	5/5	X	X
43	NAp	5/5	X	X
Matrix			Serum	Plasma
Volume per aliquot (µL)			All volume	All volume
Number of aliquot(s)			1	1
Storage condition (set to maintain)			-80°C	-80°C
Responsible Lab (processing)			CR-SHB	CR-SHB

X = Sample to be collected, NAp = Not applicable

The number of aliquots and volumes are targets that may be adjusted based on sample volume availability.

The samples for IL-1ß, IL-6, TNF-α, IP-10, MIP-1-α and MCP-1 will be analyzed by the Biomarkers department at CR MTL. Analysis for IL-1ß, IL-6, TNF-α, IP-10, MIP-1-α and MCP-1 will be conducted using a multiplex Luminex method. . The procedures to be followed during the course of this study along with the assays acceptance criteria will be detailed in the appropriate analytical procedure. Samples will be analyzed in duplicate.

The samples for IFN- α will be analyzed by the Immunology department (CR SHB). An ELISA method will be used for the analysis of IFN-α. The procedures to be followed during the course of this study along with the assays acceptance criteria will be detailed in the appropriate analytical procedure. Samples will be analyzed in duplicate.

Following Study Director approval, any residual/retained samples will be discarded prior to report finalization.

A Biomarkers interpretative report (IL-1ß, IL-6, TNF-α, IP-10, MIP-1-α and MCP-1) and an Immunology Report (IFN- α) will be included as an appendix to the Final Report.

Appendix 1

15.3. Anti-drug Antibody (ADA) Sample Collection, Processing, and Analysis

Blood will be collected from all animals by jugular venipuncture and/or via the abdominal aorta while under isoflurane anesthesia (terminal and unscheduled samples).

Time Points:	Before initiation of dosing and at study termination (on Day 30 for main animals and on Day 43 for recovery animals).
Target Volume:	0.5 mL
Anticoagulant:	None, collected in serum separator tubes
Processing:	To serum

Samples will be mixed gently and allowed to clot at room temperature until centrifugation which will be carried out as soon as practical (not exceeding 60 minutes after collection). The samples will be centrifuged for (b) (4) in a refrigerated centrifuge (set to maintain (b) (4) at (b) (4)). The resultant serum will be separated, transferred to uniquely labeled clear polypropylene tubes, frozen immediately over dry ice and transferred to a freezer set to maintain -80°C.
Samples will be shipped on dry ice to:

Shipping Contact
(b) (6)
Integrated BioTherapeutics, Inc.
4 Research Court
Suite 300
Rockville, MD 20850, USA
Tel: (b) (6)
Fax: (b) (6)
E-mail: (b) (6)

The test site will be notified before shipment of the samples. Upon receipt at the immunology laboratory, the samples will be stored at -80°C.

The samples will be analyzed for rat anti-ZIKA antibodies using a qualified ELISA method.

Any residual/retained samples will be maintained for a minimum of 6 months following issuance of the Draft Report after which samples will be discarded. Alternatively, residual/retained samples will be discarded prior to the 6 month period should the issuance of the Final Report occur prior to the end of the 6 month retention period. An earlier discard of these residual/retained samples may also be requested and authorized by the Study Director.

An Anti-therapeutic Antibody Report will be included as an appendix to the Final Report.

16. TERMINAL PROCEDURES

Terminal procedures are summarized in the following table:

Appendix 1

Terminal Procedures for Main Study and Recovery Animals

Group No.	No. of Animals		Scheduled Euthanasia Day	Necropsy Procedures			Histology[a]	Histopathology[a]
	M	F		Necropsy	Tissue Collection	Organ Weights		
1	10	10	30	X	X	X	Full Tissue	Full Tissue
2	10	10					Full Tissue	Gross Lesions Target Tissues
3	10	10					Full Tissue	Gross Lesions Target Tissues
4	10	10					Full Tissue	Full Tissue
1	5	5	43	X	X	X	Full Tissue	Gross Lesions Target Tissues
4	5	5					Full Tissue	Gross Lesions Target Tissues
Unscheduled Deaths				X	X	-	Full Tissue	Full Tissue
Replaced animals (prestudy)				X	Standard Diagnostic List	-	-	-
Replaced animals (after dosing start)				X	X	-	-	-

X = Procedure to be conducted; - = Not applicable.
[a] See Tissue Collection and Preservation table for listing of tissues.

16.1. Unscheduled Deaths

If a main study or recovery animal dies on study, a necropsy will be conducted and specified tissues will be saved. If necessary, the animal will be refrigerated to minimize autolysis.

Main study or recovery animals may be euthanized for humane reasons as per Test Facility SOPs. The samples for evaluation of clinical pathology parameters and antibody analysis will be obtained if possible as specified in Section **Error! Reference source not found.**15.

These animals will undergo exsanguination by incision from the abdominal aorta following isoflurane anesthesia unless deemed inappropriate by the Study Director and/or the clinical veterinarian and will undergo necropsy, and specified tissues will be retained. If necessary, the animal will be refrigerated (set to maintain 4°C) to minimize autolysis.

Animals found dead or euthanized before the initiation of dosing will be subject to necropsy and limited tissue retention (standard diagnostic tissue list). Any animal replaced after the start of dosing will be subject to necropsy and tissues will be retained (as per Tissue Collection and Preservation section), and any data generated will not be included in the report unless deemed appropriate by the Study Director.

Appendix 1

16.2. Scheduled Euthanasia

Main study and recovery animals surviving until scheduled euthanasia will have a terminal body weight recorded, samples for clinical pathology, anti-drug antibodies and cytokines will be collected (as appropriate), and will be euthanized by exsanguination by incision from the abdominal aorta following isoflurane anesthesia. When possible, the animals will be euthanized rotating across dose groups such that similar numbers of animals from each group, including controls, will be necropsied throughout the day. Animals will be fasted overnight before their scheduled necropsy.

16.3. Necropsy

Main study and recovery animals will be subjected to a complete necropsy examination, which will include evaluation of the carcass and musculoskeletal system; all external surfaces and orifices; cranial cavity and external surfaces of the brain; and thoracic, abdominal, and pelvic cavities with their associated organs and tissues.

Necropsy procedures will be performed by qualified personnel with appropriate training and experience in animal anatomy and gross pathology. A veterinary pathologist, or other suitably qualified person, will be available.

At the discretion of the necropsy supervising pathologist, images may be generated for illustration of or consultation on gross observations. Generation of such images will be documented and communicated to the Study Director. Images and associated documentation will be retained and archived.

16.4. Organ Weights

The organs identified for weighing in the Tissues Collection and Preservation table will be weighed at necropsy for all scheduled euthanasia animals. Organ weights will not be recorded for animals found dead or euthanized in poor condition or in extremis. Paired organs will be weighed together. In the event of gross abnormalities, in addition to the combined weight, the weight of each organ of a pair may be taken and entered as a tissue comment. Organ weight as a percent of body weight (using the terminal body weight) and organ weight as a percent of brain weight will be calculated.

16.5. Tissue Collection and Preservation

Representative samples of the tissues identified in the Tissue Collection and Preservation table in **Error! Reference source not found.**ATTACHMENT A will be collected from all animals and preserved in 10% neutral buffered formalin, unless otherwise indicated. Additional tissue samples may be collected to elucidate abnormal findings.

Appendix 1

17. HISTOLOGY AND HISTOPATHOLOGY

17.1. Histology

Tissues in the Tissue Collection and Preservation table from animals identified in the Terminal Procedures table will be embedded in paraffin, sectioned, mounted on glass slides, and stained with hematoxylin and eosin.

17.2. Histopathology

Histopathological evaluation will be performed by a board-certified veterinary pathologist Tissues identified by the study pathologist during microscopic evaluation will be communicated to the study Director; tissues will be evaluated and reported. Any additional stains or evaluations, if deemed necessary by the pathologist, will be added by study plan amendment following discussion with the Study Director and in consultation the Sponsor.

At the discretion of the study pathologist and after acknowledgement by the Study Director, images may be captured for consultation purposes.

17.3. Pathology Peer Review

A pathology peer review will be conducted by:

(b) (6)
Moderna Therapeutics
200 Technology Square, 3rd Floor
Cambridge, MA 02116
Tel: (b) (6)
E-mail: (b) (6)

The peer review statement or equivalent documentation will be included as an appendix to the Final Report.

18. CONSTRUCTED VARIABLES

Body Weight Gains	Calculated between at least each interval as well as between the beginning and end of each phase
Organ Weight relative to Body Weight	Calculated against the Terminal body weight for scheduled intervals
Organ Weight relative to Brain Weight	Calculated against the brain weight for scheduled intervals

19. STATISTICAL ANALYSIS

All statistical tests will be conducted at the 5% significance level. All pairwise comparisons will be conducted using two sided tests and will be reported at the 0.1%, 1%, and 5% levels

Appendix 1

Numerical data collected on scheduled occasions for the listed variables will be analyzed as indicated according to sex and occasion. Descriptive statistics number, mean and standard deviation (or %CV or SE when deemed appropriate) will be reported whenever possible. Values may also be expressed as a percentage of predose or control values when deemed appropriate. Inferential statistics will be performed according to the matrix below when possible, but will exclude semi-quantitative data, and any group with less than 3 observations.

Statistical Matrix

Variables for Inferential Analysis	Statistical Method Parametric/ Non-Parametric
Body Weight	X
Body Temperature	X
Hematology Variables	X
Coagulation Variables	X
Clinical Chemistry Variables	X
Cytokines	X
Organ Weights	X
Body Weight Changes	X
Organ Weight relative to Body Weight	X
Organ Weight relative to Brain Weight	X

The following pairwise comparisons will be made:

Group 2 vs. Group 1

Group 3 vs. Group 1

Group 4 vs. Group 1

19.1. Parametric/Non-Parametric

Levene's test will be used to assess the homogeneity of group variances.

Datasets with at least 3 groups will be compared using an overall one-way ANOVA *F*-test if Levene's test is not significant or the Kruskal-Wallis test if it is. If the overall *F*-test or Kruskal-Wallis test is found to be significant, then the above pairwise comparisons will be conducted using Dunnett's or Dunn's test, respectively.

Datasets with 2 groups (the designated control group and 1 other group) will be compared using a *t*-test if Levene's test is not significant or Wilcoxon Rank-Sum test if it is.

20. COMPUTERIZED SYSTEMS

The following critical computerized systems may be used in the study. The actual critical computerized systems used will be specified in the Final Report.

Data for parameters not required by study plan, which are automatically generated by analytical devices used will be retained on file but not reported. Statistical analysis results that are

Appendix 1

generated by the program but are not required by study plan and/or are not scientifically relevant will be retained on file but will not be included in the tabulations.

Critical Computerized Systems

System Name	Description of Data Collected and/or Analyzed
Provantis	In-life; clinical pathology; postmortem
Dispense	Test Material receipt, accountability and/or formulation activities
SRS (CR MTL in-house application built with SAS) and SAS system for Windows and/or In-house reporting software Nevis 2012 (using SAS)	Statistical analyses of numerical in-life, clinical pathology and postmortem data
Mesa Laboratories AmegaView CMS	Continuous Monitoring System. Monitoring of standalone fridges, freezers, incubators, and selected laboratories to measure temperature, relative humidity, and CO2, as appropriate
Johnson Controls Metasys	Building Automation System. Control of HVAC and other building systems, as well as temperature/humidity control and trending in selected laboratories and animal rooms
Empower 3 (Waters Corporation)	Data acquisition for dose formulation analysis, including regression analysis and measurement of concentration and recovery of dose formulations using HPLC. Data regression analysis and measurement of purity.
BioPlex Manager	Cytokines (IL-1ß, IL-6, TNF-α, IP-10, MIP-1-α, MCP-1) data collection
Softmax Pro GxP	IFN-α data collection
Watson LIMS	Cytokines (IL-1ß, IL-6, TNF-α, IP-10, MIP-1-α, MCP-1) data regression
Dynamics (Wyatt)	Data acquisition for particle size analysis of the test item using DLS
(b) (4)	Data acquisition
Excel	Data analyses and tabulation

21. AMENDMENTS AND DEVIATIONS

Changes to the approved study plan shall be made in the form of an amendment, which will be signed and dated by the Study Director. Every reasonable effort will be made to discuss any necessary study plan changes in advance with the Sponsor.

All study plan and SOP deviations will be documented in the study records. Deviations from the study plan and/or SOP related to the phase(s) of the study conducted at a Test Site shall be documented, acknowledged by the PI/IS, and reported to the Study Director for authorization/acknowledgement. The Study Director will notify the Sponsor of deviations that may result in a significant impact on the study as soon as possible.

22. RETENTION OF RECORDS, SAMPLES, AND SPECIMENS

All study-specific raw data, electronic data, documentation, study plan, retained samples and specimens, and interim (if applicable) and final reports will be archived by no later than the date

Appendix 1

of final report issue. All materials generated by Charles River from this study will be transferred to a CR-MTL archives. At least one year after issue of the draft report, the Sponsor will be contacted.

Records to be maintained will include, but will not be limited to, documentation and data for the following:

- Study Plan, study plan amendments, and deviations
- Study schedule
- Study-related correspondence
- Test system receipt, health, and husbandry
- Test and Reference Item receipt, identification, preparation, and analysis
- In-life measurements and observations
- Clinical pathology and cytokine sample collection and evaluation
- Anti-drug Antibodies sample collection
- Gross and microscopic observations and related data
- Organ weight measurements
- Statistical analysis results

23. REPORTING

A comprehensive Draft Report will be prepared following completion of the study and will be finalized following consultation with the Sponsor. The report will include all information necessary to provide a complete and accurate description of the experimental methods and results and any circumstances that may have affected the quality or integrity of the study.

The Sponsor will receive an electronic version of the Draft and Final Report provided in Adobe Acrobat PDF format (hyperlinked and searchable at final) along with a Microsoft Word version of the text. The PDF document will be created from native electronic files to the extent possible, including text and tables generated by the Test Facility. Report components not available in native electronic files and/or original signature pages will be scanned and converted to PDF image files for incorporation. An original copy of the report with the Test Facility's handwritten signatures will be retained.

Reports should be finalized within 6 months of issue of the Draft Report. If the Sponsor has not provided comments to the report within 6 months of draft issue, the report will be finalized by the Test Facility unless other arrangements are made by the Sponsor.

Appendix 1

24. ANIMAL WELFARE

24.1. Institutional Animal Care and Use Committee Approval

The study plan and any amendment(s) or procedures involving the care and use of animals in this study will be reviewed and approved by CR SHB Institutional Animal Care and Use Committee (IACUC). During the study, the care and use of animals will be conducted with guidance from the USA National Research Council and the Canadian Council on Animal Care (CCAC).

Appendix 1

AMENDMENT APPROVAL

(b) (6) _____ Date: 21 Sep 2017

As authorized by the Sponsor on 21 Sep 2017

STUDY PLAN AMENDMENT 07

Test Facility Study No. 5002231

A 1 Month (3 doses) Intramuscular Injection Vaccine Study of mRNA-1706 in Sprague-Dawley Rats With a 2-Week Recovery Period

SPONSOR:
Moderna Therapeutics, Inc.
200 Technology Square, Third Floor
Cambridge, MA 02139, USA

TEST FACILITY:
Charles River Laboratories Montreal ULC
Sherbrooke Site (CR SHB)
1580 Ida-Metivier
Sherbrooke, QC J1E 0B5
Canada

Appendix 1

Summary of changes and Justifications

Study Plan effective date: 15 Mar 2017

Note: When applicable, additions are indicated in bold underlined text and deletions are indicated in bold strikethrough text in the affected sections of the document.

Item or Section(s)	Justification
Amendment 1	**Date: 27-Mar-2017**
2. PROPOSED STUDY SCHEDULE	To include new schedule following delay in dosing initiation due to test item delivery date.
10.3.Sample Collection and Analysis	To remove homogeneity for Group 1 based on sample collection in section 10.3.1.1.
10.3.1. Analytical Method	To correct the dose formulation analysis validation number.
10.3.1.2. Stability Analysis	To include end of use for bulk test item.
13. EXPERIMENTAL DESIGN	To correct the dose concentration for mid dose group.
15.1.1. Sample Collection	To correct the group numbers to be evaluation on both occasions.
Amendment 2	**Date: 02-May-2017**
2. PROPOSED STUDY SCHEDULE	To include reporting schedule.
7. RESPONSIBLE PERSONNEL	To update PIs description based on wording used in section 15.3.
8.1. Test Item	To include information from Summary of Analysis.
14.2.1. Detailed Clinical Observations	To include detailed examination of the injection site following each dosing.
14.3. Local Irritation Assessment	Section deleted. Replaced by detailed examination of the injection site (refer to section 14.2.1.)
14.7. Body Temperature	To update the procedure as animals were not identified with the appropriate microship for body weight recording with scanner.
Amendment 3	**Date: 07-Jun-2017**
7. RESPONSIBLE PERSONNEL	To include the pathology IS.
Amendment 4	**Date: 15-Jun-2017**
7. RESPONSIBLE PERSONNEL	To include clarification for immunology analysis and to include a biomarker IS.
15.2. Cytokines Analysis	To include clarification for cytokine analysis..
Amendment 5	**Date: 26-Jun-2017**
8.6. Test and Reference Items Disposition and Inventory	To update shipping contact information.
Amendment 6	**Date: 21-Sep-2017**
7. RESPONSIBLE PERSONNEL	To change the IS for Analytical Chemistry due to workload reassignment and to update Study Director's phone extension number.
Amendment 6	
7. RESPONSIBLE PERSONNEL	To remove the IS for immunology (cytokine IFN-α Analysis) as analysis will not be conducted.
15.2 Laboratory Investigations (Cytokine Analysis)	To remove IFN-α from the list of cytokine to be analyzed as we were not able to appropriately validate an assay for the analysis.

Appendix 1

TABLE OF CONTENTS

Appendix 1

1. OBJECTIVE(S)

The objectives of this study are to determine the potential toxicity of mRNA-1706, when given by intramuscular injection for 1 month (3 doses) to rats and to evaluate the potential reversibility of any findings following a 2-week recovery period.

1.1. Study Classification

Study Category:	TOX
Study Type:	Repeat Dose Toxicity
Study Design:	Parallel
Primary Treatment CAS Registry Number:	Not Available
Primary Treatment Unique Ingredient ID:	Not Available
Class of Compound:	mRNA

2. PROPOSED STUDY SCHEDULE

Proposed study dates are listed below. Actual applicable dates will be included in the Final Report.

Experimental Start Date:	16 Mar 2017 (First date of study-specific data collection)
Experimental Completion Date:	Week of 25 Sep 2017 (Last date data are collected from the study)
Animal Arrival:	16 Mar 2017
Initiation of Dosing:	03 May 2017
Completion of In-life:	02 Jun 2017 (main study animals) 15 Jun 2017 (recovery animals) (Last date of necropsy)
Unaudited Draft Report:	14 Aug 2017
Draft Report:	19 Sep 2017
Final Report:	26 Sep 2017 (Expected date of Study Director signature)

3. GUIDELINES FOR STUDY DESIGN

The design of this study was based on the study objective(s), the overall product development strategy for the Test Item, and the following study design guidelines:

- OECD Guideline 407. *Repeated Dose 28-day Oral Toxicity Study in Rodents*.

Appendix 1

- Committee for Medicinal Products for Human Use (CHMP). *Note for Guidance on Repeated Dose Toxicity*. CPMP/SWP/1042/99corr.
- ICH Harmonised Tripartite Guideline M3 (R2). *Nonclinical Safety Studies for the Conduct of Human Clinical Trials and Marketing Authorization for Pharmaceuticals*.
- Japanese Guidelines for Nonclinical Studies of Drugs Manual (1995). *Guidelines for Nonclinical Pharmacokinetic Studies*, *Guidelines for Toxicity Studies of Drugs (Chapter 3, Repeated Dose Toxicity Studies)*
- Appendix to Director General Notification, No. 12-Nousan-8147, 24 November 2000, Agricultural Production Bureau, Ministry of Agriculture, Forestry and Fisheries of Japan (JMAFF).

4. REGULATORY COMPLIANCE

The study will be performed in accordance with the OECD Principles of Good Laboratory Practice and as accepted by Regulatory Authorities throughout the European Union, United States of America (FDA), Japan (MHLW), and other countries that are signatories to the OECD Mutual Acceptance of Data Agreement.

Any portion of this study conducted in the USA will be performed in accordance with the U.S. Department of Health and Human Services, Food and Drug Administration. United States Code of Federal Regulations, Title 21, Part 58: Good Laboratory Practice for Nonclinical Laboratory Studies and as accepted by Regulatory Authorities throughout the European Union (OECD Principles of Good Laboratory Practice), Japan (MHLW), and other countries that are signatories to the OECD Mutual Acceptance of Data Agreement.

Exceptions to GLPs include the following study elements:

- Characterization of the Test Item will be performed by the Sponsor or Sponsor subcontractor according to established SOPs, controls, and approved test methodologies to ensure integrity and validity of the results generated; these analyses will not be conducted in compliance with the GLP or GMP regulations.
- Analysis of cytokines and anti-therapeutic antibody will be conducted using scientifically qualified methods and in accordance with all applicable analytical procedures.
- Pathology peer review

5. QUALITY ASSURANCE

5.1. Test Facility

The Test Facility Quality Assurance Program (QAP) will monitor the study to assure the facilities, equipment, personnel, methods, practices, records, and controls are in conformance with Good Laboratory Practice regulations. The QAP will review the study plan, conduct inspections at intervals adequate to assure the integrity of the study, and audit the Final Report to

Appendix 1

assure that it accurately describes the methods and standard operating procedures and that the reported results accurately reflect the raw data of the study.

The Test Facility QAP contact for this study is indicated below:

Appendix 1

Each PI is required to report any deviations or other circumstances that could affect the quality or integrity of the study to the Study Director in a timely manner. Each PI will provide a report addressing their assigned phase of the study, which will be included as an appendix to the Final Report. The phase report will include the following:

- The archive site for all records, samples, specimens and reports generated from the phase or segment (alternatively, details regarding the retention of the materials may be provided to the Study Director for inclusion in the Final Report)
- A listing of critical computerized systems used in the conduct and/or interpretation of the assigned study phase

8. TEST AND REFERENCE ITEMS

8.1. Test Item

Identification:	mRNA-1706
Supplier:	Moderna Therapeutics, Inc.
Batch (Lot) Number:	MTDP17036
Concentration:	2.1 mg/mL
Retest Date:	Concomitant assessment, ongoing
Physical Description:	White to off-white lipid nanoparticle dispersion
Storage Conditions:	Kept in a freezer set to maintain -20°C

8.2. Reference Item

Identification:	Phosphate-buffered Saline (PBS) pH 7.2
Supplier:	Will be included in the Final Report
Batch (Lot) Number:	Will be included in the Final Report
Expiration Date:	Will be included in the Final Report
Physical Description:	Liquid
Storage Conditions:	Kept in a controlled temperature area set to maintain 21°C

8.3. Test and Reference Item Characterization

The Sponsor will provide to the Test Facility documentation of the identity, strength, purity, and composition for the Test Item. A Certificate of Analysis or equivalent documentation will be provided for inclusion in the Final Report. The Sponsor will also provide information concerning the regulatory standard that was followed for these evaluations.

Appendix 1

The Sponsor has appropriate documentation on file concerning the method of synthesis, fabrication or derivation of the Test Item, and this information is available to the appropriate regulatory agencies should it be requested.

8.4. Analysis of Test Item

A sample (2 vials) of the Test Item will be taken on the completion of the dosing period. Analysis of bulk Test Item for concentration, particle size and purity will be performed.

The first vial will be transferred on ice pack to the analytical laboratory at the Test Facility for concentration and particle size analysis.

The second vial will be transferred on ice pack to the molecular biology laboratory at the Test Facility for purity analysis.

Purity-and Particle size analysis will be performed by IEX- HPLC, Differential Light Scattering (DLS) and capillary electrophoresis (CE) using validated analytical procedures.

Any residual/retained analytical samples (and Test Item used in analysis) will be discarded before issue of the Final Report.

8.5. Reserve Samples

For each batch (lot) of Test and Reference Item components, a reserve sample (1 mL, 100 mg or 1 vial) will be collected and maintained under the appropriate storage conditions by the Test Facility.

8.6. Test and Reference Item Inventory and Disposition

Records of the receipt, distribution, storage, and disposition of Test and Reference Items will be maintained. With the exception of reserve samples, all unused Sponsor-supplied bulk Test Item will be returned to the Sponsor

Shipping Contact
(b) (6)
Moderna Therapeutics
500 Technology Sq, 8th Floor
Cambridge MA 02138
Cell: (b) (6)
E-mail: (b) (6)

9. SAFETY

The safety precautions for the Test Item and dose formulations will be documented in a Test Material Safety Data Sheet (TMSDS) based on the information provided by the Sponsor either by an MSDS or similar document.

Appendix 1

10. DOSE FORMULATION AND ANALYSIS

10.1. Preparation of Reference Item

Dose formulation preparations will be performed under a laminar flow hood using clean procedures.

The Reference Item, Phosphate Buffered Saline pH 7.2, will be dispensed on days of dosing (i.e. Days 1, 15 and 29) for administration to Group 1 control animals and as required to dilute the bulk Test Item for administration to Groups 2 to 4 animals. The aliquots will be stored in a refrigerator set to maintain 4°C until use. They will be removed from the refrigerator and allowed to warm to room temperature for at least 30 minutes before dosing.

Any residual volumes will be discarded unless otherwise requested by the Study Director.

10.2. Preparation of Test Item

Dose formulation preparations will be performed under a laminar flow hood using clean procedures.

Test Item dosing formulations will be diluted with Phosphate Buffered Saline, pH 7.2, as necessary for administration. The dosing formulations will be prepared on each days of dosing (i.e. Days 1, 15 and 29) and will be stored in a refrigerator set to maintain 4°C. The dose formulations will be allowed to warm to room temperature for at least 30 minutes prior to dosing. Alternatively, the aliquots can be transferred directly to room temperature.

Any residual volumes of formulated Test Item will be stored in a refrigerator set at 4°C and will be discarded prior to finalisation following approval by the Study Director.

10.3. Sample Collection and Analysis

Dose formulation samples will be collected for analysis as indicated in the following table. Additional samples may be collected and analyzed at the discretion of the Study Director.

Dose Formulation Sample Collection Schedule

Interval	Homogeneity	Concentration	Sampling From
Day 1[b]	2 to 4[a]	All groups	Preparation vessel
Day 29[b]	N/A	All groups	Preparation vessel

N/A = not applicable.

[a] The homogeneity results obtained from the top, middle and bottom preparations will be averaged and utilized as the concentration results.

[b] Samples will be collected on the first preparation of the study and on the last preparation of the study.

Samples to be analyzed will be submitted as soon as possible following preparation.

All samples to be analyzed will be transferred on ice packs to the analytical laboratory (CR-MTL).

Appendix 1

Any residual/retained analytical samples (and Test Item used in analysis) will be discarded before issue of the Final Report.

10.3.1. Analytical Method

Analyses described below will be performed by HPLC using a validated analytical procedure (Validation Study Number 1801737).

10.3.1.1. Concentration and Homogeneity Analysis

Samples for Analysis:	Duplicate top, middle, and bottom samples (duplicate middle only from Group 1); sent for analysis as noted in Section 10.3. On days where only concentration analysis is required, the formulation will only be sampled from the middle.
Backup Samples:	Triplicate top, middle, and bottom samples (duplicate middle only from Group 1); maintained at the Test Facility. Backup samples may be analyzed at the discretion of the Study Director. On days where only concentration analysis is required, the formulation will only be sampled from the middle.
Sampling Containers:	Appropriate sized containers.
Sample Volume:	0.5 mL for analysis and backup samples
Storage Conditions:	Kept in a refrigerator set to maintain 4°C.
Acceptance Criteria:	For concentration, the criteria for acceptability will be mean sample concentration results within or equal to ± 15% of theoretical concentration. Each individual sample concentration result within or equal to ± 20%. For homogeneity, the criteria for acceptability will be a relative standard deviation (RSD) of concentrations of ≤ 5% for each group.

10.3.1.2. Stability Analysis

There will be no stability analysis performed for concentration used on this study, however, end of use stability analysis on the bulk test item will be performed at the end of the dosing period.

11. TEST SYSTEM

Species:	Rat
Strain:	Crl:CD(SD) Sprague-Dawley rat
Source:	Charles River Canada Inc., St. Constant, QC, Canada
Number of Males Ordered:	60

Appendix 1

Number of Females Ordered:	60
Target Age at Arrival:	4 to 8 weeks
Target Weight at Arrival:	126 to 150 g (males) 101 to 125 g (females)

The actual age and weight of animals received will be listed in the Final Report.

The actual age, weight, and number of animals received will be listed in the Final Report.

11.1. Justification of Test System and Number of Animals

The Sprague Dawley rat was chosen as the animal model for this study as it is an accepted rodent species for preclinical toxicity testing by regulatory agencies.

The total number of animals to be used in this study is considered to be the minimum required to properly characterize the effects of the Test Item. This study has been designed such that it does not require an unnecessary number of animals to accomplish its objectives.

At this time, studies in laboratory animals provide the best available basis for extrapolation to humans and are required to support regulatory submissions. Acceptable models which do not use live animals currently do not exist.

11.2. Animal Identification

Each animal will be identified using a subcutaneously implanted electronic identification chip.

11.3. Environmental Acclimation

A minimum acclimation period of 12 days will be allowed between animal receipt and the start of dosing in order to accustom the animals to the laboratory environment.

11.4. Selection, Assignment, Replacement, and Disposition of Animals

Animals will be assigned to groups by a stratified randomization scheme designed to achieve similar group mean body weights. Males and females will be randomized separately. Animals in poor health or at extremes of body weight range will not be assigned to groups.

Before the initiation of dosing, any assigned animals considered unsuitable for use in the study will be replaced by alternate animals obtained from the same shipment and maintained under the same environmental conditions.

After initiation of dosing, study animals may be replaced during the replacement period with alternate animals in the event of accidental injury, non-Test Item-related health issues, or similar circumstances.

The alternate animals may be used as replacements on the study within 1 day.

The disposition of all animals will be documented in the study records.

Appendix 1

12. HUSBANDRY

12.1. Housing

Animals will be group housed (up to 3 animals of the same sex and same dosing group together) in polycarbonate cages containing appropriate bedding equipped with an automatic watering valve. These housing conditions will be maintained unless deemed inappropriate by the Study Director and/or Clinical Veterinarian. The room(s) in which the animals will be kept will be documented in the study records.

Animals will be separated during designated procedures/activities. Each cage will be clearly labeled with a color-coded cage card indicating study, group, animal number(s), and sex. Cages will be arranged on the racks in group order. Where possible, control group animals will be housed on a separate rack from the Test Item treated animals.

12.2. Environmental Conditions

The targeted conditions for animal room environment will be as follows:

Temperature:	19°C to 25°C
Humidity:	30% to 70%
Light Cycle:	12 hours light and 12 hours dark (except during designated procedures)

12.3. Food

PMI Nutrition International Certified Rodent Chow No. 5CR4 will be provided ad libitum throughout the study, except during designated procedures. The same diet in meal form may be provided to individual animals as warranted by clinical signs (e.g., broken/damaged incisors or other health changes).

The feed is analyzed by the supplier for nutritional components and environmental contaminants. Results of the analysis are provided by the supplier and are on file at the Test Facility.

It is considered that there are no known contaminants in the feed that would interfere with the objectives of the study.

12.4. Water

Municipal tap water after treatment by reverse osmosis and ultraviolet irradiation will be freely available to each animal via an automatic watering system (except during designated procedures). Water bottles can be provided, if required.

Periodic analysis of the water is performed, and results of these analyses are on file at the Test Facility.

It is considered that there are no known contaminants in the water that could interfere with the outcome of the study.

Appendix 1

12.5. Animal Enrichment

Animals will be socially housed for psychological/environmental enrichment and will be provided with items such as a hiding tube and a chewing object, except during study procedures/activities.

12.6. Veterinary Care

Veterinary care will be available throughout the course of the study and animals will be examined by the veterinary staff as warranted by clinical signs or other changes. All veterinary examinations and recommended therapeutic treatments, if any, will be documented in the study records.

In the event that animals show signs of illness or distress, the responsible veterinarian may make initial recommendations about treatment of the animal(s) and/or alteration of study procedures, which must be approved by the Study Director or Scientific designate. All such actions will be properly documented in the study records and, when appropriate, by study plan amendment. Treatment of the animal(s) for minor injuries or ailments may be approved without prior consultation with the Sponsor representative when such treatment does not impact fulfillment of the study objectives. If the condition of the animal(s) warrants significant therapeutic intervention or alterations in study procedures, the Sponsor representative will be contacted, when possible, to discuss appropriate action. If the condition of the animal(s) is such that emergency measures must be taken, the Study Director and/or clinical veterinarian will attempt to consult with the Sponsor representative prior to responding to the medical crisis, but the Study Director and/or veterinarian has authority to act immediately at his/her discretion to alleviate suffering. The Sponsor representative will be fully informed of any such events.

13. EXPERIMENTAL DESIGN

Experimental Design

Group No.	Test Material	Dose Level (µg/dose)	Dose Volume (µL/dose)	Dose Concentration (mg/mL)	No. of Animals			
					Main Study		Recovery Study	
					Males	Females	Males	Females
1	Reference Item	0	200	0	10	10	5	5
2	mRNA-1706	10	200	0.05	10	10	-	-
3	mRNA-1706	50	200	0.25	10	10	-	-
4	mRNA-1706	100	200	0.5	10	10	5	5

13.1. Administration of Test and Reference Items

The Test and Reference Items will be administered to the appropriate animals from Groups 1 to 4 via intramuscular injection into the lateral compartment of the thigh alternating legs on Days 1, 15 and 29 (site 1= left thigh, site 2 = right thigh). The volume for each dose will be administered using a syringe/needle within the demarcated area. The first day of dosing will be designated as

Appendix 1

Day 1 (exception: alternate animals used for replacement after Day 1 will assume the day of the animal being replaced).

The injection area will be marked as frequently as required to allow appropriate visualization of administration sites. Hair may be clipped or shaved if required to improve visualization of the injection sites. The injection site will be documented in the raw data for each dose administered.

13.2. Justification of Route and Dose Levels

The intramuscular route of exposure was selected because this is the intended route of human exposure.

The dose levels for this toxicology study were chosen to approximate a substantial multiple of the anticipated clinical starting dose and top clinical dose. The highest dose to be tested is expected to represent the intended maximum human clinical dose and volume and will be administered by the clinical route (intramuscular). At this dose level, minimal systemic toxicity is expected, but it is possible mild to moderate injection site reaction (redness, swelling) and potentially elevation of systemic cytokine/acute phase markers may be observed. The mid- and low-dose were selected to evaluate the dose-dependent effect of this compound.

14. IN-LIFE PROCEDURES, OBSERVATIONS, AND MEASUREMENTS

The in-life procedures, observations, and measurements listed below will be performed for all main study and recovery animals. These data will be included in an appendix to the study report, but not used in the evaluation of the results, unless considered appropriate by the Study Director. During the study, additional evaluations to those described below and/or scheduled, and considered necessary by the Study Director and/or Veterinarian to assess health status will be conducted and duly documented. More frequent observations may be undertaken if considered appropriate.

14.1. Mortality/Moribundity Checks

Frequency:	Twice daily, once in the morning and once in the afternoon, throughout the study.
Procedure:	Animals will be observed for general health/mortality and moribundity. Animals will not be removed from cage during observation, unless necessary for identification or confirmation of possible findings.

14.2. Clinical Observations

14.2.1. Detailed Clinical Observations

Frequency:	Weekly during the dosing and recovery periods, and at least every 2 weeks during the predosing period.

Appendix 1

	In addition detailed examination of the injection sites will be performed at predose, 24, 48 and 72 hours post each dose. Following Day 29 dosing, no assessment will be perfomed on main study animals at 72 hours post dose as animals will be sent to necropsy on Day 30. Any clinical signs at the injection site (e.g. erythema/redness, skin thickening, edema/swelling, vocalization upon palpation, ulceration, necrosis, warm to the touch, etc...) will be recorded as observed.
Procedure:	Animals removed from the cage for examination.

14.3. Local Irritation Assessment

Section deleted

14.4. Body Weights

Frequency:	Weekly during the dosing and recovery periods, and at least every 2 weeks during the prestudy period.
Procedure:	Animals will be individually weighed. A fasted weight will be recorded on the day of necropsy. Terminal body weights will not be collected from animals found dead or euthanized moribund.

14.5. Food Consumption

Frequency:	Weekly, starting Day -7, throughout the dosing and recovery periods.
Procedure:	Food consumption will be quantitatively measured except for on the day of scheduled euthanasia.

14.6. Ophthalmic Examinations

Frequency:	Once prestudy and again at the end of the dosing period. During Week 2 of the recovery period if Test-Item related findings are observed during the dosing period.
Procedure:	All animals will be subjected to funduscopic (indirect ophthalmoscopy) and biomicroscopic (slit lamp) examinations. The mydriatic used will be 1% tropicamide.
Evaluation:	A report will be included as an appendix to the Final Report.

14.7. Body Temperature

Frequency:	On Day 1 and Day 29 at predose, 6 and 24 hours post dose (end of each group). If body temperature is significantly above normal range (36.0C to 38.0C) the temperature will be monitored daily till

Appendix 1

return to normal. If clinical observations indicate a possible body temperature changes, measurement may be taken at the discretion of the Study Director.

Procedure: Rectal body temperature will be recorded on un-sedated animals.

15. LABORATORY EVALUATIONS

15.1. Clinical Pathology

15.1.1. Sample Collection

Blood will be collected from the abdominal aorta following isoflurane anesthesia. After collection, samples will be transferred to the appropriate laboratory for processing.

Animals will be fasted overnight before blood sampling (for clinical chemistry). Samples will be collected according to the following table.

Samples for Clinical Pathology Evaluation

Group Nos.	Time Point	Hematology	Coagulation	Clinical Chemistry
1 to 4[a]	Day 30	X	X	X
1 and 4	Day 43	X	X	X
Unscheduled euthanasia (when possible)	Before euthanasia	X	X	X

X = Samples to be collected
a Samples will only be collected from those animals scheduled for euthanasia on Day 30.

Any residual/retained clinical pathology samples will be discarded before issue of the Final Report.

15.1.2. Hematology

Target Volume: 0.5 mL

Anticoagulant: EDTA

Hematology Parameters

Red blood cell count	White blood cell count
Hemoglobin concentration	Neutrophil count (absolute)
Hematocrit	Lymphocyte count (absolute)
Mean corpuscular volume	Monocyte count (absolute)
Red Blood Cell Distribution Width	Eosinophil count (absolute)
Mean corpuscular hemoglobin concentration	Basophil count (absolute)
Mean corpuscular hemoglobin	Large unstained cells (absolute)
Reticulocyte count (absolute)	Other cells (as appropriate)
Platelet count	

Appendix 1

A blood smear will be prepared from each hematology sample. Blood smears will be labeled, stained, and stored. Blood smears may be read to investigate results. If additional examination of blood smears is deemed necessary, the smears may be subsequently evaluated and this evaluation will be described in a study plan amendment.

15.1.3. Coagulation

Target Volume: 0.9 mL (in a 1.0 mL tube)

Anticoagulant: Citrate

Processing: To plasma

Coagulation Parameters

Activated partial thromboplastin time	Prothrombin time
Fibrinogen	Sample Quality

15.1.4. Clinical Chemistry

Target Volume: 0.7 mL

Anticoagulant: None, collected in serum separator tubes

Processing: To serum

Clinical Chemistry Parameters

Alanine aminotransferase	Total protein
Aspartate aminotransferase	Albumin
Alkaline phosphatase	Globulin
Gamma-glutamyltransferase	Albumin/globulin ratio
Creatine Kinase	Glucose
Total bilirubin[a]	Cholesterol
Urea nitrogen	Triglycerides
Creatinine	Sodium
Calcium	Potassium
Phosphorus	Chloride
Sample Quality	

[a] When total bilirubin is > 0.5 mg/dL, indirect and direct bilirubin will also be measured.

15.1.5. Bone Marrow Smear Evaluation (Optional)

Bone marrow smears will be collected and prepared as described in the Tissue Collection and Preservation table (ATTACHMENT A).

Evaluation of stained smears may be added by amendment at the discretion of the Study Director in consultation with the pathologist and the Sponsor.

15.2. Cytokine Analysis

Blood will be collected from the jugular vein of all recovery animals and preterminally euthanized animals (recovery animals only). After collection, blood samples for serum will be

Appendix 1

allowed to clot at ambient room temperature and blood samples for plasma will be transferred on wet ice to the appropriate laboratory for processing.

Sample Collection Schedule

Target Blood Volume (mL)			0.5	0.5
Anticoagulant			**None (SST)**	**EDTA**
Centrifugation settings			(b) (4)	
Timepoints			**Sample Type**	
Day	**Hrs**	**No. of Males/ Females**	IFN-α*	IL-1ß, IL-6, TNF-α, IP-10, MIP-1-α, MCP-1
1	6	5/5	X	X
15	6	5/5	X	X
29	6	5/5	X	X
43	NAp	5/5	X	X
Matrix			Serum	Plasma
Volume per aliquot (µL)			All volume	All volume
Number of aliquot(s)			1	1
Storage condition (set to maintain)			-80°C	-80°C
Responsible Lab (processing)			CR-SHB	CR-SHB

X = Sample to be collected, NAp = Not applicable

*** The assay validation of IFN-α did not work appropriately and serum samples analysis will not be conducted.**

The number of aliquots and volumes are targets that may be adjusted based on sample volume availability.

The samples for IL-1ß, IL-6, TNF-α, IP-10, MIP-1-α and MCP-1 will be analyzed by the Biomarkers department at CR MTL. Analysis for IL-1ß, IL-6, TNF-α, IP-10, MIP-1-α and MCP-1 will be conducted using a multiplex Luminex method. . The procedures to be followed during the course of this study along with the assays acceptance criteria will be detailed in the appropriate analytical procedure. Samples will be analyzed in duplicate.

~~**The samples for IFN- α will be analyzed by the Immunology department (CR SHB). An ELISA method will be used for the analysis of IFN-α. The procedures to be followed during the course of this study along with the assays acceptance criteria will be detailed in the appropriate analytical procedure. Samples will be analyzed in duplicate.**~~

Following Study Director approval, any residual/retained samples will be discarded prior to report finalization.

Appendix 1

A Biomarkers interpretative report (IL-1ß, IL-6, TNF-α, IP-10, MIP-1-α and MCP-1) and an Immunology Report (IFN- α) will be included as an appendix to the Final Report.

15.3. Anti-drug Antibody (ADA) Sample Collection, Processing, and Analysis

Blood will be collected from all animals by jugular venipuncture and/or via the abdominal aorta while under isoflurane anesthesia (terminal and unscheduled samples).

Time Points:	Before initiation of dosing and at study termination (on Day 30 for main animals and on Day 43 for recovery animals).
Target Volume:	0.5 mL
Anticoagulant:	None, collected in serum separator tubes
Processing:	To serum

Samples will be mixed gently and allowed to clot at room temperature until centrifugation which will be carried out as soon as practical (not exceeding 60 minutes after collection). The samples will be centrifuged for (b) (4) in a refrigerated centrifuge (set to maintain (b) (4) at (b) (4)
The resultant serum will be separated, transferred to uniquely labeled clear polypropylene tubes, frozen immediately over dry ice and transferred to a freezer set to maintain -80°C.
Samples will be shipped on dry ice to:

Shipping Contact
(b) (6)
Integrated BioTherapeutics, Inc.
4 Research Court
Suite 300
Rockville, MD 20850, USA
Tel: (b) (6)
Fax: (b) (6)
E-mail: (b) (6)

The test site will be notified before shipment of the samples. Upon receipt at the immunology laboratory, the samples will be stored at -80°C.

The samples will be analyzed for rat anti-ZIKA antibodies using a qualified ELISA method.

Any residual/retained samples will be maintained for a minimum of 6 months following issuance of the Draft Report after which samples will be discarded. Alternatively, residual/retained samples will be discarded prior to the 6 month period should the issuance of the Final Report occur prior to the end of the 6 month retention period. An earlier discard of these residual/retained samples may also be requested and authorized by the Study Director.

An Anti-therapeutic Antibody Report will be included as an appendix to the Final Report.

16. TERMINAL PROCEDURES

Terminal procedures are summarized in the following table:

Appendix 1

Terminal Procedures for Main Study and Recovery Animals

Group No.	No. of Animals		Scheduled Euthanasia Day	Necropsy Procedures			Histology[a]	Histopathology[a]
	M	F		Necropsy	Tissue Collection	Organ Weights		
1	10	10	30	X	X	X	Full Tissue	Full Tissue
2	10	10					Full Tissue	Gross Lesions Target Tissues
3	10	10					Full Tissue	Gross Lesions Target Tissues
4	10	10					Full Tissue	Full Tissue
1	5	5	43	X	X	X	Full Tissue	Gross Lesions Target Tissues
4	5	5					Full Tissue	Gross Lesions Target Tissues
Unscheduled Deaths				X	X	-	Full Tissue	Full Tissue
Replaced animals (prestudy)				X	Standard Diagnostic List	-	-	-
Replaced animals (after dosing start)				X	X	-	-	-

X = Procedure to be conducted; - = Not applicable.
[a] See Tissue Collection and Preservation table for listing of tissues.

16.1. Unscheduled Deaths

If a main study or recovery animal dies on study, a necropsy will be conducted and specified tissues will be saved. If necessary, the animal will be refrigerated to minimize autolysis.

Main study or recovery animals may be euthanized for humane reasons as per Test Facility SOPs. The samples for evaluation of clinical pathology parameters and antibody analysis will be obtained if possible as specified in Section **Error! Reference source not found.**15.

These animals will undergo exsanguination by incision from the abdominal aorta following isoflurane anesthesia unless deemed inappropriate by the Study Director and/or the clinical veterinarian and will undergo necropsy, and specified tissues will be retained. If necessary, the animal will be refrigerated (set to maintain 4°C) to minimize autolysis.

Animals found dead or euthanized before the initiation of dosing will be subject to necropsy and limited tissue retention (standard diagnostic tissue list). Any animal replaced after the start of dosing will be subject to necropsy and tissues will be retained (as per Tissue Collection and Preservation section), and any data generated will not be included in the report unless deemed appropriate by the Study Director.

Appendix 1

16.2. Scheduled Euthanasia

Main study and recovery animals surviving until scheduled euthanasia will have a terminal body weight recorded, samples for clinical pathology, anti-drug antibodies and cytokines will be collected (as appropriate), and will be euthanized by exsanguination by incision from the abdominal aorta following isoflurane anesthesia. When possible, the animals will be euthanized rotating across dose groups such that similar numbers of animals from each group, including controls, will be necropsied throughout the day. Animals will be fasted overnight before their scheduled necropsy.

16.3. Necropsy

Main study and recovery animals will be subjected to a complete necropsy examination, which will include evaluation of the carcass and musculoskeletal system; all external surfaces and orifices; cranial cavity and external surfaces of the brain; and thoracic, abdominal, and pelvic cavities with their associated organs and tissues.

Necropsy procedures will be performed by qualified personnel with appropriate training and experience in animal anatomy and gross pathology. A veterinary pathologist, or other suitably qualified person, will be available.

At the discretion of the necropsy supervising pathologist, images may be generated for illustration of or consultation on gross observations. Generation of such images will be documented and communicated to the Study Director. Images and associated documentation will be retained and archived.

16.4. Organ Weights

The organs identified for weighing in the Tissues Collection and Preservation table will be weighed at necropsy for all scheduled euthanasia animals. Organ weights will not be recorded for animals found dead or euthanized in poor condition or in extremis. Paired organs will be weighed together. In the event of gross abnormalities, in addition to the combined weight, the weight of each organ of a pair may be taken and entered as a tissue comment. Organ weight as a percent of body weight (using the terminal body weight) and organ weight as a percent of brain weight will be calculated.

16.5. Tissue Collection and Preservation

Representative samples of the tissues identified in the Tissue Collection and Preservation table in **Error! Reference source not found.**ATTACHMENT A will be collected from all animals and preserved in 10% neutral buffered formalin, unless otherwise indicated. Additional tissue samples may be collected to elucidate abnormal findings.

Appendix 1

17. HISTOLOGY AND HISTOPATHOLOGY

17.1. Histology

Tissues in the Tissue Collection and Preservation table from animals identified in the Terminal Procedures table will be embedded in paraffin, sectioned, mounted on glass slides, and stained with hematoxylin and eosin.

17.2. Histopathology

Histopathological evaluation will be performed by a board-certified veterinary pathologist Tissues identified by the study pathologist during microscopic evaluation will be communicated to the study Director; tissues will be evaluated and reported. Any additional stains or evaluations, if deemed necessary by the pathologist, will be added by study plan amendment following discussion with the Study Director and in consultation the Sponsor.

At the discretion of the study pathologist and after acknowledgement by the Study Director, images may be captured for consultation purposes.

17.3. Pathology Peer Review

A pathology peer review will be conducted by:

(b) (6)
Moderna Therapeutics
200 Technology Square, 3rd Floor
Cambridge, MA 02116
Tel: (b) (6)
E-mail: (b) (6)

The peer review statement or equivalent documentation will be included as an appendix to the Final Report.

18. CONSTRUCTED VARIABLES

Body Weight Gains	Calculated between at least each interval as well as between the beginning and end of each phase
Organ Weight relative to Body Weight	Calculated against the Terminal body weight for scheduled intervals
Organ Weight relative to Brain Weight	Calculated against the brain weight for scheduled intervals

19. STATISTICAL ANALYSIS

All statistical tests will be conducted at the 5% significance level. All pairwise comparisons will be conducted using two sided tests and will be reported at the 0.1%, 1%, and 5% levels

Appendix 1

Numerical data collected on scheduled occasions for the listed variables will be analyzed as indicated according to sex and occasion. Descriptive statistics number, mean and standard deviation (or %CV or SE when deemed appropriate) will be reported whenever possible. Values may also be expressed as a percentage of predose or control values when deemed appropriate. Inferential statistics will be performed according to the matrix below when possible, but will exclude semi-quantitative data, and any group with less than 3 observations.

Statistical Matrix

Variables for Inferential Analysis	Statistical Method Parametric/ Non-Parametric
Body Weight	X
Body Temperature	X
Hematology Variables	X
Coagulation Variables	X
Clinical Chemistry Variables	X
Cytokines	X
Organ Weights	X
Body Weight Changes	X
Organ Weight relative to Body Weight	X
Organ Weight relative to Brain Weight	X

The following pairwise comparisons will be made:

Group 2 vs. Group 1

Group 3 vs. Group 1

Group 4 vs. Group 1

19.1. Parametric/Non-Parametric

Levene's test will be used to assess the homogeneity of group variances.

Datasets with at least 3 groups will be compared using an overall one-way ANOVA *F*-test if Levene's test is not significant or the Kruskal-Wallis test if it is. If the overall *F*-test or Kruskal-Wallis test is found to be significant, then the above pairwise comparisons will be conducted using Dunnett's or Dunn's test, respectively.

Datasets with 2 groups (the designated control group and 1 other group) will be compared using a *t*-test if Levene's test is not significant or Wilcoxon Rank-Sum test if it is.

20. COMPUTERIZED SYSTEMS

The following critical computerized systems may be used in the study. The actual critical computerized systems used will be specified in the Final Report.

Data for parameters not required by study plan, which are automatically generated by analytical devices used will be retained on file but not reported. Statistical analysis results that are

Appendix 1

generated by the program but are not required by study plan and/or are not scientifically relevant will be retained on file but will not be included in the tabulations.

Critical Computerized Systems

System Name	Description of Data Collected and/or Analyzed
Provantis	In-life; clinical pathology; postmortem
Dispense	Test Material receipt, accountability and/or formulation activities
SRS (CR MTL in-house application built with SAS) and SAS system for Windows and/or In-house reporting software Nevis 2012 (using SAS)	Statistical analyses of numerical in-life, clinical pathology and postmortem data
Mesa Laboratories AmegaView CMS	Continuous Monitoring System. Monitoring of standalone fridges, freezers, incubators, and selected laboratories to measure temperature, relative humidity, and CO2, as appropriate
Johnson Controls Metasys	Building Automation System. Control of HVAC and other building systems, as well as temperature/humidity control and trending in selected laboratories and animal rooms
Empower 3 (Waters Corporation)	Data acquisition for dose formulation analysis, including regression analysis and measurement of concentration and recovery of dose formulations using HPLC. Data regression analysis and measurement of purity.
BioPlex Manager	Cytokines (IL-1ß, IL-6, TNF-α, IP-10, MIP-1-α, MCP-1) data collection
Softmax Pro GxP	IFN-α data collection
Watson LIMS	Cytokines (IL-1ß, IL-6, TNF-α, IP-10, MIP-1-α, MCP-1) data regression
Dynamics (Wyatt)	Data acquisition for particle size analysis of the test item using DLS
(b) (4)	Data acquisition
Excel	Data analyses and tabulation

21. AMENDMENTS AND DEVIATIONS

Changes to the approved study plan shall be made in the form of an amendment, which will be signed and dated by the Study Director. Every reasonable effort will be made to discuss any necessary study plan changes in advance with the Sponsor.

All study plan and SOP deviations will be documented in the study records. Deviations from the study plan and/or SOP related to the phase(s) of the study conducted at a Test Site shall be documented, acknowledged by the PI/IS, and reported to the Study Director for authorization/acknowledgement. The Study Director will notify the Sponsor of deviations that may result in a significant impact on the study as soon as possible.

22. RETENTION OF RECORDS, SAMPLES, AND SPECIMENS

All study-specific raw data, electronic data, documentation, study plan, retained samples and specimens, and interim (if applicable) and final reports will be archived by no later than the date

Appendix 1

of final report issue. All materials generated by Charles River from this study will be transferred to a CR-MTL archives. At least one year after issue of the draft report, the Sponsor will be contacted.

Records to be maintained will include, but will not be limited to, documentation and data for the following:

- Study Plan, study plan amendments, and deviations
- Study schedule
- Study-related correspondence
- Test system receipt, health, and husbandry
- Test and Reference Item receipt, identification, preparation, and analysis
- In-life measurements and observations
- Clinical pathology and cytokine sample collection and evaluation
- Anti-drug Antibodies sample collection
- Gross and microscopic observations and related data
- Organ weight measurements
- Statistical analysis results

23. REPORTING

A comprehensive Draft Report will be prepared following completion of the study and will be finalized following consultation with the Sponsor. The report will include all information necessary to provide a complete and accurate description of the experimental methods and results and any circumstances that may have affected the quality or integrity of the study.

The Sponsor will receive an electronic version of the Draft and Final Report provided in Adobe Acrobat PDF format (hyperlinked and searchable at final) along with a Microsoft Word version of the text. The PDF document will be created from native electronic files to the extent possible, including text and tables generated by the Test Facility. Report components not available in native electronic files and/or original signature pages will be scanned and converted to PDF image files for incorporation. An original copy of the report with the Test Facility's handwritten signatures will be retained.

Reports should be finalized within 6 months of issue of the Draft Report. If the Sponsor has not provided comments to the report within 6 months of draft issue, the report will be finalized by the Test Facility unless other arrangements are made by the Sponsor.

Appendix 1

24. ANIMAL WELFARE

24.1. Institutional Animal Care and Use Committee Approval

The study plan and any amendment(s) or procedures involving the care and use of animals in this study will be reviewed and approved by CR SHB Institutional Animal Care and Use Committee (IACUC). During the study, the care and use of animals will be conducted with guidance from the USA National Research Council and the Canadian Council on Animal Care (CCAC).

Appendix 1

AMENDMENT APPROVAL

(b) (6) Date: 25 Sep 2017

As authorized by the Sponsor on 25 Sep 2017

[a] At the discretion of the Study Pathologist, findings for extraneous tissues (nonspecified tissues in the Study Plan that may be present on a slide as a result of collection of Study Plan tissues) will be recorded when observed.

Appendix 1

DEVIATIONS

All deviations that occurred during the study have been authorized/acknowledged by the Study Director, assessed for impact, and documented in the study records. All study plan deviations and those SOP deviations that could have impacted the quality or integrity of the study are listed below.

None of the deviations were considered to have impacted the overall integrity of the study or the interpretation of the study results and conclusions.

Husbandry

- As per study plan, the light cycle is 12 hours light and 12 hours dark. On one occasion during the prestudy period, this cycle was not followed and the lights were temporary turned off during the light cycle. This deviation is considered to have no impact on the study and animal's health as it occurred only once and was of short duration.
- On one occasion, high dose female animal no.4506 was found out of home cage and did not have access to food and water during this time. This deviation is considered to have no impact on the study and animal's health due short time excursion (around 4 hours).

In-life Observations, Measurements, and Evaluations

- On two occasions, the mortality/moribundity check was not performed during the morning for males or for all animals with no impact on the study and animal's health as animals were monitored at the end of the day and were observed during the daily activities.
- On some occasions, detailed examination of the injection sites were performed outside the acceptance time range of ± 30 minutes. These deviations are considered to have no impact on the study due to minor time excursion. In addition, all injection sites were examined.

Laboratory Evaluations

- On Day 30 ADA sample for animal Nos. 1001 and 4001 were not centrifuged within 60 minutes of collection. These deviations are considered to have no impact on the study due to minor time excursions.
- On Day 30, collection tubes for animal nos.1001 and 4001 were centrifuged outside the 60-minute stability for creatinine kinase analysis. This deviation will be taken in consideration during clinical pathology evaluation. As this deviation occurred only for two animals from different groups, it is considered to have no impact on the study.

TABLE OF CONTENTS

Appendix 3

LIST OF TABLES

LIST OF APPENDICES

Appendix 3

1. SUMMARY

Dose formulation samples have been analyzed by Ion Exchange High Performance Liquid Chromatography (IEX-HPLC) for the determination of mRNA-1706.

In addition, at the end of the study dosing phase, the bulk test item was analyzed by Ion Exchange High Performance Liquid Chromatography (IEX-HPLC) for concentration analysis and by Dynamic Light Scattering (DLS) for particle size analysis.

The dose formulations were within specification. Homogeneity testing showed that the formulation technique used produced homogeneous preparations.

The end of use bulk Test Item analysis demonstrated that the test item was suitable for use during the study period.

2. INTRODUCTION

This report describes the analytical evaluation of mRNA-1706 in dose formulations (phosphate-buffered saline (PBS) pH 7.2) in the bulk test item from Study 5002231.

For the work detailed in this report, the analytical phase experimental start date was 02 May 2017, and the analytical phase experimental completion date was 23 Jun 2017.

3. EXPERIMENTAL DESIGN

3.1. Dose Formulation Analysis

Analysis of dose formulations was carried out with regard to concentration and homogeneity.

On Day 1 of the study, duplicate samples were collected from the top, middle and bottom strata of Group 2 to 4 for concentration and homogeneity verification while duplicate samples were collected from the middle strata of Group 1. Duplicate samples were also collected from the middle strata of all Groups for concentration verification on Day 29 of the study. The samples were shipped on ice packs, stored refrigerated upon receipt and analyzed within the established stability.

3.2. Bulk Test Item Analysis

Analysis of the bulk test item was carried out with regard to concentration and particle size analysis.

At the end of the study dosing phase, one unopened vial of test item was transferred for concentration and particle size analysis.

Appendix 3

4. MATERIALS AND METHODS

4.1. Materials

4.1.1. Reference Standard

Identification:	CX-000171 mRNA
Physical Description:	Clear, colorless solution
Batch/Lot No.:	MTDS16017
Concentration:	2.04 mg/mL (used for calculations)
Retest Date:	Aug 2017
Storage Conditions:	Kept in a freezer set to maintain -20°C
Supplier:	Moderna Therapeutics, Inc.

4.1.2. Reference Material (Bulk Test Item)

Identification:	mRNA-1706
Physical Description:	White to off-white lipid nanoparticle dispersion
Batch/Lot No.:	MTDP17036
Concentration:	2.1 mg/mL (used for calculations)
Manufacture Date:	24 Mar 2017
Retest Date:	24 Mar 2018 (12 months from date of manufacture)
Storage Conditions:	Kept in a freezer set to maintain -20°C
Supplier:	Moderna Therapeutics, Inc.

4.1.3. Characterization of Reference Standard and Reference Material

The Sponsor provided the documentation for the identity, strength, purity, composition, and stability for the reference standard and reference material. Copies of the supplied Summaries of Analysis (SoA) or equivalent documentation are presented in Appendix 2.

4.1.4. Inventory and Disposition of Reference Standard and Reference Material

Records of the receipt, distribution, and storage of the reference standard and reference material were maintained. All unused Sponsor-supplied reference standard and reference material were retained for use on subsequent studies for the Sponsor.

Appendix 3

4.2. Methods

4.2.1. Analytical Procedures

The method for concentration analysis is documented in Analytical Procedure AP.5002231.SP.01 (Appendix 1) and was previously validated under Study Nos. 1801737. Concentration stability data were generated by the department of Analytical Chemistry, Charles River, CR MTL for 8 days, for formulation samples stored in a refrigerator set to maintain 4°C, over the concentration range of 0.0100 – 1.20 mg/mL, under Study No. 2100442.

The method for particle size analysis is documented in Analytical Procedure AP.5002231.DLS.01 (Appendix 1).

4.3. Computerized Systems

Critical computerized systems used in this study phase are listed below (see Text Table 1).

Text Table 1
Computerized Systems

System Name	Version No.	Description of Data Collected and/or Analyzed
Empower 3 (Waters Corporation)	Build 3471 SR1	Data acquisition for dose formulation analysis, including regression analysis and measurement of concentration and recovery of dose formulations using HPLC
Dynamics (Wyatt)	7.1.9.3	Data acquisition for particle size analysis for the test item using DLS
Mesa Laboratories AmegaView CMS	v3.0 Build 1208.8	Continuous Monitoring System. Monitoring of standalone fridges, freezers, incubators, and selected laboratories to measure temperature, relative humidity, and CO_2, as appropriate
Johnson Controls Metasys	MVE 7.0	Building Automation System. Control of HVAC and other building systems, as well as temperature/humidity control and trending in selected laboratories and animal rooms

5. RESULTS AND DISCUSSIONS

All results presented in the tables of the report were calculated using non-rounded values as per the raw data rounding procedure and may not be exactly reproduced from the individual data presented.

5.1. Dose Formulation Analysis

All study samples analyzed had mean concentrations within or equal to the acceptance criteria of ± 15% (individual values within or equal to ± 20%) of their theoretical concentrations. Results are presented in Table 1.

For homogeneity, the RSD of concentrations for all samples in each group tested was within the acceptance criteria of ≤ 5%. Results are presented in Table 1.

Appendix 3

5.2. Bulk Test Item Analysis

The concentration and the particle size was measured. Concentration and particle size results were consistent with the initial Summary of Analysis provided by the Sponsor. Results are presented in Table 2 and Table 3.

6. CONCLUSION

The dose formulations were within specification. Homogeneity testing showed that the formulation technique used produced homogeneous preparations.

The bulk Test Item analysis demonstrated that the test item was suitable for use during the study period.

Appendix 3

Analytical Procedure (AP.5002231.SP.01)

Determination of mRNA-1706 in Dose Formulations by Ion Exchange High Performance Chromatography Using Ultraviolet/Visible Detection

Reference Standard, Reference Material and Vehicle

Reference Standard	CX-000171 (formely mRNA-1325)
Lot number	MTDS16017
Concentration (actual)	2.04 mg/mL
Reference Material	mRNA-1706 *
Description	White to off-white lipid nanoparticle dispersion
Lot number	MTDP17036
Concentration (nominal)	2.1 mg/mL (to be used for calculations)
Vehicle	Phosphate-buffered Saline (PBS) pH 7.2

* mRNA-1706 and mRNA-1325 have the same mRNA construct.

For storage conditions for reference standard and reference material supplied by the Sponsor, refer to the corresponding log sheets.

NOTES:

- ❑ Modifications may be made to the chromatographic conditions in order to optimize the chromatography.
- ❑ Solution volumes throughout this AP (including reagent solutions, blanks, standard stocks, standards and spiked samples) may be scaled up or down as long as the final concentration remains the same as specified in the procedure.
- ❑ Any changes made are to be documented in the raw data of the run.
- ❑ Unless otherwise indicated, information relating to the time of mixing/stirring, temperature or mixing method used in the preparation of solutions, diluents, mobile phases and vehicle will be considered non-critical. If a step is deemed critical, it will be noted within the procedure, and a positive entry will be made in the raw data
- ❑ **The compound is a mRNA, benchwork and handling should be performed under clean conditions to limit RNase contamination. When possible use RNase free tubes, pipette and repeater tips for reference standard/test item dilutions. DO NOT VORTEX, mix manually by inversion.**
- ❑ The method was previously validated under study 1801737.

Summary of Analysis ***DATE: 6 July 2017***

Part II Release Testing Results for mRNA-1706 LNP Drug Product Lot MTDP17036

Protocol Number: MRA-C0019-RTP0005.00 **Document Number:** MRA-C0019-RTR0012.00 (CPR15101)	**Date Received at Eurofins Advantar:** March 31, 2017	**Product Description:** 0.5 mL of approximately 2 mg/mL mRNA-1706 in a white to off-white lipid nanoparticle dispersion (20mM Tris Buffer, 8% Sucrose, pH 7.4)
Time point: Release **Storage Condition:** -20°C	**Product Lot #:** MTDP17036	**Container/Closure:** **Vial:** 2 mL, 13 mm, Type I, S-L FNT W/BB NV WOS Serum/Lyophilization **Stopper:** 13 mm, Serum, Novapure RP-S2-F451, Gray, FluroTec Coated Plug **Seal:** 13 mm, Flip-Off, TruEdge TE (6-B)3767, Blue Button

ASSAY (TEST METHOD)	DRAFT SPECIFICATIONS (per protocol)	TEST DATE	RESULTS
Lipid Impurities (UHPLC-CAD)	Report total % Area and RRT	05/22/2017	(b) (4)
Mean Particle Size (nm) (MRA-C0000-GTM0015.02)	Report result	04/27/2017	
Polydispersity (MRA-C0000-GTM0015.02)	Report result	04/27/2017	
Particulate Matter[1] (USP <788> method 2)	(b) (4)	04/07/2017	
Residual Solvents from Formulation: Ethanol (MRA-C0000-GTM0018.01)		05/04/2017	
Osmolality (USP <785>)	Report Result	04/27/2017	
pH (MRA-C0000-GTM0017.01)	Report result	04/27/2017	

[1] Testing performed at Nelson Laboratories.
[2] This is a composite mean coming from 3 data sets (below) as requested by the Sponsor (CPR15099, ADR F1-F2):
T=0 (n=1, 84%), CPR15099, ADR D5
Method Qualification-Linearity (n=6 preps, 90%, 90%, 89%, 90%, 90%, 89%), CPR14795, ADR E7
Method Qualification-Stability (n=1, 88%), CPR14796, ADR F5

The data generated at Advantar and described within this Summary of Analysis were reviewed by the Project Director for accuracy and compliance with Good Scientific Practices. Advantar has archived the raw data.

Appendix 4

Individual Animal Mortality Explanation Page

Abbreviation	Description	Abbreviation	Description
AD or ACCD	Accidental death	REC	Recovery euthanasia
FD	Found dead	REL	Released
INTM	Interim	TE or TERM	Terminal euthanasia
NR	Not recorded	UE or UNSC	Unscheduled euthanasia

Note: This is a comprehensive list of abbreviations. All of the abbreviations listed may not be applicable to this report.

Note: Removal Time represents the time the removal was entered into the Provantis system and may not be representative of the time of death.

Dosing Information

Dosing information is abbreviated on various data outputs; the following represents the dosing information for this study.

Group No.	Test Material	Dose Level (µg/dose)
1	Reference Item	0
2	mRNA-1706	10
3	mRNA-1706	50
4	mRNA-1706	100

Appendix 6

Individual Body Weights Explanation Page

Abbreviation	Description	Abbreviation	Description
--	Not scheduled to be performed / dead	TERR	Technical error
AVS	Suspected aberrant value	UPTD	Unable to perform due to technical difficulty
OA	Omitted activity	X	Excluded from mean

Note: This is a comprehensive list of abbreviations. All of the abbreviations listed may not be applicable to this report.

Dosing Information

Dosing information is abbreviated on various data outputs; the following represents the dosing information for this study.

Group No.	Test Material	Dose Level (µg/dose)
1	Reference Item	0
2	mRNA-1706	10
3	mRNA-1706	50
4	mRNA-1706	100

Individual Body Weight Gains Explanation Page

Abbreviation	Description	Abbreviation	Description
--	Not scheduled to be performed / dead	TERR	Technical error
AVS	Suspected aberrant value	UPTD	Unable to perform due to technical difficulty
NC	Not calculable	X	Excluded from mean
OA	Omitted activity		

Note: This is a comprehensive list of abbreviations. All of the abbreviations listed may not be applicable to this report.

Dosing Information

Dosing information is abbreviated on various data outputs; the following represents the dosing information for this study.

Group No.	Test Material	Dose Level (µg/dose)
1	Reference Item	0
2	mRNA-1706	10
3	mRNA-1706	50
4	mRNA-1706	100

ANH	Animal found with no hopper during measurement interval	REHO	Animal rehoused during measurement interval
ANIC	Animal not in cage or in incorrect cage during measurement	REPL	Animal replaced during measurement interval
ANW	Animal found with no water access during measurement intervals	SPIL	Spilled food (by animal)
ANWB	Animal found with no water bottle during measurement interval	TERR	Technical error
AVS	Suspected aberrant value	UPTD	Unable to perform due to technical difficulty
AWE	Animal found with no water in bottle during measurement interval-Exclude	WAFE	Water added to food during measurement interval
FSG	Food supplementation given during interval, included in feed weight	WAFI	Water added to food during measurement interval, included
FSNC	Food supplementation given during interval, value not calculable	WETF	Wet or contaminated food (in container)
NC	Not calculable	X	Excluded from mean

Note: This is a comprehensive list of abbreviations. All of the abbreviations listed may not be applicable to this report.

Dosing Information

Dosing information is abbreviated on various data outputs; the following represents the dosing information for this study.

Group No.	Test Material	Dose Level (µg/dose)
1	Reference Item	0
2	mRNA-1706	10
3	mRNA-1706	50
4	mRNA-1706	100

Appendix 8

Individual Food Consumption (g/animal/day)

Group 1 - Reference Item
Group 2 - mRNA-1706 10 µg/dose
Group 3 - mRNA-1706 50 µg/dose
Group 4 - mRNA-1706 100 µg/dose

Group / Sex	Animal No.	Day (From/To) -7/1	1/8	8/15	15/22	22/29	29/36	36/42

Analyzed Parameter Descriptions

Parameter	Abbreviation	Units	Methodology
Hematocrit	HCT	%	Calculated
Hemoglobin	HGB	g/dL	Colorimetric
Mean Corpuscular Hemoglobin	MCH	pg	Calculated
Mean Corpuscular Hemoglobin Concentration	MCHC	g/dL	Calculated
Mean Corpuscular Volume	MCV	fL(μm^3)	Calculated
Mean Platelet Volume	MPV	fL(μm^3)	Calculated
Platelet Count	PLT	$x10^3/\mu L$	Light scatter
Red Blood Cell Count	RBC	$x10^6/\mu L$	Light scatter
Red Blood Cell Distribution Width	RDW	%	Calculated
Reticulocytes	RETIC	$x10^9/L$	Calculated
Reticulocytes Percent	RETIC	%	Light scatter
White Blood Cell Count	WBC	$x10^3/\mu L$	Light scatter
White Blood Cell Differential Count			
Neutrophils Percent	NEUT	%	Light scatter
Lymphocytes Percent	LYMPH	%	Light scatter
Monocytes Percent	MONO	%	Light scatter
Eosinophils Percent	EOS	%	Light scatter
Basophils Percent	BASO	%	Light scatter
Large Unstained Cells Percent	LUC	%	Light scatter
Neutrophils	NEUT	$x10^3/\mu L$	Calculated
Lymphocytes	LYMPH	$x10^3/\mu L$	Calculated
Monocytes	MONO	$x10^3/\mu L$	Calculated
Eosinophils	EOS	$x10^3/\mu L$	Calculated
Basophils	BASO	$x10^3/\mu L$	Calculated
Large Unstained Cells	LUC	$x10^3/\mu L$	Calculated

Manual and Visual

Analyzed Parameter Descriptions

Parameter	Abbreviation	Units	Methodology
White Blood Cell Differential Count		% and/or $x10^3/\mu L$	Microscopic enumeration (100 white cells)
- Immature Neutrophils Count	IMM NEUT		
- Immature Neutrophils Percent	IMM NEUT		
- Immature Cells Percent	IMM CELL		
- Immature Cells Count	IMM CELL		
- Large Platelets	LPLT		
- Neutrophils Band Form	NEUT BAND		
- Neutrophils Band Form Percent	NEUT BAND		
- Packed Cell Volume	PCV		
- Neutrophils	NEUT		
- Lymphocytes	LYMPH		

Appendix 10

- Monocytes	MONO		
- Eosinophils	EOS		
- Basophils	BASO		
Others			
- Nucleated Red Blood Cells/100 Leukocytes	RBCNUCLE	#/100 WBC	Microscopic enumeration (100 white cells) Reported as Number but not included in WBC Differential
CELL MORPHOLOGY			
- Cytoplasmic Basophilia Neutrophil	CYTO BASO NEUT	1+ (Minimal) 2+ (Mild)	Microscopic Examination
- Polychromasia	POLY	3+ (Moderate)	
- Anisocytosis	ANISO	4+ (Marked)	
- Hypochromasia	HYPOCHROMIA		
- Reactive Lymphocytes	REACTIVE LYMPH		
- Megakaryocytes	MEGAK		
- Smudge Cells	SMUDGE CELL		
- Microcytes	MICROCYTES		
- Macrocytes	MACROCYTES		
- Poikilocytosis	POIK		
- Rouleaux Formation	ROULEAUX		
- Agglutination	AGGL		
- Red Blood Cell Clumping	RBC Clumping		
- Acanthocytes	ACAN		
- Codocytes	TARGET CELLS		
- Dacryocytes	DACR		
- Platelet Clumps	PLATELET CLUMPS		
- Eccentrocytes	ECCENTCY		
- Schistocytes	SCHZ		
- Spherocytes	SPHR		
- Stomatocytes	STOM		
- Howell Jolly Bodies	HJB		
- Basophilic Stippling	BASO STIP RBC		
- Echinocytes	ECHINO		
- Vacuolated Neutrophils	NEUTVAC		
- Vacuolated Lymphocyted	LYMVAC		
- Döhle Bodies	DOHLE		
- Degenerated Cells	DEG CELL		
- Ovalocytes	OVAL		
- Large Platelets Alpha	LARGE PLATELETS		
- Immature Neutrophils Morphology	IMM NEUT MORPH		
- Heinz Bodies	HEINZ BODY		
- Plasmodium	PLASMOD		
- Kurloff Cell	KURL		
- Burr Cells	BURR		

Appendix 10

- Neutrophils Band Form Morphology	NEUT BAND MORPH		
- Nuclear Swelling	NUC SWELL NEUT		
- Red Blood Cell Morphology	RBC MORPH		
- White Blood Cell Morphology	WBC MORPH		
- Toxic Granulation	TOXG		
- Platelet Morphology	PLT MORPH		
Heinz Bodies Percent	HEINZ BODY	%	Microscopic examination. Methyl violet in physiological saline
Reticulocyte Percent	RETIC	%	Microscopic enumeration, (b) (4)
Bone Marrow Stain		None	Manual, Wright-Giemsa stain
Bone Marrow Slide Fixation		None	Manual, Fixative

Aerospray Automated Slide Stainer

Analyzed Parameter Descriptions

Parameter	Abbreviation	Units	Methodology
White Blood Cell Differential Stain		None	2 parts aqueous stain (Eosin-Thiazin)

Midas III Slide Stainer

Analyzed Parameter Descriptions

Parameter	Abbreviation	Units	Methodology
White Blood Cell Differential Stain		None	Wright-Giemsa stain
Bone Marrow Stain		None	Wright-Giemsa stain
Bone Marrow Slide Fixation		None	Fixative

Other Abbreviations

Abbreviation	Description	Abbreviation	Description
--	Not required for veterinary monitoring / No findings / Not scheduled to be performed/Dead	QNS	Quantity not sufficient
ADQ	Adequate	RSV	Refer to source data
AVS	Suspected aberrant value	SAMU	Large number of smudge cells
CLOT	Sample clotted	SND	Stability not documented
COMM	Comment added	SNR	Sample not received
DEC	Decreased	UDPC	Results not confirmed by smear review
INC	Increased	Unsc	Unscheduled bleed
MDIFF	Manual differential	UPTD	Unable to perform due to technical difficulty
NAF	No abnormal findings	UTD	Unable to determine
NRBC	WBC corrected for presence of nucleated RBC	UTDM	Unable to determine, not confirmed by microscopy
NSCH	Not scheduled to be performed	UTDR	Unable to determine, results not reproducible
OA	Omitted activity	Vet	Bleed for veterinary monitoring
OOS	Sample analysed outside of established stability, results for	VNC	Value not calculable

Appendix 10

information only

X Excluded from mean

Note: This is a comprehensive list of parameters and abbreviations. All of the parameters and abbreviations listed may not be applicable to this report.

Note: Additional morphology for flagged samples has been reported for the following animals: 4004, 4008, 4508

Dosing Information

Dosing information is abbreviated on various data outputs; the following represents the dosing information for this study.

Group No.	Test Material	Dose Level (µg/dose)
1	Reference Item	0
2	mRNA-1706	10
3	mRNA-1706	50
4	mRNA-1706	100

Appendix 10

TABLE OF CONTENTS

Appendix 13

LIST OF APPENDICES

Appendix 13

1. INTRODUCTION

This report presents the ophthalmology evaluations for the study entitled *A 1 Month (3 doses) Intramuscular Injection Vaccine Study of mRNA-1706 in Sprague-Dawley Rats With a 2-Week Recovery Period* (Study No. 5002231).

For the work detailed in this report, the ophthalmology phase start date was 19 Mar 2017, and the ophthalmology phase completion date was 25 May 2017.

2. MATERIALS AND METHODS

Experimental procedures applicable to ophthalmology evaluations are summarized in Text Table 1.

Text Table 1
Experimental Design

Group No.	Test Material	Dose Level (µg/dose)	Dose Volume (µL/dose)	Dose Concentration (mg/mL)	No. of Animals			
					Main Study		Recovery Study	
					Males	Females	Males	Females
1	Reference Item	0	200	0	10	10	5	5
2	mRNA-1706	10	200	0.05	10	10	-	-
3	mRNA-1706	50	200	0.25	10	10	-	-
4	mRNA-1706	100	200	0.5	10	10	5	5

2.1. Ophthalmic Examinations

Frequency: Examinations were performed once prestudy and again at the end of the dosing period.

Procedure: All animals were subjected to funduscopic (indirect ophthalmoscopy) and biomicroscopic (slit lamp) examinations. The mydriatic used was 1% tropicamide.

2.2. Computerized Systems

The following critical computerized system was used by the Test Facility in the generation of this report (Text Table 2).

Text Table 2
Computerized Systems

System Name	Version No.	Description of Data Collected and/or Analyzed
Provantis	8	Ophthalmic evaluations

Appendix 13

3. RESULTS AND DISCUSSION

(Appendix 1)

3.1. Pretreatment Evaluation

Background findings were recorded and recommendations for rejection from study groups were made when appropriate.

3.2. End of the Dosing Period Evaluation

There were no test item-related ocular changes observed during the course of the study. The findings noted were age-related or incidental in origin and to be expected in this population of animals.

4. CONCLUSION

Administration of mRNA-1706 by intramuscular injection vaccine on Days 1, 15, and 29 (3 doses) to Sprague-Dawley rats at doses of 10, 50, and 100 µg/dose did not result in any test item-related ophthalmic changes.

Appendix 13

5. REPORT APPROVAL

(b) (6) Date: 27 NOV 2017

1. INTRODUCTION

This report describes the biomarker evaluation of Cytokines/Chemokines (IL-1b, IL-6, TNF-α, IP-10, MIP-1α, and MCP-1) in rat plasma (EDTA) samples from Study No. 5002231 entitled "A 1 Month (3 doses) Intramuscular Injection Vaccine Study of mRNA-1706 in Sprague-Dawley Rats With a 2-Week Recovery Period".

For the work detailed in this report, the Cytokines/Chemokines phase experimental start and end dates were 22 Jun 2017 and 12 Jul 2017, respectively.

2. EXPERIMENTAL PROCEDURES

2.1. Materials and Methods

The methodology and materials used for the biomarker analyses were detailed in the analytical procedure and listed in the table below:

Biomarkers	Analytical Procedure No.	Validation study number(s)
IL-1b, IL-6, TNF-α, IP-10, MIP-1α, and MCP-1α	AP.5002231.CYT.01	Qualified method only

2.2. Computerized Systems

Critical computerized systems used in this study phase are listed below (see Text Table 1).

Text Table 1
Computerized Systems

System Name	Version No.	Description of Data Collected and/or Analyzed
Bio Plex Manager (Bio-Rad)	Version 6.1	Data collection
Watson LIMS	7.4.2 SP1	Data analysis
Microsoft Excel	2007	Descriptive statistics
Microsoft Word	2007	Reporting of data in the report
Mesa Laboratories AmegaView CMS	v3.0 Build 1208.8	Continuous Monitoring System. Monitoring of standalone fridges, freezers, incubators, and selected laboratories to measure temperature, relative humidity, and CO_2, as appropriate
Johnson Controls Metasys	MVE 7	Building Automation System. Control of HVAC and other building systems, as well as temperature/humidity control and trending in selected laboratories and animal rooms

3. RESULTS AND DISCUSSIONS

The upper limit of the normal range of concentrations was defined as the overall baseline mean (all time points of all Group 1 animals, males and females calculated separately) plus 2 standard deviations. Incidence indicates the number of individual animals per group with Cytokine/Chemokine concentration > upper limit of the normal range of concentrations.
Fold change indicates the ratio of the measured Cytokine/Chemokine concentrations over the upper limit (or below the upper limit) of the normal range of concentration.

Appendix 14

Individual animal data were compared to the upper limit of the normal range for any observed trends (time or dose related changes). For individual animals, if a Cytokine/Chemokine value was above this value, this increase was considered to indicate a potential mRNA-1706 treatment-related effect.

3.1. Cytokines and Chemokines Study Samples

For Cytokines/Chemokines analysis, plasma samples collected from all recovery animals (Groups 1 and 4) on Days 1, 15 and 29, 6 hours after dosing, and at scheduled termination on Day 43 were analyzed.

For all Cytokines/Chemokines, study samples were analyzed diluted 2-fold in assay buffer in duplicate using a qualified method. As the method was only qualified, no stabilities were proven. Study samples will be discarded prior to report finalization.

3.2. Standards and Quality Control Samples for Cytokines/Chemokines

Standard, Quality control (QC) preparation and acceptance criteria are described in the analytical procedure (Appendix 2). Standard curve and quality control specifications are presented in Text Table 2.

Text Table 2
Cytokines/Chemokines Standard Curve and Quality Controls Specifications

Cytokines	Range of the Curve (pg/mL)	LLOQ (pg/mL)	ULOQ (pg/mL)	QC1 (pg/mL)	QC2 (pg/mL)	QC3 (pg/mL)
IL-1ß, IP-10 and MIP-1α	2.93 to 3000.00*	11.72	1500.00	26.02	150.00	1200.00
TNF-α	2.93 to 3000.00**	2.93	375.00	7.81	37.50	300.00
IL-6	87.89 to 90000.00***	351.56	45000.00	780.47	4500.00	36000.00
MCP-1	35.16 to 36000.00****	140.63	18000.00	312.19	1800.00	14400.00

* Standards 2.93, 5.86 and 3000.00 pg/mL are accessory standards used to define the lower and higher portions of the curve.
** Standards 750.00, 1500.00 and 3000.00 pg/mL are accessory standards used to define the higher portion of the curve.
*** Standards 87.89, 175.78, and 90000.00 pg/mL are accessory standards used to define the lower and higher portions of the curve.
**** Standards 35.16, 70.31, and 36000.00 pg/mL are accessory standards used to define the lower and higher portions of the curve.

A total of 4 assays were performed for Cytokines/Chemokines, except for IL-1ß, for which a total of 5 assays were performed, and all met the method acceptance criteria. All results are reported from the assays that met the acceptance criteria.

Appendix 14

3.2.1. Cytokines/Chemokines Results

Acceptance criteria are described in the latest version of the Analytical Procedure (Appendix 2). Results are presented in Appendix 3 and Table 1.

The upper limit of normal range specifications are presented in Text Table 3.

Text Table 3
Cytokines/Chemokines Upper Limit of Normal Range Specifications (pg/mL)

	IL-1b	IL-6	IP-10	MCP-1	MIP-1α	TNF-α
Males	66.88	351.56	117.95	462.94	11.72	2.93
Females	190.22	351.56	116.23	267.05	11.72	2.93

For IP-10, increases were observed for all animals dosed at 100 µg/dose on Days 1, 15 and 29 (6 hrs post dose), with increases ranging from 2.6-fold to 10.1-fold for males and from 6.4-fold to 18.7-fold for females. At recovery Day 43, the level of IP-10 were back to the normal range values for almost all animals, only one male and one female still had small increases of 2.0-fold and 1.2-fold respectively. These increases were considered mRNA-1706 related due to the high magnitude and incidence observed for the mRNA-1706 dosed group, as well as the reversibility of mRNA-1706 treatment (Day 43).

For MIP-1α and MCP-1, increases above the upper limit of normal range were observed on Days 1, 15 and 26 (6 hrs post dose). These increases were apparent for some males, at a lower magnitude, but were apparent for most of the females dosed at 100 µg/dose. At recovery Day 43, the level of both MIP-1α and MCP-1 were back to the normal range values for all animals. These increases were considered to be mRNA-1706 related due to similar incidence, magnitude and pattern observed in the mRNA-1706 dosed group for both MIP-1α and MCP-1.

For IL-1b, slight increases above the upper limit of normal range were noted for one male and one female dosed at 100 µg/dose, on Day 29 at 6 hrs post dose (1.2-fold and 1.6-fold respectively). These increases we still present at recovery Day 43, at a higher magnitude for the male (8.5-fold). Those changes were not considered to be mRNA-1706 related due to low incidence as well as similar slight increases also observed in control group animals.

For TNF-α and IL-6, all concentrations were below the limit of quantitation, except one female dosed at 100 µg/dose on Day 15 (6 hrs post dose), for which an increase of 2.1-fold for TNF-α and 2.4-fold for IL-6 was observed. Due to the low incidence and magnitude observed, the increase was not considered to be mRNA-1706 treatment-related.

Appendix 14

4. CONCLUSION

All samples collected for the Cytokines/Chemokines were analyzed using a qualified immunoassay method. As the method was only qualified, no stabilities were proven. Based on the acceptable performance of the standards and QCs during sample analysis, it is concluded that the values reported for the study samples are valid. The sample results are presented in Appendix 3 and Table 1.

For IP-10, high incidence and magnitude of change observed for males and females of higher dose group (100 µg/dose) were considered to be mRNA-1706 treatment-related.

Increases observed for MIP-1α and MCP-1 were also considered mRNA-1706 related due to the magnitude and incidence observed in the mRNA-1706 dosed groups.

No mRNA-1706 treatment-related results were observed for IL-1β, TNF-α and IL-6.

All the treatment-related increases observed tend to be reversible.

Title: **LUMINEX METHOD FOR THE QUANTITATIVE DETECTION OF IL-1β, IL-6, IP-10, TNF-α, MCP-1, MIP-1α, IN RAT PLASMA USING THE MAGNETIC BEADS**	AP Number: AP.5002231.CYT.01	Effective Date: Signature of AP
	CR MTL	Supersedes: N/Ap
Prepared by: (b) (6) (b) (6)		Date: 19-Jun-2017
Verified by: (b) (6) (b) (6)		Date: 19 Jun 2017
Management Approval: (b) (6) (b) (6)		Date: 19 Jun 2017

1.0 Purpose

To describe a method to determine the concentration of IL-1β, IL-6, IP-10, TNF-α, MCP-1, MIP-1a in rat plasma by Luminex.

2.0 Scope

This procedure applies to Luminex assays undertaken in the Biomarkers department.

3.0 Responsibilities

All staff performing this assay are responsible for compliance with this analytical procedure.

Individual Cytokine Values Explanation Page

Abbreviation	Description	Abbreviation	Description
--	No findings / Dead	QNS	Quantity not sufficient
CLOT	Sample clotted	SNR	Sample not received
NA	Not applicable	TNR	Test not reported
NC	Not calculable	X	Excluded from mean
NR	Not reported	SNC	Sample not collected
PD	Post Dose		
a	% CV between singlicate values > acceptance criteria. Mean of original and repeat values reported for information purposes only		

Note: This is a comprehensive list of abbreviations. All of the abbreviations listed may not be applicable to this report.

Note:

For IL-1β, MIP-1-α

Lower Limit of Quantitation (LLOQ) = 11.72 pg/mL (23.44 pg/mL when taking the dilution factor into account), <23.44 was assigned as 23.44/2 (11.72 pg/mL) for statistical analysis purposes

For IL-6

Lower Limit of Quantitation (LLOQ) = 351.56 pg/mL (703.12 pg/mL when taking the dilution factor into account), <703.12 was assigned as 703.12/2 (351.56 pg/mL) for statistical analysis purposes

For MCP-1

Lower Limit of Quantitation (LLOQ) = 140.63 pg/mL (281.26 pg/mL when taking the dilution factor into account), <281.26 was assigned as 281.26/2 (140.63 pg/mL) for statistical analysis purposes

For TNF-α

Lower Limit of Quantitation (LLOQ) = 2.93 pg/mL (5.86 pg/mL when taking the dilution factor into account), <5.86 was assigned as 5.86/2 (2.93 pg/mL) for statistical analysis purposes

Appendix 14

The upper limit of the normal range of concentration was defined as:
The overall baseline mean (predose/pretreatment values for all animals* in all groups) ** + 2 standard deviations

Incidence of Cytokine elevations was reported as:
The number of individual animals* per group with Cytokine concentrations > upper limit of the normal range of concentrations

Fold Change was reported as:
The ratio of the measured Cytokine concentration / upper limit of the normal range of concentrations

The fold change was calculated for each sample

*Calculations were done separately for females and males

** If predose values were not available, values from all animals of the non-treated group(s) were used to generate the overall baseline mean

Dosing Information

Dosing information is abbreviated on various data outputs; the following represents the dosing information for this study.

Group No.	Test Material	Dose Level (µg/dose)
1	Reference Item	0
2	mRNA-1706	10
3	mRNA-1706	50

Appendix 15

TABLE OF CONTENTS

Appendix 15

LIST OF TABLES

LIST OF APPENDICES

Appendix 15

1. SUMMARY

The bulk test item was analyzed using the (b) (4) System for the determination of mRNA-1706 purity.

The bulk test item was collected at the end of the dosing period of Study No. 5002231 entitled "A 1-Month (3 Doses) Intramuscular Injection Vaccine Study of mRNA-1706 in Sprague-Dawley Rats With a 2-Week Recovery Period."

The end of use bulk test item analysis demonstrated purity results of (b) (4)

2. INTRODUCTION

This report describes the analytical evaluation of mRNA-1706 purity in the bulk test item from Study No. 5002231.

For the work detailed in this report, the analytical experimental phase start date was 13 Jun 2017 and the end date was 19 Jun 2017.

3. EXPERIMENTAL DESIGN

3.1. Bulk Test Item End of Use Analysis

Analysis of the bulk test item was carried out with regards to the purity analysis.

At the end of the study dosing phase, one vial of test item was received for purity analysis.

4. MATERIALS AND METHODS

4.1. Materials

4.1.1. Reference Standard

Identification:	mRNA-1325*
Physical Description:	Clear, colorless solution, no visible particulates and no turbidity
Batch/Lot No.:	MTDS16004
Concentration:	1.84/2.15** mg/mL
Retest Date:	Apr 2017
Storage Conditions:	Kept in a freezer set to maintain -20°C
Supplier:	Moderna Therapeutics, Inc.

* mRNA-1325 and mRNA-1706 have the same mRNA construct.
** Concentration based on summary of analysis (SoA) released on 29 Apr 2016 /Concentration based on SoA released on 25 Apr 2017.

Appendix 15

4.1.2. Bulk Test Item

Identification:	mRNA-1706 (in lipid nanoparticles)
Physical Description:	0.5 mL per vial, white to off-white lipid nanoparticle dispersion
Batch/Lot No.:	MTDP17036
Concentration:	2.1 mg/mL
Expiry Date:	The end of use bulk Test Item analysis demonstrated that the Test Item was suitable for use during the study period.
Storage Conditions:	Kept in a freezer set to maintain -20°C
Supplier:	Moderna Therapeutics, Inc.

4.1.3. Characterization of Reference Standard and Bulk Test Item Sample

The Sponsor provided the documentation for the identity, strength, purity, and composition of the reference standard and bulk test item sample. Copies of the supplied Certificates of Analysis (CofA) or equivalent documentation are presented in Appendix 3.

4.1.4. Inventory and Disposition of Reference Standard and Bulk Test Item Sample

Records of the receipt, distribution, and storage of the reference standard and bulk test item sample were maintained. All unused Sponsor-supplied reference standard and bulk test item sample will be discarded before issue of the final report.

4.2. Methods

(b) (4)

4.3. Computerized Systems

Critical computerized systems used in this study phase are listed below (see Text Table 1).

Appendix 15

Text Table 1
Computerized Systems

	Version No.	Description of Data Collected and/or Analyzed
(b) (4)	1.1.0.11	Data acquisition
Empower 3 (Waters Corporation)	Build 3471 SR1	Data regression analysis and measurement of purity
Excel	2007	Data analysis and tabulation
Mesa Laboratories AmegaView CMS	v3.0 Build 1208.8	Continuous Monitoring System. Monitoring of standalone fridges, freezers, incubators, and selected laboratories to measure temperature, relative humidity, and CO_2, as appropriate
Johnson Controls Metasys	MVE 7	Building Automation System. Control of HVAC and other building systems, as well as temperature/humidity control and trending in selected laboratories and animal rooms

5. DEVIATIONS

Deviations from the analytical procedure did not occur during this phase of the study. No study plan deviation occurred during this phase of the study.

6. RESULTS AND CONCLUSION

(b) (4)

The end of use bulk test item analysis demonstrate a purity of (b) (4) which is similar to the original results provided by the Sponsor on the Certificate of Analysis. As per Certificate of Analysis, the purity specification is expected to be (b) (4)

2. INTRODUCTION

This report describes the detection of anti-ZIKV antibodies in vaccinated Sprague-Dawley rat sera from Charles River Study No. 5002231, entitled "A 1-Month Study (3 doses) of mRNA-1706 by Intramuscular Injection in Sprague-Dawley Rats with a 2-Week Recovery Period." The objectives of this study are to determine the potential toxicity of mRNA-1706, when given by intramuscular injection for 1 month (3 doses) to rats and to evaluate the potential reversibility of any findings following a 2-week recovery period

The study was sponsored by Moderna Therapeutics Inc., Cambridge, Massachusetts. (b) (6), ALM served as Sponsor Representative for Moderna Therapeutics Inc.

A total of 221 serum samples (100 samples from Day -14 before initial dosing, 80 samples from Day 30, and 20 samples from Day 43; 21 separate spare pre-bleed samples) were received at Integrated BioTherapeutics, Inc. (IBT) from Charles River Laboratories on June 21, 2017.

Any remaining samples are discarded 30 days upon completion of the signed report. All records will be maintained at IBT Bioservices for a period up to three years.

This study phase was not within the scope of regulations governing the conduct of nonclinical laboratory studies and was not intended to comply with such regulations. However, this non GLP study phase was conducted in accordance with the Standard Operating Procedures of Integrated Biotherapeutics, Inc.

Batch/Lot No.:	N/A
Concentration:	Not applicable
Expected Titer:	5,586 AU/mL
Expiry:	Not available
Retest Date:	N/A
Storage conditions:	Kept in a freezer set to maintain -80°C

4.3. Unknown test samples

Identification:	Sprague-Dawley rat sera (Charles River Study Number 5002231)
Supplier:	Charles River Laboratories
Storage conditions:	Kept in a freezer set to maintain -80°C
Duration:	Test samples will be discarded 30 days from completion of the project unless otherwise instructed

Appendix 16

4.4. Detection Antibody

Identification:	Goat anti-rat IgG (H+L)-HRP, mouse serum-adsorbed
Supplier:	KPL
Batch/Lot No.:	Catalog # 474-1612, lot 150317
Storage conditions:	Kept in a refrigerator set to maintain +4°C
Expiry:	Not available
Retest Date:	01AUG2018
Storage conditions:	Kept in a freezer set to maintain -80°C

5. RESULTS AND DISCUSSIONS

5.1. Standard

The standard is a well-characterized anti-ZIKV pooled rat serum whose titer (Antibody Units/mL) and has been re-assigned 5,586 AU/mL based on the average EC50 value of multiple runs during Assay Development. A cumulative graph of the standard curves tested on is shown below in **Figure 1.**

5.2. Study Samples

Antibody titers of Unknown Test Samples tested at 1:100 and 1:10,000 dilutions were calculated from the standard curve tested on each plate.

Main study: Day 30 rat sera from animals vaccinated with mRNA-1706 at 10 µg/dose, 50 µg/dose, 100 µg/dose on days 1, 15, and 29 intramuscularly showed detectable antibody responses against ZIKV lysate.

Recovery study: Day 43 rat sera from animals vaccinated with mRNA-1706 on days 1, 15 and 29, showed higher antibody titers than Day 30 rats.

Individual Antibody Titers are shown in **Table 6, Table 7, and Table 8**. Graphs are shown in **Figure 2**.

Appendix 17

1. SUMMARY

This report presents the pathology findings in rats assigned to Study No. 5002231. The objectives of this study were to determine the potential toxicity of mRNA-1706, when given by intramuscular injection for 1 month (3 doses) to rats and to evaluate the potential reversibility of any findings following a 2-week recovery period.

The intramuscular injection of mRNA-1706 to rats for 1 month (3 doses) at all dose levels resulted in inflammation and hemorrhage at the injection site (correlating with abnormal consistency; firm and material accumulation; clot, respectively) with mixed cell infiltration in the draining lymph nodes (inguinal, popliteal and iliac, correlating with enlargement), increased myeloid cellularity in the bone marrow, decreased lymphoid cellularity in the periarteriolar sheath of the spleen and paracortex of the mesenteric lymph node and Kupffer cell hypertrophy in the liver (with occasional centrilobular degeneration). At ≥ 50 µg/dose, additional microscopic findings attributed to the administration of mRNA-1706 were cortical hypertrophy in the adrenal glands (correlating with higher adrenal weights) and single cell necrosis in the thymus. Microscopic changes observed only at 100 µg/dose, were single cell necrosis of lymphocyte in the spleen and decreased lymphoid cellularity in the thymus.

All macroscopic and microscopic findings as well as difference in organ weights were completely recovered at the end of the 2-week recovery period except at the injection site where mononuclear cell infiltration was observed and considered as the healing process from previous inflammation.

2. INTRODUCTION

This report presents the pathology findings in rats assigned to Study No. 5002231. The objectives of this study were to determine the potential toxicity of mRNA-1706, when given by intramuscular injection for 1 month (3 doses) to rats and to evaluate the potential reversibility of any findings following a 2-week recovery period.

3. MATERIALS AND METHODS

Experimental procedures applicable to pathology investigations are summarized in Text Table 1.

Text Table 1
Experimental Design

2	mRNA-1706	10	200	0.05	10	10	-	-
3	mRNA-1706	50	200	0.25	10	10	-	-
4	mRNA-1706	100	200	0.5	10	10	5	5

Appendix 17

A complete gross pathological examination was performed on all animals and organ weights were recorded, as specified in the Study Plan. A detailed microscopic evaluation was performed on all tissues for main study animals from the reference and high dose groups (Groups 1 and 4). The histopathological evaluation was limited to the tissues identified as potential target organs (adrenal gland, bone marrow, liver, spleen, injection site, inguinal, mesenteric and popliteal lymph nodes, thymus and gut associated lymphoid tissue - GALT) for main study animals from the intermediate dose groups (Groups 2 and 3) as well as in recovery animals. Additional details along with deviations from these procedures may be found in the main study report.

3.1. Computerized Systems

Critical computerized systems used in this study phase are listed in Text Table 2.

Text Table 2
Computerized Systems

System Name	Version No.	Description of Data Collected and/or Analyzed
Provantis	8	Terminal body weight, Organ weight data, gross pathology and histopathology.
Nevis	2	Statistical analyses of numerical terminal data.

4. RESULTS AND DISCUSSIONS

4.1. Mortality

There were no unscheduled deaths during the course of this study.

4.2. Gross Pathology

4.2.1. Terminal Euthanasia Animals (Day 30)

(Table 1 and Appendix 4)

mRNA-1706-related gross pathology findings were observed in lymph nodes (iliac, inguinal, popliteal) and at the injection site and their incidences are summarized in Text Table 3.

Text Table 3

Enlargement	1	3	0	1	0	3	0	0

[a] Iliac left as documented in individual animals.

Macroscopic findings attributed to the administration of mRNA-1706 at the injection site were characterized by firmness, swelling and occasionally by the presence of a clot in the thigh muscle used for the injection. These macroscopic findings were observed in males and females at all dose levels with no clear dose relationship and correlated histologically with inflammation and/or hemorrhage.

In addition, enlargement of the draining lymph nodes (inguinal, popliteal and iliac) was observed in males and females at all dose levels with no evidence of dose relationship and correlated histologically with mixed cell infiltration.

Other gross findings observed were considered incidental, of the nature commonly observed in this strain and age of rats, and/or were of similar incidence in reference and treated animals and, therefore, were considered unrelated to administration of mRNA-1706.

4.2.2. Recovery Euthanasia Animals (Day 43)

(Table 1 and Appendix 4)

mRNA-1706-related gross findings noted at the terminal euthanasia in the injection site and draining lymph nodes were not observed at the end of the recovery period (Day 43). Other gross findings observed were considered incidental, of the nature commonly observed in this strain and age of rats, and/or were of similar incidence in reference and treated animals and, therefore, were considered unrelated to administration of mRNA-1706.

4.3. Organ Weights

4.3.1. Terminal Euthanasia Animals (Day 30)

(Table 2, Table 3, Table 4, Appendix 1, Appendix 2 and Appendix 3)

mRNA-1706-related organ weight changes were observed in the adrenal glands and are summarized in Text Table 4.

Appendix 17

Text Table 4
Summary of Organ Weight Data – Scheduled Euthanasia (Day 30)

	Males			Females		
Group	**2**	**3**	**4**	**2**	**3**	**4**
Dose (µg/dose)	**10**	**50**	**100**	**10**	**50**	**100**
No. Animals per Group	**10**	**10**	**10**	**10**	**10**	**10**
Gland, adrenal (No. Weighed)[a]	(10)	(10)	(10)	(10)	(10)	(10)
Absolute value	7	2	14	4	**13**	**21**
% of body weight	**15**	5	**27**	6	11	**23**
% of brain weight	7	-2	11	3	13	**24**

[a] All values expressed as percent difference of reference group means.
Based upon statistical analysis of group means, values highlighted in bold are significantly different from reference group – $P \leq 0.05$; refer to data tables for actual significance levels and tests used.

The group means for absolute and relative (to body and brain) weight of the adrenal were significantly higher in females given mRNA-1706 at 100 µg/dose compared to the concurrent reference. There was also a trend toward higher group means for absolute and relative (to body and brain) weight in males given mRNA-1706 at 100 µg/dose and females at 50 µg/dose but these values were statistically significant only in for absolute (females) or relative to body (males) weights. These increases of adrenal weights correlated histologically with cortical hypertrophy.

No other mRNA-1706-related organ weight changes were noted. There were other isolated organ weight values that were statistically different from their respective references. There were, however, no patterns, trends, or correlating data to suggest these values were toxicologically relevant. Thus, other organ weight differences observed were considered incidental and/or related to difference of terminal body weight and unrelated to administration of mRNA-1706.

4.3.2. Recovery Euthanasia Animals (Day 43)

(Table 2, Table 3, Table 4, Appendix 1, Appendix 2 and Appendix 3)

mRNA-1706-related organ weight changes noted in the adrenal glands at the terminal euthanasia were not observed at the end of the recovery period (Day 43). There were isolated organ weight values that were statistically different from their respective references. There were, however, no patterns, trends or correlating data to suggest these values were toxicologically relevant. Thus, the organ weight differences observed were considered incidental and/or related to difference of terminal body weight and unrelated to administration of mRNA-1706.

Appendix 17

4.4. Histopathology

4.4.1. Terminal Euthanasia Animals (Day 30)

(Table 5 and Appendix 4)

mRNA-1706-related microscopic findings were observed at the injection site, in the draining lymph nodes (inguinal, popliteal, iliac), bone marrow, adrenal glands, liver, mesenteric lymph node, thymus and spleen and their incidence and severity are summarized in Text Table 5.

[a] Numbers in parentheses represent the number of animals with the finding.
[b] Iliac lymph node, examined only if gross abnormality observed.

At the injection site, the microscopic findings attributed to the administration of mRNA-1706 were minimal to marked inflammation and minimal to moderate hemorrhage. The inflammation was observed in males and females at all dose levels with no dose relationship between 50 µg/dose and 100 µg/dose but with lower severity of the findings at 10 µg/dose. It was characterized locally by extensive infiltration of mixed inflammatory cells, mainly granulocytes, with associated edema and fibrin exudates and correlated macroscopically with firmness of the thigh (abnormal consistency; firm). It was accompanied by mild to moderate hemorrhage (correlating macroscopically with material accumulation; clot) in some males at 50 µg/dose. This inflammatory process was not otherwise associated with degeneration of the muscle. Similar incidence and severity of minimal degeneration/necrosis of myofiber was observed in reference and mRNA-1706-dosed animals and was considered related to the experimental procedures (intramuscular injection).

In the inguinal, popliteal and iliac lymph nodes (considered as draining injection site), there was minimal to mild mixed cell infiltration in males and/or females administered mRNA-1706 at all dose levels. The inflammatory infiltrate was composed of clusters of degenerated granulocytes in the lymph node sinuses or in the adjacent adipose/connective tissue.

Appendix 17

A dose related minimal increase of myeloid cellularity was observed in the bone marrow of males and females at all dose levels.

In the adrenal glands, a dose related minimal cortical hypertrophy was present in males and females administered mRNA-1706 at ≥ 50 µg/dose and correlated with the increased adrenal weights.

In the liver, a low incidence of minimal to mild hypertrophy of the Kupffer cell was observed in males and females at all dose levels with no clear dose relationship. The hypertrophied Kupffer cells sometimes contained finely granular brownish pigment. In one male at 10 µg/dose, one female at 50 µg/dose and three females at 100 µg/dose, there was minimal to mild degeneration in the centrilobular region characterized by presence of mixed inflammatory cell in the sinusoid with single cell necrosis or degeneration of hepatocytes.

Microscopic findings similar in nature were observed in the spleen and mesenteric lymph nodes at all dose levels as well as in thymus at ≥ 50 µg/dose. They consisted of minimal to mild decreased lymphoid cellularity and/or single cell necrosis of lymphocyte. The decreased lymphoid cellularity was present in the periarteriolar sheath of the spleen, in the cortex of the thymus and in the paracortex of the mesenteric lymph node. In these areas, the lymphoid cells were less densely populated with prominent dendric cells. Single cell lymphoid necrosis was observed in the depleted region in these organs, mainly at 100 µg/dose.

After evaluation of all dose group animals, the GALT was no longer considered as a target organ.

Other microscopic findings observed were considered incidental, of the nature commonly observed in this strain and age of rats, and/or were of similar incidence and severity in reference and treated animals and, therefore, were considered unrelated to administration of mRNA-1706.

4.4.2. Recovery Euthanasia Animals (Day 43)

(Table 5 and Appendix 4)

Microscopic findings noted in the adrenal glands, bone marrow, lymph nodes (mesenteric, popliteal, inguinal), thymus, spleen and liver at the terminal euthanasia were not observed at the end of the recovery period (Day 43) and therefore, considered completely recovered.

At the injection site, the inflammation and hemorrhage present at the end of dosing were no longer observed but minimal mononuclear cell infiltration was noted in males and females at 100 µg/dose as well as in one control female. This microscopic finding was interpreted to result from the healing process from previous inflammation at the injection site. The incidence and severity are summarized in Text Table 6.

Appendix 17

[a] Numbers in parentheses represent the number of animals with the finding.

Other microscopic findings observed were considered incidental, of the nature commonly observed in this strain and age of rats, and/or were of similar incidence and severity in reference and treated animals and, therefore, were considered unrelated to administration of mRNA-1706.

Appendix 17

5. CONCLUSIONS

The intramuscular injection of mRNA-1706 to rats for 1 month (3 doses) at all dose levels resulted in inflammation and hemorrhage at the injection site (correlating with abnormal consistency; firm and material accumulation; clot, respectively) with mixed cell infiltration in the draining lymph nodes (inguinal, popliteal and iliac, correlating with enlargement), increased myeloid cellularity in the bone marrow, decreased lymphoid cellularity in the periarteriolar sheath of the spleen and paracortex of the mesenteric lymph node and Kupffer cell hypertrophy in the liver (with occasional centrilobular degeneration). At ≥ 50 μg/dose, additional microscopic findings attributed to the administration of mRNA-1706 were cortical hypertrophy in the adrenal glands (correlating with higher adrenal weights) and single cell necrosis in the thymus. Microscopic changes observed only at 100 μg/dose, were single cell necrosis of lymphocyte in the spleen and decreased lymphoid cellularity in the thymus.

All macroscopic and microscopic findings as well as difference in organ weights were completely recovered at the end of the 2-week recovery period except at the injection site where mononuclear cell infiltration was observed and considered as the healing process from previous inflammation.

Individual Absolute Organ Weights Explanation Page

Abbreviation	Description	Abbreviation	Description
--	Not scheduled to be performed	OPMP	Only one of the paired organs present – Macroscopic pathology
AVS	Suspected aberrant value	OPOP	Only one of the paired organs present
COME	See Comment Value Excluded	OUM	Organ unidentifiable macroscopically
COMI	See Comment Value Included	MPE	Macroscopic pathology – Excluded from mean
LIBW	Lung infused before weighing	MPI	Macroscopic pathology – Included in mean
NC	Not calculable	TERR	Technical error
OA	Omitted activity	UPTD	Unable to perform due to technical difficulty
ONP	Organ not present	X	Excluded from mean

Note: This is a comprehensive list of abbreviations. All of the abbreviations listed may not be applicable to this report.

Dosing Information

Dosing information is abbreviated on various data outputs; the following represents the dosing information for this study:

Group No.	Test Material	Dose Level (µg/dose)
1	Reference Item	0
2	mRNA-1706	10
3	mRNA-1706	50
4	mRNA-1706	100

Individual Organ Weights Relative to Body Weight Explanation Page

Abbreviation	Description	Abbreviation	Description
--	Not scheduled to be performed	OPMP	Only one of the paired organs present – Macroscopic pathology
AVS	Suspected aberrant value	OPOP	Only one of the paired organs present
COME	See Comment Value Excluded	OUM	Organ unidentifiable macroscopically
COMI	See Comment Value Included	MPE	Macroscopic pathology – Excluded from mean
LIBW	Lung infused before weighing	MPI	Macroscopic pathology – Included in mean
NC	Not calculable	TERR	Technical error
OA	Omitted activity	UPTD	Unable to perform due to technical difficulty
ONP	Organ not present	X	Excluded from mean

Note: This is a comprehensive list of abbreviations. All of the abbreviations listed may not be applicable to this report.

Dosing Information

Dosing information is abbreviated on various data outputs; the following represents the dosing information for this study:

Group No.	Test Material	Dose Level (µg/dose)
1	Reference Item	0
2	mRNA-1706	10
3	mRNA-1706	50
4	mRNA-1706	100

Individual Organ Weights Relative to Brain Weight Explanation Page

Abbreviation	Description	Abbreviation	Description
--	Not scheduled to be performed	OPMP	Only one of the paired organs present – Macroscopic pathology
AVS	Suspected aberrant value	OPOP	Only one of the paired organs present
COME	See Comment Value Excluded	OUM	Organ unidentifiable macroscopically
COMI	See Comment Value Included	MPE	Macroscopic pathology – Excluded from mean
LIBW	Lung infused before weighing	MPI	Macroscopic pathology – Included in mean
NC	Not calculable	TERR	Technical error
OA	Omitted activity	UPTD	Unable to perform due to technical difficulty
ONP	Organ not present	X	Excluded from mean

Note: This is a comprehensive list of abbreviations. All of the abbreviations listed may not be applicable to this report.

Dosing Information

Dosing information is abbreviated on various data outputs; the following represents the dosing information for this study:

Group No.	Test Material	Dose Level (µg/dose)
1	Reference Item	0
2	mRNA-1706	10
3	mRNA-1706	50
4	mRNA-1706	100

Individual Gross and Microscopic Findings Explanation Page

Abbreviation	Description	Abbreviation	Description
AB	Abdominal region	LJ	Lower jaw
AX	Axillary region	LN	Lymph node
BC	Body cavity	LT	Left
BI	Bilateral	LU	Lumbar region
CGEP	Complete gross examination performed	MF	Multifocal
CR	Cranium	MU	Muzzle
DC	Dorsal cervical region	NBF	Neutral buffered formalin
DT	Dorsal thoracic region	Ø	In diameter
F	Focal	PO	Periorbital region
FL	Forelimb	RT	Right
FP	Forepaw	SA	Sacral region
G	Gross Pathology	SC	Scapular region
GALT	Gut associated lymphoid tissue	SI	Small intestine
GL	Gland	SR	Scrotum
HL	Hindlimb	TGL	Trackable Gross Lesion
HP	Hindpaw	UG	Urogenital region
IG	Inguinal region	VC	Ventral cervical region
IS	Interscapular region	VT	Ventral thoracic region
LI	Large Intestine		

Note: This is a comprehensive list of abbreviations. All of the abbreviations listed may not be applicable to this report.

Dosing Information

Dosing information is abbreviated on various data outputs; the following represents the dosing information for this study:

Group No.	Test Material	Dose Level (µg/dose)
1	Reference Item	0
2	mRNA-1706	10
3	mRNA-1706	50
4	mRNA-1706	100

Appendix 17
Appendix 4

Individual Gross and Microscopic Findings
5002231

Animal:	1001	Group: 1	Sex: Male
Species:	Rat	Strain: Sprague-Dawley	
		Dose: 0 ug/dose	
		Removal Reason: Terminal Euthanasia	
		Day (Week) of Death 30 (5)	

Gross Pathology Animal Details:

Animal Tissues submitted Into 10% neutral buffered formalin except eyes and optic nerves submitted in Davidson`s and testes in modified Davidson`s Fixative.

Animal Notes: EUTHANASIA VIA ANESTHESIA AND EXSANGUINATION

Gross Pathology Observations:

No observations found

Any remaining study plan required tissues, which have been examined, have no visible lesions

Gross Pathology - The following Tissues were Not Examined:

None

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

GLAND, ADRENAL : Vacuolation; cortical, bilateral, minimal
KIDNEY : Infiltration, mixed cell; interstitial, unilateral, focal, minimal
LUNG : Hemorrhage; focal, minimal

Histo Pathology - The following Tissues were Within Normal Limits:

ARTERY, AORTA; BONE MARROW; BONE, FEMUR; BONE, STERNUM; BRAIN; EPIDIDYMIS; ESOPHAGUS; EYE; GALT; GLAND, HARDERIAN; GLAND, MAMMARY; GLAND, PARATHYROID; GLAND, PITUITARY; GLAND, PROSTATE; GLAND, SALIVARY, MANDIBULAR; GLAND, SEMINAL VESICLE; GLAND, THYROID; HEART; LARGE INTESTINE, CECUM; LARGE INTESTINE, COLON; LARGE INTESTINE, RECTUM; LIVER; LYMPH NODE, INGUINAL; LYMPH NODE, MANDIBULAR; LYMPH NODE, MESENTERIC; LYMPH NODE, POPLITEAL; MUSCLE, SKELETAL; NERVE, OPTIC; NERVE, SCIATIC; PANCREAS; SITE, INJECTION; SKIN; SMALL INTESTINE, DUODENUM; SMALL INTESTINE, ILEUM; SMALL INTESTINE, JEJUNUM; SPINAL CORD, CERVICAL; SPINAL CORD, LUMBAR; SPINAL CORD, THORACIC; SPLEEN; STOMACH; TESTIS; THYMUS; TONGUE; TRACHEA; URINARY BLADDER

Histo Pathology - The following Tissues were Not Examined:

None

Appendix 17
Appendix 4

Individual Gross and Microscopic Findings
5002231

Animal:	1002	Group: 1	Sex: Male
Species:	Rat	Strain: Sprague-Dawley	
		Dose: 0 ug/dose	
		Removal Reason: Terminal Euthanasia	
		Day (Week) of Death 30 (5)	

Gross Pathology Animal Details:

Animal Tissues submitted Into 10% neutral buffered formalin except eyes and optic nerves submitted in Davidson`s and testes in modified Davidson`s Fixative.

Animal Notes: EUTHANASIA VIA ANESTHESIA AND EXSANGUINATION

Gross Pathology Observations:

LIVER : Focus; pale : 1, fissure, right medial (TGL)
THYMUS : Focus; dark : 2, right (TGL)

Any remaining study plan required tissues, which have been examined, have no visible lesions

Gross Pathology - The following Tissues were Not Examined:

None

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

EPIDIDYMIS : Cellular debris; bilateral, minimal
EPIDIDYMIS : Decreased cellularity; unilateral, moderate, lumen
GLAND, ADRENAL : Vacuolation; cortical, bilateral, minimal
GLAND, PARATHYROID : One Of A Pair Available For Evaluation.
GLAND, PARATHYROID : Examined
KIDNEY : Basophilia; tubular, unilateral, focal, minimal
LUNG : Hemorrhage; multifocal, minimal
LUNG : Macrophage aggregation; multifocal, minimal
TESTIS : Degeneration/atrophy; bilateral, diffuse, marked, seminiferous tubule
NO CORRELATE : No correlating lesion [LIVER : Focus; pale : 1, fissure, right medial (G) | THYMUS : Focus; dark : 2, right (G)]

Histo Pathology - The following Tissues were Within Normal Limits:

ARTERY, AORTA; BONE MARROW; BONE, FEMUR; BONE, STERNUM; BRAIN; ESOPHAGUS; EYE; GALT; GLAND, HARDERIAN; GLAND, PARATHYROID; GLAND, PITUITARY; GLAND, PROSTATE; GLAND, SALIVARY, MANDIBULAR; GLAND, SEMINAL VESICLE; GLAND, THYROID; HEART; LARGE INTESTINE, CECUM; LARGE INTESTINE, COLON; LARGE INTESTINE, RECTUM; LIVER; LYMPH NODE, INGUINAL; LYMPH NODE, MANDIBULAR; LYMPH NODE, MESENTERIC; LYMPH NODE, POPLITEAL; MUSCLE, SKELETAL; NERVE, OPTIC; NERVE, SCIATIC; PANCREAS; SITE, INJECTION; SKIN; SMALL INTESTINE, DUODENUM; SMALL INTESTINE, ILEUM; SMALL INTESTINE, JEJUNUM; SPINAL CORD, CERVICAL; SPINAL CORD, LUMBAR; SPINAL CORD, THORACIC; SPLEEN; STOMACH; THYMUS; TONGUE; TRACHEA; URINARY BLADDER

Appendix 17
Appendix 4

Individual Gross and Microscopic Findings
5002231

Histo Pathology - The following Tissues were Not Examined:

GLAND, MAMMARY - Not Present In Section.

Appendix 17
Appendix 4

Individual Gross and Microscopic Findings
5002231

Animal:	1003	Group: 1	Sex: Male
Species:	Rat	Strain: Sprague-Dawley	
		Dose: 0 ug/dose	
		Removal Reason: Terminal Euthanasia	
		Day (Week) of Death 30 (5)	

Gross Pathology Animal Details:

Animal Tissues submitted Into 10% neutral buffered formalin except eyes and optic nerves submitted in Davidson`s and testes in modified Davidson`s Fixative.

Animal Notes: EUTHANASIA VIA ANESTHESIA AND EXSANGUINATION

Gross Pathology Observations:

No observations found

Any remaining study plan required tissues, which have been examined, have no visible lesions

Gross Pathology - The following Tissues were Not Examined:

None

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

EYE : Atrophy; unilateral, focal, mild, retina
GLAND, ADRENAL : Vacuolation; cortical, bilateral, minimal
GLAND, PARATHYROID : One Of A Pair Available For Evaluation.
GLAND, PARATHYROID : Examined
KIDNEY : Basophilia; tubular, bilateral, multifocal, minimal
LYMPH NODE, INGUINAL : Erythrocytosis; minimal, sinus
THYMUS : Hemorrhage; multifocal, minimal

Histo Pathology - The following Tissues were Within Normal Limits:

ARTERY, AORTA; BONE MARROW; BONE, FEMUR; BONE, STERNUM; BRAIN; EPIDIDYMIS; ESOPHAGUS; GALT; GLAND, HARDERIAN; GLAND, MAMMARY; GLAND, PARATHYROID; GLAND, PITUITARY; GLAND, PROSTATE; GLAND, SALIVARY, MANDIBULAR; GLAND, SEMINAL VESICLE; GLAND, THYROID; HEART; LARGE INTESTINE, CECUM; LARGE INTESTINE, COLON; LARGE INTESTINE, RECTUM; LIVER; LUNG; LYMPH NODE, MANDIBULAR; LYMPH NODE, MESENTERIC; LYMPH NODE, POPLITEAL; MUSCLE, SKELETAL; NERVE, OPTIC; NERVE, SCIATIC; PANCREAS; SITE, INJECTION; SKIN; SMALL INTESTINE, DUODENUM; SMALL INTESTINE, ILEUM; SMALL INTESTINE, JEJUNUM; SPINAL CORD, CERVICAL; SPINAL CORD, LUMBAR; SPINAL CORD, THORACIC; SPLEEN; STOMACH; TESTIS; TONGUE; TRACHEA; URINARY BLADDER

Histo Pathology - The following Tissues were Not Examined:

None

Appendix 17
Appendix 4

Individual Gross and Microscopic Findings
5002231

Animal:	1004	Group: 1	Sex: Male
Species:	Rat	Strain: Sprague-Dawley	
		Dose: 0 ug/dose	
		Removal Reason: Terminal Euthanasia	
		Day (Week) of Death 30 (5)	

Gross Pathology Animal Details:

Animal Tissues submitted Into 10% neutral buffered formalin except eyes and optic nerves submitted in Davidson`s and testes in modified Davidson`s Fixative.

Animal Notes: EUTHANASIA VIA ANESTHESIA AND EXSANGUINATION

Gross Pathology Observations:

LIVER : Focus; pale : 1, fissure, right medial, near hilus, right lateral (TGL)

Any remaining study plan required tissues, which have been examined, have no visible lesions

Gross Pathology - The following Tissues were Not Examined:

None

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

KIDNEY : Cast; hyaline, unilateral, multifocal, minimal
KIDNEY : Dilatation; bilateral, mild, pelvis
LARGE INTESTINE, RECTUM : Parasitism; lumen
SITE, INJECTION : Degeneration/necrosis; multifocal, minimal, myofiber
THYMUS : Hemorrhage; multifocal, minimal
NO CORRELATE : No correlating lesion [LIVER : Focus; pale : 1, fissure, right medial, near hilus, right lateral (G)]

Histo Pathology - The following Tissues were Within Normal Limits:

ARTERY, AORTA; BONE MARROW; BONE, FEMUR; BONE, STERNUM; BRAIN; EPIDIDYMIS; ESOPHAGUS; EYE; GALT; GLAND, ADRENAL; GLAND, HARDERIAN; GLAND, MAMMARY; GLAND, PARATHYROID; GLAND, PITUITARY; GLAND, PROSTATE; GLAND, SALIVARY, MANDIBULAR; GLAND, SEMINAL VESICLE; GLAND, THYROID; HEART; LARGE INTESTINE, CECUM; LARGE INTESTINE, COLON; LIVER; LUNG; LYMPH NODE, INGUINAL; LYMPH NODE, MANDIBULAR; LYMPH NODE, MESENTERIC; LYMPH NODE, POPLITEAL; MUSCLE, SKELETAL; NERVE, OPTIC; NERVE, SCIATIC; PANCREAS; SKIN; SMALL INTESTINE, DUODENUM; SMALL INTESTINE, ILEUM; SMALL INTESTINE, JEJUNUM; SPINAL CORD, CERVICAL; SPINAL CORD, LUMBAR; SPINAL CORD, THORACIC; SPLEEN; STOMACH; TESTIS; TONGUE; TRACHEA; URINARY BLADDER

Histo Pathology - The following Tissues were Not Examined:

None

Appendix 4

Individual Gross and Microscopic Findings
5002231

Animal:	1005	Group: 1	Sex: Male
Species:	Rat	Strain: Sprague-Dawley	
		Dose: 0 ug/dose	
		Removal Reason: Terminal Euthanasia	
		Day (Week) of Death 30 (5)	

Gross Pathology Animal Details:

Animal Tissues submitted Into 10% neutral buffered formalin except eyes and optic nerves submitted in Davidson`s and testes in modified Davidson`s Fixative.

Animal Notes: EUTHANASIA VIA ANESTHESIA AND EXSANGUINATION

Gross Pathology Observations:

LARGE INTESTINE, RECTUM : Parasite : 1
SITE, INJECTION : Focus; dark : 1, left (TGL)
THYMUS : Focus; dark : >10, left lobe (TGL)

Any remaining study plan required tissues, which have been examined, have no visible lesions

Gross Pathology - The following Tissues were Not Examined:

None

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

KIDNEY : Basophilia; tubular, bilateral, multifocal, minimal
LARGE INTESTINE, RECTUM : Parasitism; lumen
SITE, INJECTION : Hemorrhage; focal, minimal : subcutis [SITE, INJECTION : Focus; dark : 1, left (G)]
SITE, INJECTION : Degeneration/necrosis; multifocal, minimal, myofiber
THYMUS : Hemorrhage; multifocal, minimal [THYMUS : Focus; dark : >10, left lobe (G)]

Histo Pathology - The following Tissues were Within Normal Limits:

ARTERY, AORTA; BONE MARROW; BONE, FEMUR; BONE, STERNUM; BRAIN; EPIDIDYMIS; ESOPHAGUS; EYE; GALT; GLAND, ADRENAL; GLAND, HARDERIAN; GLAND, MAMMARY; GLAND, PARATHYROID; GLAND, PITUITARY; GLAND, PROSTATE; GLAND, SALIVARY, MANDIBULAR; GLAND, SEMINAL VESICLE; GLAND, THYROID; HEART; LARGE INTESTINE, CECUM; LARGE INTESTINE, COLON; LIVER; LUNG; LYMPH NODE, INGUINAL; LYMPH NODE, MANDIBULAR; LYMPH NODE, MESENTERIC; LYMPH NODE, POPLITEAL; MUSCLE, SKELETAL; NERVE, OPTIC; NERVE, SCIATIC; PANCREAS; SKIN; SMALL INTESTINE, DUODENUM; SMALL INTESTINE, ILEUM; SMALL INTESTINE, JEJUNUM; SPINAL CORD, CERVICAL; SPINAL CORD, LUMBAR; SPINAL CORD, THORACIC; SPLEEN; STOMACH; TESTIS; TONGUE; TRACHEA; URINARY BLADDER

Histo Pathology - The following Tissues were Not Examined:

None

		Day (Week) of Death 43 (7)	

Gross Pathology Animal Details:

Animal Tissues submitted Into 10% neutral buffered formalin except eyes and optic nerves submitted in Davidson`s and testes in modified Davidson`s Fixative.

Animal Notes: EUTHANASIA VIA ANESTHESIA AND EXSANGUINATION

Gross Pathology Observations:

GLAND, ADRENAL : Focus; pale : >10, bilateral (TGL)
LIVER : Focus; pale : 1, fissure, medial lobe (TGL)
LYMPH NODE : Enlargement : Axillary left (TGL)

Any remaining study plan required tissues, which have been examined, have no visible lesions

Gross Pathology - The following Tissues were Not Examined:

None

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

NO CORRELATE : No correlating lesion [LIVER : Focus; pale : 1, fissure, medial lobe (G) | GLAND, ADRENAL : Focus; pale : >10, bilateral (G) | LYMPH NODE : Enlargement : Axillary left (G)]

Histo Pathology - The following Tissues were Within Normal Limits:

BONE MARROW; GALT; GLAND, ADRENAL; LIVER; LYMPH NODE; LYMPH NODE, INGUINAL; LYMPH NODE, MESENTERIC; LYMPH NODE, POPLITEAL; SITE, INJECTION; SPLEEN; THYMUS

Histo Pathology - The following Tissues were Not Examined:

None

Appendix 17
Appendix 4

Individual Gross and Microscopic Findings
5002231

Animal: 1501	Group: 1		Sex: Female
Species: Rat	Strain: Sprague-Dawley		
	Dose: 0 ug/dose		
	Removal Reason: Terminal Euthanasia		
	Day (Week) of Death 30 (5)		

Gross Pathology Animal Details:

Animal Tissues submitted in 10% neutral buffered formalin except eyes and optic nerves submitted in Davidson`s fixative.

Animal Notes: EUTHANASIA VIA ANESTHESIA AND EXSANGUINATION

Gross Pathology Observations:

LIVER : Focus; pale : 1, near hilus, right lateral (TGL)

Any remaining study plan required tissues, which have been examined, have no visible lesions

Gross Pathology - The following Tissues were Not Examined:

None

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

LIVER : Tension lipidosis; focal, minimal [LIVER : Focus; pale : 1, near hilus, right lateral (G)]
LUNG : Macrophage aggregation; focal, minimal
SITE, INJECTION : Degeneration/necrosis; multifocal, minimal, myofiber

Histo Pathology - The following Tissues were Within Normal Limits:

ARTERY, AORTA; BONE MARROW; BONE, FEMUR; BONE, STERNUM; BRAIN; CERVIX; ESOPHAGUS; EYE; GALT; GLAND, ADRENAL; GLAND, HARDERIAN; GLAND, MAMMARY; GLAND, PARATHYROID; GLAND, PITUITARY; GLAND, SALIVARY, MANDIBULAR; GLAND, THYROID; HEART; KIDNEY; LARGE INTESTINE, CECUM; LARGE INTESTINE, COLON; LARGE INTESTINE, RECTUM; LYMPH NODE, INGUINAL; LYMPH NODE, MANDIBULAR; LYMPH NODE, MESENTERIC; LYMPH NODE, POPLITEAL; MUSCLE, SKELETAL; NERVE, OPTIC; NERVE, SCIATIC; OVARY; PANCREAS; SKIN; SMALL INTESTINE, DUODENUM; SMALL INTESTINE, ILEUM; SMALL INTESTINE, JEJUNUM; SPINAL CORD, CERVICAL; SPINAL CORD, LUMBAR; SPINAL CORD, THORACIC; SPLEEN; STOMACH; THYMUS; TONGUE; TRACHEA; URINARY BLADDER; UTERUS; VAGINA

Histo Pathology - The following Tissues were Not Examined:

None

Appendix 17
Appendix 4

Individual Gross and Microscopic Findings
5002231

Animal:	1502	Group: 1	Sex: Female
Species:	Rat	Strain: Sprague-Dawley	
		Dose: 0 ug/dose	
		Removal Reason: Terminal Euthanasia	
		Day (Week) of Death 30 (5)	

Gross Pathology Animal Details:

Animal Tissues submitted in 10% neutral buffered formalin except eyes and optic nerves submitted in Davidson`s fixative

Animal Notes: EUTHANASIA VIA ANESTHESIA AND EXSANGUINATION

Gross Pathology Observations:

No observations found

Any remaining study plan required tissues, which have been examined, have no visible lesions

Gross Pathology - The following Tissues were Not Examined:

None

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

GLAND, PARATHYROID : One Of A Pair Available For Evaluation.
GLAND, PARATHYROID : Examined
THYMUS : Hemorrhage; multifocal, minimal

Histo Pathology - The following Tissues were Within Normal Limits:

ARTERY, AORTA; BONE MARROW; BONE, FEMUR; BONE, STERNUM; BRAIN; CERVIX; ESOPHAGUS; EYE; GALT; GLAND, ADRENAL; GLAND, HARDERIAN; GLAND, MAMMARY; GLAND, PARATHYROID; GLAND, PITUITARY; GLAND, SALIVARY, MANDIBULAR; GLAND, THYROID; HEART; KIDNEY; LARGE INTESTINE, CECUM; LARGE INTESTINE, COLON; LARGE INTESTINE, RECTUM; LIVER; LUNG; LYMPH NODE, INGUINAL; LYMPH NODE, MANDIBULAR; LYMPH NODE, MESENTERIC; LYMPH NODE, POPLITEAL; MUSCLE, SKELETAL; NERVE, OPTIC; NERVE, SCIATIC; OVARY; PANCREAS; SITE, INJECTION; SKIN; SMALL INTESTINE, DUODENUM; SMALL INTESTINE, ILEUM; SMALL INTESTINE, JEJUNUM; SPINAL CORD, CERVICAL; SPINAL CORD, LUMBAR; SPINAL CORD, THORACIC; SPLEEN; STOMACH; TONGUE; TRACHEA; URINARY BLADDER; UTERUS; VAGINA

Histo Pathology - The following Tissues were Not Examined:

None

Appendix 17
Appendix 4

Individual Gross and Microscopic Findings
5002231

Animal:	1503	Group: 1	Sex: Female
Species:	Rat	Strain: Sprague-Dawley	
		Dose: 0 ug/dose	
		Removal Reason: Terminal Euthanasia	
		Day (Week) of Death 30 (5)	

Gross Pathology Animal Details:

Animal Tissues submitted in 10% neutral buffered formalin except eyes and optic nerves submitted in Davidson`s fixative.

Animal Notes: EUTHANASIA VIA ANESTHESIA AND EXSANGUINATION

Gross Pathology Observations:

UTERUS : Small : Horn left (TGL)
UTERUS : Thin : Horn left (TGL)

Any remaining study plan required tissues, which have been examined, have no visible lesions

Gross Pathology - The following Tissues were Not Examined:

None

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

GLAND, PARATHYROID : One Of A Pair Available For Evaluation.
GLAND, PARATHYROID : Examined
LUNG : Macrophage aggregation; focal, minimal
SITE, INJECTION : Degeneration/necrosis; multifocal, minimal, myofiber
NO CORRELATE : No correlating lesion [UTERUS : Small : Horn left (G) | UTERUS : Thin : Horn left (G)]

Histo Pathology - The following Tissues were Within Normal Limits:

ARTERY, AORTA; BONE MARROW; BONE, FEMUR; BONE, STERNUM; BRAIN; CERVIX; ESOPHAGUS; EYE; GALT; GLAND, ADRENAL; GLAND, HARDERIAN; GLAND, MAMMARY; GLAND, PARATHYROID; GLAND, PITUITARY; GLAND, SALIVARY, MANDIBULAR; GLAND, THYROID; HEART; KIDNEY; LARGE INTESTINE, CECUM; LARGE INTESTINE, COLON; LARGE INTESTINE, RECTUM; LIVER; LYMPH NODE, INGUINAL; LYMPH NODE, MANDIBULAR; LYMPH NODE, MESENTERIC; LYMPH NODE, POPLITEAL; MUSCLE, SKELETAL; NERVE, OPTIC; NERVE, SCIATIC; OVARY; PANCREAS; SKIN; SMALL INTESTINE, DUODENUM; SMALL INTESTINE, ILEUM; SMALL INTESTINE, JEJUNUM; SPINAL CORD, CERVICAL; SPINAL CORD, LUMBAR; SPINAL CORD, THORACIC; SPLEEN; STOMACH; THYMUS; TONGUE; TRACHEA; URINARY BLADDER; UTERUS; VAGINA

Histo Pathology - The following Tissues were Not Examined:

None

Appendix 17
Appendix 4

Individual Gross and Microscopic Findings
5002231

Animal:	1504	Group: 1	Sex: Female
Species:	Rat	Strain: Sprague-Dawley	
		Dose: 0 ug/dose	
		Removal Reason: Terminal Euthanasia	
		Day (Week) of Death 30 (5)	

Gross Pathology Animal Details:

Animal Tissues submitted in 10% neutral buffered formalin except eyes and optic nerves submitted in Davidson`s fixative

Animal Notes: EUTHANASIA VIA ANESTHESIA AND EXSANGUINATION

Gross Pathology Observations:

LIVER : Focus; pale : 1, fissure, right medial (TGL)
THYMUS : Focus; dark : >10 (TGL)

Any remaining study plan required tissues, which have been examined, have no visible lesions

Gross Pathology - The following Tissues were Not Examined:

None

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

THYMUS : Hemorrhage; multifocal, minimal [THYMUS : Focus; dark : >10 (G)]
NO CORRELATE : No correlating lesion [LIVER : Focus; pale : 1, fissure, right medial (G)]

Histo Pathology - The following Tissues were Within Normal Limits:

ARTERY, AORTA; BONE MARROW; BONE, FEMUR; BONE, STERNUM; BRAIN; CERVIX; ESOPHAGUS; EYE; GALT; GLAND, ADRENAL; GLAND, HARDERIAN; GLAND, MAMMARY; GLAND, PARATHYROID; GLAND, PITUITARY; GLAND, SALIVARY, MANDIBULAR; GLAND, THYROID; HEART; KIDNEY; LARGE INTESTINE, CECUM; LARGE INTESTINE, COLON; LARGE INTESTINE, RECTUM; LIVER; LUNG; LYMPH NODE, INGUINAL; LYMPH NODE, MANDIBULAR; LYMPH NODE, MESENTERIC; LYMPH NODE, POPLITEAL; MUSCLE, SKELETAL; NERVE, OPTIC; NERVE, SCIATIC; OVARY; PANCREAS; SITE, INJECTION; SKIN; SMALL INTESTINE, DUODENUM; SMALL INTESTINE, ILEUM; SMALL INTESTINE, JEJUNUM; SPINAL CORD, CERVICAL; SPINAL CORD, LUMBAR; SPINAL CORD, THORACIC; SPLEEN; STOMACH; TONGUE; TRACHEA; URINARY BLADDER; UTERUS; VAGINA

Histo Pathology - The following Tissues were Not Examined:

None

Individual Gross and Microscopic Findings
5002231

Animal:	1505	Group: 1	Sex: Female
Species:	Rat	Strain: Sprague-Dawley	
		Dose: 0 ug/dose	
		Removal Reason: Terminal Euthanasia	
		Day (Week) of Death 30 (5)	

Gross Pathology Animal Details:

Animal Tissues submitted in 10% neutral buffered formalin except eyes and optic nerves submitted in Davidson`s fixative.

Animal Notes: EUTHANASIA VIA ANESTHESIA AND EXSANGUINATION

Gross Pathology Observations:

LIVER : Focus; pale : 1, fissure, right medial (TGL)
LUNG : Focus; dark : 1 to >10 (TGL)
OVARY : Cyst; pale : 1, left (TGL)

Any remaining study plan required tissues, which have been examined, have no visible lesions

Gross Pathology - The following Tissues were Not Examined:

None

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

GLAND, PARATHYROID : One Of A Pair Available For Evaluation.
GLAND, PARATHYROID : Examined
OVARY : Cyst; unilateral, focal, minimal [OVARY : Cyst; pale : 1, left (G)]
THYMUS : Hemorrhage; focal, minimal
NO CORRELATE : No correlating lesion [LIVER : Focus; pale : 1, fissure, right medial (G) | LUNG : Focus; dark : 1 to >10 (G)]

Histo Pathology - The following Tissues were Within Normal Limits:

ARTERY, AORTA; BONE MARROW; BONE, FEMUR; BONE, STERNUM; BRAIN; CERVIX; ESOPHAGUS; EYE; GALT; GLAND, ADRENAL; GLAND, HARDERIAN; GLAND, MAMMARY; GLAND, PARATHYROID; GLAND, PITUITARY; GLAND, SALIVARY, MANDIBULAR; GLAND, THYROID; HEART; KIDNEY; LARGE INTESTINE, CECUM; LARGE INTESTINE, COLON; LARGE INTESTINE, RECTUM; LIVER; LUNG; LYMPH NODE, INGUINAL; LYMPH NODE, MANDIBULAR; LYMPH NODE, MESENTERIC; LYMPH NODE, POPLITEAL; MUSCLE, SKELETAL; NERVE, OPTIC; NERVE, SCIATIC; PANCREAS; SITE, INJECTION; SKIN; SMALL INTESTINE, DUODENUM; SMALL INTESTINE, ILEUM; SMALL INTESTINE, JEJUNUM; SPINAL CORD, CERVICAL; SPINAL CORD, LUMBAR; SPINAL CORD, THORACIC; SPLEEN; STOMACH; TONGUE; TRACHEA; URINARY BLADDER; UTERUS; VAGINA

Histo Pathology - The following Tissues were Not Examined:

None

Species:	Rat	Strain: Sprague-Dawley	
		Dose: 0 ug/dose	
		Removal Reason: Terminal Euthanasia	
		Day (Week) of Death 30 (5)	

Gross Pathology Animal Details:

Animal Tissues submitted in 10% neutral buffered formalin except eyes and optic nerves submitted in Davidson`s fixative

Animal Notes: EUTHANASIA VIA ANESTHESIA AND EXSANGUINATION

Gross Pathology Observations:

THYMUS : Focus; dark : >10, left lobe. (TGL)

Any remaining study plan required tissues, which have been examined, have no visible lesions

Gross Pathology - The following Tissues were Not Examined:

None

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

GLAND, PARATHYROID : One Of A Pair Available For Evaluation.
GLAND, PARATHYROID : Examined
MUSCLE, SKELETAL : Degeneration; focal, minimal, myofiber
SITE, INJECTION : Degeneration/necrosis; multifocal, minimal, myofiber
THYMUS : Hemorrhage; multifocal, minimal [THYMUS : Focus; dark : >10, left lobe. (G)]

Histo Pathology - The following Tissues were Within Normal Limits:

ARTERY, AORTA; BONE MARROW; BONE, FEMUR; BONE, STERNUM; BRAIN; CERVIX; ESOPHAGUS; EYE; GALT; GLAND, ADRENAL; GLAND, HARDERIAN; GLAND, MAMMARY; GLAND, PARATHYROID; GLAND, PITUITARY; GLAND, SALIVARY, MANDIBULAR; GLAND, THYROID; HEART; KIDNEY; LARGE INTESTINE, CECUM; LARGE INTESTINE, COLON; LARGE INTESTINE, RECTUM; LIVER; LUNG; LYMPH NODE, INGUINAL; LYMPH NODE, MANDIBULAR; LYMPH NODE, MESENTERIC; LYMPH NODE, POPLITEAL; NERVE, OPTIC; NERVE, SCIATIC; OVARY; PANCREAS; SKIN; SMALL INTESTINE, DUODENUM; SMALL INTESTINE, ILEUM; SMALL INTESTINE, JEJUNUM; SPINAL CORD, CERVICAL; SPINAL CORD, LUMBAR; SPINAL CORD, THORACIC; SPLEEN; STOMACH; TONGUE; TRACHEA; URINARY BLADDER; UTERUS; VAGINA

Histo Pathology - The following Tissues were Not Examined:

None

	Day (Week) of Death 30 (5)	

Gross Pathology Animal Details:

Animal Tissues submitted Into 10% neutral buffered formalin except eyes and optic nerves submitted in Davidson`s and testes in modified Davidson`s Fixative.

Animal Notes: EUTHANASIA VIA ANESTHESIA AND EXSANGUINATION

Gross Pathology Observations:

LYMPH NODE, POPLITEAL : Enlargement : left (TGL)
SITE, INJECTION : Abnormal consistency; firm : left (TGL)
SITE, INJECTION : Focus; dark : 3, left (TGL)

Any remaining study plan required tissues, which have been examined, have no visible lesions

Gross Pathology - The following Tissues were Not Examined:

None

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

LIVER : Degeneration/necrosis; centrilobular, multifocal, minimal
LYMPH NODE, MESENTERIC : Decreased cellularity; lymphoid, minimal, paracortex
SITE, INJECTION : Inflammation; mild [SITE, INJECTION : Abnormal consistency; firm : left (G) | SITE, INJECTION : Focus; dark : 3, left (G)]
SPLEEN : Decreased cellularity; lymphoid, minimal, periarteriolar lymphoid sheath
NO CORRELATE : No correlating lesion [LYMPH NODE, POPLITEAL : Enlargement : left (G)]

Histo Pathology - The following Tissues were Within Normal Limits:

BONE MARROW; GALT; GLAND, ADRENAL; LYMPH NODE, INGUINAL; LYMPH NODE, POPLITEAL; THYMUS

Histo Pathology - The following Tissues were Not Examined:

None

Appendix 17
Appendix 4

Individual Gross and Microscopic Findings
5002231

Animal: 2002	Group: 2	Sex: Male
Species: Rat	Strain: Sprague-Dawley	
	Dose: 10 ug/dose	
	Removal Reason: Terminal Euthanasia	
	Day (Week) of Death 30 (5)	

Gross Pathology Animal Details:

Animal Tissues submitted Into 10% neutral buffered formalin except eyes and optic nerves submitted in Davidson`s and testes in modified Davidson`s Fixative.

Animal Notes: EUTHANASIA VIA ANESTHESIA AND EXSANGUINATION

Gross Pathology Observations:

SITE, INJECTION : Abnormal consistency; firm : left (TGL)

Any remaining study plan required tissues, which have been examined, have no visible lesions

Gross Pathology - The following Tissues were Not Examined:

None

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

LIVER : Hypertrophy; minimal, kupffer cell
SITE, INJECTION : Inflammation; mild [SITE, INJECTION : Abnormal consistency; firm : left (G)]
SPLEEN : Decreased cellularity; lymphoid, mild, periarteriolar lymphoid sheath
THYMUS : Hemorrhage; multifocal, minimal

Histo Pathology - The following Tissues were Within Normal Limits:

BONE MARROW; GALT; GLAND, ADRENAL; LYMPH NODE, INGUINAL; LYMPH NODE, MESENTERIC; LYMPH NODE, POPLITEAL

Histo Pathology - The following Tissues were Not Examined:

None

Appendix 17
Appendix 4

Individual Gross and Microscopic Findings
5002231

Animal: 2003	Group: 2	Sex: Male
Species: Rat	Strain: Sprague-Dawley	
	Dose: 10 ug/dose	
	Removal Reason: Terminal Euthanasia	
	Day (Week) of Death 30 (5)	

Gross Pathology Animal Details:

Animal Tissues submitted Into 10% neutral buffered formalin except eyes and optic nerves submitted in Davidson`s and testes in modified Davidson`s Fixative.

Animal Notes: EUTHANASIA VIA ANESTHESIA AND EXSANGUINATION

Gross Pathology Observations:

SITE, INJECTION : Abnormal consistency; firm : left (TGL)
THYMUS : Focus; dark : 4 (TGL)

Any remaining study plan required tissues, which have been examined, have no visible lesions

Gross Pathology - The following Tissues were Not Examined:

None

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

SITE, INJECTION : Inflammation; mild [SITE, INJECTION : Abnormal consistency; firm : left (G)]
THYMUS : Hemorrhage; multifocal, minimal [THYMUS : Focus; dark : 4 (G)]

Histo Pathology - The following Tissues were Within Normal Limits:

BONE MARROW; GALT; GLAND, ADRENAL; LIVER; LYMPH NODE, INGUINAL; LYMPH NODE, MESENTERIC; LYMPH NODE, POPLITEAL; SPLEEN

Histo Pathology - The following Tissues were Not Examined:

None

Appendix 17
Appendix 4

Individual Gross and Microscopic Findings
5002231

Animal: 2004	Group: 2	Sex: Male
Species: Rat	Strain: Sprague-Dawley	
	Dose: 10 ug/dose	
	Removal Reason: Terminal Euthanasia	
	Day (Week) of Death 30 (5)	

Gross Pathology Animal Details:

Animal Tissues submitted Into 10% neutral buffered formalin except eyes and optic nerves submitted in Davidson`s and testes in modified Davidson`s Fixative.

Animal Notes: EUTHANASIA VIA ANESTHESIA AND EXSANGUINATION

Gross Pathology Observations:

LYMPH NODE, MANDIBULAR : Enlargement : bilateral (TGL)
LYMPH NODE, POPLITEAL : Enlargement : left (TGL)
SITE, INJECTION : Abnormal consistency; firm : left (TGL)

Any remaining study plan required tissues, which have been examined, have no visible lesions

Gross Pathology - The following Tissues were Not Examined:

None

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

BONE MARROW : Increased cellularity; myeloid, minimal
GLAND, ADRENAL : Vacuolation; cortical, bilateral, minimal
LYMPH NODE, MANDIBULAR : Plasmacytosis; minimal [LYMPH NODE, MANDIBULAR : Enlargement : bilateral (G)]
SITE, INJECTION : Degeneration/necrosis; multifocal, minimal, myofiber
SITE, INJECTION : Inflammation; moderate [SITE, INJECTION : Abnormal consistency; firm : left (G)]
SPLEEN : Decreased cellularity; lymphoid, minimal, periarteriolar lymphoid sheath
THYMUS : Hemorrhage; multifocal, minimal
NO CORRELATE : No correlating lesion [LYMPH NODE, POPLITEAL : Enlargement : left (G)]

Histo Pathology - The following Tissues were Within Normal Limits:

GALT; LIVER; LYMPH NODE, INGUINAL; LYMPH NODE, MESENTERIC; LYMPH NODE, POPLITEAL

Histo Pathology - The following Tissues were Not Examined:

None

Appendix 17
Appendix 4

Individual Gross and Microscopic Findings
5002231

Animal: 2005	Group: 2	Sex: Male
Species: Rat	Strain: Sprague-Dawley	
	Dose: 10 ug/dose	
	Removal Reason: Terminal Euthanasia	
	Day (Week) of Death 30 (5)	

Gross Pathology Animal Details:

Animal Tissues submitted Into 10% neutral buffered formalin except eyes and optic nerves submitted in Davidson`s and testes in modified Davidson`s Fixative.

Animal Notes: EUTHANASIA VIA ANESTHESIA AND EXSANGUINATION

Gross Pathology Observations:

LUNG : Focus; dark : 1 to 4 (TGL)
LYMPH NODE, POPLITEAL : Enlargement : left (TGL)
SITE, INJECTION : Abnormal consistency; firm : left (TGL)

Any remaining study plan required tissues, which have been examined, have no visible lesions

Gross Pathology - The following Tissues were Not Examined:

None

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

BONE MARROW : Increased cellularity; myeloid, minimal
LYMPH NODE, MESENTERIC : Decreased cellularity; lymphoid, minimal, paracortex
SITE, INJECTION : Inflammation; mild [SITE, INJECTION : Abnormal consistency; firm : left (G)]
SPLEEN : Decreased cellularity; lymphoid, minimal, periarteriolar lymphoid sheath
THYMUS : Hemorrhage; multifocal, minimal
NO CORRELATE : No correlating lesion [LYMPH NODE, POPLITEAL : Enlargement : left (G) | LUNG : Focus; dark : 1 to 4 (G)]

Histo Pathology - The following Tissues were Within Normal Limits:

GALT; GLAND, ADRENAL; LIVER; LUNG; LYMPH NODE, INGUINAL; LYMPH NODE, POPLITEAL

Histo Pathology - The following Tissues were Not Examined:

None

Appendix 17
Appendix 4

Individual Gross and Microscopic Findings
5002231

Animal: 2006	Group: 2	Sex: Male
Species: Rat	Strain: Sprague-Dawley	
	Dose: 10 ug/dose	
	Removal Reason: Terminal Euthanasia	
	Day (Week) of Death 30 (5)	

Gross Pathology Animal Details:

Animal Tissues submitted Into 10% neutral buffered formalin except eyes and optic nerves submitted in Davidson`s and testes in modified Davidson`s Fixative.

Animal Notes: EUTHANASIA VIA ANESTHESIA AND EXSANGUINATION

Gross Pathology Observations:

No observations found

Any remaining study plan required tissues, which have been examined, have no visible lesions

Gross Pathology - The following Tissues were Not Examined:

None

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

BONE MARROW : Increased cellularity; myeloid, minimal
LYMPH NODE, MESENTERIC : Decreased cellularity; lymphoid, minimal, paracortex
SITE, INJECTION : Degeneration/necrosis; multifocal, minimal, myofiber
SITE, INJECTION : Inflammation; moderate
SPLEEN : Decreased cellularity; lymphoid, minimal, periarteriolar lymphoid sheath
THYMUS : Hemorrhage; multifocal, minimal

Histo Pathology - The following Tissues were Within Normal Limits:

GALT; GLAND, ADRENAL; LIVER; LYMPH NODE, POPLITEAL

Histo Pathology - The following Tissues were Not Examined:

LYMPH NODE, INGUINAL - Not Present In Wet Tissues.

Appendix 17
Appendix 4

Individual Gross and Microscopic Findings
5002231

Animal: 2007	Group: 2	Sex: Male
Species: Rat	Strain: Sprague-Dawley	
	Dose: 10 ug/dose	
	Removal Reason: Terminal Euthanasia	
	Day (Week) of Death 30 (5)	

Gross Pathology Animal Details:

Animal Tissues submitted Into 10% neutral buffered formalin except eyes and optic nerves submitted in Davidson`s and testes in modified Davidson`s Fixative.

Animal Notes: EUTHANASIA VIA ANESTHESIA AND EXSANGUINATION

Gross Pathology Observations:

SITE, INJECTION : Abnormal consistency; firm : left (TGL)
SITE, INJECTION : Swelling : left (TGL)
SITE, INJECTION : Focus; dark : 5, left (TGL)
THYMUS : Focus; dark : >10, left lobe (TGL)

Any remaining study plan required tissues, which have been examined, have no visible lesions

Gross Pathology - The following Tissues were Not Examined:

None

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

BONE MARROW : Increased cellularity; myeloid, minimal
SITE, INJECTION : Hemorrhage; multifocal, minimal [SITE, INJECTION : Focus; dark : 5, left (G)]
SITE, INJECTION : Inflammation; mild [SITE, INJECTION : Abnormal consistency; firm : left (G) | SITE, INJECTION : Swelling : left (G)]
SPLEEN : Decreased cellularity; lymphoid, minimal, periarteriolar lymphoid sheath
NO CORRELATE : No correlating lesion [THYMUS : Focus; dark : >10, left lobe (G)]

Histo Pathology - The following Tissues were Within Normal Limits:

GALT; GLAND, ADRENAL; LIVER; LYMPH NODE, INGUINAL; LYMPH NODE, MESENTERIC; LYMPH NODE, POPLITEAL; THYMUS

Histo Pathology - The following Tissues were Not Examined:

None

Appendix 17

Gross Pathology - The following Tissues were Not Examined:

None

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

BONE MARROW : Increased cellularity; myeloid, minimal
SITE, INJECTION : Degeneration/necrosis; multifocal, minimal, myofiber
SITE, INJECTION : Inflammation; moderate
SPLEEN : Decreased cellularity; lymphoid, minimal, periarteriolar lymphoid sheath
THYMUS : Hemorrhage; multifocal, minimal

Histo Pathology - The following Tissues were Within Normal Limits:

GALT; GLAND, ADRENAL; LIVER; LYMPH NODE, INGUINAL; LYMPH NODE, MESENTERIC; LYMPH NODE, POPLITEAL

Histo Pathology - The following Tissues were Not Examined:

None

Appendix 17
Appendix 4

Individual Gross and Microscopic Findings
5002231

Animal: 2009	Group: 2	Sex: Male
Species: Rat	Strain: Sprague-Dawley	
	Dose: 10 ug/dose	
	Removal Reason: Terminal Euthanasia	
	Day (Week) of Death 30 (5)	

Gross Pathology Animal Details:

Animal Tissues submitted Into 10% neutral buffered formalin except eyes and optic nerves submitted in Davidson`s and testes in modified Davidson`s Fixative.

Animal Notes: EUTHANASIA VIA ANESTHESIA AND EXSANGUINATION

Gross Pathology Observations:

SITE, INJECTION : Abnormal consistency; firm : left (TGL)

Any remaining study plan required tissues, which have been examined, have no visible lesions

Gross Pathology - The following Tissues were Not Examined:

None

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

SITE, INJECTION : Degeneration/necrosis; multifocal, minimal, myofiber
SITE, INJECTION : Inflammation; moderate [SITE, INJECTION : Abnormal consistency; firm : left (G)]
SPLEEN : Decreased cellularity; lymphoid, mild, periarteriolar lymphoid sheath

Histo Pathology - The following Tissues were Within Normal Limits:

BONE MARROW; GALT; GLAND, ADRENAL; LIVER; LYMPH NODE, INGUINAL; LYMPH NODE, MESENTERIC; LYMPH NODE, POPLITEAL; THYMUS

Histo Pathology - The following Tissues were Not Examined:

None

Appendix 17
Appendix 4

Individual Gross and Microscopic Findings
5002231

Animal: 2010	Group: 2	Sex: Male
Species: Rat	Strain: Sprague-Dawley	
	Dose: 10 ug/dose	
	Removal Reason: Terminal Euthanasia	
	Day (Week) of Death 30 (5)	

Gross Pathology Animal Details:

Animal Tissues submitted Into 10% neutral buffered formalin except eyes and optic nerves submitted in Davidson`s and testes in modified Davidson`s Fixative.

Animal Notes: EUTHANASIA VIA ANESTHESIA AND EXSANGUINATION

Gross Pathology Observations:

LIVER : Focus; pale : 1, near hilus, right lateral (TGL)
SITE, INJECTION : Abnormal consistency; firm : left (TGL)
THYMUS : Focus; dark : 1, left (TGL)

Any remaining study plan required tissues, which have been examined, have no visible lesions

Gross Pathology - The following Tissues were Not Examined:

None

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

GLAND, ADRENAL : Vacuolation; cortical, bilateral, minimal
LIVER : Hypertrophy; minimal, kupffer cell : with pigment
SITE, INJECTION : Degeneration/necrosis; multifocal, minimal, myofiber
SITE, INJECTION : Inflammation; moderate [SITE, INJECTION : Abnormal consistency; firm : left (G)]
SPLEEN : Decreased cellularity; lymphoid, minimal, periarteriolar lymphoid sheath
THYMUS : Hemorrhage; multifocal, minimal [THYMUS : Focus; dark : 1, left (G)]
NO CORRELATE : No correlating lesion [LIVER : Focus; pale : 1, near hilus, right lateral (G)]

Histo Pathology - The following Tissues were Within Normal Limits:

BONE MARROW; GALT; LYMPH NODE, INGUINAL; LYMPH NODE, MESENTERIC

Histo Pathology - The following Tissues were Not Examined:

LYMPH NODE, POPLITEAL - Not Present In Wet Tissues.

Appendix 17
Appendix 4

Individual Gross and Microscopic Findings
5002231

Animal: 2501	Group: 2	Sex: Female
Species: Rat	Strain: Sprague-Dawley	
	Dose: 10 ug/dose	
	Removal Reason: Terminal Euthanasia	
	Day (Week) of Death 30 (5)	

Gross Pathology Animal Details:

Animal Tissues submitted in 10% neutral buffered formalin except eyes and optic nerves submitted in Davidson`s fixative.

Animal Notes: EUTHANASIA VIA ANESTHESIA AND EXSANGUINATION

Gross Pathology Observations:

GLAND, ADRENAL : Focus; dark : 1, left (TGL)
LYMPH NODE : Enlargement : Iliac left (TGL)

Any remaining study plan required tissues, which have been examined, have no visible lesions

Gross Pathology - The following Tissues were Not Examined:

None

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

LYMPH NODE : Infiltration, mixed cell; minimal : with hemorrhage [LYMPH NODE : Enlargement : Iliac left (G)]
SITE, INJECTION : Inflammation; moderate
SPLEEN : Decreased cellularity; lymphoid, minimal, periarteriolar lymphoid sheath
NO CORRELATE : No correlating lesion [GLAND, ADRENAL : Focus; dark : 1, left (G)]

Histo Pathology - The following Tissues were Within Normal Limits:

BONE MARROW; GALT; GLAND, ADRENAL; LIVER; LYMPH NODE, INGUINAL; LYMPH NODE, MESENTERIC; LYMPH NODE, POPLITEAL; THYMUS

Histo Pathology - The following Tissues were Not Examined:

None

Animal: 2503	Group: 2	Sex: Female
Species: Rat	Strain: Sprague-Dawley	
	Dose: 10 ug/dose	
	Removal Reason: Terminal Euthanasia	
	Day (Week) of Death 30 (5)	

Gross Pathology Animal Details:

Animal Tissues submitted in 10% neutral buffered formalin except eyes and optic nerves submitted in Davidson`s fixative.

Animal Notes: EUTHANASIA VIA ANESTHESIA AND EXSANGUINATION

Gross Pathology Observations:

LIVER : Focus; pale : 1, papillary process of caudate. fissure, right medial (TGL)
LIVER : Small : Papillary process of caudate (TGL)
SITE, INJECTION : Abnormal consistency; firm : Left (TGL)

Any remaining study plan required tissues, which have been examined, have no visible lesions

Gross Pathology - The following Tissues were Not Examined:

None

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

LIVER : Tension lipidosis; focal, minimal [LIVER : Focus; pale : 1, papillary process of caudate. fissure, right medial (G)]
LIVER : Atrophy; mild : with atrophy [LIVER : Small : Papillary process of caudate (G)]
SITE, INJECTION : Inflammation; moderate [SITE, INJECTION : Abnormal consistency; firm : Left (G)]
SPLEEN : Decreased cellularity; lymphoid, minimal, periarteriolar lymphoid sheath

Histo Pathology - The following Tissues were Within Normal Limits:

BONE MARROW; GALT; GLAND, ADRENAL; LYMPH NODE, INGUINAL; LYMPH NODE, MESENTERIC; LYMPH NODE, POPLITEAL; THYMUS

Histo Pathology - The following Tissues were Not Examined:

Histo Pathology Observations [Correlation]:

LIVER : Tension lipidosis; focal, minimal [LIVER : Focus; pale : 1, fissure, left medial (G)]
SITE, INJECTION : Inflammation; moderate

Histo Pathology - The following Tissues were Within Normal Limits:

BONE MARROW; GALT; GLAND, ADRENAL; LYMPH NODE, INGUINAL; LYMPH NODE, MESENTERIC; LYMPH NODE, POPLITEAL; SPLEEN; THYMUS

Histo Pathology - The following Tissues were Not Examined:

None

Appendix 17
Appendix 4

Individual Gross and Microscopic Findings
5002231

Animal: 2510	Group: 2	Sex: Female
Species: Rat	Strain: Sprague-Dawley	
	Dose: 10 ug/dose	
	Removal Reason: Terminal Euthanasia	
	Day (Week) of Death 30 (5)	

Gross Pathology Animal Details:

Animal Tissues submitted in 10% neutral buffered formalin except eyes and optic nerves submitted in Davidson`s fixative

Animal Notes: EUTHANASIA VIA ANESTHESIA AND EXSANGUINATION

Gross Pathology Observations:

No observations found

Any remaining study plan required tissues, which have been examined, have no visible lesions

Gross Pathology - The following Tissues were Not Examined:

None

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

SITE, INJECTION : Inflammation; minimal
SPLEEN : Decreased cellularity; lymphoid, minimal, periarteriolar lymphoid sheath

Histo Pathology - The following Tissues were Within Normal Limits:

BONE MARROW; GALT; GLAND, ADRENAL; LIVER; LYMPH NODE, INGUINAL; LYMPH NODE, MESENTERIC; LYMPH NODE, POPLITEAL; THYMUS

Histo Pathology - The following Tissues were Not Examined:

None

Appendix 17
Appendix 4

Individual Gross and Microscopic Findings
5002231

Animal: 3001	Group: 3	Sex: Male
Species: Rat	Strain: Sprague-Dawley	
	Dose: 50 ug/dose	
	Removal Reason: Terminal Euthanasia	
	Day (Week) of Death 30 (5)	

Gross Pathology Animal Details:

Animal Tissues submitted Into 10% neutral buffered formalin except eyes and optic nerves submitted in Davidson`s and testes in modified Davidson`s Fixative.

Animal Notes: EUTHANASIA VIA ANESTHESIA AND EXSANGUINATION

Gross Pathology Observations:

LYMPH NODE, POPLITEAL : Focus; dark : 3, left (TGL)
SITE, INJECTION : Abnormal consistency; firm : left (TGL)
SITE, INJECTION : Material accumulation; clot : left (TGL)

Any remaining study plan required tissues, which have been examined, have no visible lesions

Gross Pathology - The following Tissues were Not Examined:

None

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

BONE MARROW : Increased cellularity; myeloid, minimal
LYMPH NODE, MESENTERIC : Decreased cellularity; lymphoid, minimal, paracortex
SITE, INJECTION : Hemorrhage; focal, moderate [SITE, INJECTION : Material accumulation; clot : left (G)]
SITE, INJECTION : Degeneration/necrosis; multifocal, minimal, myofiber
SITE, INJECTION : Inflammation; moderate [SITE, INJECTION : Abnormal consistency; firm : left (G)]
SPLEEN : Decreased cellularity; lymphoid, mild, periarteriolar lymphoid sheath
THYMUS : Hemorrhage; multifocal, minimal
NO CORRELATE : No correlating lesion [LYMPH NODE, POPLITEAL : Focus; dark : 3, left (G)]

Histo Pathology - The following Tissues were Within Normal Limits:

GALT; GLAND, ADRENAL; LIVER; LYMPH NODE, INGUINAL; LYMPH NODE, POPLITEAL

Histo Pathology - The following Tissues were Not Examined:

None

Appendix 17
Appendix 4

Individual Gross and Microscopic Findings
5002231

Animal: 3002	Group: 3	Sex: Male
Species: Rat	Strain: Sprague-Dawley	
	Dose: 50 ug/dose	
	Removal Reason: Terminal Euthanasia	
	Day (Week) of Death 30 (5)	

Gross Pathology Animal Details:

Animal Tissues submitted Into 10% neutral buffered formalin except eyes and optic nerves submitted in Davidson`s and testes in modified Davidson`s Fixative.

Animal Notes: EUTHANASIA VIA ANESTHESIA AND EXSANGUINATION

Gross Pathology Observations:

LUNG : Focus; dark : 1 to 3 (TGL)
SITE, INJECTION : Abnormal consistency; firm : left (TGL)
SITE, INJECTION : Swelling : left (TGL)
STOMACH : Focus; depressed : 2, dark, linear, mucosa, glandular (TGL)

Any remaining study plan required tissues, which have been examined, have no visible lesions

Gross Pathology - The following Tissues were Not Examined:

None

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

BONE MARROW : Increased cellularity; myeloid, minimal
GLAND, ADRENAL : Hypertrophy; cortical, bilateral, minimal
LUNG : Hemorrhage; multifocal, minimal [LUNG : Focus; dark : 1 to 3 (G)]
LYMPH NODE, MESENTERIC : Decreased cellularity; lymphoid, minimal, paracortex
SITE, INJECTION : Inflammation; moderate [SITE, INJECTION : Abnormal consistency; firm : left (G) | SITE, INJECTION : Swelling : left (G)]
SPLEEN : Decreased cellularity; lymphoid, minimal, periarteriolar lymphoid sheath
NO CORRELATE : No correlating lesion [STOMACH : Focus; depressed : 2, dark, linear, mucosa, glandular (G)]

Histo Pathology - The following Tissues were Within Normal Limits:

GALT; LIVER; LYMPH NODE, INGUINAL; LYMPH NODE, POPLITEAL; STOMACH; THYMUS

Histo Pathology - The following Tissues were Not Examined:

None

Appendix 17
Appendix 4

Species:	Rat	Strain: Sprague-Dawley	
		Dose: 50 ug/dose	
		Removal Reason: Terminal Euthanasia	
		Day (Week) of Death 30 (5)	

Gross Pathology Animal Details:

Animal Tissues submitted in 10% neutral buffered formalin except eyes and optic nerves submitted in Davidson`s fixative.

Animal Notes: EUTHANASIA VIA ANESTHESIA AND EXSANGUINATION

Gross Pathology Observations:

LIVER : Focus; pale : 1, fissure, right medial (TGL)
LYMPH NODE : Enlargement : Iliac left (TGL)
SITE, INJECTION : Abnormal consistency; firm : Left (TGL)
SITE, INJECTION : Swelling : Left (TGL)

Any remaining study plan required tissues, which have been examined, have no visible lesions

Gross Pathology - The following Tissues were Not Examined:

None

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

LIVER : Tension lipidosis; focal, minimal [LIVER : Focus; pale : 1, fissure, right medial (G)]
LYMPH NODE : Infiltration, mixed cell; mild : iliac left [LYMPH NODE : Enlargement : Iliac left (G)]
LYMPH NODE, MESENTERIC : Decreased cellularity; lymphoid, minimal, paracortex
LYMPH NODE, POPLITEAL : Infiltration, mixed cell; minimal
SITE, INJECTION : Inflammation; marked [SITE, INJECTION : Abnormal consistency; firm : Left (G) | SITE, INJECTION : Swelling : Left (G)]
SPLEEN : Decreased cellularity; lymphoid, mild, periarteriolar lymphoid sheath
THYMUS : Hemorrhage; multifocal, minimal

Histo Pathology - The following Tissues were Within Normal Limits:

BONE MARROW; GALT; GLAND, ADRENAL; LYMPH NODE, INGUINAL

Histo Pathology - The following Tissues were Not Examined:

None

Appendix 17
Appendix 4

Individual Gross and Microscopic Findings
5002231

Animal: 3508	Group: 3	Sex: Female
Species: Rat	Strain: Sprague-Dawley	
	Dose: 50 ug/dose	
	Removal Reason: Terminal Euthanasia	
	Day (Week) of Death 30 (5)	

Gross Pathology Animal Details:

Animal Tissues submitted in 10% neutral buffered formalin except eyes and optic nerves submitted in Davidson`s fixative

Animal Notes: EUTHANASIA VIA ANESTHESIA AND EXSANGUINATION

Gross Pathology Observations:

LYMPH NODE : Enlargement : iliac left (TGL)
SITE, INJECTION : Abnormal consistency; firm : left (TGL)

Any remaining study plan required tissues, which have been examined, have no visible lesions

Gross Pathology - The following Tissues were Not Examined:

None

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

GLAND, ADRENAL : Hypertrophy; cortical, bilateral, minimal
LYMPH NODE : Infiltration, mixed cell; minimal : iliac left [LYMPH NODE : Enlargement : iliac left (G)]
LYMPH NODE, INGUINAL : Erythrocytosis; minimal, sinus
LYMPH NODE, MESENTERIC : Decreased cellularity; lymphoid, minimal, paracortex
SITE, INJECTION : Inflammation; mild [SITE, INJECTION : Abnormal consistency; firm : left (G)]

Histo Pathology - The following Tissues were Within Normal Limits:

BONE MARROW; GALT; LIVER; LYMPH NODE, POPLITEAL; SPLEEN; THYMUS

Histo Pathology - The following Tissues were Not Examined:

None

Appendix 17
Appendix 4

Individual Gross and Microscopic Findings
5002231

Animal: 3509	Group: 3	Sex: Female
Species: Rat	Strain: Sprague-Dawley	
	Dose: 50 ug/dose	
	Removal Reason: Terminal Euthanasia	
	Day (Week) of Death 30 (5)	

Gross Pathology Animal Details:

Animal Tissues submitted in 10% neutral buffered formalin except eyes and optic nerves submitted in Davidson`s fixative.

Animal Notes: EUTHANASIA VIA ANESTHESIA AND EXSANGUINATION

Gross Pathology Observations:

LIVER : Focus; pale : 1, near hilus, right lateral (TGL)
LYMPH NODE : Enlargement : Iliac left (TGL)
SITE, INJECTION : Abnormal consistency; firm : Left (TGL)
SITE, INJECTION : Swelling : Left (TGL)

Any remaining study plan required tissues, which have been examined, have no visible lesions

Gross Pathology - The following Tissues were Not Examined:

None

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

BONE MARROW : Increased cellularity; myeloid, minimal
GLAND, ADRENAL : Hypertrophy; cortical, bilateral, minimal
LIVER : Hypertrophy; minimal, kupffer cell
LIVER : Tension lipidosis; focal, minimal [LIVER : Focus; pale : 1, near hilus, right lateral (G)]
LYMPH NODE : Infiltration, mixed cell; mild : iliac left [LYMPH NODE : Enlargement : Iliac left (G)]
LYMPH NODE, POPLITEAL : Infiltration, mixed cell; minimal
SITE, INJECTION : Degeneration/necrosis; multifocal, minimal, myofiber
SITE, INJECTION : Inflammation; marked [SITE, INJECTION : Abnormal consistency; firm : Left (G) | SITE, INJECTION : Swelling : Left (G)]
SPLEEN : Decreased cellularity; lymphoid, minimal, periarteriolar lymphoid sheath

Histo Pathology - The following Tissues were Within Normal Limits:

GALT; LYMPH NODE, INGUINAL; LYMPH NODE, MESENTERIC; THYMUS

Histo Pathology - The following Tissues were Not Examined:

None

Appendix 17
Appendix 4

Individual Gross and Microscopic Findings
5002231

Animal: 3510	Group: 3	Sex: Female
Species: Rat	Strain: Sprague-Dawley	
	Dose: 50 ug/dose	
	Removal Reason: Terminal Euthanasia	
	Day (Week) of Death 30 (5)	

Gross Pathology Animal Details:

Animal Tissues submitted in 10% neutral buffered formalin except eyes and optic nerves submitted in Davidson`s fixative

Animal Notes: EUTHANASIA VIA ANESTHESIA AND EXSANGUINATION

Gross Pathology Observations:

No observations found

Any remaining study plan required tissues, which have been examined, have no visible lesions

Gross Pathology - The following Tissues were Not Examined:

None

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

LYMPH NODE, MESENTERIC : Decreased cellularity; lymphoid, minimal, paracortex
SITE, INJECTION : Inflammation; moderate
SPLEEN : Decreased cellularity; lymphoid, mild, periarteriolar lymphoid sheath

Histo Pathology - The following Tissues were Within Normal Limits:

BONE MARROW; GALT; GLAND, ADRENAL; LIVER; LYMPH NODE, INGUINAL; LYMPH NODE, POPLITEAL; THYMUS

Histo Pathology - The following Tissues were Not Examined:

None

Appendix 17
Appendix 4

Individual Gross and Microscopic Findings
5002231

Animal: 4001	Group: 4		Sex: Male
Species: Rat	Strain: Sprague-Dawley		
	Dose: 100 ug/dose		
	Removal Reason: Terminal Euthanasia		
	Day (Week) of Death 30 (5)		

Gross Pathology Animal Details:

Animal Tissues submitted Into 10% neutral buffered formalin except eyes and optic nerves submitted in Davidson`s and testes in modified Davidson`s Fixative.

Animal Notes: EUTHANASIA VIA ANESTHESIA AND EXSANGUINATION

Gross Pathology Observations:

LYMPH NODE : Enlargement : iliac left (TGL)
SITE, INJECTION : Abnormal consistency; firm : left (TGL)
SKIN : Scab; dark : 1, hindlimb right, adjacent to injection site right (TGL)

Any remaining study plan required tissues, which have been examined, have no visible lesions

Gross Pathology - The following Tissues were Not Examined:

None

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

GLAND, ADRENAL : Hypertrophy; cortical, bilateral, minimal
HEART : Infiltration, mixed cell; focal, minimal
LIVER : Necrosis; multifocal, minimal : subcapsular
LIVER : Hypertrophy; minimal, kupffer cell
LUNG : Inflammation, vascular; multifocal, minimal
LYMPH NODE : Infiltration, mixed cell; mild : iliac left [LYMPH NODE : Enlargement : iliac left (G)]
SITE, INJECTION : Degeneration/necrosis; multifocal, minimal, myofiber
SITE, INJECTION : Inflammation; mild [SITE, INJECTION : Abnormal consistency; firm : left (G)]
SKIN : Inflammation; regionally extensive, moderate : with epidermal hyperplasia/crust [SKIN : Scab; dark : 1, hindlimb right, adjacent to injection site right (G)]
SPLEEN : Decreased cellularity; lymphoid, minimal, periarteriolar lymphoid sheath : with pigment
THYMUS : Hemorrhage; multifocal, minimal

Histo Pathology - The following Tissues were Within Normal Limits:

Appendix 17

Histo Pathology - The following Tissues were Not Examined:

GLAND, PARATHYROID - Not Present In Section.

Appendix 17
Appendix 4

Individual Gross and Microscopic Findings
5002231

Animal: 4009	Group: 4	Sex: Male
Species: Rat	Strain: Sprague-Dawley	
	Dose: 100 ug/dose	
	Removal Reason: Terminal Euthanasia	
	Day (Week) of Death 30 (5)	

Gross Pathology Animal Details:

Animal Tissues submitted Into 10% neutral buffered formalin except eyes and optic nerves submitted in Davidson`s and testes in modified Davidson`s Fixative.

Animal Notes: EUTHANASIA VIA ANESTHESIA AND EXSANGUINATION

Gross Pathology Observations:

LUNG : Focus; dark : 1 to 3 (TGL)
LYMPH NODE : Enlargement : iliac left (TGL)
SITE, INJECTION : Abnormal consistency; firm : left (TGL)

Any remaining study plan required tissues, which have been examined, have no visible lesions

Gross Pathology - The following Tissues were Not Examined:

None

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

BONE MARROW : Increased cellularity; myeloid, minimal
GLAND, ADRENAL : Hypertrophy; cortical, bilateral, minimal
GLAND, ADRENAL : Vacuolation; cortical, bilateral, minimal
LUNG : Macrophage aggregation; multifocal, minimal
LYMPH NODE : Infiltration, mixed cell; moderate : iliac left [LYMPH NODE : Enlargement : iliac left (G)]
LYMPH NODE, MESENTERIC : Decreased cellularity; lymphoid, minimal, paracortex
SITE, INJECTION : Inflammation; moderate [SITE, INJECTION : Abnormal consistency; firm : left (G)]
SPLEEN : Decreased cellularity; lymphoid, minimal, periarteriolar lymphoid sheath : with pigment
NO CORRELATE : No correlating lesion [LUNG : Focus; dark : 1 to 3 (G)]

Histo Pathology - The following Tissues were Within Normal Limits:

ARTERY, AORTA; BONE, FEMUR; BONE, STERNUM; BRAIN; EPIDIDYMIS; ESOPHAGUS; EYE; GALT; GLAND, HARDERIAN; GLAND, MAMMARY; GLAND, PARATHYROID; GLAND, PITUITARY; GLAND, PROSTATE; GLAND, SALIVARY, MANDIBULAR; GLAND, SEMINAL VESICLE; GLAND, THYROID; HEART; KIDNEY; LARGE INTESTINE, CECUM; LARGE INTESTINE, COLON; LARGE INTESTINE, RECTUM; LIVER; LYMPH NODE, INGUINAL; LYMPH NODE, MANDIBULAR; LYMPH NODE, POPLITEAL; MUSCLE, SKELETAL; NERVE, OPTIC; NERVE, SCIATIC; PANCREAS; SKIN; SMALL INTESTINE, DUODENUM; SMALL INTESTINE, ILEUM; SMALL INTESTINE, JEJUNUM; SPINAL CORD, CERVICAL; SPINAL CORD, LUMBAR; SPINAL CORD, THORACIC; STOMACH; TESTIS; THYMUS; TONGUE; TRACHEA; URINARY BLADDER

Histo Pathology - The following Tissues were Not Examined:

Appendix 17
Appendix 4

Individual Gross and Microscopic Findings
5002231

None

Appendix 17
Appendix 4

Individual Gross and Microscopic Findings
5002231

Animal: 4010	Group: 4	Sex: Male
Species: Rat	Strain: Sprague-Dawley	
	Dose: 100 ug/dose	
	Removal Reason: Terminal Euthanasia	
	Day (Week) of Death 30 (5)	

Gross Pathology Animal Details:

Animal Tissues submitted Into 10% neutral buffered formalin except eyes and optic nerves submitted in Davidson`s and testes in modified Davidson`s Fixative.

Animal Notes: EUTHANASIA VIA ANESTHESIA AND EXSANGUINATION

Gross Pathology Observations:

SITE, INJECTION : Abnormal consistency; firm : left (TGL)
SKIN : Scab; dark : 1, tail, tip (TGL)

Any remaining study plan required tissues, which have been examined, have no visible lesions

Gross Pathology - The following Tissues were Not Examined:

None

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

BONE MARROW : Increased cellularity; myeloid, minimal
GLAND, ADRENAL : Hypertrophy; cortical, bilateral, minimal
GLAND, ADRENAL : Vacuolation; cortical, bilateral, minimal
GLAND, PARATHYROID : One Of A Pair Available For Evaluation.
GLAND, PARATHYROID : Examined
LYMPH NODE, MESENTERIC : Decreased cellularity; lymphoid, minimal, paracortex
LYMPH NODE, POPLITEAL : Infiltration, mixed cell; minimal
SITE, INJECTION : Inflammation; marked [SITE, INJECTION : Abnormal consistency; firm : left (G)]
SKIN : Hyperkeratosis; focal, minimal : tail [SKIN : Scab; dark : 1, tail, tip (G)]
SPLEEN : Decreased cellularity; lymphoid, minimal, periarteriolar lymphoid sheath : with pigment
THYMUS : Hemorrhage; multifocal, minimal

Histo Pathology - The following Tissues were Within Normal Limits:

ARTERY, AORTA; BONE, FEMUR; BONE, STERNUM; BRAIN; EPIDIDYMIS; ESOPHAGUS; EYE; GALT; GLAND, HARDERIAN; GLAND, MAMMARY; GLAND, PARATHYROID; GLAND, PITUITARY; GLAND, PROSTATE; GLAND, SALIVARY, MANDIBULAR; GLAND, SEMINAL VESICLE; GLAND, THYROID; HEART; KIDNEY; LARGE INTESTINE, CECUM; LARGE INTESTINE, COLON; LARGE INTESTINE, RECTUM; LIVER; LUNG; LYMPH NODE, INGUINAL; LYMPH NODE, MANDIBULAR; MUSCLE, SKELETAL; NERVE, OPTIC; NERVE, SCIATIC; PANCREAS; SMALL INTESTINE, DUODENUM; SMALL INTESTINE, ILEUM; SMALL INTESTINE, JEJUNUM; SPINAL CORD, CERVICAL; SPINAL CORD, LUMBAR; SPINAL CORD, THORACIC; STOMACH; TESTIS; TONGUE; TRACHEA; URINARY BLADDER

Individual Gross and Microscopic Findings
5002231

ARTERY, AORTA; BONE, FEMUR; BONE, STERNUM; BRAIN; CERVIX; ESOPHAGUS; EYE; GALT; GLAND, HARDERIAN; GLAND, MAMMARY; GLAND, PARATHYROID; GLAND, PITUITARY; GLAND, SALIVARY, MANDIBULAR; GLAND, THYROID; HEART; KIDNEY; LARGE INTESTINE, CECUM; LARGE INTESTINE, COLON; LARGE INTESTINE, RECTUM; LIVER; LUNG; LYMPH NODE, MANDIBULAR; MUSCLE, SKELETAL; NERVE, OPTIC; NERVE, SCIATIC; OVARY; PANCREAS; SKIN; SMALL INTESTINE, DUODENUM; SMALL INTESTINE, ILEUM; SMALL INTESTINE, JEJUNUM; SPINAL CORD, CERVICAL; SPINAL CORD, LUMBAR; SPINAL CORD, THORACIC; STOMACH; TONGUE; TRACHEA; URINARY BLADDER; UTERUS; VAGINA

Histo Pathology - The following Tissues were Not Examined:

None

Appendix 17
Appendix 4

Individual Gross and Microscopic Findings
5002231

Animal: 4507	Group: 4	Sex: Female
Species: Rat	Strain: Sprague-Dawley	
	Dose: 100 ug/dose	
	Removal Reason: Terminal Euthanasia	
	Day (Week) of Death 30 (5)	

Gross Pathology Animal Details:

Animal Tissues submitted in 10% neutral buffered formalin except eyes and optic nerves submitted in Davidson`s fixative.

Animal Notes: EUTHANASIA VIA ANESTHESIA AND EXSANGUINATION

Gross Pathology Observations:

LUNG : Focus; dark : 1, left lobe (TGL)
SITE, INJECTION : Abnormal consistency; firm : Left (TGL)
SITE, INJECTION : Swelling : Left (TGL)

Any remaining study plan required tissues, which have been examined, have no visible lesions

Gross Pathology - The following Tissues were Not Examined:

None

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

BONE MARROW : Increased cellularity; myeloid, minimal
GLAND, ADRENAL : Hypertrophy; cortical, bilateral, minimal
LYMPH NODE, MESENTERIC : Decreased cellularity; lymphoid, minimal, paracortex
LYMPH NODE, POPLITEAL : Infiltration, mixed cell; minimal
SITE, INJECTION : Inflammation; marked [SITE, INJECTION : Abnormal consistency; firm : Left (G) | SITE, INJECTION : Swelling : Left (G)]
SPLEEN : Decreased cellularity; lymphoid, mild, periarteriolar lymphoid sheath : with pigment
SPLEEN : Single cell necrosis; lymphoid, minimal
THYMUS : Hemorrhage; multifocal, minimal
THYMUS : Single cell necrosis; lymphoid, minimal
NO CORRELATE : No correlating lesion [LUNG : Focus; dark : 1, left lobe (G)]

Histo Pathology - The following Tissues were Within Normal Limits:

ARTERY, AORTA; BONE, FEMUR; BONE, STERNUM; BRAIN; CERVIX; ESOPHAGUS; EYE; GALT; GLAND, HARDERIAN; GLAND, MAMMARY; GLAND, PARATHYROID; GLAND, PITUITARY; GLAND, SALIVARY, MANDIBULAR; GLAND, THYROID; HEART; KIDNEY; LARGE INTESTINE, CECUM; LARGE INTESTINE, COLON; LARGE INTESTINE, RECTUM; LIVER; LUNG; LYMPH NODE, INGUINAL; LYMPH NODE, MANDIBULAR; MUSCLE, SKELETAL; NERVE, OPTIC; NERVE, SCIATIC; OVARY; PANCREAS; SKIN; SMALL INTESTINE, DUODENUM; SMALL INTESTINE, ILEUM; SMALL INTESTINE, JEJUNUM; SPINAL CORD, CERVICAL; SPINAL CORD, LUMBAR; SPINAL CORD, THORACIC; STOMACH; TONGUE; TRACHEA; URINARY BLADDER; UTERUS; VAGINA

Species: Rat	Strain: Sprague-Dawley	
	Dose: 100 ug/dose	
	Removal Reason: Terminal Euthanasia	
	Day (Week) of Death 30 (5)	

Gross Pathology Animal Details:

Animal Tissues submitted in 10% neutral buffered formalin except eyes and optic nerves submitted in Davidson`s fixative

Animal Notes: EUTHANASIA VIA ANESTHESIA AND EXSANGUINATION

Gross Pathology Observations:

SITE, INJECTION : Abnormal consistency; firm : left (TGL)
SITE, INJECTION : Swelling : left (TGL)
THYMUS : Focus; dark : >10, left lobe (TGL)

Any remaining study plan required tissues, which have been examined, have no visible lesions

Gross Pathology - The following Tissues were Not Examined:

None

Histo Pathology Animal Details:

No animal details found

Histo Pathology Observations [Correlation]:

BONE MARROW : Increased cellularity; myeloid, minimal
GLAND, PARATHYROID : One Of A Pair Available For Evaluation.
GLAND, PARATHYROID : Examined
LIVER : Hypertrophy; minimal, kupffer cell
LYMPH NODE, POPLITEAL : Infiltration, mixed cell; minimal
SITE, INJECTION : Degeneration/necrosis; multifocal, minimal, myofiber
SITE, INJECTION : Inflammation; moderate [SITE, INJECTION : Abnormal consistency; firm : left (G) | SITE, INJECTION : Swelling : left (G)]
SPLEEN : Decreased cellularity; lymphoid, minimal, periarteriolar lymphoid sheath : with pigment
SPLEEN : Single cell necrosis; lymphoid, minimal
THYMUS : Hemorrhage; multifocal, minimal [THYMUS : Focus; dark : >10, left lobe (G)]
THYMUS : Single cell necrosis; lymphoid, mild

PEER-REVIEW STATEMENT

Study Number: 5002231

Study Title: A 1 Month (3 doses) Intramuscular Injection Vaccine Study of mRNA-1706 in Sprague-Dawley Rats With a 2-Week Recovery Period.

EXPERIMENTAL DESIGN:

Text Table 1
Experimental Design

Group No.	Test Material	Dose Level (µg/dose)	Dose Volume (µL/dose)	Dose Concentration (mg/mL)	No. of Animals			
					Main Study		Recovery Study	
					Males	Females	Males	Females
1	Reference Item	0	200	0	10	10	5	5
2	mRNA-1706	10	200	0.05	10	10	-	-
3	mRNA-1706	50	200	0.25	10	10	-	-
4	mRNA-1706	100	200	0.5	10	10	5	5

PURPOSE: The purpose of this peer review was to assess the overall quality and consistency of the microscopic data and determine the validity of the study pathologist's conclusions.

METHODS:

1. Study plan and amendments, narrative pathology report, histology records, clinical observations, and organ weight data were reviewed
2. Review of all tissues from the Male and Female Groups 1 and Group 4, animal numbers: 1002,1005,1008,1013,1503,1507, 4002, 4005, 4008, 4501, 4506, 4509.
3. The following organs from all animals in all Groups (including recovery) were reviewed: Bone Marrow, Injection Site, Adrenal, Thymus, Lymph node mesenteric and Spleen. Sciatic nerve in Groups 1 and 4 male and Liver in Groups 1 and 4 male, Group 4 female and recovery animals from both sexes.
4. Following review of the histological sections and corresponding histopathology-related study data, findings were discussed with the study pathologist.

RESULTS:

Differences of opinion were resolved and mutual agreement on terminology and diagnoses were achieved. The histopathology tables and corresponding narrative contained in the pathology report reflect diagnoses and conclusions agreed to by the peer reviewer and study pathologist
